Half Moon Island. 62°35' S, 59°55' W. A crescent-shaped, dark-colored island, not quite 2 km long, and rising to 101 m above sea level, in the entrance to Moon Bay, on the E side of Livingston Island, on the SW side of McFarlane Strait, in the South Shetlands. There is a hill on this island named Cerro Vago, and some salient points (i.e., little capes, little but standing out enough to offer clear reference points) — Punta Zurueta, Punta Berón, and Punta Morena — as well as Saddleback Ridge in the N part of the island. On the NW coast is an inlet called Caleta Matamala. The island was known to sealers as early as 1821, and roughly charted by them. It was these sealers who probably so named it, because of its shape (thus also providing a good harbor). The first landing was probably made by Nat Palmer, on Nov. 18, 1820. Capt. John Davis' log dated March 14, 1821 refers to it as Moon Island, and on Weddell's 1825 map it appears as Johnson's Island, named for Capt. Robert Johnson. It also appears as such on Powell's 1831 chart. Fildes, in 1829 (reflecting his voyages there almost a decade earlier), refers to it as Half-moon Island, a spelling that occurs again on the 1930 Discovery Investigations chart (reflecting their survey done there in 1929). A Spanish chart of 1861 shows it as Isla Johnson, but this is only a translated map of Powell's 1831 chart. In 1931, surveyor David Ferguson, who was here in 1913-14, refers to it as Keith Island. It appears as Half Moon Island on the Discovery Investigations chart of 1935 (which reflected the *Discovery II* survey of 1933-34), and the DI re-surveyed it that year (i.e., 1935). It appears on a 1949 Argentine chart as Isla Half Moon. US-ACAN accepted the name Half Moon Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears translated as Isla Media Luna on a 1953 Argentine chart, and that was the name accepted by the Argentine gazetteer of 1970, and also by the Chilean gazetteer of 1974. Teniente Cámara Station was here. The British re-plotted this island in late 2008. Islote Girardi is the little islet immediately to the S of Half Moon Island.

Half Point *see* **Square Rock Point**

Half-Ration Névé. 73°01' S, 163°30' E. A large névé at the head of Aviator Glacier, in Victoria Land. The Mesa Range forms much of its W side. So named by the Northern Party of NZGSAE 1962-63 because, while here, they were reduced to half rations due to a delay of several days in re-supply because of a blizzard. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Halfmoon Bluff. 85°13' S, 175°38' W. A rock bluff overlooking the E side of Shackleton Glacier, rising immediately N of the mouth of Brunner Glacier, in the Cumulus Hills. So named by the Texas Tech Shackleton Glacier Expedition of 1964-65, because its sheer cliffs and crescent-shaped top give it the appearance of a half moon. US-ACAN accepted the name in 1966.

Halfmoon Cove. 62°09' S, 58°28' W. A small crescent-shaped cove between Shag Point and Rakusa Point, Admiralty Bay, King George Island, in the South Shetlands. Named by American ornithologists Wayne Z. Trivelpiece and Nicholas J. Volkman, guests of the Poles at Arctowski Station in 1977-78. The Poles accepted the name in 1980.

Punta Halfthree *see* **Halfthree Point**

Halfthree Point. 62°14' S, 58°57' W. Forms the SE end of Fildes Peninsula, on King George Island, in the South Shetlands. Charted and named by the personnel on the *Discovery II* in 1935. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year. It appears on a British chart of 1962. The Argentines call it Punta Halfthree. The British were the latest to plot this feature, in late 2008.

Halfway Island. 64°45' S, 64°12' W. In the mouth of Wylie Bay, 4 km NW of Litchfield Island, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed by an RN Hydrographic Survey unit in 1956-57, and by Fids from Base N over the same period. So named by UK-APC on July 7, 1959, because it lies halfway between Arthur Harbor and Cape Monaco, a route frequently traveled by boat by Fids from Arthur Harbor. It appears on a British chart of 1960. US-ACAN accepted the name in 1965.

Halfway Nunatak. 78°23' S, 161°06' E. An isolated nunatak, rising to 1268 m, on the W side of The Landing, and almost in the center of the upper portion of Skelton Glacier. Its N side features Norton Crag, its S side features Baumann Crag, and its E side features Schulz Crag. Surveyed and descriptively named in Feb. 1957 by the NZ party of BCTAE 1957-58. US-ACAN accepted the name in 1962.

Hålisen *see* **Hålisen Glacier**

Hålisen Glacier. 72°02' S, 8°51' E. A cirque glacier between Hålisrimen Peak and Hålisstonga Peak, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hålisen (i.e., "the slippery ice"). US-ACAN accepted the name Hålisen Glacier in 1966.

Hålishalsen *see* **Hålishalsen Saddle**

Hålishalsen Saddle. 72°07' S, 9°04' E. An ice saddle between the Kurze Mountains and the interior ice plateau to the S, in the Orvin Mountasins of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hålishalsen (i.e., "the slippery ice neck"). US-ACAN accepted the name Hålishalsen Saddle in 1966.

Hålisrimen *see* **Hålisrimen Peak**

Hålisrimen Peak. 72°01' S, 8°52' E. Rising to 2665 m, 3 km NW of Hålisstonga Peak, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hålisrimen (i.e., "the slippery ice frost"), in association with Hålisen Glacier. US-ACAN accepted the name Hålisrimen Peak in 1966.

Hålisstonga *see* **Hålisstonga Peak**

Hålisstonga Peak. 72°02' S, 8°57' E. Rising to 2780 m, it marks the S end of the Kurze Mountains in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from

1958-59 air photos taken during the same long expedition, and named by them as Hålisstonga. US-ACAN accepted the name Hålisstonga Peak in 1966.

[1]**Mount Hall**. 77°34' S, 162°36' E. A somewhat isolated peak in the Asgard Range, in Victoria Land. Named by US-ACAN in 1998. NZ-APC accepted the name on Nov. 7, 1998.

[2]**Mount Hall**. 84°55' S, 170°22' W. A rock peak rising to 2430 m (the New Zealanders say 2000 m), 2.5 km SW of Mount Daniel, it is the highest point of an elevated, snow-covered table of irregular ground plan which forms the S end of the Lillie Range, in the foothills of the Prince Olav Mountains. Discovered and photographed by Bert Crary during his Ross Ice Shelf Traverse of 1957-58, and named by him for Lt. Cdr. (later Cdr.) Ray Eldon Hall (b. Feb. 21, 1923, Freelandville, Ind.), USN, VX-6 pilot during OpDF III (i.e., the same season as Crary's traverse). US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Hall, Alexander Bullock "Sandy." b. Nov. 11, 1934, Thornhill, Dumfriesshire, son of a hill sheep farmer. He joined FIDS in 1955, as a meteorologist, and wintered-over at Signy Island Station in 1956. After his tour, he left Antarctica on the *Shackleton*, stayed for a while in the Falklands, then to Montevideo, where he caught the *Highland Chieftain* back to London, with Dave Jones, meteorologist Sam Glassey, and ex-Fid Pat Biggs and his family, arriving there on Sept. 5, 1957. On his return to Scotland, he followed in his father's occupation, and still lives on his father's farm.

Hall, Frank Aitchison. b. Aug. 11, 1932, Langholm, Dumfriesshire, Scotland, but raised partly in Port William, son of bank manager Tommy Hall and his wife Jenny Goodfellow. After George Watson's College, in Edinburgh, he became a professional meteorologist, and worked at the observatory at Eskdalemuir, 50 miles from his birth place. He did his national service in the RAF, as a met man based in Britain, and then applied to FIDS, went to London for the interview, was accepted, and the RAF let him go a few weeks before his time was up. He sailed from London on the *John Biscoe* at the end of 1952, as a met man, wintering-over at Base B in 1953. In 1954 he returned to Port Stanley, and for a year stayed there, instructing Fids who were coming south as meteorological assistants. He finally made his way to Montevideo, where he caught the *Alcantara*, arriving back in Southampton on July 6, 1955. He went back to Langholm, on Sept. 1, 1956 marrying Margaret Haldane Dalgliesh, and they moved to Coventry, where Frank worked in a lab for General Electric, and Margaret worked as a clerk. Then he went to work on the Blue Streak rocket project, moving to Cumberland, then to Stevenage, Herts, then back to Cumberland, where the Blue Streak project came to an end. He was offered a job in data processing by a friend in Farnborough, Hants, but got bored with that, and went to work for Hunting Engineering, working for years at Aldermaston. In 1981 he went back to Eskdalemuir, working as a government met man again, and died in his chair of a heart attack on May 26, 1993, at Langholm.

Hall, John. b. 1950. Joined BAS on Sept. 10, 1973, as a diving officer and general assistant, who wintered-over on South Georgia in 1974 and 1975, the second year serving as base commander. On Sept. 23, 1976 he re-joined BAS, spending the summer of 1976-77 back at South Georgia. On July 4, 1977 he re-joined again, as a permanent base commander, wintering-over at Signy Island Station in 1978. On Dec. 7, 1979 he resigned. In the 1980s he was at Rothera Station as field operations manager at the air facility.

Hall Bluff. 77°33' S, 161°23' E. A prominent rock bluff, at a height of 750 m, that forms the E end of Dais, and marks the valley entrances to North Fork and South Fork, in the Wright Valley of Victoria Land. Named by US-ACAN in 1997, for Brenda Hall, research assistant with the department of geological sciences at the University of Maine, from 1990. She was a field party geologist in 6 USAP-supported field seasons from the 1990-91 season to the 1995-96 season, including work in the Wright Valley, near this bluff. NZ-APC accepted the name.

Hall Cliff. 71°59' S, 68°37' W. A sandstone cliff, 1.5 km long, and rising to about 450 m, along the S side of Saturn Glacier, and 1.5 km W of Citadel Bastion, in the SE part of Alexander Island. Mapped in 1959-60, by FIDS cartographers working from air photos taken in Nov. 1947 by RARE 1947-48, and from ground surveys conducted by FIDS between 1948 and 1950. It was surveyed again by BAS personnel from the Fossil Bluff station between 1961 and 1973. In association with the name Saturn, it was named by UK-APC on Dec. 20, 1974, for Asaph Hall (1829-1907), the U.S. astronomer. US-ACAN accepted the name in 1975.

Hall Glacier. 73°54' S, 76°23' W. Flows N between the Lidke Ice Stream and Nikitin Glacier, into Stange Sound, on the English Coast, in Ellsworth Land. Named by US-ACAN in 2006, for Dann V. Hall, USGS surveyor in support of the Ross Ice Shelf Project (RISP), 1976-77; a team member of the joint USGS-BAS Doppler Landsat Control Project, 1977-78. *See also* **Nikitin Glacier**.

Hall Nunatak. 78°59' S, 87°24' W. A small nunatak, about 3 km southeastward of Thomas Nunatak, along the ice escarpment at the head of Minnesota Glacier, in the Ellsworth Mountains. Named by the University of Minnesota Geological Party here in 1963-64, for George S. Hall, helicopter crew chief with the U.S. Army 62nd Transportation Corps Detachment, who helped the party. US-ACAN accepted the name in 1966.

Hall Nunataks. 70°48' S, 66°45' E. A group of 4 nunataks, anywhere between 11 and 13 km ESE of Mount Bunt, in the Aramis Range of the Prince Charles Mountains. Mapped by Australian cartographers from air photos taken by ANARE in 1960. Named by ANCA for Ross Hall, assistant diesel mechanic at Wilkes Station for the winter of 1964. US-ACAN accepted the name in 1967.

Hall Peak. 79°29' S, 83°45' W. Rising to 2170 m, it surmounts the dividing ridge at the upper reaches of Rennell Glacier, Schmidt Glacier, and Larson Valley, in the Heritage Range. Named by the University of Minnesota Geological Party here in 1963-64, for Walter David Michael "Mike" Hall, geologist with the party, who got his masters degree from VUW, in NZ, on the strength of this expedition. US-ACAN accepted the name in 1966.

Hall Peninsula. 62°46' S, 61°15' W. A small peninsula, 3 km SSW of President Head, on the E coast of Snow Island, in the South Shetlands. Snow Island was roughly charted by Weddell between 1820-23, and named by him as Basil Hall's Island, for Capt. Basil Hall, RN (1788-1844), the remarkable Scottish author and traveler. It appears as such on Weddell's 1825 map, but the name only lasted a few years. The peninsula itself was not mapped, but Weddell did map an anchorage in this approximate location. Photographed aerially by FIDASE in 1956. Once the peninsula was determined to be an individual feature, it was named by UK-APC on Aug. 31, 1962, in an attempt to preserve Weddell's naming, and US-ACAN followed suit in 1965. The British were the last to plot this feature, in late 2008.

Hall Ridge. 70°42' S, 63°12' W. A low, snow-covered ridge, rising to about 1600 m above sea level, 8 km S of the Eland Mountains, in the central part of Palmer Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Capt. Phillip L. Hall, U.S. Army, assistant civil engineering officer on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70). UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Hall Rock. 76°51' S, 159°20' E. A large rock, 3 km NW of Carapace Nunatak, at the edge of the Polar Plateau, in Victoria Land. Named by US-ACAN in 1971, for geologist Bradford Allyn Hall, of the University of Maine, at Orono, who, with Harold W. Borns, did research on the so-called Mawson Tillite here in 1968-69.

Hallam Peak. 77°39' S, 163°23' E. A distinctive rock peak, rising to 900 m between the heads of Von Guerard Glacier and Aiken Glacier, in the Kukri Hills, it provides an unobstructed view of the Lake Fryxell locality of the Taylor Valley. Named by US-ACAN in 1997, for Cheryl A. Hallam, USGS geographer who specialized in geographic information systems, and who worked in Antarctica in 1994-95, 1995-96, 1996-97, and 1999-2000. NZ-APC accepted the name.

Punta El Hallazgo *see under* **E**

Halle Flat. 76°40' S, 159°50' E. A relatively flat area just SSW of Coxcomb Peak, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for paleobotanist

Thore Gustaf Halle (1884-1964), head of he Swedish Museum of Natural History, whose work *The Mesozoic Flora of Graham Land* (1913), forms part of the scientific reports of SwedAE 1901-04. US-ACAN accepted the name in 1965, and ANCA followed suit on Aug. 10, 1966.

Rocas Haller *see* **Haller Rocks**

Haller Rocks. 64°04' S, 62°06' W. A small group of rocks in the E part of Bouquet Bay, 3 km NW of the SW end of Liège Island, in the Palmer Archipelago. Mapped by FIDS cartographers in 1959 from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Albrecht von Haller (1708-1777), Swiss physiologist. US-ACAN accepted the name later in 1960. The Argentines call them Rocas Haller.

Hallet Valley. 77°32' S, 160°17' E. Between Medley Ridge and Vortex Col, in the W part of the Asgard Range, in Victoria Land. Named by US-ACAN in 2004, for Bernard Hallet of the Quaternary Research Center, at the University of Washington at Seattle, who was a USARP investigator of land surface stability in the McMurdo Dry Valleys between 1995 and 2002. NZ-APC accepted the name on Nov. 30, 2004.

Cape Hallett. 72°19' S, 170°16' E. A bold rock headland on the NW coast of the Ross Sea (i.e., on the Borchgrevink Coast), at the foot of Mount Sabine, about 16 km southward of Cape Christie, it forms the N tip of Hallett Peninsula, in Victoria Land, midway between Cape Adare and Coulman Island. Hallett Station was here. Discovered in 1841 by RossAE 1839-43, and named by Ross for Thomas R. Hallett. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Hallett, Roland Sears. b. 1809, Barnstable, Mass. He was a ship's captain, and in 1836-37, took the whaling brig *Athenian* down to the South Shetlands. In 1841 he was skipper of the *Lebanon*, in 1846 of the *Sophronia*, and in 1847-48 of the fast-sailing packet schooner *General Clinch*. On June 19, 1845, in Hyannis, he married Cordelia, who died on Jan. 2, 1857, aged 39. Captain Hallett married again, to Abigail, and a third time, to Catherine. He retired from the sea, became a furniture dealer, and died on Nov. 6, 1894, in Barnstable.

Hallett, Thomas Rawe. Naval officer who sailed with Ross on the *Cove*, was promoted to purser on Aug. 30, 1838, and on April 9, 1839 was appointed purser to the *Erebus* for RossAE 1839-43. He subsequently served on the *Meteor*, and died on the *Éclair* on Sept. 6, 1845, off the coast of Sierra Leone, as that vessel returned as a pest ship from the West Coast of Africa.

Hallet Glacier *see* **Edisto Glacier**

Hallet Inlet *see* **Edisto Inlet**

Hallett Peninsula. 72°30' S, 170°10' E. An elongated basalt dome, similar to Adare Peninsula, triangular in shape, and 30 km long, it has 1500-meter cliffs on its seaboard (i.e., eastern) side and 300-meter cliffs on its W side, extends from Cape Hallett to Cape Wheatstone, and is joined to the mainland by a narrow ridge between Tucker Glacier and Edisto Inlet, being separated from the Admiralty Mountains by Edisto Inlet and Football Saddle. So named by NZGSAE 1957-58 because Hallett Station was built at the N end of the peninsula, on Seabee Hook. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Hallett Ridge. 71°15' S, 176°50' E. An undersea feature, it actually extends between 70°00' S and 72°50' S, and between between 176°40' E and 177°00' E. Named by Steven C. Cande, of the Scripps Institution of Oceanography, in association with Cape Hallett and Hallett Peninsula which lie just to the S. The name was accepted by international agreement in June 1997.

Hallett Station. 72°18' S, 170°13' E. A US/NZ IGY station, built in 1957 on bare, rocky, volcanic, and relatively ice-free ground, and 16 feet above sea level, at the foot of Mount Sabine, on Seabee Hook, at the tip of Cape Hallett, on Edisto Inlet, on the Borchgrevink Coast of Victoria Land. It was the smallest of the IGY bases on the continent. **Sept. 1955**: At the 2nd Antarctic Conference, in Brussels, Georges Laclavère asked the U.S. and NZ to consider a jointly-run station at Cape Adare (the closest landfall for NZ). **Feb. 6, 1956**: The *Edisto* was sailing in this area, scouting out a site on which to build Adare Station, as it was still called in the planning stages. A party of Seabees aboard tried to land with some press boys in an LCVP, but found no suitable landing place. **Feb. 8, 1956**: The Seabees tried again, but no luck. The *Edisto* then traveled 60 miles to the south, to Cape Hallett, which was better. **Feb. 11, 1956**: A party landed safely on Seabee Hook. **Feb. 12, 1956**: The site was selected. **Aug. 1956**: At the 3rd Antarctic Conference, in Paris, the U.S. and NZ agreed to Laclavère's proposal. **Oct. 1956**: John Hanessian went to NZ for planning of the base. **Mid-Dec. 1956**: The icebreaker *Northwind* broke the ice and the *Arneb* acted as supply ship. **Dec. 31, 1956**: A ferocious storm threatened the operation. And, the ice was pinching the *Arneb*. It took a week to unload the *Arneb*. **Jan. 2, 1957**: Landings began. *See also* **The *Arneb*** for more details of the landing. They found anywhere between 200,000 and 500,000 Adélie penguins there, in a rookery (there had only been a few there the year before). Carl Eklund cleared 8218 penguins off to another part of the colony (great care was always taken with the penguins), in what was called "Operation Penguin Lift." The Seabees built the 11-building base, and a D-4 tractor graded the supply dump. **Jan. 9, 1957**: Construction was well underway (windows were already in) on the old penguin site, and the site was commissioned, as Cape Adare Station. They would build penguin-proof fences (gone by 1960). Lt. Raymond Loomis was in charge of construction. **Jan. 10, 1957**: The *Arneb* and *Northwind* left. **Feb. 12, 1957**: Construction of main buildings was finished — living quarters, medical room, galley, mess hall (doubled as a movie theatre), meteorology, communications, power generator, vehicle maintenance, science, and several smaller units as well — latrine, spare generator, radio homer, refrigerator, a seismometer hut, 2 non-ferrous huts for geomagnetic measurements, a rawin dome, and an aurora tower. The 32 Seabees then left on the *Atka*, and the wintering crew was brought in from McMurdo Base, 350 miles away, to inhabit the 10 buildings. **1957 winter**: 14 men. The U.S. Navy personnel were: Lt. Juan Tur (q.v.) (officer-in-charge and medical officer), Richard A. Novasio (radioman; *see* **Novasio Ridge**), Raymond W. Hennessey (aerographer: *see* **Mount Hennessey**), Robert Roy (cook; *see* **Mount Roy**), Bobby G. Northcutt, Ernie Lee Bingaman, Ray H. Camp, James R. Canavan, E. Roger Evans, Jr., and Harry C. King (this last of USNR). The scientists were: Dr. James Shear (q.v.) (scientific leader), Bill Ingham (aurora and airglow specialist; *see* **Ingham Glacier**), John Humphries (ionosphere physicist; *see* **Humphries Glacier**), and Michael Langevad (radio technician; *see* **Langevad Glacier**) (these last 3 were the NZ complement). Meteorology was the specialty science, and a runway was built here. **May 1957**: The name of the station was changed from Cape Adare Station to Hallett Station (the name Ross Station had been proposed by the US). **Oct. 1957**: Loomis had surveyed a site on the ice of Moubray Bay, laid out an airstrip, but it was unsafe, and never used. In October they tried again, 6 miles from the base. This one worked. **Nov. 1, 1957**: The first of five R4Ds landed safely, bringing mail and supplies. **1958 winter**: On Jan. 16, 1958, Bob Bornmann had taken over from Juan Tur as officer-in-charge, and New Zealander Ken Salmon had taken over from Shear as scientific leader. The 2 other New Zealanders were Geoff King (*see* **Cape King**) and seismologist Ken Bargh (*see* **Bargh Glacier**). **1959 winter**: Albert Bridgman (medical officer and officer-in-charge; *see* **Bridgman Glacier**); Charlie Roberts (q.v.) (scientific leader); Mark Gordon (aurora scientist; *see* **Gordon Valley**). The 3 New Zealanders were Brian Reid (*see* **Reid Bluff**), L.R. Jones (scientist on the geomagnetic project; *see* **Jones Buttress**), and Alexander Black (technician on the geomagnetic project; *see* **Black Icefalls**). Biology was added after IGY, and the station was enlarged and improved. **1960 winter**: Lt. William J. Towles (officer-in-charge and medical officer; *see* **Towles Glacier**); Robert Baden "Bob" Thomson (NZ) (scientific leader); Charles Trainer (meterologist and senior U.S. representative; *see* **Trainer Glacier**). Technicians on the geomagnetic project Douglas Farmer (*see* **Farmer Glacier**) and Ray Brown (*see* **Brown Buttress**) were the other 2 New Zealanders. **1961 winter**: Lt. Anthony Kelly (medical officer; *see* **Kelly Glacier**); Robert Titus (USA) (meteorologist and scientific leader; *see* **Mount Titus**); meteorologists Joseph Dessent (*see* **Dessent Ridge**) and Larry Engberg (*see* **Engberg Bluff**); Thomas Ballard (aurora scientist; *see* **Ballard Spur**). The New Zealanders were Peter Martin (senior NZ scientist; *see* **Martin Hill**), Peter Lowe (*see* **Lowe Peak**), and N.E. Stent. **1962 winter**: Paul Tyler (medical officer; *see* **Tyler Glacier**); Jack Boyer (radioman; *see* **Boyer Glacier**); Claude B. Taylor (NZ) (scientific leader; *see* **Taylor Peak**); mete-

orologists Chester H. Bowers (also senior U.S. representative; *see* **Bowers Glacier**), Frank O'Donnell (*see* **O'Donnell Peak**) and William Bunker (*see* **Bunker Bluff**); Noel Hayman (aurora scientist; *see* **Hayman Nunataks**). The other 2 New Zealanders were Malcolm Woodgyer (*see* **Woodgyer Peak**) and R.R. Exley (*see* **Mount Exley**). **1963 winter**: Leonard Wylde (NZ) (officer-in-charge; *see* **Wylde Glacier**); Lt. E.E. Fitch (medical officer; *see* **Fitch Glacier**); Henry Freimanis (USA) (scientific leader); Elwood Barnes (cosmic ray scientist; *see* **Barnes Peak**); meteorologists Gene Levi (*see* **Levi Peak**), Rayburn Price (*see* **Mount Price**), Francis Willey (*see* **Willey Point**), Larry Shute (*see* **Mount Shute**), and Kent Wyckoff (*see* **Wyckoff Glacier**). The other New Zealanders were Douglas Suter (*see* **Suter Glacier**) and Brian Main (*see* **Cape Main**). **March 6, 1964**: The station was closed after a fire. **1964 winter**: USN personnel were: Hugh King (medical officer and officer-in-charge; *see* **King Glacier**); Charles Bell (utilitiesman; *see* **Bell Bluff**); Roy Lann (cook; *see* **Lann Glacier**); Norman Ridgeway (NZ) (scientific leader; *see* **Ridgeway Glacier**). The other 2 New Zealanders were Desmond Rowles (*see* **Rowles Glacier**) and E.N. Green (*see* **Green Nunatak**). Hallett was a year-round station from 1957 to 1964, and a summer station from 1964. The winter population varied between 7 and 12 scientists and between 7 and 9 support personnel. The summer populations (after 1964) varied between 2 and 9 scientists, and between 12 and 21 support personnel. **1964-65 summer**: Theodore G. Nagel (leader); geologists Dwight Crowder (*see* **Mount Crowder**) and Donald Coates (*see* **Coates Rocks**); meteorologists Robert Judd (*see* **Mount Judd**), Gene Levi (*see* **Levi Peak**), Ray Bridwell (*see* **Bridwell Peak**) and John Shelton (*see* **Mount Shelton**); Dietland Müller-Schwarze (biologist). **1965-66 summer**: biologists Eric Collins (*see* **Collins Peak**), Elmer Gless (*see* **Gless Peak**) and David Thompson (*see* **Thompson Spur**). **1966**: it was designated SPA #7. **1966-67 summer**: Gerald Mello (officer-in-charge; *see* **Mello Nunatak**); biologists Steven Frishman (*see* **Mount Frishman**), Elmer Gless (*see* **Gless Peak**), Theodore Gannutz (*see* **Gannutz Glacier**), Otto Lange (*see* **Lange Peak**) and David Thompson (*see* **Thompson Spur**). **1967-68 summer**: biologists Nels Granholm (*see* **Mount Granholm**), Elmer Gless (*see* **Gless Peak**), John Baker (*see* **Baker Glacier**) and Richard Tenaza (*see* **Tenaza Peak**). **1968-69 summer**: Rudy Castillo (aerographer; *see* **Castillo Point**); biologists John Baker (*see* **Baker Glacier**), Gary Walsh (*see* **Walsh Glacier**), and DeVere Burt (*see* **Burt Rocks**). **Feb. 19, 1973**: The station was closed. **1982-83**: the station was inspected to see if it could be used again. **1986**: New Zealanders worked here to reclaim the disused station, but now only the main building remains as an emergency hut.

Halley Bay. 75°29' S, 26°42' W. An ephemeral Weddell Sea indentation into the ice front, between the Luitpold Coast and the Caird Coast. The "excellent landing place" that Shackleton named Glacier Bay in 1915, just before the *Endurance* went down, may be identical to the feature named in 1956 as Halley Bay, or it may have been a slightly smaller feature within the Halley Bay complex. The old Halley Bay Station was here. The Americans installed an automatic weather station here on March 21, 1990, at an elevation of 52 m, and on Nov. 7, 1990, it was removed to another site. Anyway, Halley Bay is gone now.

Halley Bay Station. 75°31' S, 26°36' W. In Halley Bay, on the Brunt Ice Shelf, on the Caird Coast of Coats Land. Dr. David Dalgliesh and 10 men built the British Royal Society IGY Expedition's base here on the Weddell Sea in Jan. 1956. The traditional hut with a pitched roof was finished on Jan. 6, and opened on Jan. 15 of that year. At that time it was also known as Base Z. It studied meteorology, glaciology, seismology, radio astronomy, ionospheric physics, aurora and airglow, and geomagnetism. Named for Edmond Halley, the astronomer. Wintering-over leaders were: Dalgliesh (1956), Robin Smart (1957), and Joe MacDowall (1958). For the rest of the personnel during IGY, *see* **British Royal Society Expedition**. Note: One must visit Andy Smith's web page on Halley. **Jan. 13, 1959**: At midnight, FIDS took the base over. **1959 winter**: George Lush (leader), Gordon Artz, Johannes Bothma, Norman Hedderley, Dwm Limbert, and John Smith (meteorologists), Mick Blackwell and Michael Sheret (geophysicists), Nelson Norman (medical officer), Dennis Savins (radioman), William Whitehall (DEM), and Jim Mace (cook). **1960 winter**: Norman Hedderley (meteorologist and leader), Alex Millar, Mike Taplin, and Walter Townsend (meteorologists), Jim Blackie, Colin Dean, and Chris Horton (geophysicsts), Dennis Ardus (glaciologist), Charles Forrest (medical officer), Mike Thurston (zoologist), George Lewis and Elliot MacDonald (ionosphere physicists), Colin Johnson (radioman), Mike Brittain (radar tech), Graham Talmage (DEM), and George Moore (cook). One of the dogs was Stumpy. **Jan. 29, 1961**: The *Kista Dan* arrived. **Feb. 1961**: A new main hut and dog kennels were built near to the original building, which, by that time, was almost completely covered by snow (the Brunt Ice Shelf receives an average of 1.2 m of snow a year). **1961 winter**: Colin Johnson (radioman and leader), Dudley Jehan, Alan Precious, Maurice Sumner, Mike Taplin, and Ed Thornton (meteorologists), George Blundell, Stuart Marsden, Mike Jarman, and Colin Dean (geophysicists), Dennis Ardus (glaciologist), Mike Bethell and Barry Peters (ionosphere physicists), Mike Thurston (zoologist), David Easty (medical officer), Eric Jones (radioman), Mike Brittain and Pete Noble (radar techs), Graham Talmage (DEM), John Skilling, Big Dave Edwards, and Ernie Docchar (builders), Bob Lee (general assistant and tractorman), and Tony Thorne-Middleton and George Moore (cooks). The dogs were: Bodach, Booboo, Debbie I, Eigg, Fay, Gnat, Kate, Kelly I, Larsen, Macnab, Muck II, Oscar, Pam II, Rhum, Shep, Stumpy, Tina, Vere, Wendy III, and Zork. **Feb. 4, 1962**: The *Kista Dan* arrived. **1962 winter**: Mike Jarman (leader), Frank Bent, Peter Blakeley, John Grifiths, Ed Thornton, and Paul Whiteman (meteorologists), George Blundell, Doug Finlayson, and Stuart Marsden (geophysicists), Mike Bethell and Barry Peters (ionosphere physicists), Chris Brown (medical officer), Jack Hill (radioman), Dave Robinson (radar tech), Ken Lambert (DEM), Chris Ruffell and Charlie Spaans (carpenters), Martin Winterton and Bob Lee (general assistants), and Rod Dean and John Holt (cooks). The dogs were: Barney I, Bodach, Booboo, Bostik, Debbie I, Eigg, Fay, Gnat, Kelly I, Larsen, Macnab, Muck II, Oscar, Pam II, Rhum, Royal, Shep, Slod, Stumpy, Tina, Vere, Wendy III, and Zork. **1963 winter**: Maurice Sumner (leader), Dave Egerton, John Griffiths, Ian Buckler, Dave Hollas, and Paul Whiteman (meteorologists), Doug Finlayson, Mike Walford, and Jim Westwood (geophysicists), Dick Worsfold (geologist), Chris Jefferies and Dave Petrie (ionosphere physicists), Neville Mann and Milne Samuel (surveyors), Gordon Bowra (doctor), Gordon Mallinson and Hugh O'Gorman (radio operators), Barry Kraehenbuehl (diesel electric mechanic), Neddy Brind (radar technician), Dad Etchells (tractor mechanic), Martin Winterton (general assistant and dog sledger), Dudley Jehan (general assistant), and Andy Champness and John Holt (cooks). The dogs were: Barney I, Bodach, Booboo, Bostik, Debbie I, Eigg, Fay, Gnat, Kate, Kelly I, Larsen, Macnab, Muck II, Nanuk, Nuga, Oscar, Pam II, Pop, Raq, Rastus II, Rhum, Rolf, Royal, Skye, Slod, Stroma, Tina, Vere, Wendy III, Wilfred, and Zork. **Aug. 1963**: Neville Mann disappeared. **1964 winter**: Dudley Jehan (leader), Dave Hollas, Ian Buckler, Chris Miller, Mike Turner, and Phil Goodwin (meteorologists), David George, Munro Sievwright, Brian Smith, Jim Westwood, and David Shipstone (geophysicists), Dick Worsfold and Lew Juckes (geologists), Bill Bellchambers, Laurence Dicken, Dave Petrie, and Jerry Wright (ionosphere physicists), Phil Cotton, Dai Wild, and Milne Samuel (surveyors), Gordon Bowra (doctor), Gordon Mallinson and Simon Russell (radio operators), Dick Fewster (radar technician), Barry Kraehenbuehl (diesel electric mechanic), Dad Etchells (tractor mechanic), Tony Baker (carpenter), Jock Thomson (general assistant and tractorman), and Andy Champness and Harry Rogers (cooks). The dogs were: Barajo, Barney I, Barra, Bitter, Bodach, Booboo, Eigg, Emma, Fay, Gnat, Jukal, Mild, Muck II, Nanuk, Nuga, Oscar, Pam II, Pop, Raq, Rastus II, Rhum, Rolf, Royal, Satan III, Skye, Slod, Snowy II, Staffa, Stroma, Suaq, Tina, Vere, Wendy III, Whisky II, and Wilfred. **1965 winter**: Phil Cotton (surveyor and leader), John Duff, Phil Goodwin, Chris Miller, Dick Stokes, and Brian Barnes (meteorologists), Munro Sievwright, David Shipstone, Brian Armstrong, Jeremy Bailey, and Bill Izatt (geophysicists), Lew Juckes and Ian Ross (geologists), Bill Bellchambers, Laurence Dicken, Stu Noble, and Jerry Wright (ionosphere physicists), Rod Rhys Jones, Geoff Lovegrove and Dai Wild (surveyors), John

Wilson (physiologist and doctor), Simon Russell and Alan Weeks (radio operators), Brian Porter and Rab Reid (diesel electric mechanics), radar technicians Dick Fewster and Dick Strafford (d. June 25, 2010, Plovdiv, Bulgaria), Alf Amphlett (electrician), Tony Baker (carpenter), Doug Beebe (general assistant and tractorman), and Tony Haynes and Harry Rogers (cooks). The dogs were: Barajo, Barra, Bitter, Bodach, Booboo, Eigg, Emma, Fay, Mild, Muck II, Nanuk, Nuga, Oscar, Pop, Raq, Rastus II, Rhum, Rolf, Royal, Satan III, Skye, Slod, Snowy II, Staffa, Stroma, Suaq, Tina, Whisky II, and Wilfred. **1966 winter**: Paul Whiteman (leader), Phil Cotterill, Colin Read, Colin Wornham, Andy Williams, and Dick Stokes (meteorologists), Mick Shaw (physicist), Bill Izatt, Brian Armstrong, and Geoff McWilliams (geophysicists), Bob Thomas (glaciologist), Dave Brook (geologist), Tony Wilson and Stu Noble (ionosphere physicists), Geoff Lovegrove, Milne Samuel, and Alan Johnston (surveyors), Ron Lloyd (doctor), Dick Keyte and Chris Gostick (radio operators), Brian Swift (radar technician), Dick Cuthbertson (diesel mechanic), John Skipworth (electrician), Peter Blakeley and Doug Beebe (tractor mechanics), Tony Haynes (general assistant), and Dave McKerrow and Charlie Blossom (cooks). The dogs were: Barajo, Barra, Bitter, Bodach, Booboo, Borga, Changi, Dove, Eigg, Esk, Fay, Fedu, Frosty, Ham, Japhet, Luqa, Medina, Mild, Muck II, Nuga, Oscar, Pop, Raq, Rastus II, Rhum, Rolf, Royal, Seletar, Sharjah, Shem, Skye, Snowy II, Staffa, Stroma, Suaq, Teifi, Tengah, Tina, Wensen, Whisky II, and Wilfred. The new buildings were eventually buried by snow too, and closed in early 1968, by which time it was known as Station Z. However, earlier, in Jan. and Feb. 1967, Halley II was built (see the entry immediately below), as a replacement for the original Halley Bay Station, and for the winter of 1967 the two stations operated side by side (*see* **Halley II** for a list of combined 1967 wintering-over personnel). The old Halley Bay Station is now known as Halley I. There was an attendant depot and staging post called the Bob-Pi Hut (q.v.). Halley I eventually calved off into the sea.

Halley II. 75°31' S, 26°39' W. The replacement for Halley Bay Station, on the Brunt Ice Shelf. When they knew that the original could no longer function, they built a new one, Halley II, in Jan.-Feb. 1967, 4 km from the old site and 5 km from the ice front. It was also known as Station Z. It also had a pitched roof, but reinforced with steel supports. In 1967 and 1968 the two stations operated at the same time, the new one being known as The Village, or Grillage Village. **1967 winter**: This was the largest-ever wintering-over party at Halley — 38 men. This is a combined list of those personnel who were at the new and old stations simultaneously (a situation that occurred only for this winter). Ricky Chinn (base commander), Mike Durrant, Andy Williams, and Colin Read (meteorologists), Colin Wornham (meteorologist and general assistant), Mike Skidmore and Dave Brook (geologists), Geoff McWilliam, Jim Jamieson, and Bill Laidlaw (geophysicists), Paul Coslett and Bob Thomas (glaciologists), Tony Wilson (ionosphere physicist), Al Johnston and Milne Samuel (surveyors), Mike Burgin (physiologist and general assistant), John Brotherhood (medical officer), Ken Halliday and Chris Gostick (radio operator), Keith Gainey (radar technician), Bob Docchar and Big Al Smith (builders), Jim Shirtcliffe (builder and general assistant), John Gallsworthy, Dave Hill, and Tony Baker (carpenters), Paul Wharton and Geoff Smith (electricians), John Carter and Slim Baring-Gould (diesel electric mechanics), Dad Etchells and Chris Sykes (tractor mechanics), Peter Noble and Joe Porter (general assistants and mountain climbers), Nick Mathys (general assistant), and Neil Fothergill, Dave McKerrow, and Charlie Blossom (cooks). The dogs were: Barra, Booboo, Borga, Chalky, Changi, Chroma, Colic, Dove, Dusty III, Esk, Fedu, Flossie, Françoise, Frosty, Ham, Jill II, Jock III, Kolya, Lady III, Lassie II, Lin, Lister, Lobo II, Lotus II, Luqa, Michelle, Mild, Mitral, Mitya, Moo, Nuga, Oscar, Pop, Rastus II, Rolf, Rover IIII, Royal, Seletar, Sharjah, Shem, Skye, Snowy II, Staffa, Steno, Stroma, Suaq, Teifi, Tengah, Tricia, Trixie, Wensen, Whisky II, and Wilfred. Ken Halliday was the first Falkland Islander to winter-over at Halley Bay. **Dec. 2, 1967**: Dr. John Brotherhood flown out of Halley by Hercules aircraft from McMurdo (*see* **International cooperation**). **1968 winter**: Chris Sykes (base commander), Mike Durrant, Peter Mountford, Chas Platt, and Dave French (meteorologists), Peter Clarkson and Mike Skidmore (geologists), Jim Jamieson, Bill Laidlaw, and Jim Chalmers (geophysicists), Paul Coslett and Andrew Wager (glaciologists), David Groom and Peter Pitts (ionosphere physicists), Murray Roberts (medical officer and physiologist), John Fry (physiologist), Ken Halliday and Chris Hodson (radio operators), Keith Gainey (radar technician), John Gallsworthy (carpenter), Geoff Smith (electrician), John Carter (diesel electric mechanic), Dad Etchells and Stuart MacQuarrie (tractor mechanics), Nick Mathys, Norris Riley, Harry Wiggans, and Peter Noble (general assistants), and Duncan MacLennan and Clive Jones (cooks). The dogs were: Abdul, April, Arwin, Barra, Boby, Bompur, Booboo, Bophur, Borga, Chalky, Changi, Colic, Dad, Dove, Dusty III, Eleanor, Elsa, Esk, Evie, Fedu, Flossie, Françoise, Frodo, Frosty, Gandalf, Gollum, Ham, Inga, Jock III, Josie, Lady III, Lassie II, Lin, Lister, Lobo II, Luqa, Merry I, Michelle, Mitral, Mitya, Nuga, Pat, Pippin, Pop, Rastus II, Ratti, Rolf, Rosie III, Rover IIII, Royal, Seletar, Sharjah, Shem, Skipper, Skye, Snowy II, Staffa, Stroma, Suaq, Teifi, Tengah, Trixie, Umiak II, Wensen, Whisky II, Wilfred, and Zita. **1969 winter**: Peter Clarkson (geologist and base commander), Dave French, Graham Soar, Roger Tiffin, and Chas Platt (meteorologists), Ian Smith, Bob Wells, and Jim Chalmers (geophysicists), Keith Chappell and David Groom (ionosphere physicists), Allen Clayton and Tony True (surveyors), Dennis Wilkins (medical officer and physiologist), Chris Gostick and Chris Wells (radio operators), Dave Sealey (radar technician), Ron James (builder), Geoff Smith (electrician), John Carter and Dave Hoy (diesel electric mechanics), Malky Macrae and Dick Palmer (tractor mechanics), Malcolm Guyatt, Harry Wiggans, Graham Wright, and Norris Riley (general assistants), and Duncan MacLennan and Clive Jones (cooks). JC Carter and Abdul Smith became the first men to winter-over for 3 consecutive years at Halley Bay. The dogs were: Abdul, April, Audrey, Boby, Booboo, Bophur, Bunny, Changi, Chey II, Colic, Craven, Dad, Dove, Dusty III, Eleanor, Elsa, Esk, Evie, Fedu, Françoise, Frodo, Frosty, Gandalf, Gollum, Ham, Inga, Jock III, Josie, Lady III, Lassie II, Lister, Lobo II, Luqa, Mavis, Merry I, Michelle, Mitral, Mitya, Nancy, Nuga, Pat, Pippin, Rastus II, Ratti, Rover IIII, Seletar, Sharjah, Shem, Skipper, Suaq, Tengah, Trixie, Tuesday, Umiak II, Wensen, and Zita. **1970 winter**: Allen Clayton (surveyor and base commander), Tony Gannon, Hwfa Jones, Graham Soar, and John Gauntlett (meteorologists), Ian Smith, Bob Wells, and Brian Cornock (geophysicists), David Peel (glaciologist), Keith Chappell and John Nockels (ionosphere physicists), Iain Leith (medical officer and physiologist), Derek Devitt and Chris Wells (radio operators), Bruce Jarvis (radar technician), Paul Burton (builder), Mike Taylor (electrician), Steve Bean (diesel electric mechanic), Ron Gill and Dave Hoy (tractor mechanics), Mark Vallance, Graham Wright, and Mike Warden (general assistants), and Dave Clark and Martin Pinder (cooks). The dogs were: Abdul, April, Ari, Arkid, Audrey, Boby, Booboo, Bophur, Bunny, Changi, Chey II, Colic, Craven, Dad, Dove, Duek, Dusty III, Eleanor, Elsa, Esk, Evie, Fedu, Fin, Françoise, Freckles, Frodo, Frosty, Gandalf, Gollum, Ham, Inga, Jock III, Kalaleq, Kunute, Lassie II, Lobo II, Luqa, Merry I, Michelle, Mitral, Mitya, Naf, Pat, Pippin, Quebec, Rastus II, Ratti, Rover IIII, Seletar, Sharjah, Shem, Suaq, Tengah, Trixie, Umiak II, Wensen, Woolfe, and Zita. **1971 winter**: Mark Vallance (base commander), Gordon Devine, Tony Gannon, Hwfa Jones, and Ron Loan (meteorologists), Brian Cornock, Paul Jones, Andy Smith, and Norman Eddlestone (geophysicists), John Nockels and Trevor Thomas (ionosphere physicists), Bob Paterson (medical officer and physiologist), John Flick and Rick Lee (radio operators), Jay Rushby (radar technician), Brian Blackwell and Toby Stoneham (diesel electric mechanics), Paul Brangham (builder), Mike Taylor (electrician), Steve Bean (tractor mechanic), Muff Warden (general assistant), and Ian Bury and Keith Stewardson (cooks). The dogs were: Abdul, April, Arkid, Audrey, Beda, Beorn, Boby, Booboo, Bophur, Brae, Changi, Chey II, Colic, Craven, Dad, Dusty III, Elsa, Esk, Evie, Fedu, Fin, Freckles, Frodo, Frosty, Gandalf, Ham, Helix, Inga, Isolde, Jock III, Kalaleq, Kirstie, Kunute, Lassie II, Lobo II, Luqa, Michelle, Mitral, Mitya, Muff, Pat, Pippin, Ratti, Seletar, Sharjah, Shem, Strider, Suaq, Tengah, Umiak II, Wensen, and

Woolfe. **1972 winter**: Andy Smith (geophysicist and base commander), Trevor Boyt, Roger Daynes, Gordon Devine, and Ron Loan (meteorologists), Norman Eddlestone, Dave Habgood, and Paul Jones (geophysicists), Brian Jenkins and Trevor Thomas (ionosphere physicists), Iain Campbell (medical officer and physiologist), Kev Acheson (physiologist), John Flick (radio operator), Paul Brangham (builder), Tony Jackson (electrician), Brian Blackwell (diesel electric mechanic), Gordon Ramage and Toby Stoneham (tractor mechanics), Jack Donaldson and Dave Fletcher (general assistants), and Ian Bury and Keith Stewardson (cooks). The dogs were: Abdul, April, Arkid, Audrey, Beorn, Brae, Chey II, Colic, Craven, Elsa, Fin, Freckles, Frodo, Frosty, Ham, Helix, Isolde, Jock III, Kirstie, Kunute, Lassie II, Michelle, Mitral, Mitya, Muff, Pat, Pippin, Ratti, Seletar, Sharjah, Shem, Strider, Tengah, and Woolfe. **1973 winter**: Roger Daynes (meteorologist and base commander), Trevor Boyt, Colin Cuthbert, and Paul Ellis (meteorologists), Ken Stevenson (physicist), Chris Bienkowski and Dave Habgood (geophysicists), Brian Jenkins and Dewi Jones (ionosphere physicists), John Dawson (medical officer and physiologist), John Burke (radio operator), Alan Gay, Chas Holder, Andy Turner, Tony Wincott, Richard Waller, and Don Mackay (builders), Tony Jackson (electrician), Iain MacInnes and Dick Walker (diesel electric mechanics), and Clive Palfrey (cook). For the winter of 1973 Halley II and Halley III operated at the same time (the list of personnel above is a combined list), and at the end of the season Halley II was closed and replaced by Halley III. Halley II eventually calved off into the sea. There were only two dogs — Brae and Muff.

Halley III. 75°31' S, 26°43' W. In early 1973 this third incarnation of Halley Bay Station was opened, 500 m from the old site, and consisted of a series of pre-fabricated huts housed inside corrugated steel conduits (or tubes). Halley II and Halley III both operated at the same time in the winter of 1973 (*see* **Halley II** for a combined list of personnel). On Aug. 15, 1977 the name officially changed from Halley Bay Station to Station Z-Halley, and commonly known as Halley. **1974 winter**: Brian Jones (base commander), Graham Chambers, Colin Cuthbert, John Main, and Andy Moinet (meteorologists), Chris Bienkowski and Ken Stevenson (physicists), David Boteler and Dewi Jones (ionosphere physicist), Tom Pearce (medical officer), Ken Lax (radio operator), Dermot Connolly and Ron Dalton (builders), Richard Hewitson (electrician), Iain MacInnes (diesel electric mechanic), Gordon Wright (tractor mechanic), and Malcolm Daley (cook). The dogs Brae and Muff were still there. In July 1974 the temperature reached -55°F, an all-time recorded low for Halley. **1975 winter**: Kenn Back (base commander), Vince Carter, Graham Chambers, John Main, and Graham Mawdsley (meteorologists), Robert Bryant and John McClure (physicists), Andy Allmann (VLF physicist), David Boteler, Alan Trapani, and Clive Sweetingham (ionosphere physicists), Eric Harvey (medical officer), Ken Lax (radio operator), Jack Temple (builder), Steve Norris (electrician), Alec Hurley (diesel mechanic), Chris Turner (tractor mechanic), and Malcolm Daley (cook). The dogs Brae and Muff were still there. **1976 winter**: Ernie Thornley (base commander), Vince Carter, Phil Hart, Graham Mawdsley, and George Morgan (meteorologists), Robert Bryant and Andy Quinn (physicists), Andy Allman (VLF physicist), Steve Chambers, Clive Sweetingham, and Dave Hogg (ionosphere physicists), David Patuck (medical officer), Ernie Johnson (radio operator), Ian Rutherford (builer), Steve Emery (electrician), Chris Turner (tractor mechanic), and Roy Whitfield (cook). The dogs Brae and Muff were still there. **1977 winter**: Ken Lax (base commander), Phil Hart and George Morgan (meteorologists), John Bradford, Barry Gardiner, Andy Quinn, and Ian Somerton (physicists), Harry Matthews (VLF physicist), Steve Chambers, Dave Hogg, and Mike Pinnock (ionosphere physicists), Ian Levack (medical officer), Tom Forsyth (radio operator), Ian Rutherford (builder), Steve Emery (electrician), Pete Witty (diesel mechanic), Mike Davies and Michael Houlcroft (tractor mechanics), John Wright and Pete Edwards (general assistants), and Jim Oliver (cook). The dogs Brae and Muff were still there. On Jan. 4, 1978, three new dogs — Ralph, Tom, and Nadine, would arrive at Halley on the *Bransfield*, from Base E. This would bring the dog compliment at Halley up to 5 for the 1978 winter. **1978 winter**: Miles Mosley (base commander), John Bradford, Ian Somerton, Graham Westmacott, and Tom Lachlan-Cope (meteorologists and physicists), Martin Leeson (meteorologist), Andy Allman (VLF physicist), Charlie Adams, Michael Howes, and Mike Pinnock (ionosphere physicists), William Freeland (medical officer), Pete Bayman (radio operator), Jim Parker (builder), William Rogers (electrician), Kevin Gilbert (diesel mechanic), Michael Houlcroft (tractor mechanic), and Derek Conder (cook). Nadine, one of the new dogs, died. **1979 winter**: Pete Witty (base commander), Nick Jarvis, Tom Lachlan-Cope, Alan Ward, Graham Westmacott, and Pete Jenkins (meteorologists and physicists), Martin Leeson (meteorologist), Pat Cooper, Colin Morrell, and Mick Roscoe (ionosphere physicists), Chris Johnson (medical officer), Andrew Green (radio operator), Jack Scotcher (builder), Mike Hood (electrician), John Williams (diesel mechanic), Andy Spearey (tractor mechanic), and David Walton (cook). Muff died, leaving Brae, Ralph, and Tom as the three Halley dogs. **1979-80 summer**: Miles Mosley, the base commander for the summer and upcoming winter, was killed on Feb. 2, 1980, in an accident, and replaced by Jack Scotcher. **1980 winter**: Jack Scotcher (builder and base commander), Peter Hall, Brian James, Nick Jarvis, Pete Jenkins, and Alan Ward (meteorologists and physicists), Pete Gibbs (meteorologist), Pat Cooper, Colin Morrell, and Mick Roscoe (ionosphere physicists), Steve Smith (medical officer), Andrew Green (radio operator), Mike Hood (electrician), Tim Godsmark (diesel mechanic), Steve Holdich (tractor mechanic), and Robin Gregory (cook). This was the last year Halley had dogs. Brae, Ralph, and Tom were the last. **1981 winter**: Pete Gibbs (meteorologist and base commander), Pete Hall, Brian James, Julian Rouse, and Dave Try (meteorologists and physicists), John Knapp (VLF, radar), Mike Pinnock and Keith Wright (ionosphere physicists), Gordon McRuvie (medical officer), Stephen Williams (radio operator), Trefor Edwards (builder), Dave Uzzaman (electrician), Andy Brookes and John Tooze (diesel mechanics), Steve Holdich (tractor mechanic). Note: There was no actual cook, as such. **1982 winter**: Gijs "Hash" Nieuwenhuijs (base commander), Ian Jones, Julian Rouse, Brian Thompson, and Dave Try (meteorologists and physicists), Andy Hill (meteorologist), Pete Jenkins (physicist), Roland Halliwell and Keith Wright (ionosphere physicists), Richard Parker (medical officer), Stephen Williams (radio operator), Mal Liddle (builder), Dave Uzzaman (electrician), Bob Bowler and Steve Eadie (diesel mechanics), Andy Brookes (tractor mechanic), Rudy Bramwell and Dave Carrivick (general assistants), and Mike Smith (cook). **1983 winter**: Bob Bowler (base commander), Ian Jones (meteorologist and physicist), Andy Hill and Alex Torres (meteorologists), Vernon Attew (geophysicist), Keith Yearby (VLF scientist), Roland Halliwell and Steve Lloyd (AIS engineers), Steve Krikler (doctor), Steve Clark (radio operator), Pete Tarnas (builder), Steve Eadie and Dermot Hopkins (diesel mechanics), Pete Davies (tractor mechanic), and Neil Merrick (cook). The station operated at the same time as its successor, Halley IV, in the winter of 1983, and closed in Feb. 1984. Halley III was cleaned up in Feb. 1991, but finally broke off from the Brunt Ice Shelf and disappeared (this part of the Brunt Ice Shelf moves westward at approx. 700 m a year).

Halley IV. 75°36' S, 26°40' W. Finished in late 1982 on the Brunt Ice Shelf, 7 km from the old site and 15 km from the ice front, this fourth incarnation of the original Halley Bay Station was finished on Jan. 2, 1983. It consisted of two-story huts housed inside conduits (or tubes) constructed from interlocking plywood-faced panels. It operated at the same time as Halley III in the winter of 1983. It closed on Feb. 19, 1992, and was replaced by Halley V. The site was cleaned up during the 1992-93 season, but is now buried under the snow and ice. **1983 winter**: Doug Allan (base commander), Andrew Green (radio operator), Patrick Turner and Simon Goswell (engineers), Jack Scotcher, William Armstrong, Steven Davies, John Fleming, and Paul Humphries (builders), Tony Escott (electrician), Dave Sycamore (diesel mechanic), Gerry Johnson (general assistant), and Dale Hall (cook). **1984 winter**: Colin Nicol (base commander), Dave Williams, Mick Daly, Nick Quinsey, and Vernon Attew (meteorologists and physicists), Steve Gill (meteorologist), Dave North, Keith Yearby, Steve Lloyd, and Stuart Pickstock (ionosphere physicists), James Broad-

way (medical officer), Dave Hughes (radio operator), Pete Cavanagh (engineer), Graham Bayliss (builder), Dave Thomas (electrician), Mick Dixon and Dave Sycamore (diesel mechanics), Pete Davies (tractor mechanic), and Dale Hall (cook). **1985 winter**: Len Airey (base commander), Nick Quinsey and Mick Daly (meteorologists and physicists), Steve Gill (meteorologist), Toby Clark, Stuart Pickstock, and Dave North (ionosphere physicists), John Youens (medical officer), Dave Hughes (radio operator), Alan King (engineer), Anthony Lodge (AIS engineer), Graham Bayliss and Dale Heaton (builders), Dave Thomas (electrician), Mick Dixon and Keith Christie (diesel mechanics), Mike Howes (tractor mechanic), and Steve Ault (cook). **1986 winter**: Mick Roscoe (base commander), Ben Chappel, Pat Lurcock, and Gary Whitehead (meteorologists and physicists), Phil Anderson and Mark Row (meteorologists), Toby Clark (VLF physicist), Tony Maggs (medical officer), Mike Tracey (radio operator), Paul Aslin, Anthony Lodge, and Chris McDaid (AIS engineers), Dale Heaton (builder), Mal Smith (electrician), Graham Wood (AIS and diesel mechanic), Keith Christie (diesel mechanic), Mike Howes (tractor mechanic), and Steve Ault (cook). **1987 winter**: Paul Aslin (ionosphere physicist and base commander), Adrian Bateman, Ben Chappel, Pat Lurcock, Andy Sweetman, and Gary Whitehead (meteorologists and physicists), Chetan Modi (VLF physicist), Mark Midwinter (medical officer), John Dann (tractor mechanic), Graham Goodwin (builder), Mal Smith (electrician), Dave Hart (plumber), Pete Rowe (AIS and diesel mechanic), Tim Lawrence (diesel mechanic), Keith Stanwyck and Stephen Williams (handymen and builders), and Ian Philip (cook). **1988 winter**: Brian Newham (base commander), Adrian Bateman, Ray Freshwater, and James Squires (meteorologists and physicists), Chetan Modi (VLF physicist), Jo Adlard (AIS physicist), Jeremy Owen (medical officer), Barry Clark (communications manager), Simon Salter and Dave Cruse (AIS engineers), Mark Leonard ("PACE" engineer), Graham Goodwin (builder), Phil Clarke (electrician), Steve Dove (plumber), Dave Townsend (diesel mechanic), Graham Burgess and John Dann (tractor mechanics), David Figg (handyman and builder), and Martin Barber (cook). **1989 winter**: Donny Stewart (base commander), Ray Freshwater, James Squires, and Andy Tait (meteorologists and physicists), Dave Ingle (VLF physicist), Jo Adlard (AIS physicist), Rory O'Conor (medical officer), Barry Clark (communications manager), Mike Rose and Simon Salter (AIS engineers), Mark Leonard ("PACE" engineer), Ewan Hunter and Mark Walmsley (builders), Phil Clarke (electrician), Simon Levitt (plumber), Keith Filner (AIS and diesel mechanic), Dave Townsend (diesel mechanic), Steve Burns (tractor mechanic), Dave Cruse (base assistant), and Neil Carrington (cook). **1990 winter**: Adrian "Aids" Bateman (base commander), Andy Tait and Russ Ladkin (meteorologists and physicists), Jim Conder (physicist and "PACE" engineer), Dave Ingle (VLF physicist), Ian Farquhar (AIS physicist), Jonathan Ross (medical officer), Steve Lloyd (communications manager), Mike Rose and Mark Stuart (AIS engineers), Simon Caines, Ewan Hunter, and Mark Walmsley (builders), Les Whittamore (electrician), Keith Filmer (AIS and diesel mechanic), Nick Bracken (diesel mechanic), Alan Russell (tractor mechanic), Peter Readman (base assistant), and Neil Carrington (cook). **1991 winter**: Les Whittamore (electrician and base commander), Steve Colwell, Jon Evans, and Russ Ladkin (meteorologists and physicists), Phil Anderson (ionosphere physicist), Vivek Kulkarni (medical officer), Pete Lens (communications manager), Chris Thomas (AIS engineer), Ian Smart and Matt Tallents (builder), Paul Burkinshaw (plumber), James Shelley (AIS and diesel mechanic), Robin Badger (tractor mechanic), Keith Stanwyck (handyman and builder), and Neil Roster (cook).

Halley V. 75°35' S, 26°39' W. The fifth incarnation of the original Halley Bay Station, this one is, like all the others, on the Brunt Ice Shelf, in Coats Land. It studies atmospheric sciences, and does surveying, glaciology and geology, year-round. It is supplied twice a year by ship which arrives at the edge of the ice shelf and the supplies are then hauled by sledges attached to Sno-cats to the base, which is 12 km inland (but still on the ice shelf). It was planned from 1985, was begun in Jan. 1989, occupied by the builders in the winter of 1990 and 1991, and commissioned in Feb. 1992 to replace Halley IV, becoming fully operational on Feb. 19 of that year. The three main buildings sit 4 meters above the snow on independent jackable steel platforms, so, in effect, they rise up every year in order to defeat the snow accumulation. The Laws Building, which is the main accommodation building, was named for Dick Laws (q.v.), director of BAS, 1973-87. The Piggott Building, named for Roy Piggott (q.v.), head of the Atmospheric Sciences Division of BAS, 1973-79, contains the space science labs. The Simpson Building, named for Dr George C. Simpson, contains the meteorological labs. The Drewry Building, named for Dr D.J. Drewry, Director of BAS, 1987-94, provides summer accommodation and, following the example of a garage built there the year before, is on skis so it can be moved. By 2005 the time had come for Halley VI. By 2016 Halley V will have calved off into the sea. **1990 winter**: Paddy O'Sullivan (team leader), Patrick McGoldrick and Dave Wallis (carpenters), John Stapleton and Paul Massey (electricians), Glyn Mountjoy and Geoff Bailey (plumbers), Larry Butterworth (diesel mechanic), Steven Davies (field assistant), and Simon Gray (cook). **1991 winter**: Phil Clarke (base commander), Jim Conder (physicist and "PACE" engineer), Andrew Gawthorpe (communications manager), John Jamieson (electronics engineer), Richard Swales (builder), Patrick McGoldrick (carpenter), Campbell Keith (electrician), Howard Coates, Glyn Mountjoy, and Chris Oley (plumbers), Russel Wigley (steel erector), Martin Lamb (tractor and diesel mechanic), Rob Weight (field assistant), and Simon Gray (cook). **1991-92 summer**: BAS created the role of permanent base commander, which was not the same thing as the wintering-over base commander. The PBC stayed during the summers only, then returned to Britain. The PBCs have been: Brian Newham (1991-93), Les Whittamore (1993-98), Simon Gill (1999), Steve Marshall (2000-03), Steve Brown (2003-04), Pat McGoldrick (2004-07), Vicky Auld (2007-08), Caroline Lewis (2008-10). **1992 winter**: Ewan Hunter (steel erector and base commander), Jonathan Evans, Stuart Morrison, and Charlie Robb (meteorologists and physicists), Richard Yeo (VLF physicist), Shaun Burkey (AIS physicist), Mike Leach and Chris Thomas (AIS engineers), Simon Heron ("PACE" enginer and physicist), Paul Gunning (medical officer), Pete Lens (communications officer), Richard Swales (builder), Dave Clark (electrician), Howard Coates (plumber), Mike Lawton (diesel mechanic), Robin Badger (tractor mechanic), Derek Mason (field assistant), and Neil Roster (cook). **1993 winter**: Rob Weight (field assistant and base commander), Stuart Morrison, Paul Whittington, and Graham Neden (meteorologists and physicists), Richard Yeo (VLF physicist), Simon Heron ("PACE" engineer and physicist), Shaun Burkey (AIS physicist), Mike Leach and Ian Suttle (AIS engineers), Donald Thomas (medical officer), Tim Summers (communications manager), Dave Brown (steel erector), Paul Drury (electrician), Richard Pedley (plumber), Andy Morgan (tractor and diesel mechanic), Mike Lawton (diesel mechanic), and John Hunter (cook). **1994 winter**: Brian Mallon (base commander), Graeme Hart, Graham Neden, and Paul Whittington (meteorologists and physicists), John Digby (VLF physicist), Steve Yamin-Ali (AIS physicist), Erik Lornie and Al Massarella (electrical engineers and physicists), Simon Jones (medical officer), Tim Summers (communications manager), John Bond (steel erector), Sean Brown (electrician), Steve Dow (plumber), Nigel Dean (tractor and diesel mechanic), Damian Kemp (diesel mechanic), Tim Carpenter (field assistant), and John Hunter (cook). **1995 winter**: Steve Yamin-Ali (AIS physicist and base commander), Jon Evans, Barry Morton, and Graeme Hart (meteorologists and physicists), John Digby (VLF physicist), Erik Lornie, Andre Phillips, and Al Massarella (electrical engineers and physicists), Adrian Holden (medical officer), John O'Sullivan (communications manager), Rich Parsley (steel erector), Sean Brown (electrician), Steve Marshall (plumber), Joe Nemeth (diesel mechanic), Martin Bell (tractor mechanic), Tim Elvin (field assistant), and Dave Noden (cook). **1996 winter**: Barry Morton (meteorologist, physicist, and base commander), Phil Heath and Lucy Yeomans (meteorologists and physicists), Kate Charles and Moray Grieve (research physicists), Duncan Smith and Jon Oldroyd (electronics engineers), Robin Wiltshire (medical officer), Seamus Kirwan (communications manager), Neil Cobbett (electrical engineer and physicist), Rich Parsley (steel erector), Rob Curtis (electrician), Darren Edmunds (plumber),

Joe Nemeth (diesel mechanic), Dave Routledge (field assistant), and Eamonn Liddle (cook). **1997 winter**: Martin Bell (tractor mechanic and base commander), Vicky Auld, Phil Heath, and Richard Robinson (meteorologists and physicists), Kate Charles (research physicist), David Maxfield, Duncan Smith, and Jon Oldroyd (electronics engineers), Jon Lund (medical officer), David Earle (communications manager), John Strachan (steel erector), John Davies (electrician), Darren Edmunds (plumber), Chris Jacobs (tractor and diesel mechanic), John Blunn (field assistant), and Eamonn Liddle (cook). **1998 winter**: Vicky Auld (meteorologist and base commander), Karen Shorey (meteorologist), Matt Paley (physicist), Jonathan Bedford (doctor), David Earle (radio operator), Jim Fox, David Maxfield, Kenneth O'Rourke, and Adrian Woodroffe (electronics engineers), John Strachan (steel erector), Steve Leighton (electrician), Paul Cousens (plumber), John Jennings (diesel mechanic), Matt Pickles (tractor mechanic), Dave Routledge (general assistant), and Mark Doughty (chef). **1999 winter**: Jim Fox (electronics engineer and base commander), Karen Shorey and Alex Gaffikin (meteorologists), Matt Paley (research physicist), Simon Prasad (VLF scientist), Jon Paddle (medical officer), Mark Ryan (communications manager), Kevin O'Rourke and Adrian Woodroffe (electronics engineers), Gary Wilson (steel erector), Andy Cope (electrician), Paul Cousens (plumber), Dave Whitren (diesel mechanic), Matt Pickles (tractor mechanic), Ian Marriott (general assistant), and Mark Doughty (chef). **2000 winter**: Simon Prasad (VLF scientist and base commander), Dan Carson, Gary Wilson, and Alex Gaffikin (meteorologists), Jim Keir (data manager), Dave Glynn (SHARE electronics engineer), Neil Farnell (UASD engineer), Lil Ng (doctor), Mark Stewart (communications manager), Cat Gillies (builder and structural engineer), Andy Cope (electrician), Richard Borthwick (plumber), Ernie Dustin (diesel mechanic), Pat Fielder (tractor mechanic), Steve White (field general assistant), and Richard Turner (chef). This was the first time there were 3 women winterers at Halley Bay (Gaffikin, Ng, and Gillies). **2001 winter**: Dave Glynn (electronics engineer and base commander), Richard Turner (chef and deputy base commander), Cathy Moore (meteorologist and physicist), Dan Carson and Liz Hudd (meteorologists), Alan Burchell and Neil Farnell (engineers), Jim Keir (data manager), Thomas Rieley (doctor), Mark Ryan (communications manager), Richard Casson (carpenter and steel erector), Paul Sharp (electrician), Richard Borthwick (plumber), Andy McConnachie (generator mechanic), Gary Middleton (vehicle mechanic), and Karl Farkas (general assistant). **2002 winter**: Steve Hinde (field general assistant and base commander), Elaine Cowie, Cathy Moore, and Annette Faux (meteorologists and physicists), Jon Seddon and Douglas Colliar (electronics engineer), Mark Stewart (data manager), Lyndsey Bishop (medical officer), Mark Ryan (communications manager), Mickey Hazell (carpenter), Paul Sharp (electrician), Andy McConnachie (diesel mechanic), Ben Norrish (vehicle mechanic), Kevan White (mechanical service technician), Duncan Cameron (field general assistant), and Stuart McMillan (chef). **2003 winter**: Patrick McGoldrick (steel erector and base commander), Graeme Barton (diesel mechanic), Stuart Colley, Elaine Cowie, and Annette Faux (meteorologists and physicists), Gavin Francis (doctor), Russ Locke and Mark Maltby (electronics engineers), Mark Stewart (communications and data manager), Allan Thomas (electrician), Ben Norrish (vehicle mechanic), Rob Shortman (mechanical service technician), Paul Torode (field general assistant), and Craig Nicholson (cook). This was the smallest wintering party at Halley since 1959. **2004 winter**: Russ Locke (electronics engineer and base commander), Stuart Colley and Craig Nicholls (meteorologists and physicists), Vanessa O'Brien (physicist), Rhian Salmon (atmospheric chemist), Stephane Bauguitte (tropospheric chemist), Jeff Cohen and Mark Maltby (electronics engineers), Frank Swinton (doctor), Mike Rooney (communications manager), Simon Coggins (data manager), Graham Gillie (builder), Allan Thomas (electrician), Nigel Colgan (plumber), Graeme Barton (diesel mechanic), Gareth Wale (vehicle mechanic), Ed Dodd (general assistant), and Kevin O'Donnell (chef). In Feb. 2005 Halley Bay became connected to the Internet. **2005 winter**: Simon Coggins (data manager and base commander), Craig Nicholls and Frances Williams (meteorologists and physicists), Vanessa O'Brien (physicist), Jeff Cohen, Miriam Iorwerth, and Bryn Jones (electronics engineers), Petra Schmidt (doctor), Mike Rooney (communications manager), Dan Jones (builder and carpenter), Steve Clive (electrician), Jamie Koplick (plumber), Matt Butters (generator mechanic), Gareth Wale (vehicle mechanic), Ian Coxan (field assistant), and Kevin O'Donnell (chef). **2006 winter**: John Withers (base commander), Kirsty Stead and Frances Williams (meteorologists and physicists), Andrew Warner (meteorologist and electronics engineer), Chris Oakley and Julius Rix (electronics engineers), Alex Gough (data manager), Dave Anthony (communications manager), Vicki Mottram (doctor), Liz Kempster (builder and carpenter), Mark Wales (electrician), Brian Hunter (plumber), Bob Pratt (generator mechanic), Anthony Brennan (vehicle mechanic), Simon Herniman (field assistant), and Nicola Robinson (chef). **2007 winter**: Pete Milner (base commander), Tom Speiss (ACES-FOCAS scientist and meteorologist), Kirsty Stead, David Evans, and Tamsin Gray (meteorologists), Neil Brough (atmospheric chemist), Chris Oakley (SHARE electronics engineer), Julius Rix (AIS engineer), Alex Gough (data manager), Richard Corbett (doctor), James Morrison (carpenter and builder), Mark Wales (electrician), Andy McConnachie (generator mechanic), Matt Richardson (vehicle mechanic), Brian Hunter (mechanical service technician), Sune Tamm-Buckle (field assistant), and Antony Dubber (chef). **2008 winter**: Agnieszka Fryckowska (base commander), Richard Burt (2nd-in-command and general assistant), David Stephenson (meteorologist and electronics technician), Hannah Deakin (doctor), Dean Evans (communications manager), Les Johnson (mechanical services technician), Bryan Brock (generator mechanic), Scott Iremonger (mechanic), Lance Seviour (plant operator), Joe Corner (electrician), and Paddy Power (chef). This was the smallest wintering party at Halley since 1956. Construction began on Halley VI. **2009 winter**: Agnieszka Fryckowska (base commander), Giles Finch (meteorologist and engineer), Susanna Gaynor (doctor), Karen Fowler (communications manager), Robert Johnson (electrician), Benjamin Mapston (generator mechanic), Nicholas Gregory (plant operator and mechanic), Robert Dunn (mechanical services technician), Colin Reston (relief driver and mechanic), Graham Niven (field assistant), and John Eager (chef). **2010 winter**: Paddy Power (base commander), Rich Sands (meteorologist and electronic engineer), Michael Ramage (doctor), Ian Sisson (communications manager), Tim Gee (plant operator and mechanic), Matt Hooper (fixed plant mechanic), Jack Parker (vehicle mechanic), Craig Brown (electrician), Mark Green (plumber), Ed McGough (general field assistant), and Antony Dubber (chef).

Halley VI. In March 2005 BAS held an international design competition for the new Halley VI station, and in Aug. 2005 engineers FaberMaunsell and architect Hugh Broughton won out of 86 entrants. The new base was to have skis, which bulldozers would move when appropriate. In early 2007 the plan was to start building on the Brunt Ice Shelf, to be ready for occupation in Dec. 2008. The main problem was to design a base that would not get buried or calve off into the sea. The 2009 wintering-over party were still at Halley V.

Mount Hallgren. 73°23' S, 3°22' W. A largely ice- and snow-capped mountain, with a steep, rocky N face, 43 km SW of Neumayer Cliffs, in the N part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Hallgrenskarvet, for Stig Hallgren. US-ACAN accepted the translated name Mount Hallgren in 1962.

Hallgren, Stig Eugen. b. Oct. 10, 1925, Stockholm. After leaving school, he worked in a film lab for 6 years, and in 1947 was appointed photographer to the ArtFilm Company, in Sweden, traveling and working all over the world. He was the photographer on NBSAE 1949-52. After the expedition was over he went back to Sweden.

Hallgrenskarvet *see* **Mount Hallgren**

Haloes *see* **Phenomena**

Halozetes Valley. 63°49' S, 57°49' W. A valley with a large stream running E from a pass between Berry Hill and the N extremity of Cape Lachman, at Herbert Sound, on James Ross Island. Named by UK-APC on Dec. 2, 1993, after

the mite *Halozetes belgicae*, which occurs here in profusion.

Halpern Point. 63°18' S, 57°52' W. A point, ENE of Cape Legoupil, on the N coast of Trinity Peninsula, directly S of the E part of the Duroch Islands. Surveyed by Fids from Base D in 1946. Named by US-ACAN in 1964, for Martin Halpern (b. Dec. 24, 1937, Quebec), geologist here in 1961-62, as leader of the field party from the University of Wisconsin at Madison which mapped this area. UK-APC accepted the name on Dec. 15, 1982, and it appears in the 1986 British gazetteer.

Halsknappane *see* **Halsknappane Hills**

Halsknappane Hills. 72°04' S, 6°01' E. A group of low rock nunataks (more like hills) just W of Skorvehalsen Saddle, and S of Håhellerskarvet, in the E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 aerial photos taken during the same long expedition, and named by them as Halsknappane (i.e., "the neck buttons"). US-ACAN accepted the name Halsknappane Peaks in 1966.

Halverson Peak. 71°47' S, 164°44' E. Rising to 1710 m, it marks the E side of the terminus of Rawle Glacier, in the King Range of the Concord Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Jack E. Halverson, USN, chief electronics technician at McMurdo in 1967.

Halvfarryggen *see* **Halvfarryggen Ridge**

Halvfarryggen Ridge. 71°10' S, 6°40' W. A broad ice- and snow-covered ridge separating the Ekström Ice Shelf from the Jelbart Ice Shelf, on the Princess Martha Coast of Queen Maud Land. First mapped by NBSAE 1949-52, who named it Isrygg (i.e., "ice ridge"). It was renamed by NorAE 1956-60 as Halvfarryggen (i.e., "the half way ridge"). US-ACAN accepted the name Halvfarryggen Ridge in 1970.

Halvorsen, H. b. Bergen, Norway. Seaman taken on the *Fram* at Buenos Aires in Sept. 1911, during the 2nd half of Amundsen's NorAE 1910-12.

Halvorsen, Hans. Norwegian whaling captain, working for Lars Christensen. In 1927-28 and 1928-29 he was skipper of the *Sevilla*. In 1930-31 he discovered the Princess Astrid Coast while in command of the *New Sevilla*.

Halzen Mesa. 77°24' S, 161°26' E. An oblong, island-like mesa, 8 km long, and rising to a height of 1345 m (the New Zealanders say 1435 m), it is the largest and easternmost of 3 mesas in the Insel Range of Victoria Land. The upper surface is relatively level, but the periphery is marked by abrupt cliffs that rise to between 500 and 600 m above the floor of Barwick Valley and McKelvey Valley. Named by US-ACAN in 2005, for Francis Louis Halzen (b. March 23, 1944), of the physics department, at the University of Wisconsin, at Madison, who, in 1987, came up with the idea of AMANDA, the Antarctic muon and neutrino detector array, at Pole Station, for which he was the USAP principal investigator in a project to build the "IceCube" neutrino telescope at Pole in 6 field seasons beginning in 2004-05. In short, AMANDA is looking for neutrino emissions in outer space. NZ-APC accepted the name on Sept. 12, 2005.

Ham radio *see* **Radio**

Hamarglovene *see* **Hamarglovene Crevasses**

Hamarglovene Crevasses. 71°56' S, 5°05' E. A crevasse field (the Norwegians call it an ice fall with crevasses) in lower Vestreskorve Glacier, just E of Hamarøya Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hamarglovene (i.e., "the hammer clefts"). US-ACAN accepted the name Hamarglovene Crevasses in 1967.

Hamarøya *see* **Hamarøya Mountain**

Hamarøya Mountain. 71°56' S, 4°57' E. A small, isolated, ice-free mountain in the middle of the mouth (i.e., on the W side of the N part) of Vestreskorve Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and so named by them as Hamarøya (i.e., "the hammer island") because this crag seems like an island in the glacier. US-ACAN accepted the name Hamarøya Mountain in 1967.

Hamaröygalten *see* **Sheehan Islands**

Hamarskaftet *see* **Hamarskaftet Nunataks**

Hamarskaftet Nunataks. 71°50' S, 4°58' E. A row of small nunataks about 8 km long, 3 km NW of Svarthamaren Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hamarskaftet (i.e., "the hammer handle"), in association with Svarthamaren. US-ACAN accepted the name Hamarskaftet Nunataks in 1967.

Hamarskorvene *see* **Hamarskorvene Bluff**

Hamarskorvene Bluff. 72°01' S, 5°14' E. A rock and ice bluff (the Norwegians describe it as a mound of rocks), just SE of Kvithamaren Cliff, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hamarskorvene, in association with Kvithamaren. US-ACAN accepted the name Hamarskorvene Bluff in 1966.

Hamartind *see* **Hamartind Peak**

Hamartind Peak. 72°33' S, 0°39' E. At the E extremity of Hamrane Heights, in the S part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Hamartind (i.e., "the crag peak"), in association with Hamrane Heights. US-ACAN accepted the name Hamartind Peak in 1966.

Hamasaki, Miosaku. b. 1882, Oita, Japan. A stoker on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910-12. He died on Aug. 3, 1953.

Hambleton, Harold Adam. b. 1902, Dunedin, NZ, son of Scottish immigrant moulder Adam Hambleton and his wife Beatrice Adelaide. He went to sea at 22, signing on to the *West Nilus* at Dunedin on June 28, 1924, as a wiper, for the run to the Americas. In Oct. 1924, he transferred to the *West Prospect*, as a fireman, and eventially became an able seaman. By 1931 he was sailing off the west coast of the Americas. He was a mess boy on the *Bear of Oakland* during the 2nd half of ByrdAE 1933-35, going back to the USA on the *Jacob Ruppert* at the end of the expedition. In 1941 he left Liverpool for Wellington, NZ.

Hamblin Glacier. 66°24' S, 65°07' W. Flows N to join Hugi Glacier at the SE side of Widmark Ice Piedmont, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Theodore Hamblin (1890-1952), British designer of snow goggles in the 1930s. US-ACAN accepted the name in 1971.

Hambourg Bay *see* **Hamburg Bay**

Hambrey Cliffs. 63°52' S, 58°06' W. Cliffs overlooking Whisky Bay, and extending NW for 3 km from the SW corner of Davies Dome to Baloo Col. Named by UK-APC on Nov. 15, 2006, for Prof. Michael John Hambrey (b. 1948, Rowley, Staffs), glacial sedimentologist at the Institute of Geography and Earth Sciences, at the University of Wales at Aberystwyth, and director of the Centre for Glaciology, also at the University of Wales. He undertook field work jointly with BAS on James Ross Island in 2001-02 and 2005-06. He was also a member of the UK National Committee on Antarctic Research, and UK geoscience delegate to SCAR.

Bahía Hamburg *see* **Hamburg Bay**

Hamburg Bay. 64°30' S, 63°57' W. Also spelled Hambourg Bay. Indents the NW coast of Anvers Island, immediately S of Bonnier Point, 10 km SW of Giard Point, and 24 km NE of Cape Monaco, in the Palmer Archipelago. Discovered by Dallmann in 1873-74, who named it for the home port of his expedition. Dallmann did not completely define it, and it was surveyed more accurately by FrAE 1903-05. US-ACAN accepted the name in 1951, and UK-APC followed suit on Sept. 8, 1953. The Germans call it Hamburghafen, the Chileans call it Bahía Hamburg, and the Argentines call it Bahía Hamburgo.

Hamburghafen *see* **Hamburg Bay**

Bahía Hamburgo *see* **Hamburg Bay**

Hamer Hill. 64°32' S, 59°35' W. Rising to 505 m on the E edge of the central mountain massif of Sobral Peninsula, on the Nordenskjöld Coast of Graham Land. Surveyed by Fids from Base D in 1960–61, and investigated geologically by BAS in 1978–79. Named by UK-APC on April 3, 1984, for Richard Daniel Hamer (b. 1955, Ashton, Lancs), BAS geologist at Rothera Station in the summer seasons 1978–79 and 1980–81. It appears in the 1986 British gazetteer. US-ACAN accepted the name.

Cabo Hamilton *see* **Hamilton Point**

Cape Hamilton *see* **Hamilton Point**

Kap Hamilton *see* **Hamilton Point**

[1]**Mount Hamilton**. 80°40' S, 158°17' E. A twin-topped mountain rising to 1990 m (the Australians say about 2260 m above sea level), at the E edge of the Kent Plateau, 11 km S of Mount Tuatara, on the S side of Barne Inlet, in the Churchill Mountains. Discovered during BNAE 1910–04, and named by Scott for Admiral Sir Richard Vesey Hamilton (1829–1912), Arctic explorer, author of *Naval Administration*, and a member of the Ship Committee for Scott's expedition. US-ACAN accepted the name, as did ANCA.

[2]**Mount Hamilton**. 85°44' S, 151°53' W. Rising to 1410 m (the New Zealanders say about 1524 m), it marks the W end of the Tapley Mountains, at the E side of the lower reaches of Scott Glacier, in the Queen Maud Mountains. Discovered by Larry Gould in Dec. 1929, during ByrdAE 1928–30, and visited by Quin Blackburn in Dec. 1934, during ByrdAE 1933–35. Byrd named it for Guy Clarence "G.C." Hamilton (1879–1950), general manager of the McClatchy newspapers, of Sacramento, Calif., who was a contributor to ByrdAE 1933–35. US-ACAN accepted the name, as did NZ-APC.

Punta Hamilton *see* **Hamilton Point**

Hamilton, Harold. b. 1884, Napier, NZ, son of Augustus Hamilton, director of the Dominion Museum, in Wellington. He graduated in science from Otago University, and was collector for the Dominion Museum, when he was selected to be geologist and entomologist on Macquarie Island (not in Antarctica) during AAE 1911–14. Thus he did not get to Antarctica proper, not that time, anyway. In Feb. 1914, when the *Aurora* was heading south to pick up the men from Antarctica, it passed Macquarie, and picked up Hamilton for the rest of the trip. He became the first director of the School of Maori Arts and Crafts, in Rotorua, and died there, in Dec. 1937, after a long and painful illness.

Hamilton, James Erik "Ham." b. May 26, 1891, Liverpool, son of the Rev. James Hamilton, of the Church of Scotland, and his wife Barbara. Educated at the University of Liverpool, and while a student there enlisted in the Territorial Army in 1914, for World War I. He was the British government's colonial naturalist and Falkland Islands government magistrate in the South Shetlands and Graham Land for nearly 40 years, from the 1920–21 season on. He was seconded for several of those years to the Discovery Investigations, and visited Antarctica on the *Discovery*, 1925–27, as a zoologist. He was zoologist on the Norwegian whaler *Anglo-Norse*, in Antarctic waters in 1927–28. He died on July 15, 1957, in Stanley.

Hamilton, William. b. 1907, NZ. Taken on in Dunedin on March 11, 1930 as a fireman on the *Eleanor Bolling* during ByrdAE 1928–30. Thus he never got to see Antarctica, but he did get to see New York at the end of the trip, and experience the Great Depression there.

Hamilton Bluff. 69°44' S, 73°56' E. A prominent rock bluff on the S side of Sandefjord Bay, 3 km W of Palmer Point, and anywhere between 16 and 19 km W of Mount Caroline Mikkelsen, on the Ingrid Christensen Coast of the American Highland. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers (but not named by them). Named by ANCA on Oct. 22, 1968, for Robert "Bob" Hamilton, helicopter pilot with ANARE in 1967–68, on the *Nella Dan*. Visited by Ian McLeod, geologist with the 1969 ANARE Prince Charles Mountains Survey Party. US-ACAN accepted the name in 1971.

Hamilton Cliff. 85°01' S, 90°18' W. An imposing rock cliff rising to over 600 m, it forms the NE extremity of the Ford Massif, in the Thiel Mountains. Named by Peter Bermel and Art Ford, leaders of the USGS Thiel Mountains Party here in 1960–61, for Warren B. Hamilton, USGS representative in charge of geologic studies in the McMurdo Sound dry valleys area in 1958–59. US-ACAN accepted the name in 1962.

[1]**Hamilton Glacier**. 77°33' S, 157°25' W. A glacier flowing NW for about 8 km from the Edward VII Peninsula, S of Cape Colbeck. Named by US-ACAN in 2003, for Gordon S. Hamilton, of the University of Maine, theoretical and field researcher of ice motion in the West Antarctic ice stream area, from the 1980s onwards.

[2]**Hamilton Glacier**. 82°40' S, 160°15' E. A glacier, about 20 km long, flowing from the N side of Mount Markham (i.e., from the NW slopes of the Markham Plateau) in the Queen Elizabeth Range, into the Nimrod Glacier. Named by the Northern Party of NZGSAE 1960–61 for agricultural scientist William Maxwell Hamilton (1909–1992), with the NZ Department of Scientific and Industrial Research (DSIR) from 1936, and secretary from 1953 (the term secretary later became director general). He retired in 1971 and, 6 weeks after the DSIR ceased to exist, so did Mr. Hamilton. US-ACAN accepted the name in 1966.

Hamilton Ice Piedmont. 74°30' S, 110°18' W. About 13 km wide, to the E of Wyatt Hill, Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1977, for Robert Hamilton, meteorologist at the University of California, at Davis, USARP scientific leader at Pole Station for the winter of 1975.

Hamilton Point. 64°22' S, 57°18' W. A flat-topped point marking the S side of the entrance to Markham Bay, and also the SE point of James Ross Island. Discovered on Jan. 6, 1843, by RossAE 1839–43, and named by Ross as Cape Hamilton, for Capt. (later Adm.) William Alexander Baillie Hamilton (1803–1881), RN, private secretary to his 2nd cousin the Earl of Haddington (then 1st Lord of the Admiralty), and later 2nd secretary to the Admiralty. It appears as such on Ross's chart of 1844. It was surveyed in 1902–03, by SwedAE 1901–04, who called it Kap Hamilton. Fids from Base D re-surveyed it in Aug. 1953, and that was the year it first appears as Hamilton Point (point being a better term than cape). US-ACAN accepted the name Hamilton Point in 1956, and UK-APC followed suit on Sept. 4, 1957. The Argentines had been calling it Cabo Hamilton from 1908, and that was the name accepted by the 1970 Argentine gazetteer. It appeared on a 1962 Chilean chart as Punta Hamilton, and that was the name accepted by the 1974 Chilean gazetteer.

Hamm Peak. 69°43' S, 74°08' E. A small rock peak, partly ice-covered, rising to about 151 m, close S of Strover Peak, and 11 km WNW of Mount Caroline Mikkelsen, just back from the Ingrid Christensen Coast. Photographed aerially by LCE 1936–37, and mapped from these photos by Norwegian cartographers in 1946. Named by ANCA on Oct. 22, 1968, for George F. Hamm, officer in charge of Mawson Station in 1968. He established a survey station here. US-ACAN accepted the name in 1971.

Hammaren, N. *see* **Órcadas Station**, 1918

Hammer Col. 78°34' S, 85°23' W. A broad, relatively level, ice-covered col, 2.5 km wide, at an elevation of about 3800 m above sea level, between the Craddock Massif and the S part of the Vinson Massif, in the Sentinel Range of the Ellsworth Mountains. The col visually separates the 2 massifs whether viewed from the E or W. Named by US-ACAN in 2006, for William R. Hammer, of the department of geology at Augustana College, in Rockford, Ill., USAP investigator of vertebrate fossils, mainly in the central Transantarctic Mountains, from 1977 onwards.

Hammer Hill. 61°05' S, 55°21' W. Rising to about 500 m just S of Cape Yelcho, in the NW part of Elephant Island, it is the most northerly hill on the island, in the South Shetlands. Surveyed in Dec. 1970, by the British Joint Services Expedition of 1970–71, and named by them as The Pap. They must have known that this name ("pap" means "tit") would be unacceptable to the British naming committee, and it was. UK-APC accepted the name Hammer Hill on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears as such in the 1974 British gazetteer. It appears on a 1977 Argentine chart, translated as Colina Martillo, and that is the name the Argentines use today. The Brazilian refugio Engenheiro Wiltgen (q.v.) was here. This hill was last plotted by the British, in late 2008.

Hammer Point. 62°21' S, 59°36' W. A point, 0.8 km SW of Catharina Point, on the NW coast of Robert Island, in the South Shetlands. Photographed aerially by FIDASE in 1956–57. It appears on a 1962 Chilean chart as Punta Clothier, named in association with Clothier Harbor, and

that was the name accepted by the 1974 Chilean gazetteer. BAS did field work here in 1975-76. Named by UK-APC on Feb. 7, 1978, as Hammer Point, for its shape, and US-ACAN followed suit with that naming. It appears as such in the 1980 British gazetteer. This feature was plotted by the British in late 2008.

Cape Hammersly. 66°28' S, 115°03' E. An ice-covered cape midway between Williamson Glacier and Totten Glacier, on the Budd Coast. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN for George W. Hammersly.

Hammersly, George W. b. 1820, Virginia. Midshipman on USEE 1838-42. He joined the *Peacock* at Callao, and transferred to the *Vincennes* at Fiji. After his return to the USA, he was promoted to passed midshipman in June 1843, and, in Sept. 1843, joined the frigate *Savannah*, which left New York on Oct. 18, 1843, bound for Rio, and then on around the Horn to the Pacific. By 1845 he was acting lieutenant on the store ship *Relief*, and on Aug. 24, 1846, he left Norfolk, Va., as acting lieutenant on the *Levant*, as part of the Pacific Squadron involved in the Mexican War, and was still aboard her in 1847. In 1850 he was harbormaster in Sacramento.

Hammond, Henry *see* **USEE 1838-42**

Hammond Glacier. 77°25' S, 146°00' W. Also called Hammond Inlet. On the NE side of the Haines Mountains, it flows NW for about 60 km to the Sulzberger Ice Shelf, in the Ford Ranges of Marie Byrd Land. Discovered in 1934 during ByrdAE 1933-35, and named by Byrd as John Hays Hammond Glacier, for John Hays Hammond (1855-1936), U.S. mining engineer and philanthropist. US-ACAN accepted the shortened name in 1947.

Hammond Inlet *see* **Hammond Glacier**

Hamna *see* **Hamna Bay**

Hamna Bay. 69°16' S, 39°41' E. A sheltered indentation into the W side of the southernmost part of the Langhovde Hills, on the E side of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped by from these photos in 1947 by Norwegian cartographers, who named this feature Hamna (i.e., "the harbor"). US-ACAN accepted the name Hamna Harbor in 1968.

Hamna-hyobaku *see* **Hamna Icefall**

Hamna Icefall. 69°17' S, 39°43' E. Descends to the S end of Hamna Bay, immediately E of Hamnenabben Head, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos made by JARE between 1957 and 1962, and named by them in May 1963, as Hamna-hyobaku (i.e., "Hamna icefall"), in association with Hamna Bay. US-ACAN accepted the name Hamna Icefall in 1975. The Norwegians call it Hamnebreen (which means Hamna Glacier; they define it as a small glacier).

Hamnebreen *see* **Hamna Icefall**

Hamnenabben *see* **Hamnenabben Head**

Hamnenabben Head. 69°17' S, 39°41' E. A bare rock headland forming the S shore of Hamna Bay, on the E side of Lützow-Holm Bay, to the S and W of the Langhovde Hills, on the Prince Olav Coast of Queen Maud Land. Photographed by LCE 1936-37, and mapped from these photos in 1947 by Norwegian cartographers, who named it Hamnenabben (i.e., "the harbor crag"), in association with Hamna Bay. US-ACAN accepted the name Hamnenabben Head in 1968.

Hamner Nunatak. 78°33' S, 157°56' E. Rising to 1620 m, W of the Warren Range, about 8.5 km WNW of Wise Peak. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Karl C. Hamner, biologist at McMurdo Station, 1960-61. ANCA accepted the name.

Hampelspitze. 74°34' S, 163°43' E. A peak on the W side of Snowy Point, W of Campbell Glacier, in Victoria Land. Named by the Germans.

Mount Hampson. 66°48' S, 51°11' E. About 1.5 km (the Australians say 3 km) N of Mount Rhodes, in the N part of the Tula Mountains, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA for R.W. Hampson. US-ACAN accepted the name in 1965.

Hampson, Richard William. b. 1898, Bolton, Lancs. He went to sea in 1924, and was a fireman on the *Discovery* during the 1st half of BANZARE 1929-31. After his part in the expedition, he took the *Bendigo* out of Melbourne, bound for London, where he arrived on June 25, 1930, and went to the Sailors' Home, on Wall Street, London. He also served as a fireman on the *William Scoresby*, 1937-38, and was in that position on Merchant ships during World War II. He was still sailing in 1950, as a donkeyman on P & O ships. He died in Greenwich, in 1958.

Glaciar Hampton *see* **Hampton Glacier**

Mount Hampton. 76°29' S, 125°48' W. An impressive mountain, rising to 3325 m, with a circular, ice-filled crater occupying much of its summit area, it is the most northerly of the extinct volcanoes which comprise the Executive Committee Range, in Marie Byrd Land. Discovered aerially on Dec. 15, 1940, during USAS 1939-41, and named by them for Ruth Hampton (b. Jan. 7, 1883, Chicago, as Laura Ruth Adkinson. d. Aug. 7, 1963, in Pasadena, Calif.), assistant director of the division of Islands and Territories, at the Department of the Interior, and a member of the USAS Executive Committee. The remarkable Mrs. Hampton graduated from Stanford, and went to Hawaii as a teacher, marrying William James Hampton in 1911. US-ACAN accepted the name in 1947. Mapped in detail by USGS, from ground surveys, and USN air photos taken between 1958 and 1960.

Hampton, Ian Francis Glynne. b. 1936, Freebridge-Lynn, Norfolk, as Ince Hampton, son of Raymond F.R. Hampton and his wife Elsie L. Jackson He joined FIDS in 1958, as a physiologist, and wintered-over at Base D in 1959 and 1960. In the latter year he survived a 70-foot fall down a crevasse. In 1962 he got his PhD at London University, and went to work full-time for BAS as a cold research physiologist, also working on the staff of the Medical Research Council. In 1966, in Harlow, Essex, he married Marjory L. Allen. From 1967 to 1972 he was at the University of Hawaii, as an associate professor in the department of physiology, working on the thermoregulation of aquatic animals, and then spent many years at the department of physiology, within the University of Leeds Medical School, in Yorkshire. He also lives in France.

Hampton, Wilfred Edward. b. Sept. 22, 1907, Eton. A cricketer and champion shot putter at Cambridge, where he graduated in aeronautical engineering in 1929. He went into the RAF as an engineer and flight lieutenant while still at university, and was with Gino Watkins and John Rymill in the Arctic in 1933 (the British Arctic Air Route Expedition). He was in Antarctica as chief pilot and 2nd-in-command of BGLE 1934-37, and flew the Fox Moth seaplane. He was in the RAF Reserve when he joined the Department of Civil Aviation for World War II, working on how best to use airfields, and also on hush-hush work. He joined the Napier Aero Engine Company after the war, and on July 19, 1945, at Wimbledon, he married Joan Alexina Fooks. He died on Jan. 19, 1994, in Lymington, Hants.

Hampton Bluffs. 64°25' S, 59°18' W. A group of 3 rock bluffs on the E side of Larsen Inlet, on the Nordenskjöld Coast of Graham Land. Surveyed by Fids from Base D in 1960-61, and mapped by FIDS cartographers from this survey. Named by UK-APC on Feb. 12, 1964, for Ian Hampton (q.v.), who took part in the survey. US-ACAN accepted the name later in 1964.

Hampton Glacier. 69°20' S, 70°05' W. In the NE part of Alexander Island, 40 km long, and 8 km wide, it flows NNE along the W wall of the Douglas Range, between that range and the Elgar Uplands, to Schokalsky Bay. BGLE flew up this glacier on Feb. 1, 1937, and photographed it. Wilfred Hampton was the pilot. In 1947-48 RARE photographed it again from the air, and, in Dec. 1948, Fids from Base E surveyed the mouth of the glacier. They plotted it in 69°29' S, 70°11' W. UK-APC named it on March 31, 1955, US-ACAN accepted the name later that year, and it appears on a U.S. Hydrographic Office chart of 1955. It was mapped by FIDS cartographers from 1959 FIDS aerial photos. The Argentines call it Glaciar Hampton. It has since been re-plotted.

Hampton Ridge. 83°52' S, 167°02' E. About 16 km long, it runs N from Pagoda Peak, between Montgomerie Glacier and Mackellar Glacier, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Maj. William C. Hampton, commanding officer of the U.S. Army Aviation Detachment which supported the Texas Tech Shackleton Glacier expedition of 1964-65.

Hamrane *see* **Hamrane Heights**

Hamrane Heights. 72°32' S, 0°36' E. Partly ice- and snow-capped heights between Skars-

dalen Valley and Hei Glacier, in the S part of the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Hamrane (i.e., "the crags"). US-ACAN accepted the name Hamrane Heights in 1966.

Hamrehovden *see* **Trethewry Point**

Hamreneset *see* **Bertha Island**

Hanamori, Shinkichi. Name also seen as Hanamori Shinkichi. b. 1877, Karafuto, Japan. One of the two Ainus on Shirase's Japanese South Polar Expedition, 1910-12. He took part in the Dash Patrol (q.v.). *See* **Yamabe, Yasunosuke**, for more details.

Hanbury, James G. *see* **USEE 1838-42**

Mount Hancox. 72°38' S, 166°59' E. A prominent mountain, rising to 3245 m above the N margin of the Malta Plateau, about 10 km SE of Mount Burton, in the Victory Mountains of Victoria Land. Named by the Mariner Glacier geology party (i.e., the Northern Party) of NZGSAE 1966-67, for Graham T. Hancox, senior geologist with VUWAE 1965-66. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Lake Hand. 68°33' S, 78°19' E. A medium-sized, saline lake, with no outlet, between slight hills in the middle of Breidnes Peninsula, in the Vestfold Hills. One important source of water comes via a waterfall originating in Waterfall Lake. Named by ANCA, presumably for Raymond M. "Ray" Hand, who wintered-over at Davis Station in 1977.

Hand Glacier. 72°58' S, 168°05' E. A deeply entrenched valley glacier flowing E from the E slopes of the Malta Plateau along the S side of Clapp Ridge into Borchgrevink Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for invertebrate zoologist Cadet Hammond Hand, Jr. (b. April 23, 1920, Patchogue, NY. d. Nov. 29, 2006, Bodega Bay, Calif.), professor at Berkeley and director of the Bodega Marine Lab, who was at McMurdo in 1967-68.

Handcock, Henry. b. May 20, 1855, High Barcus Close, in Crookbank, in the village of Burnopfield, Durham, and baptized on Nov. 28 of that year in neighboring Tanfield (where there was a church), son of well-to-do timber merchant William Handcock and his wife Jane Handcock (sic). The father died in 1868 (he was 64) and his widow continued managing the 107 acres and the timber business. Henry became a butcher in nearby Sheephill, married Elizabeth Watson, had a family, and when the butchery business failed, he became an insurance agent, and finally went to sea as a steward. In 1907 he was chief steward on the *Waihora*, of London, when he transferred to the *Nimrod* at Lyttelton, NZ, for the first cruise to Antarctica of BAE 1907-09. Upon his return to NZ, he rejoined the *Waihora*. He was still a Merchant Navy steward at 60, and died at his home, 54 Northside Street, South Shields, in 1917.

Handel Ice Piedmont. 70°35' S, 70°50' W. A large ice piedmont, N and W of the Colbert Mountains, between Haydn Inlet and Schubert Inlet, on the west-central coast of Alexander Island, on the E side of the Wilkins Ice Shelf. Discovered aerially in 1940 by USAS 1939-41. but not separately mapped. It was first mapped by Searle of the FIDS in 1959-60, from air photos taken in Dec. 1947 by RARE 1947-48. He plotted it in 70°20' S, 71°00' W. Named by UK-APC on March 2, 1961, for the great German-English composer Georg Friedrich Händel (1685-1759; known in England as George Frederic Handel). US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with these new coordinates, the feature appears in the 1977 British gazetteer.

The Handle. 78°00' S, 161°59' E. An elongated massif, 2.5 km SW of Table Mountain, in the NW part of the Royal Society Range, in Victoria Land. Named descriptively by Alan Sherwood, leader of the NZGSAE field party here in 1987-88. Its size and position in relation to an associated ridge suggest a handle to a sickle. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Handler Ridge. 72°30' S, 167°00' E. A prominent ridge, about 16 km long, it serves as a divide between Croll Glacier and the upper portion of Trafalgar Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Philip Handler (1917-1981), chairman of the (US) National Science Board, and president of the National Academy of Sciences.

Handley Hill. 78°01' S, 164°13' E. A small rounded point, rising to 1067 m, in a complex of hills on the S side of the Keble Hills. Named by NZ soil microbiologist Laurie Greenfield (*see* **Mahaka Ponds**), for his supervisor in the field, W.R.C. Handley. NZ-APC accepted the name on Feb. 1, 1994, and US-ACAN followed suit that year.

Handschuhsporn. 71°27' S, 162°50' E. A spur running NW from Mount Moody into Sledgers Glacier, in the NW part of the Lanterman Range, in the Bowers Mountains of Oates Land, in Victoria Land. Named by the Germans ("glove spur").

Mount Handsley. 77°56' S, 161°33' E. A subsidiary rock peak on the Knobhead massif in Victoria Land, 2.5 km SSE of Knobhead itself, it overlooks the upper part of Ferrar Glacier from the NNW. Named by NZ-APC in 1969, for Jesse Handsley. US-ACAN accepted the name in 1970.

Handsley, Jesse. b. March 29, 1876, Skegness, Lincs, but grew up, from the time he was three, in nearby Wainfleet, son of laborer John Handsley and his wife Rebecca Raithby. His mother died when he was seven, and at 14 he became a baker's apprentice in Skegness, then joined the RN, and was an able seaman on BNAE 1901-04, joining the expedition at NZ, from the *Ringaroona*. He sledged up the Ferrar Glacier and Taylor Glacier with Scott in 1903. He was promoted to petty officer, but got sick and and died on the battleship *Swiftsure* at Gibraltar, on June 3, 1916, during World War I.

Handsley Valley. 77°55' S, 161°36' E. A small, ice-free valley between Knob Head and Mount Handsley, in the Quartermain Mountains of Victoria Land. Named by NZ-APC on Feb. 1, 1993, in association with the mountain. US-ACAN accepted the name later in 1993.

Handy Cove *see* **Eagle Cove**

Haneborg-Hansenveggen. 74°23' S, 9°41' W. An ice and rock wall in the S part of Milorgfjella, in the N part of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Halfdan Haneborg Hansen (1890-1974), Norwegian Army major and Resistance leader during World War II.

Hanessian Foreland. 74°42' S, 135°15' W. A relatively low, snow-coverered peninsula, over 30 km long and 16 km wide, on the coast of Marie Byrd Land, it extends seaward between Siniff Bay and the W end of the Getz Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1975, for John Hanessian, Jr. (1925-1974), of George Washington University, in Washington, DC, head of the U.S. IGY Antarctic program (1957-58). He first flew into Antarctica as a passenger in an R4D, arriving at McMurdo on Oct. 19, 1956 (*see* that date under **Operation Deep Freeze II**).

Hanging Gardens. 60°43' S, 45°36' W. A terraced moss hillside with extensive moss banks and moss carpet through which a waterfall flows, E of Green Gable, and facing NE into Paal Harbor, Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Named descriptively by UK-APC on Sept. 29, 2004.

Hanging Lake. 67°42' S, 63°01' E. A small, shallow, round lake in the Framnes Mountains, about 100 m at its widest, 300 m long, and 2.5 m deep in the center, permanently frozen throughout the year except for some melt on the edge in the summer. It is easily missed when on Lake Henderson, and this is largely because it is at a slightly higher elevation, hence the name given by ANCA on Aug. 12, 2005.

Hanging valleys. Also called glacial valleys, or glacial troughs. Stream valleys that have been glaciated, or cut off at the base by a large glacier moving past, thus leaving a valley suspended, as it were, at the level of glaciation.

Hanging waterfalls. Waterfalls flowing over hanging valleys.

The *Hanka*. Whale catcher built in 1911 in Oslo for Salvesen of Leith, Scotland (the whaling company). She was in the South Shetlands, catching for the factory whaler *Neko*, in 1911-12, 1912-13 (skipper, M.G. Hansen), and 1913-14 (Capt. Hansen again), and throughout World

War I. In the 1912-13 and 1913-14 seasons, David Ferguson conducted geological reconnaissance from this vessel in the area of the Antarctic Peninsula. In 1918-19, assigned to the *Neko*, the *Hanka* was commanded by her gunner, Harald Sjøvold, who, on March 19, 1919, came to grief while shooting a whale. The *Hanka* was sold and re-sold several times in the 1920s and 1930s, and scrapped in 1937.

Islote Hanka *see* **Hanka Island**

Hanka Island. 64°51' S, 62°48' W. A small, generally snow-covered island made of diorite rock, 100 m long, and rising to an elevation of 5 m above sea level, near the head of Leith Cove, in Paradise Harbor, off the Danco Coast, on the W coast of Graham Land. Charted by whalers after 1905. Named by David Ferguson in 1913-14, who visited the area in the *Hanka* in 1913-14. It appears on his 1921 chart, and was the name accepted by UK-APC on Sept. 23, 1960, and by US-ACAN in 1965. It was further surveyed by ChilAE 1950-51, and appears on their 1951 chart as Isla Hanka. It appears on a 1953 Argentine chart as Islote Hanka, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base O in 1957-58.

Mount Hankey. 69°03' S, 70°41' W. On the landward side of Roberts Ice Piedmont, at the E edge of the Rouen Mountains, and 10 km SE of Mount Paris, in the NE part of Alexander Island. Named by UK-APC on Jan. 17, 2001, for Henry Hankey (1914-1999), under secretary of state for the South American Department during the negotiations for the Antarctic Treaty in the 1950s.

Hankinson, Kenneth William. b. April 19, 1952, Ely, Cambridgeshire. RAF flight lieutenant, an archeologist in the Arctic in 1980. In 1983 he organized and led the British Joint Services expedition to Brabant Island. In 1988 and 1991 he was back in the Arctic.

The *Hannah*. A 319-ton Liverpool sealer, originally a Danish prize, which left home port on Sept. 20, 1820, under the command of her owner, Capt. James Johnson, bound for Buenos Aires, and then on to the South Shetlands, to take part in the 1820-21 sealing season. She was wrecked there on Dec. 25, 1820, at what is now called Hannah Point, on the south coast of Livingston Island. Her remains were found in the South Shetlands on Jan. 31, 1830, by the *Penguin* and the *Annawan*, during the Palmer-Pendleton Expedition.

Punta Hannah *see* **Hannah Point**

[1]**Hannah Island** *see* **Ridley Island**

[2]**Hannah Island**. 76°39' S, 148°48' W. An ice-covered island in the Marshall Archipelago, between Hutchinson Island and Guest Peninsula, within the Sulzberger Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for J.P. Hannah, USARP ionosphere physicist at Byrd Station in 1968.

Hannah Peak. 82°36' S, 53°10' W. A sharp peak rising to about 1100 m, at the SW end of the Dufek Massif, 3 km NNE of Walker Peak, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for James L. "Jim" Hannah, construction electrician at Ellsworth Station in 1957, and at McMurdo in 1961. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Hannah Point. 62°39' S, 60°37' W. Forms the E side of the entrance to Walker Bay, and divides that bay from South Bay, on the S coast of Livingston Island, in the South Shetlands. Roughly charted by Capt. Fildes in 1820-21, and named descriptively by him as Black Point. It appears as such on his 1821 chart. It was re-charted by the Discovery Investigations in 1933, photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1956 and 1958. Re-named by UK-APC on July 7, 1959, as Hannah Point, for the *Hannah*, this being the point where that vessel was wrecked on Christmas Day, 1820. US-ACAN accepted the new name in 1960. It appears as such on a British chart of 1962. It appears on an Argentine chart of 1959, as Punta Sub. Ribes, named presumably by ArgAE 1958-59, presumably for a suboficial named Ribes. That name was shortened to Punta Ribes, but neither name stuck. Today, the Argentines call it Punta Hannah. However, there is an (ephemeral) 1974 Argentine reference to it as Punta Sur (i.e., "south point"), named in association with South Bay.

Hannah Ridge. 83°36' S, 55°10' W. A narrow, arc-shaped rock ridge, 8 km long, extending northwestward from the Washington Escarpment just N of Brown Ridge, in the Neptune Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Edward L. Hannah, aviation structural mechanic who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Hannam, Walter Henry. b. May 5, 1885, Burwood, NSW, son of Walter Henry Hannam and his wife Anna Sarah "Annie" Walters. Radioman and mechanic on AAE 1911-14. He served as a corporal in the Australian Army (Signals) during World War I. In 1927, in Woollahra, Sydney, he married Elizabeth Bielby. He died in Gosford, NSW, in 1965.

Hannam Islands. 66°55' S, 142°58' E. Three small islands in the E part of Commonwealth Bay, midway between Cape Denison and Cape Gray, off the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for Walter Hannam. ANCA accepted the name, and US-ACAN followed suit in 1963.

Hannan, Michael. b. 1886, Liverpool. He went to sea in his late teens, as a trimmer plying the seas between England and the Antipodes. He settled in NZ, and went to work for the Union Steam Ship Company, as a fireman on ships ranging all over the world. He was donkeyman (4th engineer) on the *Aurora*, in 1917, during the relief of BITE 1914-17.

Hannan Glacier *see* **Molle Glacier**

Hannan Ice Shelf. 67°36' S, 47°35' E. About 30 km wide, in the SW of Casey Bay, on the coast of Enderby Land, it is fed by Molle Glacier and Kichenside Glacier, and borders McKinnon Island on every side except the N side. Mapped by Australian cartographers from 1956 ANARE air photos. Visisted in Oct. 1957 by an ANARE party led by Bruce Stinear. Named by ANCA on Aug. 11, 1958, for Francis Thomas "Frank" Hannan (b. May 14, 1911, Bayswater, Vic. d. June 7, 1988), meteorologist who wintered-over at Mawson Station in 1957. He was also weather officer-in-charge and deputy base leader. In fact, for 4 months he was base leader. He had also been station leader at Heard Island (not in the Antarctic) for the winter of 1951. US-ACAN accepted the name in 1961.

Hannon Hill. 77°50' S, 163°38' E. A bare rock hill rising to 1100 m, on the W side of the terminus of Amos Glacier, at the junction of that glacier with Blue Glacier, in Victoria Land. Named by US-ACAN in 1992, for Timothy J. Hannon, USGS cartographer, leader of the two-man USGS team working jointly out of Vanda Station with a NZ team in the 1988-89 field season, to establish new geodetic controls and observe old stations in the McMurdo Dry Valleys, and to re-position the South Pole with more accuracy.

Hannoverpass. 70°55' S, 166°30' E. A pass on the SW side of Mount Eliot, between Kirkby Glacier and O'Hara Glacier, in northern Victoria Land. Named by the Germans.

Hans-Martin Nunatak. 71°37' S, 8°56' E. An isolated nunatak, about 5 km S of Henriksen Nunataks, between those nunataks and the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hans-Martinsteinen, for Hans-Martin Henriksen, meteorological assistant on IGY, 1956-58. US-ACAN accepted the name Hans-Martin Nunatak in 1967.

Hans-Martinsteinen *see* **Hans-Martin Nunatak**

Hans Rock. 68°29' S, 77°54' E. An isolated, submerged rock about 5 km due N of Magnetic Island, off the Vestfold Hills. The least depth is probably not more than 3 m. On Jan. 29, 1955, this rock was struck by the *Kista Dan*. Named by ANCA on July 4, 1961, for Hans Christian Petersen, skipper of the vessel.

Hansabucht. 70°42' S, 166°38' E. A bay between Cape Hooker and Cape Dayman, along the N coast of Victoria Land. Named by the Germans. It is surprising that any bay in this area has not been named by the Americans, at least, and although it may be a tiny bay that no one has bothered to give an individual name to, one suspects that, with the coordinates given, which

put it very, very close to Yule Bay, it is, indeed, the German name for Yule Bay.

The *Hanseatic*. Tourist vessel registered in the Bahamas, she could carry 188 passengers. She was in Antarctic waters in 1993-94 and 1994-95 (both times under the command of Capt. Hartwig von Harling), 1995-96 and 1996-97 (unknown skipper, both voyages), 1997-98, 1998-99, and 1999-2000 (Capt. Hans Aye for all three voyages), 2000-01 (captains Thilo Natke and Matthias Bosse), and 2005-06.

Cabo Hansen *see* **Cape Hansen**

Cape Hansen. 60°40' S, 45°35' W. Separates Marshall Bay from Iceberg Bay, on the S side of Coronation Island, in the South Orkneys. Charted by Petter Sørlle in 1912-13, during his running survey of the islands that season, but not named by him until the late 1920s, for Hans P. Hansen, skipper of the *Lancing* in 1925-26. The original Norwegian name would have been H. Hansenpynten (*see* **Meier Point**), and it has also been seen as Cape H. Hansen. Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart as Cape Hansen, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1952 as Cabo Hansen, and that was the name accepted by the 1970 Argentine gazetteer.

Isla Hansen *see* **Hansen Island**

[1]**Mount Hansen**. 71°28' S, 12°09' E. Rising to 1895 m, 1.5 km N of Kåre Bench, and just NW of Daykovaya Peak, at the N end of the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered aerially by GermAE 1938-39, and first plotted from these photos. Remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hansenhovden, for Kåre J. Hansen, who wintered-over as a meteorologist at Norway Station in 1959, during NorAE 1956-60. US-ACAN accepted the translated name Mount Hansen in 1970. The Germans call it Felsinsel.

[2]**Mount Hansen** *see* **Mount Henson**

Hansen, Bjønnes *see* **Bjønnes-Hansen, Harald**

Hansen, Carl. b. Nov. 25, 1882, Norway. Skipper of the *Solstreif*, in the South Shetlands during the 1927-28 season, who died of uremia on Nov. 16, 1927, and was buried at the Whalers Bay Cemetery on Deception Island.

Hansen, Carl A. b. Norway. He harpooned the first whale in southern seas, at South Georgia, in Nov. 1904. He was skipper of the *Southern Queen,* 1927-28, when she was wrecked east of the South Orkneys on Feb. 24, 1928.

Hansen, Gunnar N. b. 1921. He was on the *North Star* for the 2nd half of USAS 1939-41. His address was Lakeville, Minn. He served during World War II.

Hansen, Hans. b. 1877, Norway. 2nd mate on the *Southern Cross* during BAE 1898-1900.

Hansen, Hans P. Skipper of the *Lancing*, in at the South Shetlands, the South Orkneys, and the Palmer Archipelago, in 1925-26, and again at the South Orkneys in 1926-27.

Hansen, J. On Nov. 9, 1913, at Hobart, he signed on to the *Aurora*, as an able seaman, at £5 per month, for the last voyage to Antarctica during AAE 1911-14. He left the expedition on March 19, 1914, with a £4 bonus.

Hansen, Ludvig Anton. b. April 16, 1871, Tromsø, Norway, son of master tinsmith Lars Hansen and his wife Gurine Guneriusdatter. He became a tinsmith, and went to sea. He was an ice pilot with Arctic experience when he went on the *Fram* during NorAE 1910-12, under Amundsen. He was not one of the shore party. He was one of the group who arrived back in London on June 29, 1912, on the *Highland Scot*, from La Plata. He married Laura Marie Zachariassen, and died on May 25, 1955.

Hansen, Marinius. b. Oct. 4, 1879, Tønsberg, Norway. He became a whaler, worked his way up through the mate ranks, moved to Kristiania (Oslo), and in 1919 was skipper of the *Balto* (not in Antarctic waters). By 1924 he was skipper of the *St. Roch* (again not in Antarctic waters), and by 1928 of the *Nord*. It was while he was skipper of the *Nord* that he went to Antarctica as skipper of the whale factory ship *Hektoria* in 1928-29, which took down Wilkins and his expeditioners. Then he was back on the *Nord*.

Hansen, Nils. b. July 2, 1901, Sandefjord, Norway. Sailor working on the whaler *Thor I* in the South Shetlands in the 1918-19 season. On Dec. 22, 1918, he opened a pressure cooker on board and was blown off the ship onto the ice, dead. He was buried on Christmas Eve, in the Whalers Bay Cemetery on Deception Island.

Hansen, Søren. b. Jan. 5, 1872, Norway. Mate on the *Nor*, in the South Shetlands, who drowned in Admiralty Bay, King George Island, on March 1, 1914, and was buried in the Whalers Bay Cemetery on Deception Island.

Hansen, Thorleif Bjarne. b. July 29, 1904, Norway. He was aboard the Hektor Whaling Company's whale catcher *Bransfield* when it capsized in Whalers Bay, Deception Island, in the South Shetlands (or was it South Bay, Doumer Island? Sources vary), on March 11, 1924. He died of injuries sustained (or did he die of nephritis? Sources vary), on March 16, 1924, and was buried in the Whalers Bay Cemetery.

Hansen, Thorvald. Skipper of the *Thorshammer*, in Antarctic waters in 1948-49.

Hansen, Walter R. He was on the *North Star* for the 2nd half of USAS 1939-41. His address was 505 East Denny, Seattle.

[1]**Hansen Glacier**. 78°21' S, 84°33' W. A tributary glacier, 16 km long, flowing from Mount Tuck into Dater Glacier, in the Sentinel Range. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Herbert L. Hansen, meteorologist from Nebraska who wintered-over at Pole Station in 1957, and who was U.S. representative at Wilkes Station in 1959 after that station had been taken over by the Australians. Note: The Sept. 1961 edition of *Naval Aviation News* says this feature was named for Lt. (jg) John B. Hansen. That was an error.

[2]**Hansen Glacier** *see* **Hansenbreen**

Hansen Inlet. 75°15' S, 63°40' W. An ice-filled inlet, between Cape Schlossbach and Cape Cox, on the Orville Coast, near the E base of the Antarctic Peninsula. Surveyed from the ground during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Bernard Lyle Hansen (b. 1916, Mazon, Ill; he was known as Lyle), who, with Herbert T. Ueda, was CRREL deep-core drilling chief at Byrd Station in 1966-67 and 1967-68 (*see also* **Ueda Glacier**). It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974, and it appears on a British chart of 1982.

Hansen Island. 67°06' S, 67°37' W. An island, 10 km long and 5 km wide, immediately N of The Gullet at the head of Hanusse Bay, between Tickle Channel and Gunnel Channel, off the Loubet Coast, on the W coast of Graham Land. Discovered aerially on Feb. 25, 1936, by BGLE 1934-37, who surveyed it from the ground in July 1936, and provisonally named it as both North Island, in association with Middle Island (*see* **Day Island**) and South Island (*see* **Wyatt Island**). ChilAE 1946-47 named it Isla Tegualda, presumably for the town of that name in Chile. Re-surveyed by Fids from Base E in 1948, and renamed by UK-APC on March 31, 1955, for Leganger H. Hansen of Tønsberg (b. 1883, Notterø, Norway. d. 1948), assistant manager at Salvesen's whaling station at Leith Harbor, on South Georgia from 1911, and who, in 1916, succeeded Henrik Henriksen as manager, a post he held until 1937. He helped BGLE. US-ACAN accepted the name in 1956. It appears in the British gazetteer of 1956, and on a Brtish chart of 1957. It appears on an Argentine chart of 1960 as Isla Hansen, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Hansen Mountains. 68°16' S, 58°47' E. A large group of nunataks, rising to about 2140 m above sea level and about 300 m above the surrounding plateau, 88 km S of Stefansson Bay, in Kemp Land, behind the Mawson Coast, they extend 40 km in a NW-SE direction. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named them Hansenfjella, for Hans E. Hansen (*see* **Hansenbreen**). US-ACAN accepted the translated name Hansen Mountains in 1947, and ANCA followed suit on Aug. 20, 1957.

Hansen Nunatak. 74°48' S, 162°20' E. A prominent, beehive-shaped nunatak, rising to 965 m (the New Zealanders say about 800 m) above the middle of Reeves Glacier near that glacier's terminus, about 5 km NE of Mount Larsen, and 5 km NW of Teall Nunatak, in Victoria Land. Discovered during BNAE 1901-04, and named during BAE 1907-09. It is hard to say for whom Shackleton named this feature.

There weren't many Hansens connected with Antarctica at this early stage (the Norwegians had not yet really arrived), and it may be for Nikolai Hanson (people were not so meticulous about spelling one another's names in those days, or even their own). US-ACAN accepted the name, as did NZ-APC.

Hansen Rocks. 67°30' S, 62°54' E. A group of 5 small islands just N of Holme Bay, about 1.5 km (the Australians say about 3 km) NE of Sawert Rocks, off the coast of Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos. Named by ANCA on May 18, 1971, for Capt. Bent Thygesen "B.T." Hansen, captain of the *Nella Dan* in 1968, 1969, 1970, and 1972. US-ACAN accepted the name in 1973.

Hansen Spur. 86°13' S, 159°33' W. A spur, 13 km long, it descends from the NW side of Nilsen Plateau, in the Queen Maud Mountains, and terminates at the edge of Amundsen Glacier just E of Olsen Crags. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Amundsen named a mountain somewhere near here as Mount L. Hansen, a name that became Mount Ludvig Hansen, for, of course, Ludvig Hansen. The name was later shortened, and this spur was selected arbitrarily (although based on considerable research) to be the mountain Amundsen meant, thus preserving the spirit of Hansen in this area. US-ACAN accepted this situation in 1967.

Hansenbreen. 72°06' S, 22°45' E. Also called Hansen Glacier. A large glacier, 24 km (the Norwegians say about 50 km) long, flowing N along the W side of Mount Nils Larsen, in the W part of the Sør Rondane Mountains. Photographed aerially by LCE 1936-37, roughly mapped from these photos in 1946 by Norwegian cartographers, and then, by them in more detail in 1957 from air photos taken during OpHJ 1946-47, and named by them as H.E. Hansenbreen (i.e., "the H.E. Hansen glacier"), for Hans E. Hansen, famous Norwegian Antarctic cartographer. There are countless features in this book that were plotted in 1946 from air photos taken by LCE 1936-37. Capt. Hansen was the cartographer, or, at least, supervised the cartography. US-ACAN accepted the name Hansenbreen in 1965, and today that is what the Norwegians call it too.

Hansenfjella *see* **Hansen Mountains**

Hansenhovden *see* [1]**Mount Hansen**

[1]**Mount Hanson**. 85°28' S, 147°26' W. Rising to 800 m, 1.5 km SE of Supporting Party Mountain, in the Harold Byrd Mountains. Discovered by Larry Gould in Dec. 1929, during ByrdAE 1928-30, and named by Byrd for Malcolm Hanson. US-ACAN accepted the name in 1957.

[2]**Mount Hanson** *see* **Hanson Peak**

Hanson, Ken. He wintered-over at Mawson Station in 1971, 1973, and 1975, and then at Macquarie Island in 1977, at Davis Station in 1978, and again at Macquarie Island in 1980.

Hanson, Malcolm Parker "Malc." b. Oct. 19, 1894, Berlin, Germany, son of Danish parents, Albert P. Hanson and his wife Lida. The family came to Milwaukee in 1911. During World War I he was a radio officer in the U.S. Navy, and from 1920 to 1924 was in charge of the construction and operation of the radio system at the University of Wisconsin. He was with Byrd in the Arctic, supervised the radio equipment for Byrd's flight across the Atlantic in 1927, and was then assigned by the Navy Department to be chief radio engineer on ByrdAE 1928-30, going south on the *Eleanor Bolling*. During the expedition, he was in charge of radio design, installation, and operation. On Nov. 22, 1928, while he was cruising NZ waters, his son was born in Washington, D.C. He was one of the shore party during the 1929 winter-over at Little America, and was also responsible for the first ever two-way radio conversation between Antarctica and New York, when Byrd spoke to Times Square from his plane. Hanson was a pioneer of polar radio communication, working at the Naval Research Laboratory in Bellevue. He died in a plane crash in the Aleutian Mountains of Alaska on Aug. 10, 1942.

Hanson, Nikolai. b. 1870, Kristiansund, Norway. Naturalist (zoologist and taxidermist) on the wintering-over party of BAE 1898-1900. He contracted scurvy (some say it might have been beriberi) in late July 1899, and died on Oct. 14, that year, "of unknown causes." He was buried at Cape Adare on Oct. 20, 1899, the first recorded human being to be buried on the actual continent of Antarctica.

Hanson, Thomas Anthony "Tony." b. 1936, Stockport, Cheshire, son of Thomas H. Hanson and his wife Eleanor Evans. He joined FIDS in 1957, as a surveyor, and wintered-over at Base J in 1958 and at Base D in 1959. In 1961, in Cheshire, he married Valerie Amos. He later lived in Exeter.

Hanson Hill. 63°35' S, 58°49' W. A snow-covered mountain, rising to 900 m, 6 km SE of Cape Roquemaurel, on Trinity Peninsula, it has 2 lower summits, one to the N of it and one to the S. Roughly charted in March 1838 by FrAE 1837-40, but left unnamed. Named Thanaron Hill by UK-APC on Nov. 21, 1949. This name came about because Fids from Base E, during a Sept. 1946 survey and a fruitless search for Dumont d'Urville's coastal feature that he had named Cap Thanaron, recommended the preservation of the French navigator's naming. US-ACAN accepted the name Thanaron Hill in 1952. Photographed aerially by FIDASE in 1956-57, and re-surveyed from the ground by Fids from Base D, in 1959-60. As a result of these efforts, the British did find the original Cap Thanaron, and, on Feb. 12, 1964, renamed it Thanaron Point, at the same time renaming the hill Hanson Hill, for Tony Hanson of the FIDS. US-ACAN accepted these new names, and they appear in the 1974 British gazetteer.

Hanson Peak. 71°21' S, 170°18' E. Also called Mount Hanson. A small peak, rising to 1255 m, 6 km S of Cape Adare, in the N part of Adare Peninsula. Named by NZ-APC for Nikolai Hanson. US-ACAN accepted the name in 1966. Mr. Hanson's grave surmounts Cape Adare.

Hanson Ridge. 77°17' S, 163°19' E. A small, but prominent, ice-free ridge, 5 km NW of Spike Cape, near the center of Wilson Piedmont Glacier, in Victoria Land. BAE 1910-13 called it Black Ridge (it appears as such on their maps), but, as there was another Black Ridge (in the Deep Freeze Range of Victoria Land), and named by the same expedition, it was renamed by US-ACAN in 1964, for Kirby Julian Hanson (b. May 3, 1929, Bloomer, Wisc. d. Nov. 21, 2006, Ocala, Fla.), meteorologist-in-charge at Pole Station in 1958. NZ-APC accepted this new situation.

Hanson Spur. 84°22' S, 164°44' E. A flat-topped ridge, 3 km long, trending NW from Mount Falla, in the Queen Alexandra Range. Named by US-ACAN in 1995, for Richard E. Hanson, geologist at Ohio State University, who conducted field research in this area in 1990-91.

Hanssen, Mount. 85°59' S, 164°28' W. An ice-covered mountain, rising to 3280 m, and distinguished by a sharp peak, at the most southerly point of the Rawson Plateau, in the Queen Maud Mountains. Discovered in Nov. 1911 by Amundsen, as he was speeding toward the Pole, and named by him as Mount H. Hanssen, for Helmer Hanssen. The name was also seen as Mount Helmer Hanssen, but the shortened name was accepted by US-ACAN in 1967, and also by NZ-APC.

Hanssen, Helmer Julius. b. Sept. 24, 1870, Risøyhavn, near Andøya, in the Vesterålen Islands of Norway, son of a seaman. He joined the fishing fleet at the age of 12, and by 18 had his master's ticket. He met Amundsen at Sandefjord in 1897, and, served as 2nd mate on the *Gjoa* when Amundsen found the Northwest Passage in 1903-05. He learned to drive dogs while in the Arctic, and was deputy leader, under Amundsen, of NorAE 1910-12, and one of the first men to reach the South Pole, on Dec. 14, 1911. He was one of the group who arrived back in London on June 29, 1912, on the *Highland Scot*, from La Plata. He was with Amundsen again in the Arctic, as master of the *Maud*, this time through the Northwest Passage. He also made several other Arctic trips. He wrote 3 books, including his autobiography, *The Voyages of a Modern Viking*. He died on Aug. 2, 1956, at Tromsø.

Hanssonhorna. 74°25' S, 9°53' W. Crags in the S part of Milorgfjella, in the N part of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for law graduate Arthur Hansson (b. 1910), his shipbroker brother Michael Hansson (b. 1906), and their lawyer cousin Wladimir Hansson (b. 1906), all members of the famous Milorg Resistance group during World War II.

Bahía Hanusse *see* **Hanusse Bay**

Fiord Hanusse *see* **Hanusse Bay**

Hanusse Bay. 66°57' S, 67°30' W. A broad V-shaped bay, about 24 km wide in its N part, indenting the Loubet Coast for about 30 km in a general N-S direction, between the N portions of Adelaide Island and Arrowsmith Peninsula,

or, to put it another way, between Cape Mascart (on Anvers Island) and Shmidt Point (on Arrowsmith Peninsula), on the W coast of Graham Land. It is broken by Liard Island at its N entrance, and is bounded to the S by a line joining Landauer Point (on the E coast of Adelaide Island), the N point of Hansen Island, and Bagnold Point. Discovered and roughly charted by FrAE 1908-10, when the W part of the feature was named by Charcot as Fiord Hanusse, for Ferdinand-Isidore Hanusse (b. 1848, Paris; curiously as Isidore-Ferdinand Hanusse), director of the Archives du Service Hydrographique in the French Ministry of Marine, and a member of the expedition's scientific committee. It appears as Hanusse Fiord on British charts of 1914, 1930, and 1940. It was sketched from the air in 1936, by BGLE 1934-37. It appears on a 1937 French chart as Fjord Hanusse. It appears as Hanusse Fjord on a USAAF chart of 1942, and also on a 1948 British chart. It was photographed aerially in 1947, by RARE 1947-48, and surveyed from the ground in 1948 by Fids from Base E. FIDS applied the name Hanusse Bay to the whole feature, and, as such, it appears on a British chart of 1952. US-ACAN accepted that situation in 1953, with UK-APC following suit on Jan. 28, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1961. It appears on a 1953 Argentine chart as Bahía Hanusse, and on a 1957 Argentine chart as Fiordo Hanusse, but it was the name Bahía Hanusse that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The bay was further photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base W between 1956 and 1959.

Hanusse Fjord *see* **Hanusse Bay**

[1]**Hånuten** *see* **Shark Peak**

[2]**Hånuten**. 71°54' S, 11°34' E. One of the Skeidsnutane Peaks, in the Betekhtin Range, in the SE portion of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the shark peak"). The Russians call it Gora Molchanova.

Nunatak Hanza. 66°01' S, 61°24' W. One of the numerous nunataks on Jason Peninsula named by the Argentines [in this case, for Alberto Hanza (*see* **Hanza Inlet**)].

Hanza Inlet. 65°59' S, 61°27' W. An ice-filled inlet, W of Chapman Point, on the N side of Jason Peninsula, on the Oscar II Coast. Named by the Argentines in 1978, for Sub Lt. Alberto Hanza, on the *Uruguay*, 1906-07. On July 7, 2008, US-ACAN accepted the name Skvarca Inlet, in 66°00' S, 61°30' W, but, upon realizing that the feature had already been named by the Argentines, they changed it to Hanza Inlet, and also amended the coordinates.

Happy Feet. A 2006 full-length movie cartoon which took the world by storm. Really a story about a tap-dancing penguin, rather than Antarctica, nevertheless. Considering that the director was George Miller, and that some of the many stars who lent their voices included Robin Williams, Hugh Jackman, and Nicole Kidman, one knew going in that this was a big movie. What one wasn't prepared for was that it is one of the worst movies ever made.

[1]**Happy Valley** *see* **Belemnite Valley**

[2]**Happy Valley**. 75°20' S, 72°30' W. An ice-filled valley, over 16 km long, and 5 km wide, running NE-SW within the horseshoe-shaped confines of the Behrendt Mountains, in Ellsworth Land. Named by the University of Wisconsin Traverse Party of 1965-66, while they were surveying the area. They plotted it in 75°22' S, 72°40' W. US-ACAN accepted the name in 1966, and it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974, but with new coordinates.

Harald Bay. 69°12' S, 157°45' E. Also spelled (erroneously) as Harold Bay. A bay, 6.5 km wide, it indents the coast between Archer Point and Williamson Head, in Oates Land. Photographed aerially by OpHJ 1946-47. Sketched and photographed on Feb. 20, 1959, by Phil Law, during an ANARE visit off the *Magga Dan*. Named by ANCA for Harald Møller Pedersen, captain of the *Magga Dan* during that 1958-59 ANARE season. They plotted it in 69°09' S, 157°43' E. US-ACAN accepted the name in 1961. The feature has since been re-plotted.

Harbord, Arthur Edward. b. Sept. 13, 1883, Hull, Yorks, son of trawler fisherman Richard Arthur Harbord and his wife Rose Helen Chamberlain. When he was 5 the family moved just south of the Humber, to New Clee, in Lincolnshire, close to Grimsby. He entered the Merchant Navy at 12, becoming a master in 1906. He was 2nd officer and navigator on the *Nimrod* during BAE 1907-09. In 1910 he married Gladys Penn, in Hull, and transferred to the RN, serving in the Hydrographic Department of the Admiralty through both world wars. He (almost) took part, as 2nd-in-command, in the British Antarctic and Oceanographical Expedition of 1914-16 (to be led by Stackhouse, but which never materialized). Then he retired (as a commander) and became marine surveyor to the Port of Liverpool, finally retiring to Worcestershire. He died on Oct. 11, 1961, in Bromsgrove.

Harbord Glacier. 77°55' S, 162°24' E. About 5 km wide, it descends along the S side of Mount George Murray, between that mountain and Mount Smith, into the Ross Sea S of Whitmer Peninsula, where it forms Harbord Glacier Tongue, on the coast of Victoria Land. Named by US-ACAN in 1949, in association with the glacier tongue. NZ-APC accepted the name.

Harbord Glacier Tongue. 75°55' S, 162°50' E. The seaward extension of Harbord Glacier, on the coast of Victoria Land. At the time BAE 1907-09 charted it, it extended about 8 km out into the Ross Sea. Shackleton named it for A.E. Harbord. US-ACAN and NZ-APC both accepted the name.

Harbord Ice Barrier Tongue *see* **Harbord Glacier Tongue**

Harbord Ice Tongue *see* **Harbord Glacier Tongue**

Harbour, Richard Arthur Everett "Dick." b. 1936, Lewisham, London, son of Arthur H. Harbour and his wife Dora C. Everett. He graduated in civil engineering at Birmingham University, and joined FIDS in 1959, as a surveyor. He left England on the *John Biscoe* in Oct. 1959, and spent three months in the Falklands assisting surveyors with the Directorate of Overseas Surveys, who were mapping the islands. He wintered-over at Base D in 1960 and 1961. He was back in Antarctica in 1966, helping to finalize the mapping of the Trinity Peninsula. He retired to Baldock, Herts.

Harbour, Stephen Richard "Steve." b. Sept. 21, 1946. Senior diesel mechanic at Mawson Station in 1970 and 1971, plant inspector at the same station in 1973, and a member of the Prince Charles Mountains survey parties of 1971, 1972, and 1973.

Harbour Bluff. 73°09' S, 68°06' E. A rock outcrop, between Helmore Glacier and Manning Glacier, on the Mawson Escarpment, in Mac. Robertson Land. Photographed aerially by ANARE in 1956 and 1970, and mapped by Australian cartographers from these photos. A geodetic survey station was established on this bluff during ANARE's Prince Charles Mountains Survey of 1972. Named by ANCA on Nov. 27, 1973, for Steve Harbour.

[1]**Harbour Glacier**. 64°49' S, 63°26' W. A crevassed through glacier, 5 km long and 2.5 km wide, on the NW side of Wiencke Island, in the Palmer Archipelago. The American gazetteer says that "it extends in a NE direction from Port Lockroy to the cove [1.5 km] E of Noble Peak," while the British gazetteer says that it flows "NE into Neumayer Channel, near Lockley Point, and SW into Port Lockroy." A 1946 publication by the U.S. Board of Geographic Names says that it "flows NE and SW between the inlet to the E of Lockley Point and Peltier Channel," and J. Pepper, in *Meteorology of the Falkland Islands and Dependencies, 1944-1950*, says it "lies in a high valley (730 ft.) leading over into the northern extension of the Neumayer Channel." It was probably discovered by BelgAE 1897-99, but if so, it wasn't named by them. In 1944 FIDS charted it and named it for the harbor of Port Lockroy. UK-APC accepted the name on Nov. 21, 1949, and it appears on a 1950 British chart, and also in the 1955 British gazetteer. US-ACAN followed suit with the naming in 1951. It appears on a 1949 Argentine chart as Ventisquero Channel, and on a 1953 Argentine chart as Ventisquero Canal. The word "ventisquero" is one of the words the Argentines use for a glacier, and "canal" means "channel." These last two names also seem to have been applied, at one time, to Channel Glacier (q.v.).

[2]**Harbour Glacier**. 77°02' S, 162°54' E. Flows N from the Wilson Piedmont Glacier into Granite Harbor E of Couloir Cliffs, in Victoria Land. Named by US-ACAN in 2006, in association with Harbour Glacier Tongue.

Harbour Glacier Tongue. 77°01' S, 162°55' E. A small ice tongue, 1.5 km long, the seaward extension of Harbour Glacier into Granite Har-

bor, E of Couloir Cliffs, in Victoria Land. Charted by a geological party led by Grif Taylor during BAE 1910-13, and, in association with the glacier, named by them as Harbour Ice Tongue, which is how it was shown in the 1958 NZ gazetteer and subsequent publications. US-ACAN accepted the name Harbour Glacier Tongue in 2006, and NZ-APC followed on May 15, 2006.

Harbour Heights *see* **Arrival Heights**

Harbour Ice Tongue *see* **Harbour Glacier Tongue**

[1]**Mount Harcourt** *see* **Mount Vernon Harcourt**

[2]**Mount Harcourt**. 83°49' S, 172°25' E. Rising to 1535 m, overlooking the E side of the Beardmore Glacier at its junction with the Ross Ice Shelf, 8 km E of Mount Kyffin, at the N end of the Commonwealth Range, in Victoria Land. Discovered and named in Dec. 1908, by BAE 1907-09. US-ACAN accepted the name in 1951.

Harden, Thomas *see* **USEE 1838-42**

Hardiman Peak. 85°01' S, 169°23' W. Rising to 1210 m, it forms the E extremity of the ridge along the N side of Zotikov Glacier, in the Prince Olav Mountains. Named by US-ACAN in 1966, for Terrance L. "Terry" Hardiman, geomagnetist and seismologist at Pole Station in 1965.

Mount Harding. 72°53' S, 75°02' E. The largest of the Grove Mountains, in the S central part of the group, and about 6 km W of Gale Escarpment, in Princess Elizabeth Land. Mapped by ANARE from their aerial photographs taken between 1956 and 1960. Named by ANCA for Norman E. Harding, senior topographic draftsman with what was then called the Division of National Mapping, Department of National Development, who contributed enormously to Antarctic map-making. US-ACAN accepted the name in 1967.

Harding, James "Jim." 2nd steward on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Península Hardley *see* **Ardley Island**

Caleta Hardy *see* **Hardy Cove**

Islote Hardy *see* **Harry Island**

Mount Hardy. 66°49' S, 50°43' E. Just E of Mount Oldfield, in the NW part of the Tula Mountains of Enderby Land. Plotted by Australian cartographers from aerial photographs taken by ANARE in 1956. Named by ANCA for Kenneth "Ken" Hardy, weather observer at Wilkes Station in 1959. US-ACAN accepted the name in 1965.

Point Hardy *see* **Sartorius Point**

Punta Hardy *see* **Fort Point**

Rocas Hardy *see* **Hardy Rocks**

Hardy, Alister Clavering. b. Feb. 10, 1896, Nottingham, son of architect Richard Hardy and his wife Elizabeth Clavering. Educated at Oundle, just as World War I broke out he had gained a place at Exeter College, Oxford, but, instead, immediately joined the Army, and served in the Northern Cyclist Battalion, patrolling the coast of Lincolnshire, looking for spies, and was later, in the same war, an army camouflage officer. He returned to Oxford after the war, switched from botany and forestry to zoology, and in 1921, after graduation, went to Naples to study marine plankton. He then became an assistant naturalist at the Ministry of Agriculture and Fisheries laboratory in Lowestoft. He was the marine biologist on the scientific staff during the *Discovery*'s first cruise of 1925-27 for the Discovery Investigations. In Dec. 1927 he married Sylvia Lucy Garstang, and in 1928 became the first professor of zoology at the University of Hull. In 1942 he became Regius professor of natural history at the University of Aberdeen, and from 1946 to 1961 was Linacre professor of zoology and comparative anatomy at Oxford. He was knighted in 1957, and retired in 1959, becoming an emeritus professor. Long into parapsychology, he founded the Religious Experience Research Centre, in Manchester College. He died on May 22, 1985, in Oxford, and his wife died the same year.

Hardy, George Francis Michael "Mike." b. July 16, 1921, London, son of George Francis Hardy and his wife Eva Kathleen Sly. He was a lieutenant in the RNVR when he joined FIDS in 1945, as a meteorologist, and left Liverpool for Montevideo later that year, wintering-over as base leader at Port Lockroy Station in 1946. He brought with him a sheepdog named Crown (*see* **Dogs**, for Crown's fate). He, Frank White, and Gordon Stock left Port Lockroy on the *Fitzroy* on Jan. 27, 1947, bound for Port Stanley. Hardy made his way to Montevideo, where he caught the *Condesa*, bound for London, arriving there on April 5, 1947. He was on his way to South Africa, to cancel an engagement with a girl made while he was drunk. He died in July 1998, in Portsmouth.

Hardy Cove. 62°31' S, 59°36' W. A cove, N of Fort Point, on the E side of Greenwich Island, in the South Shetlands. Charted by early 19th-century sealers. In 1821, Capt. Robert Fildes described it thus: "to the eastward of Point Hardy and near English Straits is a snug little Shallop harbour, in a bight in the Ice Berg as you pass you will distinguish it." Re-surveyed by the Discovery Investigations in 1934-35, photographed aerially by FIDASE in 1956, and re-surveyed by FIDS in 1957-58. Named by UK-APC on Aug. 31, 1962 to preserve the original naming, Point Hardy, given in 1821 by Fildes to what is now Sartorius Point, for Admiral Sir Thomas Masterman Hardy (1769-1839), of "Kiss me Hardy" fame. It appears on a British chart of 1962. US-ACAN accepted the name in 1965. The Argentines call it Caleta Hardy. This cove was last replotted by the British, in late 2008.

Hardy Rocks. 66°16' S, 67°17' W. Insular rocks rising to a height of about 15 m above sea level, 3 km W of DuBois Island, in the Biscoe Islands. Mapped by FIDS from aerial photographs taken by FIDASE 1956-57. Named by UK-APC on Sept. 23, 1960, for James Daniel Hardy (1904-1985), U.S. physiologist specializing in the reaction of cold on the human body. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call this feature Rocas Hardy.

Hare, Clarence Howard. b. Dec. 2, 1880, Invercargill, NZ, son of a banker in Christchurch. He worked as a clerk in NZ and Fiji, and was then taken on at Lyttelton on the *Discovery* during BNAE 1901-04, as replacement steward for the dismissed Albert Dowsett. After taking part in sledging programs, and sleeping in the snow for 36 hours, he returned to NZ on the *Morning*. On June 8, 1904 he was re-engaged for the trip back to London. He later became a piano tuner in Sydney and Melbourne, and retired in 1957 to Queensland, where he died on May 31, 1967.

Hare Peak. 84°59' S, 174°17' E. A rocky, ice-free peak, rising to 2970 m, at the N end of the ridge forming the E wall of Leigh Hunt Glacier, in the Queen Maud Mountains. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for Clarence Hare. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Hargrave Hill. 64°01' S, 60°11' W. Rising to about 950 m, on the S side of Wright Ice Piedmont, 3 km NE of the mouth of Henson Glacier, on the Davis Coast, on the W coast of Graham Land. Mapped by FIDS from air photos taken by FIDASE 1956-57 and from ground surveys conducted in the same season by Fids from Base D. They plotted it in 64°01' S, 60°07' W. Named by UK-APC on Sept. 23, 1960, for Lawrence Hargrave (1850-1915), Australian inventor of the box-kite, and pioneer of rotary aero engines. US-ACAN accepted the name later in 1960. It has since been replotted.

Hargreaves, Richard Bryan. b. Sept. 7, 1915, Washington, DC, son of Beverly Hills (Calif.) banker Richard Lewis Hargreaves and his wife Grace Dexter Bryan (daughter of the Boy Orator of the Platte). In 1929 his parents were divorced, and his father married Helen Ferguson, the movie star. He joined the Navy and became an aerial photographer who served in World War II, and then went on OpHJ 1946-47. He served in Korea. He died on July 1, 1995, in Ventura, Calif., and is buried in Arlington National Cemetery.

Hargreaves Glacier. 69°46' S, 74°20' E. A glacier, 3 km W of Mount Caroline Mikkelsen, on the Ingrid Christensen Coast, it flows into the central part of the head of Sandefjord Ice Bay. Photographed aerially by OpHJ 1946-47, and first delineated in 1952, from these photos, by U.S. cartographer John H. Roscoe, who named it for R.B. Hargreaves. US-ACAN accepted the name in 1956. The Australians have mapped it in 69°46' S, 74°31' E.

Hargreaves Peak. 71°37' S, 170°33' E. Rising to 2083 m, it is the highest peak on Adare Peninsula, and stands sharply above Downshire Cliffs to the E, while its W ice slopes descend gently toward Nameless Glacier, which flows into Protection Cove, in Oates Land, Victoria Land. Named by NZ-APC on Aug. 7, 2008, for Paul Hargreaves, member of the board of Antarctica New Zealand, 2001-08, and chairman, 2003-08. He had been in the Ross Sea in 1956-57, as a sea cadet on the *Hawea*. He visited McMurdo

Sound in Jan. 1994. The name was accepted by US-ACAN on Oct. 21, 2008.

Hargreavesbreen. 72°11' S, 23°13' E. A short steep glacier flowing NW for 13 km between Mount Nils Larsen and Mount Widerøe, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, working from aerial photos taken during OpHJ 1946-47, and named by them for R.B. Hargreaves. They plotted it in 72°14' S, 22°56' E. It has since been replotted. Normally, US-ACAN might have accepted a translated name such as Hargreaves Glacier, but as this name had already been taken (and for R.B. Hargreaves, to boot), it was decided to accept the name Hargreavesbreen, without modification, in 1966.

Hariholm *see* **Mariholm**

Hariot Glacier. 69°00' S, 66°20' W. Flows NW along the S side of Morgan Upland, and then turns W and flows into the N portion of the Wordie Ice Shelf, along the Fallières Coast, on the W coast of Graham Land. Roughly surveyed in 1936-37 by BGLE 1934-37. On Nov. 27, 1947, the upper reaches of this glacier were photographed aerially by RARE 1947-48. In Dec. 1958 a FIDS group from Base E traveled along it, and re-surveyed it. Named by UK-APC on Aug. 31, 1962, for Thomas Hariot (1560-1621), English mathematician and navigation pioneer. US-ACAN accepted the name later in 1962.

Mount Harker. 77°18' S, 162°05' E. Rising to 914 m, at the E side of Willis Glacier, in the Saint Johns Range of Victoria Land (the New Zealanders say the Gonville and Caius Range, but the Saint Johns Range is more likely), it forms the N wall of Debenham Glacier near its head, in Victoria Land. Charted by BAE 1910-13, and named by them for Alfred Harker (1859-1939), British petrologist. US-ACAN accepted the name in 1952.

Mount Harkness. 86°04' S, 150°36' W. Rising to 1900 m (the New Zealanders say 1676 m), 2.5 km S of Organ Pipe Peaks, and close to Mount Zanuck, it forms part of the E wall of Scott Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn, during ByrdAE 1933-35, and named by Byrd in 1935 as Mount Bruce Harkness. The name was later shortened, and, as such, accepted by both US-ACAN and NZ-APC. Robert Bruce Harkness, Jr. (1908-1933), known as "Bob," was a friend of the Russell family of Boston. William A. Russell, brother of Richard S. Russell, Jr. (q.v.) was best man at Harkness's wedding to Allison Hardy in 1931, in New York, and Harkness had been an usher at William Russell's wedding to Jane Wyatt in 1929. As the Byrd expedition was heading south, Harkness was out racing in his car one day, and hit a tree.

Harkness, Robert Samuel Matthew "Bob." b. NZ. FIDS diesel electric mechanic at Base F for the winters of 1960 and 1961. In the second year he was also base leader. He went back to NZ.

Harley Island. 69°23' S, 76°16' E. In the Larsemann Hills, between Easther Island and Broknes. Named by ANCA for Simon Harley, geologist here in 1987-88. The Chinese call it Yingwu Dao.

Harlin Glacier. 70°53' S, 160°50' E. A broad, sweeping glacier flowing NE from the Polar Plateau in the vicinity of Mount Nero, between Sample Nunataks and the N end of the Daniels Range, and then eastward into the lower part of Rennick Glacier, in the Usarp Mountains. Lovejoy Glacier merges with the N side of the Harlin E of Sample Nunataks but eventually loses its individual characteristics. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Ben W. Harlin, U.S. Weather Bureau meteorologist of Louisville, Ky., meteorologist-in-charge at Little America in 1957, and scientific leader at Pole Station in 1961. ANCA accepted the name on June 9, 1964, and NZ-APC followed suit.

Harlow, Leon Vernon "Len." b. 1928, Liverpool, son of William P. Harlow and Edith Phyllis Eaves. He joined FIDS in 1955, as a general assistant and mountain climber, and left Southampton later that year, bound for Montevideo, and then wintered-over at Base N in 1956. In 1958 he married Margaret Rees, in Merioneth, and they lived at Coedmor, near Bangor, in North Wales.

Harmanli Cove. 63°35' S, 59°47' W. A cove, 1.1 km wide, indenting the E coast of Tower Island for 1.1 km, and entered N of Cape Dumoutier, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the town of Harmanli, in southeastern Bulgaria.

[1]**Harmon, John** *see* **USEE 1838-42**

[2]**Harmon, John** *see* **USEE 1838-42**

Harmon Bay. 74°15' S, 110°52' W. An embayment, about 11 km wide, at the N end of Bear Peninsula, and defined by the NE shore of Moore Dome, the terminus of Park Glacier, and the NW end of Gurnon Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN for Cdr. Robert H. Harmon, of the U.S. Coast Guard, exec on the *Burton Island* during OpDF 69 (i.e., 1968-69).

The *Harmony*. Schooner built in Barnstable, Mass., in 1818. 111 tons, 71 feet long, she was owned by Josiah and William Sampson, of Barnstable, and temporarily registered in Nantucket on Aug. 17, 1820. She was in the South Shetlands in 1820-21, under the command of Capt. Nathaniel Ray, and in company with the *William and Nancy*, which was under the command of Tristan Folger. She was based at Harmony Cove, on Nelson Island, and took 4500 seal skins, arriving back in Nantucket on June 6, 1821, in company with the *Huntress*. She left Nantucket in Aug. 1821, under Capt. Isaac Hodges, and in company with the *George Porter* (under the command of Capt. Prince B. Moores), for the 1821-22 season in the South Shetlands. She took 850 skins and 200 barrels of oil, left Antarctica on Feb. 4, 1822, and arrived back in Nantucket on June 6, 1822, with the *Huntress*.

Caleta Harmony *see* **Harmony Cove**

Punta Harmony *see* **Harmony Point**

Harmony Bay *see* **Harmony Cove**

Harmony Cove. 62°19' S, 59°11' W. A cove, S of Harmony Point, between that point and The Toe, on the W side of Nelson Island, in the South Shetlands. Roughly charted by U.S. sealers in 1820, and named by them for the *Harmony*. It appears on Sherratt's map of 1821, and on Powell's chart published in 1822. In Pendleton's log dated Dec. 18, 1821, a feature appears in this location as Collom's Harbour, which may well signify this feature. It appears as Harmony Cove on a British chart of 1901. The Discovery Investigations re-charted it in 1934-35, as Harmony Bay, and made astronomical observations here. It appears as Harmony Cove on a 1937 British chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947, translated as Caleta Armonía, and on a 1949 Argentine chart as Caleta Harmony. The name Caleta Armonía was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. In 1953 the Argentines established Refugio Armonía here (it was later named Refugio Francisco de Gurruchaga), and in 1985 the Brazilians established Refugio Astronomo Cruls. The British were the latest to re-plot this cove, in late 2008.

Harmony Point. 62°18' S, 59°14' W. A point forming the W entrance point of Harmony Cove, and also the W extremity of Nelson Island, in the South Shetlands. Roughly charted by early 19th-century sealers, and named Cape Huntress, after the *Huntress*. It appears as such on Burdick's chart of 1820-21. Re-surveyed in 1934-35 by personnel on the *Discovery II*, and re-named by them as Harmony Point, in association with the cove. It appears as such on their 1935 charts, as well as on British charts of 1942 and 1948. It appears on an Argentine chart of 1948 as Punta Harmony. US-ACAN accepted the name Harmony Point in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1951 Chilean chart translated all the way as Punta Armonía, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. There is a 1958 reference to it as Cerro Punta Armonía. Harmony Point was designated SSSI #14. The British were the last to plot this feature, in late 2008.

Harmony Strait(s) *see* **Nelson Strait**

Harmsen, Erich. b. 1911, Germany. Radio operator, he went to sea in 1933, on the Arnold Bernstein ship *Gerolstein*, out of Hamburg, but was discharged in Atwerp in 1934. He was on the Lufthansa ship *Friesenland* (with Herbert Amelang) before he joined GermAE 1938-39, as the ship's radio chief on the *Schwabenland*.

Mount Harmsworth. 78°41' S, 160°56' E. A prominent, ice-covered peak, rising to 2765 m, at the NW side of the head of Delta Glacier, NW of Moore Bay, it is the northernmost peak in the Worcester Range, on the W side of the

Ross Ice Shelf. Discovered by BNAE 1901-04, and named by them for British newspaper magnate Sir Alfred Harmsworth (1865-1922), later Lord Northcliffe, a contributor to the expedition. It was first climbed in 1957 by Guyon Warren, Arnold Heine (*see* **Mount Heine**), and Bernie Gunn, of BCTAE, and was the first ascent of a major peak in Victoria Land. US-ACAN and NZ-APC both accepted the name.

Harnasie Hill. 62°11' S, 58°16' W. A steep-sided hill rising to about 250 m, between Penderecki Glacier and Szymanowski Icefall, or, to put it another way, between Vauréal Peak and Martins Head, above Cape Syrezol, on the Bransfield Strait, in the S portion of Kraków Peninsula, Admiralty Bay, King George Island, in the South Shetlands. PolAE 1979-80 named it Wierch Harnasie (i.e., "Harnasie hill") in 1980, after the two-act ballet-pantomime called *Harnasie*, written by Karol Szymanowski, which was inspired by the people of the Tatra Mountains, in southern Poland. UK-APC accepted the translated name Harnasie Hill on April 3, 1984, and US-ACAN followed suit. The British plotted this hill, in late 2008.

Harnish Creek. 77°37' S, 163°13' E. A meltwater stream, 5 km long, flowing N from the unnamed glacier E of Crescent Glacier into the E part of Lake Fryxell, in Taylor Valley, in Victoria Land. Named by USGS hydrologist Diane McKnight, for Richard A. Harnish, a fellow USGS hydrologist, a member of the field teams of 1988-89 and 1990-91 with Ms. McKnight. During the latter season he assisted in establishing stream-gaging stations on streams flowing into Lake Fryxell.

Caleta Haro. 62°32' S, 59°47' W. An inlet within Yankee Harbor, on the SW coast of Greenwich Island, in the South Shetlands. The name first appears on a 1947 Chilean chart, and has been in use ever since.

Harold Bay *see* **Harald Bay**

Harold Byrd Mountains. 85°26' S, 146°30' W. Also called the Byrd Mountains. A group of exposed mountains and nunataks extending in an E-W direction between the head of the Ross Ice Shelf and the lower part of Leverett Glacier. Discovered in Dec. 1929 by Larry Gould's geological party, during ByrdAE 1928-30, and named by Byrd for Texan oil man, geologist, and philanthropist David Harold Byrd (1900-1986; known as Harold), a cousin and contributor of furs to the expedition. US-ACAN accepted the name in 1967.

Mount Harold June *see* **Mount June**

Islote Harp *see* **Harp Island**

Harp Glacier. 77°32' S, 163°14' E. A tributary glacier flowing S from the glacial col W of Harp Hill into the Commonwealth Glacier, at Taylor Valley, in Victoria Land. Named by US-ACAN in 1997, in association with the hill. NZ-APC accepted the name.

Harp Hill. 77°31' S, 163°19' E. A detached hill rising to 750 m, triangular in plan, the NW and SE sides being defined by ridge-like rock exposures, at the N side of the MacDonald Hills, in the Asgard Range of Victoria Land. Named descriptively by US-ACAN in 1997, for its distinctive appearance. NZ-APC accepted the name.

Harp Island. 66°00' S, 65°39' W. A small island, rising to an elevation of 30 m above sea level, between (on the one hand) Beer Island and (on the other) Upper Island and Cliff Island, in Mutton Cove, in the Biscoe Islands, 13 km W of Prospect Point, off Holtedahl Bay, on the Graham Coast, on the the W coast of Graham Land. Roughly charted in Feb. 1936, by BGLE 1934-37, and so named by them for its shape. It appears on Rymill's 1938 map of the expedition. However, it appears on a 1950 British chart as Harp Islet, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC re-defined it as Harp Island (its original name), and US-ACAN accepted that change in 1963. It appears on a 1957 Argentine chart as Islote Harp, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Mount Harper. 84°03' S, 57°03' W. Rising to 1405 m, 3 km W of Mount Kaschak, in the southwestern part of the Neptune Range, in the Pensacola Mountains. Mapped by USGS from ground surveys conducted between 1956 and 1966, and from USN air photos taken in 1963-64. Named by US-ACAN in 1968, for Ronald B. Harper, USN, chief electronics technician who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Harper, John Reynolds. b. Sept. 18, 1956. He spent 75 months in Antarctic waters on BAS ships, between 1980 and 1998. He began as a rating in 1980, and in 1982 became senior rating. In 1985 he became 3rd officer, and in Sept. 1995 made 1st officer.

Harper Glacier. 73°52' S, 163°05' E. A small tributary glacier which descends NE between Mount Gibbs and Mount Adamson, in the Deep Freeze Range, and enters Campbell Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Wayne M. Harper, satellite geodesist at McMurdo, 1964-65.

Harper Ridge. 79°09' S, 156°57' E. A nearly ice-free ridge, 3 km long, and rising to over 1800 m, it extends N from the central part of the Finger Ridges toward Yamagata Ridge, in the Cook Mountains. Named by US-ACAN in 2001, for Doyal A. Harper, of the University of Chicago's Yerkes Observatory, at Williams Bay, Wisc., director of the Center for Astrophysical Research in Antarctica. He was at Pole Station for several season from 1991.

Harpoon Point. 62°05' S, 58°25' W. A small cape on the SW coast of Keller Peninsula, Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, after an old whaling harpoon found here.

The *Harpun*. Norwegian whale catcher built in 1911 for the Laboremus Company (the name "harpun" means "harpoon" in Norwegian). On Feb. 20, 1915, on her way to Schollaert Channel, she foundered on Harpun Rocks, and was wrecked.

Roca(s) Harpun *see* **Harpun Rocks**

Harpun Rock *see* **Harpun Rocks**

Harpun Rocks. 64°19' S, 62°59' W. Submerged rocks, about 165 m SE of Bills Point, on Delta Island, in Melchior Harbor, Dallmann Bay, in the Melchior Islands. Named by Norwegian whalers for the *Harpun*. The feature was surveyed by the Discovery Investigations in 1927, and appears on their 1929 chart, as well as on a British chart of 1947. ArgAE 1942 and ArgAE 1943 re-charted the feature. The main rock appears as Harpun Rock on a 1943 U.S. Hydrographic Office chart and on a 1947 British chart, and on a 1949 Argentine chart as Roca Harpun. On a 1953 Argentine chart the group appears as Rocas Harpun. UK-APC accepted the name Harpun Rocks on March 31, 1955, and US-ACAN followed suit in 1956. It appears as such on a British chart of 1960. On a 1957 Argentine chart the main rock appears as Roca Árpun (sic), but on one of their 1964 charts as Roca Arpún. On Aug. 14, 1964, Argentina officially accepted the name Rocas Arpón, and that is the one that appears in the 1970 Argentine gazetteer. The 1974 Chilean gazetteer accepted Rocas Harpun. Note: The word "harpun" is Norwegian, and means, of course, "harpoon." There is only one Spanish word for this object, and that is "arpón." The name of the whale catcher is "Harpun," and that should be invariable, no matter which country is using it. Thus, the Argentines, by naming the feature "Rocas Arpón," are honoring any whaling harpoon, rather than the whale catcher, and thus they miss the point.

Islotes Harriague *see* **Faure Islands**, **Kirkwood Islands**

Harriague, Silvano. Captain of the *Primero de Mayo* in 1943.

Harrigan Hill. 66°19' S, 110°29' E. A rocky hill in the NW part of Mitchell Peninsula, just E of Pidgeon Island, in the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1963, for Edward C. Harrigan, meteorologist at Wilkes Station in 1961.

[1]**Mount Harrington**. 72°45' S, 168°57' E. Rising to 2610 m (the New Zealanders say 2682 m), on the W side of Whitehall Glacier, and 8 km SW of Mount Northampton, it is one of the highest peaks at the E end of the Victory Mountains of Victoria Land. Named by NZ-APC in 1960, for H.J. Harrington. US-ACAN accepted the name in 1967.

[2]**Mount Harrington**. 85°34' S, 164°00' W. Rising to 2550 m, 6 km E of Mount Ruth Gade, in the Quarles Range of the Queen Maud Mountains. First mapped by ByrdAE 1928-30. Re-mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1993, for John R. Harrington, meteorological electronics technician with the U.S. Weather Bureau, who wintered-over at Pole Station in 1962.

Harrington, Hilary James "Larry." b. 1924, Auckland, NZ. While at Oxford, studying geology, he led an expedition to the Arctic. He married Shirley Ann Rose, older sister of Sir Edmund Hillary's first wife. He took part in a 4-man expedition to the Himalayas in 1954, to climb Saipal (23,000 feet). In 1957-58 he led an 8-man NZGSAE team to Antarctica, in the area of Hallett Station, and in 1958-59 a similar 12-man geological survey and mapping expedition into northern Victoria Land. In 1967-68 he was leader of the Cape Hallett Expedition, and in 1968-69 (with Russell J. Korsch) was a USARP investigator in the McMurdo Sound region. In 1969 he became an Australian citizen, and lived in Armidale, NSW.

Harrington Hill *see* **Herrington Hill**

Mount Harris *see* **Mount Jord**

Roca Harris *see* **Harris Rock**

Harris, Alvin *see* **USEE 1838-42**

Harris, John *see* **USEE 1838-42**

Harris, Leslie "Les." He joined FIDS in 1955, and wintered-over as general assistant and carpenter at Base O, during its first winter of operation, in 1956.

Harris, Nathaniel *see* **USEE 1838-42**

Harris Hill. 77°48' S, 163°17' E. A bare rock hill rising to 900 m, it is a SW outlier of the Stratton Hills, and stands at the head of Overflow Glacier, overlooking Ferrar Glacier just northward, in Victoria Land. Named by US-ACAN in 1992, for William M. Harris, USGS cartographer from 1971. He was the field team leader of the USGS Royal Society Range survey of 1983-84. At the South Pole, the team repositioned the marker for the Geographic South Pole, and completed the site survey plan for the new Pole Station, as well as site surveys for the Clean Air Facility. At the end of the season, working from the *Polar Sea*, they obtained a new position for Siple Island. *See also* **Mount Jord**.

Harris Ledge. 77°28' S, 161°26' E. A flat, ice-free ledge to the N of Mount Hercules, in the Olympus Range of Victoria Land. Named by US-ACAN in 1997, for Henry Harris, of the Illinois State Geological Survey, who, with Keros Cartwright (*see* **Cartwight Valley**), made hydrogeological studies in Victoria Valley, Wright Valley, and Taylor Valley, during the Dry Valley Drilling Project of 1973-74, 1974-75, and 1975-76. NZ-APC accepted the name on Oct. 7, 1998.

[1]**Harris Peak**. 64°36' S, 61°47' W. Rising to 1005 m, it surmounts the base of Reclus Peninsula, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base O, operating out of the Portal Point refuge hut in the summer of 1956-57. Named by UK-APC on Sept. 23, 1960 for Les Harris (q.v.) of the FIDS, who took part in the survey. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

[2]**Harris Peak**. 77°34' S, 162°42' E. A peak on the S side of Mount Weyant, between Loftus Glacier and Newall Glacier, in Victoria Land. Named by NZ-APC on Oct. 7, 1998, for Andy Harris, who worked an an NZARP field leader, including 2 trips to Marie Byrd Land. He was one of a party of 8 who died on Mount Everest on May 10, 1996. US-ACAN accepted the name later in 1998.

Harris Peninsula. 71°31' S, 74°06' W. A broad, snow-covered peninsula, surmounted by Mount Lee, between Verdi Inlet and Brahms Inlet, on the N side of Beethoven Peninsula, Alexander Island. Photographed aerially by RARE 1947-48, and mapped from these photos by Searle of the FIDS in 1959-60. Named by US-ACAN for Cdr. Michael J. Harris, USN, commanding officer of VXE-6 from May 1982 to May 1983. UK-APC accepted the name on May 13, 1991.

Harris Point. 81°35' S, 161°32' E. A rocky coastal point along the W side of the Ross Ice Shelf, 10 km S of Young Head, at the S side of Beaumont Bay. Named by US-ACAN in 1965, for Herman David Harris (b. Sept. 1, 1918, Hopewell, Va.), USN, a VX-6 chief hospital corpsman, who built a sick bay station at Pole Station in 1961. He had joined the Navy in July 1942.

Harris Rock. 62°57' S, 56°21' W. The largest and most southerly of a group of 3 offshore rocks N of Montrol Rock, and ENE of Cape Juncal (on d'Urville Island). Photographed aerially by FIDASE in 1956-57. Named by ArgAE 1956-57, as Roca Harris, for Capitán de navío Santiago Harris (d. March 19, 1868), a naval captain of that country. It appears on their 1957 expedition chart, on another Argentine chart of 1960, and was the name accepted by the 1970 Argentine gazetteer. Surveyed from the ground by Fids from Base D between 1958 and 1961. UK-APC accepted the translated name Harris Rock on Feb. 12, 1964, and US-ACAN followed suit that year.

Harris Valley. 76°38' S, 159°52' E. Just E of Coxcomb Peak, in the Allan Hills of Victoria Land. Reconnoitered by the NZ Allan Hills Antarctic Expedition of 1964, and named by them for Prof. Thomas Maxwell "Tom" Harris (b. Jan. 8, 1903, Leicester. d. May 1, 1983), British paleobotanist. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA also accepted the name.

Cape Harrison *see* **Cape Harrisson**

Mount Harrison. 70°23' S, 159°46' E. A large mountain, rising to 1955 m, which dominates the ridge that separates Robilliard Glacier and Svendsen Glacier, about 7 km N of Mount Gillmore, in the Usarp Mountains, in Oates Land, in Victoria Land. Named by US-ACAN in 1964, for Louis J. Harrison, Spec5, U.S. Army helicopter mechanic in Antarctica in 1961-62 (in support of the USGS's Topo North-South Project) and 1962-63 (Topo East-West), the latter season including a photographic survey of this mountain, from which the coordinates were plotted. ANCA accepted the name on June 9, 1964.

Pasaje Harrison *see* **Harrison Passage**

Paso Harrison *see* **Harrison Passage**

Harrison, Brian Robert. b. March 21, 1950. Geologist at Casey Station in 1975.

Harrison, David Platt. b. Feb. 10, 1934, Preston, Lancs, son of James Harrison and his wife Mary Platt. Radio astronomer on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, and as such wintered-over at Halley Bay in 1957 and 1958. After the expedition, he left Cape Town on the *Kenya Castle*, and arrived back in London on Feb. 27, 1959.

Harrison, George Washington. b. May 21, 1815, St. Thomas, West Indies, son of the the remarkable U.S. consul to St. Thomas, Robert Monroe Harrison (who was from Virginia, and the older brother of President William Henry Harrison) and his Swedish wife Margaret. He lived subsequently in Antigua, in Portsmouth, NH, and Virginia. He joined the U.S. Navy, became a midshipman on Jan. 20, 1832, a passed midshipman on June 23, 1838, and, in that rank, joined the *Flying Fish* for USEE 1838-42, transferring to the *Peacock* at Fiji. He was involved in a notorious duel with Wilkes Henry (q.v.). On Nov. 2, 1842, he was promoted to lieutenant, and on April 17, 1861, resigned his commission and went south, becoming a naval commander in the Confederate Navy. He married Alexina Virginia Zantzinger, and was later a company paymaster in Hoboken, NJ.

Harrison, Henry Turner, Jr. They called him "'enery," or "Huffy." b. Dec. 12, 1903, Washington, D.C., but raised partly in College Park, Md., and Worcester, Mass., son of Henry Turner Harrison (a teacher at Maryland Agricultural College, and later an employment manager for a pressed steel company) and his wife Georgia. Self-taught meteorologist assigned by the U.S. Weather Bureau from his Cleveland branch to ByrdAE 1928-30, he traveled down on the *City of New York* as a seaman (as several of the scientists did), and was a member of Byrd's shore party at Little America during the 1929 winter-over. In 1934 he joined United Airlines as their chief met man, and stayed with them until he retired in 1964. He was a lieutenant colonel in the Army during World War II, and was a weather forecaster at the Yalta Conference of 1945. He married Grace Smith, and died on April 21, 1991, in Asheville, NC.

Harrison, Robert Bernard. Known as Bernard. He joined FIDS in 1958, as a meteorologist, and wintered-over at Signy Island Station in 1959 and 1960, the second year also as base leader.

Harrison Bluff. 77°17' S, 166°23' E. A pale-colored trachyte headland forming the seaward termination of Trachyte Hill, and marking the S end of McDonald Beach, on the W side of Mount Bird, Ross Island. Many skuas nest here. A survey station marked by a rock cairn was placed on the top of the NW corner of the bluff by E.B. Fitzgerald of the Cape Bird Party of NZGSAE 1958-59. Large areas in this vicinity are covered by white patches of cyclic sea salt formed by the evaporation of wind-blown seawater. Named by NZ-APC on May 24, 1961, for John Harrison, mountain climbing assistant with the expedition. US-ACAN accepted the name

in 1964. John Harrison, one of New Zealand's great mountain climbers, was born in 1932, and was killed by an avalanche on June 23, 1966, while taking part in a rescue operation.

Harrison Glacier. 66°14' S, 131°15' E. A channel glacier flowing into the Clarie Coast of Wilkes Land, anywhere between 20 and 37 km E of Cape Carr. Photographed aerially by OpHJ 1946-47, and first delineated from these photos. Named by US-ACAN in 1955, for George W. Harrison.

Harrison Ice Ridge. 79°30' S, 146°00' W. Between Echelmeyer Ice Stream and MacAyeal Ice Stream, on the Shirase Coast of Marie Byrd Land. Named by US-ACAN in 2003, for Prof. William D. Harrison (b. 1936), of the Geophysics Institute, at the University of Alaska at Fairbanks; he investigated ice dynamics in the margin of nearby Whillans Ice Stream in 1992-93 and 1993-94, and at Siple Dome in 2001-02.

Harrison Nunatak. 72°32' S, 96°02' W. A snow-covered nunatak, with rock exposure to the SE, 6 km S of Savage Glacier, in the extreme SE part of Thurston Island. Discovered on helicopter flights from the *Burton Island* and *Glacier* in Feb. 1960, during the USN Bellingshausen Sea Expedition. Named by US-ACAN in 1960, for Henry T. Harrison, Jr. Originally plotted in 72°29' S, 96°05' W, it has since been replotted.

Harrison Passage. 65°53' S, 65°11' W. A very deep passage, navigable by all classes of vessel, between Larrouy Island and Tadpole Island to the W, and the Llanquihue Islands and the W coast of Graham Land to the E. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from charting done by an RN Hydrographic Survey unit in conjunction with FIDS, 1957-58. Named by UK-APC on July 7, 1959, for John Harrison (1693-1776), English horologist who solved the problem of determining longitude at sea. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The Argentines call it Pasaje Harrison, and the Chilean gazetteer of 1974 accepted the name Paso Harrison. The interesting thing is that the Chileans say the feature was named for L. Harrison Matthews, British zoologist on the Discovery Investigations. Leonard Harrison Matthews (1901-1986) was, indeed, part of the DI, in the mid-1920s, on South Georgia. "Leo," or "Matt" as he was known (and sometimes as "El-Aitch-Em" or "Hyaena") was the last of the great traveling naturalists, according to the entertaining 30-page biography of him written by Sir Richard Harrison. In Matthews' 1931 book on South Georgia appears an early reference to ice fish (q.v.). Both Matthews Point and Harrison Point, on South Georgia, are named for him.

Harrison Peak. 72°24' S, 166°39' E. Rising to 2830 m, along the N side of Wood Glacier, about 8 km N of Mount McDonald, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for William R. Harrison, biologist at McMurdo Station, 1967-68.

Harrison Stream. 77°17' S, 166°24' E. A small bubbling stream on the S side of Harrison Bluff and Trachyte Hill, flowing W between that hill and Cinder Hill to the N end of Romanes Beach, on the ice-free W slopes of Mount Bird, on Ross Island. Mapped by the Cape Bird Party of NZGSAE 1958-59, who camped at the mouth of the stream, and found the water unpleasant to drink, as it was contaminated by cyclic salt, dissolved from surrounding slopes by meltwater from snow patches. Named by NZ-APC on May 24, 1961, for John Harrison (*see* **Harrison Bluff**). US-ACAN accepted the name in 1964.

Harriss Ridge. 70°08' S, 65°08' E. A ridge, running in an E-W direction, with 2 small outliers off its W end, 3.5 km NE of Mount Dovers, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from 1965 ANARE air photos. Named by ANCA for Brian Harriss, helicopter pilot with the ANARE Prince Charles Mountains Survey Party of 1969. US-ACAN accepted the name in 1971. *See also* **Nunatak Predgornyj** and **Hrebet Podvova**.

Cape Harrisson. 66°43' S, 99°03' E. Also spelled (erroneously) as Cape Harrison. An ice-covered cape just northward of Possession Rocks, at the point where Northcliffe Glacier and Denman Glacier meet, i.e., at the junction of the Denman with Robinson Bay, on the coast of Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Charles T. Harrisson. US-ACAN accepted the name, as did ANCA.

Harrisson, Charles Turnbull. b. Feb. 9, 1866, Kingston, Tasmania. In 1900, in Hobart, he married Annie Caroline Butler. Biologist and artist at the Western Base of AAE 1911-14. Several of his paintings appear in Mawson's book, *Home of the Blizzard*. He was appointed to the Commonwealth Fisheries steamer *Endeavour*, and died when the vessel foundered on Dec. 3, 1914, after leaving Macquarie Island for Tasmania in a heavy fog. Annie died in July 1952, in Hobart, aged 84.

Harrisson Ice Rises. 66°27' S, 96°39' E. About 20 km WSW of Henderson Island, these 2 local swellings of the ice surface are caused by the Shackleton Ice Shelf riding over the underlying rocky ridge leading N from Cape Moyes, in Queen Mary Land. Discovered by the Eastern Sledge Party of AAE 1911-14, and named by Mawson for Charles T. Harrisson. US-ACAN accepted the name in 1951, and ANCA followed suit on March 7, 1991.

Harrop Island. 67°16' S, 46°52' E. A small island off Tange Promontory, 6 km NW of Felton Head, close off the coast of Enderby Land. Plotted from air photos taken by ANARE in 1956. Named by ANCA for James Ronald "Jim" Harrop (b. June 24, 1933), weather observer at Wilkes Station in 1960. He was leader of Davis Station in 1962, as well as being weather observer again. US-ACAN accepted the name in 1965.

Harrow Peaks. 74°04' S, 164°45' E. A group of rugged peaks in the E part of the Random Hills, bounded on the N by Clausnitzer Glacier, and on the E by Tinker Glacier, overlooking the NW extremity of Wood Bay, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Geoffrey N. Harrow, biologist at McMurdo Station, 1965-66.

Île Harry *see* **Harry Island**

Isla Harry *see* **Harry Island**

Mount Harry. 74°14' S, 76°32' W. Rising to about 1000 m, 22 km SE of FitzGerald Bluffs, and SSE of Carroll Inlet, it is the westernmost in a chain of small summits lying SE of those bluffs, on the English Coast of Ellsworth Land. It lies within a group of nunataks photographed aerially by Lincoln Ellsworth on Nov. 23, 1935. Mapped by USGS from 1965-66 USN air photos and from 1961-65 ground surveys. Named by US-ACAN in 1968, for Jack L. Harry, USGS topographic engineer, a member of the Marie Byrd Land Survey Party of 1967-68. UK-APC accepted the name on Dec. 20, 1974.

Punta Harry *see* **Spallanzani Point**

Harry Automatic Weather Station. 83°00' S, 121°24°W. An American AWS, installed on Nov. 29, 1994, at an elevation of 945 m, and named for the Twin Otter pilot who flew it in. On Jan. 12, 2006, it was visited and raised.

Harry Dodson Island *see* **Dodson Peninsula**

Harry Island. 64°08' S, 61°59' W. Also called Enrique Island. An ice-capped island dominated by a truncated pyramidal peak rising to 128 m, and lying at the S side of the SE entrance to the channel between Brabant Island and Liège Island, N of Spallanzani Point, in the Palmer Archipelago. Discovered, landed upon, and roughly charted on Jan. 25, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Harry, for a supporter of his expedition, Gérard Harry, manager of the newspapers "Le Petit Bleu" and "L'Indépendence Belge." At least, this is probably the island de Gerlache named, rather than, say, Lecointe Island or Davis Island. Dr. Frederick Cook's 1900 map of that expedition names it in English, as Harry Island. It was further charted by FrAE 1903-05. BGLE 1934-37 charted it as Harry Island (it is seen, as such, on their 1938 expedition map). A 1947 Chilean chart has Spallanzani Point wrongly given as Isla Harry, but later, when the Chileans realized their mistake, they used the name Isla Harry for Harry Island in their 1974 gazetteer (they rejected Isla Wiegand). It appears on a British chart of 1949 as Harry Islet, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It appears as Isla Enrique on a 1953 Argentine chart (this is a simple translation, although an ill-informed one, as Harry was the man's surname, and therefore not subject to translation). On another 1953 Argentine chart it appears erroneously as Islote Hardy. However, on an Argentine chart of 1954, they show the island as Isla Harry, but position it wrongly SW of Spallanzani Point. Oddly, the Argentines never caught their linguistic error (or, if they did, they were frozen into a perpetuation of it by the

fear that they might be seen to be emulating the Chileans), and the name Isla Enrique went into their 1970 gazetteer. On Sept. 23, 1960, following 1956-57 FIDASE air photos, UK-APC redefined it as Harry Island, and US-ACAN followed suit in 1963.

Harry Islet *see* **Davis Island, Harry Island**

Harston, Henry Cuthbert Eagles. b. 1852, Ireland, son of Capt. Henry Cooke Harston, RN and his wife Alicia Eagles. He joined the Royal Navy as a midshipman, and had just finished a tour on the *Icarus* in the China Sea when Sub Lt. Henry Sloggett had to return to England in 1873 during the *Challenger* Expedition 1872-76. Harston replaced him, as sub lieutenant. He completed the expedition, but was moody, and sadly, drank the contents of a bottle of chloral hydrate, dying in his cabin on June 6, 1876. He left a letter, apologizing for the trouble he had caused.

Mount Hart. 72°05' S, 169°05' E. Rising to over 3000 m, 3 km NW of Mount Chider, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. (later Cdr.) Vernon David Hart, who wintered-over as officer-in-charge of VX-6 at McMurdo Station in 1968.

Roca Hart *see* **Hart Rock**

Hart, Asa *see* **USEE 1838-42**

Hart, Percy J. b. 1907, NZ. Taken on as a fireman on the *Eleanor Bolling* at Dunedin on March 11, 1930, during ByrdAE 1928-30, for the last trip south to Antarctica.

Hart, Thomas John. Known as John. b. Sept. 17, 1907, Erpingham, Norfolk, son of John Henry Arthur Hart and his wife Mary Ann Gwatkin. A member of the zoological staff of the Discovery Committee, he was zoologist on the first *Discovery II* cruise of 1929-31, scientific leader of the *William Scoresby* cruise of 1936-37, and then transferred to the *Discovery II,* as a zoologist, for that vessel's last (1937-39) cruise before World War II. Dr. Hart died on May 4, 1970, in Surrey.

Hart Glacier. 77°30' S, 162°23' E. A hanging glacier on the S wall of Wright Valley, between Meserve Glacier and Goodspeed Glacier, in Victoria Land. Named by U.S. geologist Robert Nichols (q.v.) for Roger Hart, of Lynn, Mass., geological assistant to Nichols at nearby Marble Point in 1959-60. US-ACAN accepted the name in 1962.

Hart Hills. 83°43' S, 89°05' W. A line of low, isolated, mainly snow-covered hills, extending E-W for 6 km, 13 km W of Pagano Nunatak, and 121 km N of Ford Massif, in the Thiel Mountains. Discovered on Dec. 13, 1959, by Ed Thiel and Cam Craddock, during the course of an airlifted geophysical traverse along the 88th meridian west, and named by them for Pembroke J. Hart (b. Jan. 1929. d. Feb. 6, 2008, Arlington, Va.), seismologist on the U.S. National Committee for IGY (1957-58). US-ACAN accepted the name in 1962.

Hart Rock. 60°41' S, 44°22' W. Rising to an elevation of 9 m above sea level, 2.5 km NW of Herdman Rocks, and 5 km NNE of Cape Dundas (the most easterly point on Laurie Island), in the South Orkneys. It may have been discovered by Weddell, in 1822-24, but it was first charted in 1838 by FrAE 1837-40, and named in 1933 by the personnel on the *Discovery II* for T. John Hart (see above). It appears on the DI chart of 1934. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. It appears on a 1945 Argentine chart as Roca Hart, and that was the name accepted by the 1970 Argentine gazetteer.

Harter Nunatak. 81°14' S, 84°54' W. A small, relatively isolated nunatak, 6 km NE of Mount Tidd, at the NE side of the Pirrit Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1961. Named by US-ACAN in 1964, for Gene L. Harter, meteorologist at Little America in 1957.

Mount Hartigan. 76°52' S, 126°00' W. A broad, mostly snow-covered mountain with several individually named peaks on it which can rise to as high as 2800 m, immediately N of Mount Sidley, in the Executive Committee Range of Marie Byrd Land. Discovered aerially on Dec. 15, 1940 by USAS from West Base, and named for Rear Admiral Charles Conway Hartigan (b. Sept. 13, 1882, NY. d. Feb. 25, 1944, Santa Clara, Calif.), Navy Department member of the Antarctic Service Executive Committee. US-ACAN accepted the name in 1947.

Hartigan, William B. "Bill. b. May 25, 1921, Philmont, NY, son of railroad agent William Hartigan and his wife Virginia Boyd. The father died when Bill was a child, and, after Cornell, Bill enlisted in the U.S. Marine Corps on June 14, 1939, serving as a sergeant cameraman in the Pacific during World War II, until Aug. 28, 1943. He became an NBC-TV newsreel cameraman, and, as such, came in on the *Edisto* to McMurdo Sound for OpDF I (i.e., 1955-56). This was the first time TV had been to Antarctica, and Hartigan was the only one there that year with a TV camera. He had 40,000 feet of film, 90 percent of it in color, and would send his film back on various ships as they returned to the US. That season he also went out with an advance unit of the BCTAE, and snapped a cartilage. He had to rest up in the tent, and he turned the camera on himself, which was especially dramatic when his companions did not show up when expected, and Bill's palpable fear was seen by all. Alone in Antarctica. Hartigan was afraid, but he was so obviously a brave man that when the film was shown on American TVs on Feb. 26, 1956, he was a big hit. Only the inane babbling of voice-over commentator Chet Huntley detracted from an otherwise astonishing film. He was back for OpDF II (i.e., 1956-57), and was on the Oct. 26, 1956 flight to the Pole (*see* **South Pole**). He died on July 1, 2000, in Schenectady, NY.

Mount Hartkopf. 75°59' S, 140°45' W. Rising to 1110 m, along the E side of the upper reaches of Land Glacier, 17.5 km SE of Mount McCoy, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Kenneth Walter Hartkopf (b. Feb. 21, 1921, Minn. d. Jan. 29, 1997, Sacramento), ionosphere physicist at Byrd Station in 1963. *See also* Gora **Kastanaeva**.

Hartmann, Wilhelm. Catapult leader on the *Schwabenland* during GermAE 1938-30.

Cabo Hartree *see* **Cape Hartree**

Cape Hartree. 60°48' S, 44°44' W. Forms the SW tip of Mossman Peninsula, and the W entrance point of Buchan Bay, on the S coast of Laurie Island, in the South Orkneys. Discovered by Powell and Palmer on Dec. 12-13, 1821, and named by Powell for a friend, Thomas Hartree of Rotherhithe, a ship's captain. It appears on his 1822 chart. ScotNAE charted it on June 28, 1903, and Bruce named it Cape McVitie, after Robert McVitie, Jr. (1854-1910), of Messrs McVitie & Price, biscuit manufacturers of Edinburgh. The SE entrance point of Wilton Bay they erroneously charted as Cape Hartree, and this situation is to be found on their 1905 maps, wherein Cape Hartree is listed variously as Cape McVitie and Cape M'Vitie. Relying on Bruce's map, the Argentines have it on one of their 1930 charts as Cabo Vitie. The Discovery Investigations team surveyed the area again, in 1933, and the situation was cleared up on their 1934 chart. US-ACAN accepted the situation in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1945 Argentine chart as Cabo Hartree, and that was the name accepted by the Argentine gazetteer of 1970. On various other charts, from different countries, there may appear various slight spelling mistakes, but it is obvious that they are referring to either Cape Hartree or Cape Vitie (or McVitie).

Hartshorne Island. 64°47' S, 64°23' W. Between Dakers Island and Howard Island, in the eastern Joubin Islands, off the SW coast of Anvers Island. Following work done here from 1965 onwards by personnel from Palmer Station, it was named by US-ACAN in 1975, for Sidney G. Hartshorne, captain of the *Hero* on that vessel's first voyage to Palmer Station in 1968. UK-APC accepted the name on Dec. 20, 1974.

Hartstene, Henry Julius. b. 1812, Beaufort, SC, son of Jacob Hartstein (sic) and his wife Mary. He graduated from Norwich in 1828, and entered the U.S. Navy as a midshipman on April 1, 1828. On June 14, 1836, in Chatham, Ga., he married Martha Roberts, and they lived in Beaufort, SC. He was a lieutenant on USEE 1838-42, joining the *Porpoise* at Callao in 1838, and serving on her until June 21, 1839, when he transferred to the *Relief*. He was promoted to lieutenant on Feb. 23, 1840, served in the Mexican War, 1846-48, and in 1851 was attached to the coastal survey. He later commanded the mail steamer *Illinois*, and in 1855 was promoted to commander, that year rescuing Dr. Elisha Kane's party from the Arctic. The *Resolute* was a British bark abandoned in the Arctic, and salvaged by Capt. Buddington, the New London whaler. Congress bought the vessel from Buddington and made a gift of it to the British. Hartstene it

was who took it across the Atlantic, where he was made much of by Queen Victoria. He was later involved in taking soundings for the Atlantic telegraph cable. In 1860 he was skipper of the steamer *Pawnee*, out of Philadelphia, but in 1861 he went south, being placed in command of guard boats at Fort Sumter right at the very beginning of the Civil War. In the summer of 1862 he went insane, but recovered, to command the Savannah Station. He was sent to France to garner support for the Confederate cause, and died in Paris on March 31, 1868.

Harvard Tarn. 77°34' S, 163°08' E. A tarn, 0.3 km SW of Yale Tarn, in the central part of Tarn Valley, in Victoria Land. Named by US-ACAN in 1997, it is one of several tarns in the valley named after American universities. NZ-APC accepted the name.

The *Harvest*. Nantucket whaler, new in 1825, when she set sail from her home port on Oct. 7, 1825, commanded by Capt. Richard Macy, bound for the South Seas. That first season (1825-26) Macy reported spotting an island in 59°S, 91°W, which would put it due north of Peter I Island, in the southern Pacific Ocean. A phantom island, probably (see under Macy). The *Harvest* returned home on May 8, 1828, with 2158 barrels of sperm.

Mount Harvey. 66°55' S, 50°48' E. A snow-free peak, it is the highest in a group of mountains E of Amundsen Bay, in the Tula Mountains, about 10 km ENE of Mount Gleadell, and about 14 km SSE of Mount Oldfield, in Enderby Land. Discovered in 1955 by an ANARE party led by Peter Crohn. Named by ANCA on July 22, 1957, for William H. "Bill" Harvey (b. Aug. 8, 1919), carpenter who was in the first wintering-over group at Mawson Station, in 1954. In 1958 he wintered-over at Macquarie Station. US-ACAN accepted the name in 1961.

Harvey, Brian Gavin. b. Jan. 25, 1952. Senior diesel mechanic at Mawson Station in 1977.

Harvey, Peter. b. 1779, Philadelphia. One of the first blacks in Antarctica (actually one of the first men of any color), as a crew member on the *Hero* during the Fanning-Pendleton Sealing Expedition of 1820-21.

Harvey, Samuel. Perhaps of Liverpool, but unlikely. Antarctic historian A.G.E. Jones speculates that he may have been the son of renowned Liverpool soap boiler Samuel Harvey (who occupied premises on Matthew Street, the very same short street where the Beatles would be discovered many years later). Although the soap boiler did have a son Samuel, he was not born until 1814 [this author is the great great great great grand nephew of the soap boiler]. Capt. Samuel Harvey is, unfortunately, no relation whatever to the Harveys of Liverpool. He was 3rd officer on the *Emerald*, in 1820, under Capt. William Elliott, when that vessel discovered Emerald Island (which didn't really exist), close to Antarctic waters, and, by the time the *Emerald* pulled into Hobart in 1821, he was 1st officer. In 1830 he took command of the *Venus* (q.v.), was the first captain into the Ross Sea, and commanded the same vessel for years.

Harvey, W. Seaman on the *Eleanor Bolling* during the 2nd half of ByrdAE 1928-30.

Harvey, William. b. 1742, London. He sailed with Cook on his 1st voyage, 1768-71, and on Dec. 17, 1771, now a midshipman, he joined the *Resolution* for Cook's 2nd voyage, 1772-75. Incidentally, there was another William Harvey, an able seaman, who joined the *Resolution* on Dec. 10, 1771, but he ran on Jan. 19, 1772. Our William Harvey kept a diary of the voyage. He then sailed with Cook again, on the 3rd voyage, 1776-80, as a master's mate on the *Discovery*. After Cook's death he went with Clerke to the *Resolution*, and was promoted to 3rd lieutenant. Again, he kept a diary. In 1790 he was promoted to commander, and on July 27, 1790, at Portsmouth, he married Martha Plumer, and they moved to her home town of Much Hadham, Herts, where he died on July 12, 1807.

Harvey Cirque. 79°54' S, 155°52' E. A cirque containing a small glacier, between Scheuermann Spur and Corell Cirque, in the S part of the Darwin Mountains. The cirque occurs along the extensive Prebble Icefalls, which feature contributes some ice to the head of the cirque. There is limited flow from the cirque to Hatherton Glacier. Named by US-ACAN in 2001, for geologist Ralph P. Harvey, of Case Western Reserve University, in Cleveland, engaged in the USAP Antarctic Search for Meteorites in the Transantarctic Mountains for many austral summers between 1992 and 2001, ultimately as ANSMET principal investigator.

Harvey Heights. 64°14' S, 62°24' W. A series of elevations, rising to an elevation of 2450 m above sea level, close N of Mount Parry, and W of the head of Malpighi Glacier, in central Brabant Island, in the Palmer Archipelago. They were included under the general name of Mount Parry, at least they were on Bagshawe's chart of 1921-22, made during the British Imperial Antarctic Expedition. However, FIDASE air photos taken in 1956-57, revealed these heights as a separate feature, and they were named by UK-APC on Sept. 23, 1960, for William Harvey (1578-1657), the English physician who first demonstrated the circulation of the blood. US-ACAN accepted the name later in 1960. The heights were first climbed on March 7, 1984, by the British Joint Services Expedition of that season.

Harvey Islands. 67°43' S, 45°33' E. Two islands in the W part of Freeth Bay, in Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA for Ross Lawrence Harvey, radio officer who wintered-over at Wilkes Station in 1959, and at Mawson Station in 1962. US-ACAN accepted the name in 1965.

Mount Harvey Johnston *see* **Johnston Peak**

Harvey Johnston Peak *see* **Johnston Peak**

Harvey Nunataks. 66°58' S, 52°00' E. A group of 4 nunataks, 6 km W of Mount Ryder, and 24 km E of Pythagoras Peak, in the E part of the Tula Mountains, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA for David J. "Dave" Harvey, electronics engineer who wintered-over at Mawson Station in 1961. US-ACAN accepted the name in 1965.

Harvey Peak. 79°13' S, 157°01' E. An ice-free peak rising to 2120 m, about 3.5 km S of the central part of the Finger Ridges, in the Cook Mountains. Mapped by USGS from tellurometer surveys conducted in 1961-62, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Paul Harvey, a member of the U.S. Army aviation support unit here for USGS's Topo North and Topo South surveys in 1961-62, which conducted the tellurometer surveys. ANCA accepted the name on Aug. 27, 1975.

Harvey Ridge. 70°59' S, 65°18' E. A ridge, elongated in a N-S direction, about 3.5 km E of Husky Massif, in the Aramis Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Sidney T. "Sid" Harvey, senior technician (electronics) at Wilkes Station in 1965. US-ACAN accepted the name in 1971.

Harvey Shoals. 68°11' S, 67°08' W. Three shoal patches, no shallower than 3 fathoms, between Millerand Island and Northstar Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Charted by an RN Hydrographic Survey unit on the *John Biscoe* in 1966, and named by UK-APC on Nov. 3, 1971, for Petty Officer Brian Edward Harvey (b. 1937), surveying recorder who did all the sounding for this survey. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer, and on a 1982 British chart.

Harvey Summit. 78°19' S, 162°18' E. A peak rising to 2644 m at the head of McDermott Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1994, for John W. Harvey, of the National Solar Observatory, who, with Thomas L. Duvall and Martin Pomerantz, conducted research in helioseismology at Pole Station from 1980.

Harwell Glacier. 84°57' S, 171°29' W. A steep-walled tributary glacier, 5 km long, flowing from the N slopes of the Prince Olav Mountains, just E of Mount Smithson, to enter the upper part of Gough Glacier. Named by US-ACAN in 1966, for Lt. (later Cdr.) Thomas William Harwell, USN, construction electrician in Antarctica in 1964.

Mount Harwood. 70°44' S, 165°49' E. A mostly ice-covered peak, rising to 1040 m, it surmounts Gregory Bluffs (which rise just to the N), on the E side of Nielsen Fjord, on the N coast of Victoria Land. Named by ANCA for Thomas R. "Tom" Harwood, 2nd-in-charge of the ANARE expedition of 1962 aboard the *Thala Dan*. He had also led the 1959 wintering-over party at Macquarie Island. US-ACAN accepted the name in 1964.

Haselton Glacier. 77°21' S, 160°45' E. A glacier flowing ENE from Haselton Icefalls (which is, in effect, the heavily crevassed upper part of the glacier), between Gibson Spur and the Apocalypse Peaks, terminating as a hanging glacier at Barwick Valley, in Victoria Land. Named by US-

ACAN in 2005, in association with the icefalls. NZ-APC accepted the name on Sept. 12, 2005.

Haselton Icefall. 77°21' S, 160°46' E. Flows from the Willett Range, between Gibson Spur and Apocalypse Peaks, toward Webb Lake in Barwick Valley, in Victoria Land. Named by Parker E. Calkin, U.S. geologist, for fellow USARP geologist George M. Haselton, Calkin's assistant in the field here in 1961-62. US-ACAN accepted the name in 1970.

The *Hashedate Maru*. A 11,320-ton Japanese oiler, the *T-1*, built in 1944, which was converted after the war into the 10,896-ton whaling factory ship *Hashedate Maru*, and, given permission on Oct. 6, 1946 by General MacArthur, was in Antarctic waters in 1947-48. Aboard was David McCracken, the general's representative, and in 1948 he wrote a book, *Four Months on a Jap Whaler*. The vessel was back in Antarctic waters in 1947-48, 1948-49, 1949-50, and 1950-51.

Hasick, David James "Jim." He wintered-over at Macquarie Island in 1965 and again in 1968, the second year as base leader. He wintered-over as station leader at Mawson Station in 1986, 1992, and 1995.

Haskard Highlands. 80°30' S, 29°15' W. A range of peaks and ridges, rising (in Mount Weston) to 1210 m (the New Zealanders say 1345 m), between Blaiklock Glacier and Stratton Glacier, and including (from N to S) Mount Provender, Pratts Peak, Mount Gass, Honnywill Peak, Mount Rogers, and Pointer Nunatak, in the NW part of the Shackleton Range. First surveyed and mapped by BCTAE in Oct. 1957. Photographed aerially by USN in 1967, and further surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Mapped by USGS from all these efforts. Named by UK-APC on Jan. 5, 1972, for Cosmo Dugal Patrick Thomas Haskard (b. 1916; knighted in 1965), governor of the Falkland Islands, 1964-70. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Mount Haskell. 66°45' S, 64°16' W. A buttress-type mountain rising to 1480 m (the British say 1785 m), at the SW side of Cabinet Inlet, between Mount Denucé and Mount Holmes, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially in 1947 by RARE 1947-48, and surveyed from the ground that same year by Fids from Base D. The FIDS named it for Daniel C. Haskell (see the Bibliography). UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and also in the 1955 British gazetteer.

Haskell Glacier. 73°34' S, 94°13' W. A small glacier flowing from Christoffersen Heights, and draining W between Prism Ridge and Forbidden Rocks, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains party in 1960-61. Named by US-ACAN in 1963, for Lt. (later Cdr.) Hugh Brasher Haskell, USN, co-pilot on a flight of Nov. 25, 1961, from Byrd Station, to establish Camp Sky-Hi (later Eights Station).

Haskell Ridge. 79°44' S, 156°10' E. A high, rocky ridge, 15 km long, with many large cirques, 3 km W of Colosseum Ridge, just E of Green Glacier, in the Darwin Mountains. Mapped by VUWAE 1962-63, and named by them for Tom R. Haskell, a member of the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA also accepted the name.

Haskell Strait. 77°55' S, 166°45' E. A tidal flow, SW and NE, between Cape Armitage on Ross Island to the N, and Cape Spencer-Smith on White Island to the S, lying under the permanent McMurdo Ice Shelf. Williams Field and Pegasus Airfield are located above the ice. Named by NZ-APC on Nov. 5, 2009, for Timothy G. Haskell, NZARP oceanographer who first visited Antarctica in 1978.

Haskill Nunatak. 83°24' S, 51°45' W. An elongate nunatak, rising to about 1710 m, 4 km W of Dyrdal Peak, in the southern Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Robert E. Haskill, MCB, Special Detachment Bravo, Seabee radioman at Ellsworth Station, 1957. A committed Texan, Mr. Haskill brought to the ice a ten-gallon hat and western boots. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Haskins, James *see* **USEE 1838-42**

Haskovo Cove. 62°27' S, 59°54' W. A cove, 1.5 km wide, indenting the N coast of Greenwich Island for 900 m, next E of Crutch Peaks, and NW of Sevtopolis Peak, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the city of Haskovo, in southeastern Bulgaria.

Haslam Heights. 67°25' S, 67°30' W. A line of peaks trending NNE-SSW, and rising to about 1000 m, E of Laubeuf Fjord, they are bounded to the E by the Nye Glacier and Vallot Glacier, and to the W by Whistling Bay, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. They include Tanglefoot Peak and Mount Veynberg. Probably discovered (although certainly not named) by FrAE 1908-10. Roughly surveyed and mapped by Fids from Base E in Sept. 1948, and photographed aerially by FIDASE in 1956-57. They appear on a British chart of 1961. Named by UK-APC on Nov. 13, 1985, for Rear Admiral David William Haslam (1923-2009; knighted in 1984), RN, Hydrographer of the Navy, 1975-85. US-ACAN accepted the name.

Mount Haslop. 80°36' S, 30°16' W. Rising to 760 m (the British say about 975 m), 3 km S of Mount Lowe, it is the westernmost peak in the Otter Highlands, at the W extremity of the Shackleton Range. Surveyed and mapped in Oct. 1957 by BCTAE, and named by them for Gordon Haslop. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Haslop, Gordon Murray. b. Oct. 15, 1922, Gull Lake, Saskatchewan, Canada, son of the Rev. J. Haslop. In 1927 he moved to Te Aroha, NZ, where he trained as a school teacher. In the NZ Army briefly, he transferred to the RNZAF in 1942, and was seconded to the RAF, as a flight lieutenant, flying all sorts of aircraft during the war. After the war he was in Palestine, back in NZ, Berlin (for the airlift), and Malaya. In 1951 he returned to the UK, and was still in the RAF when he went on BCTAE 1955-58, as 2nd pilot. He and John Lewis made the first transantarctic flight in a single-engined Otter aircraft, Jan. 6-7, 1958. After the expedition he returned to Wellington, and there caught the *Rangitoto*, bound for Southampton, where he arrived on May 12, 1958. Later stationed in Singapore, he died as the result of a car crash on Aug. 27, 1961.

Pico Haslum *see* **Haslum Crag**

Haslum, Hans Joachim. b. 1856, Vestre Aker, Norway, but grew up in Skoger, son of Erik Haslum and his wife Berte Marie Hansdatter. He was living unmarried with his mother, when he went as 2nd mate on the *Antarctic* during SwedAE 1901-04. This was his 28th Polar voyage, but his first in Antarctica.

Haslum Crag. 64°22' S, 56°59' W. A prominent rock crag, rising to about 170 m, close to the NE end of Snow Hill Island, 3 km NE of Station Nunatak, in the James Ross Island group. Discovered and surveyed by SwedAE 1901-04, who established a winter station nearby in Oct. 1902, and named this feature descriptively as Basaltspitze, or Die Basaltspitze (i.e., "basalt peak"). In 1950 there is a British reference to it as Basalt Peak. Fids from Base D surveyed it in Sept. 1952, and UK-APC renamed it on Sept. 4, 1957, for H.J. Haslum. US-ACAN accepted the name in 1963. The Argentines call it Pico Haslum.

Monte Hassage *see* **Mount Hassage**

Mount Hassage. 75°51' S, 72°29' W. A prominent, isolated mountain, rising to 1120 m, 20 km SW of Mount Horne, W of the Hauberg Mountains, on the Orville Coast, where eastern Ellsworth Land meets southern Palmer Land. Discovered by RARE 1947-48, it was the SW extremity and turnabout point of the RARE plane flight of Nov. 21, 1947. Named by Ronne for Chuck Hassage. It appears on Ronne's 1948 map plotted in 77°28' S, 71°30' W, and those coordinates also appear on the American Geographical Society's map of 1962. On an Argentine chart of 1952, it appears as Monte Hassage, and that is what the Argentines call it to this day. It appears as such in the 1974 Chilean gazetteer as well. It was surveyed by USGS during the 1961-62 Antarctic Peninsula Traverse, photographed aerially by USN between 1965 and 1967, and mapped anew by USGS from these efforts. It appears with the new coordinates on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. US-ACAN accepted the name, and UK-APC followed suit on Dec. 20, 1974.

Hassage, Charles "Chuck." b. Sept. 17, 1919, Hubbard, Ohio, son of Slovak immigrants George Hassage, a railroad carpenter, and his wife Bertha. After naval service, he happened to

be in Beaumont, Texas, as a naval reservist attached to an LST laid up there. He was in a small motorboat buzzing about the harbor when he asked the crew of a ship what they were up to. They told him, and, curious, he came aboard. Two days later, still aboard, he ran into Finn Ronne, and told Ronne he wanted to go with them to Antarctica. At that time Ronne was desperately in need of a chief engineer, and Chuck wanted to get away from women for a while. That's how he became chief engineer on the *Port of Beaumont, Texas*, during RARE 1947-48. He was in charge of Main Base during Finn Ronne's absence. He died on Jan. 21, 2003, in California, and is buried in San Joaquin Valley National Cemetery.

Mount Hassel. 86°28' S, 164°28' W. Rising to 2390 m (the New Zealanders say 3261 m) above sea level, it is one of a group of low-lying peaks barely protruding through the ice cap covering the Polar Plateau, and is the most northeasterly summit of the massif at the head of Amundsen Glacier, about 40 m SW of the Nilsen Plateau, in the Queen Maud Mountains. Named by US-ACAN in 1951, for Sverre Hassel. NZ-APC accepted the name. This may or may not be the Mount S. Hassel (also called Mount Sverre Hassel) hastily positioned by Amundsen on his trek to the Pole in Nov. 1911, but it was in this vicinity. It was mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964.

Hassel, Sverre Helge. b. July 30, 1876, Kristiania, Norway. Navigator, sailmaker, and saddler, he served with Otto Sverdrup in that navigator's attempt to circumnavigate Greenland in the *Fram* between 1898 and 1902, and was one of the first men to reach the South Pole, on Dec. 14, 1911, with Amundsen, during NorAE 1910-12. Not bad for a customs house officer who had been prepared to go only as far as San Francisco with the dogs on the latter expedition. He was one of the group who arrived back in London on June 29, 1912, on the *Highland Scot* from La Plata. He was in charge of Grimstad Customs House when he died on June 6, 1928, at Amundsen's feet.

Hasselknippenova. 74°22' S, 9°42' W. A crag in the ice wall on the N side of the cirque the Norwegians call Borgebotnen, in the S part of Milorgfjella, in the N part of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for newspaper editor Oskar Hasselknippe (1911-2001), Resistance leader with Milorg in Ringerike, Norway, during the war against the Nazis.

Mount Hastings. 85°34' S, 154°10' W. A low mountain, 3 km SE of Mount Rigby, in the Karo Hills, at the W side of Scott Glacier. Discovered by ByrdAE 1928-30. Named by US-ACAN in 1967, for James V. Hastings, geomagnetist at McMurdo Station, 1964-65.

Haswell Island. 66°31' S, 93°00' E. A rocky, diamond-shaped islet, about 1.5 km wide, and rising to an elevation of about 100 m above sea level, it is the largest and seaward of the Haswell Islands, 4 km off the coast of Queen Mary Land, about 2.5 km N of Mabus Point, and just E of MacDonald Bay. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson as Haswell Islet, for Prof. William Aitcheson Haswell (1854-1925), zoologist at Sydney University, and a member of the AAE Advisory Committee. ANCA accepted the name on Nov. 28, 1955, and US-ACAN followed suit in 1956. The feature was redefined by US-ACAN in 1963, as Haswell Island, and ANCA accepted that change. The Russians call it Ostrov Ploskij.

Haswell Islands. 66°32' S, 93°00' E. A group of rocky islets and rocks, 4 km out to sea off Mabus Point on the coast of Queen Mary Land, just E of MacDonald Bay, not far from Mirnyy Station. Haswell Island is the largest, followed in order of size by Tokarev Island, Zykov Island, Fulmar Island, Poryadin Island, Buromskiy Island, Gorev Island, Greben Island, Khmara Island, and Vkhodnoy Island. Also included in the group, but outside the central area, are the Stroiteley Islands and the Tyulen'i Islands. Discovered and charted by the Western Base Party of AAE 1911-14. Mawson called them the Rookery Islands because of the large emperor penguin colony on Haswell Island. Renamed by ANCA on Aug. 11, 1955, as Haswell Islets, in association with the largest island. US-ACAN accepted the Australian naming in 1956. In 1963, US-ACAN redefined the feature as the Haswell Islands, and ANCA followed suit with this.

Haswell Islet *see* **Haswell Island**

Haswell Islets *see* **Haswell Islands**

Hatch, Lyranus *see* **USEE 1838-42**

Hatch Islands. 66°53' S, 109°16' E. A small group of rocky islands, 5 km E of Ivanoff Head, at the head of Vincennes Bay, they mark the division between the Knox Coast and the Budd Coast, in Wilkes Land. First mapped from air photos taken by OpHJ 1946-47, the islands were closely examined by ANARE personnel on helicopters, led by Phil Law from the *Magga Dan*, in 1960. Named by US-ACAN in 1963, for Ernest B. Hatch, tractor driver on OpW 1947-48.

Hatch Outcrop. 72°34' S, 93°20' W. An outcropping of rocks northward of Peeler Bluff, in the W part of McNamara Island, in the N part of the Abbot Ice Shelf. Named by US-ACAN in 1962, for Lt. Ross R. Hatch (b. Sept. 1934, NYC), USN, a 1956 graduate of the Naval Academy, who, while serving as operations officer aboard the *Glacier* during the 1960-61 season, helped position the outcrop, on Feb. 7, 1961. Lt. Hatch (later a captain), had also served on the *Glacier* as operations officer in 1959-60. Incidentally, Capt. Hatch is a great great grandson of Sir James Clark Ross.

Hatch Plain. 80°44' S, 25°36' W. A small, debris-covered area, rising to about 1350 m above sea level, on the E margin of the Du Toit Nunataks, in the Read Mountains, in the E part of the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. They plotted it in 80°44' S, 25°43' W. Named by UK-APC on Jan. 5, 1972, for Frederick Henry Hatch (1864-1932), British petrologist, mining engineer, and consulting geologist. The mineral hatchite was named for him as well. US-ACAN accepted the name. The feature has since been replotted.

Hatcher Bluffs. 86°20' S, 125°36' W. A line of bluffs facing NW, 8 km S of Metavolcanic Mountain, at the E side of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Julius Omar Hatcher (b. Sept. 14, 1929, Charleston, W. Va.), construction mechanic at Little America V in 1957-58, and who wintered-over at Byrd Station in 1962 (where he was promoted to chief petty officer).

Hatcher Island. 77°53' S, 165°04' E. On the E side of Juergens Island, and 3 km E of West Dailey Island, in the Dailey Islands. Named by US-ACAN in 2001, after John H. Hatcher III, of Antarctic Support Associates, who initiated a comprehensive waste management program for USAP, and managed the program until 1999. "We take out the trash," he said.

Hathaway, Capt. New Bedford skipper of the *Congress*, in South Shetlands waters in 1852-53.

Hatherton, Trevor. b. Sept. 30, 1924, Normanton, near Leeds, Yorks, son of coal mine manager Baden Hector Hatherton and his wife Evelyn Burrough. A cricket player and mountain climber of note, he moved to NZ in 1950 as a geophysicist, worked for many years for the government, and in May 1953 he married Stella Williams in Wellington. In 1955-56 he accompanied the American OpDF I to Antarctica, to scout out the future Scott Base, and was the first scientific leader of Scott Base, from Dec. 1956 to Feb. 1958. He was later scientific officer in charge of Antarctic Activities, Department of Scientific and Industrial Research. He retired in 1989, and died on May 2, 1992, in Wellington. *See also* the Bibliography.

Hatherton Glacier. 79°55' S, 157°35' E. A large glacier, with an average width of 11 km and a notably smooth surface for most of its 68 km length, flowing in a generally E direction from the Polar Plateau, along the S side of the Darwin Mountains (which separate this glacier from Darwin Glacier for practically all of the Hatherton's flow), finally to enter Darwin Glacier (with which Hatherton Glacier shares a common névé) at Junction Spur. Discovered and mapped by the Darwin Glacier Party of BCTAE in 1957, and named by them for Trevor Hatherton. US-ACAN accepted the name in 1962.

Hatinosu Peak *see* **Hachinosu Peak**

Hatinosu-yama *see* **Hachinosu Peak**

Hatinozu Yama *see* **Hachinosu Peak**

Hatley, Simon. 2nd captain on Shelvocke's voyage of 1719.

Hatten *see* **Hatten Peak**

Hatten Peak. 72°34' S, 4°10' W. An isolated rock peak, 10 km NW of Veten Mountain, rising above the ice at the NW side of the Borg Massif, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and

named by them as Hatten (i.e., "the hat"). US-ACAN accepted the name Hatten Peak in 1966.

Cape Hattersley-Smith. 71°51' S, 61°04' W. A cape marked by a triangular rock peak, at the SE end of Condor Peninsula, 8 km SW of Cape Knowles, and on the N side of Hilton Inlet, on the Black Coast, on the E coast of the Antarctic Peninsula. Photographed aerially on Dec. 30, 1940, by USAS 1939-41. In Nov. 1947 a joint sledging team of personnel from RARE 1947-48 and Fids from Base E surveyed it from the ground. In 1966 USN re-photographed it aerially. Named by UK-APC on Nov. 13, 1985, for Geoff Hattersley-Smith. US-ACAN accepted the name later in 1985.

Hattersley-Smith, Geoffrey Francis "Geoff." b. April 22, 1923, London, son of Major Wilfrid Percy A. Hattersley-Smith and his wife Ethel Mary Willcocks. An Oxford-educated glaciologist, he joined FIDS in 1948, and wintered-over as base leader at Base G in 1949. After the tour, he left Santos, Brazil, on the *Andes*, and arrived back in Southampton on April 16, 1950. He was with the Defence Research Board of Canada, 1951-73, and spent portions of 20 summers in the Arctic. On May 12, 1955 he married Greek-born geneticist Maria Kefallinou. He was with BAS (successor to FIDS) from 1973, and was secretary of UK-APC from 1975 to 1991. In 1991 his book *The History of Antarctic Place Names* was published in Cambridge. In 1990 he retired to Sissinghurst, Kent.

Hatusima. 68°59' S, 39°35' E. A small island, immediately NE of the lake the Norwegians call Selvatnet, in the Flatvaer Islands, in the NE sector of Lützow-Holm Bay, off the Prince Olav Coast. Mapped (but, apparently, not named) by Norwegian cartographers in 1946, working from air photos taken during LCE 1936-37. This was the first landing place for a Japanese route-finding party in Jan. 1957, during JARE I. Named by the Japanese on Oct. 1, 1962 (name means "first island").

Montes Hauberg *see* **Hauberg Mountains**

Hauberg Mountains. 75°52' S, 69°15' W. A group of mountains, about 56 km in extent, and rising to about 1450 m on what used to be called the Joerg Plateau, 20 km N of Cape Zumberge, and 50 km S of the Sweeney Mountains, immediately behind the Orville Coast, in eastern Ellsworth Land. They include, from W to E: Bean Peaks, Janke Nunatak, Mount Dewe, and Mount Leek. Discovered aerially on Nov. 21, 1947, by RARE 1947-48, and named by Ronne for John Henry Hauberg (1869-1955), lawyer, photographer, historian, and one of the leading citizens of Rock Island, Ill., a contributor to RARE. They appear on Ronne's 1948 map, plotted in 76°48' S, 68°00' W. US-ACAN accepted the name, and, with those coordinates, the feature appears in the 1956 U.S. gazetteer, and also on the 1962 American Geographical Society's map. Re-mapped by USGS from USN air photos taken between 1965 and 1967, the feature appears, with the new coordinates, on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. They appear on a 1952 Argentine chart as Montes Hauberg, and that is the name used by the Argentines today. It was also the name accepted by the 1974 Chilean gazetteer.

Haugebreen. 74°28' S, 9°51' W. A large glacier, about 14 km long, between Milorgfjella and XU-fjella, in the N part of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for lawyer Jens Christian Hauge (1915-2006), Resistance fighter against the Nazis during World War II. In 1945, at the age of 30, he was appointed Norway's youngest ever minister of defense.

Haugen. 72°08' S, 17°11' E. A small nunatak, NE of Sarkofagen Mountain, in Borchgrevinkisen, in Fimbulheimen, in Queen Maud Land. Name means "the hill" in Norwegian.

Hauglandkleppen. 74°38' S, 10°13' W. The southernmost nunatak in XU-fjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the Haugland lump") for civil servant Finn Haugland (b. 1907), Norwegian Resistance leader during World War II. The Russians call it Gora Mansurova.

Hauglandtoppen. 70°56' S, 11°23' E. The most westerly nunatak in Lingetoppane, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Lt. Knut Haugland (1917-2009). During World War II, he was captured by the Gestapo, escaped to Sweden, and from there to England, where he joined the Norwegian Independent Company. He was the radio operator during the heavy water sabotage at Vermork, and later trained marine telegraphists in the Oslo area for Milorg, escaping twice more from the Gestapo. In 1947 he took part in the famous *Kon-Tiki* expedition (he had met Thor Heyerdahl in England in 1944).

Haugtussa. 71°42' S, 25°27' E. A small mountain E of Kamp Glacier, in the north-central part of the Sør Rondane Mountains. Named by the Norwegians ("the wood nymph").

The *Hauk*. A 137 foot 5 inch Norwegian whale catcher, built in 1941 at Framnaes Mek., in Sandefjord, for Thor Dahl's Ørnen Company. She was seized by the Germans that year, and renamed *Cimber*, being used by them as a minesweeper. After the war, Dahl got her back, and renamed her *Hauk* again. In 1948-49 she was in Antarctic waters, catching for the *Thorshammer* and the *Thorshavet*. In 1952, she was laid up as a spare catcher, and in 1956 was sold to the Compañía Ballenera del Norte, in Callao, and renamed the *Don Tomás*. She was catching until 1966, when she was laid up, and in 1971 was sold for scrap.

Haukehullet. The old (ca. 1910), and unofficial name, for a whaling anchorage on King George Island, in the South Shetlands. Named for the catcher *Hauken*.

Haukelandnuten. 74°18' S, 9°34' W. A mountain with a snow-capped top, in Helsetskarvet, in Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for army officer Mons Olai Haukeland (1898-1983), Resistance leader during World War II.

The *Hauken*. Norwegian whale catcher, 121 tons, she was one of the first two modern catchers (cf. **The *Ørnen***), and was built for Chris Christensen at Framnaes Mek. (Christensen's shipyard) in 1904. She worked for the *Admiralen* in the South Shetlands between 1905 and 1909, first leaving Sandefjord with the *Admiralen* fleet on Oct. 21, 1905, for the 1905-06 season. Her skipper was Lauritz Ellefsen. Then, with the *Ørnen*, she was laid up at Port Stanley for the winter, to await the next season, 1906-07, when she again accompanied the *Admiralen* to the South Shetlands. *See* **The *Admiralen*** for details of the expedition. The *Hauken* was back for the 1907-08 and 1908-09 seasons, commanded by famous gunner Thorvald Andersen. Nokard Davidsen's brother was gunner that season. In 1911 she and the *Grib* were sold to the Norwegian Canadian Whaling Company.

Hauken Rock. 62°00' S, 57°32' W. A rock, awash, about 1.3 km E of Ørnen Rocks, and 3 km NE of Cape Melville (the E end of King George Island), in the South Shetlands. Photographed aerially by FIDASE in 1956. In association with Ørnen Rocks, it was named by UK-APC on Sept. 23, 1960, for the *Hauken*. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. The British were the latest to re-plot this rock, in late 2008.

Haulaway Point. 68°11' S, 67°00' W. A small, rocky point midway along the NE side of Stonington Island, in Marguerite Bay, close off the Fallières Coast, on the W coast of Graham Land. First surveyed by USAS 1939-41, it appears on Glenn Dyer's expedition map of 1941. FIDS re-surveyed it in 1946-47, and so named it because it is one of the best places in the area for hauling supplies ashore. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Punta Desembarco.

Haumea Glacier. 71°00' S, 68°39' W. Flows NE from the LeMay Range, meeting Jupiter Glacier in the N, as they flow into George VI Sound. Named by UK-APC on March 17, 2010, for Haumea, the dwarf planet situated beyond Pluto, discovered in 2004 by a team from the Palomar Observatory, Calif., and in 2005 by a team from the Sierra Nevada Observatory, in Spain.

Haun, Robert Charles. b. Dec. 31, 1903, Boston. He married Sophie Kizelewicz, and was a well-known Rhode Island artist when, in 1955, he volunteered to go as civilian artist on OpDF I (i.e., 1955-56). Admiral Dufek, who already had famous World War II combat artist Standish Backus, turned him down initially, but he wound up going anyway. It was his desire to chronicle the adventures of the Seabees which led Dufek finally to invite him on Nov. 8, 1955, and on Nov. 20, he flew out of the States to Christchurch, NZ, arriving there on Nov. 26. On Dec. 16, 1955, he sailed for Antarctica on the *Arneb*. He did 75 paintings and sketches, and returned to Norfolk, Va., on May 6, 1956. He

continued in Rhode Island, as a painter, and died on Feb. 1, 1975, at Providence. Sophie died in 1990.

Haunn Bluff. 66°23' S, 110°33' E. A steep rock bluff surmounting the E part of the S shore of Odbert Island, in the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW 1947-48. Named by US-ACAN in 1963, for Marvin George Haunn (b. 1937), meteorologist at Wilkes Station in 1962.

Haupt Nunatak *see* **Haupt Nunataks**

Haupt Nunataks. 66°35' S, 110°41' E. Three small rock outcrops protruding above the ice cap, 8 km S of Alexander Nunatak, at the E side of the lower reaches of Vanderford Glacier, about 40 km SE down the Budd Coast from Wilkes Station and Casey Station, in Wilkes Land. In fact, when you leave Casey Station heading in that direction, you get to what is loosely called Haupt Turn-Off, which leads you there. Plotted by U.S. cartographer Gard Blodgett in 1955 from air photos taken during OpHJ 1946-47, but as one nunatak. Named by US-ACAN in 1955 as Haupt Nunatak (i.e., in the singular), for Ensign Richard William Haupt (b. March 4, 1927, Providence, RI. d. Jan. 18, 2006, Cape Elizabeth, Maine), who joined the U.S. Navy in July 1944, and was assistant hydrographic officer on OpW 1947-48. He retired as a captain in Feb. 1973. ANCA accepted the name, but in the plural, as Haupt Nunataks.

Hauron Peak. 64°56' S, 62°59' W. Rising to 1350 m, 5 km SE of Mount Banck, between Petzval Glacier and Miethe Glacier, S of Ferguson Channel, on the Danco Coast, on the W coast of Graham Land. It appears (apparently unnamed) on a 1952 Argentine government chart. In 1956-57, FIDASE photographed it aerially and Fids from Base O surveyed it from the ground. Named by UK-APC on Sept. 23, 1960, for Louis-Arthur Ducos du Hauron (1837-1920), French color photography pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Hausen *see* **Hausen Nunatak**

Hausen Nunatak. 66°37' S, 56°23' E. A peak, rising to about 500 m above sea level, on the N side of Seaton Glacier, in Kemp Land. Mapped by Norwegian cartographers in 1946, from air photos taken during LCE 1936-37, and named by them as Hausen (i.e., "the pate"). ANCA accepted the name Hausen Nunatak.

Hausten, Hansen. b. 1901, Norway. Just after World War I, he joined NorskAmerika Line as a fireman, and plied across the Atlantic on their ships from Bergen. He was a seaman on the 2nd half of ByrdAE 1928-30.

Havelgletscher. 74°13' S, 162°40' E. A glacier, on the W side of Mount Meister, and NE of Eskimo Point, in the Eisenhower Range of Victoria Land. Named by the Germans.

Haven Hill. 82°53' S, 162°36' E. A hill, 3 km W of Mount Tedrow, on the S side of Kent Glacier, in the Queen Elizabeth Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Stoner B. Haven, biologist at McMurdo Station in 1960.

Haven Mountain. 80°02' S, 155°12' E. A prominent mountain rising to 2470 m (the Australians say 2560 m), with a level, razor-back snow ridge at its highest (eastern) part, 3 km NE of Three Nunataks, in the NW part of the Britannia Range. The aforementioned ridge is semicircular in plan, with a sheer, bare rock face about 500 m high on the inside and a steep snow slope on the outer (southern) face of the semicircle. The area enclosed by the semi-circular ridge consists of rock debris and is largely snow-free. Named by the Darwin Glacier Party of BCTAE 1956-58, who sheltered here for 5 days in the largely snow-free area below the N side of the summit ridge. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1965.

Mount Havener. 78°27' S, 84°37' W. Rising to 2800 m, directly at the head of Guerrero Glacier, in the Sentinel Range. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Melvin Charles Havener (b. March 7, 1936, Council Bluffs, Iowa), who joined the U.S. Navy in Aug. 1954, and was a mechanic who wintered at South Pole Station in 1957. He was also at McMurdo for OpDF IV (i.e., 1958-59). He also served in Vietnam, and retired in Feb. 1974.

Haver Peak. 75°09' S, 114°35' W. A small peak, 6 km S of Morrison Bluff, in the Kohler Range of Marie Byrd Land. First photographed aerially by OpHJ 1946-47. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Lt. (later Cdr.) David John Haver, USN, assistant officer in charge of the supply department at McMurdo during OpDF 65 (i.e., 1964-65) and OpDF 66 (i.e., 1965-66). Originally plotted in 75°09' S, 114°18' W, it has since been replotted.

Haverly Peak. 65°06' S, 63°33' W. Rising to 960 m. 1.5 km E of Azure Cove, and SW of Sonia Point, on the S side of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. It was one of the most southerly points triangulated by aerial photography conducted by FIDASE in 1956-57. Named by UK-APC on Nov. 13, 1985, for William Reginald Haverly (b. 1936), of the cartographic section, at the Foreign & Commonwealth Office, from 1970 (head of the section from 1986), responsible for preparing UK-APC maps. US-ACAN accepted the name.

The *Havfruen*. Norwegian auxiliary factory whaler and depot ship, a 3-masted iron sailing barque, built in 1885, and formerly Hogarth's British ship *Ochtertyre*. Chris Christensen's Kosmos Company bought her, and she sailed south for the 1911-12 whaling season in Antarctica, under the command of Capt. Søren Andersen, and attendant on the new, experimental whaler-catcher *Thulla*. The two vessels spent some time in the South Shetlands and South Orkneys, but couldn't get through the pack-ice, so the *Thulla* took the *Havfruen* in tow, and they spent most of the season in the South Sandwich Islands. However, the *Havfruen* was damaged, and was sunk by ice on Dec. 3, 1911, near Southern Thule, in 58°21' S, 31°07' W. All hands were saved, taken by the *Thulla* to South Georgia, and then back to Norway.

Havhestbotnen. 68°50' S, 90°41' W. A corrie in Havheststupet (the W precipice of the mountain the Norwegians call Tofteaksla), on the NW side of Lars Christensen Peak, on the coast they call Lazarevkysten, E of Cape Ingrid, in the NW part of Peter I Island. Named by the Norwegians, for the havhest, i.e., the northern fulmar (*Fulmarus glacialis*). The word "botnen" means "the cirque" or "the corrie."

Havheststupet. 68°49' S, 90°43' W. The W precipice of the mountain the Norwegians call Tofteaksla, on the NW side of Lars Christensen Peak, on the coast they call Lazarevkysten, E of Cape Ingrid, on Peter I Island. Named by the Norwegians in association with Havhestbotnen. *See also* **Havhestbotnen**.

Punta Havilland *see* **Havilland Point**

Havilland Point. 63°55' S, 60°14' W. A point, 3 km E of Cape Page, it forms the W entrance point of Lanchester Bay, on the Davis Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS cartographers. Named by UK-APC on Sept. 23, 1960, for Sir Geoffrey de Havilland (1882-1965), the great British pioneer aircraft designer. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. The Argentines call it Punta Havilland.

Havola Escarpment. 84°45' S, 98°40' W. An isolated, arc-shaped, snow-covered, south-facing escarpment, 50 km long, 50 km NW of the Thiel Mountains. Discovered and mapped by the Horlick Mountains Traverse of 1958-59. Named by US-ACAN for Major Antero Arnold Havola (b. April 16, 1911, Finland. d. Dec. 9, 1998, Williamsburg, Va.), of the Army Transportation Corps, trail expert, who had fought in the Russo-Finnish War, and after World War II joined the U.S. Army. He led the Byrd-South Pole Traverse of 1960-61 (q.v.). On Christmas Day of 1960, his party passed a few miles northward of this escarpment.

Montes Havre *see* **Havre Mountains**

Mount Havre *see* **Havre Mountains**

Havre Mountains. 69°16' S, 71°45' W. Rising to as high as 1920 m above sea level, they form the NW extremity of Alexander Island, and extend 30 km in an E-W direction, between Cape Vostok and Russian Gap, off the W coast of the Antarctic Peninsula. They are bounded by the Bongrain Ice Piedmont to the N, by Russian Gap and Palestrina Glacier to the E, and Lazarev Bay to the W. They include St. George Peak, Mount Newman, and Simon Peak. Discovered by von Bellingshausen on Jan. 28, 1821, and not seen again until BelgAE 1897-99 saw them in Feb. 1898. FrAE 1908-10 roughly charted them in Jan. 1909, and Charcot named them Massif Le Havre, for Le Havre (in France), the home port of his expedition. They appear on a British chart

of 1914, as the Le Havre Range. Wilkins' map of 1929 shows them as Mount Havre. The BGLE 1934-37 map shows them as the Havre Mountains, as does a 1943 U.S. Hydrographic Office chart and a 1948 British chart. They were photographed aerially on Nov. 4, 1940, by USAS 1939-41, again on Feb. 9, 1947, during OpHJ 1946-47, and then in Nov. 1947 by RARE 1947-48. In 1959-60, from the RARE photos, Searle of the FIDS mapped these mountains in great detail. He plotted them in 69°08' S, 71°40' W, and UK-APC accepted the name Havre Mountains (and those coordinates) on March 2, 1961, and US-ACAN followed suit that year. By the time of the 1977 British gazetteer, the coordinates had been corrected. The feature appears on a 1946 Argentine chart as Monte Havre, and that was the name accepted by the 1970 Argentine gazetteer. It appears on a 1971 Chilean chart as Montes Le Havre, and that was the name accepted by the Chilean gazetteer of 1974. The mountains were surveyed from the ground by BAS personnel from Fossil Bluff, in 1976-77.

Havsbotn. 69°50' S, 38°45' E. A bay comprising the narrow S portion (i.e., the "bottom" portion) of Lützow-Holm Bay, marking that bay's head. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it (name means "sea bottom"). Havsbotn was the old Norse name for the northernmost part of the sea N of Norway. US-ACAN accepted the name without modification in 1947.

Havstein *see* **Havstein Island**

Havstein Island. 67°07' S, 58°45' E. A rocky island, about 5.5 km long and about 3.5 km wide, 2.5 km (the Australians say 4 km) N of Law Promontory, and 1.5 km E of Broka Island, in Kemp Land. Mapped by Norwegian cartographers in 1946 from air photos taken during LCE 1936-37, and named by them as Havstein (i.e., "sea stone"), probably due to its rocky nature and its seaward position. First visited by an ANARE party led by Bob Dovers in 1954. US-ACAN accepted the name Havstein Island in 1947, and ANCA followed suit on Nov. 28, 1955.

The *Hawea*. Formerly the *Loch Eck*, she was a NZ frigate which, with the *Pukaki*, escorted the *Endeavour* to 67°30' S, 179°58' E (about 50 km inside the Ross Sea pack-ice) in the 1956-57 summer, when the *Endeavour* was en route to Ross Island. The two frigates then went investigating the ocean N of Scott Island, and failed to land there. Capt. W.J. Brown.

Mount Hawea. 82°50' S, 161°52' E. A conical spire, rising to 3080 m, 6 km (the New Zealanders say 10 km) E of Mount Markham, in the Frigate Range. Named by the Northern Party of NZGSAE 1961-62, for the *Hawea*. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Hawes Col. 60°44' S, 45°38' W. A col between the 2 main flat-topped peaks of the Gneiss Hills, viz. North Gneiss and South Gneiss, on Signy Island, in the South Orkneys. Surveyed from the ground by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, for Ian Hawes, BAS limnologist who wintered-over at Signy in 1979, 1980, and again in 1984.

Hawk Island *see* **Dufayel Island**

Hawker Island. 68°38' S, 77°51' E. An irregular-shaped island, about 1.5 km long, between Mule Island and Mule Peninsula, in the Vestfold Hills, in the E part of Prydz Bay. Photographed aerially by LCE 1936-37, and mapped (but, apparently not named) from these photos by Norwegian cartographers in 1946. Re-mapped by Australian cartographers from ANARE air photos taken in 1957-58. Named by ANCA on Aug. 11, 1958, for radio supervisor Alan Charles Hawker (b. April 17, 1930), who was one of the first group ever to winter-over at Davis Station, in 1957. He had also wintered-over at Macquarie Island in 1954. US-ACAN accepted the name in 1965.

[1]**Mount Hawkes** *see* **Hawkes Heights**

[2]**Mount Hawkes**. 83°55' S, 56°05' W. Rising to 1975 m, at the E side of Jones Valley, it is the highest peak in the Neptune Range, in the Pensacola Mountains, along the S end of the Washington Escarpment. Discovered and photographed from the plane that made the non-stop flight from McMurdo to the Weddell Sea and back on Jan. 13, 1956 (see that date under Operation Deep Freeze I). Named by US-ACAN in 1957, for Trigger Hawkes. On the *National Geographic* map of 1957, it is plotted in 83°28' S, 46°00' W, and is shown rising to 3660 m. In the 1960 U.S. gazetteer and on the American Geographical Society's map of 1962 it is plotted in 84°28' S, 54°00' W, and on a 1963 U.S. Hydrographic Office chart it is plotted in 83°28' S, 54°00' W. In 1963-64, USGS surveyed the feature from the ground, and USN photographed it aerially. USGS was able then to correct the coordinates. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Hawkes, William Michael "Trigger." b. Sept. 29, 1910, Jersey City, NJ, son of railroad clerk John Hawkes and his wife Sara Sheehan. One of the truly seminal figures of Antarctic history, Trigger Hawkes was an officer in the USNR, and learned to fly at the Naval Air Station in Pensacola. On Oct. 14, 1937, he married Helen Marie Barry. As a commander, he was a pilot on OpHJ 1946-47. He was back on the continent during OpDF I (i.e., 1955-56), as Dufek's senior air adviser, and again for OpDF II (i.e., 1956-57). He often flew with an unlighted cigar in his mouth. On Dec. 22, 1955, although not qualified to fly an Otter, he pulled rank and did so, while the official pilot, Eric Weiland, sat in the co-pilot's seat. The Otter had been recently assembled, and on that day he flew Dick Bowers and others to Hut Point to relieve the first tractor train. The Otter crashed on the ice just south of Cape Bird. Several men were injured, two of them seriously. Hawkes had incorrectly set the trim tabs. Lt. Cdr. Jack Torbert, although short of fuel, flew his Neptune in to bring the injured back to Hut Point, and the *Edisto* turned back to take them aboard. Helen died in 1961 (she was buried in Arlington Natinal Cemetery), and Trigger went to live in San Diego, where he died on April 2, 1994.

Hawkes Glacier. 62°56' S, 60°31' W. A large tidewater glacier extending along the E side of Deception Island, between Macaroni Point to the N and Baily Head to the S, reaching an elevation of 528 m (in Mount Chile) and 548 m (in Mount Pond). Named by the Poles on Sept. 1, 1999, for Donald Durston "Don" Hawkes (b. July 18, 1934, Cardiff, Wales), who studied geology at Exeter and at the University of London, joined FIDS in 1956 as a research assistant to Ray Adie, and in 1956-57 worked in Birmingham on material gathered at King George Island. He went to Antarctica in 1957 on the *Shackleton* (the season that vessel got pierced), was at Base B (Deception Island) in 1957-58, and made a map of the island in his report, *The Geology of the South Shetlands*, which was published in 1961 (this got him his PHD, from Birmingham). From 1963 to 1972 he was head of the geology department at the Univeristy of Sierra Leone, and, subsequently, head of the geology department at the University of Aston, in Birmingham for many years. He was back in Antarctica in 1976-77, spending a month at Galíndez Island, and visiting Anvers Island, Adelaide Island, the Loubet Coast, and the Fallières Coast.

Hawkes Heights. 73°32' S, 169°42' E. An ice-filled crater rising to 2000 m, it dominates the S part of Coulman Island, and marks the island's summit, in the Ross Sea. Named by NZGSAE 1958-59 for Trigger Hawkes. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Hawkins, Geoffrey Alan Brooke. b. July 13, 1895, son of Capt. Herbert Reginald Montgomery Hawkins. He entered Osborne College in May 1908, and in Jan. 1913 was appointed midshipman on the cruiser *Natal*, on which ship he was serving at the start of World War I. In Jan. 1916 he was promoted to sub lieutenant, and transferred to the destroyer *Sandfly*. In May 1917 he went to the minesweeper *Holderness*, on which he was promoted to lieutenant. He was given command of the minesweeper *Tedworth* in June 1918, when he was only 22 years old, and in 1919 was awarded the DSC. Between 1924 and 1927 he was aide to the governor general of South Africa, and in 1925 was attached to the staff of the Prince Of Wales during the royal visit to South Africa. On Feb. 16, 1926, in Cape Town, while a lieutenant commander, he married Lady Margaret Ida Montagu Douglas Scott, daughter of the 7th Duke of Buccleuch and 9th Duke of Queensberry. He went back to sea in 1927, and in Dec. 1930, while serving on the royal yacht *Victoria And Albert*, was promoted to commander. After several staff appointments, he was promoted to captain in Dec. 1937. In Oct. 1939 he took over command of the *Queen of Bermuda*, and went to Antarctica as her skipper in Jan.-March 1941. On April 24, 1941, at Freetown, Sierra Leone, he handed over command to Allan Peachey. He saw action in World War II, and in

May 1945 was appointed commodore of the RN Barracks, in Portsmouth. In Jan. 1947 he was promoted to rear admiral, and in March 1947 he became vice controller in the Admiralty, a post he held until Oct. 1949. He was in charge of the dockyard at Malta, in 1952 was knighted, retired in Dec. 1952, and died on Oct. 5, 1980, in Kettering, Northants.

Hawkins, Samuel V. b. Maryland. He was living in NY when he was appointed to the U.S. Navy as a sailmaker, on May 1, 1831, joining the *Falmouth*, on which he served for several years. However, by 1837 he was on the *Relief*. He was sailmaker on the *Vincennes* during USEE 1838-42. His widow, Jane, was pensioned on July 27, 1849, at the rate of $10 a month.

Hawkins Cirque. 77°30' S, 160°34' E. About 0.8 km wide, it is, in part, occupied by a glacier, and is located near the center of the S cliffs of the Prentice Plateau, and opens S to the Wright Upper Glacier, in the Olympus Range of Victoria Land. Named by US-ACAN in 2004, for Jack D. Hawkins, lead PHI helo pilot with USAP in 8 consecutive field seasons beginning with the 1996-97 season. NZ-APC accepted the name on Nov. 30, 2004.

Hawkins Glacier. 66°34' S, 107°31' E. A channel glacier flowing to the coast, 6 km W of Snyder Rocks, and about 19 km WNW of Underwood Glacier, on the Knox Coast of Victoria Land. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Samuel V. Hawkins. ANCA accepted the name on Oct. 22, 1968.

Hawkins Peak. 75°24' S, 110°29' W. A small summit peak on a mostly ice-covered and rounded mass, 11 km SE of Mount Murphy, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Maj. Billy R. Hawkins, a member of the U.S. Army Aviation Detachment in Antarctica, 1966-67.

Hawlley, Edward Bernard. b. Jan. 11, 1910, Cavite, in the Philippines, son of Kentucky-born Edward D. Hawlley and his Filipina wife Wilhelmina Correa (she was actually born in Japan). In 1912, the family returned to the USA, to San Francisco, but between 1915 and 1918 they lived in Shanghai until the divorce. Wilhelmina brought the child back to San Francisco, but then set off again for the Orient. The father, who worked for Rogers Brown & Co., went off to Hankow, to work for Arnhold Brothers. The son did not return to the USA permanently until 1927, and in 1931 he went to sea as a fireman on the *Golden West*, out of Seattle. He then switched to the *Golden Cross*, and was on the Vancouver to San Francisco to Auckland run, leaving the ship at Auckland in early Nov. 1933, making his way to Wellington, where he joined the *Jacob Ruppert*, as an assistant engineer for the first half of ByrdAE 1933-35. After the expedition, he made his way back from NZ to San Francisco, signing on there to the *President Cleveland*, and then as chief electrician on a variety of ships. He married Olive, and they lived in Brooklyn, and later Laurelton, NY. He continued on as a ship's electrician, into World War II, and was serving on the *East Indian* when he was torpedoed and killed off Cape Town on Nov. 3, 1942.

Haworth Mesa. 85°54' S, 128°18' W. An ice-capped mesa with steep rock walls, its summit area is 8 km long, 5 km wide, and rises to 3610 m, between Sisco Mesa and Mount McNaughton, where it forms part of the divide between Norfolk Glacier and Olentangy Glacier, in the W part of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for physicist Leland J. Haworth (1904-1979), director of the NSF.

Mount Hawthorne. 72°14' S, 98°29' W. Also called Mount Mark. A prominent mountain in the Walker Mountains, directly S of the base of Noville Peninsula, on Thurston Island. Discovered aerially on Feb. 27, 1940 by Byrd on a flight from the *Bear*, during USAS 1939-41, and named by him for Roger Hawthorne. US-ACAN accepted the name in 1952. Originally plotted in 72°10' S, 98°39' W, it has since been replotted.

Hawthorne, Roger. b. Jan. 24, 1905, Wolfeboro, NH. His mother, Esther, later ran a boarding house in Plymouth, Mass. After Bowdoin, he became a news reporter, first with a Boston daily paper, and wrote several news pieces on Antarctica while UP reporter in Washington, DC, which led Admiral Byrd to request him to be field representative for USAS 1939-41. At that time he was living in Middleboro, Mass., with his wife Sylvia. He went south on the *Bear* in 1940, was due to winter-over at East Base in 1940, but went back to the USA on the *Bear*, being replaced by Harry Darlington. He was back for the second half of the expedition. He moved to Cape Cod in 1960, and was a feature writer for the local paper there until 1966. He died on May 12, 1973, at Bourne, Mass.

Hawthorne Bluff. 77°29°S, 160°21' E. A rock bluff at the S end of the McAllister Hills, in Victoria Land. Named by US-ACAN in 2004, for Ann Parks Hawthorne, photographer from Washington, DC, who photo-documented the USAP during several field seasons from 1984 onwards. NZ-APC accepted the name on Nov. 8, 2006.

Mount Hay. 71°06' S, 65°39' E. About 17.5 km SE of Husky Dome, and about 33 km ENE of Mount Hicks, in the Prince Charles Mountains of Mac. Robertson Land. Named by ANCA for Malcolm Cave Hay (b. Oct. 16, 1934), base leader and medical officer of Davis Station in the winter of 1961. US-ACAN accepted the name in 1967.

Hay Hills. 72°56' S, 68°25' E. Elevated rock outcrops at the N end of the Mawson Escarpment, between Rofe Glacier and Petkovic Glacier, in Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1958, 1960, and 1973. Named by ANCA.

Punta Haydée. 62°28' S, 60°46' W. A point immediately S of the beach the Chileans call Playa Daniel, from which it is separated by Playa Marko, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1987-88, for biologist Haydée María Castillo Gutiérrez, professor of agroclimatology at the University of Chile, a scientific researcher here that year.

Hayden Peak. 74°41' S, 111°41' W. The southernmost of the rock summits in the Gerrish Peaks, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN for Dennis J. Hayden, USN, VXE-6 radioman 3 times at McMurdo up to the 1975-76 season.

Haydn Inlet. 70°13' S, 70°30' W. An ice-filled inlet, 20 km wide at its mouth, and narrowing toward the head, it indents the W coast of Alexander Island for 45 km between Mozart Ice Piedmont and Handel Ice Piedmont, and forms the E arm of Wilkins Sound, E of Dorsey Island. Discovered aerially by USAS 1939-41, and roughly mapped by them. Mapped by Searle of the FIDS in 1959-60 from 1947 air photos taken during RARE 1947-48. He plotted it in 70°13' S, 70°45' W. Named by UK-APC on March 2, 1961, for the composer Franz Joseph Haydn (1732-1808). US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with those new coordinates, the feature appears in the 1977 British gazetteer.

Monte Hayes *see* **Mount Hayes**

Mount Hayes. 66°50' S, 64°10' W. A plateau-type mountain, rising to 1140 m, at the base of Cole Peninsula, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially in 1947 by RARE 1947-48. Fids from Base D surveyed and charted it in 1947 and named it for the Rev. James Gordon Hayes (*see* the Bibliography) (1877-1936). UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a 1954 British chart, and also in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Monte Hayes. It was further surveyed by BAS personnel from Base E in 1963-64.

Hayes, Earl. Oiler and fireman on the *Eagle*, in 1944-45, during the 2nd phase of Operation Tabarin.

Hayes, James *see* **USEE 1838-42**

Hayes, William *see* **USEE 1838-42**

Hayes Bank. 77°00' S, 171°00' W. A submarine feature off McMurdo Sound, in Victoria Land. Named by NZ-APC on Nov. 30, 2004, for Dennis Hayes, marine geophysicist, professor at Columbia University, deputy director of the Lamont-Doherty Earth Observatory there, who worked in, and published extensively on, the Antarctic, as results of his trips on the *Eltanin* from the 1960s to the 1980s.

[1]**Hayes Glacier** *see* **Hays Glacier**

[2]**Hayes Glacier**. 76°16' S, 27°54' W. Enters the SE part of the Weddell Sea, 27 km WSW of Dawson-Lambton Glacier. Discovered and pho-

tographed aerially on Nov. 5, 1967, during a Hercules flight over the Caird Coast, and plotted by USGS from these photos. Named by US-ACAN in 1970, for Lt. Cdr. Winston R. Hayes, USNR pilot on that flight.

Hayes Head. 74°01' S, 165°17' E. A prominent headland, rising to 850 m, and overlooking the N extremity of Wood Bay, 5 km N of Kay Island, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Miles O. Hayes (b. Oct. 1934), geologist at McMurdo Station, 1965-66.

[1]**Hayes Peak**. 67°28' S, 60°46' E. A conical peak rising to 340 m (the Australians say 240 m) above sea level through the ice slopes 3 km S of Cape Bruce and Oom Bay, in Mac. Robertson Land. Discovered in Feb. 1931 by BANZARE and named by Mawson for James Gordon Hayes (*see* the Bibliography, and **Mount Hayes**). US-ACAN accepted the name in 1947, and ANCA followed suit on Nov. 28, 1955. The Norwegians call it Veslekuten.

[2]**Hayes Peak**. 85°20' S, 89°18' W. An isolated, low rock peak, rising to 2060 m above sea level, above the ice surface just S of the Bermel Escarpment in the Thiel Mountains. Named by Bermel and Ford, leaders of the USGS Thiel Mountains Party here in 1960-61, for Philip T. Hayes, USGS geologist in the McMurdo Sound dry valley area in 1958-59. US-ACAN accepted the name in 1962.

Hayman Nunataks. 85°40' S, 179°30' E. A small group of isolated nunataks at the E end of the Grosvenor Mountains, 10 km N of Larkman Nunatak. Named by US-ACAN in 1966, for Noel R. Hayman, aurora scientist at Hallett Station in 1962.

Haymes, Carlos. b. 1877, Uruguay. He joined the merchant marine as a teenager, and was plying the Atlantic on the *Danube*, at age 17, as an engineer. He replaced Harry Gravill as chief engineer on the *Scotia* for the 2nd part of ScotNAE 1902-04. He lived in Buenos Aires and never married. He was still alive in 1933.

Mount Hayne. 70°16' S, 65°02' E. A mountain, about 3.5 km NW of Moore Pyramid, on the N side of Scylla Glacier, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1965. Named by ANCA for J. Roger Hayne, photographic officer with the Antarctic Division, Melbourne, who was a member of the Prince Charles Mountains Survey Party in 1969. US-ACAN accepted the name in 1971.

Haynes, Patrick Joseph Anthony "Tony." Some called him "Paddy." b. 1938, London. He joined FIDS in 1959, as a cook, and wintered-over 4 times in Antarctica. His first two tours were at Base F, in 1960 and 1961, and his second two at Halley Bay Station in 1965 and 1966, in the latter year being more of a general assistant. In between Antarctic tours he taught English in Chile for a while with Bob Thomas. He moved to Killara, NSW. He did not wish to be interviewed for this book.

Haynes Glacier. 75°25' S, 109°30' W. A broad glacier flowing to the Walgreen Coast along the E side of Mount Murphy, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Maj. John W. Haynes, U.S. Marine pilot during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68), who made a photographic flight over this glacier on Jan. 1, 1967.

Haynes Table. 84°49' S, 174°35' E. A high snow-covered mesa-like upland, about 13 km (the New Zealanders say 10km) across and rising to 3390 m (the New Zealanders say 2700 m or more), S of Mount Odishaw, in the Hughes Range, between the heads of Keltie Glacier and Brandau Glacier (the New Zealanders say it lies between 2 of the principal tributaries of the Keltie Glacier). Discovered and photographed aerially by VX-6 on the flight of Jan. 12-13, 1956, mapped by USGS from these photos, and named by US-ACAN in 1962, for Benarthur Haynes (b. May 23, 1909, Santa Fe, NM. d. April 29, 1954, Los Angeles), meteorologist, chief of the U.S. Weather Bureau's observation section, who was on OpHJ 1946-47. Mr. Haynes was actually born Benarthur R. Castle, the elder of 2 sons of Mr. Castle and his wife Eveleyn (Evelyn had been born in Colorado, under rather doubtful circumstances. Her mother, Jennie, had then married a much older Illinois brakeman named Charles Haynes, and they settled in Santa Fe). Charles and Jennie Haynes adopted their grandsons, and moved to Pasadena, where the older boy became Benarthur Castle Haynes, or B.C. Haynes.

Hayrick Island. 68°42' S, 67°32' W. A small, but prominent rock mass, rising to 160 m above sea level, between Lodge Rock and Twig Rock, in the Terra Firma Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. The Terra Firma Islands were first visited and surveyed in 1936, during BGLE 1934-37. Fids from Base E surveyed it in Sept. 1948, and named it Hayrick Islet due to its appearance when viewed from the east. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. In 1957, the Argentines built Granaderos Refugio on the W side of the island. On July 7, 1959, UK-APC redefined it as Hayrick Island, and US-ACAN followed suit in 1963.

Hayrick Islet *see* **Hayrick Island**

Hays Glacier. 67°41' S, 46°17' E. Flows northward into the head of Spooner Bay, Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA for James R. Hays, USAF geologist, the American observer on the *Thala Dan*, on the voyage led by Don Styles, which left Melbourne on Jan. 5, 1961, visited the Australian stations (as well as Mirnyy Station), and made a landing near here. US-ACAN accepted the name Hays Glacier in 1965.

Hays Mountains. 86°00' S, 155°00' W. A large group of mountains and peaks in the Queen Maud Mountains, surmounting the divide between the lower portions of Amundsen Glacier and Scott Glacier, they extend from the vicinity of Mount Thorne in the NW, to Mount Dietz in the SE. Discovered aerially by Byrd on his South Pole flight of Nov. 28-29, 1929, mapped (in part) by Larry Gould's geological party of 1929 (during that expedition) and by Quin Blackburn's geological party of 1934, during ByrdAE 1933-35. Named by Byrd as the Will Hays Mountains, for William Harrison Hays, Sr. (1879-1954), known as Will Hays, Hollywood censor (the Hays Code) and former postmaster general under Harding. US-ACAN accepted the name in 1947, and in 1966 abbreviated it to Hays Mountains. NZ-ACAN accepted the name.

The Haystack *see* **Haystack Mountain**

Haystack Mountain. 77°03' S, 162°41' E. Rising to about 1000 m, with a rounded summit suggestive of a mound or haystack, it stands 2.5 km E of Mount England, in the NE part of the Gonville and Caius Range, in Victoria Land. Charted by BAE 1910-13, and named descriptively by them as The Haystack. US-ACAN accepted the name Haystack Mountain in 1952, and NZ-APC followed suit.

Mount Hayter. 82°02' S, 157°26' E. Rising to 2690 m above sea level, 1.5 km SE of Laird Plateau (the Australians say it is the main peak on the Laird Plateau), on the W side of Olson Névé. Discovered by NZGSAE 1964-65, and named by them for Adrian Goodenough Hayter (b. Dec. 22, 1914, Timaru, NZ. d. June 14, 1990), leader at Scott Base in 1965. Col. Hayter (jungle warfare, Malaya) was one of the great sailors of the post-war period, and wrote several books. NZ-APC accepted the name, and US-ACAN followed suit in 1966, as did ANCA on Aug. 10, 1966.

Mount Hayton. 72°03' S, 165°12' E. Rising to 2240 m (the New Zealanders say 2225 m), on the highest point of Camp Ridge, in the S part of the East Quartzite Range. Named by the NZ Federated Mountain Clubs Expedition of 1962-63, for John S. Hayton (b. 1929), an accountant and geologist, field assistant with the party. It was first climbed on Dec. 18, 1962. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mount Hayward. 78°07' S, 167°21' E. A hill, 3.5 km SW of Mount Heine, on White Island, in the Ross Archipelago. Climbed in Dec. 1958, by a party from NZGSAE 1958-59, and named by them for Vic Hayward. NZ-APC accepted the name, and US-ACAN followed suit in 1961.

Hayward, John "Chippie." Carpenter and bosun on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Hayward, Victor George "Vic." b. Oct. 23, 1887, in Harlesden, Willesden, London, son of railway clerk Francis Checkley "Frank" Hayward and Mary Jane Fairchild (whom the railway clerk finally decided to marry in 1908, after having had a prodigious number of children by her). After boarding school in Essex, Vic went to work in the City, as an accounts clerk. In order to relieve the boredom, he went to northern Canada for a while, working with dogs on cattle ranches.

But boredom called, and he was back in London. Then adventure called again, and he applied to Shackleton for his forthcoming Antarctic expedition. He sailed from Dover on the *Ionic* on Sept. 18, 1914, as storekeeper and dog handler on the Ross Sea Party of BITE 1914-17. On his way back from the depot-laying expedition across the Ross Ice Shelf, he and leader Aeneas Mackintosh left the Discovery Hut on May 8, 1916, in an impatient effort to get back to Cape Evans over the soft sea-ice. Expecting to reach base in a couple of hours, the couple did not take a tent or sleeping bags, and a blizzard blew up. They were never seen again. Ironically, Vic's younger brother, Stan, a private in the Quebec Regiment, was killed at Ypres 36 days later.

Haywood Island *see* **Heywood Island**

Roca Hazard *see* **Hazard Rock**

Hazard Rock. 64°59' S, 63°44' W. A small, isolated rock, less than 1 m above sea level, awash on the E side of Butler Passage, 4 km NE of Cape Renard, off the Danco Coasts, on the W coast of Graham Land. Named by Frank Hunt following his RN Hydrographic Survey unit work here on the *John Biscoe* in April 1952. It is a hazard to shipping in the low visibility frequent in this vicinity. It is too small to produce an easily identifiable radar echo, and can often be confused with a piece of floating ice. It appears on a British chart of 1954, and UK-APC accepted the name on Sept. 22, 1954. It appears in the 1955 British gazetteer, and on a British chart of 1958. US-ACAN accepted the name in 1956. It appears on a 1957 Argentine chart, translated as Roca Azar, and that was the name accepted by the 1970 Argentine gazetteer. It appears on a 1962 Chilean chart as Roca Hazard, and that was the name accepted by the 1974 Chilean gazetteer.

Mount Hazlett. 72°06' S, 167°35' E. Rising to 2080 m, at the S side of the mouth of Montecchi Glacier, where that glacier enters Tucker Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Paul C. Hazlett, VX-6 member at McMurdo in 1968.

Hazuki-hyoga. 69°08' S, 39°47' E. A small glacier, N of Hovde Bay, and flowing to the NE coast of Lützow-Holm Bay, on the Prince Olav Coast. Surveyed by JARE in Aug. 1981. Named by the Japanese on Feb. 26, 1988 for the month in which it was discovered ("hazuki" means "August"). The Norwegians call it Hazukibreen. "Hyoga" and "breen" both mean the glacier."

Hazukibreen *see* **Hazuki-hyoga**

Islote Head *see* **Head Island**

Head, John C. *see* **USEE 1838-42**

Head Island. 64°31' S, 62°55' W. A small, almost circular, island, about 150 m in diameter, lying 0.9 km S of Andrews Point, and the same distance to the SW from the extreme SW of False Island (Head Island is sometimes confused with False Island, or nearby Pear Island), and very close to the point that marks the extreme SE of Hackapike Bay, at Parker Peninsula, off the NE coast of Anvers Island, in the Palmer Archipelago. Roughly charted in Jan. 1936, by BGLE 1934-37, and named descriptively for its position in the bay. It appears as such on the expedition's maps. It appears on a 1947 U.S. Hydrographic Office chart of 1947, and on a Chilean chart of that year, as Isla Cabeza (a straight translation). It was renamed Head Islet by FIDS, and that name appears on a 1950 British chart. UK-APC accepted that name on Sept. 20, 1955, and US-ACAN followed suit in 1956. It appears on a 1955 Chilean chart as Islote Head, and that was the name accepted by the Chilean gazetteer of 1974. However, FIDASE air photos of 1956 showed it to be half connected to Anvers Island through the encroachment of glacier ice from the south. Despite this, UK-APC accepted the name Head Island on July 7, 1959, and US-ACAN followed suit in 1965. 1969 USN air photos showed it to be completely connected to Anvers Island, and the feature does not appear in the 1974 (British) Directorate of Overseas surveys sheet of the area. It looks as if its career as an island is over.

Head Islet *see* **Head Island**

Head Mountains. 77°12' S, 160°05' E. A group of mountains to the S of Gateway Nunatak, and at the head of Mackay Glacier, near the interior ice plateau of Victoria Land. From W to E the group includes Mount DeWitt, Mount Littlepage, Mount Dearborn (2300 m), and Coalbed Mountain. Named by US-ACAN on Jan. 15, 2008, for James W. Head III, of the department of geological sciences at Brown University, in Providence, RI, planetary scientist whose investigations in the McMurdo Dry Valleys between 2002 and 2006 have led to advances in the concept of Antarctica as an analog of Martian features. NZ-APC accepted the name on April 7, 2008.

Head Peak. 72°10' S, 166°11' E. Rising to about 2100 m, 5.5 km E of Le Couteur Peak, on a projecting ridge of the Millen Range. So named by the Southern Party of the NZ Federated Mountain Clubs Expedition of 1962-63, partly because of its likeness to a head, and partly for its position in the névé area (i.e., at the head) of Pearl Harbor Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Headley, Lord. b. May 22, 1901, as Rowland Patrick John George Allanson Winn (last name Allanson Winn, no hyphen), son of Rowland George Allanson Winn, the famous 5th Baron Headley (in the Irish peerage), muslimist and haj, by his first wife, Teresa St Josephine Johnson. On Jan. 22, 1935 the son succeeded his father, as the 6th Lord Headley, and on Aug. 18, 1936, at Kirkoswald, Ayrshire, he married Edith Jane "Billy" Dods. He was a flight officer, RAFVR, 1939-43, a lieutenant, RNR, 1943-45, and served as first mate on the *John Biscoe* after the war, and became well-known to FIDS going south on that famous vessel. He died on Dec. 17, 1969, at Irvine, Ayrshire.

Headwall Pond. 77°33' S, 160°46' E. A very small, ice-covered pond, lying along a rock headwall close NE of Crag Pond, in the feature known as Labyrinth, in the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named descriptively by the USAP field party that sampled the pond in 2003-04. US-ACAN accepted the name in 2004.

Heald, William Lofthouse. b. Dec. 25, 1875, York Castle, son of warder John Heald, and his wife Mary Lofthouse. On Jan. 20, 1892 he entered the RN, was promoted to ordinary seaman on Dec. 25, 1893, and on Nov. 13, 1895 to able seaman. On July 1, 1896 he qualified as a senior gunner (T), and on Jan. 26, 1899 was promoted to leading seaman. He was serving in Gibraltar as an explosives expert on the *Jupiter* when he committed a youthful indiscretion and was busted to able seaman on Jan. 23, 1901. On June 18, 1901 it was decided to send him as far away as possible, and he was transferred to the *Discovery* for BNAE 1901-04, in the hope that he might never come back. He was instructed in ballooning at Aldershot, and then went south with Scott. On the expedition he saved Hartley Ferrar's life in 1902 when the latter was dying of scurvy out on the trail. Mr. Heald not only survived his exile, but, being a hero, as he was, the Admiralty so forgave him that they promoted him to petty officer on Sept. 10, 1904. On Oct. 30, 1904, back in England, he finally left the *Discovery*, and *w*as now free to commit further indiscretions, which he did in Sept. 1906. He wasn't demoted, but he lost his good conduct badges, and was encouraged to purchase his discharge on May 22, 1908. He joined the Royal Fleet Reserve, and was back with Scott as a petty officer on the *Terra Nova,* during BAE 1910-13. In 1913, in London, he married Agnes Gittins. He fought at sea in World War I, and after the war became a Borstal officer. He died on Dec. 19, 1929, at the Borstal in Feltham, Mdsx.

Heald Island. 78°15' S, 163°49' E. An island, 5 km long, and rising to a height of 555 m above sea level, it projects through the ice of Koettlitz Glacier, which lies just to the S, the island lying between Koettlitz Glacier and Walcott Glacier, just E of Walcott Bay, in Victoria Land. Discovered by BNAE 1901-04, and named by them for William L. Heald. It was climbed on Feb. 26, 1911, by Grif Taylor of BAE 1910-13. US-ACAN accepted the name in 1962.

Heale Peak. 81°35' S, 160°04' E. A rock peak rising to 1340 m, at the E side of Starshot Glacier, 3 km N of Adams Peak, and 13 km SW of Mount Ubique, in the Surveyors Range. Named by NZGSAE 1960-61, for Theophilus Heale (1816-1885), a NZ surveyor, an early exponent of the use of triangulation in survey work, in 1868, and the first to use the steele band for the measurement of baselines. He was later Inspector of Survey for NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Cape Healey *see* **Cape Healy**

Cabo Healy *see* **Cape Healy**

Cape Healy. 71°22' S, 60°58' W. A prominent, square-shaped rock cape, forming the NE entrance point of Lamplugh Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered in 1940 by USAS 1939-41, who photographed it aerially in Dec. 1940, and surveyed

it from the ground, naming it Cape Healey (sic) for Joe Healy. It appears as such on a 1943 U.S. Hydrographic Office chart. On a USHO chart of 1946, still as Cape Healey, it is plotted in 71°20' S, 61°05' W. In Nov. 1947, it was re-surveyed by a joint sledging team of personnel from RARE 1947-48 and Fids from Base E. It appears on a 1949 Argentine chart as Cabo Healey. UK-APC accepted the name Cape Healey on Jan. 28, 1953, and US-ACAN followed suit that year. However, by the time of a 1954 British chart, someone had found out how to spell Joe Healy's name, and the correct spelling was adopted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On a 1958 Argentine chart it appears as Cabo Healy, and that was the spelling accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially again in 1966, by USN, and surveyed again from the ground, in 1972-73, by BAS personnel from Base E.

Healy, Joseph Donald "Joe." Also known as "Don." b. April 29, 1912, Scituate, Mass., son of Irish immigrant parents, caretaker John J. Healy and his wife Hannah Hourihan (both of whom had come over to the States in 1892). In the 1920s the family moved to Dorchester, Mass., where they stayed. He trained for the sea on the Nantucket Training Ship, and joined the Merchant Marine, being 4th mate on the *Jacob Ruppert*, 1933-34, during the first part of ByrdAE 1933-35. During the setting up of the new Little America he was one of the dog drivers, but did not winter-over. For the 2nd part of the expedition, he was 3rd officer, 1934-35, and finally 2nd officer. He was with the Department of the Interior when he became dog driver and sea operations man at East Base during USAS 1939-41. On July 21, 1941, in Boston, he enlisted as a private in the Army Air Force, was posted to Greenland on search and rescue work, was promoted to sergeant, and on July 5, 1942, he, Dutch Dolleman, and Bernt Balchen rescued the 13 stranded men of the B-17 *My Gal Sal*. He lived in Virginia for a while after the war, married Anna C. Finn, and moved back to Plymouth County, Mass, to Pembroke, in 1950, to become a poultry farmer. He died suddenly, of a heart attack, on July 1, 1971, at his home in Pembroke, and is buried there, in Centre Cemetery.

Healy Trough. 77°33' S, 160°52' E. A primary elongate trough extending diagonally SW-NE across the E part of the feature known as Labyrinth, in the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Terry R. Healy, of the department of earth sciences, at the University of Waikato, NZ, who, with John Shaw, published observations on the formation of Labyrinth, following a visit in 1975-76. NZ-APC accepted the name on Nov. 30, 2004.

Heap, John Arnfield. b. Feb. 5, 1932, Manchester, son of David Heap and his wife Ann James. In 1953, while at Edinburgh University, he led a team to the Arctic. He graduated in 1955 and joined FIDS, as a research student at the Scott Polar Research Institute. He came in several times to FIDS bases on the relief ship *John Biscoe*, and into the Weddell Sea on the *Theron* during BCTAE 1955-58, during which he was a sea-ice observer. In fact, until 1962 he conducted sea-ice studies in Antarctic waters. On Sept. 10, 1960, he married Margaret Grace Gillespie "Peg" Spicer, daughter of the 3rd Baronet Spicer, and then spent 2 years as a research associate at the University of Michigan, at Ann Arbor, and was a member of the University of Michigan Ross Ice Shelf Studies party of 1962-63. From 1975 to 1992 he was head of the polar regions section of the Foreign and Commonwealth Office, from 1989-92 was administrator of the British Antarctic Territory, and, from 1992 to 1998, was director of SPRI, in Cambridge. He died on March 8, 2006, at home, at Harston, Cambridge.

Heap, Michael James. b. Feb. 8, 1947. Cook at Casey Station in 1972. In the 1990s he managed a hotel in Darwin.

Heap Glacier. 79°03' S, 159°20' E. A glacier, about 16.5 km long, flowing northeastward into Mulock Glacier, just to the E of Henry Mesa. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1965, for John Heap. ANCA accepted the name on Aug. 27, 1975.

Heap Island. 65°50' S, 65°43' W. An island, off the SE coast of Renaud Island, in the Biscoe Islands, between Jurva Point and Bates Island, on the Graham Coast, on the W coast of Graham Land. Photographed by FIDASE in 1956. Named by UK-APC on Nov. 13, 1985, for John Heap. US-ACAN accepted the name.

Heaphy Spur. 77°14' S, 161°15' E. A prominent, curved rock spur, 6 km long, descending from the S side of the Clare Range, and dividing the head of Victoria Upper Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1947 and 1962. Named by US-ACAN in 1975, for William Heaphy, a New Zealander who worked many years with USARP.

Heaps Rock. 76°00' S, 132°46' W. A rock exposure above Bursey Icefalls, 3 km WNW of Hutt Peak, on the Mount Bursey massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Kenneth L. Heaps, meteorologist at Pole Station in 1970.

Heard Island. 53°05' S, 73°33' E. Not in the Antarctic, but definitely a sub-Antarctic island. George Manley Dixon took his *LST 3501* down and set up the first Australian sub-Antarctic scientific station. It opened on Dec. 26, 1947. There were 14 winterers there in the winter of 1948. *See* **ANARE**.

Hearfield Glacier. 72°26' S, 167°42' E. A tributary glacier (at least on its N flank), between 24 and 30 km long, and about 3 km wide, flowing ESE along the S side of the Cartographers Range into Trafalgar Glacier, just E of Aldridge Peak, in the Victory Mountains of Victoria Land. Named by the Northern Party of the NZ Federated Mountain Clubs Expedition of 1962-63, for Brian Hearfield, a NZ alpinist, assistant surveyor and mountain climber with NZGSAE 1957-58. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Hearn, Dennis "Dinny." Fireman and oiler on the *Eagle*, in 1944-45, during the 2nd phase of Operation Tabarin.

Hearn, James "Jimmy." Fireman and oiler on the *Eagle*, for the 2nd half of Operation Tabarin, 1944-45.

Cape Hearst *see* **Cape Wilkins**

Isla Hearst *see* **Hearst Island**

Hearst Escarpment *see* **Hearst Island**

Hearst Island. 69°25' S, 62°10' W. A grounded, ice-covered, dome-shaped island, 60 km long in a N-S direction, 11 km wide, and rising to 365 m, in the Larsen Ice Shelf, 6 km E of Cape Rymill, on the E coast of Palmer Land, it is separated from the Wilkins Coast by Stefansson Sound. Discovered aerially on Dec. 20, 1928 by Wilkins, who thought it to be part of the mainland, naming it Hearst Land, for his patron, newspaper magnate William Randolph Hearst (1863-1951). He plotted it in about 71°S on his map of 1929, and had it extending indefinitely from E to W. The name Hearst Land appears on many charts and maps over the course of the next several years, each one differing (sometimes quite widely) from the others in its definition, extent, and coordinates. As an example, W.L.G. Joerg's 1937 chart has it plotted in about 71°S, between 60°W and 77°W, and including the S part of Alexander Island and the mainland S of Charcot Island. Between Sept. and Dec. 1940, USAS 1939-41 found Wilkins' feature from flyovers and ground surveys, but, as what they found was an island, they did not connect it to the feature Wilkins had seen. They duly called it Wilkins Island. It appears as such on a USAAF chart of 1942, and on a 1943 U.S. Hydrographic Office chart. At the same time, the name Hearst Escarpment was given to a feature SW of Cape Collier. Wilkins' Hearst Land appears on a 1945 Argentine chart as Tierra de Hearst, and Wilkins Island appears on a 1946 Argentine chart as Isla Wilkins. American cartographers, comparing the Wilkins and USAS efforts, realized that Hearst Land and Wilkins Island were one and the same, and in 1947 US-ACAN accepted the name Hearst Island. It appears as such on a USHO chart of that year. It was re-surveyed by a joint sledging team of personnel from RARE 1947-48 and Fids from Base E, and appears as Hearst Island on Dougie Mason's 1950 FIDS map. UK-APC accepted the name Hearst Island on Jan. 28, 1953, and it appears as such in the 1955 British gazetteer. On a 1948 Chilean map, Hearst Land appears as Tierra José Miguel Carrera, named for José Miguel Carrera (1786-1821) a major figure in the fight for Chile's independence. However, the island appears on an Argentine chart of 1953 as Isla Hearst. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Isla Hearst, although, if what the British gazetteer says is true, the Argentines spelled it Isla Hearts (if they

did, they don't any longer). On a USHO chart of 1960, it appears as "Hearst (Wilkins) Island."

Hearst Land *see* **Hearst Island**

The Heart *see* **Holiday Peak**

Heart Lake. 77°34' S, 166°14' E. One of several small lakes on Cape Barne, Ross Island, this one is 330 m NW of Terrace Lake. Named for its shape by BAE 1907-09. US-ACAN accepted the name in 1972.

Mount Heathcliffe *see* **Pardo Ridge**

Heathcock Peak. 86°07' S, 130°40' W. Rising to 2310 m, in the E part of the Caloplaca Hills, overlooking the W edge of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Joe D. Heathcock, builder at Byrd Station in 1962.

Heathorn, Arthur Eric. Known as Eric. b. June 22, 1938, Worthing, Sussex, son of Arthur H. Heathorn and his wife Doris E. Peters. Chief cook and catering officer on the *Shackleton* and on the *Bransfield*, 1958-85, except the years 1965 and 1970.

Heave-ho Slope. 72°32' S, 170°10' E. It falls 450 m from Quarterdeck Ridge to a saddle at the SW end of Hallett Peninsula, and the NE slopes of Mount Vernon Harcourt. Named by NZGSAE 1957-58, who had to manhaul sledges in relays over the deep, soft, new snow found here that year. NZ-APC accepted the name, and US-ACAN followed suit in 1962. The slope must be traversed by parties moving overland from Hallett Station to Tucker Glacier after the bay ice in Edisto Inlet has broken out.

Hebrizelm Hill. 62°31' S, 59°52' W. A rocky hill rising to 70 m, 1.1 km WNW of Triangle Point, and 2 km SSW of Tile Ridge, on the SW coast of Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the old Thracian king Hebrizelm, 389-384 BC.

Heckmann Island. 67°20' S, 61°03' E. The largest island in the E part of the Thorfinn Islands, 11 km N of Byrd Head, in Mac. Robertson Land. Probably seen by BANZARE 1929-31. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. First visited by ANARE geologist Ian McLeod, on Jan. 8, 1965. Re-mapped by Australian cartographers, and named by ANCA on July 29, 1965, for B. Heckmann, chief officer on the *Nella Dan* in 1965. US-ACAN accepted the name in 1966.

Mount Hector. 64°36' S, 63°25' W. A snow-covered mountain, rising to 2225 m, between Mount Français and Mount Priam, in the S part of the Trojan Range, on Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in 1955. Named by UK-APC on Sept. 4, 1957, for the Homeric hero. It appears on a British chart of 1959. US-ACAN accepted the name in 1963. It appears by error as Monte Français on a Chilean chart of 1962 (*see* **Mount Français**).

Hector Whaling Company. Formed in London in 1928, as a subsidiary of Hektoria, London, which, in turn, was the London branch of N.R. Bugge, of Tønsberg, Norway. Sir Karl Knudsen, of Hambros Bank, was a principal director, as were Rupert Trouton and Erling Naess. In 1961 the company was bought by Cayzer, Irvine & Co., by 1968 the whale catchers had been disposed of, and the company wound up in 1995.

Hedanek, Emanuel George. Known as "Papa George." b. Feb. 9, 1929, Czechoslovakia. Australian plant inspector, he wintered-over at Casey Station in 1979, at Mawson Station in 1981, and again at Casey in 1983 and 1986.

Hedblom, Earland E. "Bloss." b. April 22, 1914, Colorado Springs, son of Swedish-American parents, high school principal Edward E. Hedblom and his wife Lillian. He was a commander (later captain) surgeon with VX-6, medical officer with Task Force 43 in 1955-56 and 1957-58. He died in Maine, on Nov. 27, 1982.

Hedblom Glacier. 76°34' S, 162°24' E. Between Mount Creak and Tito Peak, it flows E from the Endeavour Massif to the Tripp Ice Tongue, in Victoria Land. Named by US-ACAN in 1999, for Bloss Hedblom. NZ-APC accepted the name on Nov. 4, 1999.

Mount Hedden. 72°05' S, 1°25' E. The most northerly nunatak in the Rømlingane Peaks, it rises to 1515 m, 1.5 km N of Brattskarvet Mountain, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Discovered aerially by GermAE 1938-39, and named by Ritscher as Hedden-Berg, for Karl Hedden. This feature may or may not be exactly the Hedden-Berg that Ritscher had in mind, but it is in the general area. US-ACAN accepted this in 1970. The Norwegians call it Heddenberget.

Hedden, Karl. Sailor on the *Schwabenland* during GermAE 1938-39.

Hedden Berg *see* **Mount Hedden**

Heddenberg *see* **Mount Hedden**

Heddenberget *see* **Mount Hedden**

Hedderley, Norman Alexander. b. 1925. He joined FIDS as a meteorologist in 1954, and later that year left Dover on a ship chartered from Sweden, and bound for the Falkland Islands. He wintered-over at Base G in 1955, then at Base F in 1956, being also base leader that second season (Ross Hesketh had left unexpectedly, so Hedderley stepped in). He wintered-over twice more, at Halley Bay Station, in 1959 and 1960, being also base leader again in his second year there. He died at the beginning of 1966, in Newcastle, aged 40.

Hedgehog Island. 72°12' S, 170°00' E. A small, bare, granite island, or stack, in Moubray Bay, 1.5 km S of Helm Point. First visited in 1957 by a small party from Hallett Station, during NZGSAE 1957-58, and named by them as One Day Islet. NZ-APC accepted the name Hedgehog Island (for its shape), and US-ACAN followed suit in 1962.

Hedgpeth Heights. 71°07' S, 167°30' E. Mainly snow-covered heights, 22 km long, and with peaks rising to about 1300 m, 3 km SW of Quam Heights, in the Anare Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Joel W. Hedgpeth, USARP biologist at McMurdo, 1967-68, and at Palmer Station, 1968-69.

Hedin Nunatak. 75°19' S, 111°18' W. A conspicuous nunatak with an ice-capped flat top and steep, bare rock walls, 14 km WNW of the summit of Mount Murphy, on the Walgreen Coast of Marie Byrd Land. First roughly mapped from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Alan E. Hedin, aurora scientist at Byrd Station in 1962 (actually, he wintered over at Byrd Aurora Substation).

Punta Hedionda *see* **Stinker Point**

Hedley Glacier. 77°49' S, 162°07' E. A small glacier flowing S from Mount Coates, in the Kukri Hills, into Ferrar Glacier, in Victoria Land. Named by Grif Taylor's Western Journey Party during BAE 1910-13, for Charles Hedley (1862-1926), of the Australian Museum, an authority on mollusks. His studies and reports on that topic contributed not only to Scott's expedition, but also to BAE 1907-09. US-ACAN accepted the name in 1972, and NZ-APC followed suit.

Heed Rock. 64°59' S, 63°47' W. A very small rock, awash at high water, 1.5 km S of Brown Island, on the NW side of Butler Passage, in the Wauwermans Islands of the Wilhelm Archipelago, off the W coast of Graham Land. Shown on a 1950 Argentine government map of 1950, but not named. Surveyed by an RN Hydrographic Survey unit on the *John Biscoe* in 1956-57. So named by UK-APC on July 7, 1959, as a warning to navigators, as the rock is practically hidden from view. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Mount Heekin. 85°03' S, 177°16' W. A large, sprawling, irregular mass, almost entirely ice-free, with a bowl-shaped depression near the center, overlooking the N side of Baldwin Glacier, where that glacier enters Shackleton Glacier (it is on the W side of Shackleton Glacier), midway between Mincey Glacier on the N and Baldwin Glacier on the S. Discovered and photographed aerially on Feb. 16, 1947, during OpHJ 1946-47, and named by US-ACAN in 1962, for Robert P. Heekin. NZ-APC accepted the name.

Heekin, Robert Patrick. b. March 17, 1920, Conception Junction, Mo., son of farmer Wilbur Heekin and his wife Mary. He joined the U.S. Navy, was a lieutenant (jg), married Margaret Mary Repper in 1946 in Florida, and almost immediately went to Antarctica, as navigator on V6, the 2nd flight on Byrd's South Pole flight of Feb. 16, 1947, during OpHJ 1946-47. He died on Aug. 1, 1983, in Jacksonville, Fla.

Mount Heer. 73°18' S, 62°58' W. A mountain rising to about 1700 m on the SW side of Haines Glacier, 5 km N of Mount Barkow, on the Lassister Coast, on the E coast of Palmer Land. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Raymond Robert "Ray" Heer, Jr. (b. June 2, 1920, Louisville, Ky. d. Aug. 1983, Annapolis, Md.),

program director (atomospheric physics) in the Office of Antarctic Programs, at the National Science Foundation. He visited McMurdo in 1965-66 and 1966-67. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Heezen Glacier. 72°47' S, 61°22' W. A glacier flowing NE from the E portion of the Wegener Range, to enter Violante Inlet E of Mount Reynolds, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969, and plotted by them in 72°40' S, 61°10' W. Surveyed from the ground by BAS personnel from Base E, and plotted by them in 72°45' S, 61°18' W. Named by UK-APC on Feb. 7, 1978, for Bruce Charles Heezen (1924-1977), American marine geologist and oceanographer, professor of geology at the Lamont-Doherty Geological Observatory, at Columbia University, in NY, 1964-77. It appears on the 1979 USGS sketch map of the N part of Palmer Land, and also in the 1980 British gazetteer. Dr. Heezen died aboard the U.S. nuclear sub *NR-1* on June 28, 1977, while on a research cruise off the coast of Iceland. The feature has since been replotted.

Hefferman, William P. *see* **USEE 1838-42**

Heftye Island. 71°59' S, 171°06' E. The most southerly of the Possession Islands, E of the S end of Adare Peninsula. Named in Jan. 1895 by the *Antarctic* expedition led by Bull, as Heftye's Island (a name still used by NZ) for Heftye and Son, bankers of Christiania (now Oslo), shareholders in the expedition ship. US-ACAN accepted the unapostrophized name in 1962.

Heftye's Island *see* **Heftye Island**

Mount Heg. 72°57' S, 166°45' E. A massive, ice-covered mountain, forming the S end of a promontory on the W side of the Malta Plateau, in Victoria Land. On the W it is bounded by Seafarer Glacier, on the S by Mariner Glacier, and on the E by Potts Glacier. It first appears on a 1960 NZ map, compiled from USN air photos. Named by US-ACAN in 1973, for James E. Heg, chief of the polar planning and co-ordination staff, in the NSF's Office of Polar Programs.

Hei Glacier. 72°29' S, 0°35' E. Flows NW between Hamrane Heights and Robin Heights, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Heibreen (i.e., "the upland glacier"). US-ACAN accepted the name Hei Glacier in 1966.

Heiberg Glacier *see* **Axel Heiberg Glacier**

Heibreen *see* **Hei Glacier**

Heidelberginsel. 62°14' S, 59°00' W. A tiny island off Stansbury Peninsula, on the NE coast of Nelson Island, in the South Shetlands. Named by the Germans.

Heidemann Bay. 68°35' S, 77°58' E. A bay, 0.5 km wide at its entrance, indenting the seaward end of Breidnes Peninsula for about 1.7 km, in the Vestfold Hills, just S of Davis Station. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Named by ANCA on Aug. 11, 1958, for Frank Heidemann, 2nd mate on the *Kista Dan* in 1957 when, on Jan. 11 of that year, this bay was first visited by an ANARE party led by Phil Law. US-ACAN accepted the name in 1965.

Heidemann Glacier. 82°33' S, 162°50' E. About 8 km long, it flows E from the area close NW of Mount Damm, in the Queen Elizabeth Range, into Lowery Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1967, for Richard P. Heidemann, USARP glaciologist at Roosevelt Island in 1962-63.

Heidemann Valley. 68°34' S, 78°01' E. A linear valley, about 3 km long and 800 m wide, running NE from Heidemann Bay to the SE corner of Lake Dingle, in the Vestfold Hills. Named by ANCA on July 26, 1983, in association with the bay.

Heikampen *see* **Heikampen Peak**

Heikampen Peak. 72°28' S, 0°41' E. At the SE end of Robin Heights, in the central part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Heikampen (i.e., "the upland mountain top"). US-ACAN accepted the name Heikampen Peak in 1966.

Heil Peak *see* **Neill Peak**

Heil Valley. 77°11' S, 160°04' E. An ice-free valley, 2.5 km long, that indents the N part of the V-shaped Mount Littlepage, in the Head Mountains, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Joseph J. Heil III, supervisor of the communications center at McMurdo for 11 summer seasons from 1993. Altogether, from 1987 to 2007, he was in Antarctica, with USAP, for 18 summers and 2 winters. NZ-APC accepted the name on April 7, 2008.

Heilman Glacier. 82°37' S, 160°46' E. In the N part of the Queen Elizabeth Range, flowing NW from Mount Sandved into the Nimrod Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for William L. Heilman, USARP glaciologist at Roosevelt Island, 1961-62.

Heim, Fritz. A friend of Filchner's, he was picked as geologist for GermAE 1911-12. Filchner wrote of him, "always drunk, but friendly."

Heim Glacier. 67°28' S, 65°55' W. A glacier, 13 km long, in the SE part of Arrowsmith Peninsula, it flows SW to merge with the ice in Jones Channel, on the Loubet Coast, on the W coast of Graham Land. With Antevs Glacier to the N, it forms a transverse depression extending to the SW part of Lallemand Fjord. Discovered aerially in 1936 by BGLE 1934-37, it appears on Rymill's 1938 map of that expedition. Surveyed in its lower reaches in Nov. 1949 by Fids from Base E, who named it for Albert Heim (1849-1937), Swiss geologist and glaciologist. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. Between 1955 and 1957 the area was further surveyed by Fids from Base W and Base Y (*see* **Antevs Glacier** for the history of this period).

Heimdall Glacier. 77°35' S, 161°50' E. A small glacier just E of Siegfried Peak and Siegmund Peak, on the S side of Wright Valley, in the Asgard Range of Victoria Land. Named by NZ-APC for the Norse mythological character. US-ACAN accepted the name in 1976.

Heimefront Range. 74°35' S, 11°00' W. A large range of mountains running in a NE-SW direction for 104 km, 80 km WSW of the Kirwan Escarpment, in the S part of Maudheimvidda, in Queen Maud Land. It is composed of three groups — northern, central, and southern, and another N part, not really a real division, as such, named XU-fjella. The northern one is called Milorgfjella, the central one is Sivorgfjella, and the S one is Tottanfjella. Ritscher, during GermAE 1938-39, discovered a range that he called Kottasberge (i.e., the "Kottas Mountains"). This is now generally believed to be Milorgfjella. The whole range was discovered aerially and defined by NBSAE during aerial reconnaissance flights from Maudheim in Jan. 1952, and named Heimefrontfjella (i.e., "homefront range") by the Norwegians. The Heimefront was the Norwegian Resistance during World War II. US-ACAN accepted the name Heimefront Range in 1966.

Heimefrontfjella *see* **Heimefront Range**

Heimesdom. 73°02' S, 167°15' E. A dome on the S side of Mount Phillips, in the Victory Mountains of Victoria Land. Named by the Germans.

Heinacker, Paul. b. Sept. 6, 1882, East Prussia. Engineer's assistant on the *Gauss* during GermAE 1901-03.

Mount Heine. 78°05' S, 167°27' E. A hill, rising to 760 m, in the N part of White Island, in the Ross Archipelago. Named by NZGSAE 1958-59, for Arnold John Heine (b. Nelson, NZ), toolmaker, photographer, skier, mountain climber, glaciologist, and alpine guide, technical officer with NZGSAE 1956-57, and, to many, the quintessential NZ Antarctic explorer. He was also on NZGSAE 1957-58, and was stores officer on NZGSAE 1958-59 (he climbed this hill that year). He wintered-over at Scott Base in 1959, and in 1959-60 was the NZ member of USARP on the North Victoria Land Traverse Party. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Cabo Heinen *see* **Molley Corner**

Heinous Peak. 85°59' S, 154°55' W. A prominent peak, rising to about 3300 m, 1.5 km NNE of Mount Crockett, and 10 km SE of Mount Vaughan, in the Hays Mountains, in the Queen Maud Mountains. It was climbed on Nov. 28, 1987, by 4 members of Ed Stump's USARP-Arizona State University geological

party, and so named by Stump because the descent was a 20-hour ordeal in technical ice-climbing on very steep terrain. US-ACAN accepted the name.

Heinrich, Willy. b. Jan. 27, 1878, Altona, Germany. 2nd carpenter on the *Gauss* during GermAE 1901-03.

Heintz Peak. 70°56' S, 63°42' W. The summit at the N end of the W ridge of the Welch Mountains, it rises to about 2200 m, about 3 km N of Mount Acton, in central Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Lt. Cdr. Harvey L. Heintz, USN, LC-130 Hercules aircraft commander during OpDF 69 and OpDF 70. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Heinz Kohnen Station. Also called Kohnen Station. 75°00' S, 0°04' E. On Amundsenisen, in the S part of Maudheimvidda, in Queen Maud Land, 2892 m above sea level, 757 km from Georg Neumeyer Station, and 381 km from Sanae IV Station. A German summer field station of the European drilling project, EPICA, ready for use on Jan. 18, 2001, and named for Heinz Kohnen (*see* **Mount Kohnen**). It was opened officially on March 11, 2001. It could accommodate 28 persons. It was still in use in 2009.

Heirtzler Fracture Zone. 63°30' S, 162°30' E. An undersea feature in the Pacific Ocean, out beyond the Ross Sea. Named by Drs Cande, Haxby, and Raymond, of the Lamont-Doherty Geological Observatory, for James Ransom Heirtzler (b. Sept. 16, 1925, Baton Rouge, La.), research scientist at Lamont, 1960-64; senior research scientist there, 1964-67 (during which time he led the *Eltanin* project); chairman of the geology and geophysics department at Woods Hole Oceanographic Institute, 1969-86; and head of the geophysics branch at NASA's Goddard Space Flight center, from 1986; a pioneer in the theory of seafloor spreading. The name was accepted by international agreement in May 1993.

Heirtzler Highland. 72°34' S, 61°25' W. Rising to about 500 m, at the head of Violante Inlet, on the Black Coast of southern Palmer Land, it is bounded to the S by Maury Glacier and to the N by an unnamed glacier. Named by UK-APC on May 31, 1991, for James Heirtzler (*see* **Heirtzler Fracture Zone**).

Heirtzler Ice Piedmont. 72°34' S, 61°25' W. A relatively low, triangular-shaped ice-covered area, about 11 km in extent, at the W side of Violante Inlet, and N of Maury Glacier, on the Black Coast of southern Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, during USAS 1939-41. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1994, for James Heirtzler (*see* **Heirtzler Fracture Zone**). UK-APC accepted the name on Oct. 5, 1974.

Mount Heiser. 82°40' S, 162°56' E. Just N of Dorrer Glacier, in the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1965, for Paul W. Heiser, Jr. (b. Sept. 28, 1932. d. July 29, 2010, Reno, Nev.), USARP aurora scientist at Scott Base in 1959.

Heiser Ridge. 83°50' S, 57°09' W. A narrow rock ridge, 8 km long, running WSW-ESE at an elevation of about 1290 m, midway between West Prongs and Hudson Ridge, in the SW part of the Neptune Range, in the Pensacola Mountains. In 1963-64 it was surveyed from the ground by USGS, and that same season photographed aerially by USN, being mapped by USGS from these efforts. Named by US-ACAN in 1965, for James R. Heiser, USGS topographic engineer here with the Neptune Range field party in 1963-64. Back then, it was plotted in 83°51' S, 56°50' W, but the coordinates were corrected by 1969. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Heiskanen Knoll. 67°36' S, 8°30' W. An undersea feature in the vicinity of Scott Island. Name was proposed by Heinrich Hinze, in Jan. 1997, and was accepted by international agreement in June 1997. Named for Finnish geodesist Veikko Heiskanen.

Mount Heito. 69°16' S, 39°49' E. A flat-topped mountain rising to 496.6 m, on the SE end of the Langhovde Hills, in Queen Maud Land. It is the highest mountain in the area of the Soya Coast. Photographed aerially by LCE 1936-37, and roughly mapped (but not named) from these photos by Norwegian cartographers in 1946. Re-mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on June 22, 1972, as Heito-zan (i.e., "flat-top mountain"). US-ACAN accepted the name Mount Heito in 1975.

Heito Glacier. 69°16' S, 39°48' E. A small glacier flowing westward along the S side of Mount Heito, in the S part of the Langhovde Hills, in Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on Nov. 22, 1973, as Heito-hyoga (i.e., "flat-top glacier"), in association with the mountain. US-ACAN accepted the name Heito Glacier in 1975.

Heito-hyoga *see* **Heito Glacier**

Heito-zan *see* **Mount Heito**

Heke Peak. 77°58' S, 162°53' E. Rising to 2175 m on the ridge that forms the S wall of Mitchell Glacier, near the head of that glacier, in the Royal Society Range of Victoria Land. Named by NZ-APC in 1993, for Randall Heke, foreman of the construction unit which built Scott Base in 1957 (Ron Mitchell, architectural draftsman, was his 2nd-in-command). Mr. Heke, from Christchurch, a Maori born in 1927, remained in a supervisory role for the management of the buildings for many years afterwards, until his retirement. US-ACAN accepted the name later in 1993. However, the name does not seem to appear in the NZ gazetteer.

Heksegryta *see* **Heksegryta Peaks**

Heksegryta Peaks. 73°31' S, 3°48' W. A group of peaks between Belgen Valley and Tverregg Glacier, in the N part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Basically they comprise Svartbandufsa Bluffs in the N, Kvervelnatten Peak about 3 km to the SW of that, and Mjøllføykje Bluff about 3 km due E of Kvervelnatten. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Heksegryta (i.e., "the witch's cauldron"). US-ACAN accepted the name Heksegryta Peaks in 1966.

The *Hektor*. Actually there were seven 250-ton whale catchers, *Hektor I* through *Hektor VII*, all 113 feet long, all built in 1929 for the Hektor Whaling Company, and catching for the *Hektoria* in Antarctic waters every season between 1929-30 and 1939-40. They were built at 3 different Norwegian yards — Kaldnaes Mek., Jarlsø Vaerft, and Fredriksstad Mek. *I*, *II*, and *V* were all sold to the Union Whaling Co., of Durban, and renamed, respectively, *UNI X*, *UNI XI*, and *UNI XIV* (all short for Uniwaleco).

Hektor Icefall. 62°00' S, 57°46' W. Extends in an arc about 8 km long, on the NW side of (i.e., at the head of) Sherratt Bay, on the S coast of King George Island, in the South Shetlands. Fids from Base G surveyed it from 1948, and FIDASE photographed it aerially in 1956-57. Named by UK-APC on Sept. 23, 1960, for the Hektor Whaling Company. US-ACAN accepted the name later in 1960. The British were the last to plot this feature, in late 2008.

The Hektor Whaling Company. Founded in 1910 by Finn Bugge, in Tønsberg, Norway, as Aktieselskabet Hektor, this company ran the whaler *Ronald* at Deception Island, in 1910-11, with Hans Krogh-Hansen as manager. On Oct. 1, 1911 the company took a 21-year lease on Deception Island from the British government (who had claimed it as their own and were then leasing it out), at £250 per annum. They set up a shore-based whaling station at Whalers Bay, with Krogh-Hansen managing it the first season, 1911-12. C. Stugard Christensen led the expedition of 1912-13, on the *Ronald* and the *Hektoria*, to expand construction of the station, and Jørgen Øhre was station manager from 1913 to 1916. In the 1913-14 season, using British funds (£241 12s 5d), the company built a magistrate's house for the Falklands magistrate. By 1913-14 the station could accommodate 89 persons. They had living barracks, a hospital, a galley (cook house), mess room, provision store, coal store, rope store, water storage tanks, fuel oil tanks, whale oil tanks, piggery, toilet, slip, flensing plan, pump house, a fresh water well, boiler house, guano factory and store, engineering workshop, mooring blocks, and cargo and loading quays. Every season they brought pigs and other livestock down. Even though the station was not manned during the winter months, it became a veritable village. The Company continued to run the

Ronald until 1914, the *Hektoria* from 1912 to 1916, and the *Benguela* from 1914 to 1916. The station did not operate between 1916 and 1920, because all of Hektor's ships had been lost at sea during the war. Jørgen Øhre returned as station manager, from 1920 to 1928, and Sverre Nielsen was station manager, 1929-30. The company ran the second *Ronald* from 1920 to 1931, and the second *Hektoria* from 1928 to 1931. A.C.F. Krogsbaek was the Danish doctor at the station between 1921 and 1925, based on the *Ronald*. In 1929 the station was converted to use fuel oil, and in 1931, with pelagic whaling (whaling out at sea) making such stations somewhat redundant, the factory was closed. Not to be confused with the Hector Whaling Company (q.v.), with a "c."

[1]**The *Hektoria***. A 5003-ton Norwegian whaling factory ship, formerly the British ship *Inchmaree*. When the Hektor Company bought her, she was the largest whaling factory in her fleet, indeed, the largest factory ship in the South Shetlands at that time (i.e., her first two seasons there, 1912-13 and 1913-14). That second season she took Arthur Bennett to the South Shetlands, as the first actual onsite Falkland Islands magistrate there. She was back in Antarctica in 1914-15 (under Capt. Frithjof Randulff Kjørboe), and 1915-16. On May 14, 1916 she arrived in Falmouth, en route back to Norway, and was torpedoed by the Germans in the North Atlantic, in 1917.

[2]**The *Hektoria***. Built by Harland and Wolff, of Belfast, as the *Medic* in 1898 for Cunard, she served as a British troop ship during the South African War, and also operated during World War I. In 1928 the Navigation Company sold her to the British and Norwegian Whaling Company, of London, but they couldn't pay for her, so the Hektor Company bought her, in June 1928, and in 1928-29 she acted as a transport ship for the Hektor Company's Deception Island station. During that season she took Wilkins from Buenos Aires to Deception Island in 1928, for the Wilkins-Hearst Expedition of 1928-30. Her catcher was the *Weddell*. In 1929 she was converted by Grayson, Rolls & Clover Docks, of Birkenhead into a 13,797-ton whaling factory ship. Captain Marinius Hansen was skipper. She continued to whale pelagically off the coasts of West Antarctica, every season between 1929-30 and 1939-40, being based out of Deception Island with her 7 catchers. In 1932-33, her skipper was Fred Gjertsen, and he was her skipper again in 1941-42. On Feb. 12, 1942, she left Glasgow, under the command of Salvesen's skipper Georg Jørgensen. On Sept. 12, 1942, in the North Atlantic, she was torpedoed and sunk by the Germans.

Hektoria Fiords *see* **Hektoria Glacier, Vaughan Inlet**

Hektoria Glacier. 65°03' S, 61°31' W. Flows SE from the area around Mount Johnson into the Larsen Ice Shelf just W of Shiver Point, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Discovered and photographed aerially by Wilkins on Dec. 20, 1928, and he named it Hektoria Fiords, for the *Hektoria*. He plotted it in 64°45' S, to the SW of Drygalski Glacier. It appears as Hektoria Fjords on a map of 1929, as Hectoria Fiords on a British chart of 1933, as Hektoria Fiords on a British chart of 1945, as Hektoria Fiord on a USAAF chart of 1946, as Fiordo Hectoria on a Chilean chart of 1947, and as Fiords Hektoria on an Argentine chart of 1949. These fjords could not be identified during a FIDS survey of 1947, but during a Sept. 1955 survey Fids from Base D found that Wilkins's "long, ice-filled fjords almost severing Graham Land" were, in fact, this glacier, and two short, unnamed ones to the W, and so they renamed it Hektoria Glacier. UK-APC accepted the name on Sept. 4, 1957, and it appears on a British chart of 1961. US-ACAN followed suit with the naming in 1963, although it does appear on a 1963 American chart as Hectoria Glacier. It was photographed aerially by USN in 1968-69.

Hel. 66°17' S, 100°44' E. A small peninsula on the N coast of Figurnoe Lake, 800 m W of Dobrowolski Station, in the Bunger Hills of Queen Mary Land. Named by the Poles in 1985, for the peninsula in Poland on the coast of the Baltic Sea.

Held Glacier. 84°47' S, 177°00' W. A tributary glacier, 5 km long, it flows E from Anderson Heights to enter Shackleton Glacier just S of Epidote Peak, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Lt. George B. Held, USN, public works officer at McMurdo Station in 1964.

Mount Helen. 64°32' S, 63°38' W. Rising to 1370 m, and snow-covered, except for a steep rock scarp on its E side, 3 km SW of Mount Achilles, in the Achaean Range of central Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in 1955, and named by UK-APC on Sept. 4, 1957, for the Homeric heroine. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Helen Glacier. 66°40' S, 93°55' E. A glacier marked by a series of heavy, broken, crevassed icefalls, it flows into the sea as Helen Glacier Tongue on the coast of Queen Mary Land. Discovered in Nov. 1912 by the Western Base Party of AAE 1911-14, and named by Mawson for Lady Helen Tooth, wife of Sir Robert Lucas-Tooth (1844-1915; until 1904 Robert Lucas Tooth, without the hyphen), of Sydney, a patron of the expedition. Lady Helen, who died in 1942, was born Helen Tooth, and was a distant relative of her husband's. US-ACAN accepted the name in 1947, and ANCA followed suit.

Helen Glacier Tongue. 66°33' S, 94°00' E. The seaward extension of Helen Glacier, on the coast of Queen Mary Land. Discovered in Nov. 1912 by the Western Base Party of AAE 1911-14, and named by Mawson in association with the glacier. US-ACAN accepted the name in 1947.

Mount Helen Washington *see* **Washington Ridge**

Helen Washington Bay *see* **Kainan Bay**

Helena Island *see* **Bridgeman Island**

Helena Rock *see* **Bridgeman Island**

Île Hélène *see* **Hélène Island**

Hélène Island. 66°37' S, 139°44' E. A small, rocky island, 330 m NW of Ifo Island, and to the NW of Astrolabe Glacier, it is the most westerly in the W part of Baie Pierre Lejay, and, indeed, marks the W end of the Géologie Archipelago. Photographed aerially during OpHJ 1946-47. Charted by the French between 1949 and 1951, and named by them as Île Hélène, for one of their dogs. US-ACAN accepted the name Hélène Island in 1955.

Helfert Nunatak. 77°53' S, 87°25' W. A prominent rock nunatak, 24 km W of Mount Sharp of the Sentinel Range, in the Ellsworth Mountains. Discovered by Charles Bentley and his Marie Byrd Land Traverse Party of 1957-58, and named by Bentley for Norbert Fred Helfert (b. Oct. 19, 1935, Sheboygan, Wisc. d. Oct. 24, 1974, Rockville, Md.), meteorologist at Byrd Station in 1957. US-ACAN accepted the name in 1960.

Helfferich Glacier. 70°35' S, 160°12' E. About 13 km long, it flows from the E slopes of the Pomerantz Tableland, southward of Armstrong Platform, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Merritt Randolph Helfferich (b. Aug. 1935), USARP ionosphere physics worker at Pole Station in 1967-68.

Mount Helicon *see* **Helmet Peak**

Helicopter Hills *see* **Stansbury Peninsula**

Helicopter Mountains. 77°11' S, 161°23' E. A series of rugged mountains W of Mount Mahony, they form the NW end of the Saint Johns Range, in Victoria Land. Mount James, the highest peak in the group, rises to 1700 m, and the others, going from W to E, are Touchstone Crag, Mick Peak, and Hott Peak. Named by US-ACAN on Jan. 15, 2008, for the helos that assisted USAP parties in the McMurdo Dry Valleys and the McMurdo Sound area. Individual peaks have been named for personnel in the helicopter group. NZ-APC accepted the name on April 7, 2008.

Isla Helicóptero *see* **Belding Island**

Helicopters. Often called "helos" in Antarctica, they were the successors to the autogyros (q.v.), and it wasn't until after World War II that the helo came into its own in Antarctica. Seven Sikorskys were used during OpHJ 1946-47, the first time that helos flew on the continent. Lt. Cdr. Walter Sessums was the first man ever to fly a helo in Antarctica. OpW (Operation Windmill) 1947-48 was named thus for the helos used during that expedition. Whaling fleets began using helos in the early 1950s. IGY (1957-59) saw helos all over the continent. The French used mostly their own 2-seater Djinns, the Japanese used S-58s, the USSR used huge M14s, and the Americans used HO4S-3 Sikorskys. The most popular chopper since then seems to be the French Puma, but in the 1960s the Americans at McMurdo were using UH-1B turbo-powered Iroquois helos which could go as high as 16,000 feet above sea level. On Feb. 4, 1963, three of these, led by Frank Radspinner, flew from Mount Weaver to the South Pole, the first heli-

copters to arrive at the South Pole (q.v. and that date, for details). These UH-1Bs were an improvement over the original turbine helos first used in Antarctica in 1961-62, when the U.S. Army flew single-engine UH-1Bs. The longest nonstop Antarctic helo flight took place on Nov. 27, 1968, when two LH-34s belonging to VX-6 flew 395 miles from McMurdo to Hallett Station to help in emperor penguin collections. In the late 1960s the UH-1D replaced the UH-1B. They were superior, even though the flight speed was the same — about 120 mph. In 1971-72 the U.S. Navy replaced these with UH-1Ns, a single-rotor, skid-configured machine made by the Bell Helicopter Company. These could be loaded into an LC-130 Hercules aircraft. By the 1980s most nations were using the helicopter as a field-work tool. Ice-reconnaissance (spotting leads in the pack-ice for ships to go through), helping unload ships, etc. Squirrel helicopters are normally based at Davis Station during the summer months. There are 53 heliports in Antarctica, including the one at Palmer Station.

The *Helier 2*. A 130 foot 9 inch Norwegian whale catcher, built in 1936, by Nylands, of Oslo, for St Helier Shipowners (a subsidiary of Tønsbergs Hvalfangeri, of Tønsberg, in Norway), based in Jersey (Hans Borge was manager). She was catching in Antarctic waters for the *Svend Foyn* in 1936-37, 1937-38, 1938-39, and 1939-40. In May 1940, she was requisitioned by the Royal Navy and used as a minesweeper, her name unchanged. In 1944, while still a minesweeper, she was transferred to the Star Whaling Company, of Guernsey (still a Tønsbergs Hvalfangeri company vessel, and managed by Mr. Borge). After the war she was refitted, and sent to Husvik Harbor, in South Georgia, where she caught for that shore station from 1945-46 until 1949-50, whereupon she was legally transferred to Tønsbergs Hvalfangeri, and renamed the *Busen 2*. She caught for Husvik Station until 1956-57, and was then laid up at South Georgia. Norway ended its whaling operations out of Husvik after the 1958-59 season, and the *Busen 2* was brought back to Tønsberg, where she was laid up. In 1960 she was sold and became the motor fishing vessel *Pioner*. She was sold again in 1973, becoming the *Arctic*, and again in 1978, becoming the *Arctic II*. In 1985 she was sold again and became the *Kapp Linné*, but was comdemned in 1988, and scrapped in 1990.

Mount Helios. 77°27' S, 162°19' E. A peak, rising to 1650 m, 1.3 km NE of Mount Theseus, in the E part of the Olympus Range of Victoria Land. In keeping with the practice of naming several features in this area for figures in mythology, this one was named by US-ACAN in 1997, for the Greek sun god. NZ-APC accepted the name.

Helios Ridge. 77°26' S, 162°29' E. A broad rock ridge, 7 km long, in the vicinity of Lake Brownworth, it extends in an ENE direction from Mount Helios, and rises between the E snout of Clark Glacier and Wright Valley, causing meltwater streams to flow E around it in order to reach Onyx River, in the Olympus Range of Victoria Land. Named by US-ACAN in 1997, in association with Mount Helios.

Heliozans. Spherical, mostly freshwater organisms, a form of protozoans. They are some of the microfauna of Antarctica (*see* **Fauna**).

Helis Nunatak. 62°32' S, 60°05' W. A crown-shaped rocky peak, rising to 340 m in Vidin Heights, 3.1 km W of Edinburgh Hill, 1.8 km S of Sharp Peak, and 1.8 ESE of Madara Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the ancient Thracian capital Helis, whose remains are located at Sveshtari, in northeastern Bulgaria.

Helix Pass. 71°18' S, 163°18' E. A small pass, running in a N-S direction between the Curphey Peaks to the E, and Mount Wodzicki to the W, 6 km ENE of Mount Jamroga, in the central Bowers Mountains. The pass permits passage from the area at the head of Carryer Glacier to areas in the S part of the Bowers Mountains. So named by NZGSAE 1967-68 because ascent of the pass required an all-night trip with much zigzagging and climbing. The helix is a snail, which tends to move in such a manner. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Hell Below Zero. 1954 movie. Part of the filming was done from the *Kista Dan* in the 1952-53 season. The star, Alan Ladd, was actually on the ship.

Hell Gates. 62°40' S, 61°11' W. A narrow boat passage between the chain of islets and rocks off Devils Point (the SW end of Livingston Island), running between Livingston Island and Snow Island, across from the S limit of Morton Strait, in the South Shetlands. So named by sealers about 1821 because of the loss of shipping and life that had already taken place there. They seem to have used it as a short cut between New Plymouth and South Beaches. The name appears on Fildes's 1821 chart as Hell-Gates, and on Powell's 1822 chart as Hell Gates. It also appears as Hell Gates on the 1829 chart made up during the *Chanticleer* Expedition of 1828-31. It appears as such on a British chart of 1921, and as "Hell Gates (Morton Strait)" on a 1946 USAAF chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and also on a 1957 British chart. It appears translated as Puertas del Infierno on a 1947 Chilean chart. However, US-ACAN, in 1956, described the feature as "a chain of small islands and rocks across the E entrance of Morton Strait" (i.e., not across the S entrance). After FIDASE air photography in 1956-57, and ground surveys conducted by FIDS in 1958, the name Hell Gates was re-applied by UK-APC on July 7, 1959, to the boat passage on the S side of the strait. Today, the Chileans call it Paso Puertas del Infierno (i.e., "Hell's gate passage"), and the Argentines (still going with the 1950s definition) call it Islotes Puertas del Infierno (i.e., "Hell's gate islets"). US-ACAN finally accepted the new British definition in 1981. Last plotted by the UK, in late 2008.

Mount Helland-Hansen *see* **Helland-Hansen Shoulder**

Helland-Hansen Mountains. 86°07' S, 169°00' W. Ice features, thought by their discoverer Amundsen in 1911 to be mountains. On Nov. 27, 1911, during his push to the Pole, he saw "two long, narrow mountain ridges to the west of us, running north and south, and completely covered with snow. These Helland-Hansen's Mountains were the only ones we saw on our right hand during the march over the plateau; they were between 9000 and 10,000 feet high [what he means is, above sea level], and would probably serve as excellent landmarks on the return journey. There was no connection to be traced between these mountains and those lying to the east of them. They gave us the impression of being entirely isolated summits, as we could not make out any lofty ridge running east and west." Named for Prof. Bjørn Helland-Hansen (b. Oct. 16, 1877, Kristiania. d. Sept. 7, 1957, Bergen) of the University of Oslo, Norwegian pioneer of modern oceanography, and formerly assistant director of fisheries (under Johan Hjort) at Bergen. Modern geographers have not been able to find these mountains, and so they do not appear in any modern gazetteer.

Helland-Hansen Shoulder. 85°26' S, 168°10' W. A portion of the steep slopes of the mainly ice- and snow-covered W boundary of the Mohn Basin, resembling snow-covered ridges when viewed from the E, and extending for an indefinite distance from N to S from the W portion of Mount Fridtjof Nansen, it overlooks the N side of the head of the Axel Heiberg Glacier, on the Polar Plateau. Discovered in Dec. 1911 by Amundsen, during his trek to the Pole, and named by him at that time as Mount Helland-Hansen for Bjørn Helland-Hansen (*see* **Helland-Hansen Mountains**). Amundsen described Mount Helland-Hansen this way: "a very curious peak to look at. It seemed to stick its nose up through the plateau, and no more; its shape was long, and it reminded me of nothing so much as the ridge of a roof. Although this peak was thus only just visble, it stood 11,000 feet above the sea." The feature was later re-defined as Helland-Hansen Shoulder.

Helland-Hansenbotnen. 74°37' S, 10°46' W. An ice corrie (or cirque) between Berggravrista and Gramkroken, in the N part of Sivorgfjella, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Bjørn Krag Helland-Hansen (b. 1903), Norwegian Resistance fighter during World War II. This is the son of Bjørn Helland-Hansen (*see* **Helland-Hansen Mountains**

Helle Slope. 71°25' S, 5°15' E. A large ice piedmont, E of Jutulstraumen Glacier, between the Princess Astrid Coast and the Mühlig-Hofmann Mountains, in the W part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60,

and named by them as Hellehallet, for Norsk Polarinstitutt topographer Sigurd Gunnarson Helle (b. 1920), leader of NorAE 1957-58 to Queen Maud Land. US-ACAN accepted the translated name Helle Slope in 1966.

Hellehallet *see* **Helle Slope**

Hellender, John *see* **USEE 1838-42**

Islote Heller *see* **Heller Rock**

Heller Rock. 62°30' S, 59°43' W. A large rock in the S part of Discovery Bay, less than 70 m from Correa Point, and about 1 km SE of Labbé Point, Greenwich Island, in the South Shetlands. Named by ChilAE 1947 as Islote Carpintero Heller, for Cabo 2nd class José Heller C., carpenter on the *Iquique* during that expedition. In 1951 the name was shortened in order to avoid compound names, and, as Islote Heller it appears on a Chilean chart of that year. UK-APC accepted the name Heller Rock in 2003. The British plotted this feature, in late 2008.

Hellerman Rocks. 64°48' S, 64°01' W. A group of 7 small islets and rocks connected by a shoal, 0.7 km E of Hermit Island, and SE of Arthur Harbor, off the SW coast of Anvers Island. Between 1956 and 1958 they were surveyed by Fids from Base N in conjunction with an RN Hydrographic Survey unit. Work was done here from 1965, by personnel from Palmer Station. Named by US-ACAN in 1974, for Lt. (jg) Lance W. Hellerman, officer-in-charge of Palmer Station in 1969. UK-APC accepted the name on Dec. 20, 1974.

Helliwell Hills. 71°50' S, 161°25' E. A group of rocky hills and low mountains, about 29 km long, and 14 km wide, S of Gressitt Glacier, and midway between the Emlen Peaks and the Morozumi Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Robert A. Helliwell of Stanford University, program director for the USARP study of very low frequency radio noise phenomena. NZ-APC accepted the name.

Hells Gate. 74°51' S, 163°48' E. A small area of the confluent ice in the form of a narrows, near the E edge of the Nansen Ice Sheet, it discharges into the N portion of Evans Cove, between Inexpressible Island and the Northern Foothills, along the coast of Victoria Land. Discovered and first explored by Campbell's Northern Party during BAE 1910-13. They camped near here in 1912, and named it with reason. US-ACAN accepted the name, and NZ-APC followed suit.

Hell's Gate. 86°30' S, 167°20' W. At the entrance to Devils Glacier, in the Queen Maud Mountains. The glacier, at this point, had formed a remarkable long ridge about 6 m high, with a fissure about 1.8 m wide as a gateway. Named by Amundsen in Nov. 1911, as he sped his way toward the Pole. It appears in the 1958 NZ provisional gazetteer.

Hells Gate Moraine. 74°52' S, 163°48' E. The glacial moraine at Hells Gate, at the head of Evans Cove, on the coast of Victoria Land. It extends southward to Hells Gate from nearby Vegetation Island and Cape Confusion. Mapped by Campbell's Northern Party during BAE 1910-13, and named by them in association with Hells Gate. US-ACAN accepted the name in 1967.

Hellyer, William Henry. b. 1877, Carlton, Victoria, son of Charles Robert Hellyer and his wife Honora Noonan (he was the 2nd son to have that name; the elder one had died in 1875). He joined the Merchant Navy, and was in it on and off for decades, and when he was off he worked as a laborer and billiard marker in Brunswick West, Vic. He married Mary Ann, and in 1927 was plying the Atlantic on the *Berengaria*, as an assistant cook, when he transferred to the *William Scoresby*, as assistant steward, for the 1927-30 cruise to Antarctica. After the expedition, he went back to Brunswick, to resume his billards career, although he continued to be a ship's steward from time to time. He died in Brunswick West in 1942.

Helm, Ennis Creed "Tex." b. Feb. 6, 1903, Newark, Tex. While working as a photographer for the *Fort Worth Star-Telegram*, he was sent out to shoot the newly discovered Carlsbad Caverns, in NM. These photos made him famous. While working for the *Daily Oklahoman*, he became photographer on USAS 1939-41 (he had to get out of town), sailing south on the *North Star* from Philadelphia, on Nov. 15, 1939. He was going to stay on the ice for the 1940 winter, but returned with the *North Star*, disembarking at Valparaíso in March 1940. From there back home. His arrival back in the States was not quite what he would have wanted, but it was not unexpected. In April 1941, he was convicted of obtaining property under false pretenses, and thrown into Oklahoma State Penitentiary on July 3. On Feb. 3, 1942, he walked out, a free man, free but flat broke. On Aug. 4, 1962, in Nevada, he married Dorothy N. Franklin (his first wife had been Grace). He later shot many of the early space flight tests, and died on Aug. 24, 1982, in Carlsbad.

Helm Glacier. 83°07' S, 162°30' E. About 30 km long, it flows N into Lowery Glacier, just W of the Fazekas Hills, on the E side of the Queen Elizabeth Range. Named by the Northern Party of NZGSAE 1961-62, for Arthur Stanley Helm (b. Feb. 25, 1914, Riverton, NZ), former secretary of the Ross Sea Committee, and secretary of NZ-APC (Antarctic Place-Names Committee) from 1957-64. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Helm Peak. 69°29' S, 67°50' W. Rising to 930 m, the highest elevation in the Relay Hills, on the W side of the Antarctic Peninsula. Photographed aerially by USN in 1966, and surveyed from the ground by BAS, 1970-73. Named by UK-APC on Dec. 8, 1977, in association with other features in the area that bear wind-names. The helm gale is an eastern gale in the lee of the northern Pennines, in England. US-ACAN accepted the name.

Helm Point. 72°11' S, 170°00' E. A point — not a cape (it is inside a bay, not on the outer coast, therefore it is a point, even though it has sometimes been defined as a cape) — that marks the SE tip of Honeycomb Ridge, on the W side of Moubray Bay. It is formed from brown granodiorite, and there is much life here — lichens, mosses, petrels. Named by NZGSAE 1957-58, for Arthur S. Helm (*see* **Helm Glacier**), who had been of great help to the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Helman Glacier. 72°12' S, 168°28' E. A small tributary glacier flowing southward between Mount Gleaton and Taylor Peak, into Tucker Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Terry N. Helman, USN, radioman who wintered-over at McMurdo in 1967.

Mount Helmer Hanssen *see* **Mount Hanssen**

Helmert Bank. 75°00' S, 25°20' W. An undersea feature, at least 400 m in depth, in the Weddell Sea. The name was proposed by Heinrich Hinze, of the Alfred Wegener Institute for Polar and Marine Research, in Bremerhaven, and accepted by US-ACAN in June 1977. Friedrich Robert Helmert (1843-1917) was a geodesist, director of the Prussian Geodetic Institute, in Potsdam, and of the Central Bureau for International Earth Measurement (Erdmessung).

Pic Helmet *see* **Helmet Peak**

Helmet Peak. 62°39' S, 60°01' W. Rising to 1040 m (the British say 1255 m), 7 km ENE of Needle Peak, between Renier Point and Barnard Point, southward of the mouth of Huron Glacier, in the SE part of Livingston Island, in the South Shetlands. The Discovery Investigations personnel, here sometime between 1926 and 1932, saw it from a distance, did not realize that the higher Great Needle Peak (as it would eventually be named) loomed immediately behind this feature to the SW, and, thinking it to be one mountain (rather than two) named it Helmet Peak. It appears on a 1951 French chart as Pic Helmet. Following the work of an RN Hydrographic Survey unit here in 1951-52 (they made the same mistake), it appears on their 1952 chart as Mount Helicon, presumably named after the Boeotian mountain sacred to the Muses in Greek mythology. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959, the mistake still wasn't cleared up. The name Helmet Peak was accepted by UK-APC on July 7, 1959, and by US-ACAN in 1960. It appears on a British chart of 1962. ArgAE 1956-57, also seeing it from a distance, again did not see that there were two mountains here, and named it Morro Falsa Aguja (i.e., "false Needle hill"), to distinguish it from Needle Peak, which they called Pico Aguja. It appears as such on their 1957 chart, but on a 1958 Argentine chart as Pico Aguja Falsa, and on a 1963 Argentine chart as Pico Falsa Aguja. This last name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It appears (presumably as a misprint) as Pico Falsa Águila (i.e., "false eagle peak") on a 1966 Chilean chart. It wasn't until the Bulgarians conducted their Tangra sur-

vey in 2004-5 that it was revealed that there were, in fact, two mountains here, not one. The smaller one remained named Helmet Peak, and the higher one was named Great Needle Peak. The British were the latest to re-plot this feature, in late 2008. The Argentines now use the name Pico Falsa Aguja to refer to Great Needle Peak.

Helmet Rock. 71°20' S, 169°10' E. A rock in front of Cape Barrow (the N point of Flat Island), Victoria Land. Named descriptively in Sept. 1912, by Campbell's Northern Party, during BAE 1910-13. It appears in the 1958 NZ provisional gazetteer.

Helmore Glacier. 73°04' S, 68°19' E. A small glacier flowing W, between Sulzberger Bluff and Harbour Bluff, 3 km S of Dolinnyy Glacier (which it parallels), in the N part of the Mawson Escarpment, in Mac. Robertson Land. The glacier flows separately into the Lambert Glacier. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973, and named by ANCA for Reginald C. "Reg" Helmore, technical officer with the ANARE Prince Charles Mountains Survey Party of 1973. US-ACAN accepted the name on Oct. 20, 2009. The Russians call it Lednik Krutoj.

Mount Helms. 82°04' S, 87°58' W. A rounded, partly snow-covered peak, between Mount Semprebon and Mount Oldenburg, in the central part of the Martin Hills. It was probably positioned by Cam Craddock's USARP party of Jan. 1963. Named by US-ACAN in 1964, for Ward J. Helms, radioscience researcher who wintered-over at Byrd Station in 1962.

Helms Bluff. 78°29' S, 164°25' E. A prominent, N-facing bluff, 10 km in length, and overlooking Moore Bay, 19 km E of Mount Morning, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos. Named by US-ACAN in 1963, for Lt. Cdr. Louis L. Helms, USN, officer-in-charge of VX-6 at McMurdo in 1961. NZ-APC accepted the name.

Helo Cliffs. 77°30' S, 167°09' E. Prominent cliffs, at an elevation of about 3525 m, on the N rim of the summit caldera of Mount Erebus, on Ross Island. A U.S. Coast Guard HH-52A helicopter (CG 1404) lost power and crashed near here while en route from McMurdo to Cape Bird, on Jan. 9, 1971. The four crew and passengers were not injured, but the helo had to be abandoned because of its location. Named by US-ACAN on Oct. 31, 2000. NZ-APC accepted the name on Feb. 20, 2001.

Helsetskarvet. 74°19' S, 9°38' W. A partly snow-covered mountain area between Hasselknippenova and Johnsonufsa, in Milorgfjella, in the N part of the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Maj. Olaf Helset (1892-1960), Norwegian Resistance leader during World War II, the first national leader of Milorg.

Hemmen, George Ethelbert. b. March 1, 1926, Brentford, Mdsx, son of Welsh parents George Henry Hemmen and Mildred Jackson. His father, indeed, was producing *The Mikado* on stage in Hanwell when the future figure of note in Antarctic history was born. He joined FIDS in 1952, and wintered-over as a meteorological observer at Base G in 1953, and again at Base B in 1954, when he was base leader. He took part in the British Royal Society IGY Expedition, as stores officer. For that expedition he was there for the summer season of 1955-56, arriving on the *Tottan* in Jan. 1956 and being one of the party to set up the base at Halley Bay. He went home on the *Tottan*, i.e., he did not winter-over in 1956 at Halley Bay. He was back at Halley Bay in Jan. 1957 (returning to London on the *Magga Dan* on March 13, 1957), and again in Jan. 1959, but, again, did not winter-over. From 1974 to 1980 he was executive secretary of SCAR, and then took an administrative post with the Royal Society, from which he retired in 1985. He lives in Lancashire.

Hemmen Ice Rise. 77°57' S, 49°46' W. An ice rise, 17.5 km long, off the NW corner of Berkner Island, on the Ronne Ice Shelf. It appears for the first time on a chart prepared at Ellsworth Station in 1957 by Finn Ronne. Named by UK-APC on Dec. 8, 1977, for George Hemmen.

The *Hemmerdinger*. Chilean ship, on ChilAE 1976-77 (Captain Carlos Opazo Perey).

Hemmestad Nunataks. 71°40' S, 8°26' E. A group of 20 or so nunataks (the largest being Arne Nunatak), extending over 11 km, they form the NE portion of the Drygalski Mountains, in the Orvin Mountain, in Fimbulheimen, Queen Maud Land. Photographed from the air by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as them Hemmestadskjera, after Arne Hemmestad (b. 1920), mechanic on that expedition, during 1955-57. US-ACAN accepted the name Hemmestad Nunataks in 1967. *See also* **Arne Nunatak**.

Hemmestadskjera *see* **Hemmestad Nunataks**

Mount Hemmingsen. 73°25' S, 61°50' W. The most northeasterly of the Werner Mountains, on the S side of Meinardus Glacier, 8 km SW of Court Nunatak, on the Lassiter Coast, on the E coast of Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Edvard Alfred Hemmingsen (b. 1932), USARP biologist at McMurdo, 1966-67, and at Palmer Station, 1967-68. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Mount Hemphill. 70°59' S, 165°06' E. A snow-covered mountain rising to more than 1800 m, E of McLean Glacier, between the head of that glacier and Ebbe Glacier, and overlooking the latter, in the S part of the Anare Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Lt. (jg) Harold S. Hemphill, USN, VX-6 photographic officer in Antarctica, 1962-63 and 1963-64. NZ-APC accepted the name.

Hemphill Island. 66°23' S, 110°34' E. A small, mainly ice-covered island, between Robinson Ridge and Odbert Island, in the Windmill Islands. First mapped from air photos taken in 1947 by OpHJ 1946-47, and in 1948 by OpW 1947-48. Named by US-ACAN in 1963, for George R. Hemphill, meteorologist at Wilkes Station in 1961.

Vrah Hemus *see* **Hemus Peak**

Hemus Peak. 62°36°S, 60°13' W. An ice-covered, breast-shaped peak, 850 m long in an E-W direction, and 550 m wide, rising to 636 m off the NW extremity of Bowles Ridge, 920 m N by W of Bowles West Peak, 1720 m NW of Mount Bowles (the summit of Bowles Ridge), 3.55 km NE of Rezen Knoll, 6.27 km E by N of Aleko Rock, and 3.5 km S by E of Gleaner Heights, it overlooks Perunika Glacier to the WSW, with a small tributary glacier draining the area between Hemus Peak and Bowles West Peak, in the E part of Livingston Island, in the South Shetlands. Mapped roughly by BAS in 1968, and more accurately from a 1995-96 Bulgarian survey. Named by the Bulgarians on June 24, 1996, as Vrah Hemus, for Hemus, the ancient name for the Balkans of South Eastern Europe. In English this is Hemus Peak. The Bulgarians built a refuge hut here.

Hender, Walter William. b. Nov. 27, 1879, Whittington Barracks, Stafford, son of Army provisioner George William Hender and his Plymouth-born wife Sarah Ann "Annie" Moore. When Walter, who got his first name from his grandfather Hender, was two, the family moved to Litchfield, and then, a little later, to Hull, where Walter's father was from. At 14, he joined the Merchant Navy, and was an able seaman on the *Morning* during the 1902-03 relief of BNAE 1901-04. He worked his way up through the ranks, and by the late 1920s, despite the anchors tattooed on the back of both hands, was a skipper, working for the New Zealand Shipping Company. He won the OBE in 1944, for his services during World War II.

Hendersin, Wendell Keith. b. 1921, Cataract, Wisc., but raised partly in nearby Bangor, but mostly in Sparta, son of farmer Walter Scott Hendersin (known as Scott), and his wife Marie Arvilla Ripley. In 1939 he was at Fort Snelling. In 1942 he made the local Sparta news when he telephoned his parents from Pearl Harbor. He was an aviation radioman 1st class, a petty officer, U.S. Navy, married to Lillian, and living in Portsmouth, Va., when he went to Antarctica as part of OpHJ 1946-47, during which he was on the PBM-5 Martin Mariner sea plane which flew off the *Pine Island* on Dec. 30, 1946, for a photographic reconnaissance. During a whiteout the plane crashed and Hendersin died (*see* **Deaths**, 1946). His mother died in 1951, and his father in 1973.

Hendersin Knob. 72°08' S, 101°26' W. Also spelled (erroneously) Henderson Knob. An ice-covered knob, between the heads of Craft Glacier and Rochray Glacier, in the SW part of Thurston Island. First plotted from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1960, for Wendell K. Hendersin.

The *Henderson*. A 3460-ton destroyer escort, 390 feet 6 inches long, built by the Todd Shipyards, in Seattle, in 1944–45, and launched on May 28, 1945, named for Major Lofton R. Henderson, a U.S. Marine aviator, a hero who died at Midway, during World War II. Capable of 36.8 knots, and with a crew of 336, she was commisioned into the U.S. Navy on Aug. 4, 1945, and, after a tour in Hawaii, left California on Dec. 2, 1946, as part of the Western Task Group during OpHJ 1946–47. The captain was Cdr. Claude Fenn Bailey. On March 13, 1947 she arrived in Sydney, and on April 6, 1947 back in San Diego. She served in Korea and Vietnam, and was was struck from the Navy List on Sept. 30, 1980, and the following day transferred to Pakistan, as the *Tughril*. In 1998 she was renamed the *Nazim*, and was scrapped in 2001.

Cape Henderson. 66°11' S, 100°44' E. An ice-free rock cape overlain by morainic drift, about 7 km W of Fuller Island, it marks the NW end of the Bunger Hills. Mapped from air photos taken in Feb. 1947, during OpHJ 1946–47. Named by US-ACAN in 1956, for the *Henderson*. ANCA accepted the name on May 18, 1971.

Lake Henderson. 67°42' S, 63°02' E. The largest epiglacial lake in the Framnes Mountains, it has an area of about 85.4 hectares, and a measured depth of 115 m. It has a permanent, year-round ice cover, and about 40 boulders floating on the surface of the ice. For many years ANARE personnel at Mawson Station referred to it as Lake Henderson, due to its location at the base of Mount Henderson, and on May 1, 2005, ANCA accepted the name. The Russians call it Ozero Glubokoe.

[1]**Mount Henderson**. 67°42' S, 63°04' E. A massive mountain rising through the ice sheet to 970 m above sea level, 8 km SE of Holme Bay, and 8 km (the Australians say about 11 km) NE of the N end of the Masson Range, 14 km from Mawson Station, in Mac. Robertson Land. First sighted from the crow's nest of the *Discovery*, on Jan. 3, 1930, during BANZARE 1929-31, and again seen from the airplane, 2 days later. Its position was plotted, and the mountain named, on or about Feb. 14, 1931 by Mawson, for Walter Henderson (1887–1986), first director of the Australian Department of External Affairs, and a member of the Australian Antarctic Committee of 1929. In fact, he resigned from External Affairs just as Mawson was leaving for Antarctica. US-ACAN accepted the name in 1947, and ANCA followed suit. First climbed in Feb. 1955 by Phil Law, John Béchervaise, Peter Shaw, and Lt. A.W. Hall. In 1977–78 a summer field station was established here by ANARE.

[2]**Mount Henderson**. 78°11' S, 167°20' E. A hill, 3 km WSW of Isolation Point, in the south-central part of White Island, in the Ross Archipelago. Named by NZGSAE 1958–59, for G.B. Henderson, surveyor of that expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

[3]**Mount Henderson**. 80°12' S, 156°13' E. A prominent mountain, rising to 2660 m (the Australians say 2470 m above sea level), 8 km W of Mount Olympus, in the S part of the Britannia Range, on the N side of Barne Inlet. Discovered by BNAE 1901–04, and named by Scott for Rear Admiral Reginald Friend Hannam Henderson (1846–1932), with whom he dined the night the *Discovery* arrived back in Portsmouth on Sept. 10, 1904. Henderson had succeeded Pelham Aldrich as dockyard superintendent at Portsmouth, and held that position from 1902 to 1905. US-ACAN accepted the name in 1949, and ANCA followed suit.

Henderson, Harvey Lavern. Known as Lavern as a child. b. April 1893, Newberg, Oregon, son of Harvey Henderson and his wife Minnie. Minnie married again to carpenter William Warren, and the family moved to Seattle, where Harvey got various jobs, beginning with an apprenticeship in the meat market, and including window dresser in a dry goods store. In 1936 he went to sea, and on Nov. 26, 1937, signed on to the *North Sea* in Seattle, as a waiter, for the run up to British Columbia and back. He was a galleyman on the *North Star* during USAS 1939–41. He married Nellie. He died on Dec. 8, 1959, in Portland.

Henderson, James *see* **USEE 1838–42**

Henderson Bluff. 83°05' S, 50°35' W. A rock bluff rising to 1660 m, on the W side of the Lexington Table, about 14 km N of Mount Lechner, in the Forrestal Range of the Pensacola Mountains. Mapped by USGS from USN air photos taken in 1964, and from ground surveys conducted by USGS during their Pensacola Mountains Project of 1965–66. Named by US-ACAN in 1968, for John R. Henderson, USARP geophysicist on the ground survey. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Henderson Glacier. 79°47' S, 82°25' W. A glacier, about 11 km long, in the Enterprise Hills of the Heritage Range, it flows NE from Schoeck Peak and Hoinkes Peak, to enter Union Glacier just E of Mount Rossman. Surveyed from the ground by USGS in 1961–62, photographed from the air by USN in 1965–6, and mapped by USGS from these efforts. Named by US-ACAN in 1966, for Felix E. Henderson, USARP meteorologist at Eights Station in 1965.

Henderson Hill. 77°34' S, 163°11' E. An ice-free summit, rising to about 700 m, 1.3 km NE of Mount Falconer, on the N side of Taylor Valley, in Victoria Land. The name appears in a 1968 report and geologic sketch map of the area prepard by VUWAE 1965–66, and was named for Robert A. Henderson, a member of that party, and who was later with the Museum of Comparative Zoology, at Harvard. NZ-APC accepted the name, and US-ACAN followed suit in 1997.

Henderson Island. 66°22' S, 97°10' E. An ice-covered island, 15 km long and rising to an elevation of 252 m above sea level, 15 km SE of Masson Island, within the Shackleton Ice Shelf, off the coast of Queen Mary Land. Discovered in Aug. 1912 by the Western Base Party of AAE 1911–14, and named by Mawson for historian Prof. George Cockburn Henderson (1870–1944) of Adelaide, a member of the AAE Advisory Committee. US-ACAN accepted the name in 1947, and ANCA followed suit.

Henderson Knob *see* **Hendersin Knob**

Henderson Pyramid. 78°06' S, 161°27' E. A pointed, mostly ice-covered mountain, rising to 2450 m, 6 km SSW of Ugolini Peak, on the W side of the Royal Society Range, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1961. Named by US-ACAN in 1995, for Thomas E. Henderson, USGS cartographer, field team member on the Ellsworth Mountains Geodetic Control Project, 1979–80; USGS leader of the northern Victoria Land geodetic team of 1981–82; and a member of the USGS satellite surveying team that wintered-over at Pole Station in 1982.

Hendricks, Herman Otto. b. April 15, 1895, Renville, Minn. He moved to Portland, Oreg., and went to sea in 1922, as a machinist on merchant ships. He was a machinist on the *North Star* during USAS 1939–41. He continued to sail for years, working his way up the engineer ranks until he was chief on the *Arizona*, in 1951, plying between Vancouver and Seattle, and later on the *Colorado*, plying between Portland and Manila. He died in Portland on April 27, 1968.

Hendrickson Peak. 85°56' S, 132°49' W. A rock peak rising to over 2000 m, at the W side of Reedy Glacier, 3 km W of May Peak, in the Quartz Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for George Hendrickson, glaciologist at Byrd Station in 1962–63 and 1963–64.

Hendy Hills. 77°42' S, 162°08' E. A group of mostly ice-free hills, 1.5 km long and rising to an elevation of about 1435 m, due W of Mount J.J. Thompson, and due S of Kottmeier Mesa, along the W margin of Rhone Glacier, where that glacier descends abruptly to Lake Bonney, in the Taylor Valley, in the Asgard Range of Victoria Land. Named by NZ-APC in Nov. 1997, for Chris H. Hendy, NZ geochemist involved in Antartic field work from 1969, including research at Lake Bonney. US-ACAN accepted the name in 1998.

Henfield, Joseph Hardy. b. March 18, 1786, Salem, Mass., son of merchant Joseph Henfield and his wife Anne Mansfield (née Ward; formerly married to Jonathan Mansfield). He went to sea as a teenage seaman on whalers out of Salem — the *Catherine* (to Europe), the *Madockawando* (West Indies), and the *Lucia*. It was on the *Lucia* in 1806 that he became 2nd mate, and about 1808 he moved to New London, Conn., where, by the age of 24, he was master of the brig *Eliza Greene*. On Dec. 24, 1809, in New London, he married Lydia Goddard, and raised a family there. After the war of 1812 he became master of the brig *Sarah*, and in 1817 of the *Sampson*. He moved to Stonington, Conn., and was commander of the brig *Catharina* in the South Shetlands in the 1820–21 season.

Henfield Rock. 62°19' S, 59°35' W. A rock offshore, 3 km NW of Newell Point, NE of

Catharina Point, and E of Heywood Island, off Robert Island, in the South Shetlands. The rock was known to early 19th-century sealers, and sometimes included under the name Powels Islands (sic) or Heywood's Isles. Following the analysis of air photos taken by FIDASE in 1956-57, it was named Henfield Rock by UK-APC on Aug. 31, 1962, for Joseph Henfield. US-ACAN accepted the name in 1965. For more, *see* **Heywood Island**.

Hengduan Shangu. 62°13' S, 58°58'W. A valley on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Hengist Nunatak. 69°00' S, 70°14' W. An isolated, flat-topped nunatak, rising to over 610 m above the SE side of the Roberts Ice Piedmont, 16 km N of Mount Calais, in the NE part of Alexander Island. First photographed aerially on Aug. 15, 1936 and Feb. 1, 1937, by BGLE 1934-37. Surveyed from the ground by Fids from Base E in 1948, and named by UK-APC on March 31, 1955, for the 5th-century Saxon chief. US-ACAN accepted the name later in 1955. *See also* **Horsa Nunataks**.

Islotes Henkes *see* **Henkes Islands**

Henkes Islands. 67°48' S, 68°57' W. A group of small snow-covered islands and rocks, 3 km in extent and surrounded by reefs, 1.5 km SW of Avian Island, ringing the SW end of Adelaide Island, SW of Crosse Passage, and extending SE from Cape Adriasola, and terminating in Islote Bories. They include Preston Island, Biggs Island, Crouch Island, Dean Rocks, and Worth Reef. Discovered, surveyed, and roughly charted in Jan. 1909, by FRAE 1908-10, and named by Charcot as Îlots Henkes, for Augustus Henkes (b. 1874), the Rotterdam-born manager of the the Compañía Ballenera Magallanes, at Punta Arenas, who assisted the expedition. Charcot did not define limits to this feature, but, as it appears on his 1912 maps (and on a British map of 1914, where it appears as Henkes Islets, and on Wilkins' 1929 map, as Henkes Islands), it included a far wider area (than we know them today) of rocks and islands between Cape Adriasola and Cape Alexandra. ChilAE 1946-47 named them Grupo Blanco Encalada, after Admiral Manuel Blanco Encalada (1790-1876), Chile's first president (1826). It appears as such on their 1947 chart. This name was adopted and adapted by certain other countries, but was occasionally erroneously applied to the whole of Adelaide Island. *See also* **Hoseason Island**. On an Argentine chart of 1947 the name Islotes Henkes refers to a limited group SW of Avian Island, and on one of their 1949 charts the feature extends NW toward Cape Adriasola. It appears on a 1957 Argentine chart as Islotes Henkes, but on one of their 1959 charts as Islotes Henke. In the early 1950s both US-ACAN and UK-APC accepted the name Henkes Islets, plotted in 67°44' S, 69°10' W, and it appears as such in the 1955 British gazetteer. On Feb. 12, 1964, after definitive mapping by Fids from Base T in 1961, and by an RN Hydrographic Survey unit on the *Protector* in 1963, UK-APC restricted the term to what we know today. US-ACAN accepted that later in 1964, and that year it appears on a British chart. The name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer was Islotes Henkes.

Henkes Islets *see* **Henkes Islands**

Henkle Peak. 74°39' S, 75°50' W. Rising to about 1100 m, about 24 km N of Mount Rex, and S of Stange Sound, on the English Coast, where Ellsworth Land meets southern Palmer Land. It lies among a group of nunataks that were discovered and photographed aerially by Ellsworth on Nov. 23, 1935. On Dec. 23, 1947 it was re-photographed aerially by RARE 1947-48. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN in 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Charles R. Henkle, of USGS, a topographic engineer with the Marie Byrd Land Survey Party of 1967-68. It appears on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974.

Mount Henksen. 66°46' S, 51°04' E. An elongated mountain with several peaks, between Peacock Ridge and Mount Parviainen, and about 24 km NW of Pythagoras Peak, in the N part of the Tula Mountains, in Enderby Land. Plotted from air photos taken by ANARE in 1956 and 1957, and named by ANCA for H. Henksen, crew member on the *Discovery* during BANZARE, 1929-31. Trouble is, there was no one on BANZARE named Henksen. There was, however, Aage Henriksen (q.v.). US-ACAN accepted the name, without any checking whatsoever, in 1965.

Henksen, Aage *see* **Henriksen, Aage**

Point Hennequin. 62°07' S, 58°24' W. Forms the E side of the entrance to Martel Inlet and Mackellar Inlet, on the E side of Admiralty Bay, King George Island, in the South Shetlands. Charted in Dec. 1909, by FrAE 1908-10, and named by Charcot (in one of those rare cases, for a dead person) as Pointe Hennequin, for Army geologist General Néoclès-Charles-Auguste-Émile Hennequin (1838-1902; known as Émile), director of the Institut Cartographique Militaire, in Brussels, and a member of the committee of the Royal Geographical Society of Belgium. It appears as Hennequin Point on a 1921 British map, and on the 1929 Discovery Investigations chart as Point Hennequin. It was recharted by the DI in 1935. It appears on a 1946 Argentine chart as Punta Hennequin, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The name Point Hennequin was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The British were the latest to re-plot this feature, in late 2008. The SW tip of this point was named Basalt Point by the Poles in 1977, and appears as such on Krzysztof Birkenmajer's 1980 map.

Pointe Hennequin *see* **Point Hennequin**

Punta Hennequin *see* **Point Hennequin**

Mount Hennessey. 72°14' S, 164°45' E. A mountain, 3 km N of Mount Tukotok, in the Salamander Range of the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Raymond W. Hennessey, aerographer at Hallett Station in 1957.

Islas Hennessy *see* **Hennessy Islands**

Hennessy Islands. 65°53' S, 65°43' W. A group of small islands, 3 km in extent, 6 km SE of Jurva Point (the SE end of Renaud Island), in the Biscoe Islands, NE of Dodman Island, off the Graham Coast, on the W coast of Graham Land. The main islands in the group were first shown accurately on a 1957 Argentine chart. They were photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Jack Hennessy (1885-1954), deputy marine superintendent of the Met Office, 1940-54, who collected and published reports on sea ice observations in Antarctic waters for the entire first half of the 20th century. They appear on a British chart of 1960. US-ACAN accepted the name in 1971. They appear on a Chilean chart of 1962, as Islas Cabrales, named after the Chilean tug boat *Cabrales*, or so we are told (*see* **Pasaje Cabrales**). Today, the Argentines call them Islas Hennessy.

The *Henrietta*. New London sealing schooner which left home on Aug. 27, 1832, bound for the South Shetlands for the 1832-33 season. Crew: Isaac Hodges (captain), Sylvester Hodges (1st mate), Alfred Looch (2nd mate), James Gogsen, Sherwood Fitch, Ambrose Higgins, John Dikeman, Samuel Prentis, Henry Wheeler, Christopher Prach, Anthony Fritch, John Andire, Joseph Williams, Elon Sutherland, John A. Drew, William Fuller, Francis Hunter, Gilbert Pendleton.

The *Henrik Ibsen*. A 4671-ton Norwegian vessel in the South Shetlands in the 1929-30 season, fueling ship for the whaler *Hektoria*. She transported the Wilkins-Hearst Expedition from Deception Island to Montevideo in March 1930. Captain Johan Svendsen.

Henriksen, Aage. b. Nov. 5, 1895, Drammen Bu, Norway, but raised in Askøy, son of coast artillery sergeant Harald Teodor Henriksen and his wife Sigrid. He joined the Merchant Navy, and in Nov. 1911, at Bergen, signed on the *Governor Arnold* for a tour of the West Coast of North America, thus beginning a career at sea. He was an able seaman on the *Discovery* during the 2nd half of BANZARE, i.e., 1930-31. He had disappeared by 1934. In the 1960s, when the Australians came to name a mountain in the Tula Mountains, they were into the BANZARE motif, and erroneously named it Mount Henksen. Henksen has been perpetuated.

Henriksen, Bill. He wintered-over at Pole Station, as an inspector, in 2000, and was back as station manager in 2003 and 2005, the first person to manage that station twice. He was NSF manager at McMurdo for the winters of 2006, 2007, and 2008.

Henriksen Nunataks. 71°30' S, 9°00' E. A group of scattered nunataks, about 16 km N of

the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Plotted initially from the air photos taken by GermAE 1938–39, then re-plotted by Norwegian cartographers from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Henriksenskjera, after Hans-Martin Henriksen (b. 1935), who wintered-over at Norway Station in 1957 and 1958, as meteorological assistant, during NorAE 1956–60. US-ACAN accepted the name Henriksen Nunataks in 1967. *See also* **Hans-Martin Nunatak**. Note: The SCAR gazetteer gives another feature in exactly these coordinates, Skaly Junye, a feature named by the Russians. The Norwegian name "skjera" means "skerries" or "group of rocks," but can be used for a group of nunataks, especially scattered ones. This matches perfectly with the Russian word "skaly." So, one has to suspect strongly that these are the Henriksen Nunataks.

Henriksenskjera *see* **Henriksen Nunataks**

[1]**The *Henry***. Three-masted American sealing schooner of 150 tons, built in Saybrook, Conn., in 1817. 83 feet long, she was registered on June 24, 1817, and, owned by New York sealing magnate James Byers, she went down to the South Shetlands in 1820–21, with a crew of 26 officers and men under the command of Capt. Ben Brunow, as part of the New York Sealing Expedition. George Noble was one of the officers on board. The following season she was part of the 2nd phase of the expedition, and in 1822, back in New York, was taken over by Capt. Robert Johnson (who had led the New York Sealing Expedition). After being overhauled by Messrs Blossom, Smith, and Damon, she returned to the South Shetlands for the 1822–23 season, leaving with the *Wasp*. 2nd mate on this trip was George Noble. At the beginning of Sept. 1822, on the way down to Antarctica, Capt. Johnson took her out on a 6-week trip from the Falklands to try to find the Aurora Islands. She returned to the Falklands on Oct. 23, 1822, and this was the first time she had seen the *Wasp* since leaving New York at the end of June. On Nov. 2, 1822, while the *Wasp* went on her own search for the Aurora Islands, the *Henry* left westward, looking for new lands.

[2]**The *Henry***. A 43-ton British sloop, built in Plymouth in 1818, and owned by (and named for) Capt. Henry Rowe. She left her home port in 1821, bound for the South Shetlands and the 1821–22 sealing season, commanded by Capt. Kellick. Not to be confused with her American namesake, also in South Shetland waters the same season.

[1]**Mount Henry**. 67°43' S, 50°17' E. Rising to 1500 m, about 1.5 km E of Simpson Peak, in the Scott Mountains of Enderby Land. In 1831 John Biscoe named a feature in this area for Henry Enderby, his employer, but later geographers could not find this feature, and therefore named this mountain thus, in order to preserve Biscoe's naming. This one was plotted by Australian cartographers from 1956 ANARE air photos, and named by ANCA on Nov. 24, 1961. US-ACAN accepted the name in 1965.

[2]**Mount Henry**. 83°52' S, 172°04' E. A sharp peak, rising to 1676 m in the Commonwealth Range, 6 km SE of Mount Kyffin, on the E side of the Beardmore Glacier, between Mount Cyril and Mount Harcourt. Discovered in Dec. 1908, during BAE 1907–09, and named by Shackleton. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Henry, Wilkes. Nephew of Charles Wilkes (leader of USEE 1838–42). As a teenager, Wilkes Henry joined his uncle's famous expedition at Callao, as a midshipman on the *Vincennes*. He and George Harrison (q.v.) got into a quarrel in Rio, and both demanded a duel. However, Rio proved impossible as the venue, and so they settled it when they got to Valparaíso. Henry's second was James Blair. They took two shots at each other, but no one was hurt. However, Capt. Wilkes had no alternative but to dismiss the principals and their seconds. Wilkes agonized over the decision to fire his own nephew, but a petition signed by the other officers to keep the two miscreants relieved Wilkes of the responsibility, and they all stayed on. Wilkes Henry transferred to the *Peacock*, and was killed at Malolo on July 24, 1840.

Henry Automatic Weather Station. 89°00' S, 1°00' W. An American AWS, installed in Jan. 1993 on the Polar Plateau, at an elevation of 2755 m, and named for a Twin Otter pilot who flew it in.

Henry Bay. 66°52' S, 120°45' E. A small bay, about 7 km wide, indenting the E end of the Sabrina Coast for 6 km. The Henry Islands are in the W part of this bay. Delineated from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1955, for Wilkes Henry. ANCA accepted the name on July 22, 1959. First visited in Feb. 1960 by an ANARE party led by Phil Law off the *Magga Dan*.

Henry Bluff. 62°41' S, 60°25' W. Rising to about 120 m, on the W side of Hurd Peninsula, 2.5 km SW of Johnsons Dock, on Livingston Island, in the South Shetlands. On Ian Dalziel's 1972 map it appears as Solemark Point, but, as Dr. Dalziel will tell you, with sardonic humor, the many features he named did not appeal at all to UK-APC. Named by that august body on May 13, 1991, for Ben Brunow's sealing schooner *Henry*. US-ACAN accepted that name. The UK plotted this feature, in late 2008. An amusing anecdote, but a danger warning, concerning this feature: The US-ACAN descriptor accidentally omitted the vital part of a sentence, and it reads thus, "Named after the schooner *York*, which visited the South Shetland Islands in 1820–21." What it should have said was "Named after the schooner *Henry* [Capt. Benjamin Brunow (Brunow Bay, q.v.], one of James Byers' fleet of sealing ships from New York, which visited the South Shetland Islands in 1820–21." As a result of this booboo, all the web pages which take direct from the U.S. gazetteer have copied the same error, and this will presumably lead the unwary Antarctic researcher in a futile search for the schooner *York*.

Henry Ice Rise. 80°35' S, 62°00' W. A triangular-shaped ice rise, about 110 km long, and rising to an elevation of about 250 m above sea level, between Korff Ice Rise and the S part of Berkner Island, on the Ronne Ice Shelf. First visited by a geophysical traverse party from Ellsworth Station, in 1957–58, and roughly indicated by them as a peninsula, although they did not exclude the possibility of its being an island. So, they somewhat cautiously named it Malville Peninsula, for Kim Malville (*see* **Mount Malville**). It appears as such on 1958 and 1959 maps. The nature and extent of the present feature were later determined by USARP flights over the area (it is shown on an American Geographical Society map of 1970) and also from U.S. Landsat images taken in 1973–74. Re-named by US-ACAN in 1977, as Henry Ice Rise, for Capt. Clifford D. Henry, USN, part of Military Sealift Command. He was no fewer than 14 times in Antarctica, as support to USARP. He skippered the *Wyandot* in 1965–66, 1967–68, 1968–69, 1969–70, 1970–71, and 1971–72. He died on his ship, the *Private John R. Towle*, on Feb. 16, 1975, while returning from Antarctica. UK-APC accepted the name on Feb. 7, 1978, and it appears in the 1980 British gazetteer. ArgAE 1977–78 named it Isla Quejada, after Vice Admiral Hermes Quijada of the Argentine Navy, assassinated in 1973.

Henry Inlet. 71°54' S, 100°20' W. A narrow, ice-filled inlet, indenting the N coast of Thurston Island for 20 km (the original estimate was 30 km), immediately E of Hughes Peninsula. First plotted from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1960, for Robert Henry, photographer's mate on the USN Bellingshausen Sea Expedition, 1959–60, who, in Feb. 1960, recorded features along the Eights Coast from helicopters.

Henry Islands. 66°53' S, 120°38' E. A group of 4 small islands in the W part of Henry Bay. Delineated from air photos taken during OpHJ 1946–47, and named by ANCA on July 22, 1959, in association with Henry Bay. Visited in Feb. 1960, by an ANARE party led by Phil Law off the *Magga Dan*. US-ACAN accepted the name in 1963.

Mount Henry Lucy. 85°11' S, 170°26' E. Also called Mount Lucy. A prominent peak, rising to 3020 m (the New Zealanders say "probably about 3300 m," but, as their directions for this peak are not to be trusted, neither is this estimate), 4 km SSE of Mount White, between Keltie Glacier and Mill Glacier, at the S end of the Supporters Range, on the E side of the Beardmore Glacier. Discovered by BAE 1907–09, and named by them for William Henry Lucy (1842–1924; known as Henry Lucy; knighted in 1909), the great political journalist, who had been a great help to the expedition. Sir Henry came up the hard way, and left a small fortune. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Henry Mesa. 79°05' S, 159°04' E. A distinctive, wedge-shaped mesa, about 3.5 km across, about 6.5 km S of Mulock Glacier, on the W side of Heap Glacier. The ice-covered summit

rises to 1430 m above sea level, and is flat except for a cirque which indents the N side. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Capt. B.R. Henry, of the U.S. Coast Guard, commander of the *Eastwind* from June 1, 1962 to Aug. 10, 1965, dates which took in OpDF 63 (i.e., 1962-63) OpDF 64 (i.e., 1963-64, and OpDF 65 (i.e., 1964-65). During the last season he was also commander of the U.S. ship group of OpDF 65.

Henry Moraine. 71°57' S, 9°38' E. A small moraine on the NW side of Mount Bjerke, in the S part of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Henrysanden, for Henry Bjerke, mechanic with NorAE 1957-59. US-ACAN accepted the translated name Henry Moraine in 1970.

Henry Nunataks. 75°08' S, 72°36' W. A group of nunataks, 10 km W of the Merrick Mountains, in eastern Ellsworth Land. Named for Kenneth Carroll "Big John" Henry (b. Jan. 15, 1938, Baltimore), engineman who wintered-over at Eights Station in 1963. He was flown back to McMurdo, and from there left in Oct.-Nov. 1963, bound for Christchurch, marrying a New Zealand girl along the way. He was supposed to winter-over at Plateau Station in 1967, but, after 30 days acclimatization at Pole Station en route (the acclimatization taking place mostly at Pole Station's bar), John Henry wasn't in the mood to spend another winter at an outlying station, and he revolted, being sent back in disgrace to McMurdo, where he did spend that winter. After retiring from the Navy, he became fire chief in Florida, and wrote a couple of books.

The *Henry Wellesley*. A 301-ton London sealer ("a very handsome vessel"), built in 1807 at the yard of Messrs Bacon, Harvey, & Co. She was in at the South Shetlands in 1820-21, commanded by Capt. Brigdon. After this she joined the London to Calcutta to Sydney trading route. Her subsequent skippers included Thomas Wilson, Capt. Church, and Capt. Johnson, but she never went back to Antarctic waters. On May 25, 1841, she ran aground off Calais, during a fog, while commanded by Capt. Castle.

Henryk Arctowski Station *see* **Arctowski Station**

Henryk Cove. 64°51' S, 62°24' W. In the inner part of Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for Henryk Arctowski.

Henryk Glacier. 64°42' S, 62°30' W. A tidewater glacier with a noteworthy cirque at its head, on Arctowski Peninsula, flowing SE (the British say SW) between Wild Spur and Hübl Peak, into Errera Channel, at Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for Henryk Arctowski. UK-APC accepted the name on Dec. 16, 2003, and US-ACAN followed suit in 2004.

Henryk Peak. 64°40' S, 62°27' W. A prominent peak on the main ridge of Arctowski Peninsula, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for Henryk Arctowski.

Henrysanden *see* **Henry Moraine**

Mount Henson. 84°50' S, 168°21' W. Also spelled (erroneously) as Mount Hansen. An ice-free summit (the New Zealanders describe it as a short ridge), rising to 905 m (the New Zealanders say 762 m), at the NE extremity of Mayer Crags, it forms the NW portal to Liv Glacier, where that glacier enters the Ross Ice Shelf, at the edge of the foothills of the Prince Olav Mountains. Discovered and photographed aerially in Nov. 1929 during ByrdAE 1928-30, and named for Matthew Alexander Henson (1866-1955), a member of Peary's party to the North Pole in 1909. In 1912 he wrote the book, *A Negro Explorer at the North Pole*, in which he claimed (as he did, and had done, elsewhere) that he was actually the first man at the North Pole. In 1947 he and Bradley Robinson wrote another "autobiography," *Dark Companion*. Henson's Eskimo descendants still live in Greenland. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Henson Glacier. 64°06' S, 60°11' W. Flows NW from the Detroit Plateau into Wright Ice Piedmont, 3 km SW of Hargrave Hill, on the Davis Coast, on the W coast of Palmer Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base E that same season. Named by UK-APC on Sept. 23, 1960, for William Samuel Henson (1805-1888), British aeronautical pioneer. US-ACAN accepted the name later in 1960.

Hentschel, Ernst. b. Germany. Biologist and senior scientist on the *Meteor*, during the German Atlantic Expedition, 1925-27.

Hepinstall, Patricia A. "Pat." b. Dec. 26, 1931, Kansas City, but grew up in Houston, daughter of New Yorker silverware salesman Lynn David Hepinstall and his wife Mary Ann Dickey. A brunette model in San Francisco, she joined Pan-Am as a stewardess, and was picked for obvious reasons, with Ruth Kelly (q.v. for details) to be one of the two stewardesses to fly to McMurdo in 1957. She never married, and died on Sept. 2, 1998, in Houston.

The *Heraclitus*. American yacht, skippered by Klaus Elberle, which visited the South Shetlands and the Antarctic Peninsula in 1988-89.

The *Herald*. Stonington sealer in the South Shetlands in 1843-45, under the command of Capt. Ebenezer Morgan. She sailed in company with the *Richard Henry*.

Herald Reef. 65°11' S, 64°11' W. A reef, 1.5 km SW of Petermann Island, on the N side of French Passage, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted by FrAE 1908-10. Photographed in March 1958 from the *Protector*'s helicopter, and so named by them because it heralds the approach to French Passage from the east. UK-APC accepted the name on July 7, 1959, and it appears on a British chart of 1960. US-ACAN accepted the name in 1971. It was re-surveyed by ChilAE 1960-61, and named by that expedition as Arrecife Baeza (i.e., "Baeza reef"), for Jorge Baeza Concha, 2nd-in-command of the *Piloto Pardo* on that expedition. It appears as such on their 1961 chart, and was the name accepted by the 1974 Chilean gazetteer.

Herbert, Walter William "Wally." b. Oct. 24, 1934, York, son of Army man Walter W.J. Herbert and his wife Helen Manton. In 1952 he signed on for the Royal Engineers for 3 years, became a surveyor, and in 1955 joined FIDS. In 1956 and 1957 he wintered-over as surveyor at Base D, and arrived back in London from Montreal, on the *Carinthia*, on Aug. 22, 1958. In 1960 he was in Greenland getting dogs for NZGSAE 1961-62, and was leader of the Southern Party of that Antarctic expedition, which went down the Axel Heiberg Glacier, confirming the difficulty of the route pioneered by Amundsen in 1911-12, and mapping extensively in the Queen Maud Mountains. He wrote *The Noose of Laurels*, in which he set out to prove that one of his heroes, Peary, had, indeed, reached the North Pole. He concluded, reluctantly, that Peary had failed. Ironically, his results were attacked by the National Geographic Society, who had sponsored the project. He wrote several other books. In 1966-67 he was in the Arctic with Roger Tufft and Allan Gill, and in 1968, with Ken Hedges, Fritz Koerner, and Allan Gill (the Trans-Arctic Expedition) he crossed the Arctic by its longest route. This was the first surface crossing of the Arctic Ocean. On April 6, 1969 they reached the North Pole by dog sledge. On his return to London, he married Marie R. McGaughey, and, from 1971 to 1973, the two of them lived in Greenland, and in 1978 Mr. Herbert tried unsuccessfully to sledge around Greenland. He was knighted in 2000. He died in Inverness, Scotland, on June 12, 2007. The *Daily Telegraph* described him as "the foremost polar explorer of his generation."

Herbert Mountains. 80°21' S, 25°30' W. A conspicuous group of rock summits, S of Slessor Glacier and Mount Sheffield, and bounded to the E by Bernardi Heights, to the S by the Shotton Snowfield, and to the W by Gordon Glacier, in the Shackleton Range. They include, from N to S, Charpentier Pyramid, Maclaren Monolith, Venetz Peak, and Mount Absalom. Partially surveyed, and first mapped, in Oct. 1957, by BCTAE 1957-58, and named by them for lawyer and mountain climber Sir Edwin Savory Herbert (1899-1973), chairman of the finance committee and member of the committee of management of the expedition. He was president of the Alpine Club, 1953-55, and in 1964 was raised to the peerage as Baron Tangley. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. The group was photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971.

Herbert Plateau. 64°32' S, 61°15' W. A portion of the central plateau of Graham Land, rising to about 1950 m, and running NE-SW between The Catwalk and The Waist, S of Hughes Bay and E of Charlotte Bay, between Blériot Glacier and Drygalski Glacier, on the Danco Coast. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base E in 1957. Named by UK-APC on Sept. 23, 1960, for Wally Herbert (q.v.), who, with Lee Rice and others, made the first survey sledge journey from Hope Bay to Reclus Peninsula via the Detroit Plateau, this plateau, and the Foster Plateau. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. USN photographed it aerially in 1968-69.

Herbert Range. 85°22' S, 165°30' W. A range of mountains forming the W wall of the Axel Heiberg Glacier, and lying between that glacier and Strom Glacier, in the Queen Maud Mountains, and extending from the edge of the Polar Plateau to the Ross Ice Shelf. The range includes Mount Fridtjof Nansen, Mount Balchen, and Mount Betty. Surveyed by the Southern Party of NZGSAE 1961-62, and named by NZ-APC for Wally Herbert (q.v.), leader of that party. US-ACAN accepted the name in 1966.

Herbert Sound. 63°55' S, 57°40' W. A sound, with its NE entrance lying between Cape Lachman and Keltie Head, and its SE entrance lying between The Naze and False Island Point, it separates Vega Island from James Ross Island, and connects Prince Gustav Channel with Erebus and Terror Gulf, to the SE of Trinity Peninsula. In general, it remains blocked by ice, even in the summer. On Jan. 6, 1843, Ross discovered a broad embayment to the SE of the sound, which he charted as a bay, and named Sidney Herbert Bay, for Sidney Herbert (1810-1861), 1st Baron Herbert of Lea, first secretary of the Admiralty, 1841-45. It appears as such on Ross's chart of 1844, and on his map of 1847. In Vincendon-Dumoulin's atlas of 1947, it appears as Baie Sidney Herbert, and on a Spanish chart of 1861 as Bahía Sidney Herbert. The actual sound, as we know it today, was (re-)discovered and charted in Oct. 1903, by SwedAE 1901-04, and they decided that the two stretches of water (i.e., the sound and the bay) should be re-defined as one feature, which Nordenskjöold named Sidney Herbert Sound. All the interested nations translated this in their own way, some with spelling mistakes (but, those are instantly recognizable). On Gourdon's map of 1908, for example, it appears as Chenal Sidney-Herbert, and on Charcot's 1912 map as Détroit Sidney Herbert. On a 1943 U.S. Hydrographic Office chart it appears as Sydney Herbert Sound, and on one of their 1947 charts as Herbert Sound. It appears as Sidney Herbert Sound on British charts of 1921 and 1954, the feature was re-surveyed by Fids from Base D in 1945, and the name Sidney Herbert Sound was accepted by US-ACAN and by UK-APC. It appears as such in the 1955 British gazetteer, and in the 1956 American gazetteer. Since then, however, it has been re-defined again. The embayment discovered by Ross is now considered to form the W margin of Erebus and Terror Gulf, and the name Herbert Sound has been restricted to the area W of the narrows between The Naze and False Island Point. UK-APC accepted the name Herbert Sound on Sept. 23, 1960, and it appears as such on a British chart of 1962. US-ACAN accepted that name in 1963. The Argentines were calling it Seno Sidney Herbert as early as 1908, but on a 1949 Argentine chart it appears as Estrecho Sidney Herbert. However, ArgAE 1952-53 renamed it Estrecho Azopardo, named for Coronel de marina Juan Bautista Azopardo (1772-1848), who fought for Argentina in the war against Brazil in 1824, and it appears that way on their 1953 chart. It was also the name accepted by the 1970 Argentine gazetteer. It appears on a 1947 Chilean chart as Paso Herbert Sidney, but on a 1951 Chilean chart (corrected) as Paso Sidney Herbert. On a 1961 Chilean chart it appears as Canal Sidney Herbert, and that was the name accepted by the 1974 Chilean gazetteer. The feature was further surveyed by Fids from Base D in 1960-61.

Herbertson Glacier. 77°42' S, 163°48' E. A small, steep, alpine glacier draining the area around the cliff that forms the S margin of New Harbor, about 8 km WSW of Butter Point, and flowing into the S side of the Ferrar Glacier just near its mouth, in Victoria Land. Discovered by BAE 1910-13, and named by them for Scottish geographer Andrew John "A.J." Herbertson (1865-1915), of Oxford University. He and his wife also sold best-selling geography books. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Herbie Alley. Basically a nickname for the space between Black Island and White Island, on Ross Island. You can see Minna Saddle from there. If you can't, better be ready for a herbie (*see* **Herbies**).

Herbie Alley Automatic Weather Station. An American AWS, installed in Jan. 1999, at Herbie Alley, at an elevation of 30 m. It was removed in Jan. 2005.

Herbies. A weather condition created when fierce winds blow snow or ice crystals through the atmosphere, obscuring vision to less than 100 feet.

Herbst Glacier. 75°40' S, 132°07' W. The eastern glacier of the two which flow from the N slopes of Mount Kosciusko into Brown Valley, in the Ames Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Emmett Lee Herbst (b. July 30, 1925, Farmington, Mo. d. Feb. 7, 1998, Las Vegas, Nev.), of Holmes & Narver, Inc., who was part of the drilling program at Byrd Station in 1968-69. Between 1971 and 1976 he was several times in Antarctica, mostly at McMurdo.

The *Hercules*. London sealer in the South Shetlands for the 1820-21 season, under the command of Capt. Drummond.

[1]**The *Hércules***. Argentine privateer commanded by Miguel Brown, which, in 1815, found herself blown off course to 65°S (*see* **Brown, Guillermo**).

[2]**The *Hércules***. Argentine ship, under the command of Ángel Fernández Gamio, in a patrol expedition in Dec. 1950, during the 1950-51 season, to the Melchior Islands, led by Gaston C. Clemente, and in company with the *Trinidad*. Their mission was to study sea ice conditions in the Drake Passage, and to conduct oceanography. In 1952 she was in the waters of the South Sandwich Islands, under the command of Capt. Carlos A. Viñuales.

Mount Hercules. 77°29' S, 161°27' E. A large, flat-topped, elevated feature, rising to 2200 m, between Mount Aeolus and Mount Jason, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59, for the Greco-Roman mythological hero. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Hercules, Santo *see* **USEE 1838-1842**

Hercules Dome. 86°00' S, 105°00' W. A large ice dome between the Thiel Mountains and the Horlick Mountains. First mapped by USGS from USN air photos taken in 1959-60. Further delineated by the SPRI-NSF-TUD aerial echo-sounding program of 1967-79. Named for the famous Hercules aircraft (the Lockheed LC-130), which was used on all echo-sounding flights from 1969. US-ACAN accepted the name.

Hercules Inlet. 80°04' S, 79°00' W. A long, narrow, ice-filled inlet, forming part of the SW margin of the Ronne Ice Shelf. It is bounded on the W by the SE flank of the Heritage Range, and on the N by Skytrain Ice Rise. Photographed aerially by USN in 1961, 1962, and 1964, and mapped by USGS in 1966, from these efforts. Named by US-ACAN in 1966, for the American LC-130 Hercules aircraft. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1977 British gazetteer. It appears on the 1976 USGS satellite image map. Originally plotted in 80°05' S, 78°30' W, it has since been replotted.

Hercules Névé. 73°04' S, 165°15' E. At the N margin of the Mountaineer Range, in Victoria Land, it is bounded by Astronaut Glacier, Deception Plateau, the Retreat Hills, and such tributaries to the Mariner Glacier as Meander Glacier and Gair Glacier. Named by the Northern Party of NZGSAE 1966-67, for the American C-130 Hercules aircraft. NZ-APC accepted the name, and US-ACAN followed suit in 1968. There were two reasons for the naming. One was the New Zealand lads' appreciation for the American support in flying their parties in and out of the field, and the other was as an indication to future field parties of a possible Herc landing place.

Herculessletta. 73°33' S, 13°40' W. The plain where the first Camp Norway was established, S of the glacier the Norwegians call Plogbreen, in the Kraul Mountains of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the Hercules aircraft (LC-130), the American aircraft in use during NorAE 1968-69.

Cabo Herdman *see* **Cape Herdman**

Cape Herdman. 72°36' S, 60°39' W. A low,

broad, ice-covered cape, 20 km ENE of Mount Reynolds, it forms the S side of the entrance to Violante Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially in 1940, during USAS 1939-41. In Nov. 1947, it was re-photographed aerially by RARE 1947-48, and in Dec. 1947 was surveyed from the ground by a joint sledging team of RARE personnel and Fids from Base E. Named by those Fids for Henry Herdman. However, on Ronne's 1948 map, it appears in error as Cape Reynolds (*see* **Mount Reynolds**). UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a 1954 British chart, and also in the 1955 British gazetteer and on the 1979 USGS sketch map of the N part of Palmer Land. It appears on an Argentine chart of 1957 as Cabo Herdman, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Rocas Herdman *see* **Herdman Rocks**

Herdman, Henry Franceys Porter. b. March 11, 1901. Northern Irish hydrologist and oceanographer who, while at Belfast University, joined the hydrological staff of the Discovery Committee in 1924, as a chemist. He went south on the *Discovery*, 1925-27, and on *Discovery II* on the 1929-31 and 1933-35 cruises; he was scientific leader on the 1937-39 cruise (at least, from Jan. 1938 until May 1939). During World War II he was involved in anti-submarine work, and after the war took part in the re-fitting of the *Discovery II* and the *William Scoresby*. He was scientific leader on the last Antarctic expedition of the *Discovery II*, 1950-51. For many years thereafter he was one of Britain's leading oceanographers, and died on Sept. 3, 1967, in Petersfield, Hants.

Herdman Rocks. 60°41' S, 44°20' W. Two rocks, 15 m high, 2.5 km SE of Hart Rock, and 5 km NE of Cape Dundas (the E end of Laurie Island), in the South Orkneys. Possibly seen by Weddell on Jan. 22, 1823. First charted in 1838 by FrAE 1837-40. Re-charted by the personnel on the *Discovery II* in 1933, and named by them for Henry Herdman. The feature appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1945 Argentine chart as Rocas Herdman, and that name was accepted by the 1970 Argentine gazetteer.

Hergest, Richard. b. 1753, Whitechapel, London, son of linen draper Jeremiah Hergest and his wife Margaret. He went to sea as an ordinary seaman on the *Augusta* in 1770, and after working his way up through midshipman (sic) to able seaman, he transferred from the *Marlborough* to the *Adventure* on Dec. 16, 1771, for Cook's 2nd voyage, 1772-75. On Jan. 2, 1773 he became a midshipman again. He kept a diary. He sailed again with Cook, as an able seaman and midshipman on the *Resolution*, for the 3rd voyage, 1776-80. In revenge for the death of Cook, he attempted to shoot the priest, Koa, but his pistol misfired. In Dec. 1780 he became a lieutenant, and in 1790 was given command of the *Daedalus*, sailing around the Horn into the Pacific. Ironically, he was killed on the Hawaiian island of Oahu on May 12, 1791. However, there is no record of his having been eaten.

Heritage Expeditions. Tourist outfit out of Christchurch, NZ, founded in 1985 by Wildlife Service biologist Rodney Russ, and still family-owned. It operates two vessels, the *Akademik Shokalskiy* and the *Spirit of Enderby*.

Heritage Range. 79°45' S, 83°00' W. Also called the Wexler Mountains. A major mountain range, about 160 km long and 50 km wide, southward of Minnesota Glacier, it forms the S half of the Ellsworth Mountains. The range is complex, consisting of scattered ridges and peaks of moderate height, escarpments, hills, and nunataks, the various units of relief being set off by numerous intervening glaciers. The N portion of the range was probably sighted by Ellsworth, as he flew over this general area on Nov. 23, 1935. In Dec. 1959, Ed Thiel, Cam Craddock, and Robbie Robinson conducted an aerial reconnaissance of the area, landing on a glacier in the N part of the range. Named by US-ACAN in 1961, in a continuation of the theme of feature-names in this area — American heritage. The University of Minnesota expeditions made geological and cartographic surveys of the range in 1962-63 and 1963-64. The entire range was mapped by USGS from all these surveys, and also from USN air photos taken over the same time period.

The *Herkules*. Norwegian whale catcher belonging to Tønsbergs Hvalfangeri, she (and another whale catcher, the *Husvik*), worked in the South Shetlands, in 1920-21, for the whaling factory ship *Teie*. In Jan. 1921, they were all in the South Orkneys.

Cape Herlacher. 73°51' S, 113°56' W. A bold, ice-covered cape forming the N end of Martin Peninsula, in Marie Byrd Land. Delineated from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1955, for Carl John Herlacher (1895-1975), the principal Antarctic cartographer with the USN Hydrographic Office from 1937 onwards.

Mount Hermanson. 84°23' S, 173°32' E. An ice-covered mountain rising to 3140 m at the head of Cunningham Glacier, 6 km SW of Gray Peak, in the Queen Maud Mountains. Named by US-ACAN in 1966, for J.M. Hermanson.

Hermanson, Joseph Marcus "J.M." b. May 1, 1913. He joined the U.S. Navy on July 15, 1937, served in World War II and Korea, and was a captain when he became air operations officer at McMurdo, 1957-58. In 1959 he was chief of staff to the U.S. Antarctic Projects Officer. He died on Feb. 7, 2004.

The *Hermaphrodite*. Tender to the *Esther* during the Boston Expedition of 1820-21, in the South Shetlands.

Isla Hermelo *see* **Delta Island**

Hermelo, Ricardo. Leader of ArgAE 1947-48 until March 1948. He was skipper of the *Irigoyen*, as part of ArgAE 1973-74.

Hermelo, Ricardo J. *see* [1]**Delta Island**

Hermes Glacier. 68°59' S, 65°15' W. A glacier, 13 km long, flowing W into Weyerhaeuser Glacier, on the Antarctic Peninsula. Discovered and surveyed by Fids from Base E in Jan. 1960. After several fruitless attempts to find a route out of the mountains E of Earnshaw Glacier, the Fids found that this glacier provided an ideal NE "road" back to known country, and named it for Hermes, the Greek god of the roads. This began the British practice of naming features in the area for Greek mythological figures. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Hermes Point. 73°35' S, 166°13' E. The seaward end of a ridge from the Mountaineer Range, at the confluence of Icebreaker Glacier and Fitzgerald Glacier, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Agustive Aloysius Hermes, Jr., USN, aviation structural mechanic at Williams Field, 1967 and 1968.

Hermit Island. 64°48' S, 64°02' W. An island, 1.3 km long, 2.5 km SE of Bonaparte Point, off the SW coast of Anvers Island, in the Palmer Archipelago. Named by UK-APC on July 7, 1959, for the FIDS surveyor (either Denis Kershaw or Pete Wylie) who spent time alone on this island in Jan. 1957, making observations. US-ACAN accepted the name in 1960.

Hermitage Peak. 81°26' S, 160°29' E. Rising to 750 m, 6 km N of Mount Ubique, near the mouth of Starshot Glacier, in the Surveyors Range. Named by NZGSAE 1960-61 for the Hermitage, the military school of surveying, in England. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Punta Hermosilla. 61°27' S, 58°42' W. A bare rock point, between Punta del Canto and Punta Troncoso, in the extreme NW of Discovery Bay, on the NE coast of Greenwich Island, in the South Shetlands. Named by ChilAE 1947, for senior enlisted man Francisco Hermosilla H., Navy photographer.

Caleta Hernán *see* [2]**Caleta Valenzuela**

Glaciar Hernández *see* **Johnston Glacier**

Hernandez, Antonio *see* **USEE 1838-42**

Hernandez Valley. 77°23' S, 161°05' E. An ice-free valley opening N to Barwick Valley, opposite Lake Vashka, it is the easternmost of 4 aligned hanging valleys in the Apocalypse Peaks of Victoria Land. Named by US-ACAN in 2005, for Gonzalo J. Hernandez, of the department of earth and space sciences at the University of Washington, at Seattle, a USAP high latitude atmospheric researcher at Pole Station and McMurdo, for 15 seasons between 1991 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

[1]**The *Hero***. A 44-ton sealing sloop built at Groton, Conn., in 1800. 47 feet 3 inches long, she was registered on July 5, 1820, and was, at that time, part-owned by her skipper, Nat Palmer, who left from Stonington, Conn., as part of the Fanning-Pendleton Sealing Expedition of 1820-21. There was a crew of 5 that year —

Palmer, Phineas Wilcox (1st mate), Richard Fanning Loper (2nd mate), Stanton L. Burdick and Peter Harvey (able seamen). She left the South Shetlands on Feb. 25, 1821, and arrived back in Stonington on May 8, 1821. She was back in the South Shetlands the following season, as part of the Fanning-Pendleton Sealing Expedition of 1821-22, this time under the command of Harris Pendleton. Phineas Wilcox was again 1st mate. The ship was sold at Coquimbo, Chile, on Oct. 11, 1822.

[2]**The *Hero***. Small (125 feet long), wooden-hulled, American motor research vessel belonging to the National Science Foundation (NSF). She served Palmer Station between 1968 and 1984, before being retired due to dry rot in the timbers. 300 tons, she was named for Nat Palmer's old sloop, and was framed with large oak timbers. Ketch-rigged, she had 2 decks and a superstructure. The mast was made of Oregon fir. She had 2 engines, and carried a crew of 12, as well as 8 scientists, and first pulled into her assigned home port of Palmer Station on Dec. 25, 1968, under the command of Capt. Sidney G. Hartshorne. This floating lab operated in Antarctic waters between November and April every year, and wintered-over in South America. Skippers were: Robert Carrow (1969-70, 1970-71, 1971-72), Frank Liberty (1972-73), and, the best-remembered of all, Pieter J. Lenie, who became skipper in 1973, and captained her every year from then on, until 1984. On April 15, 1984 the *Hero* left Arthur Harbor for the last time, and was retired in October of that year, in favor of the *Polar Duke*.

Bahía Hero *see* **Hero Bay**

Hero Bay. 62°31' S, 60°28' W. A bay, 27 km wide, indenting the N side of Livingston Island for 10 km between Cape Shirreff and Williams Point, in the South Shetlands. In the 1920s this bay was named Blythe Bay, but that name had already been given in 1822 to another, smaller bay on the SE side of Desolation Island. Notwithstanding, it appears as Blythe Bay on the Discovery Investigations chart of 1934, and on a 1946 Argentine chart as Bahía Blythe. Blythe Bay was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and appears in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57. In 1958, US-ACAN cleared up the confusion by re-applying the name Blythe Bay to its original position, and naming this one as Hero Bay, for the *Hero*, Palmer's vessel of the 1820s. UK-APC accepted this on July 7, 1959, and it appears as such on a British chart of 1962. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted Bahía Blythe. However, today the Argentines call it Bahía Hero. The UK re-plotted this bay in late 2008.

Hero Fracture Zone. 61°30' S, 66°00' W. An undersea feature in the Drake Passage. Named by international agreement in June 1987.

Hero Inlet. 64°46' S, 64°04' W. A narrow inlet at the S side of Palmer Station, SE of Gamage Point, between that point and Bonaparte Point, along the SW side of Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N between 1956 and 1958. Personnel from Palmer Station worked on the N side of this inlet from 1965. Named by US-ACAN in 1970, for the *Hero*, the research vessel of the 1960s and 1970s, which used to use this inlet as a turning basin when docking at Palmer season after season. UK-APC accepted the name on Dec. 20, 1974, and it appears in the 1976 British gazetteer.

The Heroic Era. A term of convenience, nothing more, implying the first two decades of the 20th century as applied to Antarctic exploration. Author James Gordon Hayes reckons 1895 to be the first year of the Heroic Age of exploration, land traverses, and epic endurance, when great scientific and geographic inroads were made on the southern continent. These were the voyages of Scott and Amundsen, Shackleton and Mawson, Nordenskjöld, Borchgrevink, de Gerlache and von Drygalski, Filchner, Shirase, Bruce, and Bull, national heroes most of them, who boldly went where no man had gone before. Rather than the ship versus the elements, it was now man against the unknown and the inhospitable. It was the Edwardian era, when the gentleman was role model, and nobility and purity of spirit were applied to exploration and captured the attention of the civilized world. Author Charles Neider puts Shackleton's death, on Jan. 5, 1922, as the end of the Heroic Era, but that date is too dependant on one man. Aside from that, it's wrong. The Heroic Age was all over by 1916.

The *Heroína*. Argentine ship in Antarctic waters in 1948-49, with the *Sarandí* (q.v. for more details). Captain Raimundo Palau.

Caleta Heroína *see* **Caleta Barra**

Islote Heroína *see* **Heroina Island**

Heroína Island. 63°24' S, 54°36' W. A small island, marking the NE end of the Danger Islands, ESE of Joinville Island. Named by ArgAE 1948-49 as Islote Heroína, after the *Heroína*. It appears as such on an Argentine chart of 1977. ChilAE 1976-77 named it Islote Ercilla, for Alonso de Ercilla y Zúñiga (1533-1594), Spanish author of the 1569 poem *La Araucana*, in which Antarctica is mentioned. *See also* **Vega Island**. On June 11, 1980, UK-APC accepted the name Heroína Island, and US-ACAN followed suit in 1993.

Mount Herr. 85°45' S, 149°32' W. Rising to 1730 m, 8 km NE of Mount Gould, in the Tapley Mountains. Named by US-ACAN in 1967, for Lt. Arthur L. "Art" Herr, Jr. (d. 2011), VX-6 aircraft commander at McMurdo Station, 1962-63 and 1963-64.

Caleta Herradura *see* **Lystad Bay**

Isla Herradura *see* **Horseshoe Island**

Herrin Peak. 79°16' S, 85°45' W. A large, snow-covered peak, rising to 1755 m, 10 km S of Landmark Peak, on the E side of Gowan Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64, for John M. Herrin, helicopter crew chief with the 62nd Transportation Detachment, who helped the party that year. US-ACAN accepted the name in 1966.

Herring, Joseph. For years he had been working on Falmouth packets when, in Liverpool, he became mate on the *Williams* in 1819, when the South Shetlands were discovered. His account of the expedition was published in the July 1820 edition of the *Imperial Magazine*. After the expedition, he went to Buenos Aires and fitted out an expedition of his own, to take advantage of the 1819 discovery. This may well have been the *Espíritu Santo* (q.v.).

Herring Island. 66°24' S, 110°38' E. A rocky island, 3 km long, 1.5 km E of Cloyd Island, in the S part of the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW 1947-48. Named by US-ACAN in 1956, for Lt. Charles C. Herring, USN, photographic officer on OpW 1947-48.

Herring Nunataks. 83°12' S, 51°22' W. Two prominent nunataks, rising to about 1620 m, 5 km NW of Mount Lechner, in the W part of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Earl F. Herring, who wintered-over as VX-6 aviation storekeeper at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Herring Point. 62°37' S, 61°12' W. On the N coast of Rugged Island, 1.3 km NW of Vund Point, 1.6 km ESE of Ivan Vladislav Point, and 4.9 km ESE of Cape Sheffield, off the W coast of Byers Peninsula (which is on Livingston Island), it forms the E side of the entrance to Hersilia Cove, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Joseph Herring.

Colina Herrington *see* **Herrington Hill**

Herrington Hill. 66°15' S, 66°42' W. A hill, rising to about 200 m, about 8 km southward of Benedict Point, on the E side of Lavoisier Island, in the Biscoe Islands. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Lovic Pierce Herrington (1906-1991), U.S. physiologist specializing in the cold. It appears, misspelled as Harrington Hill, in the 1961 British gazetteer. US-ACAN accepted the correct name in 1965. The Argentines call it Colina Herrington (which means the same thing).

Herrmann, Ernst. b. Sept. 24, 1895. Geographer. He was in Spitzbergen between June and August 1938, and then went on GermAE 1938-39. He died in 1970.

Herrmann, John Lovejoy. b. Dec. 12, 1892, Galveston, Tex., son of German immigrant music teacher Fred Herrmann and his wife Pauline Elala Lovejoy, a Georgia girl. At 16, he went into electrical engineering, then moved to California, married Frances Keene, and became a Paramount News cameraman, which is what he was on ByrdAE 1933-35, wintering-over at Little America in 1934. He arrived back in Los Angeles from Auckland on the *Mariposa*, on

March 9, 1935. He died in Nov. 1983, in Kilgore, Tex.

Herrmann Gebirge *see* **Herrmann Mountains**

Herrmann Mountains. 72°33' S, 0°30' E. A group of rocky elevations between Reece Valley and Kvitsvodene Valley, in the Sverdrup Mountains of Queen Maud Land. They include Hamrane Heights and Roots Heights. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Herrmann Gebirge, for Ernst Herrmann. Surveyed from the ground by NBSAE 1949-52. US-ACAN accepted the name Herrmann Mountains in 1966. Today the Germans call them Herrmanngebirge.

Herrmann Nunatak. 76°15' S, 143°47' W. A nunatak, 6 km NE of the E end of the Phillips Mountains, in Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for John Herrmann.

Herrmannberge *see* **Herrmann Mountains**

Herron, Lewis *see* **USEE 1838-42**

Cape Herschel *see* **Cape Sterneck**

Mont Herschel *see* **Mount Pénaud**

Monte Herschel *see* **Mount Pénaud**

[1]**Mount Herschel** *see* **Mount Pénaud**

[2]**Mount Herschel**. 72°12' S, 169°31' E. A conspicuous peak, rising to 3335 m above Cape Roget, 2.7 km NE of Mount Peacock, it overlooks the terminus of Ironside Glacier from the S, in the Admiralty Mountains of Victoria Land. Discovered in 1841 by RossAE 1839-43, and named by Ross for astronomer Sir John Frederick William Herschel (1792-1971), son of Sir William Herschel. First climbed in 1967 by Dr. Michael Gill of Sir Edmund Hillary's party. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Herschel Heights. 71°53' S, 69°38' W. A complex of nunataks, rising to about 1020 m, SW of Enceladus Nunataks, near the head (i.e., to the W) of Saturn Glacier, in the SE part of Alexander Island. Mimas Peak, on the E, is the highest. The E part of this feature was photographed aerially by Ellsworth on Nov. 23, 1935, and was roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Surveyed by BAS personnel from Fossil Bluff between 1961 and 1972. Named by UK-APC on Dec. 20, 1974, for German-born English astronomer Sir Frederick William Herschel (1738-1822; known as William Herschel), the man who discovered not only the the moons Mimas and Enceladus, but also the planet Uranus. He also coined the term asteroid, and was the father of Sir John Herschel. US-ACAN accepted the name in 1975.

Hershey Ridge. 77°40' S, 147°10' W. A low, ice-covered ridge, trending in a NW-SE direction for about 50 km between McKinley Peak and the Haines Mountains, in the Ford Ranges of Marie Byrd Land. Discovered in 1934 during ByrdAE 1933-35, and named by Byrd as Garland Hershey Ridge, for Howard Garland Hershey (1905-2000; known as Garland Hershey), the noted American geologist. US-ACAN accepted the name in 1947, later shortening it.

The *Hersilia*. American sealing brig of 131 tons, 68 feet long, with a square stern, 22 feet 8 inches wide, with a depth of 10 feet 1 inch, she was built by Christopher Leeds of Stonington and Mystic, Conn., for William A. Fanning. **July 20, 1819**: The ship was registered. **About July 22, 1819**: She left Stonington on her maiden voyage, Capt. James P. Sheffield in command of a crew of 19. Elof Benson (1st mate); Nat Palmer (2nd mate); William A. Fanning (supercargo). **Early Oct. 1819**: After going by way of Cape Verde, they arrived at the Falklands, where Nat Palmer and a small group of sailors went looking for supplies, while Capt. Sheffield took the *Hersilia* searching (unsuccessfully) for the mythical Aurora Islands. Palmer and his gang met the *Espíritu Santo* as she came into harbor. Then the *Hersilia* returned to the Falklands, and they all made their way to the South Shetlands. **Jan. 23, 1820**: She arrived at Hersilia Bay, Rugged Island, in the South Shetlands, the first Yankee sealer in these parts. Here she met a "black brig from Buenos Aires." This was probably the *San Juan Nepomuceno*, but it might have been the *Espíritu Santo*, which was also in these waters at that time. In 15 days the *Hersilia* collected 8868 sealskins. **Feb. 27, 1820**: The *Hersilia* arrived at Buenos Aires. 5 days behind the *San Juan Nepomuceno*, she was the second ship to bring in seal skins from the new sealing grounds of the South Shetlands. **May 21, 1820**: They got back to Stonington, and sold their skins for $22,146.49. The commercial success of this venture revived the declining sealing industry, opening up a rush to the South Shetlands in the 1820-21 season. **July 28, 1820**: The ship was re-registered, due to partial change of ownership. **1820-21**: The *Hersilia* formed part of the Fanning-Pendleton Sealing Expedition. Still commanded by Capt. Sheffield, the 1st mate was Daniel W. Clark, and there were 15 other crew. **Aug. 7, 1820**: They left Stonington. **Oct. 31, 1820**: They arrived at the South Shetlands, the first ship in for the season. **Feb. 18, 1821**: Still at Port Williams, in the South Shetlands. That 2nd season in the South Shetlands the *Hersilia* pulled in over 18,000 good-quality skins, and then, still part of the Fanning-Pendleton Sealing Expedition, she sailed into the Pacific. **May 13, 1821**: She was seized by the Spanish off the coast of Chile, and turned into a warship, and not long afterwards was burned in the fire of Arauco. A new ship of the same name was built in 1822 in Stonington, and registered on Dec. 9, 1822, at New London, Capt. James P. Sheffield commanding, and Daniel W. Clark again as 1st mate.

Caleta Hersilia *see* **Hersilia Cove**

Hersilia Cove. 62°37' S, 61°13' W. Indents the N side of Rugged Island near its E end, off New Plymouth (on Livingston Island), in the South Shetlands. Discovered on Jan. 22, 1820, and named in Feb. 1820 by James P. Sheffield, captain of the *Hersilia*, which used this cove that season and also in the 1820-21 season. On a 1943 U.S. Hydrographic Office chart it is incorrectly shown as being on the S part of Rugged Island, and the Argentines perpetuated this error on one of their 1954 charts, when they named it Caleta Hersilia. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1958-59. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. The Argentines rectified their mistake, and it appears (in the right place) on one of their 1958 charts, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The UK were the latest to plot this feature, in late 2008.

The *Herta* *see* **The *Hertha***

The *Hertha*. Name also seen as the *Herta*. A 253-ton, 3-masted Norwegian sealing bark built for Chris Christensen in 1884 by Rødsverven (later Framnaes Mek.) of Sandefjord. In 1886 she was sold to A.J. Freberg, and in 1889 Oceana A/S (managed by Christensen) bought her. Under the command of Capt. Karl Julius Evensen she went to Antarctica in 1893-94 with the *Castor* and the *Jason*. Mostly in the South Shetlands that season, she did explore the W side of the Antarctic Peninsula as far south as Alexander Island. In 1914, just before World War I, she was sold to the Russians.

Nunatak Hertha *see* **Hertha Nunatak**

Hertha Nunatak. 65°09' S, 59°59' W. A nunatak rising to 225 m above the Larsen Ice Shelf, 1.5 km NW of Castor Nunatak, in the Seal Nunataks, off the Oscar II Coast, on the E coast of Graham Land. Discovered and roughly charted (as an island) on Dec. 11, 1893, by Carl Anton Larsen, and named by him as Hertha-Insel, for the *Hertha*. It appears as Île Hertha on the 1900 map prepared by BelgAE 1897-99, and as Hertha Island on a 1901 British chart. It was not until Oct. 8, 1902, during a sledge journey, when it surveyed by SwedAE 1901-04, that it was defined correctly. It appears on their charts variously as Hertha-Nunatak, Herthas Nunatak, and Nunatak Hertha. It appears on a British chart of 1921 as Hertha Nunatak, and that was the name accepted by UK-APC on Jan. 22, 1951, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. It appears on a 1947 Chilean chart as Roca Hertha, but the Chilean gazetteer of 1974 accepted the name Nunatak Hertha.

Herthainsel *see* **Hertha Nunatak**

Hervé. Seaman on the *Pourquoi Pas?*, during FrAE 1908-10.

Anse Hervé *see* **Hervé Cove**

Caleta Hervé *see* **Hervé Cove**

Glaciar Hervé *see* **Barcus Glacier**

Hervé Cove. 62°11' S, 58°32' W. A small cove, 3 km SW of Point Thomas, along the S side of Ezcurra Inlet, E of Monsimet Cove, Admiralty Bay, King George Island, in the South Shetlands. Charted in Dec. 1909, by FrAE 1908-10, and named by Charcot as Anse Hervé, for Hervé, one of his sailors. It appears as such on his 1912 map. It was surveyed by the Discovery Investigations in 1927, and appears on their 1929 chart as Hervé Cove. It appears as Herve Cove (i.e., without the accent) on a 1943 U.S. Hydrographic Office chart, and on a British chart of 1948. It appears on a 1947 Chilean chart as Caleta Hervé, and that name was accepted by

both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Hervé Cove in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It was photographed aerially by FIDASE in 1956. The UK re-plotted this feature, in late 2008.

Cabo Hervéou *see* **Hervéou Point**
Point Herveou *see* **Hervéou Point**
Pointe Hervéou *see* **Hervéou Point**
Punta Hervéou *see* **Hervéou Point**

Hervéou, F. Seaman on the *Français* during FrAE 1903-05.

Hervéou Point. 65°04' S, 64°04' W. Forms the W extremity of the rocky peninsula between Port Charcot and Salpêtrière Bay, it also forms the S shore of Roland Bay, on the W side of Booth Island, in the Wilhelm Archipelago. It also forms the NW entrance point of Salpêtrière Bay. First charted in 1904, by FrAE 1903-05, and named by Charcot as Pointe Hervéou, for F. Hervéou. It appears on a 1943 U.S. Hydrographic Office chart as Point Herveou (i.e., with no accent), and on a 1949 Argentine chart as Punta Hervéou. US-ACAN accepted the name Hervéou Point in 1952, and it appears as such in the 1956 U.S. gazetteer. UK-APC accepted that name on July 7, 1959. It appears on a 1962 Chilean chart as Cabo Hervéou, but both the Argentine gazetteer of 1970 and the 1974 Chilean gazetteer accepted the name Punta Hervéou.

Herzog Ernst Bucht *see* **Vahsel Bay**

Hesketh, Ross Vernon. b. April 5, 1929, Codnor, Derbyshire, son of grocery shop owners Albert William Hesketh and his wife Elsie Hubbard. He joined FIDS as a physicist in 1954, and was leader at Base F for the winter of 1955. He was due to stay on to be base leader there in 1956 as well, but left unexpectedly. He had different things planned for the winter of 1956 (summer in Durham)—marriage to Margaret E. Turner. Between 1956 and 1959 he was a research fellow at Glasgow University and then joined the Central Electricity Generating Board, working first at their nuclear establishment in Caithness, but then moving to their research labs at Berkeley, Glos. He was head of research at Radiation Damage, 1964-66, and of Solid State Physics, 1966-83. In 1981 he blew the whistle on CEGB, telling the world in a letter to the *Times* that Britain was supplying plutonium to the USA for warheads. In 1983 CEGB had the pressure put on them, and Hesketh was fired on June 8 of that year. In 1985 he moved to Nigeria to teach physics at a university there, and in 1989 moved to Oman. He retired in 1991, and came back to Britain. A Quaker, he built viols, married Elva, and died on April 3, 2004, in Stroud, Glos.

The *Hespérides*. Built at the Cartagena Shipyards in Spain, in 1989, and based out of that port, she was launched on March 12, 1990, and was ready for service by April 1991. 2790 tons, 82.5 meters long, she could do 15 knots, had 9 officers and 46 other crew, and could carry 30 scientists. She replaced the smaller, somewhat outdated *Las Palmas*, as the Spanish Navy's principal Antarctic supply vessel, and, from the 1991-92 season on (Capt. José Carlos Manzano), resupplied the Spanish scientific stations of Juan Carlos I and Gabriel de Castilla (after that refugio had been upgraded to a scientific station), as well as the Bulgarian station of St. Kliment Ohridski. Her skippers on various Antarctic tours were: Víctor Quiroga (1992-93 and 1993-94), José Luis Martínez García de las Heras (1994-95), Francisco Lara Arias (1995-96 and 1996-97), Luis Nuche Rivera (1997-98), and Carlos Cordón Scharfhausen (1998-99 and 1999-2000). From 2000-01 onwards, the *Hespérides* was joined by the modernized *Las Palmas*. The *Hespérides* was overhauled in 2003-04, and thus did not make it to Antarctica that season.

Halm Hesperides *see* **Hespérides Hill**
Punta Hespérides *see* **Hespérides Point**

Hespérides Hill. 62°39' S, 60°22' W. It is actually a 250-meter wide ridge, extending 420 m in a SSE-NNW direction, and narrowing toward the NNW, snow-free in the summer, surmounting the coast of South Bay, N of Johnsons Dock to the SW, and Bulgarian Beach to the NW, and being bounded to the SW by Sea Lion Glacier. It has two heights, 94 m and 63 m, the latter surmounting Hespérides Point. The summit is located 665 m SW of Sinemorets Hill and 510 m NW by N of Atlantic Club Ridge, and Hespérides Hill is linked to the N slopes of Atlantic Club Ridge by a saddle 52 m above sea level. Mapped in detail by the Spanish in 1991, and again by the Bulgarians in 1995-96. It had been called Hespérides Hill for some time before the Bulgarians named it officially on Oct. 29, 1996, as Halm Hesperides (no accent mark), in association with Hespérides Point. US-ACAN accepted the name Hespérides Hill in 1997.

Hespérides Point. 62°39' S, 60°22' W. Projects into South Bay, 1.4 km N of Johnsons Dock, Hurd Peninsula, on Livingston Island, in the South Shetlands. Named by the Spanish as Punta Hespérides, after their expedition ship the *Hespérides*. UK-APC accepted the name Hespérides Point on Dec. 7, 1994, and US-ACAN followed suit in 1995. Plotted by the UK in late 2008.

Hespérides Trough. 60°21' S, 50°50' W. An undersea feature in the area of the South Orkneys. Discovered from the Spanish ship *Hespérides*, during a swath bathymetric survey, and named for the vessel by oceanographers Miquel Canals (sic) and Eulalia Gracia Mont. The name was accepted by international agreement in Nov. 1995.

Hesperus Nunatak. 71°31' S, 69°21' W. A sharp-pointed nunatak rising to about 1035 m, 3 km SW of Titania Peak, on the SE side of Satellite Snowfield, about 28 km W of Venus Glacier, in the SE part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff Station between 1961 and 1973. Mapped by the (British) Directorate of Overseas Surveys, from NASA-USGS satellite imagery. Named by UK-APC on Dec. 20, 1974. Hesperus is an alternative name for the planet Venus, at least in that planet's appearance as the evening star. The ancient Greeks, until they became persuaded otherwise, thought that Hesperus and Phosphorus (the planet as seen as the morning star) were two separate planets. US-ACAN accepted the name in 1975.

Glaciar Hess *see* **Hess Glacier**

Hess, Otto *see* **Órcadas Station**, 1922, 1924

Hess Glacier. 67°13' S, 65°05' W. A minor glacier, flowing ENE for 8 km between steep rock walls, and then flowing SE, terminating in Hess Inlet, at the Foyn Coast, on the E coast of Graham Land, 16 km SW of Monnier Point. Charted in Dec. 1947 by Fids from Base D, who named it for Hans Hess (1864-1940), German glaciologist, author of the seminal *The Earth's Ice* [translated title]. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Glaciar Hess. The area was re-surveyed by BAS personnel from Base E in 1963-64, and photographed aerially by USN in 1968. It appears on an Argentine chart of 1957, as Glaciar Hess, and that is what the Chileans and Argentines call it today. UK-APC, after studying the 1968 USN air photos, decided that this glacier was so minor that it no longer warranted a name, and they transferred the name Hess to Hess Inlet. They seem to be the only ones who did this.

Hess Inlet. 67°12' S, 65°08' W. An inlet that meets the ice shelf between Battle Point and Marmelon Point, 16 km SW of Monnier Point, on the Foyn Coast, on the E coast of Graham Land. It is dominated on its S side by Mount Thorarinsson, and Hess Glacier flows into it. Surveyed from the ground by Fids from Base D in Dec. 1947. For how it came to be recognized as a separate feature, *see* **Hess Glacier**. It appears in the British gazetteer of 1982.

Hess Mesa. 77°38' S, 160°47' E. A small mesa that surmounts the divide between Koenig Valley and Mudrey Cirque, in the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Laurent Oswald "L.O." Hess (b. Nov. 22, 1912. d. Feb. 1974), of Philadelphia, who went to sea in 1934, and was skipper of the *Maumee* in the Ross Sea ship group during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71).

Hess Mountains. 72°00' S, 62°30' W. A group of mountains rising to about 1500 m, at the head of Hilton Inlet, to the W of Dietz Bluff, on the Black Coast, on the E side of the Antarctic Peninsula. They are bounded to the N by Gruening Glacier, to the W by Runcorn Glacier, and to the S by Beaumont Glacier. First photographed aerially, in 1940, by USAS 1939-41. Mapped by USGS from air photos taken by USN between 1966 and 1969. Surveyed by BAS in 1972-73. Named by US-ACAN in 1978, for Harry Hammond Hess (1906-1969), professor of geology at Princeton, from 1948 until his death. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name in 1980.

Hessengletscher. 70°42' S, 164°35' E. A glacier, due W of Mount Kostka, in the Anare Mountains. Named by the Germans.

Hessler Peak. 79°37' S, 84°02' W. A sharp peak, rising to 1670 m, at the S end of Dunbar

Ridge, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Victor P. Hessler, ionosphere physicist and USARP exchange scientist at Vostok Station, 1965-66 and 1966-67.

Hessling, Nils *see* **Órcadas Station**, 1906

Hesteskoen *see* **Hesteskoen Nunatak**

Hesteskoen Nunatak. 71°52' S, 27°15' E. A horseshoe-shaped nunatak, rising to 2350 m, 6 km N of Balchen Mountain, in the E part of the Sør Rondane Mountains. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Remapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named descriptively by them as Hesteskoen (i.e., "the horseshoe"). US-ACAN accepted the name Hesteskoen Nunatak in 1965.

The *Hetairos*. German yacht, in the waters of the Antarctic Peninsula and the South Shetlands, in the 1995-96 summer, under the command of billionaire Otto Happel (b. Feb. 9, 1948).

Heth Ridge. 69°58' S, 159°45' E. A ridge, 5 km long, 6 km S of Hornblende Bluffs, near the head of Suvorov Glacier, in the Wilson Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Samuel R. Heth, USARP biologist at Hallett Station, 1968-69.

Hetha Peak. 77°32' S, 162°32' E. Rising to 1700 m, about 2 km NE of Mount Saga, on the ridge bounding the W side of Newall Glacier, in the Asgard Range, in the McMurdo Dry Valleys of Victoria Land. Named by NZ-APC on Oct. 7, 1998, for Hetha, the earth goddess in old Norse mythology. US-ACAN accepted the name later that year.

Hette Glacier. 71°43' S, 26°35' E. A glacier, 10 km long, flowing N between the Hettene Nunataks and Austhamaren Peak, on the E side of Byrdbreen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Hettebreen (i.e., "the cap glacier"), in association with the Hettene Nunataks. US-ACAN accepted the translated name Hette Glacier in 1966.

Hettebreen *see* **Hette Glacier**

Hettene *see* **Hettene Nunataks**

Hettene Nunataks. 71°45' S, 26°25' E. A group of nunataks at the W side of Hette Glacier, between that glacier and Byrdbreen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Hettene (i.e., "the caps"). US-ACAN accepted the name Hettene Nunataks in 1966.

Hettevatnet *see* **Maruwan-oike**

The *Hetty*. A 104-ton London sealing brigantine, built in the USA in 1810, she was taken as a prize by the British in 1813, during the war between the two countries. In 1819, she was purchased by William, Thomas, Isaac, and James Thomas of Narrow Street, Ratcliff, London, and John William Gray of Shadwell, and was repaired. Ralph Bond was appointed skipper on July 19, 1820, and on Aug. 1, 1820 the vessel left Gravesend, bound for the South Shetlands and the 1820-21 season. She left the South Shetlands on Feb. 24, 1821, in company with the *George* (Capt. Richards). She arrived back in Plymouth on May 20, 1821, and in London, on May 28, 1821, with 15,000 seal skins in the first season. She was back in the South Shetlands for the 1821-22 season, same skipper.

Rocas Hetty *see* **Hetty Rock**

Hetty Rock. 62°41' S, 60°44' W. The largest of several rocks off John Beach, it marks the E end of the foul ground which extends eastward from that beach, at Walker Bay, on the S side of Livingston Island, in the South Shetlands. Charted by the Discovery Investigations in 1935, and named by them descriptively as Low Rock. Photographed aerially by FIDASE in 1956-58, and surveyed from the ground by FIDS between 1956 and 1958. In association with Bond Point, it was re-named Hetty Rock by UK-APC on July 7, 1959, for the *Hetty*. US-ACAN accepted the name in 1960. In the British gazetteer of 1974, the group appears as Hetty Rocks, and the Argentines call them Rocas Hetty. This rock was last plotted by the UK, in late 2008.

Hetty Rocks *see* **Hetty Rock**

Heuser Nunatak. 72°02' S, 160°38' E. A small nunatak, 5 km S of Mount Phelen, it marks the S extremity of the Emlen Peaks, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Charles M. Heuser, biolab technician at McMurdo, 1966-67.

Heverley Nunataks. 75°33' S, 128°34' W. A group of small, relatively isolated nunataks protruding through the ice about 22 km NE of Mount Flint, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1969. Named by US-ACAN in 1974, for Harry W. Heverley (b. June 1941), USN, builder who wintered-over at Pole Station in 1971. He had been at McMurdo in 1962 and 1966.

Hewat, Alexander William R. "Alex." b. June 28, 1925, Hastings, Sussex. He went to work for the Met Office, joined FIDS in 1949, as a meteorological assistant, and wintered-over at Base B in 1950. In 1951 he returned to Port Stanley, and then to Montevideo, and from there, along with Joe Gallacher, caught the *Andes* back to Southampton, arriving there on Feb. 26, 1951. He married Patricia Young, moved to Nuneaton, had a son, Alex, in 1955, then emigrated to Kenya, still as a meteorologist, had another son, William, and returned to England in 1955.

The *Heweliusz*. Ship used to relieve SpanAE 1988-89, and PolAE 1989-90. Skipper that last season was Roman Firlej.

Hewitt, Walter J. Fireman on the *Discovery II*, 1929-32.

Hewitt Bay. 64°49' S, 63°47' W. A rectangular bay, 1.5 km long, between Biscoe Point and Access Point, on Anvers Island, in the Palmer Archipelago. Named by US-ACAN on July 17, 2007, for Roger P. Hewitt, of the Antarctic Ecosystem Research Group, Southwest Fisheries Science Center, in La Jolla, Calif., leader of surveys of the ecosystem in waters of the South Shetlands and the northern Antarctic Peninsula, between 1989 and 2005. He was also convener of the CCAMLR working group, 2000-05. UK-APC accepted the name on May 20, 2008.

Hewitt Glacier. 83°17' S, 167°50' E. A steep, impassable glacier that flows from Bowden Névé (on the the E slopes of the Holland Range, in the Queen Maud Mountains), for 24 km between Lewis Ridge and Mount Tripp, into Richards Inlet on the N side of Mount Asquith. Named by NZGSAE 1959-60, for Leonard Rodney Hewitt, leader at Scott Base from Nov. 1958 to Nov. 1959. NZ-APC accepted the name, and US-ACAN followed suit in 1961.

Mount Hewson. 73°58' S, 162°38' E. A bluff-type peak, rising to 3720 m, 11 km WSW of Mount Adamson, and N of Mount Levick, between Priestley Glacier and Campbell Glacier, in the Deep Freeze Range of Victoria Land. Named by the Southern Party of NZGSAE 1962-63, for Ronald William Hewson (b. Lower Hutt, NZ), leader and surveyor of the party. He had also been a surveyor for the Northern Party of NZGSAE 1961-62, and had wintered-over at Scott Base in 1962. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Hewson Glacier. 84°12' S, 169°45' E. Anywhere between 24 and 30 km long, in the Queen Alexandra Range, it flows NE into the Beardmore Glacier, immediately N of (i.e., below) The Cloudmaker. Named by the Northern Party of NZGSAE 1961-62 for Ronald Hewson (*see* **Mount Hewson**). NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Heyer, Henry R. *see* **USEE 1838-42**

Heyneck, Conrad. Ship's engineer on the *Deutschland*, during GermAE 1911-12.

Bahía Heynen. 64°09' S, 58°16' W. The little bay that separates Molley Corner (which is the point the Argentines call Cabo Heinen, but which should read Cabo Heynen) from Cabo Obelisk, within the larger Röhss Bay, on the SW side of James Ross Island. Named by the Argentines for radio operator Sgt. Adrián Enrique Heynen, whose Avro Lincoln B019 crashed in Chile on March 22, 1950, after completing an Antarctic flight. *See also* **Molley Corner**.

Cabo Heynen *see* **Molley Corner**

Isla(s) Heywood *see* **Heywood Island**

Islotes Heywood *see* **Heywood Island, Mellona Rocks**

Heywood, Henry George "Harry." b. 1924, Tamworth, Staffs, son of Harry H. Heywood and his wife Eleanor May Shipley. He went to South Africa in 1947. FIDS leader of Base F in the winter of 1950. In 1951, after his stint in Antarctica, he worked in the Falklands, as a laborer, for the summer, and then made his way to Montevideo, where he caught the *Highland Monarch*, arriving back in London in Aug. 1951. From the late 1950s he lived in Margate.

Heywood, Ronald Barry. Known as Barry Heywood. b. Sept. 28, 1937, Castle Gresley, Derbyshire, son of coalminer Ronald Heywood. He grew up in Derbyshire, and graduated from Birmingham University. While he was doing post-grad research there in insect neurophysiology, as a limnologist (freshwater lakes), he went on a climbing expedition to the islands of Scotland, and after rescuing an injured boy, he and his climbing friend were driving back, and, near Lockerbie, the friend fell asleep at the wheel, and crashed into a truck. The friend was killed and Heywood was badly smashed up, left for dead, as it were, by the side of the road, and had to spend a long time in hospital. Once out, he met Ray Priestley and Bill Sloman, who invited him to join FIDS in 1961, which he did, leaving the UK on the *Shackleton* bound for Antarctica, where he wintered-over as BAS (FIDS became BAS that year) zoologist at Signy Island Station in 1962 and 1963. In 1964 he went home on the *John Biscoe*, and in Feb. 1965, in Cardiff, married Josephine Panayopoulos. He was back at Signy for the summer of 1970-71, and was at Alexander Island in 1973-74. He worked on BAS's offshore biological program from the *Discovery* in 1976-77, 1977-78, and 1979-80, and from the *John Biscoe* in 1978-79, and 1980-81, 1981-82, 1983-84, 1984-85, and 1985-86. From 1986 to 1994 he was deputy director of BAS (under director Dave Drewry), and director, 1994-97. He lives in Oundle, near Peterborough.

Heywood Island. 62°19' S, 59°41' W. A rocky, crescent-shaped island, 1.5 km long, the largest of several islands located WNW of Catharina Point (the N tip of Robert Island), 2.5 km from that point, 4 km NNE of the W tip of the same island, and 6 km ENE of Table Island, in the South Shetlands. This was one of a group of islands that was roughly charted by Powell in 1821-22 and named by him as Heywood's Islands or Heywood's Isles, for Capt. Peter Heywood (1773-1831), RN, and which included Cornwall Island and the islands forming Clothier Harbor. Capt. Heywood, by the way, had been a midshipman on the *Bounty*, under Bligh. The *Chanticleer* Expedition of 1828-31 charted the group as Heywood's Isles. Weddell's chart of 1825 includes Heywood's Isles in an even larger group he called Powels Islands (sic, and named after George Powell), which also included other islands and rocks (including what later became known as Henfield Rock) off the N coast of Robert Island as far E as the Mellona Rocks. The group named by Powell (rather than the one named for him) appears on an 1844 British chart as Heywood Islands, and on an 1861 Spanish chart as Islas Heywood. In 1934-35 the personnel on the *Discovery II* charted this group (as the Heywood Islands), but named this specific island, the largest of the group (i.e., the subject of this entry) as Hummock Island. That was the situation as it appeared on the 1937 DI expedition map, and was accepted by both US-ACAN and UK-APC, and the name Heywood Islands (and the name Hummock Island) appears in the 1955 British gazetteer, and also on a 1957 British chart. Hummock Island shows up on a 1942 USAAF map as Haywood Island (sic) and on a 1943 USAAF map as Heywood Island. As for the Argentines and the Chileans: The name Islotes Heywood appears on a 1957 Argentine chart, for the group, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The Chileans accepted Isla Hummock for the individual island. The Argentines, however, have had a bit of problem over the years coming to grips with a name for the individual island. It appears on a 1946 chart as Isla Hummock, on a 1953 chart as Isla Colina (i.e., the name was translated direct from the English), on two various 1957 charts as Isla Heywood and Isla de la Colina (they rejected Isla Hummok — sic). Isla de la Colina was the one accepted by their 1970 gazetteer. FIDASE air photos taken in 1956-57 showed that, in fact, there is not a real group of islands here, but rather a series of single ones, and so the name Heywood Islands was eliminated and, in order to avoid duplication (there was already another Hummock Island off the coast of the Antarctic Peninsula), and also in order to preserve Powell's original naming, the name Heywood Island was given by UK-APC on Aug. 31, 1962 to this one (i.e., the one that had previously been Hummock Island). That situation appears on a 1962 British chart, and was accepted by US-ACAN in 1963. This island was last plotted by the UK, in late 2008.

Heywood Islands *see* **Heywood Island**

Heywood Isles *see* **Heywood Island**

Heywood Lake. 60°41' S, 45°37' W. The most northerly of the lakes in Three Lakes Valley, in the NE part of Signy Island, in the South Orkneys. Named by UK-APC on Nov. 20, 1974, for Barry Heywood. US-ACAN accepted the name in 1975.

Heywood's Isles *see* **Heywood Island**

Hi Priestley Glacier Automatic Weather Station. 73°36' S, 160°42' E. An Italian AWS, at an elevation of 1980 m, S of Exposure Hill, at the S end of Gair Mesa, in the Southern Cross Mountains of Victoria Land.

Hibbert Rock. 67°47' S, 69°02' W. A drying rock SE of League Rock, off the S end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for William Hibbert, 2nd engineer on the *John Biscoe* from 1957 to 1963. He was aboard when the ship helped the RN Hydrographic Survey unit here in 1962-63. US-ACAN accepted the name later in 1964.

Cape Hickey. 76°05' S, 162°38' E. On the coast of Victoria Land, close E of Charcot Cove and Marin Glacier, it forms the outer, N portal of the re-entrant through which Mawson Glacier flows to the Ross Sea. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1964, for Lt. John Hickey, USN, VX-6 pilot in Antarctica in 1962. NZ-APC accepted the name on Feb. 1, 1965.

Mount Hicks. 71°08' S, 64°39' E. A ridge-like mountain with 2 peaks and a snow-covered E face, about 20 km SW of Husky Massif, in the Prince Charles Mountains. ANARE photographed it in 1960, and Australian cartographers plotted it in 71°09' S, 64°46' E. Named by ANCA for Kenneth Edward "Ken" Hicks (b. Nov. 26, 1921), medical officer and 2nd-in-command at Wilkes Station in 1963 and 1965. US-ACAN accepted the name in 1967. It has since been re-plotted.

Hicks, Robinson *see* **USEE 1838-42**

Hicks, William H. *see* **USEE 1838-42**

Hicks Ridge. 71°09' S, 162°40' E. A rugged ridge between Mount Soza and Morley Glacier, in the Explorers Range of the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Thomas Hicks, USN, who wintered-over as cook at McMurdo in 1967.

Hidalgo, Santiago *see* **Órcadas Station, 1942**

Hidari-zima. 69°05' S, 39°31' E. A small island just off Showa Station, East Ongul Island, on the E fringe of Lützow-Holm Bay, off the Prince Olav Coast of East Antarctica. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. The Japanese named it on June 22, 1972, the name meaning "left island" (it lies on the left hand side of the sea route as icebreakers come into the station).

Hidden, Captain. Commander of the Stonington tender *Flying Cloud*, which, en route to the South Shetlands and the 1853-54 season with the fleet led by the *United States*, was, along with the *Sarah E. Spear*, lost in a gale off the Falklands on Oct. 9, 1853, before they got to Antarctica. But, before this happened, Hidden had been replaced as skipper by Capt. Craig. The expedition was abandoned before the South Shetlands, so Capt. Hidden never got to Antarctica.

Hidden Bay. 65°02' S, 63°46' W. A bay, 5 km long, between Cape Renard and Aguda Point, on the Danco Coast, on the W coast of Graham Land. First charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and that same season surveyed by an RN Hydrographic Survey unit on the *John Biscoe*. So named by UK-APC on July 7, 1959, because, from the N, it is hidden by the Screen Islands. US-ACAN followed suit with the naming in 1960. As for Chile, it first appears on a Chilean naval chart in 1962, as Bahía Escondida (which means the same thing). The Argentines call it Bahía Paraná.

Hidden Col. 85°32' S, 156°00' W. In the N part of the Medina Peaks, 5.5 km SW of Marks Point, it provided a good, quick sledging route between the lower reaches of Amundsen Glacier and Scott Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Explored by NZGSAE 1969-70, and so named by them because it is hidden behind ridges and spurs of the peaks to the NE and SW of it. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Hidden Gorge. 68°37' S, 78°27' E. A short gorge, 10 m wide and 30 m deep, running in a S-N direction from the NW end of Hidden Valley to Krok Lake, in the Vestfold Hills. At the

top end of the gorge is an icefall, via which the gorge drains that part of Hidden Valley. So named by ANCA because the gorge is "hidden" behind an island in Krok Lake.

[1]**Hidden Lake**. 64°02' S, 58°18' W. A lake, 2.5 km long, between Lagrelius Point and Cape Obelisk, S of Holluschickie Bay, in the W part of James Ross Island. It drains by a small stream into the deep bay 6 km S of Lagrelius Point. Discovered and surveyed in 1945 by Fids from Base D, who so named it because it is obscured by the surrounding highlands. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. There are occasional South American references to it as Lago Escondido (which means the same thing). The Argentines built San Juan Refugio here in 1959.

[2]**Hidden Lake**. 67°41' S, 63°03' E. A small, circular, permanently frozen lake, with an area of about 4 hectares, hidden in a narrow basin on the N tip of the Henderson Massif. Named descriptively. ANCA accepted the name.

Hidden Lake Bay *see* **Holluschickie Bay**

[1]**Hidden Valley**. 68°37' S, 78°27' E. An elongated valley, 1.3 km long and 200 m wide, trending SE-NW, draining an area on the N side of Syrsdal Glacier, and flowing into Hidden Gorge via a bend to the N and thence to Krok Lake, in the Vestfold Hills. The floor has superb polygonal patterned ground. Named by ANCA.

[2]**Hidden Valley**. 78°10' S, 163°52' E. The ice-free valley next S of Miers Valley, between Miers Glacier and Ward Glacier. An alpine glacier once flowed through here and coalesced with Koettlitz Glacier. The mouth of the valley is totally blocked by the moraine of Koettlitz Glacier, the only one of the numerous valleys tributary to the Koettliz isolated in this fashion. Traversed in Dec. 1960 and Jan. 1961, by VUWAE 1960-61, who so named it because the main valley is hidden not only from the coast, but also from most of the surrounding ridges. NZ-APC accepted the name, and US-ACAN followed suit in 1973.

Hideaway Lake. 63°58' S, 57°34' W. A lake, measuring about 1 km by 0.5 km, and rising to about 200 m above sea level in a narrow, steep-sided hanging valley, about 1.5 km SE of Terrapin Hill, on James Ross Island. So named by UK-APC on Dec. 2, 1993, because the lake is obscured until access to the valley has been gained.

Hiegel Passage. 66°23' S, 110°27' E. A marine passage between Ardery Island on the N, and Holl Island and Ford Island on the S, in the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW 1947-48. Named by US-ACAN in 1963, for Cdr. James A. Hiegel (b. Aug. 26, 1919, Davenport, Ia. d. June 4, 1998, Winter Springs, Fla.), who joined the U.S. Navy in July 1941, and who was leader of Mobile Construction Battalion Number One (Seabees), who supervised the building of Wilkes Station in Feb. 1957. He retired from the Navy in July 1970. ANCA accepted the name.

Morro Hielo *see* **Morro Blachet**

Higashi-naga-iwa Glacier. 68°27' S, 41°38' E. A wide glacier flowing to the sea at the E side of Naga-iwa Rock, about 29 km E of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on May 1, 1963, as Higasi-naga-iwa-hyoga, or Higashi-naga-iwa-hyoga (i.e., "eastern long rock glacier"). US-ACAN accepted the name Higashi-naga-iwa Glacier in 1968. The Norwegians call it Langknattbreen (i.e., "the long crag glacier), a translation of the Japanese.

Higashi-naga-iwa-hyoga *see* **Nigashi-naga-iwa Glacier**

Lake Higashi Yukidori. 69°14' S, 39°47' E. A little lake found at the uppermost stream of Yukidori Valley, in the south-central part of the Langhovde Hills, on the E shore of Lützow-Holm Bay. Mapped from JARE air photos and ground surveys conducted between 1957 and 1962, and named by the Japanese on Nov. 22, 1973, as Higasi-yukidori-ike (i.e., "east Yukidori lake"). It was later translated into English.

Higasi-hamna-ike. 69°17' S, 39°42' E. A small lake at the S extremity of the Langhovde Hills. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them (name means "east Hamna pond") on Nov. 22, 1973, in association with Hamna Icefall.

Higasi-hanare-iwa. 71°27' S, 36°56' E. Two small rock exposures 12 km SE of Mount Fukushima, in the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese (name means "east remote rocks") on March 22, 1979.

Higasi-naga-iwa Glacier *see* **Higashi-naga-iwa Glacier**

Higasi-naga-iwa-hyoga *see* **Higashi-naga-iwa Glacier**

Higasi-ongul-to *see* **East Ongul Island**

Higasi-Teøya. 69°03' S, 39°35' E. The eastern of the Te Islands (hence the name; "higasi" meaning "east" in Japanese), just S of Ongul Island, in the Flatvaer Islands. Named by the Japanese on March 12, 1977. For a history of this island (and the group) *see* **Te Islands**.

Higasi-Yamato Nunatak. 71°30' S, 36°53' E. Two small nunataks about 40 km E of the Queen Fabiola Mountains. Photographed aerially by JARE on Dec. 18, 1975, and named by the Japanese on Nov. 24, 1981 (name means "east Yamato nunataks"—the name Yamato being used by the Japanese for the Queen Fabiolas).

Higasi-yukidori-ike *see* **Lake Higashi Yukidori**

Higgins Canyon. 84°47' S, 114°41' W. A steep-sided, ice-filled canyon, immediately E of Schulthess Buttress, on the N side of the Buckeye Table, in the Ohio Range of the Horlick Mountains. Named by US-ACAN in 1962, for Merwyn D. Higgins, geologist with the Ohio State University expedition to the Horlick Mountains in 1961-62.

Higgins Nunatak. 79°39' S, 82°27' W. The largest of the Samuel Nunataks, near the S end of that group, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for John C. Higgins, USN, utilitiesman at McMurdo in 1966.

Mount High. 73°34' S, 62°05' W. Rising to about 1600 m, on the S side of Douglas Glacier, in the central portion of the Werner Mountains (it is the highest peak in the Werners), on the Lassiter Coast, on the E coast of Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Harvey W. High. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Pico High *see* **Mount Camber**

High, Harvey W. b. Dec. 19, 1938. Cook who wintered-over at Pole Station in 1967. Later he was cook on the *Hero*, as it supplied Palmer Station. On June 26, 1982, he fell off the gangplank as he was boarding the *Hero* in Punta Arenas, Chile, and drowned.

High Cliff. 77°37' S, 166°27' E. A high cliff in North Bay, Ross Island. Named descriptively by BAE 1910-13. It appears in the 1958 NZ provisional gazetteer.

High Island *see* **Ross Island**

High Lake. 67°01' S, 142°41' E. A small lake to the SW of Low Lake, and due W of East Lake. At 40 m above sea level, it is the highest lake in the Cape Denison area, lying about 725 m ESE of Mawson's Main Hut (used during AAE 1911-14). It appears on Mawson's maps of that expedition. ANCA accepted the name on March 7, 1991.

High Nunatak. 80°03' S, 82°35' W. An isolated nunatak, 6 km E of the Liberty Hills, in the Heritage Range of the Ellsworth Mountains. Named by US-ACAN in 1966, for Elmer High, helicopter crew chief with the 62nd Transportation Detachment, who assisted the University of Minnesota geological party here in 1963-64.

[1]**High Peak** *see* **Pardo Ridge**

[2]**High Peak** *see* **Mount Camber**

[3]**High Peak**. 77°33' S, 166°33' E. A peak, 60 m high, near the site of Shackleton's camp near Cape Royds, on Ross Island, during BAE 1907-09, and named by him. It appears in the 1958 NZ provisional gazetteer.

High Point *see* **Edinburgh Hill**

High Rock. 66°24' S, 98°38' E. A conspicuous nunatak, 2.3 km NW of The Doublets, on David Island, off the coast of Queen Mary Land. Named descriptively by AAE 1911-14. The only ones who seem to use this name today are the Australians.

High Stile. 60°35' S, 45°30' W. A pass at the head of Sunshine Glacier, running at an elevation of about 455 m above sea level, between Iceberg Bay and Ommanney Bay, at the junction of the SW ridge of Mount Nivea and the E end of Brisbane Heights, in the central part of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948-49, and named by them for its appearance and

height. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Further surveyed by Fids from Signy between 1956 and 1958.

High Window. 62°59' S, 60°33' W. A "window" offering a panoramic view, it is located in a rocky ridge between, on the one hand, Cathedral Crags and Neptunes Window, and, on the other, South East Point, on the SE side of Deception Island, in the South Shetlands. Mapped by Don Hawkes in 1961. Named by the Poles on Sept. 1, 1999.

Highest points in Antarctica. The average height of Antarctica is 7000-8000 feet above sea level. It is the highest continent in the world (Asia is next, at an average of 3000 feet). Without the ice, though, it would average only 1500 feet above sea level. The massive ice sheets of East Antarctica reach heights of 11,500 feet above sea level, and the highest point on the whole ice cap is 13,450 feet, also in East Antarctica. It is difficult to say exactly how high some of the mountains are. Measurement is an ongoing process. For example, the Omega High Antarctic Project of 2004 measured the peaks of the Vinson Massif, which contain some of the highest mountains in Antarctica. Having said that, the points in Antarctica over 13,000 feet are: Vinson Massif, 4897 m (16,071 ft); Mount Tyree, 4852 m (15,919 ft); Mount Shinn, 4661 m (15,292 ft); Mount Craddock, 4650 m (15,256 ft); Mount Epperly, 4602 m (15,098 ft); Mount Gardner, 4587 m (15,049 ft); Mount Kirkpatrick, 4528 m (14,856 ft); Mount Elizabeth, 4480 m (14,698 ft); Bugueño Pinnacle (reported at over 4400 m); Mount Markham, 4350 m (14,275 ft); Mount Bell, 4303 m (14,117 ft); Mount Mackellar, 4295 m (14,098 ft); Mount Sidley, 4285 m (14,058 ft); Mount Anderson, 4254 m (13,957 ft); Mount Bentley, 4247 m (13,934 ft); Mount Kaplan, 4230 m (13,878 ft); Fleming Summit, 4200 m (13,780 ft); Mount Ostenso, 4179 m (13,711 ft); Mount Minto, 4166 m (13,668 ft); Mount Miller, 4160 m (13,648); Mount Long Gables, 4151 m (13,619); Mount Dickerson, 4120 m (13,517 ft); Dome Argus, 4091 m (13,422 ft); Mount Wade, 4084 m (13,399 ft); Mount Fisher, 4080 m (13,386 ft); Centennial Peak, 4070 m (13,353 ft); Mount Fridtjof Nansen, 4069 m (13,350 ft); Mount Wexler, 4024 m (13,202 ft); Mount Lister, 4023 m (13,199 ft); Decennial Peak, 4020 m (13,189 ft); Mount Adam, 4010 m (13,156 ft); Mount Korsch, 4000 m (13,123 ft); Flat Top, 4000 (13,123 ft), Mount Odishaw, 3965 m (13,009 ft). The highest peak in the Antarctic Peninsula, and the only one over 10,000 feet, is Mount Andrew Jackson, at 3184 m (10,446 ft).

Highet, William Bremner. b. 1911, Dunedin, NZ, son of David Highet and Elsie Bremner. A medical doctor (Otago, 1932), he was a house surgeon at Dunedin Hospital when he set sail as ship's doctor and able seaman on the *Bear of Oakland*, when she left Dunedin on Jan. 2, 1935, bound for Little America, during the 2nd half of ByrdAE 1934-35. After the expedition, he spent 3 months visiting hospitals in the USA, then moved to the UK, where he was resident orthopedic officer at Norwich Hospital. He married Joan Richards, and in Sept. 1942, joined the R.A.M.C., as a lieutentant. He left Liverpool on the *Ceramic* bound for Pietermaritzburg, South Africa, where he was to open a new nerve injury unit. The ship was torpedoed in the Atlantic late on the night of Dec. 6, 1942. There was one survivor, and it was not Doc Highet.

Highjump Archipelago. 66°05' S, 101°00' E. A group of rocky islands and rocks, about 80 km (the Australians say 95 km) long, and between 8 and 28 km wide, NE of the Bunger Hills, it extends from the Taylor Islands (close NW of Cape Hordern), to a prominent group of ice rises which terminate just W of Cape Elliott, on the Knox Coast of Wilkes Land. The archipelago includes Thomas Island, Fuller Island, Foster Island, Dieglman Island, Currituck Island, Chernyy Island, and the Mariner Islands. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Operation Highjump. ANCA accepted the name on Aug. 20, 1957.

Highton Glacier. 61°14' S, 54°04' W. A glacier flowing NE to the sea on the E coast of Clarence Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by the British Joint Services Expedition of 1976-77, as Stamina Glacier, because of the stamina needed to cross it. Renamed by UK-APC on June 11, 1980, for Cdr. John Ernest Highton (b. 1935), RN, deputy leader of the expedition. US-ACAN accepted the name in 1993. This glacier was last plotted by the UK, in late 2008.

Highway Lake. 68°28' S, 78°13' E. A long, narrow feshwater lake (actually slightly salty) in the Vestfold Hills, it measures 1.25 km long by 250 m at its widest point. When frozen, the lake serves as a quick, direct travel "highway" between Langnes Fjord and Taynaya Bay. Named by ANCA on July 26, 1983.

Highway Ridge. 78°23' S, 162°58' E. A ridge extending eastward from Shark Fin Glacier to Foster Glacier, in the Royal Society Range of Victoria Land. Work was done here by a NZGSAE field party in 1977-78. Named by NZ-APC in 1980, alluding to the excellent access that the ridge provides from the lower part of Foster Glacier to Shark Fin Glacier. US-ACAN accepted the name in 1994.

Caleta Higueras. 61°55' S, 58°18' W. A cove, E of Punta Redonda, in the extreme NW of King George Island, in the South Shetlands. Named by the Chileans for Lt. Héctor Higueras Ormazábal, naval aviator and helo pilot on the *Piloto Pardo*, who took part in the rescue of British, Argentine, and Chilean personnel on the bases on Deception Island, when the volcano blew in Dec. 1967. The Argentines call it Caleta Fernández Grellet, for Teniente de fragata Humberto Fernández Grellet, of the Argentine navy, base leader at Teniente Cámara Station in 1953.

Hikae Rock. 68°00' S, 43°58' E. A small coastal rock exposure of 1.5 km in length, and looking like a small mountain, along the ice of the Prince Olav Coast, 1.5 km E of Rakuda Glacier, and between Kamelbreen and Carstensfjella, in Queen Maud Land. As seen from the sea, it lies behind Cape Ryugu. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE in 1962, and named by them on May 1, 1963, as Hikae-iwa (i.e., "attendant rock"). US-ACAN accepted the name Hikae Rock in 1968. The Norwegians call it Bieknatten (which means the same thing).

Hikae-iwa *see* **Hikae Rock**

Hiku-iwa. 71°47' S, 35°49' E. A small rock exposure, rising to 2114 m above sea level, 5.5 km S of Mount Gaston de Gerlache, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1973, and named by the Japanese on March 22, 1979 ("low rock").

The *Hilda Knudsen*. A 9178-ton Norwegian whaler, 470 feet 4 inches long, and capable of 11 knots, built in 1928, in Nakskov, Denmark, for ship owner Knut Knutsen, of Haugesund. She was in Antarctica in 1930-31, under the command of Captain Arne Daehli, and during World War II served as a cargo ship. In 1946 Knut Knutsen died, and the *Hilda Knudsen* was transferred to his son-in-law, Christian Haaland, in July 1947. The ship was laid up at Byvågen from June 1953 to Jan. 27, 1955, when she was sold to British Iron & Steel, and broken up for scrap.

Punta Hildegard. 63°19' S, 57°55' W. A point between Punta Lermanda and Punta Mary, on the E coast of Kopaitic Island, in Covadonga Harbor, Trinity Peninsula. The name appears for the first time on a 1948 Chilean chart, and has been in use ever since.

Hildringa. 73°40' S, 14°34' W. A small mountain in the Kraul Mountains of Maudheimvidda, in Queen Maud Land. Name means "the mirage" in Norwegian.

Bahía Hill *see* **Hill Bay**

Cabo Hill *see* **Mount Hill**

Cape Hill *see* **Mount Hill**

Monte Hill *see* **Mount Hill**

Mount Hill. 70°56' S, 61°40' W. Rising to 945 m on Imshaug Peninsula, 13 km SW of Cape Sharbonneau, at the E side of the head of Lehrke Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered by personnel from East Base in 1940, during USAS 1939-41. They photographed it aerially and roughly mapped it from the ground, but, due to poor visibility, they thought it was a cape marking the S limit of Lehrke Inlet. For the same reasons, they thought that Cape Sharbonneau was an island. They named the "cape" as Cape Hill, for Archie Hill. It appears as such on a USAAF chart of 1942. It was re-defined in 1947, by a joint sledge party of members of RARE 1947-48 and Fids from Base E, and appears, consequently, on Ronne's 1949 map as Mount Hill. This revelation was not in time for a 1949 Argentine chart, which shows it as Cabo Hill, but on a 1952 Argentine chart it appears as Monte Hill. US-ACAN accepted the name Mount Hill in 1952, and UK-APC followed suit on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1954 Argentine chart as Monte Colina (i.e., "mount hill"). Photographed aerially by USN in 1966,

and surveyed from the ground by BAS personnel from Base E in 1973. The Chilean gazetteer of 1974 accepted the name Monte Hill.

Hill, Archie Clayton. Known as "Tiny." b. Dec. 12, 1902, Rock Creek, Ala., son of farmer Franklin G. Hill and his wife Sader L. Williams. He was partly raised by his grandparents, Charley and Sarah Williams, in nearby Cherokee. He did 6 grades-worth of school, and joined the U.S. Navy in 1924. He was ship's cook 1st class at East Base during USAS 1939-41. On Dec. 12, 1940, Lewis Sims cooked a meal for Tiny's birthday, and Art Carroll made a fine devils food cake. His fiancée, Marine Lavine, of San Diego, was waiting for him in Los Angeles, but it must have fallen through, as Archie married Dora Edna in 1942, in Duval Co., Fla. They were divorced there in 1945. He died in Murfreesboro, Tenn., in Oct. 1977.

Hill, Arthur Jamison. b. Oct. 7, 1916, Beaver Dam, Richmond Co., NC, but raised in Wolf Pit, in the same county, son of L.V. Hill and his wife Delia Rebecca. The father died at the end of World War I, forcing Rebecca to raise 6 children, including a daughter just born, and to go to work in the local cotton mill. Arthur, or Alex as he was known, joined the U.S. Navy in Norfolk, Va., on March 8, 1936, and while working as a pharmacist's mate 3rd class at the naval hospital in Washington, DC, luck placed under secretary of the Navy Louis Compton under his care. The secretary had broken a hip, and became friendly with young Hill, asking him if he would take his (i.e., Compton's) young wife out dancing, which the young pharmacist was only too pleased to do. The grateful secretary asked Hill if there was anything he could do for him in return, and Hill suggested a berth on Byrd's new expedition to Antarctica. The next day he was assigned to the *Bear*, and went south on that vessel for both halves of USAS 1939-41. For the 2nd half, he was promoted to PhM2c. He died in Tampa, Fla., on Feb. 1, 2009.

Hill, Edward *see* **USEE 1838-42**

Hill, Ernest William Bruce. Known as Bruce. b. June 11, 1921, Ampthill, Beds, son of Ernest J. Hill and his wife Doris M. Nash. He worked at de Havilland, as an aircraft designer. He joined FIDS in 1948, summered-over in Antarctica in 1948-49, and was scheduled to winter-over at the new Base K in 1949, as a diesel electric mechanic, but when that station failed to open, he went back to England. In 1951 he tried again, leaving Southampton in 1951, bound for Montevideo, and then wintered-over at Base D in 1952. He lived in a manor house in Devon, and died in March 2005, in Truro, Cornwall.

Hill, John "Jack." b. April 5, 1933, Atherton, Lancs, son of coal miner John P. Hill and his wife Martha Penkethman. His father died young, of TB, and his mother married again, to cotton worker Joseph Caldwell. At age 15, Jack apprenticed with a motor engineering and coach building company. As an apprentice he was exempt from national service, yet volunteered anyway, and wound up serving 3 years in the RAF, where he trained as a radio operator. He answered an ad for FIDS in 1955, and left Southampton on the *Shackleton* on Dec. 29, 1955. A cabin, marked "Hill," was already occupied by another FID — Ken Hill. "I think you're in my cabin, Chum." "No, you're in mine." Thus began a lifelong friendship. Via Montevideo and Port Stanley, the *Shackleton* took him down to Deception Island (Base B), where he wintered-over as radio operator in 1956. In early Jan. 1957 he met the Duke of Edinburgh, who was touring FIDS bases. After several weeks at Signy Island Station, he returned to the UK in May 1957 on the new *John Biscoe*, determined to settle down, get a job, and marry Marion Nuttall, which he did in in 1958. In 1961 he became a FIDS radio operator again, and left the UK on the *Kista Dan*, bound for Halley Bay Station, where he wintered-over in 1962, and where he carried out trials growing tomatoes using hydroponic methods. On his return to the UK in 1963 he became a secondary school teacher of rural studies and rural craft, and an authority on Windsor chairs and other antique furniture. He left teaching to become a senior lecturer, demonstrating at country shows and writing articles for woodworking publications. He also wrote the following books (among others): *The Complete Practical Book of Country Crafts* (1981), *Woodworking Tools and How to Use Them* (1982), and *Jack Hill's Country Chair Making* (1997), all published by David & Charles. In 1989 he left Manchester and Marion, and moved to Midhurst, Sussex, where, for the next 10 years he shared his way of life with Fran, his publisher's publicity manager. In 1998, after Fran's death, he "retired" to Barnham, near Chichester, and the following year was in South Georgia and the Antarctic Peninsula for 2 months, as a lecturer and guide on a tourist ship. In Nov. 2000 he came down with Parkinson's Disease, and he died on Aug. 24, 2009.

Hill, Joseph Francis "Joe." b. Aug. 24, 1913, Canyon, Texas, son of Joseph Abner Hill, chairman of the history department at West Texas State Normal College (later West Texas A & M, and even later West Texas State University), in Canyon, and his wife Ola Ethel Davis. In 1918 Prof. Hill became president of the college. After a couple of years at his father's college, Joe Jr. (as he was known) signed on to the *Bear of Oakland* for ByrdAE 1933-35, as 2nd cook, but at Newport News, on the way down, transferred to the *Jacob Ruppert* as Byrd's messboy. He was mechanic and dog driver in the shore party in Antarctica for the winter-over of 1934 at Little America. He married Wilma Jo Jones on Aug. 18, 1935. In 1937 he and his mother wrote *In Little America with Byrd*, and Joe Jr. got his degree in mechanical engineering at the University of Texas in 1939. He lived in Columbus, O. He died on Oct. 14, 1999, in Sun City, Calif.

Hill, Kenneth Vernon "Ken." b. Nov. 22, 1934, London, son of real estate agent's clerk Harold Hill and his wife Marjorie Care. He left school at 15, became a filing clerk, and did his national service in the Navy, 1953-55, where he trained a a radio operator. In 1955 he answered an ad in a London paper for FIDS radio operators, and on Dec. 29 of that year left Southampton on the *Shackleton* (Jack Hill was aboard too) heading for Montevideo and Port Stanley, from where he took the *John Biscoe* down to Base D, wintering-over there in 1956 with a 16 mm camera (complete with film). On his return home in 1957 (he traveled on the new *John Biscoe* from Port Stanley back to the UK), he lectured widely with his film, for three consecutive summers appearing at the Commonwealth Institute. He worked at the Post Office for a while, and then in 1959 got into telephone reporting on Fleet Street, and then became a journalist, an occupation he followed until he retired to Kings Lynn, Norfolk. In 1962 he married Jean Ryall (the well-known artist Jean Hill). His film is now on DVD.

Hill, Leonard Charles. b. Sept. 5, 1908, Glasgow, 3rd son of Richard Hill and his wife Marion. At the age of 16 he joined the Merchant Navy, was 4th officer on the *William Scoresby* in Jan.-Feb. 1931, and then joined the *Discovery II* in 1931 as 3rd officer and navigator. He was on every voyage of that ship from 1931 to 1939, was her 1st officer, 1933-35, and captain, 1935-39. In Jan. 1936 he rescued Lincoln Ellsworth and Herbert Hollick-Kenyon. Highly decorated in World War II, commanding warships in the North Atlantic and the Arctic, he rose quickly through the ranks, and when asked how, he replied, "Because I was sober." In 1940 he married Joyce Mary Snelus. In late 1944 he became a river pilot on the Clyde, and, from 1946, worked for the Mersey Docks, becoming harbormaster in 1970. He retired in 1972. In 1967 he was president of the Antarctic Club, to which he belonged for years. He died on Sept. 2, 2003.

Hill Bay. 64°11' S, 62°08' W. A bay, 3 km wide, it indents the E coast of Brabant Island for 8 km between Spallanzani Point and Mitchell Point. Roughly surveyed by an RN Hydrographic Survey unit on the *John Biscoe*, in 1951-52, and further surveyed by Fids on the *Norsel* in 1955. Named by UK-APC on Sept. 4, 1957, for Leonard C. Hill. Photographed aerially by FIDASE in 1956-57. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

Hill Glacier. 73°03' S, 75°40' W. A broad glacier flowing from the west-central part of Spaatz Island, into Stange Sound, at the S side of Ronne Entrance, on the English Coast. Mapped by USGS from USN air photos taken in 1965-66. Named by US-ACAN in 1968, for Lennie J. Hill, USGS topographic engineer here, and a member of the Marie Byrd Land Traverse Party of 1967-68. It appears on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the name on Dec. 20, 1974.

Hill Island. 69°23' S, 76°04' E. The more easterly of a pair of islands about 0.6 km W of the NW tip of Stornes Peninsula, in the Larsemann Hills. The center of this island lies about 0.4 km to the NE of the center of Richardson Island.

[1]**Hill Nunatak**. 73°04' S, 64°47' E. A small, dark rock outcrop at the NW end of Mount Seddon, in the S part of the Prince Charles

Mountains. Plotted by Australian cartographers from 1956 ANARE aerial photos. Named by ANCA for Vivian J. "Viv" Hill, radio officer who wintered-over at Mawson Station in 1960.

[2]**Hill Nunatak**. 84°00' S, 54°45' W. A prominent nunatak rising to about 1450 m above the ice, on the S side of the Iroquois Plateau, at the SE end of the Neptune Range, in the Pensacola Mountains, 13 km ENE of Gambacorta Peak. Discovered and photographed aerially on Jan. 13, 1956 (*see* that date under **Operation Deep Freeze I**), and named by US-ACAN in 1957, for Chief Petty Officer Jack O. Hill, USN, aerial photographer on this flight. It appears on a 1957 *National Geographic* map, plotted in 84°35' S, 52°00' W, and that is how it is shown in the 1960 American gazetteer. In 1963-64, USN re-photographed it aerially, and it was surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66. USGS re-plotted it from these efforts. UK-APC accepted the name (and the new coordinates) on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Hill Peaks. 76°54' S, 146°42' W. A small group of peaks, 3 km SW of Mount Dane, in the W part of Radford Island, in the Sulzberger Ice Shelf, off the coast of Marie Byrd Land. Probably first seen from the air on Dec. 5, 1929, during ByrdAE 1928-30. Named by US-ACAN in 1966, for Joe Hill.

Hillary, Edmund Percival. b. July 20, 1919, Auckland, NZ, son of Percival Augustus Hillary and his wife Gertrude Clark. After college he became a beekeeper on his father's farm, and served in World War II as an RNZAF navigator in the Pacific. His stock as a mountain climber was rising when, in 1953, he and Tensing reached the peak of their careers, when they became the first to reach the top of Mount Everest, thus making him (on July 16, 1953) Sir Edmund Hillary, the most famous mountain climber who ever lived. Tensing being — well, not British — received the George Medal. Hillary wrote *High Adventure*, a book about mountain climbing. In 1955 he was picked to lead the NZ party of Fuchs' British Commonwealth Transantarctic Expedition, in other words, while Fuchs crossed the continent in 1956-58, Hillary would lay depots from the Ross Sea end to the Pole. On Feb. 17, 1957, he was a guest passenger on Admiral Wright's flight over the South Pole. Hillary set up Scott Base, on Ross Island, was its first commander, and explored the Ross Sea Basin. Then he went via Skelton Glacier to lay Depot 700 en route to the Pole. This was meant to be his farthest south, and it was intended that he would wait here for Fuchs, and guide the polarfarer and his party back to the Ross Sea, but, with a month to wait for Fuchs, he decided to go for the Pole, reaching there in tractors on Jan. 4, 1958, the first leader to reach 90°S by land since Scott. When Fuchs arrived at the Pole and found Hillary waiting there, he must have been stunned, but he was too much of a gentleman to show it. There can be no doubt that Hillary stole his leader's thunder, and his taste was called into question. The book *The Crossing of Antarctica* came out in 1958, with the authors listed as Hillary and Fuchs. Hillary also wrote *No Latitude for Error*, in 1961. In 1967-68 he was back in Antarctica, leading the ascent of Mount Herschel. In 1990 he wrote the foreword to the first edition of *Antarctica: an Encyclopedia*. He died in Auckland, on Jan. 10, 2008.

Hillary Canyon. Between 74°40' S and 73°30' S, and between 77°15' W and 173°00' W. A submarine feature of the Ross Sea. Named by international consent for Sir Edmund Hillary. Originally plotted in 72°25' S, 173°00' W, it has since been replotted.

Hillary Coast. 79°20' S, 161°00' E. That portion of the coast along the W margin of the Ross Ice Shelf between Minna Bluff to the N and Cape Selborne to the S, in Victoria Land. Named by NZ-APC in 1961 for Sir Edmund Hillary. US-ACAN approved the name in 1964.

Hillier Moss. 60°43' S, 45°36' W. A wet, level, low-lying area, which has many small pools and extensive carpets of moss (the term as applied here really means "peat bog"), about 320 m north of Lenton Point, between Gourlay Peninsula and McLeod Glacier, in the SE part of Signy Island, in the South Orkneys. BAS did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for Edward Richard Hillier (b. 1940), BAS medical officer and first base commander of Signy island Station in 1967 (officers in charge of a FIDS station had been called "base leaders" up until then). US-ACAN accepted the name in 1975.

Hills. Although a hill is a hill, and there are plenty of them in this book (too numerous to itemize here individually), what is intended with this entry-heading is "a group of hills," such as the Vestfold Hills, which is too small to be a range or a group of mountains (*see* **Ranges** and **Mountains**). Main groups include: Ahlstad, Allan, Anderson, Aureole, Austkampane, Benson, Blåklettane, Bravo, Brown, Buchanan, Bunger, Caloplaca, Camp, Campbell, Canine, Caudal, Centkiewicz, Chisholm, Clark, Colbert, Collier, Condon, Coombs, Crown, Cumulus, Daley, Darley, Davis, Dekefjellrantane, Denton, Diversion, Eblen, Elliott, Enterprise, Fazekas, Flowers, Forgotten, Friis, Fyfe, Gabbro, Gateway, Genghis, Geoffrey, Glover, Gneiss, Goodman, Gross, Halsknappane, Hart, Hay, Helicopter, Helliwell, Hendy, Himmelberg, Holmes, Horseshoe, Howard, Illusion, Independence, Instekleppane, Jaeger, Jantar, Jersak, Karo, Kavrayskiy, Keble, Kelmelis, Kjølrabbane, Krzeminski, Kukri, Kyle, Lågkollane, Laine, Langhovde, Larsemann, Lawrence, Liberty, Lichen, Linnormen, Long, Lully, McAllister, MacAlpine, MacDonald, McKaskle, Mandolin, Marble, Mars, Martin, Mayer, Meteorite, Meyer, Mistichelli, Monteath, Morris, Morrison, Nash, Nathan, Nimbus, Obruchev, Owen, Panzarini, Patriot, Peterson, Pirrit, Porter, Quartz, Random, Rathbone, Reinbolt, Relay, Rescuers, Retreat, Ricker, Runaway, Rundvågs, Russet, Scar, Schirmacher, Schmidt, Schneider, Schulte, Sequence, Simpson, Skallen, Skallevikhalsen, Snow, Stanton, Statler, Stewart, Stillwell, Stratton, Sukiennice, Taylor, Thala, Thomas, Tottan, Touchdown, True, Turner, Vantage, Vestfold, Viking, Vulcan, Waller, Watlack, Wiggans, Williams, Wilson, Wisdom, and Xanadu.

Hillson, Richard Henry "Dick." b. Dec. 18, 1926, Stirling, Scotland. His parents were divorced when Dick was a lad, and his mother, the former Isabel Raines, married again, to Staffordshire farmer Jack York. He joined the Navy in Jan. 1945, became an able seaman, and served on three ships, one of them the *Mauritius*, in the Mediterranean, where he ran into a young sailor named Peter Bunch (q.v.). Demobbed in Jan. 1948, he did a year as a farm student in Shropshire, then went to Trinidad, in 1949, as a sugar cane planter, and in 1952 went from there to Nigeria for 3 years. In 1955 he headed back to England, but not in the regular manner. He and a few others crewed a boat through the Straits of Gibraltar and the Bay of Biscay back to England, for a client. One of the crew was Adrian Wensley-Walker (q.v.). He joined FIDS in 1956 (Bill Sloman interviewed him in London), did 3 months met training at Aberdeen Airport (which is where he met Robin Perry), and sailed south as a meteorologist later that year, wintering-over at Base G in 1957, and at Base W in 1958. In between tours, he had his appendix removed at Stanley. When Black, Statham, and Stride disappeared from Base Y, Dick joined John Rothera, Frank Oliver, and Jim Young, to form a party of four to look for the missing lads. They never found them. Because Base Y was now 3 men short for the winter of 1958, Dick was seconded from Base W to fill out the complement at Horseshoe Island, and that is where he spent most of the winter. In the summer of 1958-59 he returned to Base W. Getting out of Antarctica was a little difficult (*see* **Base W**, 1959, for details). Due to all the activity, it wasn't until June 1959 that the *Shackleton* arrived back in the UK, with Hillson aboard. He spent a month on his stepfather's farm, went to Scotland to visit relatives, then took himself down to Liverpool, and got on a ship bound for Canada. On board he met a recently-qualified physiotherapist named Pat, who had seen an ad for Canada. They both stayed in the New World, and were married for 29 years. Dick got his BSc from the University of Alberta, worked as a range survey supervisor for a year, taught at the Northern Alberta Institute of Technology, went to Britain on a sabbatical, got his MSc from the University of London, and then bought a tree nursery in the north of Canada, running it for 30 years until he retired (persuaded back to Edmonton by the lady he has lived with for many years).

Hilt Cirque. 77°17' S, 160°51' E. A cirque, 0.8 km wide, and E of Salyer Ledge, it is the most westerly cirque of The Fortress, in the Cruzen Range. Named by US-ACAN in 2005, for Lt. (jg) John Wesley Hilt (b. Feb. 26, 1936, Janesville, Wisc.), who joined the U.S. Navy in Nov. 1956, and was pilot of the VX-6 Otter that obtained low-elevation oblique air photos of the Saint Johns Range, the Willett Range, and the Cruzen Range, on Nov. 20, 1959. NZ-APC ac-

cepted the name on Sept. 12, 2005. Lt. Hilt retired from the Navy in Aug. 1961.

Bahía Hilton *see* **Hilton Inlet**

Ensenada Hilton *see* **Hilton Inlet**

Hilton, Donald Cross "Don." b. Aug. 24, 1909, Minneapolis, but grew up in Rochester, NY, son of salesman George F. Hilton and his wife Ida Carolyn. A civil engineer, he worked in Rochester for a while, then, jobs being scarce, he signed on to the ketch *Temptress* as a mate, and plied Florida and Bahamian waters in 1931 and 1932. In 1932 he was skipper of a little schooner on the Great Lakes, then went back on the *Temptress* for a while. He skippered a few vessels in Florida waters, did some enginering, even going into partnership in a company. He had been living in Florida for 5 years when he became assistant surveyor and dog driver at East Base during USAS 1939-41. During World War II he lived at Lakeville, NY, and in 1943 was in Iran and India for a while. In 1953, as a civilian research engineer with the Naval Bureau of Yards and Docks, he accompanied several Seabees to the Arctic to build a landing strip near the North Pole. On Oct. 23, 1960 he went to Antarctica again, as project manager for Antarctic construction for the Yards and Docks, to help plan the nuclear reactor at McMurdo Sound. He later moved to Floyd County, Georgia, and died in DeKalb County on March 11, 1990.

Hilton Bay *see* **Hilton Inlet**

Hilton Inlet. 71°57' S, 61°20' W. Ice-filled and 20 km wide, it recedes about 33 km W from its entrance between Cape Darlington and Cape Knowles, along the Black Coast, on the E coast of Palmer Land. Discovered in 1940 by USAS 1939-41, and named for Don Hilton (q.v.), a member of the East Base sledge party that roughly surveyed and charted this coast as far S as this inlet. They placed it in 71°50' S, 61°00' W, and it appears with those coordinates on a 1942 USAAF chart, and on Finn Ronne's map of 1945. It was also photographed aerially in Dec. 1940, by the same expedition, but, due to a navigation error, was plotted about 40 degrees S of the feature identified by the sledge party, and thus the two features were thought to be entirely different. In Dec. 1947, Fids from Base E re-surveyed the inlet, confirmed the 1940 sledge party's finding, reconciled the 1940 aerial error, and corrected all the the coordinates. UK-APC accepted the name and new situation on Jan. 28, 1953, and US-ACAN followed suit that year. It appears as such on a 1954 British chart, and on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1957 Argentine chart as Ensenada Hilton, but the name accepted by the 1970 Argentine gazetteer was Bahía Hilton. The Chileans had to use another name now (they had used Bahía Hilton on one of their 1947 charts), so they picked Ensenada Hilton (which means the same thing). In 1966 USN photographed it aerially, and in 1973 BAS personnel from Base E surveyed it again from the ground.

Himalaya Ledge *see* **Unwin Ledge**

Himalia Peak. 70°51' S, 68°26' W. A prominent peak, rising to about 650 m above sea level, midway along Himalia Ridge, in Ablation Valley, on Alexander Island. Named by UK-APC on Jan. 18, 2002, in association with the ridge.

Himalia Ridge. 70°50' S, 68°27' W. A ridge running E-W on the N side of Ganymede Heights, in the NE part of Jupiter Glacier, in the E part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 during RARE 1947-48. BAS did geological work here in 1983-84. Named by UK-APC on Nov. 13, 1985, for Himalia, one of the moons of the planet Jupiter. US-ACAN accepted the name.

Himelright, James Henry. b. July 5, 1917, Winchester, Va., son of farming superintendent Clarence Henry Himelright and his wife Leola (known as Lee). James was named for his grandfather, and just after he was born, the father took a job as a farming superintendent in Moorefield, W. Va., but in the 1920s they all returned to Winchester, where Clarence became credit manager with a storage company. Adding a year to his age, James went to sea as a messboy on the *President McKinley* in 1933, and, in 1934, he and Dick Byrd's cousin B.B. Flood (q.v.) were both serving in that capacity on that ship when they transferred (again, as mess boys) to the *Jacob Ruppert*, for the 2nd part of ByrdAE 1933-35. His brother, Richard, a 2nd lieutenant in the Army, died during World War II. James died in Oct. 1982, in Germantown, NY.

Himi-yama. 69°40' S, 39°29' E. A round-topped hill, rising to 142.5 m, in the SE part of the Skallen Hills, in the E part of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by Japanese cartographers from ground surveys and air photos taken by JARE in 1969, and named by them on Nov. 22, 1973 ("view-of-the-glacier hill").

Himmelberg Hills. 83°24' S, 51°46' W. A linear group of hills with prominent rock outcrops, 18 km long, at the SW end of the Saratoga Table, in the Pensacola Mountains. Haskill Nunatak, at 1710 m, is near the center of this group; Ray Nunatak and Beiszer Nunatak are near the S end. Named by US-ACAN in 2001, for Glen R. Himmelberg, of the department of geology at the University of Missouri, at Columbia. His lab research and scientific reporting with Art Ford, from 1973 to 1991, on the petrology of Antarctica, and specifically on the Dufek intrusion of the northern Pensacola Mountains was critical for the understanding of the evolution of this major igneous complex.

The *Hinayana*. French yacht, skippered by Remy Poirier, which could take another crew member and 3 passengers. She was in Antarctic waters in 2002-03.

Hinchey, Ray. He wintered-over at Casey Station in 1971, at Mawson Station in 1977, and at Davis Station in 1979 and 1982.

Hinckley Rock. 83°04' S, 55°14' W. A rock rising to about 1135 m, 6 km NW of Gillies Rock, in the northern Neptune Range, in the Pensacola Mountains. In 1963-64 it was surveyed from the ground by USGS, and photographed aerially by USN, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Neil Hinckley, survival specialist with the U.S. Air Force Electronics Test Unit, here in 1957-58. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Hind Turret. 77°38' S, 161°37' E. At the south (hind) side of Obelisk Mountain, in the Asgard Range of Victoria Land. Named in 1976, by US-ACAN and NZ-APC.

Hindberg, Kaj Viggo. b. 1911, Denmark. He went to sea in 1932, working his was up through the mate ranks with the Lauritzen Line, on the *Karla Dan*, the *Gerda Dan*, the *Marna Dan*, the *Greta Dan*, and finally as skipper of the *Thala Dan* in 1957-58, and of the *Kista Dan* in 1959-61, the latter two times in Antarctic waters. In 1964 he was skipper of the *Helga Dan*, in the Arctic. He was described as having "the weathered face of an old sea wolf," and with "a merry twinkle in his narrowed eyes." His uniform was a faultless fit.

Hinde Nunataks. 73°31' S, 69°09' W. Two distinct nunataks, the eastern one rising to 1495 m and the W one to 1480 m, 10.5 km SE of the Witte Nunataks, between the Sweeney Mountains and the Hauberg Mountains, in southern Palmer Land. Named by UK-APC on Oct. 8, 2009, for Stephen Victor "Steve" Hinde (b. 1959, Cheshire), BAS terrestrial field assistant who wintered-over at Rothera Station in 1999 and 2000, at Halley Bay Station in 2002 (field general assistant and base commander), and at Rothera again in 2004 (as base commander).

Hindle, Alex. He wintered-over at Casey Station in 1985, at Mawson Station in 1988 and 1990, and again at Casey in 1992.

Mount Hindson *see* **Mount Ancla**

Hindson, William John "Bill." b. 1935, Portsmouth, son of Capt. William Theobald Hindson, RN, and his wife Drusilla Chamberlain. As a baby he returned to Malta, where his father was serving. He was living in Wickham, near Fareham, Hants, and doing his national service as a Royal Navy midshipman on a frigate based in Port Stanley, when he was seconded to FIDS in 1954, as a surveyor, and wintered-over at Base N in 1955, as the youngest member there. He, Jim Rennie, and Arthur Shewry were the first group to climb Mount Français. He left the base early, around Christmas 1955, to go back to the Navy, and later, after his service was over, he went mountain climbing in Africa. With Rusty Bailey and Barry Cliff he climbed Kilimanjaro, and then ran all the way down. He joined Barclay's Bank in London. On June 6, 1959 he married Helen Felicity Lambert in Portsmouth, and they left London in 1959, for Tripoli.

Hindson Glacier. There is no such feature, never has been, despite the occasional reference to it (on Anvers Island). Any such references are errors, and imply either William Glacier or Mount Ancla.

Hinely Nunatak. 74°56' S, 70°15' W. A small

nunatak, rising to about 1450 m, isolated except for Graser Nunatak 1.5 km to the NE, about 26 km ESE of Sky-Hi Nunataks, in Ellsworth Land, where that land joins the S part of Palmer Land. Named by US-ACAN in 1987, for John A. Hinely, Jr. (b. 1945), USGS civil engineer who, with William F. Graser, formed the USGS satellite surveying team at Pole Station for the winter of 1976. UK-APC accepted the name on Feb. 15, 1988, but, apparently as Hinley Nunatak.

Hinkley Glacier. 78°27' S, 85°20' W. Flows NE from Schoening Peak, on the Vinson Massif, and continues between Mount Segers and Zinsmeister Ridge, to enter Dater Glacier on the E slopes of the Sentinel Range. Named by US-ACAN in 2006, for Todd K. Hinkley, technical director of the USGS's National Ice Core Laboratory at Denver.

Cabo Hinks *see* **Cape Hinks**

Canal Hinks *see* **Hinks Channel**

Cape Hinks. 69°10' S, 63°10' W. A bold headland, with dark rock cliffs rising to 223 m, and surmounted by a high, ice-covered dome, it marks the N extremity of Finley Heights, and also the NW entrance point of Stefansson Sound, 28 km S of Cape Keeler, on the Wilkins Coast, on the E coast of Palmer Land. Discovered and photographed aerially by Wilkins on Dec. 20, 1928, and regarded by him as part of what he called Finley Islands (as is evidenced by his map of 1929). Re-photographed aerially by Ellsworth on Nov. 21, 1935, and mapped by U.S. cartographer W.L.G. Joerg from not only these photos but also from Wilkins'. On Joerg's 1937 map, it was plotted in 69°25' S, 62°30' W, and shown as the NE extremity of what he described as Finley Peninsula. In 1940 it was further photographed aerially, and surveyed from the ground, by USAS 1939-41, and appears on a U.S. Hydrographic Office chart of 1943. Named Cape Cross (presumably by USAS) for Allan Cross (*see* **Mount Cross**), it appears as such on a 1942 USAAF chart, and shown in 69°12' S, 63°07' W. It appears on a 1947 Argentine chart as Cabo Cross. The whole E side of Finley Heights was named Cape Hinks by US-ACAN in 1947, for Arthur Robert Hinks (1873–1945), surveyor, cartographer, mathematician, astronomer, author, and secretary of the Royal Geographical Society, 1915–45. He undertook, in his published studies, to reconcile the explorations of Wilkins, Ellsworth, BGLE 1934-37, and USAS in this general area. However, in Nov. 1947, the area was surveyed from the ground by a joint sledging party of personnel from RARE 1947–48 and Fids from Base E, and, as a result of this survey, UK-APC, on Jan. 28, 1953, restricted the name Cape Hinks to what we know today. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. US-ACAN accepted this, and it appears in the 1956 American gazetteer, and on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1953 Argentine chart as Cabo Hinks, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Mount Hinks. 67°53' S, 66°03' E. A rock peak, rising to 593 m above sea level, about 330 m S of Mount Marsden, in the Gustav Bull Mountains of Mac. Robertson Land. Named by BANZARE, under Mawson, for Arthur R. Hinks (*see* **Cape Hinks**). The expedition saw land in this area on Dec. 29, 1929, and, on Feb. 13, 1931, made a landing at nearby Scullin Monolith. US-ACAN accepted the name in 1947. The current coordinates of this feature were fixed by Dave Carstens, surveyor at Mawson Station in 1962 (*see* **Carstens Shoal**). For a more detailed history of the naming of this mountain, *see* [2]**Mount Kennedy**.

Hinks Channel. 67°16' S, 67°37' W. An arc-shaped channel, 17.5 km long and 3 km wide, in the N part of Laubeuf Fjord, it extends from The Gullet, and separates Day Island on the W, from Arrowsmith Peninsula and Wyatt Island on the E, off the Loubet Coast, on the W coast of Graham Land. First roughly surveyed in July 1936, by BGLE 1934-37, it appears on Rymill's 1938 map of that expedition. Re-surveyed in 1948 by Fids from Base E, who named it for Arthur R. Hinks (*see* **Cape Hinks**). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957.

Hinley Nunatak *see* **Hinely Nunatak**

Hinman, Herbert. b. Dec. 26, 1800, Woodbury, Conn., son of Scoville Hinman and his wife Deborah Minor. Landsman on the *Huron*, in the South Shetlands in 1820-21 and again in 1821-22. He died on Feb. 8, 1829, in New Haven, Conn.

Cape Hinode. 68°07' S, 42°38' E. An ice-free rock cape, 8.2 sq km in area, projecting northward from the Prince Olav Coast of Queen Maud Land, 5 km W of Akebono Glacier, and about 60 km W of Carstensfjella. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Hinode-misaki (i.e., "sunrise cape"). US-ACAN accepted the name Cape Hinode in 1964. The Norwegians call it Solsprettodden (which means the same thing).

Hinode Peak. 68°10' S, 42°35' E. A small coastal peak, rising to 157.7 m, 5 km SW of the central part of Cape Hinode, on the coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Hinode-yama (i.e., "sunrise mountain"). US-ACAN accepted the name Hinode Peak in 1964. Originally plotted in 69°10' S, 42°35' E, it was replotted in 1975.

Hinode-misaki *see* **Cape Hinode**

Hinode-yama *see* **Hinode Peak**

Hinton Glacier. 80°03' S, 157°10' E. A tributary glacier, flowing northward between Forbes Ridge and Dusky Ridge into Hatherton Glacier, in the Britannia Range. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Chief Construction Mechanic Clarence Cornelius Hinton, Jr. (b. 1943, Bessemer, Ala.), USN, who wintered-over at McMurdo Station in 1963, heading a team charged with the maintenance of mechanical equipment at the outlying U.S. stations. ANCA accepted the name on Aug. 27, 1975.

Hinzberg. 74°36' S, 164°08' E. A peak due S of Mount Browning, on the W side of Terra Nova Bay, in Victoria Land. Named by the Germans.

Glaciar Hipócrates *see* **Hippocrates Glacier**

Islas Hipólito *see* **Forge Islands**

Punta Hipólito *see* **Hippolyte Point**

Hippo Island. 66°25' S, 98°10' E. Also called Hippo Nunatak. A small, steep, rocky island, about 0.9 km long, rising above the Shackleton Ice Shelf to a height of 75 m, about 2.75 km N of Delay Point, in Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for its shape (like a hippopotamus). US-ACAN accepted the name in 1963, and ANCA followed suit.

Hippo Nunatak *see* **Hippo Island**

Hippocrates Glacier. 64°22' S, 62°22' W. At least 5 km long and 3 km wide, it flows SE into Buls Bay, on the E side of Brabant Island, in the Palmer Archipelago. Shown on a 1953 Argentine chart, but not named. Mapped by FIDS cartographers in 1959, from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for the ancient Greek doctor Hippocrates (460-377 BC). US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Glaciar Hipócrates.

Cap(e) Hippolyte *see* **Hippolyte Point**

Punta Hippolyte *see* **Hippolyte Point**

Hippolyte Point. 64°41' S, 63°07' W. Marks the NE end of Lion Island, immediately SE of Anvers Island, in the Palmer Archipelago. Roughly charted on Feb. 8, 1898, by BelgAE 1897-99, when a landing was made near the point. Named by de Gerlache as Cap Hippolyte, for Count Hippolyte d'Ursel (sic) (*see* **D'Ursel Point**). It appears as Cape Hippolyte on Frederick Cook's 1900 English language map of that expedition. UK-APC accepted that name on Sept. 8, 1953, and US-ACAN followed suit that year. Roughly re-surveyed by Fids on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. On Sept. 4, 1957, UK-APC redefined it as a point, naming it Hippolyte Point, and it appears as such on a British chart of 1959. US-ACAN accepted the new name in 1963. It appears on a Chilean chart of 1962 as Punta Hippolyte, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines, always reluctant to follow a Chilean lead, chose to translate the name as Punta Hipólito, thus honoring not the count but rather merely a forename.

Mount Hiram *see* **Mount Hirman**

Monte Hirart *see* **Monte Guina**

Mount Hirman. 75°28' S, 72°46' W. Also spelled (erroneously) as Mount Hiram. A prominent mountain, rising to 1070 m, and marking the S end of the Behrendt Mountains, NW of Cape Zumberge, on the Orville Coast of Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1966, for

Joseph W. Hirman, USARP scientific leader at Eights Station, 1965. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. The British seem to plot this feature in 75°58' S, 72°46' W.

Mount Hiroe. 69°21' S, 39°47' E. A rocky mountain, rising to 316.1 m, 0.8 km NW of the highest peak of Breidvågnipa Peak, and 2.1 km NE of Hiroe Point, on the coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by Japanese cartographers from JARE air photos taken between 1962 and 1973, and named by them on Nov. 22, 1973, as Hiroe-yama (i.e., "broad bay mountain"), in association with Breidvåg Bight. US-ACAN accepted the name Mount Hiroe in 1975.

Hiroe-ike. 69°21' S, 39°48' E. A small lake at the NE edge of Breidvåg Bight. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1962 and 1973, and named by them on Nov. 22, 1973 (name means "broad bay pond"), in association with Breidvåg ("broad bay"), which had been named by the Norwegians.

Hiroe-misaki *see* **Hiroe Point**

Hiroe Point. 69°22' S, 39°44' E. A rock point, about 2.1 km SW of Mount Hiroe, it marks the SW extremity of Breidvåg Bight, on the E shore of Lützow-Holm Bay, on the coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and first mapped in 1946, from those photos, by Norwegian cartographer H.E. Hansen, who, apparently, did not name it. Re-mapped by Japanese cartographers (on a 1:25,000 scale) from JARE ground surveys and air photos taken between 1962 and 1973, and named by them on Nov. 22, 1973, as Hiroe-misaki (i.e., "broad bay point"), in association with Breidvåg Bight (i.e., "broad bay"), which had been named by the Norwegians. US-ACAN accepted the name Hiroe Point in 1975.

Hiroe-yama *see* **Mount Hiroe**

Hirschinsel *see* **Bridgeman Island**

Hisarya Cove. 63°04' S, 62°35' W. A cove, 950 m wide, indenting the SE coast of Smith Island for 500 m, 7.3 km NE of Cape James, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the town of Hisarya, in southern Bulgaria.

Hisey, Howard Alan "Al." b. May 17, 1933, Stafford, Kans., son of oil company employee Harold B. Hisey and his wife Vera, who traveled constantly throughout the 1930s and 40s in Louisiana, Texas, Oklahoma, and finally, Colorado, where Howard Hisey finished school and joined the U.S. Navy on his 17th birthday. His first posting as a Seabee was in Alaska, on a waterfront construction crew, then to the Philippines. He was working in the hobby shop at the Naval Air Station in Norfolk, Va., woodworking for the commander, when he answered the notice for "volunteers wanted for the South Pole." He went to Davisville, RI, for training, but did not go for further training as many of the other volunteers did, as he had already been in Alaska. He shipped out of Norfolk, Va., on the *Wyandot*, for Christchurch, NZ, and then on to McMurdo Sound, where, as builder 2nd class on Chief Bevilacqua's team, he helped build McMurdo, and he wintered-over there in 1956. There were 4 Howards at McMurdo, so he changed his name to Al, and that name has stuck. On Nov. 25-26, 1956 he was one of the 2nd party of Seabees to be flown by Gus Shinn to the Pole in the *Que Sera Sera*, those Seabees who built South Pole Station that season (*see* **South Pole Station**). He was among the first party to leave, on Dec. 24, 1956, and he actually flew to Little America V for Christmas Day (he never knew why), and then on the next day to McMurdo. On his way back, in Christchurch, he married Jane Sutton, a girl he had met on his way down, and who now accompanied him back to the USA. In 1958 he married again, to Billy Fay Pearce. He worked his way through the Naval ranks, and from country to country — Egypt, 3 tours of Vietnam — before retiring as a lieutenant in 1978. The next years were spent living in Maryland, Virginia, Las Vegas (for 12 years), Indiana, but working for an engineering company based in Boston, which had him traveling through the Middle East and Indonesia, among other places, and finally he hit the road with Billie Fay in their rv.

The *Hissem*. U.S. Edsel class destroyer escort, built by Brown Shipbuilding, of Houston, and launched on Dec. 26, 1943, as DE-400, and named for Ensign Joseph Hissem. She saw action in the Mediterranean, the Atlantic, and the Pacific, during World War II, and was decommissioned in 1946. In 1955 she was brought out of mothballs, had modern radar equipment installed, and was re-commissioned as radar picket ship DER-400. In Feb. 1963 Lt. Cdr. Richard K. Fontaine took command, and between then and May 1963 the *Hissem* was off Cuba, doing surveillance work, and looking for the lost American submarine *Thresher*. On Aug. 12, 1963 she sailed for NZ, and from Sept. 19, 1963 to Feb. 28, 1964, acted as picket ship stationed between NZ and Antarctica, and going into Antarctic waters, as part of OpDF 1964. She was then in Vietnam for a couple of years, was decommissioned on May 15, 1970, and was sunk as a target off the coast of California on Feb. 24, 1982.

Historic sites. This entry does not list just any sites which anyone might conceivably label "historic." Certain specific sites were created in Antarctica, the idea coming from the first Antarctic Treaty Consultative Meeting (ATCM) at Canberra in 1961, and put into effect at the 5th ATCM in Paris in 1968. 43 of these special sites were nominated, and others followed later. Scott's Discovery Hut is the most revered of all. The original 43 were: **1**. 90°S. Flagmast at the Pole, erected in Dec. 1965 by 1965 Operación 90, the first Argentine overland expedition to the South Pole. **2**. 69°00' S, 39°35' E. Rock cairn and plaques at Showa Station, Ongul Island, in memory of Shin Fukushima (*see* **Deaths**, 1960). Erected Jan. 11, 1961. Some of Shin's ashes are in the cairn. **3**. 65°51' S, 53°41' E. Rock cairn and plaque on Proclamation Island, Enderby Land. Erected by Mawson in Jan. 1930 to commemorate the BANZARE landing here. **4**. 83°06' S, 54°58' E. The station building itself, built by the Russians at the Pole of Inaccesibility, a bust of Lenin, and a plaque marking Soviet conquest of this spot in 1958. **5**. 67°25' S, 60°47' E. Rock cairn and plaque at Cape Bruce, Mac. Robertson Land. Erected in Feb. 1931 by Mawson to commemorate his BANZARE landing here. **6**. 68°22' S, 78°32' E. Rock cairn at Walkabout Rocks, Vestfold Hills. Erected by Wilkins in 1939. The cairn houses a canister containing a record of his visit. 7. 66°33' S, 93°01' E. Stone with inscribed plaque, erected at Mirnyy Observatory, Mabus Point, Queen Mary Land, in memory of Ivan F. Khmara (*see* **Deaths**, 1956). **8**. 66°33' S, 93°01' E. Metal monument-sledge at Mirnyy Observatory, in memory of Anatoliy Shcheglov, who died in Antarctica (*see* **Deaths**, 1962). **9**. 66°32' S, 93°00' E. Cemetery on Boromskiy Island, near Mirnyy Observatory, in Queen Mary Land, in which are buried those Communist Bloc members who died in the Mirnyy fire (*see* **Deaths**, 1960). **10**. 66°16' S, 100°45' E. Buildings at Dobrowolski Station, with plaque erected in 1959 on a concrete pillar commemorating the opening of Oazis Station in 1956. **11**. 78°28' S, 106°49' E. Heavy tractor at Vostok Station, with plaque, in memory of the opening of the station in 1957. **12**. Cross and plaque at Cape Denison. Erected by Mawson in 1913 to commemorate Ninnis and Mertz (qq.v.). In 2003 this site was de-listed, and combined into historic Site #77 (see below). **13**. Hut at Cape Denison, built in Jan. 1912 by AAE 1911-14, as their main base. In 2003 this site, like Historic Site #12, was de-listed, and combined into Historic Site #77 (see below). **14**. 74°54' S, 163°43' E. Remains of Campbell's ice-cave, at Inexpressible Island, Terra Nova Bay, built in March 1912 by Campbell's Northern Party of BAE 1910-13. A wooden sign, a plaque, and some seal bones are the remains left today in this rock shelter. **15**. 77°38' S, 166°07' E. Shackleton's Cape Royds hut, built in Feb. 1908, as part of BAE 1907-09. Restored by NZ in Jan. 1961. This Historic Site was subsequently incorporated into ASPA #158 (*see* **Antarctic Specially Protected Areas**). **16**. 77°38' S, 166°24' E. Scott's Cape Evans hut, built in Jan. 1911 during BAE 1910-13. Restored by NZ in Jan. 1961. This Historic Site was subsequently incorporated into ASPA #155 (*see* **Antarctic Specially Protected Areas**). **17**. 77°38' S, 166°24' E. Cross on Windvane Hill, Cape Evans, erected by the Ross Sea Party of Shackleton's BITE 1914-17. In memory of the three who died (*see* **Deaths**, 1916). This Historic Site was subsequently incorporated into ASPA #155 (*see* **Antarctic Specially Protected Areas**). **18**. 77°51' S, 166°37' E. Scott's Hut Point hut, built in Feb. 1902 as part of BNAE 1901-04. Partially restored in Jan. 1964 by the NZ Antarctic Society, with aid from the USA. This Historic Site was subsequently incorporated into ASPA #158 (*see* **Antarctic Specially Protected Areas**).

19. 77°50' S, 166°37' E. Cross at Hut Point erected Feb. 1904 by Scott during BNAE 1901-04, to commemorate George Vince. **20**. 77°51' S, 166°41' E. The Polar Party Cross (q.v.) on Observation Hill, erected in Jan. 1913, by BAE 1910-13. **21**. 77°31' S, 169°22' E. Stone hut built by Wilson at Cape Crozier in July 1911, during "the worst journey in the world," as part of BAE 1910-13. **22**. 71°18' S, 170°12' E. Borchgrevink's two Cape Adare huts built in Feb. 1899, during BAE 1898-1900, and Campbell's Northern Party hut built in Feb. 1911, as part of BAE 1910-13. Only Borchgrevink's southern one is any good now. Campbell's is a wreck, with only the porch standing. This site has been incorporated within ASPA 159 (*see* **Antarctic Specially Protected Areas**). **23**. 71°17' S, 170°13' E. Nikolai Hanson's grave at Cape Adare. A large boulder marks the head of the grave, with the grave itself outlined with white quartz stones. A cross and plaque are attached to the boulder. **24**. 85°11' S, 163°47' W. Amundsen's cairn on Mount Betty, erected on Jan. 6, 1912 by NorAE 1910-12 during the Norwegian's trek back from the Pole. **25**. Hut and plaque on Peter I Island, built by Nils Larsen in Feb. 1929, at Framnaesodden. Inscribed "Norvegiaekspedisjonen 2/2/1929." This site was delisted in 2003. **26**. 68°07' S, 67°06' W. Abandoned installations of San Martín Station, on Barry Island, in the Debenham Islands, with cross, flagmast, and monolith built in 1951. **27**. 65°10' S, 64°09' W. Cairn with a replica of a lead plaque on Megalestris Hill, Petermann Island, erected by Charcot in 1909, as part of FrAE 1908-10. Restored by FIDS in 1958. Charcot's original plaque is in the Natural History Museum, in Paris. **28**. 65°03' S, 64°02' W. Rock cairn at Port Charcot, Booth Island, with wooden pillar and plaque inscribed with the names of Charcot's *Français* crew, who wintered here in 1904, during FrAE 1903-05. **29**. 64°18' S, 62°58' W. Lighthouse named "Primero de Mayo" on Lambda Island in 1942, the first Argentine lighthouse in Antarctica. **30**. 64°49' S, 62°51' W. Shelter at Paradise Harbor, on the Danco Coast, erected in 1950 near Presidente Gabriel González Videla Station, to honor the first head of state to visit Antarctica (i.e., González Videla). **31**. Memorial plaque marking the position of a cemetery (Whalers Graveyard) on Deception Island, in the South Shetlands, where about 40 Norwegian whalers were buried in the first half of the 20th century. Swept away by a volcanic eruption in Feb. 1969. This historic site was delisted in 2003, and probably with good reason; the very existence of all but a very few of those interred here is, to put it mildly, suspect. *See also* Historic Site #58 (below). **32**. 62°28' S, 59°40' W. Concrete monolith erected in 1947 near Capitán Arturo Prat Station, on Greenwich Island. It is a point of reference for Chilean hydrographic surveys. **33**. 62°29' S, 59°40' W. Shelter and cross with plaque near Capitán Arturo Prat Station, on Greenwich Island. Named in memory of Capitán de corbeta González Pacheco (*see* **Deaths**, 1960, and **Azufre Point**). **34**. 62°30' S, 59°41' W. Bust of Capitán Arturo Prat erected in 1947 at the Chilean scientific station which bears his name. **35**. 62°29' S, 59°40' W. Wooden cross and statue of the Virgen del Carmen, erected in 1947 near Capitán Arturo Prat Station, on Greenwich Island. There is also nearby a metal plaque of the Lions International Club. **36**. 62°14' S, 58°39' W. Replica of a metal plaque at Potter Cove, King George Island, the original having been erected by Dallmann on March 1, 1874, to commemorate his expedition of that year. **37**. 63°19' S, 57°54' W. Statue of Bernardo O'Higgins, erected in 1948 in front of the Chilean scientific station which bears his name. **38**. 64°22' S, 56°59' W. Nordenskjöld's wooden Snow Hill hut, built in Feb. 1902 for SwedAE 1901-04. **39**. 63°24' S, 56°59' W. Stone hut at Hope Bay, built in Jan. 1903 by J. Gunnar Andersson's party during SwedAE 1901-04. **40**. 63°24' S, 56°59' W. Bust of General San Martín, grotto with a statue of the Virgen del Luján, and a flagmast at Esperanza Station, erected by the Argentines in 1955. Together with a cemetery with a stele honoring members of Argentine expeditions who died here. **41**. 63°34' S, 55°45' W. Larsen's Paulet Island stone hut built in Feb. 1903, during SwedAE 1901-04; also the grave of a member of that expedition; and a rock cairn built by the survivors of the wrecked *Antarctic* at the highest point of the island to draw attention from rescue parties. **42**. 60°44' S, 44°41' W. Stone hut built by Bruce on Laurie Island, in 1903, during ScotNAE; the Argentine meteorological hut and magnetic observatory built in 1905 in the same place, and known later as Moneta House; and a graveyard with twelve graves, the earliest of which dates from 1903. **43**. 77°58' S, 38°48' W. Cross erected at Piedrabuena Bay, by the Argentines in 1955, 1300 meters NE of General Belgrano Station, on the Filchner Ice Shelf. In 1979 this Historic Site was moved to General Belgrano II Station. Those were the original 43 sites. The subsequent sites have been: **44**. 70°43' S, 11°40' E. Plaque erected at Dakshin Gangotri Station, to commemorate the members of the first Indian Antarctic Expedition which landed on the Princess Astrid Coast, on Jan. 9, 1982. **45**. 64°02' S, 62°34' W. Plaque mounted at a height of 70 meters, on the crest of the moraine separating Metchnikoff Point from the glacier, on Brabant Island. It reads: "This monument was built by François de Gerlache and other members of the Joint Services Expedition 1983-85 to commemorate the first landing on Brabant Island by the Belgian Antarctic Expedition 1897-99. Adrien de Gerlache (Belgium), leader; Roald Amundsen (Norway), Henryk Arctowksi (Poland), Frederick Cook (USA), and Émile Danco (Belgium) camped nearby from 30 January to 6 February 1898." **46**. 66°49' S, 141°23' E. All buildings and installations at Port-Martin Base, built in 1950 by the Third FrAE, and partly destroyed by fire Jan. 23-24, 1952. **47**. 66°41' S, 140°01' E. Base Marret, the wooden building where the survivors of the Port-Martin fire wintered-over in 1952. **48**. 66°41' S, 140°01' E. Iron cross erected on the NE headland of Pétrel Island, to commemorate André Prud'homme (*see* **Deaths**, 1959). **49**. 66°16' S, 100°45' E. The concrete pillar erected by the first Polish Antarctic Expedition at Dobrowolski Station. **50**. 62°12' S, 59°01' W. A brass plaque on a cliff facing Maxwell Bay, bearing the Polish Eagle, dated 1975 and 1976, and reading (in Polish, English, and Russian): "In memory of the landing of members of the first Polish Antarctic marine research expedition on the vessels *Professor Siedlecki* and *Tazar* in Feb. 1976." **51**. 62°10' S, 58°28' W. The grave of Wladzimierz Puchalski, surmounted by an iron cross, on a hill to the south of Arctowski Station (*see* **Deaths**, 1979). **52**. 62°13' S, 58°58' W. Monument on Fildes Peninsula, which reads (in Chinese): "Great Wall Station, First Chinese Antarctic Research Expedition, 20 February 1985." **53**. 61°06' S, 54°50' W. Bust of Capt. Pardo, monolith and plaque, on Elephant Island celebrating the rescue of Shackleton's *Endurance* party in 1916 by the the Uruguayan ship *Yelcho*. ChilAE 1987-88 placed these here, and the wording says, "Here, on Aug. 30, 1916, the Chilean Navy cutter *Yelcho*, commanded by Pilot Luis Pardo Villalón, rescued the 22 men from the Shackleton Expedition who survived the wreck of the *Endurance*, living for four and one half months in this island." ChilAE 1987-88 also put replicas of this monolith and plaque at Capitán Arturo Prat Station and at Frei Station. **54**. 77°51' S, 166°40' E. Richard E. Byrd Memorial (q.v.). **55**. 68°11' S, 67°00' W. The East Base buildings and artifacts on Stonington Island, used by USAS 1939-41 and RARE 1947-48. **56**. 64°49' S, 62°51' W. The Waterboat Point hut of the British Imperial Antarctic Expedition, 1920-22. Located near President Gabriel González Videla Station, only the base of the boat, the foundations of the doorposts, and an outline of the hut and the extension, exist today. **57**. 62°32' S, 59°45' W. Commemorative plaque at Yankee Bay, in the South Shetlands, to honor Capt. Andrew Macfarlane (q.v.). **58**. Cairn with plaque, at Whalers Bay, Deception Island, in the South Shetlands. It was destroyed in the volcano of 1969, and in 2003 was de-listed. *See also* Historic Site #31 (above). **59**. 62°28' S, 60°46' W. A cairn on Half Moon Beach, Cape Shirreff, on Livingston Island, and a plaque on Cerro Gaviota, opposite San Telmo Island, commemorating the officers, soldiers, and seamen, on the *San Telmo* (q.v.). **60**. 64°16' S, 50°39' W. Wooden plaque at Penguins Bay, on the south coast of Seymour Island, which reads: "10.IX. 1903 *Uruguay* (Argentine Navy) in its journey to give assistance to the Swedish Antarctic Expedition." In Jan. 1990 a rock cairn was erected by the Argentines, close by, to commemorate the event further. **61**. 64°49' S, 63°29' W. Port Lockroy Scientific Station. **62**. 65°15' S, 64°16' W. Wordie House, on Winter Island, the original building of Base F (Faraday Station). **63**. 67°48' S, 67°18' W. Base Y, on Horseshoe Island, along with Blaiklock Refuge. **64**. 68°11' S, 67°00' W. Base E, on Stonington Island. **65**. 71°56' S, 171°05' E. A message post on Svend Foyn Island, which is a pole with a box attached, placed there on Jan. 16, 1895 during Bull and Kristensen's *Antarctic*

expedition. It was examined and found intact by BAE 1898-1900, and much later, in 1956, sighted by the *Edisto*, and again in 1965 by the *Glacier*. **66**. 77°11' S, 154°32' W. Prestrud's Cairn, a small rock cairn at the foot of the main bluff on the N side of Scott Nunataks, in the Alexandra Mountains, on Edward VII Peninsula, built by Kristian Prestrud (q.v.) on Dec. 3, 1911 during NorAE 1910-12. **67**. 77°00' S, 162°32' E. "Granite House," a rock shelter on Cape Geology, in Granite Harbor, built as a field kitchen by Grif Taylor on the second of his geological excursions during BAE 1910-13. *See* **Granite House**. **68**. 74°52' S, 163°50' E. Depot at Hells Gate Moraine, on Inexpressible Island, in Terra Nova Bay. It was an emergency depot consisting of a sledge loaded with supplies and equipment placed there on Jan. 25, 1913, by BAE 1910-13. The sledge and supplies were removed in 1994 because they were deteriorating. **69**. 77°27' S, 169°16' E. Message post at Cape Crozier, Ross Island. Erected Jan. 22, 1902 by BNAE 1910-04, to provide information for the relief ships. It held a metal message cylinder which has since been removed. **70**. 73°19' S, 169°47' E. Message post at Cape Wadworth, Coulman Island. A metal cylinder nailed by Scott to a red pole 8 meters above sea level on Jan. 15, 1902. He painted the rocks behind the post red and white to make it more conspicuous. **71**. 62°59' S, 60°33' W. This site comprises all pre-1970 remains of the shore of Whalers Bay, on Deception Island (i.e., pior to the volcano), including those from the early whaling period (1906-12), when Capt. Adolfus Andresen was there; the ruins of the Hektor whaling station established on Deception Island in 1912, and which ran until 1931, as well as artifacts associated with it; the site of a cemetery with 35 burials and a memorial to 10 men lost at sea; and FIDS remains there from 1944 to 1969. **72**. 68°22' S, 78°24' E. A rock cairn on Tryne Islands, in the Vestfold Hills, erected by the landing party of Mikkelsen's Norwegian expedition of 1934-35, and the wooden mast on top of it. **73**. 77°25' S, 166°27' E. Stainless steel memorial cross erected in Jan. 1987 on a rocky promontory in Lewis Bay, Ross Island, 3 km SE of Mount Erebus (*see* **Deaths**, 1979), to honor the dead in that plane crash. This Historic Site subsequently became SPA #26 (*see* **Specially Protected Areas**). **74**. Between 61°10' S and 61°17' S, and between 55°24' W and 55°13' W, is scattered the wreckage of a large wooden sailing ship on the beach of the bay between the S side of Mensa Bay and Cape Lookout, on the SW side of Elephant Island, including the foreshore and intertidal areas. **75**. 77°51' S, 166°45' E. "A" Hut, erected in 1956 as NZ's first building in Antarctica, on Pram Point, Ross Island. It is the only building existing from BCTAE 1955-58. **76**. 62°56' S, 60°36' W. Ruins of Pedro Aguirre Cerda Station, on Deception Island. **77**. 62°00' S, 142°40' E. Cape Denison, including Boat Harbor, and all historic artifacts within its waters. In 2003 Historic Sites #12 and #13 were de-listed, and incorporated into this one. The site has subsequently been incorporated into ASMA #30 (*see* **Antarctic Specially Managed Areas**). Part of it also became incorporated within ASPA #162 (*see* **Antarctic Specially Protected Areas**). **78**. 71°45' S, 11°12' E. Memorial plaque at India Point, in the Humboldt Mountains, to honor the four who died (*see* **Deaths**, 1990). **79**. 71°12' S, 164°31' E. Lili Marleen Hut, built for GANOVEX I, on Mount Dockery, in the Everett Range. **80**. 90°S. Amundsen's tent, at the Pole, even though it is buried under the snow and ice.

Hitar Petar Nunatak. 63°58' S, 58°42' W. A rocky hill rising to 462 m on the coast of Prince Gustav Channel, 7.35 km NE of Mount Roberts, 4.69 km SE of Baley Nunatak, and 4.35 km S of Tuff Nunatak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010 for the Bulgarian folklore character Hitar Petar (i.e., "sly Peter").

Montaña Hitchcock *see* **Hitchcock Heights**

Mount Hitchcock *see* **Hitchcock Heights**

Hitchcock Heights. 68°46' S, 64°51' W. A mountain mass, rising to 1800 m, and mostly ice-covered, between Maitland Glacier and Apollo Glacier, at the S side of Mobiloil Inlet, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Discovered and photographed aerially, by Wilkins, on Dec. 20, 1928. Photographed aerially again by Ellsworth on Nov. 21, 1935. Surveyed from the ground by Fids from Base E in 1947. The highest part of the feature was named by US-ACAN in 1952, as Mount Hitchcock, for Charles Baker Hitchcock (1906-1969), director of the American Geographical Society from 1953, who, using the aforementioned aerial photos, had assisted W.L.G. Joerg in making the first reconnaissance map of this area, in 1936-37. Mount Hitchcock was accepted by UK-APC, and appears on a U.S. Hydrographic Office chart of 1955. Following further ground surveys conducted by Fids from Base E in 1958, UK-APC renamed the whole feature as Hitchcock Heights, on Aug. 31, 1962. US-ACAN accepted this change later in 1962. The Argentines call it Montaña Hitchcock.

Hitler, Adolf. b. April 20, 1889. Prominent Austrian dictator of the 1930s and 40s, who lived latterly in New Berchtesgaden, Antarctica (an address that has remained elusive to this researcher). At least, according to some. This myth probably began with a report by the Buenos Aires newspaper, *Crítica*, of July 17, 1945, that Hitler and Eva Braun had been landed on the coast of Queen Maud Land by U-530, and made their way to a new and secret (and icy) Berchtesgaden in the Mühlig-Hofmann Mountains, a lair prepared initially by GermAE 1938-39, and improved for the Führer during the war. The following day *Le Monde* and the *New York Times* picked up the story and ran with it, but clearly tongue in cheek. However, this story was a distinct improvement on the *Chicago Times* article of July 16, 1945, which proposed that Mr. Hitler and Miss Braun (now Mrs. Hitler) had escaped to Argentina. Then it appeared that it might have been U-977 that took the famous couple south, one of a fleet of U-boats, or perhaps a continuous string of them beginning during the war. Another present-day address for the (by now very old) Führer is the South Pole. As the Allies were closing in on Berlin, he took off for the Pole, and went into a hole there (a hole in the Pole). This theory is in some way connected with people who believe in a hollow earth. It wasn't just Hitler and Eva, apparently. It was also 2000 German and Italian scientists, and a million regular folk. All now living under the South Pole. Perhaps what we take for penguins are really Nazis. However, this is unlikely, because penguins have a sense of humor and are cute. Another theory is that the British put Operation Tabarin together to fight the Nazi Gestapo (pronounced Nazzy Jestapo, with the emphasis on "jest") in Antarctica. They sent in SAS boys to do the job. The fact that the British bases were a long, long way from Queen Maud Land doesn't seem to deter the adherents to this theory. Then, in 1946-47 came Operation Highjump, a mission of staggering size, organized by Admiral Byrd to take on the Nazi menace in Antarctica. In the 1950s the U.S. finally dropped 3 atomic bombs on Hitler's lair. But, did these destroy the Führer? Probably not. On April 30, 1947, in an Argentine bookstore near you, appeared *Hitler is Still Alive*, written by Buenos Aires journalist Ladislao Szabo (who knew all about these things). Trevor Ravenscroft's brilliant book *The Spear of Destiny* was inadvertently responsible for a sequel, *Adolf Hitler and the Secrets of the Holy Lance*, written by Col. Howard Buechner and Capt. Wilhelm Bernhart, in which it is claimed that the spear of Longinus was actually taken to Antarctica, and a fake installed in Vienna. These two lads did a sequel to the sequel, *Hitler Ashes*, about the same sort of thing.

Hitosasiyubi-one. 71°53' S, 24°34°E. A projecting mountain ridge, the second most easterly of the 5 ridges stretching northward in the Brattnipane Peaks, in the Luncke Range, in the north-central part of the Sør Rondane Mountains. Mapped by Japanese cartographers from JARE ground surveys conducted between 1984 and 1991, and from JARE air photos taken in 1981-82 and 1986, and named by them (name means "forefinger ridge") on Oct. 18, 1988, in association with Brattnipane Peaks, which they saw resembling a left hand. The Norwegians call it Nipeodden (i.e., "the cape ridge").

Hiyoko Island. 69°00' S, 39°33' E. An island, 1 km SW of Nesøya, in the NE part of Lützow-Holm Bay, it is the most easterly of 3 small islands lying 0.8 km NW of the strait separating Ongul Island from East Ongul Island. Photographed aerially by LCE 1936-37, and roughly mapped from these photos by Norwegian cartographers in 1946. JARE, between 1957 and 1962, mapped the island more accurately, and named it, on June 22, 1972, as Hiyoko-zima (i.e., "baby chicken island"), a name also seen as Hiyoko-jima. US-ACAN accepted the name Hiyoko island in 1975.

Hiyoko-jima *see* **Hiyoko Island**

Hiyoko-zima *see* **Hiyoko Island**

Mount Hjalmar Johansen *see* **Johansen Peak**

Hjart Island. 69°38' S, 39°16' E. An island, 3 km W of the Skallen Hills, in the E part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Hjartøy (i.e., "heart island"), for its shape. US-ACAN accepted the name Hjart Island in 1968.

Hjartøy *see* **Hjart Island**

Hjelmen *see* **Kabuto Rock, New Rock**

Hjelmkalven *see* **Hjelmkalven Point**

Hjelmkalven Point. 71°40' S, 26°22' E. A rocky point on the N side of Vesthjelmen Peak, at the E side of the mouth of Byrdbreen, in the Sør Rondane Mountains. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. It was photographed aerially again by OpHJ 1946-47, and mapped anew from these photos in 1957, by Norwegian cartographers, who named it Hjelmkalven (i.e., "the helmet calf"), in association with nearby Vesthjelmen Peak. US-ACAN accepted the name Hjelmkalven Point in 1966.

Hjelmknausen. 71°38' S, 26°22' E. A nunatak about 3 km NW of Vesthjelmen (in association with which it was named by the Norwegians), in the north-central part of the Sør Rondane Mountains. Name means "the helmet peak."

Hjelseth, Otto. b. June 3, 1905, Ålesund, Norway. He went to sea in his 20s, as a donkeyman on Norwegian merchant ships, working his way up the engineer ranks. He was 2nd engineer on the *Wyatt Earp* for Ellsworth's last Antarctic expedition, 1938-39. He was a 3rd engineer on commercial shipping in 1951.

Hjonøyane *see* **Oyako Islands**

Hjonsteinane *see* **Meoto Rocks**

Hjörnehorna *see* **Eckhörner Peaks**

Hjort, Johan. b. Feb. 18, 1869, Kristiania (later called Oslo), Norway, son of ophthalmology professor Johan S.A. Hjort and his wife Elisabeth "Betty" Falsen. His younger brother Alf would become a name in underwater tunnel construction in New York City. In 1900 Johan founded the Norwegian government fisheries, at Bergen, and worked until 1916 as its first director (Bjørn Helland-Hansen was, for a while, in the early days, his assistant director). In 1921 he became professor of marine biology at Oslo University. In 1924 he invented a machine that could better extract whale oil from blubber, and he is also known as the father of shrimp fishing. In 1924 he led an expedition to Davis Strait (in the Arctic), in the research ship *Michael Sars*, and in 1929-30 he was in Antarctic waters aboard the Norwegian whale cooker *Vikingen*. From 1926 to 1939 he was chairman of the International Whaling Committee. He married Wanda Maria von der Marwitz, and died on Oct. 8, 1948, in Oslo. The Norwegian research ship, the *Johan Hjort*, launched in 1990, was named for him.

Hjort Fracture Zone. Centers on 62°00' S, 163°00' E. A submarine feature, out to sea toward the Balleny Islands. Named by international agreement in 1971, for Johan Hjort.

Hjort Massif. 72°08' S, 61°24' W. A salient mountain rising to about 1000 m at the NE end of the Wilson Mountains, on the S side of Hilton Inlet, on the Black Coast, on the E side of Palmer Land. Photographed aerially in 1940, during USAS 1939-41. Mapped by USGS from USN air photos taken in 1968-69, surveyed by BAS personnel from Base E in 1974-75, and mapped by USGS from these efforts. Named by US-ACAN in 1977, for Johan Hjort. UK-APC accepted the name on Feb. 7, 1978. It appears on the 1979 USGS sketch map of the N part of Palmer Land, as well as in the 1980 British gazetteer.

Hjorth Hill. 77°31' S, 163°37' E. A rounded, ice-free hill rising to 760 m (the New Zealanders say 883 m), just N of New Harbor and 3 km S of Hogback Hill, between Mount Coleman and Cape Bernacchi, in Victoria Land. Charted by BAE 1910-13, and named by them for B.A. Hjorth & Co., the makers of the primus lamps used by the expedition. Also seen as Hjort's Hill. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

HL-bandet. 74°52' S, 11°02' W. An ice-ridge located southeastward from the S part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians (HL is an abbreviation of Heimefrontleiinga (i.e., the central Resistance board during World War II).

Mys Hljustina. 68°24' S, 148°39' E. A cape to the W of Cape Blake, on the coast of George V Land. Named by the Russians.

Hlubeck Glacier. 72°30' S, 97°09' W. A glacier, 14 km W of Long Glacier, it flows S along the E side of Shelton Head into the Abbot Ice Shelf, in the SE part of Thurston Island. Named by US-ACAN in 2003, for Aviation Radioman Vernon R. Hlubeck, PBM Mariner air crewman in the Eastern Group of OpHJ 1946-47, which obtained air photos of Thurston Island and adjacent areas.

Bukhta Hmary *see* **Khmara Bay**

Ostrov Hmary *see* **Khmara Island**

Gora Hmyznikova *see* **Mount Khmyznikov**

Cape Hoadley. 66°28' S, 99°56' E. A prominent rock outcrop at the E end of the Obruchev Hills, it forms the W portal of the valley occupied by Scott Glacier, and also forms the coastline between the Scott Glacier and the Denman Glacier, in Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson in Nov. 1912, for Charles Hoadley. US-ACAN accepted the name in 1947, and ANCA followed suit.

Hoadley, Charles Archibald Brookes. b. March 1, 1887, Burwood, Vic., son of British immigrant jam manufacturer Abel Hoadley and his wife Susannah Ann Barrett. Geologist with the Western Base Party during AAE 1911-14. He left the expedition after the first year, and in 1914 was appointed senior lecturer in engineering at the School of Mines and Industry, in Ballarat, Vic. In 1916 he became principal of Footscray Technical School, in Melbourne, a post he held until he died. He volunteered for the *Aurora* during BITE 1914-17, but never went. He was a major figure in the Victoria Boy Scouts movement, and on May 21, 1932, at Kew, married a nurse, Rita Cadle McComb. He died in Footscray, of a coronary thrombosis, on Feb. 27, 1947.

Lake Hoare. 77°38' S, 162°51' E. About 3 km long, between Lake Chad and Canada Glacier, in Taylor Valley, Victoria Land. Named by VUWAE 1963-64 for Raymond A. "Ray" Hoare, physicist here with that party. He would return for VUWAE 1965-65. NZ-APC accepted the name, and US-ACAN followed suit in 1976. The Americans built a refuge hut here, 100 feet from the lake, in 1989-90.

Hoarfrost. The deposit of ice crystals on objects exposed to the free air.

Hobbie Ridge. 73°09' S, 165°41' E. A bold ridge projecting from the middle of the head of Meander Glacier, 8 km S of Mount Supernal, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for John Eyres Hobbie (b. June 5, 1935, Buffalo, NY), biologist at McMurdo Station, 1962-63. He was at North Carolina State University, 1965-76, and then went to the Marine Biology Lab at Woods Hole, in Massachusetts.

Cape Hobbs *see* **Hobbs Islands**

Glaciar Hobbs *see* [1]**Hobbs Glacier**

Mount Hobbs. 83°45' S, 58°50' W. Rising to 1135 m, it is the highest summit in the Wilson Hills, in the Neptune Range of the Pensacola Mountains. In 1963-64 it was surveyed from the ground by USGS and photographed aerially by USN, and was mapped by USGS from these efforts. Named by US-ACAN in 1968, for Ensign James W. Hobbs, USN, who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971. It appears in the 1974 British gazetteer.

Hobbs, Graham John. b. Aug. 31, 1934, Newport, Wales. After University College, Aberystwyth, he joined FIDS in 1956, as a geologist, and wintered-over at Base O in 1957 and 1958. In between winters, he worked out of Base D in the summer of 1957-58, on a party that the *John Biscoe* took to Livingston Island, in the South Shetlands, to do survey and geological work. In Jan. 1959 he was back at Livingston Island, and also at King George Island. On his way home in 1959, he and Denis Goldring stopped off at Tristan da Cunha and collected paleomagnetic specimens. On his return to the UK, he went to work at the FIDS geology unit at the department of geography and geophysics at Birmingham University, and left FIDS on May 31, 1960. His work on Livingston Island earned him an MSc from Birmingham in 1962. He died in Jan. 1999, in Newport.

Hobbs Bank. 74°20' S, 137' 30' W. A submarine feature off the Hobbs Coast of Marie Byrd Land, hence the name.

Hobbs Coast. 74°50' S, 132°00' W. That portion of the coast of Marie Byrd Land extending from Cape Burks to a point on the coast opposite eastern Dean Island, in 74°42' S, 127°05' W.

Discovered by USAS 1939-41, and named for Prof. William Herbert Hobbs (b. July 2, 1864, Worcester, Mass. d. Jan. 1, 1953, Ann Arbor, Mich.), glaciologist, geographer, and Arctic explorer, head of the geology department at the University of Michigan, and who was with USGS, 1886-1906. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. US-ACAN accepted the name in 1966.

[1]**Hobbs Glacier**. 64°18' S, 57°26' W. Inside a steep, rock-walled cirque at the NW side of Hamilton Point, it flows SE into the S part of Markham Bay, on the E coast of James Ross Island. Discovered and surveyed in 1902-03, by SwedAE 1901-04, and named by Nordenskjöld as Hobbs Gletscher, for Prof. William H. Hobbs (*see* **Hobbs Coast**). It appears on a 1943 U.S. Hydrographic Office chart as Hobbs Glacier. It appears on an Argentine chart of 1949 as Glaciar Hobbs. It was re-surveyed by Fids from Base D in Aug. 1953. UK-APC accepted the name Hobbs Glacier on Sept. 4, 1957, and US-ACAN followed suit in 1963. The Chileans call it Glaciar Brant, for Pedro Brant, fishing skipper with the University of Chile's marine biology station, who studied marine life in Antarctica during ChilAE 1946-47.

[2]**Hobbs Glacier**. 77°54' S, 164°24' E. A glacier, between 2.5 and 3 km wide, flowing eastward for about 11 km (the New Zealanders say 24 km) in a low gradient, into McMurdo Sound 3 km (the New Zealanders say 11 km) S of Blue Glacier, on the coast of Victoria Land. Discovered and explored during BNAE 1901-04. BAE 1910-13 explored the glacier more thoroughly, and Scott named it during the latter expedition for Prof. William H. Hobbs (*see* **Hobbs Coast**). US-ACAN accepted the name, and NZ-APC followed suit.

Hobbs Gletscher *see* [1]**Hobbs Glacier**

Hobbs Islands. 67°19' S, 59°58' E. Also called Kringholmane. A group of islands, between 16 and 19 km NE of William Scoresby Bay. The largest of the group was discovered on Feb. 18, 1931, by BANZARE, and named Cape Hobbs by Mawson for Prof. William H. Hobbs (*see* **Hobbs Coast**). In other words, Mawson thought it was a cape. Explorations by the *William Scoresby* in 1936 and by LCE 1936-37 showed the "cape" to be a part of the island group. It was subsequently re-defined, and the name Hobbs Island was accepted by US-ACAN in 1965, and by ANCA.

Hobbs Peak. 77°53' S, 163°56' E. A prominent peak, rising to 1510 m (the New Zealanders say 1767 m), it is the highest point on the E-W section of Hobbs Ridge (the dividing ridge between Hobbs Glacier and Blue Glacier), in Victoria Land. From the coast, it is easily identifiable as a promontory at the head of Hobbs Glacier. Climbed and charted by VUWAE 1960-61, who named it thus in association with the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Hobbs Point. 64°37' S, 62°03' W. The NE end of Brooklyn Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and, between 1956 and 1958 surveyed from the ground by Fids from Base O and Portal Point. Named by UK-APC on Sept. 23, 1960, for Graham Hobbs. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. One of the Argentine Antarctic expeditions named it Punta Manchada (i.e., "speckled point"), and it has been appearing as such since about 1978.

Hobbs Pool. 71°19' S, 67°34' W. A tidal lake on the coast of George VI Sound, S of Horse Bluff, and marginal to the George VI Ice Shelf. BAS personnel from Fossil Bluff did oceanographic and limnological studies here from 1974. Named by UK-APC on Dec. 8, 1977, for Simon Alistair Hobbs (b. 1949), BAS general assistant who wintered-over at Fossil Bluff Station in 1973, and at Base T in 1974. It appears in the 1980 British gazetteer.

Hobbs Ridge. 77°52' S, 164°00' E. A prominent arc-shaped ridge which circumscribes Hobbs Glacier to the N and NW, and forms the divide with lower Blue Glacier, on the Scott Coast of Victoria Land. Named by NZ-APC in 1980, in association with the glacier, and with Hobbs Peak (the major peak on the ridge). US-ACAN accepted the name in 1992.

Hobbs Stream. 77°55' S, 164°30' E. A seasonal meltwater stream, about 1.5 km long, flowing from the snout of Hobbs Glacier to enter Salmon Bay, at the N end of Davis Bay, N of Cape Chocolate, on the W side of McMurdo Sound, on the coast of Victoria Land. It was referred to, but not named, in BAE 1910-13 scientific publications. Named by NZGSAE 1958-59, in association with the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Hobby Rocks. 68°35' S, 77°54' E. Three small islands about 0.8 km E of Gardner Island, off the Vestfold Hills, they mark the W side of Davis Anchorage. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by Australian cartographers from ANARE air photos, and named by ANCA on July 4, 1961, for Derrick William David Hobby (b. 1927, Yorkshire; in Australia since 1948), diesel mechanic at Davis Station in 1960. A month before he left for Davis, Mr. Hobby, who since 1954 had lived in the Northern Territory, married a former Birmingham girl. US-ACAN accepted the name in 1965.

Hobnail Peak. 78°32' S, 161°53' E. A triangular rock bluff immediately S of Mount Tricouni, on the E side of Skelton Glacier, in Victoria Land. Explored in Feb. 1957 by the NZ reconnaissance party of BCTAE, who named it in association with Clinker Bluff and Mount Tricouni (qq.v.). NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Morena Hobot. 73°09' S, 63°23' E. A moraine, NE of Mount McCauley, in the Prince Charles Mountains. Named by the Russians.

Hobsen, Samuel *see* **USEE 1838-42**

Hochbach. 62°11' S, 58°59' W. A little stream flowing on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Mount Hochlin. 72°05' S, 4°03' E. A large, ice-topped mountain with several peaks and Stålstuten Ridge, it rises to 2760 m, E of Festninga Mountain, in the westernmost part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hochlinfjellet, for Lars A. Hochlin (b. 1929), who wintered-over as field radio operator and dog driver at Norway Station in 1957 and 1958, during NorAE 1956-60. US-ACAN accepted the translated name in 1966.

Hochlinfjellet *see* **Mount Hochlin**

Hochstein Ridge. 82°45' S, 159°47' E. About 20 km long, it extends N from Cotton Plateau between Prince Edward Glacier and Prince of Wales Glacier, in the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Manfred P. Hochstein of the department of geology at the University of Auckland, USARP glaciologist at Roosevelt Island, 1961-62, 1962-63, and 1963-64.

Hochstetter Peak. 63°37' S, 58°18' W. A partly ice-free peak rising to over 1000 m in the SE foothills of the Louis Philippe Plateau, 6.83 km WSW of Kukuryak Bluff, 10.82 km NW of Levassor Nunatak, and 2.69 km N by E of Smin Peak, it surmounts Cugnot Ice Piedmont to the E, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the German-Austrian geologist Ferdinand von Hochstetter (1829-1884), who worked in Bulgaria, other European countries, and NZ.

Hockey Cirque. 83°17' S, 156°30' E. A glacial cirque, 0.8 km wide, along the E wall of Ascent Glacier, in the Miller Range. Named by the Ohio State University Geological Party of 1967-68 for the game of ice hockey that they played here. US-ACAN accepted the name in 1970.

Hodge Escarpment. 83°03' S, 50°11' W. Rising to about 1500 m, to the NE of Henderson Bluff, on the NW side of the Lexington Table, in the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN for Steven M. Hodge, USGS geophysicist who worked in the Dufek Massif and the Forrestals, in 1978-79. UK-APC accepted the name on May 21, 1979.

Hodgeman, Alfred James "Alfie." b. Aug. 8, 1885, Portland Estate, near Adelaide, South Australia, son of Alfred Hodgeman and Helen Davidson Pennington. He trained as an architect, then entered the Government Works Department, in Adelaide. He was cartographer and assistant meteorologist with AAE 1911-14. In World

War I he served in the 6th Battalion, Prince of Wales' Leinster Regiment, and also in the Flying Corps. He married Vera LeBland, and lived in Chiswick, London, for decades, dying in Dartford in Jan. 1964.

Hodgeman Islands. 67°01' S, 144°14' E. A group of several small, ice-capped islands, close to the coast of George V Land, 6 km WSW of Cape de la Motte, in the E part of the entrance to Watt Bay. Discovered by AAE 1911-14, and named by Mawson for Alfie Hodgeman. US-ACAN accepted the name in 1963, and ANCA followed suit.

Hodges, Ben. b. July 15, 1936, Sheffield, son of coal hewer Charles Benjamin Hodges and his wife Gertrude Clethroe. After school, he went to Sheffield Technical School for a year, then began work with the GPO, as a linesman. He did his national service in the Middle East, with the Signals, then, back in Civvy Street, as a scaffolder, steel erector, and steeplejack. He and Pete Secker saw an ad for two FIDS steel erectors, applied, and left Southampton in late 1960 on the *Shackleton*, going to Montevideo, on to Port Stanley, and down to Antarctica. They were on a six-month contract, and Secker left at the end of it. Hodges stayed, as general assistant, and wintered-over 3 times in Antarctica, in 1961 at Base B, and in 1962 and 1963 at Base E. He was a dog driver for 2 of those years, and on his first winter slipped a disc, a problem that would bedevil him for some time afterwards. He was with the BAS Larsen Ice Shelf party of 1963-64, and then returned to Stanley, staying there for almost 2 years building bungalows, and backpacking through South America. In 1967 he was invalided back to England, and married his physiotherapist, Kathy Joel, in 1969. He was rejected for a job as a rat catcher, and, instead, went to work in the North Sea, as an explosives man on a geophysical survey. He then went to the Cameroons on the same deal. After a few odd jobs, he went into partnership in an architectural antiques business for 10 years, then went to work for BAS, spending 3 summers at Halley Bay as a steel erector. He then spent three summers at South Georgia, cleaning up Grytviken for the Falkland Islands government, and putting a new roof on the old whalers' chapel there. He finally retired in Sheffield. He was the last person to be awarded the Fuchs Medal by Sir Vivien himself.

Hodges, Isaac. b. Jan. 2, 1770, Barnstable, Mass., son of Hercules Hodges and his wife Lydia Crocker. He went to sea, working his way up to skipper. On Oct. 28, 1795, in Nantucket, he married Lydia Crocker. He took over command of the *Harmony* from Nat Ray on Aug. 1, 1821, for that vessel's 2nd Antarctic season, 1821-22. He died in 1866, in Nantucket. Father of Isaac Hodges (see below).

Hodges, Isaac. b. March 9, 1798, Barnstable, Mass., son of Capt. Isaac Hodges (see the entry above) and his wife Lydia Crocker. He lived in Osterville, Mass. He took the *Henrietta* out of New London, for the South Shetlands sealing season of 1832-33. He died in 1879.

Hodges, Stuart. He wintered-over at Davis Station in 1984, at Macquarie Island in 1986, at Mawson Station in 1991, at Casey Station in 1993, at Davis again in 1995, and at Mawson again in 1997.

Hodges, Thomas. He had been skipper of the *Aberdeen*, returning to Liverpool in July 1820 from Calcutta and Buenos Aires, when, on Sept. 8, 1820, he was appointed captain of the Liverpool sealer *Salisbury*, and was in the South Shetlands for the 1820-21 season. After this season, back in London, he succeeded Capt. McGregor as skipper of the *Minstrel*, and actually bought a quarter share of his new ship.

Hodges, William. b. Oct. 28, 1744, London, the only child of blacksmith Charles Hodges and his Welsh wife Ann Richards. He studied under artist Richard Wilson, and on June 30, 1772, at Plymouth, joined the *Resolution* as painter on Cook's 2nd voyage, 1772-75. On May 11, 1776, in London, he married Martha Bowden Nesbitt, and they settled in Pimlico, but she died within a year. He spent 3 years in India, and then returned to London, where he married, on Oct. 16, 1784, Lydia Wright. Again he was soon a widower, and then, finally, on Dec. 1, 1785, he married Anne Mary Carr. He had made money in India, but despite being a member of the Royal Academy, and recognized as a painter, he never made it as such, and gave it up to go into banking in Devon. The Bank of Dartmouth, which opened its doors on Aug. 24, 1795, did not last long, and, with finances pressing on him, Hodges took an overdose of laudanum at Brixham, Devon, on March 6, 1797, leaving his family in dire poverty.

Hodges Point. 67°21' S, 65°03' W. A rocky point terminating in an impressive black cliff, 10 km ENE of Cape Northrop, between that cape and Mamelon Point, on the Foyn Coast, on the E coast of Graham Land. Twin summits on the point rise to 960 m and 940 m. Photographed aerially in 1940 during USAS 1939-41. Mapped by FIDS in 1947-48. Named by UK-APC on Dec. 20, 1974, for Ben Hodges (q.v.), a member of the BAS Larsen Ice Shelf Party who surveyed it in 1963-64. US-ACAN accepted the name in 1975.

Hodgins, H. b. 1898. Of Hammonton, NH. Quartermaster on the *Jacob Ruppert* during ByrdAE 1933-35. He may not have made the trip.

Cape Hodgson. 78°07' S, 166°05' E. The most northerly cape on Black Island, in the Ross Archipelago. Named by NZGSAE 1958-59, for Thomas V. Hodgson. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit that year.

Hodgson, Thomas Vere. b. Feb. 19, 1864, Erdington, Warwickshire, son of solicitor Charles Bray Hodgson and his wife Jane Vere Lucy. He started in banking, but was working in the Marine Biological Association's labs in Plymouth when he went on BNAE 1901-04, as the notoriously bald biologist, and, during the expedition, took part in sledging expeditions. Shackleton called him "Muggins." On his return he became curator of Plymouth Museum and Art Gallery, and became an authority on porcelain. He married Ann Himing in 1914, in Plymouth, and died on May 3, 1926, in Plympton.

Hodgson Lake. 72°01' S, 68°28' W. A perennially ice-covered freshwater lake, about 15 km long and about 2 km wide, between 2.3 and 3.9 m above sea level, with a depth of about 90 m, and sitting under about 4 m of lake ice, S of Saturn Glacier and SE of Citadel Bastion, in the S part of Alexander Island. Geomorphological and paleolimnological evidence suggests that it was a subglacial lake during the late Pleistocene until glaciers withdrew during the Holocene deglaciation. Named by UK-APC on Nov. 20, 2007, for Dominic Adam Hodgson (b. 1968, Oxford), paleolimnologist, who confirmed the presence of the lake during ground reconnaissance on Dec. 18, 2000.

Hodgson Nunatak. 74°17' S, 100°04' W. A nunatak, 8 km S of Teeters Nunatak and 30 km NW of Mount Moses, in the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Ronald A. Hodgson, USN, builder at Byrd Station in 1966.

Hodkinson, Peter John. b. Feb. 10, 1937, Staines, Mdsx., only child of Lt. Col. Harry Hodkinson and his wife Christina E.M. Stuart. He grew up partly in Cyprus and Germany (indeed, his family was in Germany while he was in Antarctica). He joined the RAF, as an officer, trained as a pilot in Canada, but failed. He left St Johns, New Brunswick, on the *Empress of France*, arrived back in Liverpool on March 4, 1956, and went back home to Atherton, Lancs. He joined FIDS in 1957, as a meteorologist, and wintered-over at Base B in 1958 and 1959, the second year also as base leader.

Hodson, Arnold Wienholt. b. Feb. 12, 1881, Bovey Tracey, Devon, son of physician Henry Algernon Hodson (known as Algernon) and his wife Sarah Wormald Wienholt. Governor of the Falkland Islands, 1926-30, who, between Feb. 17 and Feb. 22, 1928, made an official visit to the South Shetlands, the Palmer Archipelago, and the South Orkneys, on the *Fleurus*. Possibly the first ever Distinguished Visitor (q.v.) to Antarctica, certainly the first of the Falkland Islands governors to go south of 60°S. After a failure to marry Helen Mary Orchard in 1926, he married, on Nov. 15, 1928, in Aberdeen, Elizabeth Charlotte Sarah Hay. Most of his working life was spent in Africa, and he was knighted in 1932. On April 10, 1944 he flew into New York (as it were), and died there 6 weeks later, on May 26, 1944.

Mount Hoegh. 64°50' S, 62°47' W. Rising to 890 m, 2.5 km SSE of Duthiers Point, and E of Waterboat Point, Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base O between 1956 and 1958. Named by UK-APC on Sept. 23, 1960, for German mathematical optician Emil von Hoegh (1865-1915), designer of the first dou-

ble anastigmatic camera lens, in 1893. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. First climbed in 2001-02, by the British Army Antarctic Expedition.

Hoehn Peak. 77°38' S, 162°18' E. Rising to about 2000 m at the head of Matterhorn Glacier, it marks the S end of Morelli Ridge, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for Robert C. Hoehn, of the civil engineering department at Virginia Polytechnic Institute and State University, who studied the Lake Bonney ecosystem during the 1974-75 field season. NZ-APC acepted the name.

Glaciar Hoek *see* **Hoek Glacier**

Hoek, Heinz. b. 1913, Germany. He went to sea at 16, sailing on North German Lloyd ships as an ordinary sailor, mostly plying the west coast of North America. He was on the *Schwabenland* for GermAE 1938-39.

Hoek Glacier. 66°00' S, 65°04' W. Flows NW from the Simler Snowfield to Harrison Passage, southward of the Llanquihue Islands, on the W coast of Graham Land. Charted by BGLE 1934-37. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Henry William Hoek (1878-1951), German-Swiss ski pioneer. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Hoel Mountains. 72°00' S, 14°00' E. A group of mountains in the easternmost part of Fimbulheimen, in Queen Maud Land. They include the Payer Mountains and the Weyprecht Mountains. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hoelfjella, for Adolf Hoel (1879-1964), Norwegian geologist and Arctic explorer. US-ACAN accepted the name Hoel Mountains in 1966.

Hoelfjella *see* **Hoel Mountains**

Islote Hoffman *see* **Rugged Rocks**

Nunataks Hoffman. 66°13' S, 61°56' W. SE of Medea Dome, at the base of the Jason Peninsula, it is one of the numerous nunataks or groups of nunataks in this area named by the Argentines.

Mount Hoffman. 81°19' S, 85°15' W. A distinctive rock peak, 2.5 km SSW of Mount Tidd, in the S flank of the Pirrit Hills. Named by US-ACAN in 1964, for Daniel Hoffman, mechanic with the U.S. Ellsworth-Byrd Traverse Party of 1958-59, which positioned this peak on Dec. 7, 1958.

Hoffman, Emilio. Helmsman 1st class in the Argentine Navy, he was on the *Uruguay* in 1903.

Hoffman, Jack Edward. b. May 31, 1923. Drilling expert at Scott Base, 1956-57 and 1957-58. He was at McMurdo, 1960-61, and at Scott Base again in 1962-63. He was the supervisor of the NZ drilling team in the Dry Valley Drilling Project, in the summers of 1972-73, 1973-74, 1974-75, and 1975-76.

Hoffman Glacier. 83°22' S, 167°40' E. A narrow glacier, 16 km long, it flows E from Mount Miller, in the Holland Range, into Lennox-King Glacier, S of Rhodes Peak. Named by US-ACAN in 1966, for Lt. Cdr. Robert D. Hoffman, USN, commander of the *Mills* from Nov. 1962 until Nov. 11, 1964, which is an odd naming in that Cdr. Hoffman did not serve on the ship in Antarctic waters (*see* **The *Mills***).

Hoffman Ledge. 77°33' S, 160°54' E. An arcuate, flat-topped ridge, 2.8 km long and 0.8 km wide, W of Dais Col, in the feature called Labyrinth, in the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. The relatively level ridge rises to about 1000 m, and is bounded to the W and N by Healy Trough; cliffs and slopes bordering the ledge rise from 50 to over 100 m above the trough. Named by US-ACAN on July 14, 2004, for Jack Hoffman (q.v.), of the geophysics division, DSIR, superintendent of the NZ drilling team on the McMurdo Dry Valleys Drilling Project, 1973-76.

Hoffman Peak. 77°32' S, 162°52' E. On the SE side of Newall Glacier and Repeater Glacier, in the Asgard Range of Victoria Land. Named by US-ACAN in 1998. NZ-APC accepted the name.

Hoffman Point. 79°20' S, 160°30' E. An ice-covered coastal point at the S side of the mouth of Bertoglio Glacier, where that glacier flows into the Ross Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Cdr. George Lee Hoffman (b. Jan. 25, 1924, Rawlins, Wyo.), who joined the U.S. Navy in June 1941, and who was commander of Mobile Construction Battalion Number Eight, at McMurdo, during OpDF 64 (i.e., 1963-64). He retired from the Navy in July 1969.

Hoffmann, Gregory "Greg." b. June 9, 1941. Senior carpenter at Mawson Station in 1976, and building supervisor at Davis Station in 1978.

Hoffmann, Kurt. Stoker on the *Deutschland*, during GermAE 1911-12.

Höflegletscher. 80°20' S, 27°10' W. A glacier, NW of the Clarkson Cliffs, and SW of the Wiggans Hills, in the Shackleton Range. Named by the Germans.

Höflenunatak. 73°03' S, 160°36' E. A nunatak, SE of Meteorite Valley, in Victoria Land. Named by the Germans.

Hofman Hill. 77°55' S, 164°13' E. An ice-free peak, rising to 1065 m, at the N side of the terminus of Blackwelder Glacier, on the Scott Coast of Victoria Land. Named by US-ACAN in 1992, for biologist Robert J. Hofman, of the Marine Mammal Commission, in Washington, DC, from 1975. He conducted seal studies in 12 visits to Antarctica in the 1960s and 1970s. From 1983 to 1986, he was the U.S. representative to CCAMLR.

Mount Hofmann. 82°40' S, 160°36' E. A snow-covered mountain rising to 2000 m, between the mouths of Hamilton Glacier and Heilman Glacier, in the N part of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Walther F. Hofmann (1920-1993), USARP glaciologist on the Ross Ice Shelf, 1962-63.

Hofmann Spur. 78°17' S, 162°04' E. A spur on the E side of Dale Glacier, SW of Mount Huggins, in the Royal Society Range of Victoria Land. Named by US-ACAN for David J. Hofman, of the University of Wyoming and also of NOAA, who conducted upper atmospheric research through high-altitude ballooning in Antarctica for 15 years, contributing greatly to the understanding of the ozone hole.

Hofmann Trough. 77°00' S, 32°30' W. A submarine bank in the Weddell Sea. In Jan. 1997, Heinrich Hinze proposed the name, after Walther F. Hofmann (*see* **Mount Hofmann**), and the name was accepted by international agreement in June 1997.

Mount Hogan *see* **Mount Loweth**

The Hogback *see* **Hogback Hill**

Hogback Hill. 77°29' S, 163°36' E. A rounded mountain, rising to 735 m (the New Zealanders say 701 m), immediately N of Hjorth Hill, and about 5.5 km W of Cape Bernacchi, in Victoria Land. Charted by BAE 1910-13, and named descriptively by them. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Högberg, Herbert. b. Jan. 31, 1882, Sweden. Whaler who, while working in the South Shetlands with the Norwegians in the summer of 1917-18, on the *Solstreif*, died under unknown circumstances on Dec. 31, 1917, and was buried in the Whalers Bay Cemetery on Deception Island.

Högbom Outcrops. 80°15' S, 24°52' W. Rocks rising to about 1000 m at the E side of the terminus of Schimper Glacier, on the NE side of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Arvid Gustav Högbom (1857-1940), Swedish geologist who made contributions to the glacial geology of northern Sweden. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Mont Hoge *see* **Mount Hoge**

Mount Hoge. 72°35' S, 31°25' E. Rising to 2480 m, between Mount Van der Essen and Mount Brouwer, in the Belgica Mountains. Discovered by BelgAE 1957-58, under Gaston de Gerlache, who named it Mont Hoge, for Belgian meteorologist Edmond Hoge, member of the scientific committee of the expedition. US-ACAN accepted the name Mount Hoge in 1966.

Høgekletten. 72°27' S, 20°46' E. A hill (or nunatak) in the the W part of the Blåklettane Hills, about 28 km SW of Bamse Mountain, at the SW end of the Sør Rondane Mountains. Named by the Norwegians ("the high hill").

Högesyn. 72°05' S, 24°58' E. A height in Mefjell Mountain, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("high viewpoint").

Høgfonna *see* **Høgfonna Mountain**

Høgfonna Mountain. 72°45' S, 3°33' W. A high, flat, snow-topped mountain with sheer

rock sides, between Raudberg Valley to the N and Frostlendet Valley to the S, 5 km SE of Høgskavlen Mountain, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NCSAE 1949–52, and named by them as Høgfonna (i.e., "the high snowfield"). US-ACAN accepted the name Høgfonna Mountain in 1966.

Høgfonnaksla *see* **Høgfonnaksla Ridge**

Høgfonnaksla Ridge. 72°44' S, 3°34' W. A high rock ridge forming the N end of Høgfonna Mountain, on the S side of Raudberg Valley, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høgfonnaksla (i.e., "the high snowfield shoulder"), in association with the mountain. US-ACAN accepted the name Høfonnaksla Ridge in 1966.

Høgfonnhornet *see* **Høgfonnhornet Peak**

Høgfonnhornet Peak. 72°46' S, 3°37' W. Surmounts the SW extremity of Høgfonna Mountain, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høgfonnhornet (i.e., "the high snowfield horn"), in association with the mountain. US-ACAN accepted the name Høgfonnhornet Peak in 1966.

Hogg Islands. 67°31' S, 61°37' E. A group of small islands, about 0.9 km S of Kamelen Island, and about 5 km NW of Oldham Island, in the N part of the Stanton Group. Photographed aerially by LCE 1936–37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Re-mapped by Australian cartographers from ANARE air photos. Visited in 1969 by an ANARE dog sledge party to the area of Taylor Rookery. The central island in the group affords the best camp site in the area. Named by ANCA on May 18, 1971, for Dr. John Hogg, medical officer at Mawson Station in 1969. US-ACAN accepted the name in 1973.

Hoggestabben *see* **Hoggestabben Butte**

Hoggestabben Butte. 72°00' S, 3°58' E. A prominent butte, rising to 2410 m, 5 km N of Mount Hochlin, it is the highest northern outlier of that mountain, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Hoggestabben (i.e., "the chopping block"). US-ACAN accepted the name Hoggestabben Butte in 1966.

Høghamaren *see* **Høghamaren Crag**

Høghamaren Crag. 72°34' S, 0°36' E. The southernmost rock crag in Hamrane Heights, 1.5 km SW of Hamartind Peak, in the S part of the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høghamaren (i.e., "the high hammer"). US-ACAN accepted the name Høghamaren Crag in 1966.

Høghornet. 72°01' S, 26°01' E. One of the 5 nunataks that the Norwegians collectively call Horna, in the Sør Rondane Mountains. Named by the Norwegians (name means "the high horn").

Høgisen. 73°30' S, 14°45' W. A large ice hill, rising to between 900 and 1000 m, in the central part of the Kraul Mountains, in the W part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the high ice").

Hogmanay Pass. 69°15' S, 64°07' W. A pass, running NW-SE at an elevation of about 1230 m (the British say about 1150 m), immediately SW of Scripps Heights, it leads from the head of Casey Glacier to the middle of Lurabee Glacier, on the Wilkins Coast, in the NE part of Palmer Land. First photographed aerially by Ellsworth on Nov. 21, 1935, and its S portion was roughly mapped from these photos by U.S. cartographer W.L.G. Joerg, in 1936. Re-photographed in 1940 by USAS 1939–41, and on Dec. 22, 1947, by RARE 1947–48. In 1947 it was surveyed from the ground by Fids from Base E, and it was used by a FIDS sledging party from Base E in 1960, providing a good sledging route. They approached it from Stonington Island on the last day of the year, i.e., Hogmanay, hence the name given by UK-APC on Aug. 31, 1962. US-ACAN accepted the name later in 1962.

Høgryggen. 72°12' S, 23°46' E. A mostly snow-covered mountain crest, in the southernmost part of Mount Walnum, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("the high ridge").

Høgsaetet *see* **Høgsaetet Mountain**

Høgsaetet Mountain. 72°35' S, 3°23' W. A partly ice- and snow-covered mountain, just NE of Raudberget, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høgsaetet (i.e., "the high seat"). US-ACAN accepted the name Høgsaetet Mountain in 1966.

Høgsenga *see* **Høgsenga Crags**

Høgsenga Crags. 71°53' S, 5°23' E. High rock crags forming the NW extremity of Breplogen Mountain, in the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from aerial photos taken in 1958–59, during the same long expedition, and named by them as Høgsenga (i.e., "the high bed"). US-ACAN accepted the name Høgsenga Crags in 1967.

Høgskavlen *see* **Høgskavlen Mountain**

Høgskavlen Mountain. 72°40' S, 3°43' W. A prominent, flattish mountain, the middle part of which is covered in snow, just NE of Domen Butte, in the W part of Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høgskavlen (i.e., "the high snowdrift"). US-ACAN accepted the name Høgskavlen Mountain in 1966.

Høgskavlnasen *see* **Høgskavlnasen Point**

Høgskavlnasen Point. 72°42' S, 3°45' W. Forms the S extremity of Høgskavlen Mountain, in the W part of Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høgskavlnasen (i.e., "the high snowdrift point"), in association with the mountain. US-ACAN accepted the name Høgskavlnasen Point in 1966.

Høgskavlnebbet *see* **Høgskavlnebbet Spur**

Høgskavlnebbet Spur. 72°38' S, 3°39' W. Extends N from Høgskavlen Mountain, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høgskavlnebbet (i.e., "the high snowdrift spur"), in association with the mountain. US-ACAN accepted the name Høgskavlnebbet Spur in 1966.

Høgskavlpiggen *see* **Høgskavlpiggen Peak**

Høgskavlpiggen Peak. 72°39' S, 3°45' W. Rising from the NW part of Høgskavlen Mountain, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høgskavlpiggen (i.e., "the high snowdrift peak"), in association with the mountain. US-ACAN accepted the name Høgskavlpiggen Peak in 1966.

Høgskeidet *see* **Austre Høgskeidet**, **Vestre Høgskeidet**

Høgskolten. 72°24' S, 27°53' E. The highest peak in the Bleikskoltane Rocks, in the SE part of the Sør Rondane Mountains. Named by the Norwegians ("the high knolls"), in association with the rocks.

Høgskotet *see* **Høgskotet Spur**

Høgskotet Spur. 72°31' S, 3°30' W. A high rock spur in the middle of the N side of Borg Mountain, in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949–52, and named by them as Høgskotet (i.e., "the high bulkhead"). US-ACAN accepted the name Høgskotet Spur in 1966.

Hohes Land. 66°35' S, 92°00' E. A small stretch of the coast and its hinterland, immediately to the E of Wilhelm II Land, in East Antarctica. Named by the Germans.

Høigårdbrekka. 74°42' S, 10°47' W. The ice slope at the E side of Pionerflaket, running from the mountain the Norwegians call Lidkvarvet, in the NE part of Milorgfjella, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for lecturer Einar Musaeus Høigård (b. 1906), a Resistance leader during World War II. He died in Gestapo captivity.

Hoinkes Peak. 79°52' S, 82°58' W. A sharp

rock peak, rising to 1840 m, at the head of Henderson Glacier, where it forms part of the W wall of that glacier, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Herfried C. Hoinkes (1916-1975), Austrian micrometeorologist at Little America in 1957.

Holane *see* **Holane Nunataks**

Holane Nunataks. 71°58' S, 0°29' E. Two isolated nunataks, between Hellehallet and Nilsevidda, 30 km W of the N extremity of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and also from air photos taken in 1958-59 during the long NorAE 1956-60, and named by them as Holane. US-ACAN accepted the name Holane Nunataks in 1966.

Holbery-Morgan, Geoffrey Francis *see under* **Morgan**

Holcomb Glacier. 75°35' S, 142°48' W. Flows N to the coast of Marie Byrd Land, 14 km SE of Groves Island. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Leroy G. Holcomb, ionosphere physicist at Byrd Station in 1971.

Holden, Benjamin *see* **USEE 1838-42**

Holden Nunataks. 72°51' S, 65°00' W. A group of about 4 nunataks rising to 1500 m, near the head of Mosby Glacier, to the S of Journal Peaks, in the south-central part of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Surveyed by BAS in 1974-75, and named by UK-APC on Feb. 7, 1978, for Godfrey Andrew "Dog" Holden, BAS general assistant who took part in the survey. He had just wintered-over (1974) at Base E, and was about to winter over again, Base T in 1975. He was later base commander at Rothera Station, for the winter of 1977. US-ACAN followed suit with the naming.

Mount Holder *see* **Houlder Bluff**

Holder Peak. 69°45' S, 74°31' E. A low peak, just N of Young Peak, and 3.5 km E of Mount Caroline Mikkelsen, on a rock outcrop near the Ingrid Christensen Coast of Princess Elizabeth Land. Photographed aerially by LCE 1936-37. In 1946, Norwegian cartographers, using these photos, mapped it along with Mount Young, as Tvillingfjell (i.e., "twin mountain"). This peak, the higher and northern of the two, was later individualized by ANCA for James A. "Jim" Holder, weather observer who wintered-over at Davis Station in 1963, and who was a member of Bill Young's ANARE party from Davis Station that year that surveyed this area, and fixed this feature by triangulation from an astrofixed baseline. US-ACAN accepted the name in 1970.

Punta Holdfast *see* **Holdfast Point**

Holdfast Point. 66°48' S, 66°36' W. It forms the NE entrance to Lallemand Fjord, 20 km SW of Cape Rey, on the Loubet Coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE 1956-57 and from FIDS ground surveys conducted that same season by personnel from Base W. Named by UK-APC on July 7, 1959, for the fact that the pack-ice S of this point seems to hold fast while the pack to the N breaks out sooner. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Punta Holdfast.

Holdgate, Martin Wyatt. b. Jan. 14, 1931, Horsham, Sussex, but raised in Blackpool, son of teacher Francis Wyatt Holdgate (one of whose chemistry pupils at Brighton had been Vivien Fuchs), and his wife Lois Marjorie Bebbington. After Cambridge (first degree in zoology and botany; doctoral degree in insect physiology), he developed an interest in the ecology of Antarctica and the sub-Antarctic islands. He was on the 1955-56 scientific survey of Gough Island, recording invertebrate animals, and helping to make the first accurate map of the island, and wrote a book about the adventure—*Mountains in the Sea*. In 1958 he led the Royal Society Expedition to southern Chile. From 1961 to 1966 he was chief BAS biologist, and developed the BAS biological program based on Signy Island, in the South Orkneys. This was the first coordinated investigation of all the principal components of the Antarctic terrestrial ecosystem. He summered-over on Signy Island in 1961-62 and 1963-64, surveying soil and vegetation, and toward the end of that season, he carried out, in the *Protector*, the most comprehensive survey to date of the South Sandwich Islands. In 1963 he had married Elizabeth Mary, born Dickason, and widow of Dr. H.H. Weil. Between 1964 and 1968 he was secretary and chairman of the SCAR working group on biology, organizing its 2nd symposium in 1968, and editing the 2-volume proceedings entitled *Antarctic Ecology*. While serving from 1974 to 1988 as chief scientist with the UK Department of the Environment, he remained involved with Antarctic affairs, participating in the international meetings at Teniente Rodolfo Marsh Station in 1982 and at South Beardmore Camp in 1985. In 1988 he left the Civil Service to become director general of the International Union for Conservation of Nature and Natural Resources (now known as the World Conservation Union), a post he held until 1994, when he was knighted. He was a lecturer on cruise ships in Antarctica in 2004, 2005, and 2008. Among his several other books are: *From Care to Action: Making a Sustainable World*, and his memoirs, *Penguins and Mandarins*.

Mount Holdsworth. 72°08' S, 166°35' E. A granite peak rising to 2360 m, and surmounting the SE end of the small massif at the head of Pearl Harbor Glacier, that massif forming the W wall of Midway Glacier, in the E part of the Monteath Hills, in the Victory Mountains of Victoria Land. Named by the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for Gerald Holdsworth, leader of the northern party of this expedition (*see also* **Holdsworth Glacier**). NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Holdsworth Glacier. 86°30' S, 154°00' W. A tributary glacier, about 13 km long, it flows NE from Fuller Dome into the SE side of Bartlett Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1967, for New Zealander Gerald Holdsworth (b. 1939), geologist doing a 2-year post-graduate study on polar glaciers at Ohio State University, who summered at McMurdo Station, 1965-66. In 1962-63 he had been deputy leader of the NZ Federated Mountain Clubs Antarctic Expedition, and in 1963-64 had climbed Mount Erebus. *See also* **Mount Holdsworth**.

Roca Hole *see* **Hole Rock**

Hole Rock. 61°53' S, 57°41' W. A rock awash, it is the largest and most southerly of 3 small rocks close NW of North Foreland (the NE cape of King George Island), in the South Shetlands. Charted in 1937 by personnel on the *Discovery II*, and so named by them for the conspicuous hole which runs through it. It appears (misspelled) on their 1937 chart as Nole Rock. It appears on a British chart of 1942, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears on a 1949 Argentine chart as Roca Hole, but on one of their 1953 charts as Roca Perforada ("i.e., "perforated rock"). On 2 Argentine charts from 1957 it appears as Roca Ventana, and Roca de la Ventana respectively, the latter being the name accepted by the Argentine gazetteer of 1970. The Chilean gazetteer of 1974 accepted Roca Ventana. Originally plotted in 61°53' S, 57°44' W, it was re-plotted by the UK, in late 2008.

Holgersen, Holger. b. May 30, 1914, Stavanger, Norway. One of the world's leading ornithologists, he was scientific leader of NorAE 1947-48, on the *Brâtegg*. From 1948 to 1958 he was head of the zoological department at Stavanger Museum, and from 1958 to 1978 director of the museum. He ringed over 100,000 birds. He died on April 23, 1996.

Holiday Peak. 78°06' S, 163°36' E. Also known as The Heart. Rising to over 800 m (the New Zealanders say about 1500 m), between the lower ends of Miers Glacier and Adams Glacier, in Victoria Land. So named by VUWAE 1960-61, because of its prominent position overlooking the expedition's camp at Christmas of 1960. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Holl, Richard C. b. June 17, 1910, Reading, Pa., but grew up partly in Berks Co., Pa., son of railroad company store keeper Charles F. Holl and his wife Ida. On leaving school he became a surveyor with the gas company, and was a lieutenant with the USNR, and a photogrammetrist with the U.S. Navy Hydrographic Office, when he took part in OpW 1947-48. He retired as a lieutenant commander, and died on Feb. 9, 2004, in Venice, Fla.

Holl Island. 66°25' S, 110°25' E. A rocky, triangular-shaped island, 2.6 km long, and rising to 95 m above sea level, marking the SW end of the Windmill Islands, off the Budd Coast of Wilkes Land. Delineated from air photos taken in 1947 by OpHJ 1946-47, and in 1948 by OpW 1947-48. Named by US-ACAN in 1955, for

Richard Holl (q.v.), a member of the party who visited this island during OpW.

Holladay Nunataks. 69°31' S, 159°19' E. A cluster of nunataks, 5 km in extent, occupying the central part of the peninsula between the terminus of Tomilin Glacier and the Gillett Ice Shelf, about 13 km NE of Parkinson Peak, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Billy W. Holladay, chief aviation electronics technician, USN, maintenance control chief at McMurdo during OpDF 68 (i.e., 1967-68). ANCA accepted the name on July 31, 1972.

Holland, Thomas E. "Tom." lst engineer on the *North Star* during USAS 1939-41.

Holland Range. 83°10' S, 166°00' E. A rugged range of mountains, about 100 km long, just W of the Ross Ice Shelf, it extends along the Shackleton Coast between Robb Glacier in the N and (to the S) Richards Inlet and Lennox-King Glacier, and westward as far as Bowden Névé. Peaks in this range include Mount Miller, Mount Reid, Mount Allen, Mount Young, Mount Tripp, Mount Lloyd, and the Longstaff Peaks. Named by the Ross Sea Committee during BCTAE 1957-58, for Sir Sidney George Holland (1893-1961), prime minister of NZ, 1949-57, and a supporter of his country's participation in that expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Península Hollick-Kenyon *see* **Hollick-Kenyon Peninsula**

Hollick-Kenyon, Herbert "Bertie." b. April 17, 1897, London, as Herbert Kenyon, son of Herbert Kenyon. In 1909 he and his family emigrated to Ewings Landing, British Columbia, and Bertie joined the Canadian Army in 1914 as a trooper. Wounded twice in France, he was sent home, and joined the Royal Flying Corps in 1917, as a 2nd lieutenant. On Feb. 16, 1922, he married Mary "Meme" Manning in Melksham, Wilts, and they raised a family (two children), first in Hampstead, in London, then in Melksham. In the 1920s he was a rescue pilot for missing Arctic explorers, and in 1928 became a staff pilot for Trans-Canada Airlines. On May 9, 1935, with 6100 hours in the air in 35 types of plane, he was selected to replace Bernt Balchen as Ellsworth's chief pilot in his Antarctic expedition of 1935-36. With Ellsworth in the co-pilot's seat, he became the first man to make a transantarctic crossing, from Dundee Island to the Bay of Whales, in the *Polar Star*, from Nov. 23 to Dec. 15, 1935. In 1942 he left Trans-Canada and became the first chief pilot for Canadian Pacific Airlines. He retired in 1962, and died on July 30, 1975, in Vancouver.

Hollick-Kenyon Peninsula. 68°35' S, 63°50' W. A peninsula, really an ice-covered spur projecting over 60 km in a NE arc into the Larsen Ice Shelf (on the E coast of the Antarctic Peninsula) from its base between Mobiloil Inlet (on the Bowman Coast) and Casey Inlet and Revelle Inlet (on the Wilkins Coast) in the main mountain mass of the Antarctic Peninsula. Cape Agassiz is at its tip. Partially photographed aerially by Wilkins on Dec. 20, 1928, and by Ellsworth on Nov. 23, 1935. If it does appear on Wilkins' map of 1929, it is not there as a defined feature. Likewise, it was not mapped from the above mentioned photos in 1936, by U.S. cartographer W.L.G. Joerg. Partially re-photographed aerially and partially surveyed from the ground in Dec. 1940, by USAS 1939-41, when the E extremity forming Cape Agassiz was described as a snow-covered island. It appears that way on a 1942 USAAF chart and on a 1943 U.S. Hydrographic Office chart. Seen aerially by a RARE-FIDS team in Aug.-Sept. 1947, when the peninsula was identified as the feature partially photographed by Wilkins and Ellsworth, with USAS's "island" joined to the rest of the peninsula. It was surveyed from the ground in Nov. 1947, by a combined sledging team of RARE personnel and Fids from Base E, and FIDS named it Hollick-Kenyon Peninsula, for Herbert Hollick-Kenyon (q.v.), Ellsworth's pilot on the 1935 flight. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit later that year. It appears as such on a British chart of 1954, and in the 1955 British gazetteer, as well as in the 1956 American gazetteer. On an Argentine chart of 1957, it appears as Península Hollick-Kenyon, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On Sept. 23, 1960, UK-APC (and only UK-APC) shortened the name to Kenyon Peninsula, partly because that was his real name (i.e., Kenyon, not Hollick-Kenyon), and also to avoid a compound name. The British plot it in 68°27' S, 63°33' W.

Hollick-Kenyon Plateau. 78°00' S, 105°00' W. Also called Kenyon Plateau. A large, relatively featureless plateau, rising to between 1200 and 1800 m above sea level, between the N portion of the Ellsworth Mountains to the E, and Mount Takahe and the Crary Mountains to the W. Discovered aerially by Ellsworth (and Hollick-Kenyon), Nov.-Dec. 1935, and named by Ellsworth for his pilot on that flight, Herbert Hollick-Kenyon. US-ACAN accepted the name in 1947.

Hollin Island. 66°19' S, 110°24' E. About 1.5 km long, it lies N of Midgley Island, in the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1963, for John Trevor Hollin, glaciologist at Wilkes Station in 1958. ANCA accepted the name. *See also* **Ostrov Serp** (under **S**).

Mount Hollingshead. 70°41' S, 66°10' E. A large peak, T-shaped in plan, about 5 km E of Mount Dowie, in the central part of the Aramis Range, in the Prince Charles Mountains. Visited in Jan. 1957 by Bill Bewsher's ANARE Southern Party, and named by ANCA for John Alfred Hollingshead (b. Nov. 8, 1928), radio supervisor at Mawson Station in 1956. US-ACAN accepted the name in 1965.

Mount Hollingsworth. 67°15' S, 50°21' E. A mountain, 1.5 km S of Priestley Peak, close S of Amundsen Bay, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA on Nov. 24, 1961, for Roderic J. "Rod" Hollingsworth, geophysicist at Mawson Station in 1961. US-ACAN accepted the name in 1965.

Hollingsworth Glacier. 75°33' S, 159°57' E. A broad glacier of low gradient, flowing NE from the vicinity E of the Ricker Hills, to enter David Glacier just E of Trio Nunataks, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Jerry L. Hollingsworth, of the U.S. Weather Bureau, meteorologist who wintered-over at Pole Station in 1966. ANCA accepted the name.

Hollingworth Cliffs. 80°26' S, 25°33' W. A line of cliffs on the S side of Mount Absalom, in the Herbert Mountains of the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Sydney Ewart Hollingworth (1899-1966), professor of geology at University College, London, 1946-66, who specialized in the Pleistocene period in northwest England. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Hollister Peak. 78°33' S, 85°35' W. A sharp peak, rising to 4279 m, in the central part of the Vinson Plateau, on the Vinson Massif, about 2 km S of Mount Vinson itself. Named by US-ACAN on Nov. 1, 2006, for Charles Davis Hollister (1936-1999), geologist, oceanographer, and member of the first group to climb Vinson (*see* **Mount Vinson**).

Hollow Valley *see* **Belemnite Valley**

Mount Holloway. 84°45' S, 163°36' E. Rising to 2650 m, between Swinford Glacier and Table Bay, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Harry Lee Holloway, Jr. (b. May 22, 1926, York Co., Va.), Roanoke College parasitologist at McMurdo, 1964-65, and later, long associated with the University of North Dakota.

Bahía Holluschickie *see* **Holluschickie Bay**

Holluschickie Bay. 63°59' S, 58°16' W. On the W coast of James Ross Island, entered between Matkah Point and Kotick Point. Probably discovered in Oct. 1903, during SwedAE 1901-04. Surveyed by Fids from Base D in Dec. 1945. Named by FIDS in Aug. 1952 for the young seals (the holluschickie) in Kipling's *Jungle Book*. There were many young seals here in that year. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963. It appears in the 1974 British gazetteer. On an Argentine chart of 1959 it appears as Caleta San Servando, and there is a 1957 British reference to it as Hidden Lake Bay (*see* **Hidden Lake**). Today, the Argentines call it Bahía Holluschickie.

Holm, F. *see* **Órcadas Station**, 1909

Mount Holm-Hansen. 77°36' S, 162°11' E. A prominent mountain, rising to 1920 m, between lower David Valley and Bartley Glacier, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for Osmund Holm-Hansen, plant physiologist who, working in the 1959-60 season, was one of the first U.S. scien-

tists to visit and conduct research in both Taylor Valley and Wright Valley. He was with the Scripps Institution of Oceanography from 1962, and, from 1976, conducted extensive field research, including studies of microbial populations in McMurdo Sound, the Ross Sea, and other ocean areas S of the Antarctic Convergence. NZ-APC accepted the name.

Holman, Paul Myhr. b. April 3, 1916, Conway, Wash., but raised partly in East Stanwood, son of Myhr Holman (a brakeman at a logging camp) and his wife Clara. His first sea outing was as a waiter on the *North Star* during USAS 1939–41. He remained with the Merchant Marine, becoming a cook on ships plying between Washington state and British Columbia. He died on Jan. 14, 1989, in Ephrata, Wash.

Holman Dome. 66°27' S, 98°54' E. A dome-shaped nunatak, about 3.5 km SW of Watson Bluff, on the E side of David Island, off the coast of Queen Mary Land. Discovered by the Western Base Party of AAE 1911–14, and named by Mawson for William Arthur Holman (1871–1934), premier of NSW in 1911. US-ACAN accepted the name in 1953, and ANCA followed suit.

The *Holmberg* *see* **The *Dóctor Eduardo Holmberg***

Holmberg, Vilhelm Jönsson. b. 1879, Sweden. He was one of the stokers on the *Antarctic* during SwedAE 1901–04.

Mount Holmboe. 77°20' S, 86°35' W. Rising to 1730 m, 1.5 km N of Mount Liavaag, and 11 km NW of Mount Weems, near the extreme N end of the Sentinel Range, in the Ellsworth Mountains. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for Dr. Jørgen Holmboe.

Holmboe, Harald. b. Jan. 19, 1904, on an island near Hammerfest, in northern Norway, son of the Rev. Leonhard Christian Borchgrevink Holmboe, and his wife Thea Louise Schetelig, and younger brother of Jørgen Holmboe (see below). He went to sea in 1923, as an engineer on Norwegian merchant ships. On May 20, 1933, at Ålerund, he signed up as chief engineer of the *Wyatt Earp* for Lincoln Ellsworth's 1933–34 expedition to Antarctica, and he was back with Ellsworth, again as chief engineer on the *Wyatt Earp*, on the 1934–35 and 1935–36 expeditions. He was still plying the seas on Norwegian vessels as a chief engineer in the mid 1950s. He died on April 27, 1991, in Kristiansand, Norway.

Holmboe, Jørgen. b. Nov. 8, 1902, on an island not far from Hammerfest, in the far north of Norway, son of minister Leonhard Christian Borchgrevink Holmboe and his wife Thea Louise Schetelig. He was the older brother of Harald Holmboe (see above). The Rev. Holmboe was Jørgen's first teacher. In 1911 he left the island for the first time, and went to school in Tromsø. After graduation from Oslo University, he went to work for the Norwegian Weather Service, in Tromsø. In 1932 he became a professor at the Geophysics Institute, in Bergen, and was meteorologist on the Ellsworth Expedition, 1933–34. On his return to Norway after the expedition, he was injured in a skiing accident, and in 1935 married his nurse, Kirsten Bendixen. He was an associate professor of meteorology at MIT, 1936–40, and from 1943 was with the department of meteorology, at the University of California, in Los Angeles. He retired in 1970, and died on Oct. 29, 1979, in Los Angeles.

Holme Bay. 67°35' S, 62°42' E. A bay, between 33 and 38 km wide, it indents the coast of Mac. Robertson Land for 8 km, N of the Framnes Mountains. Photographed in Jan. and Feb. 1937 by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, and named by them as Holmevika, for the many "holmen" (islands) in the bay. US-ACAN accepted the translated name in 1947, and ANCA followed suit on Nov. 28, 1955.

Holmen Graa *see* **Gray Island**

Isla Holmes *see* **Holmes Island**

Mount Holmes. 66°47' S, 64°16' W. A buttress-type mountain, rising to 1440 m (the British say 1580 m), 5 km NW of Mount Hayes, on the SW side of Cabinet Inlet, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially in late 1947, by RARE 1947–48, and charted that year by Fids from Base D, who named it for Maurice Gerald Holmes (1885–1964; knighted in 1938), permanent secretary of the Board of Education, 1937–45, bibliographer of Captain Cook. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a 1954 British chart, and also in the 1955 British gazetteer. Resurveyed by BAS personnel from Base E in 1963–64.

Holmes, Bryan. b. 1932, Church Stretton, Salop. He joined FIDS in 1956, as a surveyor, and wintered-over at Base J in 1957. He was attached to the RN Hydrographic Survey unit in 1957–58. In the mid-1960s he was in Nigeria.

Holmes, H. b. 1887, Hull. Fireman on the *Nimrod* during the first half of BAE 1907–09. He was still plying the Antipodean seas as a fireman in 1917.

Holmes, James M. b. Feb. 21, 1836, Ledyard, Conn., son of Noyes Holmes and his second wife Mary Ann Wheeler. He was one of the crew on the *Peru* in 1870–71, in the South Atlantic, under Capt. Robert H. Glass. In 1871–72 he was captain of the *Franklin*, in the South Shetlands, and the following season, 1872–73 was on the *Francis Allyn*, as 1st mate, again under Glass, in the South Atlantic. In 1874–75 he was 1st mate on the *Flying Fish*, in the South Atlantic, and in 1876–77 was skipper of the same vessel, in the same waters. He was again in the South Atlantic, in 1877–78, as master of the *Golden West*. That season he visited South Georgia.

Holmes, Jeremiah. A Stonington, Conn., mariner who was a principal owner of the fleet sent out in 1820–21 to the South Shetlands under the command of Capt. Alexander Clark. Holmes commanded the *Emeline* on this trip.

Holmes, Leslie. An ex-Fleet Air Arm radio operator, who served on the *Kelly* during World War II, he was flight radio operator on the *Balaena*, during that vessel's first whaling expedition, 1946–47.

Holmes, Michael John "Mike." BAS medical officer who wintered-over at Base E in 1968 and 1971. He had to handle two famous cases by radio, the "cases" being at other stations that he couldn't visit in person, bases that had no doctor of their own. In 1968 it was the tragic case of Ken Portwine, and in 1971 the case of Roger O'Donovan.

Holmes, Silas. b. Oct. 20, 1815, Bristol, RI, son of Dr. Jabez Holmes and his wife Ruth Gorham. He graduated from Yale, as a doctor, and on Oct. 2, 1837, married Maria Parker Greene. He was assistant surgeon on USEE 1838–42, one of the few officers on the expedition who managed to stay in Wilkes' good graces. He joined the *Porpoise* in Sydney, and transferred to the *Peacock*. Yale has his diary of this expedition. While serving as a surgeon with the U.S. Navy, he drowned in Mobile Bay on May 21, 1849, when his boat capsized.

Holmes & Narver, Inc. Support contractor out of Orange, Calif., who began civilian contract work for USARP in early 1968. On April 1, 1980 ITT/Antarctic Services, Inc., took over the contract (*see* entry under ITT for what a support contractor did/does). *See also* **Antarctic Support Associates**.

Holmes Block. 78°13' S, 161°35' E. A block-like bluff rising to 1855 m, at the W side of Ruecroft Glacier, 3 km W of Cooke Bluff, in Victoria Land. Named by US-ACAN in 1995, for John W. Holmes, cartographer with the USGS branch of special maps, 1951–77, a specialist in Antarctic mapping.

Holmes Bluff. 74°59' S, 133°43' W. Marks the N end of the Demas Range, on the coast of Marie Byrd Land. Algae, lichens, and petrels are found here. Discovered aerially by USAS 1939–41. First mapped in any detail by USGS, from ground surveys, and USN air photos takem between 1959 and 1965. Named by US-ACAN in 1966, for Thomas J. Holmes, USARP meteorologist at Byrd Station in 1961.

Holmes Glacier. 66°46' S, 126°54' E. A broad glacier flowing into the W side of Porpoise Bay, about 17 km S of Cape Spieden, on the Banzare Coast. Delineated from air photos taken by OpHJ 1946–47, and named by US-ACAN in 1953, for Silas Holmes. ANCA accepted the name on May 18, 1971.

Holmes Hills. 72°08' S, 63°25' W. A group of ridges and nunataks, rising to about 1700 m, between Runcorn Glacier and Beaumont Glacier, they are bounded to the SW by the Brennecke Nunataks, in south-central Palmer Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969, and from ground surveys conducted by BAS personnel from Base E in 1972–73. Named by US-ACAN in 1978, for Arthur Holmes (1890–1965), professor of geology at Edinburgh University, 1943–56. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

Holmes Island. 65°41' S, 65°15' W. An island,

2.5 km long, S of Vieugué Island, in the Biscoe Islands, near the SW entrance of the Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, for Bryan Holmes. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Isla Holmes.

Holmes Ridge. 79°10' S, 156°42' E. A rock ridge, 3 km long, the largest feature in the W part of the Finger Ridges, in the Cook Mountains. Named by US-ACAN in 2001, for Robert E. Holmes, of the Space Science and Engineering Center, at the University of Wisconsin, at Madison, who was involved with the siting and operation of automatic weather stations throughout Antarctica, 1991-97.

[1]**Holmes Rock**. 62°23' S, 59°50' W. A rock, rising to about 45 m above sea level, 1.5 km NW of Emeline Island, off the W side of the Aitcho Islands, in the English Strait, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Aug. 31, 1962, for Jeremiah Holmes. US-ACAN accepted the name in 1965. It appears on a British chart of 1968.

[2]**Holmes Rock**. 66°02' S, 111°05' E. A small rocky island, about 2.3 km SW of Thompson Island, in the Balaena Islands, off the Budd Coast of Wilkes Land. The Balaena Islands were delineated from air photos taken on Feb. 2, 1947, during OpHJ 1946-47, and they were probably sketched from the British whaler *Balaena*, 10 days later, and shown (erroneously) to be peaks. This rock, originally plotted in 66°04' S, 109°55' E, was named by ANCA for Leslie Holmes.

Holmes Summit. 80°40' S, 24°39' W. Rising to 1875 m, it is the highest peak in the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, climbed and surveyed by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Arthur Holmes (*see* **Holmes Hills**). US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Holmevika *see* **Holme Bay**

Holness, Ernest "Ernie." Also known as "Holie," he is often erroneously listed as Albert Ernest Holness. b. Dec. 7, 1892, Hull, illegitimate son of an unknown father by Elizabeth Emma Holness. He was raised at 8 Alma Avenue, by his Kentish grandparents, master mariner James Holness and his wife Elizabeth Easter. His grandfather was lost at sea in 1898 on the *Boyne*. Ernie worked on the Hull trawlers until he went to Antarctica as able seaman and fireman on the *Endurance*, during BITE 1914-17, but his real job was as 2nd stoker to Stephenson. At 4 P.M., on Oct. 27, 1914 he found Blackborow stowed away in his locker. At 11 P.M., on April 9, 1916, while in his sleeping bag on an ice floe, the ice opened up and he fell into the water. Shackleton rescued him. "Are you all right?" "Yes, Boss. Only trouble is, I lost my bloody baccy in the drink." On June 15, 1916, as one of the stranded Elephant Island group, he caught the first fish. Although Orde-Lees considered him "the most loyal to the expedition," Shackleton recommended every one of the party for the prestigious Polar Medal except 4 — Holness, Stephenson, Vincent, and McNish. On June 12, 1917, at Hull, he married Lillian Rose Bettles, and carried on trawling. On Sept. 20, 1924 he was washed overboard and lost at sea off the Faeroes while on the *Lord Lonsdale*.

Bukhta Holodnaja. 67°54' S, 68°18' E. A bay on the coast of Mac. Robertson Land. Named by the Russians.

Ozero Holodnoe. 70°46' S, 11°52' E. A lake, N of the easternmost part of Russeskaget, in the easternmost part of the Schirmacher Hills, in Fimbulheimen, in Queen Maud Land. Named by the Russians (it means "cold lake"). The Norwegians translated this as Cholodnoevatnet.

Holoviak Glacier. 71°22' S, 72°05' W. Flows W into the head of Mendelssohn Inlet, on Beethoven Peninsula, in the SW part of Alexander Island. Mapped by USGS from USN air photos taken in 1967-68, and from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for Judy C. Holoviak, technical editor, 1964-77, of the *Antarctic Research* Series, published by the American Geophysical Union. From 1978, she was director of publications for the Union. UK-APC accepted the name on May 13, 1991.

Holst Peak. 71°14' S, 69°25' W. A rocky pyramidal peak rising to 1000 m (the British say 1185 m), midway between the S end of the Walton Mountains and the LeMay Range, on the NE side of the Satellite Snowfield, in the central part of Alexander Island. In 1959-60, Searle of the FIDS mapped this feature from air photos taken in late 1947 during RARE 1947-48, and plotted it in 71°20' S, 70°06' W. Named by UK-APC on March 2, 1961, for Gustav Theodore Holst (1874-1934), the British composer. US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, this feature appears in the 1977 British gazetteer.

Holst Point. 65°32' S, 63°50' W. At the head of Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. It divides the bay into 2 arms. Charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Axel Holst (1860-1931), Norwegian biochemist and vitamin pioneer. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Holsteingletscher. 71°06' S, 166°25' E. A glacier due W of Drabek Peak, in the Anare Mountains. Named by the Germans.

Holstnuten. 74°19' S, 9°38' W. A summit, SW of Lütkenuppen, and next to Leabotnen, in Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Kai Christian Middelthon Holst (b. 1913), Resistance operative in Lillehammer during World War II. He survived the war, bur died a month after the surrender, in an apartment in Stockholm. They say it was suicide, but that is doubtful, given the number of German Intelligence agents in Stockholm who were only too keen to kill him.

Mount Holt. 69°25' S, 71°37' W. Rising to about 750 m, near the terminus of Palestrina Glacier, at Lazarev Bay, in the N part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, working from air photos taken by RARE 1947-48, and plotted by him in 69°25' S, 71°43' W. It has since been replotted from BAS surveys conducted between 1975 and 1977. Named by US-ACAN for Cdr. Fred C. Holt, USN, commanding officer of VXE-6 during OpDF 76 (i.e., 1975-76). The season before, he had been commander of an LC-130 Hercules aircraft in Antarctica. UK-APC accepted the name on June 11, 1980.

Holt, Samuel B. *see* **USEE 1838-42**

Holt, Viggo. b. Jan. 23, 1906, Gammelby, Denmark, son of Waldemar Holt and Anna Marie Dorotea Knudsen. Waldemar died when they were living in Copenhagen, and in Sept. 1910 the widow and son left Hamburg on the *Cap Vilano* bound for Buenos Aires. They later moved to Montevideo, which is where Viggo was living when the Wilkins-Hearst Expedition pulled into town in 1928. Because he was a radio operator who spoke not only Spanish and English, but also the Scandinavian languages, he was taken on as radioman for the expedition. He came back to Montevideo in March 1929, and then in late 1929 re-joined the expedition for the 2nd half. In 1960, in Montevideo, his adventures were reported in the newspaper *El Día*.

Holt Glacier. 74°40' S, 110°36' W. A broad glacier on Bear Peninsula that flows E to the sea between Grimes Ridge and Jones Bluffs, in Marie Byrd Land. First delineated by USGS from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Joseph V. Holt, a member of the U.S. Army Aviation Detachment in Antarctica, in 1965-66. Originally plotted in 74°41' S, 110°18' W, it has since been replotted.

Holt Inlet. 64°22' S, 63°17' W. A western arm of Lapeyrère Bay, it is 3 km long and 1.5 km wide, with the entrance S of The Hump, on Anvers Island, in the Palmer Archipelago. Named by US-ACAN on July 17, 2007, for Rennie S. Holt, director of the Antarctic Ecosystem Research Group, at the Southwest Fisheries Science Center, at la Jolla, Calif., leader of the U.S. Antarctic Marine Living Resources (AMLR) program to waters adjoining the South Shetlands and the northern part of the Antarctic Peninsula, 1989-2006. UK-APC accepted the name on May 20, 2008.

Holt Nunatak. 64°17' S, 59°21' W. A prominent nunatak, rising to about 830 m, at the NE corner of Larsen Inlet, on the Nordenskjöld Coast of Graham Land. Mapped by FIDS cartographers from surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for the Holt Manufacturing Company, of Stockton, Calif., which, in 1906, began making commercial chain-track tractors, and the Holt Caterpillar Tractor Company, of New York,

founded in 1908. US-ACAN accepted the name later in 1964.

Holt Peak. 79°45' S, 81°04' W. A bare rock peak rising to 850 m, surmounting the NE end of the Meyer Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for William C. Holt, USARP aurora scientist at Ellsworth Station in 1961.

Holt Point. 66°17' S, 110°30' E. Marks the W extremity of Bailey Peninsula, at the E side of the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1963, for James R. Holt, USN, photographer's mate at Wilkes Station, 1958.

Holtanna *see* **Holtanna Peak**

Holtanna Peak. 71°55' S, 8°22' E. Rising to 2650 m, 1.5 km N of Mundlauga Crags, in the E part of Fenriskjeften Mountain, in the Drygalski Mountains, in the Orvin Mountains of Filbulheimen, in Queen Maud Land. Its E portion is occupied by a small cirque glacier. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Holtanna (i.e., "the hollow tooth"). US-ACAN accepted the name Holtanna Peak in 1967.

Holteberg. 69°24' S, 157°51' E. The highest point at the E margin of a chain of hills, 8 km NE of Thompson Peak, in Oates Land. Named by the Germans on Oct. 20, 1998, for Schloss Holte, in North Rhine Wetsphalia.

Bahía Holtedahl *see* **Holtedahl Bay**

Holtedahl, Olaf. b. June 24, 1885, Kristiania, Norway, but grew up in Aker, son of Arne Holtdahl and his wife Mathilde. He was the geologist who, with Ola Olstad, went down to Antarctica on the *Norvegia* in 1927-28. While the ship was being repaired in South Georgia, the two scientists went island-hopping in the South Shetlands, and the Palmer Archipelago, using local Norwegian whalers as lifts. Holtedahl made the first systematic study of the volcano on Deception Island. He married Petter Sørlle's daughter, Reid (*see* **Reid Island**), was professor of geology at the University of Oslo, 1920-58, and died in 1975.

Holtedahl Bay. 66°06' S, 65°19' W. A bay, averaging 10 km wide, indenting the Graham Coast for 16 km in a NW-SE direction between Prospect Point and Black Head, on the W coast of Graham Land. Its coasts are formed by ice cliffs. Discovered and mapped in March 1936, by BGLE 1934-37, and named by Rymill for Olaf Holtedahl. It appears on his 1938 map of the expedition. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1961. It appears on a 1947 Chilean chart as Bahía Holtedahl, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57.

Holtedahl Hill. 62°59' S, 60°32' W. A prominent hill, rising to an elevation of between 50 and 150 m above sea level, S of Mount Pond, at Whalers Bay, Deception Island, in the South Shetlands. First charted by Don Hawkes in 1961. Named by the Poles on Sept. 1, 1999, for Olaf Holtedahl.

Holtedahl Mountains *see* **Kurze Mountains**

Holtedahl Peaks. 71°47' S, 8°58' E. A group of peaks and ridges lying northward of Steinskaret Gap, and forming the N portion of the Kurze Mountains, in Queen Maud Land. The Norwegians, in 1966, inadvertently called the whole range Holtedahlfjella (i.e., "the Holtedahl mountains"), for Olaf Holtedahl, not realizing that they had already been named the Kurze Mountains. Consequently, the term has become more restricted. US-ACAN accepted the name in 1970.

Holtedahlfjella *see* **Holtedahl Peaks**, **Kurze Mountains**

Holtet Nunatak. 74°50' S, 73°56' W. Rising to about 1300 m (the British say about 1200 m), 3 km NE of Grossenbacher Nunatak, in the Lyon Nunataks, where Ellsworth Land meets southern Palmer Land. Mapped by USGS from USN air photos taken between 1965 and 1968, and also from U.S. Landsat images taken in 1973-74. Named by US-ACAN in 1988, for Jan A. Holtet, upper atmosphere physicist with the Norwegian Institute of Cosmic Physics, who was at Siple Station in 1970-71. UK-APC accepted the name on Feb. 15, 1988.

Holth, Baard. b. 1889, Sandefjord, Norway, son of Mrs. Jensine Holth. He became a whaler, in the Arctic, and was commander of the *Wyatt Earp* during Ellsworth's expeditions of 1933-34 and 1934-35.

Holth Peaks. 77°25' S, 86°43' W. A group of peaks, rising to an elevation of about 1820 m above sea level, in the form of a short NE-SW ridge, 3 km NW of Mount Lymburner, near the N end of the Sentinel Range, in the Ellsworth Mountains. Discovered aerially on Nov. 23, 1935 by Ellsworth. Named by US-ACAN in 1961, for Capt. Baard Holth.

Holyoake Range. 82°13' S, 160°00' E. A range of mountains inland from, and parallel to, the Nash Range, in the S part of the Churchill Mountains, it extends from the Starshot Glacier in the N and runs SSE for about 40 km to Cambrian Bluff (on the Nimrod Glacier) in the S (or, to put it another way, between Prince Philip Glacier and Errant Glacier), and is bounded on the E by Algie Glacier and Silver Ridge. The highest point in the range is Hunt Mountain. Named by NZ-APC for Keith Holyoake, prime minister of NZ, 1960-72, and who, as minister of agriculture in the 1950s, supported NZ participation in BCTAE. US-ACAN accepted the name in 1966.

Holystone Slope. 76°46' S, 161°20' E. A shallow "blue ice" glacial slope distributary overflow from Flight Deck Névé, about 2.5 km wide, that descends NW over subdued steps, between Dotson Ridge and Dory Nunatak, in the Convoy Range of Victoria Land. In 1991 the name Quarterdeck Ice was proposed, but in 1993, in keeping with the practice of naming certain features in this area after nautical terms, it was named by NZ-APC in 1991. Holystone is a soft sandstone used for scrubbing decks on a ship. US-ACAN accepted the name on Oct. 21, 2008.

Holzbach. 62°12' S, 58°56' W. A little stream flowing on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Holzrichter Glacier. 84°50' S, 172°30' W. A broad tributary glacier, flowing from the NE slopes of the Prince Olav Mountains, between Mount Wade and Mount Oliver, and entering Gough Glacier just N of Mount Dodge. Named by US-ACAN in 1966, for Capt. Max A. Holzrichter, USN, deputy commander and chief of staff, U.S. Naval Support Force, Antarctica, 1964 and 1965.

Mount Homard. 80°40' S, 29°50' W. Rising to 1200 m, near the head of Blaiklock Glacier, 3 km S of Trey Peaks, it is the highest peak in the Otter Highlands, in the W part of the Shackleton Range. Surveyed and mapped in 1957 by BCTAE, and named by them for Roy Homard. NZ-APC accepted the name, and UK-APC followed suit on Aug. 31, 1962, with US-ACAN following suit later that year.

Homard, Desmond Edgar Lemuel "Roy." b. Jan. 18, 1921. Mechanical engineer and sergeant major in the REME. He had been on the British North Greenland Expedition in 1953 before crossing Antarctica with Fuchs on BCTAE 1955-58 (he was also a member of the advance party of that expedition). After the expedition, he returned to Wellington, and there caught the *Rangitoto*, bound for Southampton, where he arrived on May 12, 1958. He was commissioned, retiring as a major.

Rocas Hombron *see* **Hombron Rocks**

Roche Hombron *see* **Hombron Rocks**

Hombron, Jacques-Bernard. b. April 14, 1800, Paris. Naturalist and surgeon 2nd class on the *Astrolabe* during FrAE 1837-40. On Oct. 11, 1838 he was promoted to surgeon 1st class. He was stationed in Senegal, got sick, took a trading ship back to France in 1852, but died en route.

Hombron Rocks. 63°28' S, 58°42' W. Two rocks awash, separated by about 1.5 km, N of Thanaron Point, about 14.5 km NE of Cape Roquemaurel, and 5 km off the N coast of Trinity Peninsula. Discovered by FrAE 1837-40, charted by them as one rock, and named by Dumont d'Urville as Roche Hombron, for Jacques Hombron. It appears as such on the 1838 expedition chart, and also in Vincendon-Dumoulin's 1847 atlas. On an 1861 Spanish chart it appears as Roca Hombron. FrAE 1910-12 surveyed it, and on their 1912 map it appears, misspelled, as Rocher Honabron. This led to Honabron Rock on a British chart of 1921, and Honabron Skjera on a 1928 Norwegian whaling chart. Surveyed and charted by Fids from Base D in Sept. 1946. It appears on a 1947 Chilean chart as Roca Honabron. On a British chart of 1949, the group appears as Hombron Rocks, and that was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It was the name that appeared in the 1955 British gazetteer. However, on a 1951 Chilean chart, the group appears as

Rocas Honabron, and on a 1956 U.S. Hydrographic Office chart as Honabron Rocks. They were photographed aerially by FIDASE in 1956-57. On a 1958 Argentine chart they appear as Rocas Hombron, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Home Beach. 77°38' S, 166°24' E. A small beach, about 180 m long, on North Bay, just N of Cape Evans, Ross Island. So named in 1911 by BAE 1910-13, because it was in front of the headquarters camp. It appears in the 1958 NZ provisional gazetteer.

Home Lake. 77°33' S, 166°07' E. A small lake at Cape Royds, on Ross Island. So named by BAE 1907-09, because it was in front of their winter quarters. It appears in the 1958 NZ provisional gazetteer. Apparently not to be confused with Pony Lake.

Home Run Bluff. 71°45' S, 166°35' E. A prominent bluff in the N part of the Tucker Glacier, which served as a survey station for the Southern Party of the New Zealand Federated Mountain Clubs Antarctic Expedition of 1962-63, who so named this feature because it was the turning point of their traverse to the airlift point. NZ-APC accepted the name on June 27, 1963.

Homerun Bluff *see* **Home Run Bluff**

Homerun Range. 71°40' S, 166°35' E. A range, trending NW for 42 km, and between 5 and 11 km wide, E of the Everett Range, at the heads of Ebbe Glacier and Tucker Glacier, in Victoria Land. In 1962-63 the Southern Party of the NZ Federated Mountain Clubs Expedition used a bluff near here as their turnabout point, and called it Home Run Bluff (q.v.). The name of the range comes from that, being named by the Northern Party of NZGSAE 1963-64. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit later that year.

Homeward Point. 64°51' S, 63°37' W. Forms the W side of the entrance to Security Bay, on Doumer Island, off Anvers Island, in the Palmer Archipelago. First charted by FrAE 1903-05. Surveyed by personnel from Port Lockroy Station in 1944, during Operation Tabarin. Surveyed by an RN Hydrographic Survey unit in 1956-57, in cooperation with FIDS, and so named by them because it served as a prominent landmark almost daily for the crew of the unit's motor launch as they made their way home to Port Lockroy after a day's work in Bismarck Strait. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. It appears on a British chart of 1960.

Homing Head. 67°48' S, 67°16' W. A conspicuous black headland, formed from sheer cliffs 60 m high, and forming the NE entrance point of Sally Cove, on Horseshoe Island, off the Fallières Coast, on the W coast of Graham Land. So named by UK-APC on July 7, 1959 because it served as an objective for FIDS sledging parties returning to Base Y from Bourgeois Fjord. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Homresund *see* **Macfie Sound**

Hon, Lloyd Neal "Hammer." b. Nov. 12, 1930, Kansas, but raised partly in Nebraska, son of Lloyd H. Hon. He joined the U.S. Navy, and was a builder at Little America in the winter of 1956. In 1956-57 he was lead builder on Vic Young's tractor train that went out to open up Byrd Station. He moved to Milton, Fla., where he married Norma Jean Williams Moore on June 4, 1988, and he died there on Sept. 24, 1997.

Honabron Rock *see* **Hombron Rocks**

Honeycomb Glacier. 72°07' S, 169°52' E. A glacier draining the N and E sides of the mountainous mass surmounted by Mount Whewell, then flows S between that feature and Honeycomb Ridge, into Moubray Bay. Named by NZGSAE 1957-58, in association with the ridge. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Honeycomb Ridge. 72°05' S, 169°58' E. Extends N from the mouth of Ironside Glacier, on the W side of Moubray Bay. So named by NZGSAE 1957-58 because it consists mainly of a granitic rock, which, in many places is honeycombed on exposed surfaces by holes and cavities. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Isla Hongo *see* **Mushroom Island**

Honkala, Rudolf Aarne "Rudy." b. Jan. 23, 1924, Salisbury, NH, son of Walter Honkala and his wife Anna Tolvanen. In 1941 he joined the Army Air Corps, as a radioman, and was one of the first beneficiaries of the GI Bill of Rights (BA in art, University of New Hampshire, 1946; later, MA in geography, University of Montana). He then worked for the Mount Washington Cog Railway, the Kearsarge Telephone Company, and for 4 years was on the staff of the Mount Washington Observatory, which is where he met Barbara Hastings, whom he married in Feb. 1950, and they formed a husband and wife team for the U.S. Weather Bureau in Alaska for 2 years. In 1953 they opened a sporting goods store in NH, but then he returned to the Mount Washington Observatory as chief weather observer there, 1955-56. He volunteered to go south as chief meteorologist and deputy scientific leader at Wilkes Station in 1957, and, on his return, he and his family moved to Missoula, Mont., with the Bureau. He wintered-over again at Wilkes Station in 1960, as chief weather observer, and at Palmer Station in 1967, as scientist-in-charge. He did a glaciological project at Palmer in the summer of 1968-69, and in 1970 moved to DC, as legislative assistant to Montana congressman Dick Shoup. He was then senior physical scientist with the Office of Coal, at the Department of Energy, and retired in 1983 to a fisherman's cottage in the Chesapeake. In 1989 they moved to Bethel, Maine, where he died on May 16, 2008.

Honkala Island. 66°14' S, 110°37' E. A rocky little island, just over 1 km long, at the SE side of Burnett Island, in the Swain Islands, about 8 km NE of Wilkes Station. The area was first mapped from aerial photographs taken by OpHj 1946-47, and was photographed aerially again by ANARE in 1956. This particular island was surveyed by Carl Eklund in 1957, during the Wilkes Station survey of the Swain Islands, and named by him for Rudy Honkala. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Honnør Glacier. 69°23' S, 39°50' E. Flows to the E side of Lützow-Holm Bay, to the N of Byvågåsane Peaks, between those peaks and Breidvågnipa Peak, on the Prince Olav Coast of Queen Maud Land. When LCE 1936-37 photographed the area aerially, they found that a glacier tongue extended seaward from this glacier, mapped the tongue, and named it Honnørbryggja (i.e., "the honor wharf"). In 1957, JARE found that the tongue had broken off, and on May 1, 1963, the Japanese amended the name slightly to Honnør-hyoga for the glacier itself, which remained. US-ACAN accepted the translated name in 1964. The Norwegians call it Honnørbreen.

Honnør-hyoga *see* **Honnør Glacier**

Honnør-kaitei-koku. 69°20' S, 39°30' E. A drowned glacial trough, with a depth of 807 m, extending northwestward then westward from Honnør Glacier, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE soundings conducted between 1968 and 1977, and named by them on Oct. 23, 1989 (name means "submarine valley").

Honnør-oku-ike. 69°27' S, 39°56' E. A small lake at the NE edge of Honnør-oku-iwa. Mapped by Japanese cartographers from JARE ground surveys and air photos from 1975-78, and named by them ("Honnør interior pond"), on Nov. 24, 1981, in association with nearby Honnør Glacier.

Honnør-oku-iwa. 69°27' S, 39°56' E. A rock exposure, 2.84 sq km, above a west-facing slope of continental ice, to the S of Honnør Glacier, and to the E of Byvågåsane Peaks, on the E side of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos from 1975-78, and named by them ("Honnør interior rock"), on Nov. 24, 1981, in association with the glacier.

Honnørbreen *see* **Honnør Glacier**

Honnørbryggja *see* **Honnør Glacier**

Honnørrenna *see* **Honnør-kaitei-koku**

Honnywill Peak. 80°31' S, 29°08' W. A rock peak, rising to 1220 m, immediately SE of Williams Ridge, on the W side of Stratton Glacier, in the Haskard Highlands, in the Shackleton Range. Surveyed and mapped in Oct. 1957 by BCTAE, and named by them for Eleanor Seymour Honnywill (1916-2003), assistant secretary to the expedition. She had married Richard B. "Dick" Honnywill in 1933, and would, in 1991, marry Sir Vivian Fuchs. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Islote Honores *see* **Honores Rock**

Honores Rock. 62°30' S, 59°43' W. A rock, rising to 2 m above sea level, 0.8 km SW of Ferrer Point, in Discovery Bay, Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47, as Islote Cocinero Honores, for Cabo 1st class Arsenio Honores, the cook on the *Iquique* during that expedition. It appears as such

on their 1947 chart. The name was later shortend to Islote Honores, appearing as such on a 1951 Chilean chart. However, the longer name (seems to have) had a resurgence on a 1961 Chilean chart, but it was the shorter name that was accepted by the 1974 Chilean gazetteer. In 1964 it was re-charted by an RN Hydrographic Survey unit on the *Protector*. It was then translated to Honores Rock, appearing as such on a British chart of 1968. That was the name accepted by UK-APC on Nov. 3, 1971, and which appears in the 1974 British gazetteer. US-ACAN accepted the English language translation in 1972.

Port Hood *see* **Blythe Bay**

Hood, Alexander. b. April 23, 1758, Netherbury, Dorset, son of RN purser Samuel Hood and his wife Ann Bere, and 1st cousin once removed to two famous admirals of that name. On March 5, 1772 he transferred from the *Katharine* as an able seaman to the *Resolution*, for Cook's 2nd voyage, 1772-75. He was the first man on board to sight the Marquesas in 1774. He was promoted to lieutenant in 1777, to commander in 1781, and saw much action on several ships. On July 11, 1792, at Butleigh, Somerset, he married Elizabeth Periam. On April 21, 1798, while commanding the *Mars*, he died off Brest, in action against the French ship *Hercule*.

Hood Glacier. 83°55' S, 173°10' E. About 40 km (the New Zealanders say more like 50 km) long, it flows northward (the New Zealanders say it flows in a generally N-S direction) from Siege Dome, in the Commonwealth Range, and enters the Ross Ice Shelf between the Commonwealth Range and the Separation Range. Discovered by Shackleton on his way to the Pole in 1908, during BAE 1907-09, and it was named for Adm. Sir Horace Hood, RN, under whom Lt. Jameson Adams had served on the *Berwick*. US-ACAN accepted the name in 1962.

Isla Hoodwink *see* **Hoodwink Island**

Hoodwink Island. 67°01' S, 66°52' W. An island, 1.5 km E of Arrowmsith Peninsula, on the W side of Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W that same season. So named by UK-APC on July 7, 1959, because the island escaped the notice of BGLE 1934-37, as they flew over in Feb. 1936; it hoodwinked FIDS geologists and surveyors, who misinterpreted the island's geological composition and incorrectly identified the survey station beside it during a local triangulation. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Isla Hoodwink.

Mount Hook. 83°20' S, 50°00' W. A mountainous, snow-covered projection, rising to about 1605 m from the E side of the Saratoga Table, 8 km SE of Sorna Bluff, in the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Lt. Richard M. Hook, USN, who wintered-over as medical officer at Pole Station in 1969. UK-APC accepted the name on May 21, 1979.

Hook Island. 65°38' S, 65°10' W. An island, about 1.5 km NE of Vieugué Island, in the Biscoe Islands, near the SW entrance of Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, for its shape when seen aerially. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Punta Hooke *see* **Hooke Point**

Hooke, Lionel George Alfred. b. Dec. 31, 1895, St Kilda, Melbourne, son of British tea merchant Frank William Hooke and his Australian wife Ethel Margaret Kelly. In 1913 he joined the Marconi Company as a radio operator, and in 1914 this company merged with Telefunken to become Amalgamated Wireless (AWA). He was the radio operator who, on Dec. 24, 1914, sailed from Hobart on the *Aurora* as part of the Ross Sea Party during BITE 1914-17, and was on the ship when it floated away from the shore party and got trapped in the ice for almost a year. On his return to Australia he found that his brother Frank had been killed at Gallipoli, so he sailed for England, on Dec. 15, 1916 becoming an officer in the Royal Naval Volunteer Reserve. In 1919 he became Melbourne manager of AWA, and a famous radio broadcasting pioneer. In 1929 he invented an automatic distress signaler for ships without a radio operator. On Feb. 15, 1930, in Melbourne, he married actress Eilleen Clarice Sparks, in 1944 he became managing director of AWA, was knighted in 1957, and became chairman of AWA in 1962. He died on Feb. 17, 1974, at St. Leonards, Sydney.

Hooke Point. 67°11' S, 66°42' W. Near the head of Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base W. It was mapped by FIDS cartographers from these efforts. Named by UK-APC on July 7, 1959, for English physicist Robert Hooke (1635-1703), pioneer in the study of ice crystals. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Punta Hooke.

Cabo Hooker *see* **[1]Cape Hooker**

[1]Cape Hooker. 63°20' S, 61°57' W. Forms the SE end of Low Island, in the South Shetlands. It was roughly charted by sealers in the early 1820s, and again in 1829 by Foster during the *Chanticleer* Expedition of 1828-31. However, Foster showed it as the NE point on the island. As for the origin of the name Hooker, no one knows, except that it appears that Foster named it thus. FIDASE charted it aerially in 1956, and this new survey showed it to be very different to the old charts. The name Cape Hooker was applied to the SE end of the island, and the feature was plotted in 63°18' S, 61°59' W. US-ACAN was the first to accept the name, in 1952, UK-APC following suit on Sept. 8, 1953. The Chileans call it Cabo Hooker, but the Argentines named it Punta Asconapé, after Domingo Asconapé. It was later re-plotted in 63°18' S, 61°56' W, and in late 2008, the UK re-plotted it yet again.

[2]Cape Hooker. 70°38' S, 166°45' E. On the NE portion of the peninsula which includes Davis Ice Piedmont, on the N coast of Victoria Land. With Cape Dayman to the ESE it forms an outer entrance point (i.e., the W point) of Yule Bay, 27 km eastward of Cape North. Discovered by Ross in 1841, and named by him for Joseph Dalton Hooker. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Mount Hooker. 78°06' S, 162°42' E. A rounded summit, rising to over 3800 m (the New Zealanders say about 3785 m), immediately S of Mount Lister, in the Royal Society Range of Victoria Land, SW of McMurdo Sound, along the W side of the Ross Sea. Discovered by BNAE 1901-04, and named by them for Joseph Dalton Hooker. US-ACAN accepted the name, and NZ-APC followed suit.

Hooker, Joseph Dalton. b. June 30, 1817, Halesworth, Suffolk, son of botanist Sir William Jackson Hooker and his wife Maria Sarah Turner. He joined the Naval Medical Service, and was assistant surgeon and botanist on the *Erebus*, during RossAE 1839-43, and wrote about it (*see* the Bibliography). He fell into the sea at Franklin Island, on Jan. 27, 1841, and was almost crushed by the ship. In the late 1840s and early 1850s he was in India and Tibet, and in 1855 became assistant director of Kew Gardens in London, which he had helped his father found, and succeeded his father as director in 1865. From 1873 to 1878 he was president of the Royal Society, and in the latter year was knighted. He had married Frances Harriet Henslow in 1851, and she died in 1874. He married again, in 1876, to Hyacinth (née Symonds) the widow of Sir William Jardine. He died on Dec. 10, 1911, in Sunningdale, Berks.

Hooker Basin. 70°10' S, 166°20' E. A submarine feature out to sea off Cape Hooker, in northern Victoria Land. Named by international agreement, in association with the cape.

Hooker Glacier. 78°04' S, 163°06' E. On the E side of the Royal Society Range, it flows NE into the head of Blue Glacier from the slopes of Mount Hooker and the main ridge immediately S of the mountain. Surveyed in Sept. 1957 by the NZ Blue Glacier Party of BCTAE, and named by them in association with Mount Hooker. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Hooley, Trevor Vernon H. "Tim." b. Oct. 18, 1904, Oldham, Lancs. A ship's radio operator, in 1927, in Penzance, Cornwall, he married Gladys Winifred Hall (b. 1899, Penzance), and that year they sailed for the Falkland Islands, where their daughter, Winifred Dawn (known as Dawn), was born in 1930. Tim was radio operator on the *Fitzroy* during the Operation Tabarin period, 1943-45, and on Feb. 15, 1944

his wife and daughter, who were also aboard, went ashore at Port Lockroy Station (*see* **Women in Antarctica**). In the 1950s the Hooleys moved to New Zealand, and lived in Auckland.

Hooper, Frederick John. b. March 28, 1890, Fareham, Hants, but raised in Alverstoke, son of asylum attendant (later a Prudential insurance salesman) William H. Hooper and his Limerick wife Annie. He joined the RN, and became a petty officer. He had already sailed around the world 3 times when he joined BAE 1910-13 as a steward, but transferred to the shore party. He was one of the search party who found Scott's tent in Nov. 1912. He died on June 20, 1955, in Southport.

Hooper, George Samuel. b. 1874. He went to sea working for the Union Steamship Company, and in June 1903 was appointed chief officer of the lighthouse steamer *Hinemoa*. On July 22, 1906, with the rank of captain, he was given command of the government training steam *Amokura*, and was still with that vessel in Dec. 1919, when he succeeded Capt. H.S. Blackburne as nautical adviser to the NZ government. He was also principal examiner of masters and mates. He was administrator of the Ross Dependency, and as such took part in Larsen's whaling expedition of 1923-24, in the *Sir James Clark Ross*. He died on March 2, 1931, at his home in Seatoun, NZ. He had been ill for 5 months.

Hooper, Peter Ralph. b. Jan. 29, 1931, Edinburgh. He was only born in Edinburgh because his parents were on a visit there. His father, Percival Ralph Hooper was a Canadian farmer, near Edmonton, Alberta, and his mother was Mary Ferguson, an accomplished doctor from Edinburgh, from the family that makes Edinburgh rock (the edible kind). Peter was raised in Canada until he was 8, then educated in Edinburgh during World War II. After graduating in geology from St Andrews, he spent a year researching in Scotland, then joined FIDS as a geologist in 1954. Interviewed by Johnny Green, then by Fuchs (who had a chunk of malachite on his desk, and asked Peter if he would go to Anvers Island to investigate it; this despite Hooper's total lack of experience at that time in mineralogy), he left Southampton on the old *John Biscoe*, bound for Montevideo, and Port Stanley, and summered-over as base leader at Base D in 1954-55, and then (from March 1955) wintered-over at Base N in 1955 and 1956, again as geologist and base leader. In 1959 he got his PhD from Birmingham University. From 1971 to 1996 he was professor of geology at Washington State University, became a U.S. citizen, and returned to the UK, retiring to Oxfordshire, with his wife Caroline.

Hooper Crags. 78°25' S, 16°43' E. A small, rocky spur, 5 km long, at the S side of Foster Glacier, 16 km SSE of Mount Huggins, and 13 km NNE of Mount Cocks, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1963, for Lt. Benjamin F. Hooper, VX-6 helicopter pilot who wintered-over at McMurdo in 1960. NZ-APC accepted the name.

Hooper Glacier. 64°44' S, 63°37' W. A glacier, 5 km long, flowing NE and E from the col N of Mount William into the W side of Börgen Bay, on Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in 1955, and named by UK-APC on Sept. 4, 1957, for Peter Hooper. It appears on a British chart of 1958. US-ACAN accepted the name in 1963.

Hoopers Shoulder. 77°32' S, 166°53' E. An independent cone, 1859 m up the W slopes of Mount Erebus, on Ross Island. When seen from McMurdo Sound, it appears as a huge, perfect pyramid of black rock, standing out as a splendid mark against the background of the ice, and almost on a line from Cape Royds to the crater of Mount Erebus. The cone itself is about 100 m high, and is exactly in the line of the fierce SE winds which sweep around the shoulder of Erebus at this level, and therefore it is surrounded by a deep moat, or ditch, over 30 m high, caused by the sweeping action of these winds. Named by Frank Debenham during the second ascent of Mount Erebus, for Frederick J. Hooper, who was on this ascent party. US-ACAN accepted the name in 1972, and NZ-APC followed suit.

Hoosh. Pemmican and plasmon biscuit. *See* **Food**.

Hop Island. 68°50' S, 77°43' E. A rocky island, one of the largest of the Rauer Islands, it is about 5 km long, and lies 1.5 km WSW of Filla Island. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Hopøy (i.e., "hop island"). These cartographers thought that (what would later be named) Varyag Island was part of Hop Island, and plotted it accordingly, or rather they thought that what became Varyag was the S part of one bigger island, and that the channel separating them was a cove. US-ACAN accepted the name in 1956. It was not until the late 1950s that the Australians determined that there were, in fact, 2 islands, and the new situation was accepted by ANCA on Aug. 20, 1957. The Australians established a refugio here, called Hop (*see* **Rauer Islands Hop Refuge**).

Hopalong Nunatak. 81°33' S, 28°45' W. Rising to about 1450 m, it is the highest and most westerly of the Whichaway Nunataks, in Coats Land. Surveyed in Dec. 1957 by BCTAE, and named by them for Jon Stephenson, the Australian geologist on the expedition ("hopalong" signifies a kangaroo). UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

The *Hope*. Whaler which, after a tour in South Shetlands waters, discovered the *Jenny* floating in the Drake Passage in Sept. 1840. *See* **The *Jenny***.

Bahía Hope *see* **Hope Bay**

Cabo Hope *see* **Brown Bluff**

Isla Hope *see* **Hope Island**

Lake Hope. 63°25' S, 57°01' W. A small lake, 0.8 km N of Mount Flora, close E of the head of Hope Bay, Trinity Peninsula. Named by Argentines working here as Lago Esperanza, in association with the bay (which they call Bahía Esperanza). US-ACAN accepted the translated name in 1966.

[1]**Mount Hope** *see* **Mount Bransfield**

[2]**Mount Hope**. 69°46' S, 64°34' W. A massive mountain rising to 2860 m, forming the central and highest peak of the Eternity Range, in northern Palmer Land. Discovered aerially by Ellsworth on Nov. 21 and Nov. 23, 1935, and named by him as Mount Hope (*see* **Mount Charity**). It was mapped from these photos by U.S. cartographer W.L.G. Joerg, in 1936-37. In Oct. 1936 Rymill surveyed it, during BGLE 1934-37, and named it Mount Wakefield, for Lord Wakefield (*see* **Wakefield Highland**). It appears as such on Rymill's 1938 map of the expedition, and also on a 1940 British chart. It was photographed aerially in Sept. 1940, during USAS 1939-41, and in Dec. 1947, during RARE 1947-48. US-ACAN and UK-APC both accepted the name, and it appears as such in the 1955 British gazetteer. Using all the photos mentioned earlier, and also based on the results of ground surveys conducted by FIDS in 1960, it was found that the two features (i.e., Ellsworth's Mount Hope and Rymill's Mount Wakefield) were one and the same, and the original name of Mount Hope was accepted by UK-APC on Aug. 31, 1962, and by US-ACAN later that year. The naming of this feature bears a striking parallel to that of Mount Bransfield.

[3]**Mount Hope**. 83°31' S, 171°16' E. An isolated nunatak, low but conspicuous, rising to 835 m and marked by a well-defined terrace strewn with erratics, it projects through the ice about 5 km eastward of the W portal of the Beardmore Glacier, and marks the W side of the terminus of that glacier at its confluence with the Ross Ice Shelf. Discovered on Dec. 3, 1908, by Shackleton's Pole party, during BAE 1907-09. They climbed it, in the hope that they could, from its summit, see a route to the Polar Plateau, and they were not disappointed. They saw the great Beardmore Glacier stretching to the S as far as the eye could see. This was the southernmost depot laid by the Ross Sea Party in 1916, during BITE 1914-17. US-ACAN accepted the name in 1947.

Hope, Christopher Sladen "Chris." b. Aug. 10, 1947. Electronics engineer at Casey Station in 1971.

Hope, Royal *see* **USEE 1838-42**

Hope Bay. 63°23' S, 57°00' W. A bay, 3 km wide, indenting Trinity Peninsula for 5 km between Sheppard Point and Stone Point, and opening on Antarctic Sound, at the NE end of the Antarctic Peninsula. Its coasts are formed from ice cliffs ranging between 15 and 50 m in height. Discovered and charted on Jan. 15, 1902 by SwedAE 1901-04. From March 12 to Sept. 29, 1903, Andersson, Duse, and Grunden were forced to winter here in a hut, and they named the bay Haabets Vig (i.e., "hope bay"), to "keep the hope alive." The name is seen on Nordenskjöld's maps of the expedition. All the interested nations translated this, and it appears as Hope Bay on British charts of 1921 and 1950, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Argen-

tines had been calling it Bahía Hope, or Bahía Esperanza, since at least 1908. The name Bahía Esperanza was accepted by the 1970 Argentine gazetteer, and the name Bahía Hope was accepted by the Chilean gazetteer of 1974. Charcot's 1911 and 1912 maps show it as both Baie Hope and Esperance Bay. The FIDS established their Base D here, "Hope Bay Station," in 1945, and surveyed the bay that year. In 1952 the Argentines established Esperanza Station here, and it was the scene of armed conflict between them and the British. That year (1952), the bay was re-charted by an RN Hydrographic Office Survey unit on the *John Biscoe*, and it was resurveyed by FIS between 1954 and 1956. The anchorage off the station was shown as an individual feature on a 1963 Argentine chart, and named Fondeadero Esperanza. It is the home of the world's largest colony of Adélie penguins.

Hope Bay Howler. The first edition of this FIDS Base D newspaper appeared on June 22, 1945, edited by Eric Back. It contained news items and articles, and letters from the bases at Deception Island and Port Lockroy. Fuchs, in his book *Of Ice and Men*, quotes a typical "advertisement": "Bright young men for the Antarctic. Must have knowledge of botany, zoology, ornithology, surveying, taxidermy, geology, oxometry, etc. German and French essential. Must be able to type, operate wireless set, light fires, clean drains, build houses and drive dogs. Some knowledge of huntin', shootin' and fishin' expected. Salary despicable, prospects nil. Please write and state any additional qualifications."

Hope Bay Station *see* **Base D**

Hope Island. 63°03' S, 56°50' W. Rising to an elevation of about 35 m above sea level, it is the largest of a group of small islands about 10 km W of Turnbull Point (which is on d'Urville Island), off the NE tip of the Antarctic Peninsula. On or around Jan. 31, 1820, Bransfield charted this feature as an island about 5 km in diameter, plotted it in 63°05' S, 57°07' W, and named it Hope Island. It appears as such on his chart of 1820, and on various subsequent charts, including Powell's chart published in 1822, on which it also appears as Hope Isle. On Feb. 27, 1838, FrAE 1837–40 charted it as a new discovery, plotted it in 63°01' S, 56°40' W, and Dumont d'Urville named it as Île Daussy, for astonomer and hydrographer Pierre Daussy (1792–1861), president of the Geographical Society of Paris. It appears as such on a British chart of 1839, and also in Vincendon-Dumoulin's 1847 atlas. Also in 1839, USEE 1838–42 spotted what they thought was this feature, but which was probably the two peaks of Mount Percy. It appears on an 1861 Spanish chart as Isla Daussy. There is an 1871 British reference to it as Daussy Island, and it appears that way on a British chart of 1901. On Friederichsen's 1895 map it appears as Hope Island, plotted in 63°00' S, 56°55' W. On maps prepared by SwedAE 1901–04 appears a feature called Hope Islands, but they are in roughly the same position as the Zélée Rocks, which lie just to the NW. On Charcot's map of 1912 appears Îles Daussy, in about the same position as given by Dumont d'Urville in 1838. A British chart of 1921 shows "Hope Island (Daussy Island)," as does a 1943 U.S. Hydrographic Office chart. Its position was fixed by Fids on the *Trepassey*, in 1946–47. On a Chilean chart of 1947 it appears as Isla Esperanza, and on an Argentine chart of 1949 it appears as Isla Hope. Correctly positioned, Hope Island appears on a 1949 British chart, and that was how it was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956–57. The Argentine gazetteer of 1970 accepted the name Isla Esperanza, while the 1974 Chilean gazetteer accepted Isla Hope. *See also* **Zélée Rocks**.

Hope Islands *see* **Hope Island, Zélée Rocks**

Hope Isle *see* **Hope Island**

Hope Point. 67°23' S, 59°36' E. A bluff forming the W end of Bertha Island, on the E side of the entrance to William Scoresvy Bay, in the William Scoresby Archipelago, off the coast of Kemp Land, in Enderby Land. Charted and named by the personnel on the *William Scoresby*, who landed here in Feb. 1936. US-ACAN accepted the name in 1953, and ANCA followed suit on May 18, 1971.

Mount Hopeful. 62°02' S, 58°08' W. A peak rising to about 700 m, 2.5 km N of the head of King George Bay, and 2.5 km SE of Rea Peak, on King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956–57. Named by UK-APC on Sept. 23, 1960, for the *Hopefull* [sic and q.v.). US-ACAN accepted the name later in 1960. The UK were the latest to re-plot this feature, in late 2008. *See also* **Copper Ridge**, **Green Crag**, **Middle Walls**, **Ruined Castle**, **Splinter**, and **Twins**.

The *Hopefull*. After John Biscoe's successful trip to Antarctica (*see* **Biscoe Expedition**) with the *Tula* and *Lively*, Enderby (the London whaling magnate) was excited about sending out a new expedition immediately. The British government was excited too, in geographical exploration (the excitement was not about exploration, as such, rather the prospect of new territory for the British Empire). Biscoe was scheduled to command this new expedition, with two ships — his flagship, the schooner *Hopefull*, and her tender, the yawl *Rose*. However, Biscoe got sick, and Capt. Henry Rea, RN, the Admiralty observer and surveying officer, now took command of the expedition. Capt. William Lysle commanded the *Hopefull*, and Capt. John Tobias Mallors commanded the *Rose*. On May 13, 1833, the *Hopefull* and the *Rose* left London, the navigator of the *Hopefull* being John Foxton. On Oct. 23, 1833, they arrived at the Falklands, to find that the convicts had massacred their masters, including Matthew Brisbane (q.v.). The two vessels went to the South Shetlands for the 1833–34 summer, and, on Jan. 1, 1834, with the crews of both ships mutinying, the *Rose* got crushed between 2 icebergs in 60°17' S, 53°26' W, and sank. The crew and provisions were rescued by the *Hopefull*. Back in the Falklands, Capt. Lysle resigned, in favor of John Foxton. In later years Foxton referred to the ship (erroneously) as the *Hopewell*.

The *Hopewell* *see* **The *Hopefull***

Glaciar Hopkins *see* **Hopkins Glacier**

Hopkins Glacier. 66°36' S, 65°42' W. Flows SSW into Darbel Bay S of Erskine Glacier, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956–57, surveyed from the ground by Fids from Base W, and mapped by FIDS cartographers from these efforts. Named by UK-APC on July 7, 1959, for Sir Frederick Gowland Hopkins (1861–1947), founder of the School of Biochemistry, at Cambridge, and a vitamin pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Glaciar Hopkins. The British plot it in 66°36' S, 65°35' W.

Hopkins Nunataks. 76°46' S, 160°24' E. A group of 3 nunataks, rising to 2180 m, and extending W–E for 2.5 km, at the head of, and rising about 50 m above the level of, Cambridge Glacier, between the Coombs Hills and the Convoy Range, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Steve Hopkins, who worked several seasons at McMurdo, first as a cargo handler loading and unloading C-141 and C-130 aircraft. In 2001–02 he was injured in a helicopter crash at Lake Fryxell, while working as lead helo-tech. NZ-APC accepted the name on April 7, 2008.

Hopøy *see* **Hop Island**

[1]**The *Horatio***. A 146-ton London sealing snow, built at Mevagissey in 1811, which, after being specially sheathed and coppered for cold climates, left Gravesend on Sept. 9, 1820, under the command of Capt. Joseph Weeks (who had been appointed skipper 8 days before), bound for the South Shetlands, to take part in the 1820–21 sealing season. She was back at Milford Haven, England, on Dec. 17, 1821, and at Falmouth on Jan. 7, 1822, and pulled in to London on Jan. 17, 1822, with 4150 seal skins, 45 casks of oil, and a quantity of whale bones.

[2]**The *Horatio***. British ship owned by Salvesen, and converted by them in Norway into a factory whaler, same size as the *Neko*. She had 28 pressure boilers. She was on her way to the South Shetlands for the 1911–12 season, with the *Neko*, but had only got as far as the English Channel when her cargo of coal caught fire, and she had to miss the season. This was followed by an unsuccessful whaling season off the African coast. She was based out of South Georgia in 1913–14, and got as far south as Graham Land that season. She was back for the 1914–15 and 1915–16 seasons, but, on March 11, 1916, in Leith Harbor, in South Georgia, she caught fire and was destroyed. Her skipper that final season was Otto Hilmar Poulsen.

Horatio Glacier. 62°17' S, 58°59' W. A large glacier at Edgell Bay, Nelson Island, in the South Shetlands. Named by the Poles in 1984, in honor of Horatio Nelson, the greatest British admiral of all time.

Horatio Stump. 62°13' S, 59°00' W. A flat-topped hill rising to 165 m, immediately E of

Flat Top Peninsula, at the SW end of Fildes Peninsula, King George Island, in the South Shetlands. In 1956-57, it was photographed aerially by FIDASE and surveyed from the ground by FIDS. Named by UK-APC on Sept. 23, 1960, for the *Horatio*. US-ACAN accepted the name later in 1960. Don Hawkes charted it in 1961, and on his map it appears as Mushroom Hill, named for its flat top. It appears as Horatio Stump on a British chart of 1962. On the 1984 Brazilian map of Fildes Peninsula, it appears as Pico Horatio Stump. The British were the latest to re-plot this feature, in late 2008.

Horatiobach. 62°13' S, 59°01' W. A small stream flowing S into Horatiobucht, on the coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans in association with the nearby hill, Horatio Stump.

Horatiobucht. 62°12' S, 59°01' W. A small bay on the coast of Fildes Peninsula, King George Islands, in the South Shetlands. Named by the Germans in association with the nearby hill, Horatio Stump.

Cape Hordern. 66°15' S, 100°31' E. Also called Hordern Peninsula, and Mount Hordern. An ice-free cape, overlain by morainic drift, at the NW end of the Bunger Hills. It marks the boundary between Queen Mary Land and the Knox Coast, in Wilkes Land. Probably sighted from Watson Bluff (on David Island, to the SW) by A.L. Kennedy and other members of the Western Base Party, during AAE 1911-14, who, during a survey carried out on foot, charted the W wall of what appeared to be 2 small islands lying N of Cape Hoadley, in about 100°35' E. Named by Mawson as Hordern Island, for Sir Samuel Hordern (1876-1956) of Sydney, a patron of the expedition. Photographed aerially by OpHJ 1946-47, and delineated from these photos in 1955, by U.S. cartographer Gard Blodgett. These OpHJ photos were compared with the Kennedy map, and some re-defining took place. The "island" became Cape Hordern, a name accepted by US-ACAN later in 1955. Re-photographed aerially by ANARE in Jan. 1956. ANCA accepted the name on May 18, 1971.

[1]**Mount Hordern** *see* **Cape Hordern**

[2]**Mount Hordern**. 67°56' S, 62°29' E. Rising to 1510 m, about 6.5 km S of Mount Coates, in the David Range of the Framnes Mountains, in Mac. Robertson Land. Discovered in Feb. 1931 by BANZARE, and named by Mawson for Sir Samuel Hordern (*see* **Cape Hordern**). US-ACAN accepted the name in 1947, and ANCA followed suit. First visited by John Béchervaise's ANARE party in 1956, and first climbed by Alf Bolza, in 1958.

Hordern Gap. 67°53' S, 62°30' E. A gap, 5 km wide, between Mount Coates and Mount Hordern, in the David Range of the Framnes Mountains, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped (but not named) by Norwegian cartographers working from these photos in 1946. It was used by ANARE parties of 1957 and 1958, as a route through the range. Named by ANCA on July 22, 1959, in association with the nearby mountain. US-ACAN accepted the name in 1961.

Hordern Island *see* **Cape Hordern**

Hordern Peninsula *see* **Cape Hordern**

Horenstein, Abel Moises *see* **Órcadas Station**, 1949, 1953

Horgebest *see* **Horgebest Peak**

Horgebest Peak. 72°34' S, 0°27' E. Just E of Fred Cirque, in the N part of Roots Heights, in the S part of the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Horgebest (i.e., "mountain beast"). US-ACAN accepted the name Horgebest Peak in 1966.

Horgen, Arne W. Norwegian flight radio operator who took part in the first *Balaena* whaling expedition, 1946-48.

Horizon. At the South Pole the horizon is 7 miles away.

Horizon Bluff. 77°54' S, 160°26' E. A steep bluff, at the head of Beacon Valley, it rises to 2275 m to the W of Friedmann Valley, in the Quartermain Mountains of Victoria Land. In keeping with naming certain features in this area after surveying terms, this one was named by NZ-APC in 1992 for the horizon, the line of sight described by level line of theodolite or level. US-ACAN accepted the name in 1993.

Horlick Ice Stream. 85°17' S, 132°00' W. A large ice stream on the otherwise featureless ice surface to the N of the main mass of the Horlick Mountains, it flows WSW, paralleling these mountains, into the lower part of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, in association with the mountains.

Horlick Mountains. 85°23' S, 121°00' W. A mountain group, eastward of Reedy Glacier, in the Transantarctic Mountains. They include the Wisconsin Range, the Long Hills, and the Ohio Range. Parts of this group were discovered by Kennett Rawson, on Nov. 22, 1934, from about 83°05' S, 105°19' W, while at the end of his SE flight, and other parts were discovered from the ground by Quin Blackburn's party in Dec. 1934, both discoveries made during ByrdAE 1933-35, from positions looking up the Leverett Glacier and the Albanus Glacier. Named by Byrd for William Horlick, of Horlicks Malted Milk Company, a supporter of this expedition. Portions of the Wisconsin Range are shown on air photos taken by OpHJ 1946-47. US-ACAN accepted the name in 1947. The entire group was surveyed by American parties in the 1950s and 1960s, photographed aerially by USN between 1959 and 1964, and mapped by USGS from all these efforts.

Horlick Mountains Traverse. 1958-59. Strictly speaking the Marie Byrd Land-Horlick Mountains Traverse. In Oct. 1958, a reconnaissance plane flew over the Horlick Mountains. No one had ever been that close to these mountains before. On board were, among others, Merle Dawson, Charlie Bentley, Bill Long, and Emil Schulthess, the Swiss photographer. On Nov. 1, 1958, a tractor train (3 Sno-cats, each pulling a sledge) left Byrd Station bound for a geological study of the Horlick Mountains. There were 6 men in the train: Charlie Bentley (leader), Bill Long, Jack Long, Bill Chapman, Fred Darling, and Leonard LeSchack. The lead cat, which carried a crevasse detector, was named the *Sally Jeanne*, and was driven by Bill Long, assisted by Fred Darling. Re-supplied along the way by R4D aircraft, the train made slow going because of the crevasses and the bad weather. A dentist was even dropped in at one point, for obvious reasons. The Long brothers, Darling, and Bentley climbed Mount Glossopteris. On Jan. 22, 1959, they arrived back at Byrd Station.

The Horn. 63°39' S, 57°34' W. Rising to 220 m, it has a sheer cliff of reddish rock on its W side, and surmounts the NW cape of Eagle Island, in Prince Gustav Channel, between Trinity Peninsula and Vega Island. Discovered, surveyed and named descriptively by Fids from Base D in Nov. 1945. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer, and on a British map of 1974. The Argentines call it Cerro Mayor (i.e., "big hill"); it appears as such on a chart of 1978, and in their gazetteer of 1990.

Isla Horn *see* **Largo Island**

Islote Horn *see* **Largo Island**

Horn, Jonas. b. 1798. Of Stonington, Conn. From 1823 to 1829 he was 1st mate of the *Alabama Packet*, and, in 1830 got his first command, the Stonington schooner *Whale*. In 1834-35, he was captain of the sealing schooner *Pacific*, 1834-35, in the South Shetlands.

Horn Bluff. 68°21' S, 149°45' E. A prominent rocky headland, rising to 325 m, on the N side of the coastal island at the W side of Deakin Bay, off the coast of George V Land, it is marked by the columnar structure of the dolerite forming the upper part of it. Discovered and mapped as part of the mainland by AAE 1911-14, and named by Mawson for William Austin Horn (1841-1922) mining magnate and politician of Adelaide, who donated £1000 to the expedition. US-ACAN accepted the name, and ANCA followed suit. In 1962 aerial shots taken by ANARE showed it to be on an island.

Horn Peak *see* **Kemp Peak**

The *Horn 2000*. American yacht, skippered by Roman Kveternik, which visited the Antarctic Peninsula in 1999-2000.

Horna. 72°01' S, 26°01' E. Five peaks in the most NE part of Mount Bergersen, in the Sør Rondane Mountains. Named by the Norwegians ("the horns"). The five horns are Høghornet, Nebbhornet, Butthornet, Skolten, and Nyvla.

Hornblende Bluffs. 69°54' S, 159°45' E. Prominent bluffs, rising to 1050 m on the N end of a feature 3 km SE of Mount Ellery, and near the head of Suvorov Glacier, in the Wilson Hills of Oates Land, in Victoria Land. Named by the Northern Party of NZGSAE 1963-64, for the hornblende found here. NZ-APC accepted the

name, and US-ACAN followed suit in 1964. ANCA also accepted the name.

Monte Horne *see* **Mount Horne**

Mount Horne. 75°46' S, 71°42' W. Rising to 1165 m, it is the highest and most prominent mountain in the Quilty Nunataks, 20 km ENE of Mount Hassage, NW of Cape Zumberge, on the Orville Coast, where the E part of Ellsworth Land meets the S part of Palmer Land. Discovered aerially on Nov. 21, 1947, by RARE 1947-48, plotted by them in 76°47' S, 70°00' W, and named by Ronne as Mount Bernard Horne, for Bernard Horne of Horne Department Store (a fixture in Pittsburgh for almost 150 years), who furnished wind-proofs and other clothing for the expedition. It appears as such on an American Geographical Society map of 1948. On Ronne's 1948 map it appears as Mount Horne, but with the erroneous coordinates, a situation that occurred again on a 1962 AGS map. US-ACAN accepted the name Mount Horne. It appears on a 1952 Argentine chart as Monte Horne, and that is presumably what the Argentines call it today. That name was also accepted by the 1974 Chilean gazetteer. It was re-mapped by USGS from their own ground survey conducted during the 1961-62 Antarctic Peninsula Traverse, and from USN air photos taken between 1965 and 1967, and appears on the USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Horne, Ralph Ross. b. Nov. 5, 1940. BAS geologist who wintered-over at Base E in 1963 and at Base T in 1964. He later became deputy director of the Irish Geological Survey.

Horne Glacier. 71°17' S, 164°56' E. A valley glacier, 10 km long, it flows SW from the Everett Range, between Mount Works and Mount Calvin, and enters the lower part of Greenwell Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Lt. (later Cdr.) Robert P. Horne (b. Wisc.), USNR, C-130 Hercules aircraft pilot during OpDF 68 (i.e., 1967-68) and OpDF 69 (i.e., 1968-69).

Horne Nunataks. 71°42' S, 66°46' W. A group of 6 nunataks in relative isolation, rising to about 715 m, on the N side of Goodenough Glacier, about 11 km inland from the W coast of Palmer Land, at George VI Sound. Surveyed by BAS personnel from Base E and from Fossil Bluff Station between 1962 and 1972. Named by UK-APC on July 21, 1976, for Ralph Ross Horne. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Horner Nunatak. 74°16' S, 72°45' W. A nunatak, rising to about 1250 m, 1.5 km E of Staack Nunatak, S of the Ronne Entrance, on the English Coast, in eastern Ellsworth Land. Mapped by USGS from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Stanley Horner, USARP radioscience researcher at Byrd Station, in 1962-63. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Hornet *see* **Hornet Peak, Kemp Peak**

Hornet Peak. 72°12' S, 2°59' W. A sharp peak, 5 km W of Snøhetta Dome, near the S end of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Hornet (i.e., "the horn"). US-ACAN accepted the name Hornet Peak in 1966, a name that is not entirely satisfactory, as it conjures up, in the English-speaking mind, the dangerous insect.

Horney Bluff. 80°09' S, 159°40' E. A conspicuous ice-free rock bluff, between 24 and 28 km long, extending eastward along the N side of Byrd Glacier, from Merrick Glacier toward Cape Kerr. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Capt. Harry R. Horney, Byrd's chief of staff during OpHJ 1946-47. ANCA accepted the name on Aug. 27, 1975.

Hornfelsgipfel. 71°36' S, 161°54' E. A peak on the S side of Mount Van Veen, in the Morozumi Range. Named by the Germans.

Horniston, Charles E. *see* **USEE 1838-42**

Hornpipe Heights. 69°52' S, 70°35' W. A group of partly exposed ridges rising to about 1200 m between Sullivan Glacier, Mikado Glacier, and Clarsach Glacier, in the N part of Alexander Island. Whistle Pass is adjacent to the NE part of these heights. Surveyed by BAS from 1968. Named by UK-APC on Dec. 8, 1977, in association with the pass. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Hornpollen *see* **Naka-no-ura**

Horns. Sharp, isolated peaks, created by 2 or more glaciers eating away rock on all sides of a mountain peak.

Mount Hornsby. 64°14' S, 59°15' W. A prominent, snow-capped mountain, rising to about 1360 m, on the S side of the middle reaches of Sjögren Glacier, NNE of Larsen Inlet, on the Nordenskjöld Coast of Graham Land. Photographed aerially by FIDASE in 1956, surveyed by Fids from Base D in 1960-61, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Feb. 12, 1964, for Richard Hornsby & Sons, of Grantham, designers and builders of the first caterpillar tractors for the War Office, 1904-10. US-ACAN accepted the name later in 1964.

Horntind *see* **Branson Nunatak**

Horntvedt, Harald. b. 1878, Sandefjord, Norway, son of master butcher Christian Horntvedt and his wife Anne Marie Abrahamsdatter. An old Arctic whaling man (he went to sea at 15), he was in South Georgia and Antarctic waters in 1909-10, as captain of the *Nor*. He was back in 1912, as skipper of the *Thor I*, out of Grytviken, South Georgia. In 1914 he commanded the whaler *Alonso*, but in Angolan waters. He was back in Antarctica, as captain of the *Norvegia*, 1927-28, and from 1935 to 1937 was skipper of the *Thorshøv* (not in Antarctic waters).

Horowitz Ridge. 77°37' S, 162°05' E. A rock ridge between David Valley and King Valley, in the Asgard Range of Victoria Land. Named by biologist Roy E. Cameron in 1966-68 for biologist Norman Harold Horowitz (b. March 19, 1915, Pittsburgh. d. June 1, 2005, Pasadena), professor at the California Institute of Technology, who suggested the analogy between the dry valleys of Antarctica and the planet Mars, and that studies along those lines might be useful. Cameron was there to carry out these studies between 1966 and 1968. US-ACAN accepted the name in 1969.

Horrall Glacier. 75°00' S, 114°28' W. A tributary glacier in the Kohler Range of Marie Byrd Land, it flows ENE from Faulkender Ridge to join Kohler Glacier at Klimov Bluff. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1967, for Thomas R. Horrall, USARP glaciologist with the Marie Byrd Land Survey Party of 1966-67.

Horrocks Block. 71°35' S, 68°22' W. A large rectangular outcrop of mainly sandstone, rising to about 750 m, on the N side of Venus Glacier, between that glacier and Mercury Glacier, 3 km SW of Keystone Cliffs, on the E side of Alexander Island. Mapped by the (British) Directorate of Overseas Surveys from surveys conducted by BAS personnel from the Fossil Bluff station between 1961 and 1973, and from satellite imagery supplied by NASA and USGS. In association with Venus Glacier, this feature was named by UK-APC on Dec. 20, 1974, for Jeremiah Horrocks (1618-1641), the English astronomer who predicted and first observed a transit of Venus, in 1639. US-ACAN accepted the name in 1975, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Nunataks Horsa *see* **Horsa Nunataks**

Horsa Nunataks. 68°56' S, 70°18' W. An isolated group of about 5 partly snow-covered nunataks, with one isolated even further, to the S, rising to over 610 m above Roberts Ice Piedmont, 22 km N of Mount Calais, in the NE part of Alexander Island. First photographed aerially on Aug. 15, 1936, and again on Feb. 1, 1937, during BGLE 1934-37. Surveyed from the ground by Fids from Base E in 1948. Named by UK-APC on March 31, 1955, for the 5th-century Saxon chief. US-ACAN accepted the name later in 1955. The feature appears on a Chilean chart of 1962 as Nunataks Horsa, and that was the name accepted by the Chilean gazettteer of 1974. *See also* **Hengist Nunatak**.

Horse Bluff. 71°18' S, 67°34' W. A coastal bluff at the W side of the Tindley Peaks, between Ryder Glacier and McArthur Glacier, on the Rymill Coast, on the W coast of the Antarctic Peninsula, overlooking George VI Sound. Surveyed by BAS personnel from Base E and from Fossil Bluff Station from 1970. Named by those personnel as Horse Point from a distinctive rock feature resembling a horse's head on the slopes above the point. It appears as such on a 1977 BAS map. UK-APC accepted the name Horse Bluff on Dec. 8, 1977,and it appears as such in

the 1980 British gazetteer. US-ACAN also accepted that name.

Horse Point *see* **Horse Bluff**

Horses. Filchner took horses with him on GermAE 1911-12. Shackleton and Scott were the principal exponents of the pony as a means of getting to the Pole (*see* **Ponies**).

Mount Horseshoe *see* **Horseshoe Mountain**

[1]**Horseshoe Bay** *see* **Lystad Bay**

[2]**Horseshoe Bay**. 77°32' S, 166°12' E. A cove just N of Cape Royds, on the W side of Ross Island. Discovered and named descriptively by BNAE 1901-04. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Horseshoe Crater. 78°14' S, 161°53' E. A crescent-shaped volcanic crater at the confluence of Radian Glacier and Pipecleaner Glacier, in the Royal Society Range of Victoria Land. An NZGSAE field party worked here in 1977-78. Named by NZ-APC in 1980, from its shape. US-ACAN accepted the name in 1994.

Horseshoe Harbor. 67°36' S, 62°52' E. In Holme Bay, Mac. Robertson Land, it is the only natural harbor in Greater Antarctica, and is formed by the horseshoe-shaped rock projections of West Arm and East Arm. Mawson Station is at the head of this harbor. Photographed aerially by LCE 1936-37, and roughly mapped from these photos in 1946 by Norwegian cartographers. Re-photographed aerially by OpHJ 1946-47. First visited by an ANARE party led by Phil Law, who selected this as the site for Mawson Station in 1953-54. Named by Law for its shape. ANCA accepted the name, and US-ACAN followed suit in 1965. The SCAR gazetteer has a Russian-named feature called East Bay at these co-ordinates, and it may well be the same feature.

Horseshoe Hills. 71°05' S, 71°24' E. A horseshoe-shaped rock outcrop, in the S part of the Manning Nunataks, in the E side of the S part of the Amery Ice Shelf. The Mannings were photographed aerially during OpHJ 1946-47, and again in 1957 by ANARE. They were visited by SovAE 1965, and by the ANARE Prince Charles Survey Party of 1969. Named descriptively by ANCA.

Horseshoe Island. 67°51' S, 67°12' W. About 11 km long, and 5 km wide, it occupies most of the entrance to Square Bay, lying between that bay and Bourgeois Fjord, along the Fallières Coast, on the W coast of Graham Land. Discovered and named descriptively in 1936-37, by BGLE 1934-37, who mapped this area from ground surveys and air photos. Peaks on this island rise to elevations of between 600 and 900 m, and are arranged in a crescent-shape. It appears on Rymill's 1938 map of the expedition, as well as on a 1940 British chart and a 1942 USAAF chart. Re-surveyed by Fids from Base E in 1949-50. UK-APC accepted the name on Sept. 20, 1955, and US-ACAN followed suit. Base Y was here, and Fids from that base re-surveyed it between 1955 and 1957, when the shape of the island was found to be less like a horseshoe than had originally been believed. It appears on a Chilean chart of 1947 as Isla Herradura (which means the same thing), and on a 1949 Argentine chart as Isla Horseshoe. It was the name Isla Herradura that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Horseshoe Island Cove *see* **Lystad Bay**

Horseshoe Islands *see* **Forge Islands**

Horseshoe Mountain. 77°34' S, 159°57' E. Rising to 2514 m, just W of Mount Fleming, on the N side of the head of Taylor Glacier, near the edge of the Polar Plateau, in Victoria Land. Discovered and named descriptively by BNAE 1901-04. US-ACAN accepted the name in 1948, and NZ-APC followed suit. ANCA accepted the name on May 18, 1971.

Horseshoe Nunatak. 81°52' S, 158°25' E. A horseshoe-shaped nunatak in the Churchill Mountains, 8 km W of Mount Hoskins, on the N side of the upper portion of Starshot Glacier. Discovered and charted by NZGSAE 1964-65, and named descriptively by them. NZ-APC accepted the name, and ANCA followed suit on Aug. 10, 1966. US-ACAN accepted the name in 1970.

Horseshoe Valley. 80°05' S, 82°00' W. A large, ice-filled valley in the southern Heritage Range of the Ellsworth Mountains, it is outlined by the semicircular arrangement of the Independence Hills, the Marble Hills, the Liberty Hills, and the Enterprise Hills, hence the descriptive name given by the University of Minnesota Ellsworth Mountains Party of 1962-63. Actually, they picked the name up from USN flyers in the area. US-ACAN accepted the name in 1965.

Horst. A fault block belt, the classic example of which is the Great Antarctic Horst, more commonly known as the Transantarctic Mountains.

Hortebrekka *see* **Hortebrekka Slope**

Hortebrekka Slope. 72°07' S, 12°34' E. A crevassed ice slope, marking the E edge of Horteriset Dome, just W of the Weyprecht Mountains, in the westernmost part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hortebrekka, in association with Horteriset. US-ACAN accepted the name Hortebrekka Slope in 1966.

Horteflaket *see* **Horteflaket Névé**

Horteflaket Névé. 71°56' S, 12°45' E. A névé at the head of Musketov Glacier, between the Petermann Ranges and the Weyprecht Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Horteflaket. US-ACAN accepted the name Horteflaket Névé in 1970.

Horten *see* **Horten Peak**

Horten Peak. 72°04' S, 3°11' E. A small rock, rising to 2470 m, S of the summit of Risemedet Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Horten. US-ACAN accepted the name Horten Peak in 1966.

Horteriset *see* **Horteriset Dome**

Horteriset Dome. 72°05' S, 12°22' E. A broad, ice-covered hill 21 km W of the S part of the Weyprecht Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Horteriset. US-ACAN accepted the name Horteriset Dome in 1966.

Horton, Christopher North "Chris." b. Feb. 25, 1935, Kingston, Surrey, but grew up partly in Worthing, son of Stanley D. Horton and his wife Alice North. He joined FIDS in 1958, as a geophysicist, and wintered-over at Base F in 1959, and at Halley Bay Station in 1960. He arrived back in England in May, and with Joe Farman and Harry Agger moved to Victoria, London, where, until November of that year they collated their Antarctic findings, and then all three moved to Edinburgh to continue doing that. In 1963, in Aylesbury, Bucks, he married Eva Teresa I. Stachiewicz, who died in 1977, in Bromley. His second wife was Frances Verel. He later lived at Pedlinge, in Hythe, Kent, and died on June 5, 1983, at William Harvey Hospital, Ashford, Kent.

Horton, William Ault. b. Jan. 14, 1885, Derby (and not 1883, as his Royal Navy record says), son of Edmond Thomas Horton and his schoolmistress wife Harriett Ann Ault. His father died when he was young. His mother married again, in 1895, to iron moulder John Midgley, but she carried on teaching. At 14 William Ault became an engineer's apprentice, and joined the Navy. He married Georgina Lucy Wootton, in Shardlow, Derbyshire, in 1907, and they lived in Belper. He was an engine room artificer 3rd class, when he became 2nd engineer on the *Terra Nova* during BAE 1910-13. He was commissioned, and was chief engineer on the *Discovery* cruise of 1925-27, and the first four *Discovery II* cruises of 1929-31, 1931-33, 1933-35, and 1935-37. He died as a lieutenant commander in Nov. 1939, in Durban.

Horton Glacier. 67°33' S, 68°30' W. At the E side of Mount Barré and Mount Gaudry, flowing SE from Adelaide Island into Ryder Bay, on the W side of Graham Land. Named by UK-APC on Feb. 7, 1978, for Colin Philip Horton (b. 1951, Cheshire), BAS builder who wintered-over at nearby Rothera Station in 1976 and 1977.

Horton Ledge. 85°41' S, 69°05' W. A flat rock ledge capping the SW extremity of Pecora Escarpment, at the SW end of the Pensacola Mountains. Mapped by USGS from ground sur-

veys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Edward C. "Ed" Horton, Jr. (b. Maine), electronics technician at Plateau Station for the winter of 1966 (he had spent the summer of 1965-66 at Pole Station). UK-APC accepted the name on Nov. 3, 1971.

Islote Horvath *see* **Horvath Island**

Horvath Island. 66°19' S, 67°08' W. A small island close N of Watkins Island, in the Biscoe Islands. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Steven Michael Horvath (1911-2007), U.S. physiologist specializing in the cold. US-ACAN accepted the name in 1965. The Argentines call it Islote Horvath.

Isla Hoseason *see* **Hoseason Island**

Hoseason, James. 1st mate on the *Sprightly*, 1824-25. He did a survey of Hughes Bay, Graham Land. Apparently, he had been to the South Shetlands on a previous sealing voyage, on the *Williams*, in 1819.

Hoseason Glacier. 67°06' S, 58°07' E. About 20 km long (the Australians say it is at least 26 km long), it flows northward into the sea between West Stack and East Stack, 19 km W of Broka Island, and 24 km E of Edward VIII Bay. Photographed aerially by LCE 1936-37, and roughly mapped from these photos in 1946 by Norwegian cartographers, who named it Slotviktangen (i.e., "the stack bay tongue"). Visited in 1954 by Bob Dovers' ANARE sledging party, and renamed by ANCA on Nov. 28, 1955, for Richard Hoseason of ANARE, who drowned under the ice on Heard Island (53°S) on May 26, 1952. US-ACAN accepted the name in 1965.

Hoseason Harbor *see* **Mikkelsen Harbor**

Hoseason Island. 63°44' S, 61°41' W. An island, 10 km long and 5 km wide, N of Liège Island, 30 km W of Trinity Island, and separated from that island to the E by Gerlache Strait, in the Palmer Archipelago. Roughly charted in late 1824, by James Hoseason, in the *Sprightly*, it was named for him, and appears as such on Powell's 1828 chart. This island was included in what was called Prince William's Land (*see* **Palmer Archipelago** for more details). On the map prepared by FrAE 1837-38, it appears as Île Hoseason, and on a British chart of 1839 as Hoseason Island, as it does on a 1937 British chart. It appears as Isla Hoseason on an 1861 Spanish chart, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On Friederichsen's 1895 map it appears as Hoseason Insel. On a 1901 British chart, it was shown to be part of Liège Island, nevertheless is referred to as "Hoseason Island (Liège Island)," but FrAE 1903-05 disproved this. In fact they doubted the existence of Hoseason Island, but its existence was, indeed, proved by FrAE 1908-10. Needless to say, such a name has been misspelled over the years, but generally speaking, one can pick it out successfully. Between Dec. 1930 and Jan. 1931, the Discovery Investigations surveyed this island, and re-charted it. On a 1942 USAAF chart it appears as Hoseason Islands. US-ACAN accepted the name Hoseason Island in 1947, and UK-APC followed suit on Sept. 8, 1953. That name appears in the 1955 British gazetteer, and also on a British chart of 1962. There are 1948 references to it as Isla Almirante Blanco Encalada, and Isla Blanco Encalada (*see* **Henkes Islands**), but that name did not catch on. It was photographed aerially by FIDASE in 1956.

Hoseason Islands *see* **Hoseason Island**

Hoseason's Aim *see* **Desolation Island**

Hoseason's Harbor. A name at one time applied to the SW entrance to Orléans Strait.

Hoseason's Land *see* **Desolation Island**

Hoshka Glacier *see* **Hoshko Glacier**

Hoshko Glacier. 71°49' S, 163°24' E. Also spelled Hoshka Glacier. A cirque-type glacier in the Lanterman Range of the Bowers Mountains, flowing SW from between Bowers Peak and Mount Edixon into the lower part of the Canham Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. John J. Hoshko, Jr., USNR, public affairs officer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1966-68.

Mount Hoskins. 81°50' S, 159°03' E. Rising to 2030 m, on the W side of Starshot Glacier, 6 km (the Australians say 15 km) SSE of Mount Lindley, on the W side of the Ross Ice Shelf. Discovered by BNAE 1901-04, and named by them for Sir Anthony Hoskins (1828-1901), a former First Naval lord (of the Admiralty) (1891-93), and a member of the expedition's ship committee. US-ACAN accepted the name, and ANCA followed suit.

Hoskins, Arthur Keith. Known as Keith. b. July 26, 1935, Romford, Essex, son of Albert R. Hoskins and his wife Miriam L. Cann. After Southampton University he joined FIDS on Oct. 1, 1957, and on that very day sailed south as FIDS geologist on the *Shackleton*, bound for Powell Island, in the South Orkneys, which he reached on Nov. 29, 1957. He left there on Dec. 18, 1957, helped D.J. Blundell collect paleomagnetic specimens at various other sites, and then headed for Base E, where he wintered-over in 1958. In March 1959 he transferred to Base Y. He stayed at Base Y for the next winter, 1959, and returned to Britain in early 1960, going to work at the FIDS geology unit in the department of geography and geophysics at Birmingham University, from which institution he received his PhD in 1962, for his thesis on the petrology of the basement complex rocks at Neny Fjord. He had left FIDS in Sept. 1960. He became a teacher, married Veronica D. Hill in 1966, in Somerset, and was killed in a motorcycle acident near Bath on July 26, 2004.

Hoskins Peak. 67°46' S, 67°36' W. A peak, rising to about 900 m, 5 km W of Contact Peak, in southern Pourquoi Pas Island, Graham Land. It was apparently not sighted during a survey conducted by Fids from Base E in 1948-50. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by Fids from Base E and Base Y between 1956 and 1959, and mapped by FIDS cartographers from these efforts. It was incorrectly identified with Contact Peak, and was accepted by UK-APC as such on Sept. 23, 1960. The situation was corrected by UK-APC on Aug. 31, 1962, when the feature was named for Keith Hoskins. US-ACAN accepted the name later in 1962.

Hospital Cove *see* **Yankee Harbor**

Hospital Point. 62°31' S, 59°46' W. A point formed by an ice cliff, with a small amount of rock exposed at its base, at the N side of Yankee Harbor, immediately E of Glacier Bluff, on Greenwich Island, in the South Shetlands. Charted by the personnel on the *Discovery II*, in 1935, and descriptively named by them as Rocky Point. It appears as such on their 1935 chart, on a British chart of 1948, was the name accepted by US-ACAN and UK-APC, and appears in the 1955 British gazetteer. On an Argentine chart of 1953 it appears translated as Punta Rocosa. It was charted by ChilAE 1952-53, and named by them as Punta Alfaro, for Lt. Mario Alfaro Cabrera (*see* **Paso Alfaro**). The Chilean gazetteer of 1974 would accept that name. It was photographed aerially by FIDASE in 1956. In order to avoid duplication, UK-APC rejected this name on Aug. 31, 1962, and renamed it in association with Hospital Cove (*see* **Yankee Harbor**). It appears as such on a British chart of 1962. US-ACAN accepted the new name in 1965. The British re-plotted this feature in late 2008.

Host Island. 64°56' S, 63°55' W. Immediately SE of Manciple Island, in the Wauwermans Islands, in the Bismarck Strait, in the Wilhelm Archipelago. It appears on a 1950 Argentine chart. Charted by an RN Hydrographic Survey unit on the *Protector* in 1956-57. Named by UK-APC on July 7, 1959, for one of the characters in Chaucer's *Canterbury Tales*. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Hostinsky, John Louis. b. Aug. 8, 1911, Smithfield, O., but raised partly in nearby Adena, son of coal miner Andy Hostinsky and his wife Mary Gresch, both from what would later become Czechoslovakia. He joined the U.S. Navy, served on the *Mississippi*, 1929-30, and from 1931 was on the *Arizona*. He was fleet boxing champion, also a wrestler, and played football, and, mostly because of the football, he was kept on the *Arizona* until 1938. He was bosun's mate 1st class on the *Bear*, during both halves of USAS 1939-41, and was promoted to warrant bosun during the expedition. During World War II, he was on the *ATR-45* from 1942 to 1944, married Mary Bernat in 1943, and in 1945 was in Africa on the *ATF-71* (the *Hopi*). He had a vicious sense of humor, and was remembered as one tough, mean son of a bitch, but a great sailor and a very effective disciplinarian. He was back in Antarctica on the *Burton Island* during OpHJ 1946-47. From 1947 he was on the *Whitewood*, as 1st lieutenant and exec. He helped build the DEW Line in the Arctic, was on the *Conecuh* in 1953, and finally retired from the Navy as a lieutenant commander. In 1956 he became a tug master for the Maritime Administration, switching to fire and damage control superintendent,

until he resigned in 1957. For years thereafter he was building superintendent for Space Radiation Effects (what would become the Virginia Associated Research Campus) in Newport News, retiring in 1976, and dying in that town on Aug. 4, 1996.

Hotels *see* **Tourism**

Hothem Cliffs. 77°35' S, 162°43' E. A line of abrupt rock cliffs at the N side of the head of Canada Glacier, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for Larry D. Hothem, American geodesist who wintered-over with the Australians at Mawson Station in 1969. He was with USGS from 1991. NZ-APC accepted the name.

Mount Hotine. 81°43' S, 160°00' E. A peak, 3 km N of Mount McKerrow, and 4 km S of Mount Mathew, in the Surveyors Range. Discovered by NZGSAE 1960-61, and named by them for Martin Hotine (*see* **Hotine Glacier**). NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted it in 1966.

Hotine Glacier. 65°08' S, 63°52' W. A glacier, 16 km long, divided at its mouth by Mount Cloos, and flowing W into both Deloncle Bay and Girard Bay, on the Graham Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, roughly mapped in 1909 by FrAE 1908-10, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Brigadier Martin Hotine (1898-1968), Royal Engineers, director of Overseas Surveys, 1946-63. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Hott Peak. 77°13' S, 161°30' E. A steep, ridge-like mountain with a sharp peak rising to 1550 m, between Mount James and Mount Mahony, in the E part of the Helicopter Mountains, in the Saint Johns Range, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Ronald Dale Hott, helicopter mechanic who assisted USAP activities in the area of McMurdo Sound, and at the McMurdo Dry Valleys, for 10 summer seasons 1998-99 to 2007-08. NZ-APC accepted the name on April 7, 2008.

Hough, Henry M. From NY. Crew member on the *Bear of Oakland*, during ByrdAE 1933-35. He was scheduled to go, but whether or not he actually did go is difficult to say. He does not seem to be on any of the expedition lists.

Hough Glacier. 78°32' S, 84°20' W. In the SE part of the Sentinel Range, just S of Mount Tuck. It flows ESE for 16 km between Guerrero Glacier and Remington Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for William Sigourney "Willi" Hough (b. Sept. 19, 1924, Greenfield, Mass.), National Bureau of Standards ionosphere physicist from Boulder, Colo., who after naval service in World War II, and study at Western Michigan University, wintered-over at South Pole Station in 1957. He subsequently did 2 summers in Antarctica, and worked for the Bureau of Ordnance. In 1970 he became a science teacher in a high school in Springfield, Mass., and retired in 1985, to Kalamazoo.

Houk, Vernon Neal "Vern." b. Dec. 16, 1929, Dos Palos, Calif., son of Tennessee-born farmer Guy Houk and his English wife Alice Joyce Woodiwiss (originally from Kent). He graduated from Berkeley in 1950, and got his medical degree from George Washington University in 1954. His specialty was pulmonary disease, and he joined the U.S. Navy, as a lieutenant. He took over from John Tuck as officer-in-charge of Pole Station on Nov. 19, 1957, and was also the medical officer there. After the Navy he became a top, and controversial, government environmental health specialist, an expert on the effects of toxic substances on the human body. In 1968 he went to work for the Center for Disease Control and Prevention. He retired as assistant surgeon general, and died of tracheal cancer on Sept. 11, 1994, in Atlanta.

Houk Spur. 85°01' S, 64°45' W. A bare rock spur extending from the SW side of Mackin Table, 1.5 km N of Mount Dumais, in the southern Patuxent Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Vern Houk. UK-APC accepted the name on Nov. 3, 1971.

Monte Houlder *see* **Houlder Bluff**

Mount Houlder *see* **Houlder Bluff**

Houlder Bluff. 61°06' S, 54°51' W. Rising to 300 m (the Chileans say it is dark from 335 m upwards), S of (and overlooking) Point Wild, on the E edge of Furness Glacier, on the N coast of Elephant Island, in the South Shetlands. Between April and August 1916, during BITE 1914-17, Shackleton saw it from the north, and roughly mapped it as a distinct mountain. One cannot see behind it from that angle, so it, does, indeed, look like a mountain. He named it Mount Frank Houlder, for Frank Houlder (1867-1936), the owner of Houlder Steamship Line, which assisted the expedition. By 1932, the name had been shortened to Mount Houlder, and that was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. It appears on an Argentine chart of 1953, as Monte Holder (sic), and that was the name accepted by the 1970 Argentine gazetteer. However, today, the Argentines spell it Monte Houlder. It appears on a 1962 Chilean chart as Monte Houlder, and that was the name that appears in the 1974 Chilean gazetteer. In Dec. 1970, the British Joint Services expedition of 1970-71 found that on the south of this feature was higher ground, thus not making it a mountain, and it was re-defined by UK-APC, on Nov. 3, 1971. US-ACAN followed suit in 1972. It appears as such in the 1974 British gazetteer and in the 1977 American gazetteer.

Île (de la) Houle *see* **Houle Island**

Houle Island. 66°42' S, 141°12' E. A low, rocky island, 1.5 km W of Ressac Island, and about 5.5 km NNE of the Zélée Glacier Tongue, between the Port-Martin Peninsula and Cape Jules, in the Géologie Archipelago. Photographed aerially by OpHJ 1946-47. Charted by the French in 1949-51, and named by them as Île de la Houle, because the surf (houle means "swell" in French) breaks over this low-lying island. US-ACAN accepted the translated name in 1955. The French later shortened their name to Île Houle.

Houliston Glacier. 72°00' S, 164°34' E. A tributary glacier flowing NW between Neall Massif and the West Quartzite Range, into Black Glacier. Named by NZGSAE 1967-68 for Russell Houliston, electrician at Scott Base that season. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Hounsell, David John "Dave." b. 1938, Swindon, Wilts, son of Sidney Hounsell and his wife Phyllis M. Davis. He joined FIDS in 1960, as a diesel electric mechanic, and wintered-over at Port Lockroy Station in 1961, and at Base T in 1962.

Hourglass Buttress. 86°40' S, 146°28' W. A rock buttress rising to 2790 m, 5.5 km W of Beard Peak, in the La Gorce Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Geologically mapped by Ed Stump's 1980-81 USARP-Arizona State University geological party. Stump named it for the long snow chute up the face of the buttress. US-ACAN accepted the name.

Hourglass dolphins. Order: Cetacea (whales); suborder: Odontoceti (toothed whales); family: Delphinidae. *Lagenorhyncus cruciger*, also called whitesided dolphin, is seen as far south as the South Shetlands. It can grow to 5 feet and 220 pounds, has a rounded snout and a short beak.

Hourglass Lake. 77°21' S, 161°04' E. A small meltwater lake between Webb Lake and Lake Vashka, in Barwick Valley, Victoria Land. Named descriptively in 1964 by U.S. geologist Parker Calkin. US-ACAN accepted the name in 1970.

Hourihan, John Joseph. b. Nov. 3, 1902, Miami, son of Irish immigrants, plasterer contractor Jeremiah "Jere" Hourihan and his wife Jennie. He graduated from the Naval Academy in 1924, married Elva Mary, and after service in World War II, was captain of the *Merrick* during OpHJ 1946-47. He retired on July 1, 1956, as a rear admiral, and died in Miami on Feb. 7, 1984.

Hourihan Glacier. 80°08' S, 158°45' E. A glacier flowing SE from the S slopes of Ward Tower, in the Britannia Range, to enter Merrick Glacier. In association with Byrd Glacier and Merrick Glacier, this glacier was named by US-ACAN on Nov. 21, 2000 for J.J. Hourihan. NZ-APC accepted the name on Feb. 20, 2001.

Lake House. 77°42' S, 161°24' E. In the extreme W end of Pearse Valley, N of the Friis Hills, in Victoria Land. Named by VUWAE 1963-64 for Donald A. "Don" House, chemist and member of this party. NZ-APC accepted the name, and US-ACAN followed suit in 1976.

House Creek. 77°39' S, 162°45' E. A meltwater stream, 1500 m long, heading at about 350 m elevation on the NE side of Suess Glacier, and flowing S along the base of the glacier, to the NW corner of Lake Chad, in Taylor Valley, in Victoria Land. Named by US-ACAN in 1996, for Harold R. House, USGS hydrologist, a member of Long Term Ecological Research (LTER) field teams during 4 summer seasons

from 1993, who assisted in establishing streamgaging stations on streams flowing into Lake Bonney and Lake Hoare.

House Nunatak. 74°56' S, 72°57' W. One of the Grossman Nunataks, it rises to about 1300 m, 6 km SE of Whitmill Nunatak, and ESE of the Lyon Nunataks, in the S part of Palmer Land, where that land meets Ellsworth Land. Named by US-ACAN in 1988, for John R. House, Jr., USGS cartographer who worked in the field at Pole Station and Byrd Station, in 1972-73. UK-APC accepted the name on Feb. 15, 1988.

Houser Peak. 68°22' S, 65°33' W. Rising to 1080 m between Tofani Glacier and Franca Glacier, at the head of Solberg Inlet, on the Bowman Coast, on the E side of the Antarctic Peninsula. Photographed aerially in 1940, during USAS 1939-41, and again by USN between 1966 and 1969, it was also surveyed by Fids from Base E between 1946 and 1948. Named by US-ACAN in 1977, for Elaine Houser, administrative officer with Holmes & Narver. UK-APC accepted the name on May 21, 1979.

Houston Glacier. 70°34' S, 62°03' W. A small glacier flowing N from Eielson Peninsula into Smith Inlet, on the Wilkins Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Robert B. Houston, USN, radioman 1st class at Palmer Station in 1973. UK-APC accepted the name on July 21, 1976.

Houtz Bank. 77°00' S, 166°00' W. A submarine feature in McMurdo Sound. Named by NZ-APC on Nov. 30, 2004, for Robert E. Houtz, a marine geophysicist who carried out some of the early marine geophysical research in the Ross Sea and Southern oceans from the 1960s to the 1980s while on the research staff of the Lamont-Doherty Geological Observatory at Columbia University, in NYC.

Cap Houzeau de Lehaie *see* **Lehaie Point**

[1]**Hovde Bay**. 69°10' S, 39°45' E. A bay along the E shore of Lützow-Holm Bay, just N of the Langhovde Hills, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Hovdebukta (i.e., "the knoll bay"), in association with the nearby hills. US-ACAN accepted the name Hovde Bay in 1964.

[2]**Hovde Bay** *see* **Hovde Cove**

Hovde Cove. 69°15' S, 76°50' E. A small coastal re-entrant, about 4 km across and 4 km long, in the SE part of Prydz Bay, lying immediately E of Flatnes Ice Tongue. Mapped in 1946 by Norwegian cartographers from aerial photographs taken by LCE 1936-37, and named by them as Hovdevika (i.e., "the knoll cove"). Photographed by an ANARE aircraft on Aug. 26, 1957. ANCA named it on April 29, 1958, as Amanda Bay, after Peter Clemence's daughter, born while Clemence was on the ice in 1957 (*see* **Clemence Massif**). In 1966, US-ACAN accepted the name Hovde Cove, although it is often seen as Hovde Bay.

Hovde Glacier. 69°15' S, 76°55' E. A small glacier just W of Brattstrand Bluffs, just E of Hovde Cove, on the SE shore of Prydz Bay, on the Ingrid Christensen Coast. A short tongue from this glacier extends seaward to nearby Hovde Island. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. In 1952, using photos taken by OpHJ 1946-47, the U.S. cartographer John H. Roscoe re-mapped it, and named it named it Hovde Ice Tongue, in association with the island. However, it has since been re-defined as a glacier. US-ACAN accepted the name in 1956, and ANCA followed suit on May 18, 1971.

Hovde Ice Tongue *see* **Hovde Glacier**

Hovde Island. 69°15' S, 76°52' E. A small, rounded, rocky island at the E entrance to Hovde Cove, in Prydz Bay, at the extremity of the small glacier tongue formed by Hovde Glacier, on the Ingrid Christensen Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Hovden (i.e., "the knoll"). US-ACAN accepted the name Hovde Island in 1965. ANCA accepted that name on May 18, 1971.

Hovdebreen. 69°18' S, 39°45' E. A glacier, S of the Langhovde Hills, and flowing N into Hovde Bay, on the Prince Olav Coast. Named by the Norwegians ("Hovde glacier"), in association with the bay.

Hovdebrekka *see* **Hovdebrekka Slope**

Hovdebrekka Slope. 72°03' S, 11°48' E. A crevassed ice slope several miles long, it trends northeastward from Skeidshovden Mountain, in the S part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hovdebrekka (i.e., "the knoll slope"). US-ACAN accepted the name Hovdebrekka Slope in 1966. The Russians call it Ledolom Suslova.

Hovdebukta *see* **Hovde Bay**

Hovdeholmen. 69°13' S, 39°27' E. The SCAR gazetteer lists this as a separate and distinct entry, and says it was named by the Russians. And it may be that the Russians have created this collective name for Indrehovdeholmen and Ytrehovdeholmen.

Indre Hovdeholmen *see under* **I**

Ytre Hovdeholmen *see under* **Y**

Hovdeknattane *see* **Hovdeknattane Rocks**

Hovdeknattane Rocks. 72°07' S, 11°39' E. Rocky crags projecting from the SW part of Hovdebrekka Slope, just NE of Skeidshovden Mountain, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hovdeknattane (i.e., "the knoll rocks"), in association with Skeidshovden Mountain. US-ACAN accepted the name Hovdeknattane Rocks in 1966.

Hovden *see* **Hovde Island**

Hovdeneset *see* **Langhovde-kita Point**

Hovdenuten. 71°59' S, 11°27' E. The most southerly peak in the Betekhtin Range (the S arm of the Humboldt Mountains), in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians (name means "the knoll peak"). The Russians call it Gora Korolëva.

Hovdeöyane *see* **Stanton Group**

Hovdeskar *see* **Hovdeskar Gap**

Hovdeskar Gap. 71°47' S, 11°39' E. Just E of Mount Skarshovden, at the head of Skarsbrotet Glacier, in the SE part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Hovdeskar (i.e., "knoll gap"). US-ACAN accepted the name Hovdeskar Gap in 1970.

Hovdevika *see* **Hovde Cove**

Hovercraft. The hovercraft was invented by Christopher Cockerell in the late 1950s. The first air-cushioned vehicle (ACV) in Antarctica was a Polish Pindair machine, tested at Scott Base by NZARP in 1977. Later that season, a British Pindair was tested at Scott Base. BAS used Tiger 4 Hovercraft on the Larsen Ice Shelf in 1987-88. The Americans experimented with them in 1988-89.

Île Hovgaard *see* **Hovgaard Island**

Isla Hovgaard *see* **Hovgaard Island**

Hovgaard Island. 65°08' S, 64°08' W. An island, 5 km long, 2.5 km SW of Booth Island, between that island and Petermann Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered by Dallmann in Jan. 1874, and named by him as Krogmann-Insel (i.e., "Krogmann island") (*see* **Krogmann Point**). On Feb. 12, 1898, during BelgAE 1897-99 de Gerlache charted it as a new discovery, and named it Île Hovgaard, for Capt. Andreas Peter Hovgaard (1853-1910), of the Royal Danish Navy, a member of the *Vega* expedition in the Arctic, and who assisted in the preparation of BelgAE. This latter name stuck. It appears as Hovgaard Island on Dr. Frederick Cook's 1900 English language version map of that expedition, and also on a British chart of 1914. It was also the name used by Charcot (as Île Hovgaard) during his FrAE 1903-05 (when he re-charted it in Feb. 1904) and FrAE 1908-10. This was the scene of Charcot's picnic (*see* **Picnics**). UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57, and further charted by a FIDS-RN team in 1958. The name Krogmann was allocated to Krogmann Point (q.v.), in the W extremity of the island, although for years both names appeared on various charts and maps to alert the reader to the fact that it was one and the same feature, and that it had been Dallmann's

discovery, not de Gerlache's. The Argentines had been calling it Isla Hovgaard since from at least 1908, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

How, Walter Ernest "Ernie." b. Dec. 25, 1884, Bermondsey, London. Also known as Wally, or Hownow. At sea from the age of 12, often in far northern waters, he was living in Edmonton when he married Ellen Vearey in 1914, and become a father when he set sail on the *Endurance* as an able seaman for BITE 1914-17, led by Shackleton. When the *Endurance* pulled into Buenos Aires on its way south, it was How and Bakewell who smuggled Perce Blackborow on board (*see* **Stowaways**, and **Blackborow, Perce**). After the expedition he served out the rest of the War as an able seaman in the Merchant Navy, losing an eye when his ship hit a German mine. He returned to his wife in Edmonton, had another daughter, and, like Bill Bakewell, was about to go with Shackleton on the *Quest*, in 1921, but in his case his father died and he stayed in England instead, doing various jobs, and becoming noted for his ships in bottles. He later lived in Enfield, London, where he died of cancer on Aug. 5, 1972.

[1]**Bahía Howard**. 66°08' S, 66°36' W. A bay, about 4 km wide, indenting the E coast of Lavoisier Island for 2.5 km, opening about 5 km S of Cape Leblond, in the Biscoe Islands. Named by the Chileans for 1st Lt. (later Vice Admiral) John Howard Balaresque, adjutant to the Commander in Chief of the Chilean Navy. He was on ChilAE 1962-63.

[2]**Bahía Howard** *see* **Cape Howard**, **Lamplugh Inlet**

Cabo Howard *see* **Cape Howard**

Cape Howard. 71°25' S, 61°08' W. A high, flat-topped, snow-covered cape at the end of the peninsula separating Lamplugh Inlet from Odom Inlet, it actually forms the SW entrance point of Lamplugh Inlet and the N entrance point of Odom Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered in Dec. 1940 by USAS 1939-41, photographed aerially and surveyed from the ground by them. They named it Cape Rusty, for a sledge dog lost here. It appears as such on a 1943 U.S. Hydrographhic Office chart, as well as on Finn Rone's 1948 map. At the same time (1940), and in the same area, the name Howard Bay was applied to the recession in the coast between Cape Bryant and Cape Knowles, named after August Howard (1910-1989; real name August Horowitz), founder of the American Polar Society in 1934, and editor of the *Polar Times*. That name appears on a 1942 USAAF chart. The name Howard Island was later applied to a feature in 72°40' S, 59°00' W. In late 1947 a combined sledging team of personnel from RARE 1947-48 and Fids from Base E explored this area, and found Cape Rusty. It was also found that the 1940 USAS flights had had errors in navigation, and that often a feature was plotted twice, in two different places, once from the ground and again from the air. Howard Island was one of these. It was found to be the same as Cape Darlington. It appears on a 1949 Argentine chart as Cabo Rusty. Renamed Cape Howard by US-ACAN in 1952. UK-APC accepted that name on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer. It appears as Cabo Howard on an Argentine chart of 1958, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (the Chileans rejecting the proposed Bahía Howard, which is just as well, as it is a cape, not a bay). *See also* **Lamplugh Inlet**.

Mount Howard. 75°40' S, 161°16' E. A rounded mountain, appearing dark in color, rising to 1460 m, 13 km SE of Mount Joyce, northward of Davis Glacier, and NNE of Mount Bowen, in the Prince Albert Mountains of Victoria Land. Discovered by BNAE 1901-04, who named it for Thomas Evelyn Ellis, 8th Lord Howard de Walden (1880-1946), who helped Scott experiment with sledges before the expedition. US-ACAN accepted the name, and NZ-APC followed suit.

Howard, Alf. b. April 30, 1906, Camberwell, Vic., son of public servant Alfred Samuel Howard. Very short Australian chemist. After Melbourne University, he was doing post grad work on organic chemistry, when he was approached by Sir David Orme Masson to go as hydrologist for both halves of BANZARE 1929-31. Within 48 hours he was on the train for Perth, where he caught the *Orvieto* bound for London, arriving there on Dec. 6, 1928, for a three-month crash course in hydrology, after which he boarded the *Armadale Castle*, bound for Cape Town, where he boarded the *Discovery*. An ice-skater of some proficiency, he actually took his skates to Antarctica, although he never used them. After the expedition, he went to work for the CSIRO, and was involved in soil salinity programs, and, aside from that, also developed a meat-freezing process. He was with CSIRO for 40 years, and during World War II worked on dehydrated foods for the British forces. He was back in Antarctica 4 times in the 1990s, including as a tourist on the *Frontier Spirit* in 1990-01, and then on the very expensive *Kapitan Khlebnikov*, in both 1992-93 and 1997-97, the last season being among the first group of tourists to circumnavigate Antarctica. On Dec. 17, 1996 he set foot at Mawson Station. He was living in a Brisbane nursing home when he celebrated his 103rd birthday, but he was fading fast, and communication with him was very difficult. He died on July 4, 2010.

Howard, Arthur David "Art." b. Aug. 9, 1906, NYC, son of journalist Louis Howard and his wife Lena. He worked his way through New York University and Columbia by playing banjo with orchestras. A geomorphologist, stratigraphist, and mineralogist, he taught at NYU from 1932 to 1941, and during World War II was with the U.S. Coast and Geodetic Survey. In 1944 he joined the OSS, working in intelligence in China, and in 1946 joined USGS. As a glaciologist he went to Antarctica with OpHJ 1946-47. On Nov. 29, 1947, he married Julia Salter, and the following year he joined the faculty at Stanford. He moved to Morehead City, NC, in 1977, and died on Nov. 22, 1986, in New Bern, NC.

Howard, Emanuel *see* **USEE 1838-42**

Howard, Patrick Matthew. b. Feb. 14, 1910, Hastings, Ontario, son of Patrick M. Howard and his wife Catherine Victoria Tracey. Engine mechanic who, in Canada, joined Ellsworth's 1935-36 expedition. He died in 1972.

Howard, William Edward. b. Dec. 24, 1907, Prahran, Vic., son of William Edward Howard. On May 11, 1926 he entered the RAN for a 12-year term, as a seaman, being promoted to able seaman on Feb. 28, 1928. He was on the *Discovery* during the 2nd half of BANZARE 1929-31. He was discharged from the *Orara* on Oct. 16, 1939 when his term was up, and he immediately re-enlisted in the RAN, this time as a sub lieutenant. On June 12, 1940 he was promoted to temporary lieutenant, and at the end of World War II, found himself port director at Wewak, New Guinea, and represented the RAN at the surrender by Rear Admiral Sato of the Japanese forces on Kairiru Island and Muschu Island, which is somewhat ironic in that Howard's father, in 1925, had piloted Japanese warships up Port Phillip, on a goodwill tour, and Sato at that time had been admiral in charge of that fleet, and had presented Howard's father with a silver cigarette case. Lt. Howard joined RANVR, as a lieutenant, on April 30, 1946, and on June 30, 1948 was promoted to lieutenant commander. He was discharged off the *Lonsdale* on July 20, 1953. He married Mary A., and they lived in Mildura, Vic.

[1]**Howard Bay**. 67°28' S, 61°04' E. A bay, 3 km wide, between Byrd Head and Ufs Island, in Mac. Robertson Land. Discovered on Feb. 18, 1931, by BANZARE, and named by Mawson for Alf Howard. US-ACAN accepted the name in 1947, and ANCA followed suit. The Norwegians call it Ufsøyvågen.

[2]**Howard Bay** *see* **Cape Howard**, **Lamplugh Inlet**

Howard Glacier. 77°40' S, 163°05' E. A small alpine glacier just W of Crescent Glacier, it flows S from the Kukri Hills into Taylor Valley, in Victoria Land. Named by Troy L. Péwé, the U.S. glaciologist who studied it in Dec. 1957, for Arthur D. Howard. US-ACAN accepted the name in 1960, and NZ-APC followed suit.

Howard Heights. 77°27' S, 151°40' W. A snow-covered coastal promontory rising to 515 m, between Stewart Glacier and Gerry Glacier, on the N side of Edward VII Peninsula. Features in this area were explored by ByrdAE 1928-30 and ByrdAE 1933-35. Named by Byrd for the famous Roy Wilson Howard (1883-1964), of the Scripps-Howard Newspapers, patrons of ByrdAE 1933-35. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. US-ACAN accepted the name in 1970.

Howard Hills. 67°06' S, 51°09' E. An area of low hills and meltwater lakes, S of Beaver Glacier, in the NE part of the Scott Mountains, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named

by ANCA for William Edward Howard. US-ACAN accepted the name in 1965.

[1]**Howard Island**. 64°47' S, 64°23' W. Directly S of Hartshorne Island, in the E part of the Joubin Islands, off the SW part of Anvers Island, in the Palmer Archipelago. Work was done here by USARP personnel from 1965. Named by US-ACAN in 1975, for Judson R. Howard, mate on the *Hero* during her first voyage to Palmer Station in 1968. UK-APC accepted the name on Dec. 20, 1974.

[2]**Howard Island** *see* **Cape Darlington, Cape Howard**

Howard Nunataks. 77°30' S, 87°00' W. A group of about 15 nuntaks off the extremity of the mountainous ridge at the NW corner of the Sentinel Range. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for Patrick Howard.

Howard Peaks. 74°15' S, 163°42' E. A line of peaks, trending E-W, at the S side of the Tourmaline Plateau, extending transversely across the Deep Freeze Range, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Hugh C. Howard, cook at McMurdo, 1963-64, 1964-65, 1965-66, and 1966-67.

Howard Ridge. 74°50' S, 71°35' W. The W ridge of Mount Lanzerotti, in the Sky-Hi Nunataks, where Ellsworth Land meets southern Palmer Land. It has been used for field reference and visibility observations. Named by UK-APC on June 26, 2001, for Julian Howard (b. 1956), chief pilot who flew the first Dash 7 to Sky Blu Runway.

Howard-Williams Point. 81°26' S, 161°25' E. A prominent point extending into the Ross Ice Shelf, just N of Beaumont Bay, and NE of the Surveyors Range. Named by NZ-APC on Feb. 27, 2003, for Clive Howard-Williams, an ecologist who led several research events in the McMurdo Dry Valleys, and also in the areas of the Darwin Glacier and Bratina Island, from 1984. From 1996 to 2000 he was a member of the Antarctica New Zealand Board. He was later a high official within SCAR. US-ACAN accepted the name later in 2003.

Howarth Glacier. 64°23' S, 57°23' W. A small glacier flowing SSE to Admiralty Sound, along the W side of The Watchtower, in the SE part of James Ross Island. Named by UK-APC on Dec. 11, 1995, for Michael Kingsley Howarth (b. 1932), deputy keeper of palaeontology at the British Museum of Natural History, 1980-92, and author of FIDS scientific report #21, on Alexander Island. US-ACAN accepted the name in 1996.

Howchin Glacier. 78°12' S, 163°22' E. Between Ward Glacier and Walcott Glacier, on the E side of the Royal Society Range, in Victoria Land. Discovered by Grif Taylor's Western Geological Party, during BAE 1910-13, and named by Taylor for Prof. Walter Howchin (1845-1937), English-born geologist of Adelaide, in Australia from 1881. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Howchin Lake. 78°13' S, 163°31' E. A meltwater lake, permanently ice-covered, fed by Howchin North Stream and Howchin South Stream, as well as by inflow from the Koettlitz Glacier, on the SE side of Howchin Glacier, on the E side of the Royal Society Range, in Victoria Land. Named by NZ-APC on Dec. 1, 1993, in association with the glacier. US-ACAN accepted the name in 1994.

Howchin North Stream. 78°12' S, 163°25' E. A melt stream coming off Howchin Glacier, and feeding the N end of Howchin Lake, on the E side of the Royal Society Range, in Victoria Land. Named by NZ-APC on Dec. 1, 1993, in association with the glacier and the lake. US-ACAN accepted the name in 1994.

Howchin South Stream. 78°13' S, 163°25' E. A melt stream coming off Howchin Glacier, and feeding the S end of Howchin Lake, on the E side of the Royal Society Range, in Victoria Land. Named by NZ-APC on Dec. 1, 1993, in association with the glacier and the lake. US-ACAN accepted the name in 1994.

Mount Howe. 87°22' S, 149°30' W. An elongated mountain, rising to 2930 m, comprising low connecting ridges and gable-shaped nunataks, at the E of Scott Glacier, and near the head of that glacier, directly opposite Mount McIntyre, it is (with its small southern outlier) the most southerly mountain in the world. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35. Named by Byrd as Mount Louis McHenry Howe, for Louis McHenry Howe (1871-1936), secretary to President Roosevelt. The name was later abbreviated, and accepted officially by US-ACAN in 1956. An American automatic weather station was installed here in 1992 (*see* **Mount Howe Automatic Weather Station**—under **M**).

Howe Glacier. 86°14' S, 149°12' W. A short tributary glacier flowing W into Scott Glacier immediately N of Mount Russell, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Robert C. Howe, VX-6 photographer during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Mount Howell. 72°14' S, 99°03' W. A mountain, 5 km SSW of Mount Borgeson, in the Walker Mountains of Thurston Island. Named by US-ACAN in 2003, for John D. Howell (see the entry below). Cdr. Howell was on the planes that photographed the areas adjacent to Thurston Island.

Howell, John David. They called him "Dixie Howell," or "Iron John." b. Dec. 2, 1918, in Philadelphia, but raised in West Orange, NJ, son of Sylvester van Syckel Howell and his wife Nelda Bachman. Even before he graduated from high school, he was working as a boiler stoker on a tugboat. He graduated from the Naval Academy in 1940, and won the Navy Cross in 1942 for heroism while serving aboard the *Boise* in the Pacific theatre. He married Gretchen Beyer. He was a lieutenant commander when he took part in OpHJ 1946-47, as plane commander and pilot of planes flying off the *Pine Island*. On Jan. 11, 1947, he landed a PBM Mariner seaplane on open water, in the E part of Glacier Bight, in order to rescue the 6 survivors of the Dec. 30, 1946 Mariner crash on Noville Peninsula. He retired as a captain, then became a Merchant Marine skipper. He retired again, his wife died, and he married again in 2002, and lived in Johnson City, Tenn., where he died on Nov. 25, 2009.

Howell Peak. 70°58' S, 160°00' E. A small rock peak, rising to 1750 m, at the NW end of the Daniels Range, in the Usarp Mountains, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Kenneth R. Howell, USARP meteorologist at Pole Station, 1967-68. ANCA accepted the name on July 31, 1972.

Howison, James R. b. 1819, Fredericksburg, Va., son of merchant Samuel Howison and his wife Helen Rose Moore. He joined the U.S. Navy, and was captain's clerk on USEE 1838-42, joining the *Vincennes* at Callao, and transferring to the *Relief* in 1839. He was the longtime secretary of the Naval Academy at Annapolis, after which he held a judicial position in that city's government. He married Sally Murray on Aug. 12, 1854, in Annapolis, and died on Dec. 30, 1874, in Annapolis.

Ensenada Howkins *see* **Howkins Inlet**

Howkins, Gordon Arthur. b. Oct. 3, 1919, Mexborough, Yorks, son of London Northeastern Railroad worker Arthur Joseph Howkins and his wife Ethel Maud Slaughter. After Mexborough Grammar School he won a scholarship to King's College, London University, but after a year there was evacuated with the other students to Bristol when World War II broke out. A year at Bristol, and he graduated early in science (mathematics and physics). He volunteered for the Fleet Air Arm, did training, but was rejected for bad eyesight due to overhanging eyelids caused by a cricket accident when a youth. He joined the RN instead, and was posted to the Falklands. On the way, aboard the *Rodney*, he was involved in the capture of the *Bismarck*. Finally, via Trinidad, he arrived in the Falklands, which is where he met Olga King, a Falkland Islander. He worked as a meteorologist here for a year, and then back to England, where they were planning Operation Tabarin. Commissioned as a sub lieutenant, RNVR, he volunteered, so he could get back to Olga, and arrived back in the Falklands on the *Highland Monarch*, spent a day, and then was off to Deception Island (Base B), as chief meteorologist (and acting medical officer), during the 2nd phase of Operation Tabarin, 1944-45. On April 3, 1945, in Port Stanley, he married Olga, and from 1945 to 1955 set up and ran the FIDS met station in the Falklands, during which time he spent 2 or 3 summers at the Antarctic bases. In 1955 he, Olga, and their 3 children returned to England. They lived at Ascot for 30 years, while Mr. Howkins worked at the met office at Heathrow from 1955 to 1979, when he retired. In the 1990s they moved to Lincolnshire.

Howkins Inlet. 73°40' S, 60°54' W. An ice-filled inlet receding SW 10 km between Cape Brooks and Lamb Point, along the Lassiter Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, by USAS in 1940. Re-photographed aerially in late 1947, by RARE 1947-48, and, that season (1947-48), it was surveyed from the ground by a joint sledging team of RARE personnel and Fids from Base E. Named by those Fids for Gordon Howkins. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer. It appears, misspelled as Hawkins Inlet, on a 1957 U.S. Hydrographic Office chart. Photographed aerially by USN between 1965 and 1967, it appears, spelled correctly, on the 1969 USGS sketch of Ellsworth Land-Palmer Land. It appears on a Chilean chart of 1966 as Ensenada Howkins, and that is presumably what the Chilean still call it. The Argentines do.

Howland, Charles F. Tabor. b. Oct. 19, 1808, Water Street, New Bedford, Mass., son of Jonathan Howland and his wife Desire Taber. He went to sea at 17, on the brig *Indian Chief*, and worked his way up through the mate ranks on a variety of vessels plying the South American seas. On June 27, 1830, in New Bedford, he married Charlotte A. Himes. He was sealing skipper of the *William Baker*, out of Warren, RI, taking her down to the South Shetlands, sometime in 1834-36, and was replaced during that time by Adby Wilcox. In the 1840s he was skipper of the *Lion*, in the Atlantic, and in the early 1850s skipper of the *Courier*. He retired from the sea in 1858, and became purchasing agent for William Crosby, of Talcahuano (Chile), and for the Chile Whaling Company, in Valparaíso. In 1864, he and Charlotte setteled in New Bedford, which is where he died on Aug. 6, 1895.

Howland, Lloyd. b. Feb. 16, 1791, New Bedford, Mass., son of Humphrey Howland and his wife Elizabeth Delano. He was a resident of Valparaíso when he became skipper of the *Ospray*, and took that barque to the South Shetlands in 1820-21, during a return trip from China to the USA. He was still skippering the *Ospray* in 1829, on a trip to the South Pacific. He married Elizabeth "Betsy" Frankfort, and they lived in New Bedford, which is where he died in 1873.

Hoxmark, Thorleif Edgar. b. 1885, Kristiania (Oslo), son of Christian Olsen Hoxmark and his wife Emilie. He was observer at Órcadas Station during the 1915 winter, and was there again for the 1918 winter.

Hoyt Head. 74°59' S, 134°36' W. A high rock headland forming the NE end of Bowyer Butte, at the W side of Venzke Glacier, on the coast of Marie Byrd Land. Discovered and photographed aerially in Dec. 1940, by members of West Base, during USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Lt. Ronnie A. Hoyt, USNR, construction electrician, officer-in-charge of Byrd Station in 1971.

Hrabar Nunatak. 62°27' S, 59°58' W. A rocky peak, rising to 160 m, 1.4 km E of Greaves Peak, 1.3 km W of Crutch Peaks, and 1.2 km S of Pavlikeni Point, on the N coast of Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the 9th-century Bulgarian scholar, Chernorizets Hrabar.

Ostrov Hrabryj. 67°17' S, 46°38' E. A little island between the Boobyalla Islands and Wattle Island, off the coast of Enderby Land. Named by the Russians.

Ozero Hrustal'noe. 67°45' S, 45°45' E. A lake in the group of rock outcrops the Russians call Gory Konovalova, at the head of Freeth Bay, in Enderby Land, just E of Campbell Glacier. Named by the Russians.

The *Hrvatska Cigra*. A 65-foot Croatian steel ketch (name means "Croatian tern"), under the command of Mladen Sutej, which visited the South Shetlands and the Antarctic Peninsula in 1996-97. Mr. Sutej (b. 1945, Zagreb) wrote the book *The Arctic to the Antarctic*.

Huaguo Shan. 69°24' S, 76°05' E. A hill in the Larsemann Hills. Named by the Chinese.

Hauidong Xueji. 69°30' S, 76°40' E. A ridge in the Larsemann Hills. Named by the Chinese.

Hualde, José Manuel *see* **Órcadas Station, 1938**

Huangjin Wan. 62°09' S, 58°56' W. A cove indenting Fildes Peninsula, on King George Island, in the South Shetlands. Named by the Chinese.

Huanglong Xia. 69°22' S, 76°22' E. A strait in the Larsemann Hills. Named by the Chinese.

Huangshi Shan. 62°13' S, 58°59' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Huaqing Shan. 69°24' S, 76°17' E. A hill in the Larsemann Hills. Named by the Chinese.

Huashan Bandao. 62°09' S, 58°56' W. A tiny peninsula projecting from Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Huashi Shan. 62°12' S, 58°59' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Huaxi Bandao *see* **Brattnevet**

Huaxia Wan *see* **Quilty Bay**

The Hub *see* **Hub Nunatak**

Hub Nunatak. 68°37' S, 66°05' W. A beehive-shaped nunatak rising to 915 m in the lower part of Lammers Glacier, W of Mobiloil Inlet, on the Bowman Coast of the Antarctic Peninsula, conspicuously located near the center of the Traffic Circle, and hence the name The Hub given by members of East Base, who discovered it from the ground and photographed it aerially in 1940, during USAS 1939-41. It appears s such on a 1943 U.S. Hydrographic Office chart, but on Finn Ronne's map of 1945 it appears as Hub Nunatak, as it does also on a 1955 USHO chart. US-ACAN accepted the name in 1956, and UK-APC followed suit on Aug. 31, 1962. Surveyed by Fids from Base E in Dec. 1958.

Caleta Hubac *see* **Caleta Couyoumdjian**

[1]**Mount Hubbard**. 72°11' S, 99°36' W. A peak in the Walker Mountains, 10 km E of Mount Noxon, on Thurston Island. First plotted from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1961, for Harold A. Hubbard, USGS geologist on the *Burton Island* during the USN Bellingshausen Sea Expedition of Feb. 1960. First plotted in 72°08' S, 99°45' W, it has since been replotted.

[2]**Mount Hubbard**. 78°22' S, 163°43' E. A peak SE of The Bulwark, on the W side of Koettlitz Glacier, in Victoria Land. Named by US-ACAN in 1994, for Cdr. (later Capt.) Paula Hubbard Hinger, USN pilot, married to Eric R. Hinger (1960-2005), Naval test pilot. She was, in succession, exec of Squadron VRC 40, at NAS Norfolk, and commanding officer of NAS Corpus Christi.

Hubbard, Edwin *see* **USEE 1838-42**

Mount Hubble. 80°52°S, 158°19' E. Rising to 2490 m, between Mount Field and Mount Dick, in the Churchill Mountains. Named by US-ACAN in 2003, for Edwin Powell Hubble (1869-1953), the famous astronomer for whom the Hubble Telescope was named.

Mount Hubel. 77°13' S, 161°54' E. A prominent, ice-free mountain rising to 1450 m, in the N part of Kuivinen Ridge, in the Saint Johns Range, standing above Miller Glacier, at the W side of Ringer Glacier, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Ed Hubel. NZ-APC accepted the name on April 7, 2008.

Hubel, Edward Hugo "Ed." b. Sept. 23, 1926, NYC, son of milkman Hugo Hubel and his wife Fannie Gross. He joined the U.S. Navy in 1944, and served in the Pacific. A Seabee, he was in Okinawa in late 1945, then in the Aleutians, Greenland, and Korea. He was in Japan when he saw the notice for "volunteers for the South Pole," went to Davisville, RI, for training, and built cold-weather buildings in Detroit for extra training. He shipped out of Norfolk, Va., on the *Wyandot*, in Nov. 1955, through the Panama Canal, to Christchurch, NZ, and then on to McMurdo Sound. He helped build the base there and wintered-over there in 1956, then he was among the 2nd group of Seabees to fly to the South Pole, on Nov. 25-26, 1956, to build South Pole Station (q.v.). When Reggie Wagner accidentally hit him in the mouth, Chief Hubel went down in history as the first man ever to have a tooth pulled at the South Pole. He was in the 3rd and last party to fly out, on Jan. 4, 1957, to McMurdo, and then shipped back to the USA. In 1958, in Naples, Italy, he married Anna Diodato, and in 1960 was commissioned as an ensign, becoming part of the Civil Engineer Corps. His various and many postings included Iceland (1964-65), and Vietnam in time for the Tet Offensive, and he retired from the Navy in 1974 as a lieutenant commander. From 1975 to 1995 he was an inspector for the Navy (residence construction) in Florida, where he finally settled down.

Glaciar Hubert. 71°40' S, 67°00' W. Flows into George VI Sound, just SE of Steeple Peaks, on the W edge of Palmer Land. Named by the Chileans for Hubert Miller (b. April 3, 1936,

Munich), glaciologist at the University of Chile, who took part in ChilAE 1963-64.

Hubert, William. b. April 23, 1864, Poplar, London, as William Henry Herbert, eldest child of bricklayer's laborer Thomas Henry Herbert and his wife Ellen Hurst. By the age of 17, he was a boy fisherman on the *Adventure*, a North Sea trawler out of Grimsby. For some reason he changed his name to William Hubert, went into the regular merchant navy as a trimmer, fireman, and donkeyman (4th engineer), plying Antipodean waters on merchants ships out of London between 1891 and 1896, and became a leading stoker on the *Discovery* during BNAE 1901-04. He went back on the *Morning* in 1903. Skelton was afraid that Hubert was not taking enough exercise, and would hurt himself. And, he did. He strained his back. "I must look for an outside job for him. He is a most ignorant man, can neither read nor write, and is a general misfit, a Cockney from the East End." His mother's family couldn't read either.

Hübl Peak. 64°43' S, 62°29' W. Rising to 1015 m, W of Stolze Peak, on Arctowski Peninsula, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base O that same season. Named by UK-APC on Sept. 23, 1960, for Artur, Freiherr von Hübl (1853-1932), Austrian surveyor who designed the first stereocomparator, in 1894. It appears on a 1961 British chart. US-ACAN accepted the name in 1965.

Mount Hubley. 78°05' S, 86°46' W. A prominent, snow-covered outlying mountain to the W of Mount Hale, in the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1960, for Richard C. Hubley, glaciologist on the U.S. National IGY Committee.

Hubley Glacier *see* **Joyce Glacier**

Hubley Island *see* **Berkner Island**

Mount Huckaby. 85°54' S, 127°03' W. An ice-free, wedge-shaped mountain, rising to 2620 m, it surmounts the E wall of Olentangy Glacier, just E of Haworth Mesa, in the western Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Cdr. Donnie W. Huckaby (b. March 12, 1919, Henderson Co., Texas. d. Oct. 4, 2005, Corpus Christi, Texas), USN, World War II, Korea, Vietnam, and VX-6 maintenance officer at McMurdo in 1962-63 and 1963-64.

Mount Huckle. 69°38' S, 69°48' W. A mainly ice-covered mountain, rising to about 2600 m, near the N end of the Douglas Range, 11 km SSE of Mount Spivey, on the W side of Toynbee Glacier, and 15 km inland from George VI Sound, in the NE part of Alexander Island. Possibly first seen on Jan. 21, 1909, during FrAE 1908-10, but not recognized by them as part of (what would become known as) the Douglas Range, let alone Alexander Island. Photographed aerially on Aug. 16, 1936, by BGLE 1934-37, and by them again on Feb. 1, 1937. In late 1947, RARE 1947-48 photographed it again, aerially, and in 1948 Fids from Base E surveyed it from the ground on its E side, naming it for John Huckle (q.v.), who, in 1949, took part in the survey of the W side of George VI Sound. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a U.S. Hydrographic Office chart of 1955, and on a British chart of 1957.

Huckle, John Sydney Rodney. b. June 22, 1924, Abbots Langley, Herts, son of Frank Huckle (director of a paper company) and his wife Evelena Phillips. From the age of 6, he lived in nearby Kings Langley. He joined the Royal Navy at 17, and served in destroyers and submarines during World War II. On July 7, 1945 Sub Lt. J.S.R. Huckle was awarded the DSC [The *Times*]. After the war he was due to leave for the Gold Coast in Oct. 1946, to be an administration officer, when he saw an ad for FIDS, and, instead, left for the Falklands. On board, Miles Clifford, governor of the Falklands, asked him to be his ADC, and he did. His job was to travel on the *Trepassey* (which left Port Stanley on Jan. 1, 1947) to supervise the relief of Base B (Deception Island), and to establish a base (Base F) in the Argentine Islands, on or near the site of the old BGLE hut. He was promoted to temporary lieutenant and became FIDS leader (or magistrate, as the leaders were sometimes called then) at Base B for the summer of 1946-47, or at least the 2nd part of the summer. For the first half, Doc Andrew had run the base, and Huckle had been at Port Lockroy with Kenny McLeod, seeing to the closing of that base. John Featherstone and Dennis Crutchley had left Base B rather unexpectedly, leaving that station short on manpower, so Huckle wintered-over there in 1947, and was general assistant at Base E (Stonington Island) for the winter of 1948 and the summer of 1948-49. After so long in Antarctica, he should have been relieved that year, but he got trapped with Fuchs' party, and was forced to winter-over again at Base E in 1949. On Jan. 24, 1950 he and Fuchs climbed Mount Neny. He was finally taken off in Feb. 1950, after over 3 years in Antarctica. He continued on as Clifford's ADC, and in 1951 married Lancashire girl Anne Hargreaves, who was a schoolteacher in the Falklands. He was appointed Queen's Harbour Master and Director of Civil Aviation in the Falkland Islands, and was ice-pilot and navigator on the *Oluf Sven* during the 1956-57 Antarctic season. One day he was flying H.K. Salvesen around the islands, and Salvesen offered him a job, as a helicopter pilot, spotting for whales in the Antarctic. It was a 3-year contract, flying off the *Southern Venturer* and the *Southern Harvester*. In 1960 he joined an aviation company, as a pilot supporting oil exploration in different parts of the world. In 1966, in Pontypool, he married teacher Eileen Uttley, and they lived in Africa (Libya, Tunisia) until 1973, when they returned to England, and became involved in the Lancashire Trust for Nature Conservation. He lived in Slaidburn, Lancs, then moved to Monmouth.

Hudak Peak. 79°58' S, 81°40' W. Rising to 1440 m, immediately S of Plummer Glacier, in the Douglas Peaks, in the Heritage Range, in the Ellsworth Mountains. Named by US-ACAN on July 14, 2004, for Curtis M. Hudak, USARP geologist on the 1979-80 Ellsworth Mountains Expedition.

Rocas Huddle *see* **Huddle Rocks**

Huddle Rocks. 65°25' S, 64°59' W. A group of rocks, between 2.5 and 3 km NW of the Symington Islands, to the E of the Pitt Islands, between those islands and the Grandidier Channel, in the Biscoe Islands, off the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. Named by UK-APC on July 7, 1959, for the way the rocks are grouped. They appear on a British chart of 1960. US-ACAN accepted the name in 1971. The feature appears on a 1962 Chilean chart as Rocas Huddle, and that was the name accepted by the 1974 Chilean gazetteer.

Hudie Dao. 62°09' S, 58°59' W. An island off the coast of Fildes Peninsula, on King George Island, in the South Shetlands. Named by the Chinese.

Hudman Glacier. 78°54' S, 84°12' W. Between Marze Peak and Miller Peak, at the S end of the Sentinel Range, it flows into Minnesota Glacier, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Capt. Rayburn A. "Ray" Hudman, U.S. Marine parachutist captain (*see* **Deaths**, 1956), of Saunderstown, RI, who died on the operating table after the P2V he was in, the 2nd plane in from Christchurch on OpDF II, crash landed at McMurdo on Oct. 18, 1956. It took an hour to get him from the crash site to the operating table in the library at the base. *See* that date under **Operation Deep Freeze II**.

The *Hudson*. Canadian vessel, belonging to the Bedford Institute of Oceanography, conducting oceanographic research in southern latitudes in 1969-70, skippered by David Butler. Cedric R. Mann was chief scientist. The vessel spent a month in the Drake Passage, and visited the South Shetlands.

[1]**Cape Hudson**. 68°20' S, 153°45' E. At the N end of Mawson Peninsula, in George V Land. Capt. William L. Hudson, of the *Peacock*, sighted land in this area on Jan. 19, 1840, during USEE 1838-42, and his commander, Wilkes, first applied the name to a cape in the area. Bruce Lambert and Phil Law studied these USEE charts, in conjunction with air photos taken by OpHJ 1946-47 and by ANARE in 1959, and came to the conclusion that this is the cape that Wilkes named after Lt. Hudson, even though looming (q.v.) caused him to chart it over 100 miles N of where it really is. ANCA accepted the name, and US-ACAN followed suit in 1961. The Russians call it Mys Voronina.

[2]**Cape Hudson** *see* **Cape Freshfield**

Hudson, Henry *see* **USEE 1838-42**

Hudson, Huberht [sic] Taylor. Known as Buddha. b. Sept. 17, 1886, Holloway, London,

but raised in Battersea, son of school teacher turned clergyman Herbert K. Hudson and his wife Caroline Emma Cooper. He became a merchant seaman in 1901, and was navigating officer on the *Endurance* during BITE 1914-17. He was in charge of the lifeboat *Stancomb-Wills* after the ship was crushed, for the journey to Elephant Island. He continued as a merchant sailor after the expedition, worked on Q Boats during World War I, and became a captain in the RNR, and as a commodore (2nd class) of the Atlantic Ocean convoy was killed in action on June 15, 1942, when his ship, the *Eaglet*, was sunk by a torpedo, en route from Gib to the UK.

Hudson, William Henry. b. 1821, Brooklyn, NY, son of William Leverreth Hudson (see the entry below) and his wife Eliza. He joined the U.S. Navy, was promoted to midshipman on July 13, 1838, and, as such, was a member of USEE 1838-42. On May 20, 1844, he was promoted to passed midshipman, and resigned from the Navy on April 22, 1852. He married Pamela Pike, and died in Brooklyn on Jan. 3, 1902.

Hudson, William Leverreth. b. May 11, 1794, NY. He entered the U.S. Navy on Jan. 1, 1816, was promoted to midshipman on Oct. 15 of that year, and, after serving at various stations, on April 28, 1826 was promoted to lieutenant. He accepted the post of 2nd-in-command of USEE 1838-42, on June 16, 1838, and was also captain of the *Peacock* during the same voyage. His son was William H. Hudson (see above). He left a journal. On Nov. 2, 1842, he was promoted to commander. He was commandant of the Brooklyn Navy Yard for years, was promoted to captain on Sept. 14, 1855, and in 1857 took command of the *Niagara*, on her first Atlantic cable laying expedition, and again in 1858, when this second mission was successful. On his return to the USA, he was made commandant of the Charlestown Navy Yard, and retired from the service in Aug. 1862, being appointed to the board of lighthouse inspectors, a position he held until his death in Brooklyn, on Oct. 15, 1862.

Hudson Glacier. 66°35' S, 125°23' E. A channel glacier, about 5 km wide and about 8 km long, flowing N from the continental ice, at the W flank of Norths Highland, to the E side of Maury Bay, on the Banzare Coast. Delineated from air photos taken by OpHJ 1946-47. Named by US-ACAN for William H. Hudson. That was the description in the 1956 U.S. gazetteer, with coordinates given as 66°35' S, 125°35' E (these were later amended). A term no longer used.

Hudson Island. 66°39' S, 108°26' E. The largest of the Davis Islands, in the W part of Vincennes Bay, off the Knox Coast of Wilkes Land. Photographed aerially by OpHJ 1946-47, and mapped from these photos in 1955, by U.S. cartographer Gard Blodgett. Named by ANCA on Oct. 11, 1960, for Capt. Ray Hudson, former RAAF, leader of the helicopter team with ANARE, which was in the area in 1959-60. On Feb. 13, 1960 he and Peter Ivanoff flew two Hiller choppers westward of Wilkes Station, and Ivanoff crashed (he was unhurt). On Feb. 19, 1960, Hudson was the leader of the helo team that first visited this feature off the *Magga Dan*, during an ANARE expedition led by Phil Law. An astrofix was obtained and geological and biological observations were made. US-ACAN accepted the name in 1967.

Hudson Mountains. 74°25' S, 99°30' W. Also called the Noville Mountains. A large group of scattered mountains and nunataks, about 110 km in extent, just E of Cranton Bay and Pine Island Bay, at the E extremity of the Amundsen Sea, to the S of the Cosgrove Ice Shelf, and to the N of Pine Island Glacier, in the W part of Ellsworth Land. Discovered on a flight from the *Bear* in Feb. 1940, during USAS 1939-41. Further delinated from air photos taken in Dec. 1946 during OpHJ 1946-47. Named by US-ACAN in 1952, for Capt. William L. Hudson. The full extent of the group was mapped by USGS from USN air photos taken in 1966.

Hudson Nunatak. 70°54' S, 65°17' E. About 4.5 km W of Mount Bewsher, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for John W. Hudson, medical officer at Mawson Station in 1966. US-ACAN accepted the name in 1971.

Hudson Ridge. 83°47' S, 56°39' W. A narrow rock ridge, running SE for 8 km from Meads Peak at an elevation of about 1250 m, 6 km N of Heiser Ridge, in the SW part of the Neptune Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed by USN that same season, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Peter M. Hudson, USN, aviation machinist who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Cerro Huemul. 62°27' S, 60°48' W. A hill, S of the beach the Chileans call Playa Angosta and the hills they call Cerro El Abismo and Cerro Pudú, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1984-85, for the animal on the Chilean coat of arms (*see* **Huemul Island**).

Isla Huemul *see* **Huemul Island**

Islote Huemul *see* **Huemul Island**

Huemul Island. 63°40' S, 60°50' W. Off Cape Wollaston (the N end of Trinity Island), in the Palmer Archipelago. Charted by FrAE 1908-10. Named by ChilAE 1946-47 as Islote Huemul, for the particular type of deer that appears on the Chilean national shield. It appears as such on their 1947 chart, and was the name accepted by the 1974 Chilean gazetteer (after they had rejected the proposed Isla Huemul). Photographed aerially by FIDASE in 1956. On Sept. 23, 1960, UK-APC named it (for themselves only) as Megaptera Island, after *Megaptera nodosa* (the humpacked whale), and it appears as such on a 1961 British chart. US-ACAN accepted the name Huemul Island in 1965, and it appears as such on a 1967 American chart. ArgAE 1959-60 named it descriptively as Islote Clavo (i.e., "nail island"), in association with Punta Martillo, their name for Cape Wollaston (i.e., the hammer and nail motif). It appears on their chart of 1960, and was the name accepted by the 1970 Argentine gazetteer.

Hueneme Glacier. 85°49' S, 131°15' W. A glacier, 13 km long, flowing westward from the Wisconsin Range into Reedy Glacier, between Griffith Peak and Mickler Spur. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Port Hueneme, home of the Construction Battalion Center, which handles West Coast cargo for the ongoing OpDF.

Isla Huevo *see* **Egg Island**

Huey Creek. 77°36' S, 163°06' E. A glacial meltwater stream, about 2 km long, flowing S from an icefield W of Mount Falconer to the north-central shore of Lake Fryxell, in the Taylor Valley of Victoria Land. Named by Diane McKnight (*see* **McKnight Creek**), for the twin-engine UH-1N "Huey" helicopters which supported this expedition (and other expeditions). US-ACAN accepted the name in 1992.

Huey Gully. 77°35' S, 163°01' E. A high, deeply incised gully between Mount Keohane and Mount Falconer, in the N wall of the Taylor Valley, in Victoria Land. Containing some glacial ice from the Commonwealth Glacier, the gully provides meltwater to Huey Creek, which descends S to Lake Fryxell, in the Taylor Valley. Named by US-ACAN in 1997, in association with the creek. NZ-APC accepted the name.

Mount Huffman. 75°16' S, 72°18' W. A prominent mountain, rising to about 1300 m, 6 km NE of Mount Abrams, in the Behrendt Mountains, NW of Cape Zumberge, on the Orville Coast of Ellsworth Land. Surveyed by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1966, for Jerry W. Huffman, USARP scientific leader at Eights Station for the winter of 1963. Mr. Huffman lost a finger that season, when he stuck it in the back of the radio set before switching off. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. Originally mapped in 75°19' S, 72°16' W, it has since been replotted.

Hufford, Lawrence *see* **USEE 1838-42**

Caleta Hugershoff *see* **Hugershoff Cove**

Hugershoff Cove. 64°39' S, 62°23' W. A cove, 3 km NW of Beaupré Cove, SW of Emma Island, in the NW part of Wilhelmina Bay, along the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and surveyed by Fids from Portal Point between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Carl Reinhard Hugershoff (1882-1941), German geodesist and aerial photography pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Caleta Hugershoff.

Mount Huggins. 78°17' S, 162°29' E. A large,

splendid, conical mountain, rising to 3735 m (the New Zealanders say 3688 m), it surmounts the heads of Allison Glacier, Dale Glacier, and Potter Glacier, SSW of Mount Rücker, in the Royal Society Range, SW of McMurdo Sound, in Victoria Land, along the W side of the Ross Sea. Discovered by BNAE 1901-04, who named it for astronomer William Huggins (1824-1910; knighted in 1897), president of the Royal Society, 1900-05. US-ACAN accepted the name, and NZ-APC followed suit.

Huggins, Francis G. *see* **USEE 1838-42**

Huggits Pillar *see* **Haggits Pillar**

Huggler Peak. 79°07' S, 84°41' W. A sharp, snow-covered peak rising to 1580 m in the N part of the Anderson Massif, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for John Q. Huggler, USNR, storekeeper at McMurdo during OpDF 66 (i.e., 1965-66). This man is so untraceable that one is led to believe he is fictitious (cf John Q. Public).

Hugh Mitchell Peak *see* **Mitchell Peak**

Bahía Hughes *see* **Hughes Bay**

Mount Hughes. 79°31' S, 157°23' E. Rising to 2520 m, midway between Mount Longhurst and Tentacle Ridge, in the Cook Mountains. Discovered by BNAE 1901-04, and named by Scott for James Ford Hughes (1858-1914), honorary secretary of the Royal Geographical Society, who helped prepare the expedition. US-ACAN accepted the name.

Hughes, Arthur *see* **USEE 1838-42**

Hughes, Edward. British sealer, commander of the *Sprightly*, 1824-25. He did some charting.

Hughes, Evan Rowland "Taffy." He was working with the Met Office in 1956, when he joined FIDS, as a meteorologist, and wintered-over at Base F in 1957. On the trip south, he was trying to choose between his childhood sweetheart and a woman he had met on a cruise to Port Stanley. One would guess he didn't choose the sweetheart. That tidbit is fair game, not gossip. It made the newspapers in 1956.

Hughes, Henry *see* **USEE 1838-42**

Hughes, John *see* **USEE 1838-42**

Hughes Basin. 80°19' S, 156°18' E. A large, basin-like névé in the Britannia Range, bounded (except to the S) by the Ravens Mountains, Mount Henderson, Mount Olympus, and Mount Quackenbush. The feature is 24 km long, and the ice surface descends N-S from about 2000 m near Mount Olympus to about 1000 m near Darnell Nunatak, where it discharges into Byrd Glacier. Named by US-ACAN in 2001, for Terence J. Hughes, of the Department of Geological Sciences and Institute of Quaternary Sudies, at the University of Maine, at Orono, who made an intensive study of the Byrd Glacier in 1978-79, entailing photogrammetric determination of the ice surface and its velocity, radio ech-sounding from LC-130 Hercules aircraft, and ground surveys from fixed stations close to the glacier, and moving stations on the glacier itself. *See also* **Hughes Ice Piedmont**.

Hughes Bay. 64°13' S, 61°20' W. A very deep bay with many coves and inlets, it is between 30 and 40 km wide, lying between Cape Sterneck and Cape Murray, on the Danco Coast, on the W coast of Graham Land. This was the site of the first landing on the actual Antarctic continent, by John Davis, on Feb. 7, 1821. In Dec. 1824, James Hoseason made the first rough chart of this bay, and it was named Hughes' Bay, for Edward Hughes. It appears as such on Powell's chart of 1828. On Dumont d'Urville's 1838 chart it appears as Baie Hugues, and on an 1839 British chart as Hughes Bay. It appears as Hughes Gulf on a British chart of 1844, and on an 1861 Spanish chart it is shown as Bahía Hugues. It was further charted between Jan. 23 and Jan. 25, 1898, by BelgAE 1897-99, and on Lecointe's 1899 map of that expedition, and also on Dr. Frederick Cook's 1900 English language map of the same expedition, it appears as Hughes Inlet. On Arctowski's 1901 maps of that expedition it appears as variously as Hughes Bay, Hughes Gulf, Golfe de Hughes, Hughes Inlet, and Baie de Hughes, but describes the area of sea between Trinity Island and Brabant Island, or (he was obviously not clear about any of this) to the area of sea bounded by Trinity Island, Liège Island, and the SW coast of the Davis Coast, or to the area of sea between Trinity Island and the Christiania Islands. On Cook's 1903 map of the same expedition, the name Hughes Gulf was misapplied to the bay on the SW side of Trinity Island. In the first decade of the 20th century there was a major tendency to confuse Hughes Bay with Brialmont Cove, and, as late as 1939, Bagshawe calls it "Hughes Bay or Brialmont Bay." On an Argentine map of 1908, the name Bahía Hughes refers to the part of Gerlache Strait E of Liège Island, and, on the same chart, it is also called Golfo de Hughes. On Charcot's map of 1912, the name Baie de Hughes (or Baie de Hugues, as it also appears) refers to the area of sea between the Danco Coast and the E part of Brabant Island. In Bartholomew's atlas of 1921, Hughes Gulf is described as the N entrance of Gerlache Strait. The name Hughes Bay was accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, as well as on British charts of 1959 and 1961. Air photography by FIDASE in 1956-57 led to major changes in topography and outline of this bay. On a Chilean chart of 1947 it appears as Bahía Hughes, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Hughes Bluff. 75°24' S, 162°12' E. A conspicuous rock and ice bluff, rising to 310 m above sea level, along the S side of David Glacier, 10 km W of Cape Reynolds, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for Garrett A. Hughes, researcher in cosmic radiation at McMurdo, in 1966.

Hughes Glacier. 77°44' S, 162°27' E. A small alpine glacier flowing from the Kukri Hills on the S, toward Lake Bonney, to the SE of Taylor Valley, in Victoria Land. Mapped by Grif Taylor's Western Geological Party during BAE 1910-13, and named by them for Thomas McKenny Hughes (1832-1917; he eschewed his first name), Woodwardian professor of geology at Cambridge from 1873 until his death, and (as it turned out) older brother of the Bishop of Llandaff. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Hughes Gulf *see* **Hughes Bay**

Hughes Ice Piedmont. 70°09' S, 62°13' W. Between Cordini Glacier and Smith Inlet, W and NW of Cape Collier, on the Wilkins Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from 1966 USN air photos, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Terence J. Hughes, of the department of geological sciences, at the University of Maine, at Orono, USARP glaciologist at Deception Island and McMurdo Sound, in 1970-71, and at Deception Island, in 1973-74. UK-APC accepted the name on July 21, 1976. *See also* **Hughes Basin**.

Hughes Inlet *see* **Hughes Bay**

Hughes Island. 70°44' S, 167°39' E. A small, ice-covered island, the most easterly of the Lyall Islands, just outside the E part of the entrance to Yule Bay, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Ronald M. Hughes, USN, medical officer at McMurdo, 1966.

Hughes Passage. 66°27' S, 97°14' E. The area of the Shackleton Ice Shelf which separates the mainland from Henderson Island, on the coast of Queen Mary Land. Named by AAE 1911-14, for William Morris "Billy" Hughes (1862-1952), prime minister of Australia, 1915-23. ANCA accepted the name on March 7, 1991.

Hughes Peninsula. 71°54' S, 100°17' W. An ice-covered peninsula, about 28 km long, W of Henry Inlet, on the N side of Thurston Island. First mapped from air photos taken in Dec. 1946, by OpHJ 1946-47, and plotted in 71°52' S, 100°35' W. Named by US-ACAN in 1960, for Jerry Hughes, photographer's mate on the USN Bellingshausen Sea Expedition of 1959-60, who took air photos of Thurston Island from helicopters. It has since been replotted.

Hughes Point. 73°30' S, 94°16' W. A steep, rock point on the W side of the terminus of Exum Glacier, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by them for Wayne B. Hughes, assistant USARP representative at McMurdo that season. US-ACAN accepted the name in 1963.

Hughes Range. 84°30' S, 175°30' E. A high, massive range, between 6 and 13 km wide, surmounted by 6 prominent summits, of which Mount Kaplan is the highest, it lies E of Canyon Glacier, in the Queen Maud Mountains. It extends in a N-S direction for about 72 km (the New Zealanders say about 40 km) from the confluence of Brandau Glacier and Keltie Glacier in the S, to Giovinco Ice Piedmont in the N.

Discovered by Byrd on the base-laying flight of Nov. 18, 1929, during ByrdAE 1928-30, and named by him for Charles Evans Hughes (1862-1948), U.S. secretary of state and chief justice of the U.S. Supreme Court, and Byrd's adviser and counselor. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Glaciar Hugi *see* **Hugi Glacier**

Hugi Glacier. 66°11' S, 65°07' W. Flows northwestward into the head of Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Swiss teacher Franz Joseph Hugi (1796-1855), the father of winter mountain climbing. It appears on a British chart of 1961. US-ACAN accepted the name in 1971. The Argentines call it Glaciar Hugi.

Hugo Island. 64°57' S, 65°45' W. An isolated, ice-covered island, 1.5 km long, with several rocky islets (one of which is Santa Claus Island) and pinnacles off its E side, in the W approach to Bismarck Strait, about 60 km SW of Cape Monaco (on Anvers Island), N of the Biscoe Islands. It is the most outlying island on the W side of the Antarctic Peninsula. Probably discovered by the *Hertha*, in 1893-94. The reason one says this is because on the expedition's charts appears an unnamed island, of roughly this size, in roughly the right coordinates. Officially discovered by FrAE 1903-05, and named by Charcot as Île Victor Hugo (i.e., "Victor Hugo island"), for the great French novelist Victor-Marie Hugo (1802-1885), grandfather of Charcot's first wife, Jeanne. It appears as such on Charcot's maps of 1906 and 1910, and as Victor Hugo Island on a British chart of 1908. It was re-charted on Jan. 13, 1909, by FrAE 1908-10. On an Argentine map of 1945 it appears as Isla Belgica, named after de Gerlache's ship. However, on a 1946 Argentine chart it appears as Isla Victor Hugo, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The name Victor Hugo Island was accepted by US-ACAN and UK-APC, and appears in the 1955 British gazetteer. However, on Sept. 23, 1960, UK-APC shortened the name to Hugo Island, and US-ACAN followed suit in 1963. It appears as such on a British chart of 1961, and in the 1977 British gazetteer. On a 1963 Argentine chart, this island, as well as rocks offlying the E end of the island, were grouped together as Islas Hugo. The island was re-charted by an RN Hydrographic Survey unit on the *Protector*, in 1966-67. The Americans had an automatic weather station on Santa Claus Island (*see* **Santa Claus Island Automatic Weather Station**).

Huhla Col. 63°35' S, 58°29' W. An ice-covered col, at an elevation of about 900 m above sea level, it links Snegotin Ridge to the N with the W part of the Louis Philippe Plateau to the S, and overlooks Prelez Gap and Malorad Glacier to the WNW. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Huhla, in southern Bulgaria.

Isla Huidobro *see* **Alpha Island**

Huie Cliffs. 83°19' S, 51°03' W. Steep rock cliffs rising to about 1700 m above May Valley, and forming the NE edge of the Saratoga Table, in the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their 1965-66 Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Carl Huie, USARP technician during OpDF 77 (i.e., 1976-77), and USGS geologist in the Pensacola Mountains in 1978-79. UK-APC accepted the name on May 21, 1979.

Isla Huinca *see* **Wyatt Island**

Cape Huinga. 82°31' S, 165°10' E. A bold cape overlooking the Ross Ice Shelf at the N side of the mouth of Robb Glacier. Named by the Southern Party of NZGSAE 1959-60, who gathered here in Nov. 1959, before moving inland. Huinga means "gathering" in Maori. NZ-APC accepted the name on May 24, 1961, and it appears in the 1963 NZ gazetteer. US-ACAN accepted the name in 1966.

Punta Huitfeldt *see* **Huitfeldt Point**

Huitfeldt Point. 65°59' S, 64°44' W. A point, SE of Vorweg Point, on the SW side of Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956 it was surveyed from the ground by Fids from Base J, and photographed aerially by FIDASE. Named by UK-APC on July 7, 1959, for Fritz Huitfeldt (1851-1938), Norwegian ski pioneer. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Punta Huitfeldt.

Huka Kapo Glacier. 77°24' S, 160°43' E. A glacier flowing E from the plateau at Willett Range, southward of Edbrooke Hill, and terminating nearly midway along the S side of the Apocalypse Peaks of Victoria Land. Named descriptively by NZ-APC on Sept. 12, 2005. "Huka kapo" is a Maori expression meaning "driving hail." US-ACAN accepted the name in 2006.

Hukuro Cove *see* **Fukuro Cove**

Hukuro-ura *see* **Fukuro Cove**

Hulbe Glacier. 73°47' S, 125°55' W. About 16 km long, it flows from the N side of Siple Island, in the Getz Ice Shelf, off the coast of Marie Byrd Land. Named by US-ACAN in 2003, for Christina L. Hulbe, of Portland State University, theoretical and field researcher of ice motion, in Antarctica from the early 1990s.

Hulcombe Ridge. 70°24' S, 66°15' E. A rock ridge, extending for between 2.5 km and 3 km in a N-S direction, 5 km W of Wignall Peak, and about 7 km W of Mount McCarthy, in the Porthos Range of the Prince Charles Mountains. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for Geoffrey Charles "Geoff" Hulcombe (b. Oct. 10, 1930), senior diesel mechanic at Davis Station in 1962 and at Wilkes Station in 1964. US-ACAN accepted the name in 1967. The Russians call it Gora Poperechnaja, implying it is a mountain.

Huldreskorvene *see* **Huldreskorvene Peaks**

Huldreskorvene Peaks. 72°00' S, 6°05' E. A group of summit peaks and crags just N of Skorvehalsen Saddle, S of the mountain the Norwegians call Håhellerskarvet, and W of Tussenobba Peak, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-57, and from 1958-59 air photos taken during the same long expedition, and named by them as Huldreskorvene. US-ACAN accepted the name Huldreskorvene Peaks in 1966.

Huldreslottet *see* **Huldreslottet Mountain**

Huldreslottet Mountain. 72°58' S, 3°48' W. A prominent ice-free mountain, the most southerly summit in the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Huldreslottet (i.e., "the fairy castle"). US-ACAN accepted the name Huldreslottet Mountain in 1966.

Hull Bay. 74°55' S, 137°40' W. An ice-filled bay, about 40 km wide, fed by Hull Glacier, which descends into the bay between Lynch Point and Cape Burks, on the Hobbs Coast of Marie Byrd Land. Discovered by USAS 1939-41, who named it Cordell Hull Bay, in association with the glacier. US-ACAN accepted the name in 1947, but shortened it in 1966.

Hull Glacier. 75°05' S, 137°15' W. About 56 km long, it flows NW between Mount Giles and Mount Gray, into Hull Bay, in Marie Byrd Land. Discovered by USAS 1939-41, and named by them as Cordell Hull Glacier, for Cordell Hull (1871-1955), the U.S. secretary of state. US-ACAN accepted the name in 1947, but shortened it in 1966.

Hull Point. 62°10' S, 58°12' W. A low promontory, rising to about 15 m above sea level, on the NE side of Legru Bay, King George Island, in the South Shetlands. It comprises a whaleback ridge aligned in a NW-SE direction, and is backed on the NE side by a sandy beach. Named by UK-APC on Feb. 15, 1998, for Edward Hull (1829-1917), a stratigrapher from Ulster, and a structural and economic geologist. He worked with the British Geological Survey on the coalfields of England and Wales, and briefly in Scotland, where he compiled outstanding drift maps of Glasgow. He later became director of the Geological Survey of Ireland. The British plotted it in late 2008. US-ACAN accepted the name in 1999.

Costa (de) Hulot *see* **Hulot Peninsula**

Île Hulot *see* **Hulot Peninsula**

Península Hulot *see* **Hulot Peninsula**

Presqu'île Hulot *see* **Hulot Peninsula**

Hulot Peninsula. 64°29' S, 62°44' W. A rugged peninsula, 3 km long, forming (all at the same time) the SW entrance of Duperré Bay, the NE entrance of Schollaert Channel, and the SW extremity of Brabant Island, in the Palmer Archipelago. It is connected to Brabant Island by an isthmus about 260 m wide. Mount Beddie is its highest point (434 m). The extreme W part

of the peninsula is a high massif. Probably discovered in Feb. 1898, by BelgAE 1897-99. Charted in 1904-05, by FrAE 1903-05, and named by Charcot as Presqu'île Hulot, for Baron Hulot, a character in *La cousine Bette*, by Balzac (Charcot had books on the expedition). It appears as such on Charcot's maps of 1906 and 1911. On the 1911 map (drawn up by Rey and Matha) it also appears as Île Hulot. On a 1943 U.S. Hydrographic Office chart it appears as Hulot Peninsula, and UK-APC accepted that name on Sept, 23, 1960, with US-ACAN following suit that year. It appears as such on a British chart of 1961. It appears on an Argentine chart of 1949 as Península Hulot, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57. On a 1953 Argentine chart, the names Costa Hulot and Costa de Hulot both appear, both apparently relating to the W coast of this peninsula. On a 1963 Chilean chart the whole peninsula appears (by error) as Cabo Lehaie.

Hülserbergnunatak. 73°41' S, 162°27' E. Due S of the Vantage Hills, in Victoria Land. Named by the Germans.

Mont Hulshagen *see* **Mount Hulshagen**

Mount Hulshagen. 72°31' S, 31°16' E. Rising to 2100 m, 1.5 km NW of Mount Bastin, on the N side of the Belgica Mountains. Discovered by BelgAE 1957-58, under Gaston de Gerlache, who named it Mont Hulshagen, for Charles Hulshagen, vehicle mechanic with the expedition. US-ACAN accepted the name Mount Hulshagen in 1962.

Monte Hulth *see* **Mount Hulth**

Mount Hulth. 66°41' S, 64°11' W. Rising to 1475 m, with precipitous black cliffs on its SE side, on the W side of Cabinet Inlet, and S of the mouth of Friederichsen Glacier, on the Foyn Coast, on the E coast of Graham Land. In 1947 it was photographed aerially by RARE 1947-48, and surveyed and charted by Fids from Base D, who named it for Johan Markus Hulth (1865-1928), Swedish polar bibliographer. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a 1954 British chart, and also in the 1955 British gazetteer. It appears on an Argentine chart of 1957 as Monte Hulth, and that is the name the Argentines use today.

Hum, Edwin Charles. b. 1913, West Ham, Essex, son of Henry Charles Hum and his wife Esther Williams. Ordinary seaman on the *William Scoresby*, 1930-32, and able seaman, 1935-36. He married Dorothy May, and they lived in Chelsmford, Essex. He joined the Royal Air Force Volunteer Reserve during World War II, as an air gunner, and became a sergeant with the 150th Squadron. He was killed on June 26, 1944, over Hungary.

Hum Island. 67°21' S, 59°38' E. Also called Sundholmen. A small island about 2 km N of Bertha Island, between the W extremity of that island and the W extremity of Islay, in the William Scoresby Archipelago, off Kemp Land, in Enderby Land. Discovered in Feb. 1936, by personnel on the *Discovery II*, and named by them for Edwin Hum. ANCA accepted the name on July 22, 1959, and US-ACAN followed suit in 1963.

Huma Nunatak. 63°43' S, 58°22' W. A rocky hill rising to 484 m in Erul Heights, 3.46 km WSW of Panhard Nunatak, 4.01 km N of Rayko Nunatak, 3.08 km ENE of Siniger Nunatak, 4.18 km SE of Gigen Peak, and 2.49 km S of Coburg Peak, it surmounts Russell East Glacier to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Huma, in northeastern Bulgaria.

Point(e) Humann *see* **Humann Point**

Punta Humann *see* **Humann Point**

Humann Point. 64°24' S, 62°41' W. Forms the N side of the entrance to Duperré Bay, on the SW side of Brabant Island, in the Palmer Archipelago. Charted in 1904-05 by FrAE 1903-05, and named by Charcot as Pointe Humann, for Vice Admiral Edgar Humann (1834-1914) of the French Navy. It appears as such on Charcot's maps of that expedition, as well as on those of FrAE 1908-10. It appears as Point Humann on a 1943 U.S. Hydrographic Office chart. On a 1949 Argentine chart it appears as Punta Humann, and that was the name accepted by the 1970 Argentine gazetteer and also by the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Humann Point on Sept. 23, 1960, and US-ACAN followed suit that year. It appears as such on a 1961 British chart.

Mount Humble. 67°40' S, 49°29' E. Rising to 1450 m, it is the highest mountain in the Raggatt Mountains, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA on July 4, 1961, for John E. Humble, cosmic ray physicist at Mawson Station in 1960. US-ACAN accepted the name in 1965.

Humble Island. 64°46' S, 64°06' W. A small rocky island 0.6 km ESE of Norsel Point, in Arthur Harbor, off the SW coast of Anvers Island, in the area of Palmer Station, in the Palmer Archipelago. Surveyed by Fids from Base N in 1955, and named by UK-APC on Sept. 4, 1957 as Humble Islet because the feature seems to be squeezed insignificantly in between Litchfield Island and the coast of Anvers Island. US-ACAN accepted that name in 1958. It appears as such on a British chart of 1958. However, on July 7, 1959, UK-APC redefined it as Humble Island, and it appears as such on a British chart of 1960. US-ACAN accepted the new name in 1963.

Humble Islet *see* **Humble Island**

Humble Point. 61°11' S, 54°08' W. A low point, 8 km SW of Cape Lloyd, on the W coast of Clarence Island, in the South Shetlands. Named by ArgAE 1956-57 as Punta Baja (i.e., "low point"), it appears as such on their chart of 1957, and that was the name accepted by the Argentine gazetteer of 1970. Surveyed in Dec. 1970, by the British Joint Services Expedition of 1970-71. As this is rather a dull name, and reminiscent of several others of similar names, UK-APC changed the name on Nov. 3, 1971, to Humble Point, and US-ACAN accepted the new name in 1972. Just to set the record straight, the most stolid and determinedly unimaginative naming of Antarctic features has been committed (just as a sin is committed) by the Norwegians in Queen Maud Land, yet hundreds, perhaps thousands, of these incredibly dull names, as hysterically funny as they might be to the Norwegians, have been allowed to stand.

The *Humboldt*. A 13,031-ton, 75.2-meter red-and-white Peruvian ship, built in 1979, owned by IMARPE (Instituto del Mar del Perú), and based out of Callao, she has a reinforced steel hull for ice work. She took the first Peruvian Antarctic Expedition to the required latitude, in Jan.-March 1988, and conducted ecosystem studies in Bransfield Strait. Her skipper that season was Ricardo García Escudero. She was back in 1988-89, under the command of Capt. Juan Carlos Cicala Collazos. She ran aground off Marion Cove, King George Island, in the South Shetlands, on Feb. 27, 1989, and her crew were rescued by the *Stena Seaspread*, from the Falkland Islands. The *Humboldt* was refloated, and was back in Antarctic waters carrying Peruvian expeditions: 1990-91 (Capt. Héctor Soldi Soldi; he had also taken part in the first two Peruvian expeditions; he was later a rear admiral); 1997-98 (Captain Luis Zuazo Mantilla); 1998-99 (skipper unknown); and in 1999-2000 (skipper unknown). She was back in 2006-07.

Humboldt Gebirge *see* **Humboldt Mountains**

Humboldt Graben. 71°45' S, 11°55' E. A long glacier-filled valley, about 30 km long, and trending N-S between the Humboldt Mountains and Zwiesel Mountain (in the Petermann Ranges), in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39, and named by Ritscher, in association with the mountains. US-ACAN accepted the name in 1966. Today the Germans call it Humboldtgraben. The Norwegians call it Humboldtsøkket.

Humboldt Mountains. 71°45' S, 11°30' E. A group of mountains immediately W of the Petermann Ranges, they form the most westerly part of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Alexander von Humbolt Gebirge, for Alexander von Humboldt (1769-1859), the founder of ecology. This was translated into English as the Alexander Humboldt Mountains. The German name was later shortened to Humbolt Gebirge, and US-ACAN accepted the translated name Humboldt Mountains in 1966. The Russians call this feature Hrebet Rozy Ljuksemburg, for Rosa Luxemburg (1871-1919), Marxist revolutionary with Karl Liebknecht. *See also* **Liebknecht Range**.

Humboldtfjella *see* **Humboldt Mountains**

Humboldtgraben *see* **Humboldt Graben**

Humboldtsökket *see* **Humboldt Graben**

Humidity. The absolute humidity in Antarc-

tica is always very low, whereas the relative humidity can be quite high.

Mount Hummel. 74°28' S, 131°19' W. A snow-capped summit rising above the east-central portion of Grant Island, off the coast of Marie Byrd Land. Discovered and first charted from the *Glacier*, on Feb. 4, 1962. Named by US-ACAN in 1966, for Lt. (jg) William T. Hummel, USNR, helicopter pilot on the *Glacier* at the time.

Mount Hummer. 83°17' S, 50°06' W. A snow-covered, bluff-type mountain, rising to 1710 m, on the SW side of the head of Chambers Glacier, at the NE end of the Saratoga Table, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their 1965-66 Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Michael G. Hummer, of the Oklahoma Medical Research Foundation, a researcher in biomedicine, and who wintered-over as medical officer at Pole Station in 1975. UK-APC accepted the name on May 21, 1979.

Hummer Point. 74°22' S, 110°15' W. The E point of ice-covered Gurnon Peninsula, on the E ridge of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1977, for Michael G. Hummer (*see* **Mount Hummer**).

[1]**Isla Hummock** *see* **Heywood Island**

[2]**Isla Hummock** *see* **Hummock Island**

[1]**Hummock Island** *see* **Heywood Island**

[2]**Hummock Island**. 65°53' S, 65°29' W. An island, 1.5 km long, 6 km W of Larrouy Island, and 8.7 km NW of Ferin Head, off the Graham Coast, on the W coast of Graham Land. Discovered and charted in Aug. 1935, by BGLE 1934-37, and named descriptively by them. It appears on Rymill's 1938 map of the expedition, and also on a 1948 British chart. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It was photographed aerially by FIDASE in 1956-57. It appears fully translated on a 1953 Argentine chart as Isla Motote, and that name was accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1970 accepted the name Isla Hummock.

Hummocks. In the Antarctic sense of the word, it means small hills or ridges of ice formed by pressure.

[1]**The Hump**. 64°21' S, 63°15' W. A conspicuous dome-shaped hill rising to about 150 m above sea level, near the NW entrance point of Lapeyrère Bay, in northern Anvers Island, in the Palmer Archipelago. Surveyed by the Discovery Investigations in 1927, it appears on their 1929 chart, but the descriptive name may well have been given earlier. US-ACAN accepted the name in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as La Joroba (i.e., "the hump"), but on one of their 1963 charts as Monte Joroba, that latter name being the one accepted by the 1974 Chilean gazetteer. It appears on a 1949 Argentine chart as Pico Hump, but on one of their 1953 charts as Pico Joroba, and that latter name was the one accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57.

[2]**The Hump** *see* **Hump Passage**

Pico Hump *see* **The Hump**

Hump Island. 67°36' S, 62°53' E. Just E of the East Arm of Horseshoe Harbor, in Holme Bay, Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Rephotographed aerially by OpHJ 1946-47. Later named by ANARE for its humped appearance from ground level. ANCA accepted the name on July 22, 1959, and US-ACAN followed suit in 1965.

Hump Passage. 85°27' S, 170°12' W. A wide gap, just SE of Barnum Peak, it is the gap through which the névé coming off the Polar Plateau feeds the Liv Glacier. Byrd called it The Hump (even though it is in no way descriptive, per se) when he flew over it on his way to the Pole in 1929, during ByrdAE 1928-30. Renamed slightly by the Southern Party of NZGSAE 1961-62, who occupied a camp at Barnum Peak. NZ-APC accepted the new name, and US-ACAN followed suit in 1966.

Humpback whales. Order: Cetacea (whales); sub-order: Mysticeti (baleen whales); family: Megapteridae. *Megaptera novaeangliae* and *Megaptera nodosa*, at 50 feet and 35 tons, are slow swimmers, and so were heavily hunted. Each one is a black whale, with long, narrow pectoral fins, and it hunches its back when diving, hence the name. They are all born in the tropics (as is usual with whales). They sing, "The Song of the Humpback," which has been recorded. An endangered species, in the 20th century it was reported that 68,294 were killed.

Humpen. 72°05' S, 27°31' E. A small mountain in Berrheia, on Balchen Mountain, in the Sør Rondane Mountains. Named by the Norwegians ("the hump").

Mount Humphrey Lloyd. 72°19' S, 169°27' E. Also called Mount Lloyd. A conspicuous mountain, rising to 2975 m, and forming a substantial part of the divide between the heads of Towles Glacier and Manhaul Glacier, between Mount Vernon Harcourt and Mount Peacock, in the Admiralty Mountains of northern Victoria Land. Discovered in Jan. 1841 by Ross, who named it for the Rev. Dr. Humphrey Lloyd (1800-1881), of Trinity College, Dublin, who had a great interest in Antarctica. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Humphreys Hill *see* **Humphreys Ice Rise**

Humphreys Ice Rise. 67°14' S, 66°50' W. An ice rise in the Müller Ice Shelf, between the mouths of Brückner Glacier and Antevs Glacier, on Arrowsmith Peninsula, in the SW part of Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base W between 1956 and 1959. Named by UK-APC on Sept. 23, 1960, as Humphreys Hill, for William Jackson Humphreys (1862-1949), U.S. meteorologist, specialist in the effects of ice in the atmosphere. US-ACAN accepted that name later in 1960. It appears as such in the 1961 British gazetteer. However, it was redefined as an ice rise by UK-APC on Nov. 13, 1985, and US-ACAN accepted that new definition in 1994.

Humphreys Ridge. 73°07' S, 61°00' E. A long, snow-covered rock ridge in the Goodspeed Nunataks, in the S part of the Prince Charles Mountains. Discovered by an ANARE seismic traverse party in 1957, and photographed aerially by ANARE in 1958. Named by ANCA for Alan E. Humphreys, senior engineer with the Antarctic Division in Melbourne, officer in charge of the Prince Charles Mountains survey party of 1972. He had also wintered over at Wilkes Station in 1966. The Russians, who plot it in 73°08' S, 61°07' E, call it Gora Dvugorbaja.

Humphries Glacier. 72°51' S, 168°50' E. A steep tributary glacier, just E of Ingham Glacier, it flows in a general SW direction to join Borchgrevink Glacier northwestward of Mount Prior, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for John Gerard Humphries, World War II seaman from NZ, who retired in 1946 as a petty officer, and who was an ionosphere physicist at Hallett Station in 1957.

Humphries Heights. 65°03' S, 63°52' W. A series of elevations rising to about 1100 m, and extending SW from False Cape Renard to Deloncle Bay, at the Lemaire Channel, on the Graham Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Col. George James Humphries (1900-81), deputy director of Overseas Surveys, 1946-63; and director, 1963-65. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Humphries Range. 72°50' S, 168°50' E. A range of mountains in the Victory Mountains of Victoria Land, in the area of Humphries Glacier, in association with which it was named by NZ.

Islote Humps *see* **Humps Island**

Humps Island. 63°59' S, 57°25' W. An island, 0.8 km (the Chileans say 1.5 km) long, with 2 summits near the W end, about 6.5 km SSE of the tip of The Naze, in the NE part of James Ross Island, in Erebus and Terror Gulf, S of the NE end of the Antarctic Peninsula. Discovered and roughly surveyed in Feb. 1902, by SwedAE 1901-04. Re-surveyed by Fids from Base D in Nov. 1945, and named by them as Humps Islet, because of its twin summits. It appears as such on a British chart of 1949. It appears on a Chilean chart of 1951 as Isla Humps, and on a 1953 Argentine chart as Islote Humps. UK-APC accepted the name Humps Islet on Sept. 20, 1955, and US-ACAN followed suit in 1956. It appears on an Argentine chart, translated all the way as Islote Giboso, and that was the name accepted by the 1970 Argentine gazetteer. On July

7, 1959, UK-APC changed the name to Humps Island, and it appears as such in the 1961 British gazetteer. US-ACAN accepted the new name in 1963. The Chilean gazetteer accepted the name Islote Humps.

Humps Islet *see* **Humps Island**

Hunagata-iwa. 67°55' S, 44°31' E. A small hill, shaped like an overturned boat, at the northernmost end of the Shinnan Rocks, at the W side of Shinnan Glacier, in Queen Maud Land. Mapped by Japanese cartographers from JARE air photos taken in 1962, and from JARE ground surveys conducted in 1974, and named descritively by them on March 12, 1977 ("boat-shaped rock").

Hunakubo-dani. 71°58' S, 27°23' E. A conspicuous depression, deeper than 100 m, on the E side of Rundtuva, in the NW part of Gropeheia (the N part of Balchen Mountain), in the E part of the Sør Rondane Mountains. Mapped by Japanese cartographers from JARE air photos taken in 1981-82 and 1987, and from JARE ground surveys conducted in 1987-88, and descriptively named by them on Oct. 23, 1989 ("boat-shaped valley"). The Norwegians call it Hunakubogropa.

Hunakubogropa *see* **Hunakubo-dani**

Hunan Shan *see* **The Wall**

Hunazoko-ike. 69°27' S, 39°34' E. A small lake below sea level on Skarvsnes Foreland, on the E side of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1962 and 1973, and named by them on June 22, 1972 ("lake shaped like hull of ship"), partly for its shape, and partly because the hull of a ship is also below sea level.

Glaciar Huneeus. 70°49' S, 61°52' W. A glacier, S of Eielson Peninsula, flowing toward the Weddell Sea, on the E coast of the Antarctic Peninsula. Named by the Chileans for Antonio Ricardo Huneeus Gana (1870-1951), minister for foreign affairs. Don Antonio, in 1906, sent to the Chilean congress a bill to finance (to the tune of 150,000 pesos) a Chilean expedition to Antarctica, and he presided over the expedition commission. Unfortunately, the great earthquake (8.2 on the Richter scale) of Aug. 16, 1906 ruined not only the city of Valparaíso, but the expedition plans as well, and it was not until after World War II that such an expedition came into effect. Antonio Huneeus Gana Base was also named after him.

Huneeus Gana *see* **Antonio Huneeus Gana Refugio**

Hungary. Alberto Tolnay, a Hungarian, wintered-over at Órcadas Station in 1925. Hungary was ratified on Jan. 27, 1984 as the 29th signatory of the Antarctic Treaty. It has established no presence on the continent.

Île Hungry *see* **Window Island**

Huns Nunatak. 71°16' S, 68°42' W. Rising to about 950 m above sea level, in the middle of the Milky Way Glacier, between the LeMay Range and Planet Heights, in the central part of Alexander Island. Named by UK-APC on Oct. 5, 1994, to honor not just the famous "Huns" dog team, but all FIDS and BAS dog teams. The Huns ran between 1961 and 1994, their last season being 1993-94, in this area, one of the last teams to work in Antarctica. US-ACAN accepted the name later in 1994.

Monte Hunt *see* **Hunt Peak**

[1]**Mount Hunt** *see* **Hunt Mountain**

[2]**Mount Hunt**. 67°07' S, 144°18' E. A dome-shaped mountain rising to 518 m, and surmounting the promontory which terminates in Cape de la Motte, on the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for H.A. Hunt (*see* **Hunt Glacier**). US-ACAN accepted the name, and ANCA followed suit on Nov. 24, 1961.

Hunt, Boston R. b. March 31, 1908, Manhattan, NY, son of Canadian immigrant Edward L. Hunt (an insurance executive, who later got the call to be a clergyman) and his wife Fanny R. Bassett (who was from Wisconsin). After a spell as a commission clerk with a brokerage in NYC, he signed on to the *Southern Cross* in New York, on Aug. 21, 1931, as a cadet merchant seaman, thus beginning a career as a state room steward. For several years he plied the waters of the eastern Americas, and then moved to Seattle. He was a waiter on the *North Star* during USAS 1939-41. He died on Sept. 5, 1975, in Seattle.

Hunt, Brian David. b. July 8, 1930, Dartford, Kent, son of dairy owner Harold William Hunt and Kathleen Mary Johnson. He worked in the Met Office after school and then in 1949-50 did his national service (it was 18 months then) in the RAF. In 1950 he left Southampton on the *John Biscoe*, bound for the Falkland Islands, where he worked for a year at the Met Office in Port Stanley. In late 1951 he took the *John Biscoe* down to Hope Bay, as FIDS meteorological assistant who wintered-over at Base D in 1952. In 1953 the *John Biscoe* came to pick him up, and took him back to Southampton, where he arrived on June 11, 1953. In 1954, back in England, he married Joyce Loft, and in 1955 rejoined the RAF for a 2½-year-term (which wound up being 6 years), as an air met observer with 2020 Squadron, based in Northern Ireland, and making Atlantic and North Sea weather reconnaissance flights. He was demobbed in 1961, as a flight sergeant. He re-joined the Met Office, in training and forecasting, and became (in his spare time) a forecaster for gliders, and in the 1970s was three times in the Arctic on trawlers, forecasting. In 1983-84 he re-joined the RAF again, as a squadron leader with the Mobile Met Unit, going on four separate tours to the Falkland Islands just after hostilities had ceased there. He retired from the Met Office in 1989, to Bracknell, Berks. In 2002 he and his wife re-visited Hope Bay as part of the Larsen-Nordenskjöld centenary trip.

Hunt, Charles. b. 1878, Jersey, Channel Islands, son of Richard Hunt, an Irish gentleman's servant, and his wife Mary Sewell, who was from Woolwich. Charles was born in Jersey only because his father had been working there at the time (he had been in Bombay a few years before that). When Charles was an infant, the family moved to Woolwich. After a spell working as a laborer, he joined the merchant navy, and on Dec. 1, 1908 (he had signed on the day before) left NZ on the *Nimrod* as the new 3rd engineer, for the 2nd half of BAE 1907-09. He was discharged at Poplar (in London) on Aug. 31, 1909.

Hunt, Frank William. Known as "F.W. Hunt." b. 1922, Chipping Norton, Oxon, son of Charles W. Hunt and his wife Edith E.I. May. He became a naval cadet at Dartmouth (Royal Naval College), training on the *Britannia*, and passed out in 1940. On Feb. 2, 1946, by now a lieutenant, at St. Sylvester's, Chivelstone, Devon, he married Mary B.E. Osborne, and they lived in South Tawton, Okehampton, Devon. As a lieutenant commander, he led the RN Hydrographic Survey Unit in Graham Land in 1951-52. On Dec. 31, 1955, he was promoted to commander, and in 1956 he went on loan for 3 years to the Royal NZ Navy. In May 1960 he transferred to the Admiralty, as superintendent of the Oceanographical Branch, and on June 25, 1962, was made skipper of the *Cook*, in the South Seas, taking up his command on Sept. 11. It was from this ship that the famous record depth of ocean was established in late 1962, in the Mindanao Trench. In Jan. 1964, at Singapore, he was court-martialed, and found guilty of hazarding and stranding his ship. In 1965 he took over from Harry Kirkwood as the chief of the British Residency Marine Department in the New Hebrides, retired from the RN as a commander on Feb. 4, 1967, and from the New Hebrides post in 1969.

Hunt, James *see* **USEE 1838-42**

Hunt, James Malcolm. Known as Malcolm, or, by his mates, as "Lord Hornsby." b. March 17 (the date is right, it is from a Fid's diary; unfortunately, no year of birth). He worked at the Met Office, and joined FIDS in 1957, as a meteorologist, and wintered-over at Base F in 1958 and at Base Y in 1959. Lives in Scotland, near Lochgilphead (actually at Knapdale).

Hunt Bluff. 74°36' S, 111°52' W. A steep rock and ice bluff, about 5 km long, 3 km S of Jeffrey Head, on the W side of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. First delineated from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Lt. Robert B. Hunt, USNR, who wintered-over as medical officer at Byrd Station in 1966. Originally plotted in 74°37' S, 111°46' W, it has since been replotted.

Hunt Glacier. 76°52' S, 162°25' E. A small, deeply entrenched glacier on the E coast of Victoria Land, it flows eastward from the highlands W of Granite Harbor, to enter the harbor immediately N of Dreikanter Head. Mapped by BAE 1910-13, and named by them for British-born Henry Ambrose Hunt (1866-1946), Australian meteorologist who helped write up the scientific reports of BAE 1907-09. Hunt was the first Commonwealth meteorologist of the Bureau of Meteorology, 1907-31. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Hunt Island *see* **Pampa Island**

Hunt Mountain. 82°05' S, 159°16' E. Rising

to 3240 m (the Australians say 3660 m), in the N part of the Holyoake Range, it is the highest point in that range, between Nimrod Glacier and Starshot Glacier. Discovered and mapped by the Southern Party of NZGSAE 1960-61, and named by them as Mount Hunt, for Capt. Peter John Hunt (b. Dunedin), Royal Engineers, leader of the southern party of the expedition that year, which surveyed the coastal area of Barne Inlet and Shackleton Inlet. He had just come off a winter-over at Scott Base (1960), and before that was a member of the Southern Party of NZGSAE 1959-60. NZ-APC accepted the name, but US-ACAN accepted the name Hunt Mountain in 1966, and ANCA followed suit.

Hunt Nunataks. 70°11' S, 64°53' E. A linear group of 5 nunataks, about 3.5 km long in a N-S direction, just E of Mount Béchervaise, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for H. Peter Hunt, senior helicopter pilot here in 1969, with the Prince Charles Mountains Survey Party. US-ACAN accepted the name in 1971.

Hunt Peak. 67°18' S, 68°02' W. Rising to 610 m (the British say about 550 m), it marks the N side of the entrance to Stonehouse Bay, on the E coast of Adelaide Island. Discovered, surveyed, and roughly charted in 1909, by FrAE 1908-10. In Sept. 1948, Fids from Base E re-surveyed it and named the point on which it then stood as Hunt Point, for Sgt. Kenneth Dawson Hunt (b. 1922), RAF mechanic for the FIDS Norseman airplane that flew from the Argentine islands to Stonington Island in Jan.-Feb. 1950, to pluck off the Fids who had been stranded there. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. Air photos taken by FIDASE in 1956-57, and ground surveys conducted by Fids from Base Y in 1957-58, found no appreciable point in the area, and on July 7, 1959, UK-APC transferred the name Hunt to the peak. US-ACAN accepted this in 1963. The Argentines call it Monte Hunt.

Hunt Point *see* **Hunt Peak**

Hunt Spur. 85°59' S, 146°50' W. A rugged spur descending from Mount Warden, along the NW face of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Glenn C. Hunt, USN, aviation electronics technician with VX-6, who was in Antarctica for 5 summers with OpDF, including two winters, 1962 and 1966.

Cape Hunter. 66°57' S, 142°21' E. A rocky promontory marking the W side of Commonwealth Bay, 13 km W of Cape Denison, on the coast of George V Land. Discovered in 1912 by AAE 1911-14, and explored in 1913 by Mawson, who named it for John G. Hunter. US-ACAN accepted the name, and ANCA followed suit.

[1]**Mount Hunter**. 64°05' S, 62°24' W. Rising to 1410 m, 6 km WSW of Duclaux Point, on Pasteur Peninsula, on Brabant Island, in the Palmer Archipelago. It appears (unnamed) on a 1953 Argentine chart. Mapped by FIDS cartographers in 1959 from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for John Hunter (1728-1793), the famous Scottish surgeon. US-ACAN accepted the name later in 1960. Climbed on Jan. 14, 1984, by the British Joint Service Expedition of 1983-84.

[2]**Mount Hunter**. 75°10' S, 68°40' W. Rising to 1566 m, 4.25 km SE of Potter Peak, in the Sweeney Mountains. It has a ridge running SW from it for 7.5 km. Named by UK-APC on Oct. 9, 2009, for Morag A. Hunter (b. 1970), BAS sedimentologist from 1997, whose work established the stratigraphy of this area.

Hunter, Gilbert Stuart. b. 1893, Lewisham, near London, son of Yarmouth-born house decorator Ernest Vivian Hunter and his Yorkshire-born wife Frances Matilda Wright. He joined the Merchant Navy, became an engineer, and was 2nd engineer on the *William Scoresby*, 1927-32, and 1934-35. In between tours, in 1932, in London, he married Annie A. Fleming, alias Staig. He died in Alton, Hants, at the beginning of 1952.

Hunter, John George. b. Sept. 19, 1888, Ultimo, Sydney, son of Scottish immigrant loomturner William Fyfe Hunter (from Tillicoultry) and his wife Ellen Jane Sloane. He was assistant demonstrator in the biological department at the University of Sydney when he became chief biologist on AAE 1911-14. On Feb. 10, 1916, in Sydney, he married a nurse, Clarice Mary Walker. He served on the Western Front as a captain in the Australian Army Medical Corps during World War I, and after the war practiced as a doctor for years in Sydney. He served as a major during World War II. In 1962 he became first secretary general of the Australian Medical Association, and is regarded as its principal architect (the AMA was formed that year); he drafted its code of ethics. He died on Dec. 27, 1964, in Lilli Pilli, Sydney.

Hunter Glacier. 71°44' S, 163°00' E. A tributary glacier, 11 km long, flowing westward from the central part of the Lanterman Range, in the Bowers Mountains, to enter Rennick Glacier at Mount Lugering. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Lt. Cdr. William Gregory "Bill" Hunter (b. Jan. 31, 1921, Salt Lake City. d June 28, 2003, San Diego), in the U.S. Navy since 1941, and executive and operations officer at McMurdo, for the winter of 1964. He retired as a commander in 1972.

Hunting Aerosurveys, Ltd. *see* **Falkland Islands Dependencies Aerial Survey Expedition**

The *Huntress*. Two-masted American sealing schooner of 80 tons, 68 feet long, built in Barnstable, Mass., in 1817. **Aug. 4, 1820**: The *Huntress* left Nantucket, bound for the South Shetlands, with Capt. Christopher Burdick commanding, William Coleman as 1st mate, Smith as 2nd mate, and with a crew of about 15, including Samuel Johnson. Burdick was one of four owners of the vessel. **Sept. 5, 1820**: The *Huntress* stopped at Cape Verde, to load salt on board. **Oct. 31, 1820**: The *Huntress* arrived at the Falkland Islands. **Nov. 22, 1820**: At the Falklands, she teamed up with the *Huron* and the *Cecilia* (the *Huron*'s shallop) and the three vessels sailed together that day to the South Shetlands sealing grounds, for the 1820-21 season. **Nov. 29, 1820**: The three vessels were in 61°26' S. **Nov. 30, 1820**: The *Huntress*, the *Huron*, and the *Cecilia*, still all together, were in 62°S, and spotted land. **Dec. 8, 1820**: The three vessels pulled into Yankee Harbor, to find the *Frederick*, the *Free Gift*, the *Hersilia*, and the *Express* already there. The *Hero* (under Nat Palmer) was off sealing along the shores of Livingston Island. At some stage Samuel Johnson deserted the *Huntress*, probably to work with a British sealing gang. **March 10, 1820**: The *Huntress* finally left Antarctica, in company with the *Nancy*, bound for the Falklands. The *Nancy* would lay over in the Falklands, waiting for the next South Shetlands season, but the *Huntress* made her way back to Nantucket, with 3000 seal skins, and in company with the *Harmony*. **June 6, 1821**: The *Huntress* and the *Harmony* arrived back in Nantucket. The best account of this trip is in Edouard Stackpole's book, *The Voyage of the* Huron *and the* Huntress (1955).

Cape Huntress *see* **Harmony Point**

Glaciar Huntress *see* **Huntress Glacier**

Huntress Glacier. 62°41' S, 60°16' W. Flows SW into the head of False Bay, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-58. Named by UK-APC on July 7, 1959, for the *Huntress*. US-ACAN accepted the name in 1960. The Argentines call it Glaciar Huntress. The UK re-plotted this feature in late 2008.

Bahía Huon *see* **Huon Bay**

Cap Huon *see* **Huon Bay**

Huon Bay. 63°23' S, 58°00' W. A shallow bay, about 13 km wide (the Chileans say about 8 km), between Cape Ducorps and Cape Legoupil, along the N coast of Trinity Peninsula. On Feb. 27, 1838, during FrAE 1837-40, Dumont d'Urville named a cape in this area as Cap Huon, for Félix Huon de Kermadec (*see* the entry below), and he charted it as such. It appears on his chart of 1838 and his map of 1841. Along the way the name "Huon" was misinterpreted as "Union," and the feature appears as Cape Union on a 1921 British chart, and as Cabo Unión on a 1947 Chilean chart. However, what FrAE 1837-40 charted and named Cap Huon may well have been what is known today as Coupvent Point, which explains why, in Sept. 1946, Fids from Base D failed to find the cape, and, instead, gave the name Huon to this bay. Huon Bay appears on a British chart of 1949, and that name was accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. It appears on a Russian chart of 1961, as Bukhta Ion. The Chileans call it Bahía Huon; it appears as such on a chart of 1962, and in their 1974 gazetteer. The Argentines call it the same thing.

Huon de Kermadec, Félix-Casimir-Marie. b. Feb. 13, 1813, Brest, France. Purser and steward on the *Zélée* during FrAE 1837-40.

Huoyan Shan. 72°28' S, 75°32' E. A isolated hill, E of the Bode Nunataks, in the Grove Mountains of Princess Elizabeth Land. Named by the Chinese.

Glaciar Hurd *see* **Hurd Dome**

Península Hurd *see* **Hurd Peninsula**

Hurd Dome. 62°41' S, 60°22' W. An ice dome (or cap) rising to about 375 m, and covering the central part of Hurd Peninsula, in the S part of Livingston Island, in the South Shetlands. Named by the Spanish as Glaciar Hurd. UK-APC accepted the name Hurd Ice Cap on July 8, 2003, and US-ACAN followed suit in 2004, but calling it Hurd Dome. The UK plotted this feature in late 2008.

Hurd Ice Cap *see* **Hurd Dome**

Hurd Peninsula. 62°41' S, 60°22' W. Between South Bay and False Bay, on the S coast of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. On a Chilean chart of 1961, it appears as Punta Elefante (*see* **Miers Bluff**). Named by UK-APC on Aug. 31, 1962, for Capt. Thomas Hurd (1747-1823), RN, second hydrographer to the Admiralty, 1808-23, who instituted a regular system of nautical surveys, and under whose authority Bransfield's 1820 survey of the Bransfield Strait area was published in Nov. 1822. It appears as such on a British chart of 1962. US-ACAN accepted the name in 1965. The Argentines have been calling it Península Hurd from at least 1978. The UK re-plotted this feature in late 2008.

Cape Hurley. 67°36' S, 145°18' E. An ice-covered coastal point marking (on the the E) the mouth of the depression occupied by Mertz Glacier. Discovered by AAE 1911-14, and named by Mawson for Frank Hurley. US-ACAN accepted the name.

Mount Hurley. 66°17' S, 51°21' E. A high, snow-covered massif (the Australians call it a peak) with steep, bare slopes, 11 km S of Cape Ann, and 5 km (the Australians say 9 km) S of Mount Biscoe, in Enderby Land. Discovered in Jan. 1930 by BANZARE, and named by Mawson for Frank Hurley. US-ACAN accepted the name, as did ANCA.

Hurley, James Francis "Frank." b. Oct. 15, 1885, Glebe, Sydney, son of British immigrant printer and trade union official Edward Harrison Hurley and his wife Margaret Agnes Bouffier. At 13 he ran away from home for two years, working in a steel mill, then got into photography. He went into the postcard business in Sydney in 1905, and by 1910 was a famous photographer in Sydney, mostly for his sensationally daring shots (involving danger, that is). He was the photographer on AAE 1911-14, and produced *Home of the Blizzard*, a motion picture. Then he was the movie man on Shackleton's BITE 1914-17, being stranded in 1915 when the *Endurance* got crushed in the ice. On one occasion he dived into the water to save his negatives. His movie, *In the Grip of Polar Ice*, became justly famous worldwide. In Aug. 1917 he went to Europe as a an honorary captain ("Cap" they called him), and made sensational pictures often at great risk to himself. In Cairo he met opera singer Antoinette Rosalind Leighton, and 10 days later married her on April 11, 1918. In 1925 he wrote the book *Argonauts of the South*. In 1929 his movie *Southward Ho with Mawson* was produced, and he was on both halves of BANZARE 1929-31. His documentary *Siege of the South* came out in 1931. He was the official Australian photographer in the Middle East during World War II, but by now his style was out of date. In 1948 he wrote the book *Shackleton's Argonauts*. He died on Jan. 17, 1962, at Collaroy, Sydney. In 1973 Tony Buckley made a documentary about his life, called *Snow, Sand and Savages*.

Hurley Glacier. 67°34' S, 68°32' W. A glacier flowing E between Mount Gaudry and Mount Liotard into Ryder Bay, on Adelaide Island. Surveyed by Fids from Base E in 1948, and photographed aerially by FIDASE in 1956-57. Further surveyed from the ground by Fids from Base T in 1961-62. Named by UK-APC on Dec. 8, 1977, for Alexander John "Alec" Hurley (b. 1951), BAS mechanic who wintered-over at Halley Bay Station in 1975, and at Rothera Station in 1976. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

The *Huron*. Square-rigged American sealing ship of 250 tons, 89 feet 8 inches long, and built at Guilford, Conn, in 1819. Owned by 19 persons, she was registered at New Haven. **March 20, 1820**: The *Huron* left New Haven, with a 31-man crew commanded by John Davis, who had been appointed skipper that day. Other crew included: Samuel H. Godddard (1st mate), Charles Philips (2nd mate), Charles Laing (bosun), William Johnson (carpenter), Samuel Wadsworth (cooper), Jason Bunce (blacksmith), Daniel French and Hiram Norton (seamen), William White (cook; *see* **Blacks in Antarctica**), Cyrus Treadwell (steward; *see* **Blacks in Antarctica**), Cato Tobias, Jr. (an 18-year-old black man), and another "colored man." The surgeon was Solomon Russell. There were also two 14-year-old boys — John W. Davis (probably the captain's son) and George Mack. Herbert Himan was a landsman. **Nov. 11, 1820**: Bound for the South Shetlands, she met the *Huntress*, at the Falkland Islands, and Davis constructed the *Cecilia* as a tender (or shallop), from a kit he had brought with him on the *Huron*. A sailor, Jabez B. Fletcher (5'1" tall) deserted, and was replaced by Thomas Evans, who probably came over from the *General Knox*. **Nov. 22, 1820**: The 3 vessels sailed together for the South Shetlands sealing grounds, for the 1820-21 season. **Nov. 29, 1820**: The three vessels were in 61°26' S. **Nov. 30, 1820**: The three vessels were in 62°S, and sighted land. **Dec. 5, 1820**: The *Cecilia* went to look for a suitable harbor. **Dec. 7, 1820**: The *Cecilia* returned, with news of Yankee Harbor. **Dec. 8, 1820**: The three vessels pulled in to Yankee Harbor. The ships of the Fanning-Pendleton Sealing Expedition were already there. **Feb. 7, 1821**: Men from the *Cecilia* made a landing on the Antarctic continent (*see* **Landings**). **March 24, 1821**: The *Huron* helped the stricken *Aurora* (Capt. Macy). **March 30, 1821**: The *Huron* and the *Cecilia* left Antarctica. **April 9, 1821**: The *Huron* and the *Cecilia* arrived at the Falklands. **Nov. 1821**: The *Huron* and the *Cecilia* were back in the South Shetlands for the 1821-22 sealing season. **Feb. 17, 1822**: They finally left Antarctica for the Falklands. **June 17, 1822**: The *Huron* and the *Cecilia* arrived home. The *Huron* had taken in almost 11,000 salted fur seal skins and 24,000 gallons of sea elephant oil, all of which was auctioned off in New Haven on July 10, 1822. The best account of this expedition (the first season, anyway) is in Edouard Stackpole's book, *The Voyage of the* Huron *and the* Huntress.

Glaciar Hurón *see* **Huron Glacier**

Huron Glacier. 62°38' S, 60°07' W. Flows E into Moon Bay, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-58. Named by UK-APC on July 7, 1959, for the *Huron*. US-ACAN accepted the name in 1960. It appears on a British chart of 1962. The Argentines call it Glaciar Hurón. Originally plotted in 62°38' S, 60°02' W, it was re-plotted by the UK in late 2008.

Hurricane Heights. 76°44' S, 160°40' E. A striking, irregular, mainly ice-free expanse of fluted snow patches and wind-ridged heights rising to about 2000 m at the S side of the head of Towle Valley, in the Convoy Range, in Victoria Land. So named by a 1989-90 NZARP field party here, to describe the windy aspect of this upland area. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Hurricane Ridge. 78°24' S, 164°12' E. The eastern of 2 broad, mainly ice-free ridges (the other, very similar in appearance, is Riviera Ridge, which lies 6 km to the E) that descend N from Mount Morning, on the Scott Coast of Victoria Land. Gandalf Ridge and Lake Discovery are at the N end of this ridge. Named by geologist Anne C. Wright, of the department of geoscience at the New Mexico Institute of Mining and Technology, a member of the field party from that institute who camped on this ridge in the 1985-86 season. Their tent was blown to shreds by 100 mph winds, necessitating the evacuation of the party by helicopter. The ridge is renowned for consistently strong winds.

Hurst, Robert. Son of George Hurst. Falkland Islands government customs officer on the *Admiralen*, 1906-07. Immediately after this expedition, he left the Falklands on the *Oronsa*, bound for Liverpool.

Hurst Bay. 63°57' S, 57°30' W. A small bay on the E side of The Naze, on James Ross Island. Surveyed by Fids from Base D between 1952 and 1954. Following hydrographic work in the area from the *Endurance* in 1981-82, it was named by UK-APC on Nov. 13, 1985, for Cdr. William Edgar Hurst (b. 1933), navigating officer on the ship. US-ACAN accepted the name.

Hurst Peak. 79°34' S, 84°35' W. A prominent rock peak rising to 1790 m at the S end of the Webers Peaks, in the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64, for aviation machinist James E.

Hurst, crew member of the LC-47 which made the first 1963-64 flight to the Ellsworth Mountains. US-ACAN accepted the name in 1966.

Mount Hush. 77°14' S, 161°46' E. A steep, ice-free mountain rising to 1400 m, it is joined by a col to the central E part of Kuivinen Ridge, and extends ENE for 1.5 km to Ringer Glacier, in the Saint Johns Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Michael "Mike" Hush and his (then) wife Christine Hayslip, who, between 1988 and 2007 served USAP at McMurdo, with, successively, VXE-6, Antarctic Services Associates, and Raytheon. NZ-APC accepted the name on April 7, 2008.

Hushen Glacier. 71°26' S, 72°48' W. A glacier flowing NE from Mount Liszt and joining Reuning Glacier to discharge into the S part of Mendelssohn Inlet, on the N side of Beethoven Peninsula, SW of Dvorak Ice Rise, on Alexander Island. Mapped by USGS from USN air photos taken in 1967-68, and from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for W. Timothy Hushen, director of the Polar Research Board, at the National Academy of Sciences, 1981-88. The Russians call it Lednik Taneeva.

Huskies *see* **Dogs**

[1]**Husky Dome** *see* **Husky Massif**

[2]**Husky Dome**. 84°54' S, 176°17' E. A snow dome rising to 3580 m, marking the highest point of Husky Heights, between the heads of Brandau Glacier and Ramsey Glacier, in the Queen Maud Mountains. Named by NZGSAE 1961-62 for their husky dog teams, which they drove to the summit of these heights. NZ-APC accepted the name, and US-ACAN followed suit in 1995.

Husky Heights. 84°53' S, 176°00' E. Relatively flat, ice-covered heights, 6 km SE of the Haynes Table, overlooking the head of Brandau Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1966, in association with nearby Husky Dome.

Husky Massif. 71°00' S, 65°09' E. A rock outcrop rising to 2100 m (the Australians say about 2190 m) above sea level, about 4.5 km long, with an area of moraine extending along its E side, about 11.5 km SW of Mount Bewsher, in the Aramis Range of the Prince Charles Mountains, in Mac. Robertson Land. First seen from Mount Bewsher in Jan. 1957 by Bill Bewsher's ANARE field party of Nov. 1956 to Feb. 1957 (see under Bewsher, for details), and named Husky Dome to commemorate the husky dogs used by the party, more specifically Mac (the leader), Oscar, Horace, Streaky, Brownie (out on the trail, he fell down a crevasse at least once, survived, and on the way back couldn't keep up, kept falling over, so Syd Kirkby shot him. This was not easy for Syd), and Dee (died on the trail, Feb. 4, 1957, after eating oil-stained cotton waste). The lads wanted each of the dogs to have a feature named after them, but ANCA wouldn't go for it, naming it Husky Dome on July 22, 1957. In 1970 ANCA slightly re-defined the feature because, after studying ANARE air photos, Australian cartographers found the feature to be larger than it had appeared from Mount Bewsher, and that it only has a domed appearance when viewed from there. US-ACAN accepted the new name in 1971.

Husky Pass. 71°40' S, 163°34' E. Between the Lanterman Range and the Molar Massif, at the head of Sledgers Glacier and of an unnamed tributary leading to Leap Year Glacier, in the Bowers Mountains. Named by NZGSAE 1963-64, for the husky dog teams, who made great efforts here in hauling out of the Rennick Glacier watershed into that of the Lillie Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mount Hussey. 72°46' S, 167°31' E. Rising to 2790 m from the spur at the head of Gruendler Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Keith Morgan Hussey (b. Dec. 2, 1908, Rock Island, Ill. d. May 19, 1997, Ames, Ia.), geologist from Iowa State, who was at McMurdo in 1966-67.

Hussey, Leonard Duncan Albert. b. May 6, 1891, Leytonstone, London, son of printing machine ruler James Hussey and his wife Eliza Aitken. He had just come from the Sudan, as an anthropologist on an expedition there, when he was selected to be assistant surgeon and meteorologist on Shackleton's BITE 1914-17. He played his banjo for his 21 mates on Elephant Island in 1916 while they waited for Shackleton. He served in the artillery during World War I, fighting in France, was with Shackleton in Russia, and was back with Shackleton on the *Quest*, 1921-22. It was Hussey who informed Lady Shackleton of her huband's death on South Georgia in 1922. In 1925, in London, he married Grace Muriel Hellstrom. He was later a doctor in Hertfordshire, a medical officer in World War II, and retired to Worthing in 1960. He died on Feb. 25, 1964, in Chorley Wood, Herts.

Husted, George *see* **USEE 1838-42**

The *Husvik*. Norwegian whale catcher belonging to Tønsbergs Hvalfangeri, and working for the *Teie* in the South Orkneys and South Shetlands, in 1920-21. *See also* **The *Herkules***. She also worked for the *Orwell* in Antarctic waters in 1922-23.

Caleta Hut *see* **Hut Cove**

Hut Cove. 63°24' S, 56°59' W. A small cove in the E part of Hope Bay, between Seal Point and Grunden Rock, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered by J. Gunnar Andersson's party during SwedAE 1901-04. Re-surveyed by FIDS in Nov. 1945, and named by them not only for their own base hut on the S shore of this cove, but also for the Swedes' hut in the same place in 1903. UK-APC accepted the name on Nov. 21, 1949, and it appears on a British chart of 1950. US-ACAN accepted the name in 1952. It appears in the 1955 British gazetteer. It appears on 2 separate Argentine charts as, respectively, Caleta Hut and Caleta Choza, the last being the name accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1974 accepted Caleta Hut. Teniente Ruperto Elichiribehety Station was here.

Hut Point. 77°51' S, 166°38' E. A small promontory, about 1.5 km NW of Cape Armitage, at the S end of Hut Point Peninsula, on Ross Island. Discovered by Scott in 1902, during BNAE 1901-04, and named by him for his hut (the Discovery Hut), which he established here. It was used as an advance base for BAE 1907-09, BAE 1910-13, and for the Ross Sea Party during BITE 1914-17. US-ACAN accepted the name, and NZ-APC followed suit.

Hut Point Peninsula. 77°46' S, 166°51' E. A long, narrow peninsula, 24 km long, and between 3 and 5 km wide, it projects SSW from the slopes of Mount Erebus, on Ross Island, and forms the SE shore of Erebus Bay. It consists of a ridge of an average height of 143 m, surmounted by a number of cones and volcanic stumps. Of these, the largest is Crater Hill. Stretching toward Mount Discovery, the peninsula curiously parallels the peninsulae of Minna Bluff and Brown Island. BNAE 1901-04 built its hut here, at Hut Point, at the S end of the peninsula, and the peninsula itself took on various names over the next decade, i.e., Winterquarters Peninsula and Cape Armitage Promontory. It was not until BAE 1910-13 that the peninsula became known by its present name. US-ACAN accepted the name, and NZ-APC followed suit. McMurdo Station and Scott Base are both here.

Hut Point Road. Antarctica's most famous road, at least it was for a long time. It leads out of McMurdo Station for Scott Base and Williams Field. Built by the Americans. *See* **Roads**.

Mount Hutago *see* **Mount Futago**

Hutago-yama *see* **Mount Futago**

Hutamata-dani. 72°00' S, 27°32' E. A conspicuous glacial valley, deeper than 200 m, in the E part of Gropeheia, in Balchen Mountain, in the Sør Rondane Mountains. Photographed by JARE in 1981-82 and 1987, and surveyed by them from the ground in 1987-88, and named by the Japanese on Oct. 23, 1989 ("forked valley"). The Norwegians call it Hutamatasøkket (which means roughly the same thing).

Hutamatasøkket *see* **Hutamata-dani**

Hutatu-iwa. 69°13' S, 35°26' E. Two small rock exposures 6 km S of Karamete Point, on the E side of the Riiser-Larsen Peninsula, on the N part of the Prince Harald Coast, in Queen Maud Land. Photographed aerially by JARE in 1970-71, and named by the Japanese on June 22, 1972 (name means "two rocks").

Hutcheson, Guy Carlton. b. March 14, 1911, Springtown, just outside Fort Worth, Tex. After graduating from Texas A & M in 1933, he went on ByrdAE 1933-35, as a radio engineer, and was part of the shore party. On his return to the States, he worked for CBS in NYC for 10 years. In 1938 he married Ruth Beal, and in 1945 he and his family moved to Arlington, Tex., where he began a consulting engineering business. He died on June 7, 2004, in Dallas, aged 93. Hutcheson Junior High School, in Arlington, is named after him. Admiral Byrd described him as "the most serene, the most undisturbed, and certainly one of the most decent minds I have ever met."

Hutcheson Nunataks. 76°17' S, 143°27' W.

A small group of nunataks along the N side of Balchen Glacier, about midway between the Phillips Mountains and Abele Nunatak, in Marie Byrd Land. Discovered and mapped by USAS 1939–41. Named by US-ACAN in 1966, for Guy Hutcheson.

Hutchins Nunataks. 75°39' S, 68°10' W. A group of nunataks, rising to about 1200 m, 20 km NNE of Mount Leek, in the Hauberg Mountains, on the Orville Coast, where eastern Ellsworth Land meets southern Palmer Land. Surveyed from the ground by USGS in 1961–62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Visited by a USGS field party led by Peter Rowley (*see* **Rowley Massif**) in Dec. 1977. Named by US-ACAN for Lt. Cdr. John Roy Hutchins, USN, command pilot of an LC-130 Hercules aircraft in support of that field party. UK-APC accepted the name on Nov. 13, 1985.

Hutchinson Island. 76°47' S, 148°53' W. An ice-covered island, about 24 km long, 16 km E of Vollmer Island, in the Marshall Archipelago. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Lt. (jg) (later Lt. Cdr.) Peter Arne Hutchinson, USN, operations officer on the *Glacier*, along this coast in 1961–62.

Hutchison Hill. 66°56' S, 65°42' W. A hill rising to about 2150 m, 2.5 km NE of Lampitt Nunatak, on the Loubet Coast, on the W coast of Graham Land, it is one of the few features on the Avery Plateau that is readily visible from Darbel Bay (to the NNW). In 1956–57 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base W. Named by UK-APC on Sept. 23, 1960, for Sir Robert Grieve Hutchison, 1st Bart. (1871–1960), Scottish nutritionist, radiologist, and pediatrician, who gave his name to Hutchison's Disease. US-ACAN accepted the name in 1966.

Hutchison Nunatak. 71°02' S, 63°46°E. About 1.6 km E of Mount Thomas, in the Prince Charles Mountains. Mapped by Australian cartographers from ANARE air photos taken in 1960, and named by ANCA for Christopher R. "Chris" Hutchison, surveyor with the 1970 Prince Charles Mountains Survey (he did not winter-over).

Hutou Dao *see* **Easther Island**

Hutou Shan. 69°26' S, 76°02' E. A hill in the Larsemann Hills. Named by the Chinese.

Hutt Peak. 76°01' S, 132°39' W. A small, but sharply-rising snow-covered peak which rises above the general level of the central part of the Mount Bursey massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Charles R. Hutt, of the U.S. Coast and Geodetic survey, seismologist and geomagnetist at Pole Station in 1970.

Hutto Peak. 79°17' S, 85°53' W. A sharp peak, rising to 1620 m, just below the Founders Escarpment, on the ridge separating the upper portions of Gowan Glacier and Splettstoesser Glacier, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Chief Yeoman Grey Hollis Hutto (b. Aug. 30, 1932. d. June 6, 1997, Oklahoma City), who joined the U.S. Navy on July 6, 1950, and, after Korea, was in Antarctica during OpDF 65 (i.e., 1964–65) and OpDF 66 (i.e., 1965–66). He later served in Vietnam.

Hutton Cliffs. 77°44' S, 166°51' E. On the W side of Hut Point Peninsula, between the Erebus Glacier Tongue and Castle Rock, on the W coast of Ross Island, about 3 km N of Ford Rock. Discovered during BNAE 1901–04, and named by Scott for British-born NZ naturalist Captain Frederick Wollaston Hutton (1836–1905), curator of the Canterbury Museum, in NZ, 1893–1905. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Hutton Mountains. 74°12' S, 62°20' W. A group of mountains, rising to about 1700 m, on the Lassiter Coast, in the SE part of Palmer Land, it is bounded on the SW by Johnston Glacier; on the NW by Squires Glacier; on the N by Swann Glacier; and on the E by Keller Inlet and Smith Peninsula. The main features within the group, from W to E, are: Mount McElroy, Mount Rath, Mount Nash, Mount Gorham, Mount Light, and Mount Tricorn. Discovered and photographed aerially during RARE 1947–48. Surveyed from the ground by USGS in 1961–62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for James Hutton (1726–1797), Scottish geologist. It appears on the 1969 USGS sketch map of Ellsworth Land–Palmer Land. UK-APC accepted the name on Dec. 20, 1974. Apparently, from about 1978, the Argentines have been calling the SE part of this feature Cordón Trenque Lauquen, after the district in Argentina. The Chileans call that part Cordón Esmeralda (q.v.).

Hutton Rocks. 77°51' S, 166°37' E. A group of rocks lying off the W coast of Hut Point, in the shadow of Hutton Cliffs, Ross Island. Named by NZ-APC, in association with the cliffs.

Huxian Jiao. 69°24' S, 76°04' E. A cape, or reef, in the Larsemann Hills. Named by the Chinese.

Mount Huxley. 77°51' S, 162°52' E. Rising to 1555 m, between Descent Glacier and the lower Condit Glacier, marginal to Ferrar Glacier, in the N part of the Royal Society Range, in Victoria Land. Named by US-ACAN in 1992, for writer and schoolteacher Leonard Huxley (1860–1933), son of zoologist Thomas Huxley, father of Julian Huxley, Aldous Huxley, and Andrew Huxley, and editor of *Scott's Last Expedition*, 2 vols., 1913.

The *Huyang 4*. Chinese vessel that assisted the *Ji Di* in the relief of the Chinese stations during ChinARE 1990–91.

Huzityaku-hyogen. 72°33' S, 31°09' E. A bare ice field in the NW part of the Belgica Mountains. Photographed aerially by JARE in 1976, and surveyed from the ground by JARE in 1979–80. Named by the Japanese on Nov. 24, 1981 (name means "emergency landing ice field"), for a crashed Belgian airplane in the area.

The *Hvalen*. Norwegian floating factory whaling ship, owned by the Hvalen Company, in the South Shetlands in 1910–11 (under the command of Capt. Hans Borge), with two whale catchers — the *Selvik* and the *Nordebble* — chartered from Andorsen & Neumann's Nordebble Company. She was back in 1911–12 and 1912–13, and in 1913–14 worked with the *Nor* in Graham Land. In the spring of 1914 she was bought by Niels Bugge, and was back in the South Shetlands and Graham Land in 1914–15 and 1915–16. She was torpedoed by the Germans during World War I.

Hvalen Company. Norwegian whaling company out of Sandefjord, owned by Andorsen & Neumann from 1910 to 1912, then by Chris Christensen from 1912 to 1914, and finally by Niels R. Bugge, from 1914. Its whaling factory ship, the *Hvalen*, operated in Antarctic waters from 1910–11 to 1915–16, and it chartered the Brazilian catcher *Dantas Barreto* between 1913–16. In 1921–22 the company chartered the *Pythia* for that season's whaling in Antarctica, and then in 1922 bought the *Maudie*, and ran her from 1922–23 until 1930–31.

Hvitfeldtsen, Jakob Kristian. b. April 25, 1893, Lenvik, Norway, son of fisherman Hvitfeldt Pedersen. He went to sea in 1912, and was an able seaman on the *Wyatt Earp* during Lincoln Ellsworth's last Antarctic expedition, 1938–39.

Hvitøya *see* [1]**White Island**

Isla Hyatt *see* **Laktionov Island**

Mount Hyatt. 74°53' S, 64°47' W. Rising to about 1600 m, it is the southernmost of the Latady Mountains, 8 km W of Schmitt Mesa, on the Orville Coast of Palmer Land. Surveyed by USGS in 1961–62, photographed by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN for Gerson "Gus" Hyatt (b. March 6, 1927, Philadelphia), who joined the U.S. Navy in Aug. 1944, and who was a builder at McMurdo during the winter-over of 1967. He helped build Plateau Station while he was there. He retired from the Navy in July 1971. It appears on the 1969 USGS sketch map of Ellsworth Land–Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Hyatt Cove. 66°05' S, 63°32' W. At the W side of Sonia Point, on the S side of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Discovered and roughly mapped by BelgAE 1897–99. Mapped in greater detail by Chilean, Argentine, and British expeditions. Photographed aerially by FIDASE in 1956–57. Named by UK-APC on Nov. 13, 1985, for Raymond Henry Hyatt (1925–2000), of the Cartographic Section, Foreign and Commonwealth office, 1949–84 (head, 1970–85), with responsibility for preparing UK-APC maps. US-ACAN accepted the name.

Hyde, William *see* **USEE 1838–42**

Hyde Glacier. 79°48' S, 83°42' W. A short glacier flowing E through the Edson Hills into Union Glacier, in the Heritage Range. Mapped

by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for William H. Hyde, ionosphere physicist at Little America in 1958.

Hydle, Halvdan. b. March 1, 1901, Ulvik, Norway, son of stenographer Magnus Hydle and his wife Ida. Oslo journalist who covered NBSAE 1949-52. "A tall, thin fellow," according to John Giaever. He died in 1968.

Hydra Cove. 62°28' S, 60°18' W. A small, semicircular bay, backed by Morton Cliff (which rises to 35 m, and which forms the W escarpment of Williams Point), N of Gargoyle Bastion, and E of Aspis Island, on Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 12, 1997, for the Greek mythological monster slain by Hercules. US-ACAN accepted the name in 1998. Plotted by the British in late 2008.

Rocas Hydrodist *see* **Hydrodist Rocks**

Hydrodist Rocks. 63°44' S, 60°55' W. Four rocks, one of which rises up to 3 m above sea level and dries at low tide, while 2 are submerged, 6 km W of Milburn Bay, Trinity Island, in the Palmer Archipelago. Their position was fixed in Jan. 1964 by a helicopter-borne hydrodist off the *Protector*, as personnel with an RN Hydrographic Survey unit charted it. Named by UK-APC on Nov. 3, 1971. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. The Argentines call the feature Rocas Hydrodist.

Hydrographenbach. 62°13' S, 58°58' W. A little stream that flows E into Hydrographers Cove, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Hydrographer Islands. 67°23' S, 48°50' E. Also called the Field Islands. A prominent group of small islands in the S part of Khmara Bay, just S of Sakellari Peninsula, in Enderby Land. They include McIntyre Island. Photographed aerially in March 1957 by personnel on the *Lena*, during SovAE 1956-57, and named by them as Ostrova Hidrografov, or Ostrova Gidrografov (i.e., "hydrographer islands"). ANARE re-photographed them aerially in Dec. 1957. US-ACAN accepted the translated name in 1965. According to the SCAR gazetteer, ANCA accepted the name Gidrografov Islands on July 31, 1972, but this makes no sense and seems unbelievable.

Hydrographers Cove. 62°13' S, 58°57' W. Between Fildes Peninsula and the SW side of Ardley Island, King George Island, in the South Shetlands. Surveyed by SovAE from Bellingshausen Station, and named by them in 1968 as Bukhta Gidrografov. It appears as such on their 1968 map, but on one of their 1971 maps it appears as Gidrografov Inlet. UK-APC translated the name on Feb. 7, 1978, and it appears in the 1980 British gazetteer. US-ACAN accepted the British naming. Great Wall Station is here. It appears as Baía Hidrografica on the 1974 Brazilian map of the Fildes Peninsula. It was plotted by the British in late 2008.

Île des Hydrographes *see under* **D**

Hydrozoans *see* **Sessile hydrozoans**

Rocas Hydrurga *see* **Hydrurga Rocks**

Hydrurga Cove. 60°44' S, 45°40' W. On the SW side of Signy Island, opening on Fyr Channel, in the South Orkneys. Named by UK-APC on May 13, 1991, for the leopard seals (*Hydrurga leptonyx*) which frequent this cove. US-ACAN accepted the name.

Hydrurga Rocks. 64°08' S, 61°37' W. A group of rocks E of Two Hummock Island, in the Palmer Archipelago. Photographed aerially by FIDASE in 1956. Named by UK-APC on Sept. 23, 1960, for the leopard seal (*Hydrurga leptonyx*). US-ACAN accepted the name later in 1960. The feature appears on a British chart of 1961. The Argentines call them Rocas Hydrurga.

Hyotan-jima *see* **Hyotan-zima**

Hyotan-zima. 69°13' S, 39°25' E. A small island, the largest of a small group adjacent to Ytrehovdeholmen Island, 6 km W of the Langhovde Hills, in the E part of Lützow-Holm Bay. It has 2 peaks on it, rising to 25 m and 21 m resp. Named by the Japanese on July 10, 2008, for its resemblance in shape to a hyotan (a Japanese cucumber).

Nunatak Hyperion *see* **Hyperion Nunataks**

Hyperion Nunataks. 72°02' S, 68°55' W. A group of about 10 nunataks, rising to a height of about 600 m above sea level, S of Saturn Glacier, 13 km W of Corner Cliffs, in the SE part of Alexander Island. Discovered and photographed aerially on Nov. 23, 1935, by Ellsworth, and roughly mapped from these photos in 1936-37 by W.L.G. Joerg. Re-photographed aerially by RARE 1947-48, and surveyed from the ground in Dec. 1949 by Fids from Base E. Named by UK-APC on March 31, 1955, for Hyperion, one of the satellites of the planet Saturn. US-ACAN accepted the name in 1956. In those days the feature was plotted in 72°04' S, 68°54' W, but it was remapped by FIDS cartographers from their own air photos taken in 1959. It appears with the amended coordinates in the 1974 British gazetteer. It is said that the Argentines call this feature Nunatak Hyperion, but is hard to believe they have singularized 10 nunataks, especially as, rather surprisingly (given the Argentine tendency to name nunataks—*see* **Jason Peninsula**, for example) they have not (yet) given individual names to any of these nunataks.

Hyslop Islands. 68°53' S, 77°46' E. A group of 2 large islands and 4 small rocky ones, about 2 km S of Ranvik Island, in the Rauer Islands, in the SE part of Prydz Bay. Named by ANCA on March 7, 1991, for John W. Hyslop, a surveyor with the Australian Land Information Group, who did map control survey work in the Rauer Islands in 1989-90, using GPS equipment. The Norwegians call them Tangholmane (i.e., "the tongue islands").

The *Hyundai 1200*. South Korean ship that took down the first South Korean Antarctic Expedition in 1987-88. Skipper was Hyun-Koo Cho.

IAATO *see* **International Association of Antarctic Tour Operators**

IAGP *see* **Ten-Year International Antarctic Glaciological Project**

Ian Peak. 71°31' S, 163°59' E. A peak, 5 km NW of Mount Stirling, in the Bowers Mountains, it overlooks the heads of Leap Year Glacier and Champness Glacier. Named by NZGSAE 1967-68 for Ian Smith, Victoria University of Wellington geologist in Antarctica as part of VUWAE 10 (1965-66), and VUWAE 1966-67. US-ACAN accepted the name in 1969.

Iapetus Nunatak. 71°36' S, 70°15' W. An isolated nunatak, rising to 915 m, on the SW side of Satellite Snowfield, about midway between the Walton Mountains and Staccato Peaks, in the S part of Alexander Island. Surveyed by BAS personnel between 1961 and 1973. Mapped by the (British) Directorate of Overseas Surveys from satellite images taken by NASA and USGS. Named by UK-APC on Dec. 20, 1974, for the satellite of the planet Saturn, in association with Saturn Glacier, which is close by to the E of this nunatak. US-ACAN accepted the name in 1975.

Punta Ibáñez *see* **Flatcap Point**

Islote Ibar *see* **Ibar Rocks**

Ibar Rocks. 62°27' S, 59°43' W. Three rocks, two awash and one submerged, 0.3 km E of Bonert Rock, and 1 km SE of Canto Point, opposite the NW entrance to Discovery Bay, Greenwich Island, in the South Shetlands. On the 1947 chart prepared by ChilAE 1946-47, the larger, western one of the two visible rocks is seen as Islote Ibar, named by them for Mario Ibar Pinochet, the 2nd lieutenant of Marine Infantry in charge of the garrison of that infantry on the *Iquique* during that expedition. It was Ibar, a graduate from the Chilean Naval Academy in Dec. 1942, who signed the official act of inauguration of Capitán Arturo Prat Station on Greenwich Island on Feb. 6, 1947. This larger rock rises to a height of one meter above sea level, between Bonert Rock and Dovizio Rock. On a 1961 Chilean chart it appears as Islote Teniente Ibar, but the 1974 Chilean gazetteer favored Islote Ibar, and that is what the Chileans still call it. However, in 1964, an RN Hydrographic Survey unit on the *Protector*, surveyed this group, and charted it (on their 1965 chart) as Ibar Rocks, to take in not only the 2 visible rocks, but also a submerged outlying rock nearby to the NE. This new name and situation appears on a 1968 British chart, and was accepted by UK-APC on Nov. 3, 1971, and by US-ACAN in 1972. It appears in the 1974 British gazetteer.

Istmo Ibarguren. 60°45' S, 44°42' W. An isthmus on Laurie Island, in the South Orkneys, named by the Argentines, for Carlos Ibarguren (1879-1956), a sub-secretary in the Ministry of Agriculture, to whom Bruce went in 1904 with his plan to hand over Omond House to the Argentines (*see* **Órcadas Station**). Don Carlos was later a famous writer and historian.

Cabo Ibarra *see* **Stranger Point**

Ibarra Peak. 77°58' S, 163°02' E. The summit at the extremity of the ridge that extends E from the Royal Society Range between Mitchell Glacier and Lister Glacier, in Victoria Land. Named by US-ACAN in 1992, for Phillip D. "Phil" Ibarra (b. Aug. 1953), USGS cartographic technician, who was a member of the field parties of 1988-89, 1989-90, and 1990-91. He

participated in establishing geodetic control at Ross Island, the McMurdo Dry Valleys, and at the South Pole, working out of the USGS Ross Island camp.

Ibbotson, George Rex. b. June 5, 1935, Plymouth, son of Harry Ibbotson and his wife Beatrice Emily Rennie. At 17 he joined the Met Office, as a professional meteorologist, did his national service in the RAF (as a met man), and joined FIDS in 1955, as a meteorologist, wintering-over at Base F in 1956 and 1957. On March 31, 1965, he married Julia Ann Hendy, in Plymouth, and they lived for a while in Chiswick, in London, eventually moving back to Plymouth. He retired in 1994, to Nether Poppleton, in York.

Nunatak Iberá. 82°11' S, 39°30' W. Next to Nunatak Ushuaia, in the Panzarini Hills, in the Pensacola Mountains. Named by the Argentines.

Icarus Point *see* **Cañón Point**

Ice. Frozen water. There are about 7 million cubic miles of ice in Antarctica, which is more than 90 percent of all the world's ice. 97.6 percent of Antarctica is ice and snow, the average thickness of which is 6,500 feet. *See also* **Glaciers**, **Icebergs**, **Ice shelves**, **Depth of ice**, and related entries.

Ice barrier. The old name for an ice shelf.

Ice Bay *see* **Amundsen Bay**, **Lanchester Bay**

Ice Berg Bay *see* **Iceberg Bay**

Ice Berg Tongue. 77°40' S, 166°51' E. Between Turks Head and Erebus Glacier Tongue, on Ross Island. Named by NZ. *See also* **Icecube Tongue**.

[1]**The *Ice Bird***. David Lewis's 9.2-meter (32-foot) steel sloop in which, in 1972–73, he sailed alone to Antarctica. Built in 1962 by Dick Taylor, of Sydney, she had a plastic dome which enabled Lewis to look out while sheltered below. On Nov. 29, 1972, in 60°S, he had his first capsize, and on Dec. 13, 1972, in 61°S, he had his 2nd capsize. The mast and the self-steering mechanism were smashed. On Jan. 29, 1973, Lewis made it to Palmer Station, and the boat was repaired by Lewis and the Americans there. Lewis left Antarctica, and in Nov. 1973, on the *John Biscoe*, returned for his boat, did a tour in her, and then set sail for Cape Town.

[2]**The *Ice Bird*** *see* **The *Icebird***

Ice blink. A luminous stripe of whiteness in the sky caused by the reflection of a large amount of ice ahead. It may be compared to the glare seen over a large city when approaching it at night.

Ice budget. Net surface ice accumulation, plus inflow of land ice, plus increments by bottom freezing, minus calved ice, minus bottom melting, minus surface melting.

Ice caps. An ice cap is smaller than an ice sheet, and is a dome-shaped glacier covering a highland area less than 50,000 square km in size. Ice caps were formed millions of years ago, and are drifting 27.3 feet per annum, in the direction of 43°W.

Ice core *see* **Core samples**

Ice crystals. Minute crystals of ice that fill the air at the South Pole and environs. In the summertime they cause phenomena (q.v.), some of which are seen in Antarctica.

Ice Edge Valley *see* **North Pass**

Ice feet. Fringes of ice found on the coast. They are usually formed by sea spray, and do not answer to tidal movement. There are notable ones at Cape Evans and Land's End.

Ice fish. Coastal fish (*see also* **Fauna**, **Fish**). It has big eyes, large pectoral and tail fins, and a long protruding jaw full of teeth. In short it looks like a fish. It is a fish. But it has no red blood corpuscles, and has a built-in antifreeze that keeps it from freezing. When Ditlef Rustad discovered this fish at Bouvet Island (in the South Atlantic) in 1928 he (and no one else) could believe that such a creature could exist. It was proved, and further studies done on it, by Johan Ruud, from 1930 to 1954. L. Harrison Matthews (*see* **Harrison Passage**) wrote about it in 1931. However, it wasn't discovered by Rustad at all. Some American sealers on the *Charity* found one in the South Shetlands on Nov. 21, 1821, while out fishing. It was described as "a very curious fish about 20 inches long, the head much resembling that of an alligator, about 3 inches long [i.e., the head was 3 inches long], perfectly white, the body resembling the cod in shape and color; on opening the body there was no appearance of blood."

Ice-free areas. Between one and 5 percent of Antarctica is ice-free, and not all of these areas have yet been discovered. The largest ice-free area is the Ross Desert (q.v.). *See also* **Lakes** (some lakes have unfrozen water), **Oases**, **Dry valleys**.

Ice fumaroles. A fumarole is a secondary vent in the side of a volcano, from which issue gasses and water vapor. Ice fumaroles are the result of condensation and freezing of the water vapor around and above fumaroles located in Antarctic volcanoes.

Ice Gate Glacier. 64°54' S, 62°45' W. A narrow hanging glacier, between rock spurs, on the W slope of Dallmeyer Peak, in Paradise Harbor, on the Danco Coast, on the W coast of Graham Land, it feeds Porphyry Glacier and Astudillo Glacier. Named by the Poles in 1992, the name was accepted by Poland officially on Sept. 1, 1999. The spurs at the junction of this glacier and Astudillo Glacier look like gates. UK-APC accepted the name on Dec. 16, 2003, and USA followed suit in 2004.

Ice Horse. 64°44' S, 62°57' W. A rocky, ice-covered crest rising to about 770 m, on Lemaire Island, Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named descriptively by the Poles on Sept. 1, 1999.

Ice islands *see* **Icebergs**

The *Ice Lady*. A 294-ton, 43.3-meter icebreaker, a former Norwegian Coast Guard icebreaker, built at the Helsingfors Shipyard, in Finland, in 1959, to tow other vessels around the northern coasts of Norway. In Sept. 2001 she was acquired by the Maritime Museum of Ushuaia, and refitted for Antarctic cruises. Not a luxury ship, by any means, she could take 12 passengers, and had an Antarctic museum on board. She was in Antarctic waters in 2001-02, and was back again for the 2002-03 season, leaving Ushuaia on Jan. 6, 2003, and arriving at Deception Island on Jan. 14, 2003. This was a trip to visit all the old whaling sites in Antarctica, including those on South Georgia, and then return to Chile. She was back in 2003-04, 2004-05, 2005-06, and 2006-07. Captain was Marcelo M. Marienhoff until Oct. 2007, when Eric Knight took over.

Ice needles. Also called ice prisms. Very small, hexagonal, unbranched ice crystals, in the form of columns, shafts, or plates. They are formed only at very low temperatures. When reflecting sunlight they are called diamond dust (q.v.).

Ice pack *see* **Pack-ice**

Ice piedmont. A broad area of lowland ice fed by two or more valley glaciers. The main ones in Antarctica are: Bertrand, Bongrain, Cruchley, Cugnot, Davis, Dee, Eady, Fenwick, Ford, Forster, Fuchs, Gavin, Gawn, Geelan, Getman, Giovinco, Hamilton, Handel, Heirtzler, Hughes, Kooperatsiya, Marr, Maumee, Mercator, Mozart, Roberts, Sopot, Stefan, Stuhlinger, Tarnovo, Vacchi, Wagner, Warren, Widmark, Wormald, Wright.

Ice prisms *see* **Ice needles**

Ice rind. A shiny skin of new ice formed from grease ice, or by direct freezing.

Ice rise. A dome-shaped feature created by a rock feature beneath it. Usually found on an ice shelf. The main ones in Antarctica are: Bawden, Burgess, Coker, Davis, Dvorák, Fletcher, Fowler, Gipps, Green Ice Rises, Harrisson Ice Rises, Hemmen, Henry, Humphreys, Ives, Kealey, Korff, Landy, Linchpin, Lyddan, Martin, Miller, Napier, Petrie Ice Rises, Reynolds, Schaus Ice Rises, Skytrain, Tharp, Vere, and Wade.

Ice rumples. There are four areas in Antarctica that bear the definition "ice rumples"—Budd, Doake, Kershaw, and McDonald. For more than a mere description of an "ice rumples," *see* **McDonald Ice Rumples**.

Ice sheets. Large masses of perennial ice on land. Must be more than 50,000 square km in area, otherwise they are ice caps. The three in Antarctica are the West Antarctic Ice Sheet, the East Antarctic Ice Sheet, and the Nansen Ice Sheet.

Ice shelves. Large, semi-permanent, glacier-fed areas of ice attached firmly to the continent, but with no bedrock underneath. Formerly called ice barriers, because they blocked the way to the South Pole. The biggest is the Ross Ice Shelf. Others are Abbot, Amery, Bach, Brahms, Britten, Brunt, Cook, Cosgrove, Crosson, Dotson, Edward VIII, Eckström, Filchner, Fimbul, George VI, Getz, Gillett, Hannan, Jelbart, Jones, Larsen, Lazarev, McMurdo, Mendelssohn, Moscow University, Müller, Nickerson, Porter, Prince Gustav, Publications, Quar, Rameau, Riiser-Larsen, Ronne, Shackleton, Slava, Stange, Sulzberger, Swinburne, Venable, Verdi, Voyeykov, West, Wilkins, Wordie, Wyers, Zubchatyy.

Ice Sphinx Hole. 71°15' S, 16°18' W. In the Weddell Sea. Discovered by the crew of the *Polarstern*. Named by Heinrich Hinze in Jan. 1997,

the name was accepted by international agreement in June 1997. Named for the Jules Verne novel *Ice Sphinx*, the characters in which visited this area.

Ice Stream A *see* **Mercer Ice Stream**
Ice Stream B *see* **Whillans Ice Stream**
Ice Stream B1 *see* **Van der Veen Ice Stream**
Ice Stream C *see* **Kamb Ice Stream**
Ice Stream D *see* **Bindschadler Ice Stream**
Ice Stream E *see* **Macayeal Ice Stream**
Ice Stream F *see* **Echelmeyer Ice Stream**

Ice streams. Large glacier-type flows of ice. They differ from glaciers in that glaciers are bounded and their flow is ordered by rock, while the ice streams are so influenced by ice sheets. The main ones in Antarctica are: Alison, Bailey, Berg, Bindschadler, Blackwall, Dawson-Lambton, Drewry, Echelmeyer, Evans, Ferrigno, Foundation, Fox, Horlick, Institute, Kamb, Lidke, MacAyeal, Mercer, Möller, Nimrod, Patuxent, Rutford, Shimizu, Stancomb-Wills, Vander Veen, Weldon, Whillans, Wiesnet, Williams.

Ice tongues. Tongues of ice projecting into the sea from an ice shelf. They differ from glacier tongues in that they are not the seaward extensions of glaciers. The main ones in Antarctica are: Blodgett, Cheetham, Chelyuskintsy, Dalton, Demas, Dibble, Drygalski, Edisto, Flatnes, Kiletangen, May, Nordenskjöld, Thwaites, Tripp.

Ice Tower Ridge. 77°32' S, 167°06' E. At 3540 m above sea level, it descends the SW slope of the summit crater of Mount Erebus, on Ross Island. Not to be confused with Tower Ridge. So named by US-ACAN on June 19, 2000, because it is defined by a series of fumarolic ice towers. NZ-APC accepted the name on Feb. 20, 2001.

Punta Iceberg *see* **Iceberg Point**

Iceberg Alley. There are 2 places in Antarctica with this name, or rather nickname. Both are spectacular showcases for scores of bergs traveling north. One is just outside Vincennes Bay, and the other is in the Lemaire Channel, off the W coast of the Antarctic Peninsula.

Iceberg Bank. 76°25' S, 168°15' E. A submarine feature off Cape Day, on the coast of Victoria Land. Named by NZ-APC.

Iceberg Bay. 60°39' S, 45°32' W. An indentation, 5 km wide, in the S coast of Coronation Island, between Cape Hansen and Olivine Point, in the South Orkneys. Named Ice Berg Bay by Matthew Brisbane in 1823. Under the direction of Weddell, he roughly charted the S coast of Coronation Island in Jan. 1823. The bay appears as Ice Berg Bay on Weddell's map of 1825, but on Powell's 1831 chart (as well as on an 1839 British chart) it is shown as Iceberg Bay. Sørlle and Borge's chart of 1913 erroneously shows it as a hitherto unnamed bay to the E of Olivine Point. Re-surveyed by the Discovery Investigations team in 1933, it appears correctly on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a 1952 Argentine chart as Bahía Témpano (i.e., "iceberg bay"), and that was the name accepted by the 1970 Argentine gazetteer. It was further charted by Fids from Signy Island Station between 1956 and 1958. It is the site of a BAS refuge hut built in 1962.

Iceberg Hill *see* **Mount Pond**

Iceberg Point. 64°38' S, 63°06' W. A prominent and steep point, it is the NE entrance point of Lion Sound, about 13 km WSW of Ryswyck Point, on the SE side of Anvers Island, in the Palmer Archipelago. First roughly charted in Feb. 1898, by BelgAE 1897-99. In 1927 the Discovery Investigations, aboard the *Discovery*, surveyed this area, and this point appears as such on their 1929 chart. However, it may have been named by whalers before 1927. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1959. Fids from the *Norsel* further charted it in 1955, and it was photographed aerially by FIDASE in 1956-57. It appears on a Chilean chart of 1947, as Punta Témpano (which means the same thing), and that was the name that was accepted by the 1970 Argentine (sic) gazetteer. It appears on a 1949 Argentine chart, as Punta Iceberg, and that was the name accepted by the 1974 Chilean (sic) gazetteer.

Icebergs. Large chunks of ice split off, or calved, from the ice shelves. 138 cubic miles of iceberg are calved from Antarctica every year (although *see* **B-9**). After breaking off, this ice then floats, normally as far north as 40°S, although one was spotted as far north as 26°30' S, in the Atlantic, in 1894. As icebergs age, they disintegrate and turn pale blue. Bottle-green icebergs are rare, but one notable one was seen in Moon Bay on March 10, 1976. Seven-eighths of an iceberg is below water, and, partly because of this, bergs are a danger to shipping. Even a small one, with its rock-like, jagged edges, can rip open a ship's hull. The largest ones are the tabular bergs (q.v.), one of which was larger than Belgium. What the early sailors called icebergs were often glaciers, and what we call icebergs they often called ice islands (*see also* **Rotten bergs**). Since 1976 bergs have been tracked by the National Ice Center (NIC), and if one is not spotted within 30 days it is removed from the tracking list.

The *Icebird*. Designed and built by the Germans in 1983 for owner Guenther Schulz, she was an ice-strengthened cargo ship which could take 100 passengers, as well as the German crew. In her first Antarctic season under charter by the Australian Antarctic Division, 1983-84, her captain was Ewald Heinrich Brune (b. Jan. 19, 1951), a German living in Australia. In late 1985, during the 1985-86 ANARE (with the vessel under Brune again) she tried to assist the trapped *Nella Dan* off Enderby Land, but almost got caught herself in the 13-foot-thick pack-ice. On Jan. 6, 1986 she reached the South Magnetic Pole. Brune was also skipper for the 1986-87, 1987-88, 1988-89, and 1989-90 ANARE expeditions, and in 1986-87 also took down the West German Antarctic Expedition of that season. She was back with ANARE in 1990-91 (unknown skipper), 1991-92 (Capt. Hans Watts), 1992-93 (captains Andreas Mahler and Hans Watts), 1993-94 (captains Mahler and Watts again). In 1994 her name was changed to the *Polar Bird*, and in 1994-95 she took down the Indian Antarctic Expedition (her skipper on that voyage was Arild Breivik). However, in the 1995-96 season, *Aurora Australis* was out of commission for 32 days, and the *Polar Bird* was brought back, again under the command of Capt. Breivik. She took down the Indian Antarctic Expeditions of 1996-97 (skipper unknown), 1997-98 (Capt. Sigvald Brandal), and 1998-99 (Capt. Helge Eik). She has been employed by ANARE, whenever the *Aurora Australis* was out of service (1998, for example). She also took to Antarctica the 14th, 16th, 17th, and 18th Indian expeditions.

Icebreaker Glacier. 73°37' S, 166°10' E. A large valley glacier, 16 km NE of Mount Monteagle, it flows SE from the area between that mountain and Mount Murchison, in the Mountaineer Range of Victoria Land, and feeds Lady Newnes Bay. In its upper reaches there are extensive icefalls and cascades, and a few miles above them there lies an easy pass to Aviator Glacier, and it is possible that this pass is a passage through which some ice from Aviator Glacier flows to Icebreaker Glacier. Close to its mouth, Icebreaker Glacier is joined by Benefactor Glacier, and below Hermes Point its flow coalesces with that of Fitzgerald Glacier. Named by NZGSAE 1958-59, in honor of the American icebreaker ships of Antarctica. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Icebreakers. Relatively clumsy vessels which lead modern Antarctic convoys. As over 95 percent of the matériel used by USARP and its successors was and is delivered to Antarctica by ship, the main purpose of the icebreakers is to free the way through the pack-ice for the supply ships to get to the bases. An icebreaker has no keel, but a barrel-shaped hull that prevents the vessel from being crushed if the ice moves in. As the ice presses in from both sides, the hull pops up and out of the water. The vessel does not have a sharp bow, and does not cut the ice, but rather charges it, crushing it with its weight. It chops out berths in the ice for other ships. Some icebreakers used to have an extra propeller in front, to suck the water out of the ice shelf in order to make it easier to crack the ice, but these propellers were subject to damage, so now the standard icebreaker still has the step on the front (formerly to hold the propeller), just like it does in the rear, which enables the ship to give the ice an extra bang, from both ends. The *Glacier* was, for a long time, the world's largest icebreaker, and the USA has been using icebreakers in Antarctica since OpHJ 1946-47. The main one belonging to Argentina was the *General San Martín*, which first went to Antarctica in 1954, and Japan has had three famous ones — the *Soya* (during IGY), the *Fuji* (launched in 1965), and the *Shirase* (from 1983). The USSR (now Russia) has its own, as do other countries.

Icecube Tongue. 77°40' S, 166°51' E. Between Turks Head and Erebus Glacier Tongue, on Ross Island. Named by NZ. *See also* **Ice Berg Tongue**.

[1]**Icefall Nunatak**. 72°28' S, 166°08' E. A nunatak, 1.5 km N of Mount Watt, in the Barker Range of Victoria Land. Visited in 1981-82 by NZGS geologist Bradley Field, who suggested the name because of the impressive icefalls that drop off on either side of this nunatak. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

[2]**Icefall Nunatak**. 78°18' S, 158°38' E. A prominent, ice-free nunatak, rising to 1769 m, close S of the main flow of Skelton Icefalls, in Victoria Land. Plotted from USN air photos. Named by US-ACAN in 1964, in association with the icefalls.

Icefalls. The ice equivalent of a waterfall, except that it doesn't drop as fast as water does. A glacier flows down (for example) a mountain. If the bed of a glacier slopes down smoothly, with no breaks, there will be no icefalls, but if a glacier bed has a break in it — a drop, as it were — then the ice suddenly speeds up into a vertical flow, a vertical drop, and falls, rather than flows. This is an icefall. To some extent, the same thing happens when the bed of a glacier suddenly narrows considerably. The main ones in Antarctica are (some are "icefalls," others are "an icefall"): Airdevronsix, Ajax, Amundsen, Anderson, Arrol, Barnes, Black, Blue, Brier, Brunt, Bursey, Cavendish, Charybdis, Cherry, Circle, Cooper, Counts, Cranfield, Creagh, Dera, Dickson, Doctors, Drake, Emerald, Flensing, Gdansk, Hamna, Haselton, Hektor, Joice, Ladies, Lloyd, Matjko, Minnehaha, Moby Dick, Moulton, Pakaru, Peterson, Polar Committee, Ponganis, Prebble, Quaternary, Ragotzkie, Rhodes, Rosciszewski, Ruen, Rydelek, Scott, Scuppers, Shackleton, Skelton, Sledgers, Soza, Spillway, Stwosz, Szafer, Szymonoswki, Thompo, Tobogganers, Tur, Warren, Webb, Weir, Wild, Worsley, and Wyspianski. *See also* **Axel Heiberg Icefalls**.

Icenhower, Joseph Bryan. Cdr., USN. b. March 13, 1913, Parkersburg, West Virginia, son of locomotive engineer Brigham Clark Icenhower and his wife Edna. He graduated from the Naval Academy in 1936, and in 1944, during World War II, was awarded the Navy Cross for gallantry as commander of the *Jallo*. He was captain of the submarine *Sennet* during OpHJ 1946-47. He retired as a rear-admiral, and wrote books: *Perry and the Open Door to Japan*; *Submarines*; *The Panay Incident*; *American Sea Heroes*; *The First Book of the Antarctic*; *The Scarlet Raider*; *Submarine Rendezvous*; *Tecumseh and the Indian Confederation*; *Mr. Midshipman Murdock and the Barbary Pirates*; *Mr. Murdock Takes Command*; *The First Book of Submarines*; etc. He married Edna May Shaffer. He died on April 7, 1994, in Bryn Mawr, Pa.

Icenhower Ridge. 80°13' S, 158°25' E. A broad, mostly ice-covered ridge, rising to over 1600 m, between Yancey Glacier and Sennet Glacier, in the Britannia Range of the Transantarctic Mountains. Named by US-ACAN in 2000, for Joseph B. Icenhower. NZ-APC accepted the name on Feb. 20, 2001.

Iceports. A term coined by the Americans in 1956, to denote an indentation in ice shelves, more or less permanent but subject to change in configuration. It offers anchorage to a ship and access to the shelf itself by one or more natural ice ramps. Atka Iceport is the most well-known. Others are Erskine, Godel, and Norsel.

Icequab. Deep sea fish, *Lycodychthis dearborni*, of the family Zoarcidae, growing to about 9 inches long, and found only in the Ross Sea; for example, they are found on the sea bed in the deeper waters of Mcmurdo Sound.

Icequakes. Also known as a barrier quake. The ice equivalent of an earthquake, in other words they occur in the ice sheet, or on an ice shelf, rather than in the bedrock. Frank Wild may have coined the term, in 1915. Most icequakes are relatively minor, but on Jan. 29, 1929 an icequake destroyed Pier One, the landing jetty for the *City of New York* and the *Eleanor Bolling* in the Bay of Whales during ByrdAE 1928-30.

IceTrek Expedition. 1998-99. Peter Hillary, Eric Phillips, and Jon Muir set out to walk from McMurdo Sound to the South Pole, dragging sledges, and then to return, in an effort to replicate (and better) Scott's 1911-12 trek. After 84 days they got to the Pole. Due to bad conditions and a case of food poisoning, they were flown back to McMurdo. Scott never had that option.

Ichime Glacier. 68°23' S, 42°08' E. Also called Itime Glacier. It feeds the Prince Olav Coast of Queen Maud Land just W of Kasumi Rock, and about 90 km W of Carstensfjella. Mapped from ground surveys and air photos conducted by JARE 1957-62, and named by the Japanese on May 1, 1963, as Itime-hyoga. US-ACAN accepted the spelling Ichime Glacier in 1964. The Norwegians call it Torghattbreen (i.e., "market-hat glacier"; a translation from the Japanese).

Ickes Inlet *see* **Nantucket Inlet**

Ickes Mountains. 75°29' S, 139°45' W. A series of coastal mountains that extend W for 24 km from Strauss Glacier, in Marie Byrd Land. Discovered aerially on Dec. 18, 1940 by USAS 1939-41, and plotted in 75°30' S, 139°35' W. Named for Harold LeClair Ickes (1874-1952), U.S. secretary of the interior from 1933 to 1946. Although Ickes (in his lifetime) objected to the use of his name in connection with these mountains, the name was accepted by US-ACAN in 1966. In 1939, USAS had been established in the Division of Territories and Island Possessions, then part of the Department of the Interior. The feature has since been re-plotted.

ICSU *see* **International Council of Scientific Unions**

Mount Ida. 83°35' S, 170°29' E. A conspicuous bare rock mountain rising to 1565 m, 3 km W of Granite Pillars, just SE of the head of King Glacier, in the Queen Alexandra Range, to the ENE of Mount Fox, 21 km SW of Mount Hope, on the W side of the Beardmore Glacier. Discovered by BAE 1907-09, and named by Shackleton for Ida Jane Rule of Christchurch, NZ, who later married Edward Saunders (*see* [2]**Mount Saunders**). US-ACAN accepted the name in 1949.

Idun Peak. 77°38' S, 161°26' E. A small peak between Mount Thundergut and Veli Peak, in the Asgard Range of southern Victoria Land. Named by US-ACAN and NZ-APC in 1976, for the Norse goddess.

The *Idus de Marzo*. A 120-ton, 32-meter 3-masted Spanish schooner which took down a private-turned-Spanish government expedition to Antarctica in 1982-83, arranged by La Asociación Españoles en la Antártida. Its intention was to re-establish a Spanish presence in Antarctica. She left Spain on Dec. 15, 1982. Her crew were: Javier Babé García (captain), Santiago M. Cañedo (chief officer), Sotero Gutiérrez (chief engineer), Xurxo Gómez (bosun), Josu Otazúa (cook), and Fernando Cayuela, José María Garcés, and Diego Garcés (able seamen). Also aboard were Alberto Vizcaíno and J. Antonio Martín (biologists), and Alfonso Jordana (journalist). From Spain they went to the Canary Islands, and from there to Punta Arenas, in Chile, where they arrived on Feb. 20, 1983. There they picked up more expeditioners: Guillermo Cryns (of the Asociación, and expedition leader), Joaquín Mariño and Guillermo Díaz (biologists), Vicente Manglano (doctor), Fernando Rodríguez (ornithologist), Félix Sorli (mountain climber and handyman), Jaime Ribes (army observer; *see also* **Juan Carlos I Station**), Juan Carlos Tuñón (naval observer), José Castedo, Antonio Guerra, and Ángel Villarías (audiovisual producers). On Feb. 28, 2003, they left Puerto Williams, bound for Antarctica. On March 4, 2003 they arrived in the South Shetlands, where they visited Deception Island, Capitán Arturo Prat Station, and several other stations. They met the *Endurance* at the closed Base G. On March 17, 2003, they left Antarctica, bound for Chile.

Cerro Iensen *see* **Mount Shelby**

Ievers, John Augustine *see* **The *Burghead Bay***

Île Ifo *see* **Ifo Island**

Ifo Island. 66°38' S, 139°44' E. A low, rocky island, 0.3 km SE of Hélène Island, in the W part of Baie Pierre Lejay, NW of Astrolabe Glacier, at the W end of the Géologie Archipelago. This area was photographed aerially by OpHJ 1946-47, but this particular island was charted by Liotard in 1950, and named by him as Île Ifo, for a sledge dog used on FrAE 1949-51. The name comes from the French expression "il faut," which means "one must." US-ACAN accepted the name Ifo Island in 1956.

Nunatak Igla. 71°01' S, 11°27' E. An isolated nunatak, on the Princess Astrid coast of Queen Maud Land. Named by the Russians.

Ostrov Igle *see* **Eagle Island**

Punta Iglesia *see* **Church Point**

Cerro Iglesias *see* **Stonethrow Ridge**

Iglika Passage. 62°27' S, 68°08' W. The passage, 1.53 km wide, between Lesidren Island (in the Zed Islands) and Williams Point (on Livingston Island), in the South Shetlands. Named by the Bulgarians on June 3, 2010, for the settlements of Iglika in northern, northeastern, and southeastern Bulgaria.

Igloo. Admiral Byrd's terrier. *See* **Dogs**.

Igloo Hill. 64°33' S, 61°47' W. Rising to 280 m (the British say about 750 m), and completely ice-covered, in the central part of Reclus Peninsula, on the Danco Coast, on the W coast of Graham Land. It appears (unnamed) on an Argentine map of 1954. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point in 1957-59. Named descriptively (it is shaped like an igloo) by UK-APC on Sept. 23, 1960. US-ACAN followed suit with the naming in 1965.

Igloo Snowdrift. 74°59' S, 163°47' E. At Evans Cove, on the coast of Victoria Land, where Campbell's Northern Party dug out an igloo and made their camp, during BAE 1910-13.

Igloo Spur. 77°33' S, 169°16' E. A small, isolated spur, rising to 161 m above sea level, at the culmination of the general ridge extending SE from Bomb Peak, 2.25 km SSW of The Knoll, which surmounts Cape Crozier (the easternmost extremity of Ross Island). Mapped by NZGSAE 1958-59. During the "worst journey in the world," during BAE 1910-13, Wilson had named this feature Oriana Ridge, after his wife, and he and his party had built a stone igloo here that he named Oriana Hut. NZGSAE re-defined and re-named the feature, and also built an astronomical station here. NZ-APC accepted the new name, and US-ACAN followed suit in 1964.

Mount Ignatiev. 63°37' S, 58°39' W. Rising to 1220 m in Srednogorie Heights, 3.3 km SSE of Corner Peak, 8.96 km ESE of Hanson Hill, 12.1 km N of Sirius Knoll, and 7.17 km SW of Crown Peak, it surmounts Trajan Gate to the E, Malorad Glacier to the N, and Russell West Glacier to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Graf Ignatievo, in southern Bulgaria, which had in turn been named for the Russian diplomat, Count Nikolay Ignatiev (1832-1908).

Ignatiev, Ivan. Appointed by Vice Admiral Moller, the governor of Kronstadt, to be a lieutenant on the *Vostok*, during von Bellingshausen's 1819-21 expedition.

Bukhta Igrivaja *see* **Igrivaja Bay**

Igrivaja Bay. 66°07' S, 101°13' E. In the Bunger Hills, on the coast of Queen Mary Land. Charted by SovAE 1956, and named by the USSR as Bukhta Igrivaja. The Australians translated the name to Igrivaja Bay.

IGY *see* **International Geophysical Year**

IGY Valley. 75°00' S, 66°00' E. In the southern part of the Prince Charles Mountains. Named by the Russians, after the International Geophysical Year.

Islote Ihl. 68°13' S, 67°03' W. A little islet, no more than 60 m in diameter, about 50 m W of the extreme SW end of Neny Island, in Marguerite Bay, opposite the W coast of the Antarctic Peninsula. Named by the Chileans for Army geodesist Major (later colonel) Pablo Carlos Fernando "Paul" Ihl Clericus (b. Feb. 6, 1907, Los Angeles, Chile. d. June 22, 1966, Santiago de Chile), head of the commission of the Instituto Geográfico Militar, on the *Angamos* during ChilAE 1946-47.

Ihtiman Hook. 62°37' S, 59°55' W. The gravel barrier spit extending 700 m westward from the N coast of Burgas Peninsula, Livingston Island, 2.8 km ENE of Rila Point, 5.9 km W of Renier Point, and 1.5 km S of Half Moon Island, in the South Shetlands. Surveyed by the Bulgarians during their 2004-05 Tangra survey, and mapped by them in 2009. They named it on Nov. 23, 2009, after the settlement of Ihtiman, in western Bulgaria.

Ikeda, Masakichi. b. 1867, Tokyo. Naturalist on the 2nd half of Shirase's Japanese South Polar Expedition, 1910-12. He died in 1919.

Il Polo Glacier. 69°50' S, 74°54' E. A small glacier flowing northward between Polar Times Glacier and Polarforschung Glacier, into the Publications Ice Shelf, on the Ingrid Christensen Coast. Photographed aerially by OpHJ 1946-47, and mapped from these photos in 1952, by American cartographer John H. Roscoe, who named it for the Italian polar journal, *Il Polo*. US-ACAN accepted the name in 1956.

Ilarion Ridge. 62°31' S, 59°36' W. A partly ice-free ridge, rising to 240 m on Breznik Heights, extending along the S shore of Hardy Cove, 2 km SW of Parchevich Ridge, 2.5 km NE of Vratsa Peak, 1.3 km N of St. Kiprian Peak, and 2.6 km NNW of Fort Point, it overlooks Musala Glacier to the S, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006, for Ilarion Makariopolski (1812-1875), metropolitan of the Bulgarian Church, and a leading figure in that church's push for religious independence in 1870.

Iliad Glacier. 64°27' S, 63°27' W. Flows NE from the central highlands of Anvers Island, between the Achaean Range and the Trojan Range, to feed Lapeyrère Bay, in the Palmer Archipelago. Surveyed in 1955 by Fids from Base N, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 4, 1957, for Homer's epic poem. US-ACAN accepted the name in 1963. The Argentines call it Glaciar Ilíada.

Glaciar Ilíada *see* **Iliad Glacier**

Iliev Glacier. 69°28' S, 71°35' W. A glacier, 5 km long and 1.5 wide, flowing from the NW slopes of Mount Wilbye, in the Lassus Mountains, into Lazarev Bay N of Vittoria Buttress, on Alexander Island. Named by the Bulgarians on Nov. 23, 2009, for composer Dilko Iliev (1898-1984).

Il'in, Nikolay. Navigating officer on the *Mirnyy*, during von Bellingshausen's 1819-21 expedition.

Il'in Island. 67°33' S, 47°42' E. The largest of the Shaw Islands, in Casey Bay, Enderby Land. Photographed by ANARE in 1956 and by SovAE 1957, and named by the USSR as Ostrov Il'ina, for Nikolay Il'in. ANCA translated the name as Il'in Island.

Ostrov Il'ina *see* **Il'in Island**

Ilinden Peak. 62°39' S, 59°42' W. An ice-covered peak, rising to 620 m, on Breznik Heights, 1.2 km NE of Razgrad Peak, 1.3 km E by N of Terter Peak, 0.7 km W of Momchil Peak, and 3.4 km NW of Sartorius Point, on Greenwich Island, in the South Shetlands. Its precipitous and partly ice-free S slope surmounts Zheravna Glacier. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006, for the settlement of Ilinden, in SW Bulgaria, in connection with the 1903 Bulgarian uprising of Ilinden-Preobrazhenie, for the liberation of Macedonia and Odrin (Adrianople), in Thrace.

Gora Il'jushina. 80°31' S, 19°11' W. A hill in the E part of the Shackleton Range. Named by the Russians. This may be the hill named Vindberget by the Norwegians.

The *Illiria*. Lindblad Travel's ship of 1987-88, on charter from a Greek company (Capt. Mindrinos was skipper), in at the South Shetlands and the Antarctic Peninsula. Built in Italy in 1962, and rebuilt in 1982 and again in 1985, she was certified by the American Bureau of Shipping in 1986. Registered in Greece, with Piraeus as her home port, her official number was 5588. She was 333 feet long, 48 feet wide, with a maximum draft of 17 feet, had a displacement tonnage of 3755, a deadweight tonnage of 950, two 2900 hp engines, and a cruising speed of 15.5 knots. She had 3 decks — Lido, Promenade, and Main, had 83 officers and crew, and could accommodate 140 guests. She was equipped with Denny-Brown stabilizers and other modern equipment. Lindblad replaced her in 1988-89 with the *Antonina Nezhdanova*. The *Illiria* was then chartered by Travel Dynamics, and was back in Antarctic waters in 1988-89 (Capt. A. Parisis), 1989-90 (Capt. I. Pittas), 1990-91 (skipper unknown), 1991-92 (Capt. Dastalakis Themistocles), and 1992-93 (skipper unknown).

Illusion Hills. 73°29' S, 162°20' E. Small, escarpment-like hills between the Lichen Hills and the Vantage Hills, at the head of Rennick Glacier, and to the W of that glacier, near the saddle that connects it to Campbell Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, for their illusory distance (much farther away than the expedition had thought). US-ACAN accepted the name in 1967.

Mont Imbert *see* **Mount Imbert**

Mount Imbert. 72°34' S, 31°28' E. Rising to 2495 m, close NE of Mount Launoit, in the E part of the Belgica Mountains. Discovered in 1958 by BelgAE 1957-59, and named by the leader of that expedition — Gaston de Gerlache — as Mont Imbert, for Bertrand Imbert. US-ACAN accepted the name Mount Imbert in 1966.

Imbert, Bertrand-Sainclair-Marie. b. Oct. 23, 1924, son of Jean Imbert and his wife Marie-Hélène Gérard. French hydrographic engineer and seismologist. After the Collège Saint-Martin de France and Collège Sainte-Geneviève, he entered the Naval School of the Free French Navy, in 1943, and was in Indo-China in 1945-47. In 1951 he was in Antarctica, in Adélie Land, as 2nd-in-command at Port-Martin for the winter of 1951. He and Paul-Émile Victor led the French Polar Expedition of 1955-56 (they did not winter-over), and in 1957 Imbert was leader of the wintering party at Dumont d'Urville Station. He

was the first French representative to SCAR, in 1958, and in 1959 he became a member of the Atomic Energy Commission. He had 5 children by his first marriage, and in 1974, Mira Pavelic became his 2nd wife.

Imbert, Lazare-Benoît. b. Jan. 6, 1798, La Seyne, France. Food supply officer on the *Astrolabe* during FrAE 1837-40.

Jeziorko Imbirowe *see* **Ginger Lake**

Imeon Range. 62°58' S, 62°30' W. Extending 30 km in a SW-NE direction, and 6.8 km wide, it occupies the interior of Smith Island, in the South Shetlands, between Cape James and Cape Smith. Mount Foster is its highest peak. Named by the Bulgarians on Dec. 15, 2006, for Mount Imeon (the present-day Pamir and Hindu Kush), whose highlands and valleys around the Oxus River are reputed to be the ancient Bulgar homeland.

Imerslundryggen. 74°42' S, 11°05' W. A partly snow-covered ridge between Schjelderupveggen and Johansenbotnen, in the central part of Sivorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians (i.e., "Imerslund ridge"), for Dr. Helge Imerslund (b. 1897), Resistance leader in Hamar, Norway, during World War II.

IMESS *see* **International Mount Erebus Seismic Study**

Imhof Knoll. 68°40' S, 2°10' W. A submarine feature in the Southern Ocean. The name was proposed in Jan. 1997, by Heinrich Hinze, of the Alfred Wegener Institute, and accepted by international agreement in June 1997. Edward Imhoff (1895-1986) was a Swiss cartographer at the ETH, in Zurich.

Mount Imhotep. 64°21' S, 62°24' W. Rising to about 1250 m, in the Solvay Mountains, 1.25 km NW of Buls Bay, near the head of Hippocrates Glacier, in the S part of Brabant Island, in the Palmer Archipelago. BelgAE 1897-99 were the first to map it. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS, in 1959. Named by UK-APC on Sept. 23, 1960, for Egyptian physician Imhotep (fl. 2890 BC). US-ACAN accepted the name later in 1960.

Imingfjellet. 72°17' S, 26°07' E. A mountain at the E side of Mjell Glacier, in the SE part of the Sør Rondane Mountains. "Iming" means "a fall of very small snowflakes" in Norwegian, and "fjellet" means "the mountain." The Russians call it Gora Rusakova.

Imray, Herbert Alexander "Sandy." b. 1932, Aberdeen, son of schoolteacher (later headmaster) Herbert Imray. After Robert Gordon College (1947-48), and after graduating from Aberdeen University in 1954, he joined FIDS as a medical officer in 1955, and wintered-over at Base F in 1956, and at Base Y in 1957. On his return to Scotland he continued to practice medicine, then went to Fiji as medical officer with the South Pacific Health Service. On his return to Scotland, he practiced psychiatry at Craig Dunain Hospital, Inverness.

Imshaug Peninsula. 70°53' S, 61°35' W. A broad, snow-covered peninsula forming the S side of Lehrke Inlet, on the Black Coast, on the E coast of Palmer Land. The peninsula terminates in Cape Sharbonneau. Mapped by USGS in 1974 from USN air photos taken in 1966, and also from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Henry Andrew Imshaug (b. July 29, 1925, Chicago. d. Nov. 18, 2010), biologist in Antarctica in the 1960s and 1970s, on a long-range biosystematic study of lichens. His lichen collection at Michigan State University (where, from 1956 to 1958, he was professor of botany and assistant curator of the herbarium, and from 1958 curator of the cryptogamic collection) is famous within bryological circles. He retired in 1990. UK-APC accepted the name on July 21, 1976.

In der Schüssel *see* **Schüssel Cirque**

The *In Sung Ho*. A 3735-ton, 90-meter South Korean trawler, built in 1970, which was in the waters of the South Orkneys in 2003. Won Jung-Bo was 1st mate, and later skipper. The vessel is famous for discovering Won Rock, when she grounded on it. She was in those waters several times since then. A later vessel with a similar name was involved in a tragedy in 2010 (*see* **Deaths**, 2010).

In the Footsteps of Scott Expedition. 1985-86. This was one of several expeditions which proved that heroes like Scott and Amundsen still exist, in this case most notably in the form of Robert Swan, the leader of this expedition. However, Bob Thomson (q.v.), described it as "bloody stupid" and outdated. With no qualifications aside from having seen *Scott of the Antarctic* (well, perhaps an extraordinary character and determination helped a bit) it took Swan 4 years to get this expedition together, at a cost of $4 million, with 1000 sponsors. What Swan wanted to do was duplicate Scott's last expedition (BAE 1910-13) as closely as possible and to eschew the benefits of the modern world as best he could, in order to get a taste of what it was like for Scott to have gone to the Pole, and also to see whether he, Swan, could do it too. Scott's son, Peter Scott, was patron of the expedition. Swan and his team trained for a year, and then left England in their ship, the *Southern Quest*. The ship, with 29 people aboard, followed the *Terra Nova*'s 1910 course exactly, to Cape Evans, Ross Island. 5 men disembarked — Swan, Roger Mear, Gareth Wood, Mike Stroud (the doctor), and John Tolson, and they set up Jack Hayward Base. **June 28, 1985**: Wood, Mear, and Stroud went to Cape Crozier, duplicating "the worst journey in the world" undertaken all those years before by Wilson, Bowers, and Cherry-Garrard. **July 26, 1985**: They returned to Jack Hayward Base. Originally Swan and Mear were the two scheduled to ski to the Pole, but they quarreled all the time, so a third man was picked at the last moment, to keep the peace. This was Wood. Stroud and Tolson remained at base. **Oct. 26, 1985:** The Polar party set out, each man manhauling a 42-pound sledge containing 311 pounds of equipment and supplies. They carried their rubbish, so as not to despoil Antarctica. No radios. No dogs. No air support. Just the way it was done in 1911— the only difference being in the number of men and the knowledge that the Pole was there, as it were (Scott did not have this vital luxury. He was going into the unknown. There should be a psychological equation which proves how much more difficult this makes such a venture; cf the 4-minute mile, Mount Everest, the English Channel, etc, etc). They averaged 12 to 15 miles a day. **Jan. 11, 1986**: They arrived safely at Pole Station at 11.53 P.M. There they got the news that the *Southern Quest* was sinking in McMurdo Sound. Crushed by the ice, she went down just a few minutes after Swan's party got to the Pole. The 3 Polarfarers were looked after at Pole Station, and then flown back to McMurdo Station in an LC-130 Hercules. **Jan. 15, 1986**: 26 of the expedition members returned to Christchurch, NZ, on a U.S. flight, while 3 stayed on at Ross Island to winter-over and to clean up Jack Hayward Base. USAP billed them only for the flight from Antarctica to Christchurch, which was jolly decent. In answer to the charge that they only did half the trip (i.e., they did not trek back), they answered that Scott had support parties to within 170 miles of the Pole. Swan's boys had no support. *See also* the Bibliography, under Mear. Greenpeace removed the final remains of the expedition in 1987.

Isla Inaccesible *see* **Inaccessible Islands**

Islas Inaccesibles *see* **Inaccessible Islands**

Inaccessible Cliffs. 82°33' S, 160°48' E. A line of steep cliffs interrupted by several glaciers, they form the 1500-meter-high N escarpment of the Queen Elizabeth Range, and border the S side of the heavily crevassed Nimrod Glacier opposite the lower ice falls. Named by the Northern Party of NZGSAE 1961-62, for their inaccessibility. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Inaccessible Coast. 77°20' S, 168°15' E. Between Cape Tennyson and Cape Crozier, on Ross Island. Named descriptively by BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

[1]**Inaccessible Island** *see* **Inaccessible Islands**

[2]**Inaccessible Island**. 77°39' S, 166°21' E. A small, rocky, and nearly always snow-free island, 1.2 km long in an E-W direction, 0.6 km wide, and rising to 159 m above sea level (in West Peak), 2.5 km SW of Cape Evans, Ross Island, it is the northernmost, the second largest, and the most imposing of the Dellbridge Islands, in McMurdo Sound. The world's most southerly emperor penguin colony is here. Discovered in 1902 by BNAE 1901-04, and so named by Scott for the difficulty in reaching it. US-ACAN, NZ-APC, and everyone else accepted the name.

Inaccessible Islands. 60°35' S, 46°38' W. A group of 3 small, precipitous islands, together with offlying rocks, the most westerly group in the South Orkneys, 30 km W of Coronation Island, they vary in height between 120 m and 250 m above sea level. Discovered by Powell on Dec. 6, 1821, from the *Dove*. He charted them as "three spiral rocks, quite inaccessible," and named them the Inaccessible Isles. However, they may well

be the same as the Seal Islands, discovered by Powell the previous season. They first appear as Inaccessible Islands on an 1839 British chart, and they appear on an 1874 chart as The Inaccessibles. By 1908 Argentina was calling them Isla Inaccesible (i.e., they had singularized the feature), and Petter Sørlle, on his chart of 1912, refers to it as Inaccessible Island. It appears on a 1930 Argentine chart as Islas Inaccesibles, and that was the name accepted by the 1970 Argentine gazetteer. The Discovery Investigations made the first landing, in Jan. 1933, and recharted the group as the Inaccessible Islands, the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears that way in the 1955 British gazetteer.

Inaccessible Isles *see* **Inaccessible Islands**

The Inaccessibles *see* **Inaccessible Islands**

Morro Inach. 62°28' S, 60°47' W. A hill on Punta Óscar, N of Playa Del Canal, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno (INACH) during ChilAE 1990-91, in memory of the support given by INACH to the investigations of marine mammals from 1965 onwards.

Inan Peak. 78°20' S, 162°38' E. Immediately S of Auster Pass, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1994, for Turkish geophysicist Umran Savas Inan (b. 1951), of Stanford University, who, from 1980, at Siple Station and Palmer Station, conducted critical research in the upper atmosphere of Antarctica.

El Inca *see* **Inca Point**

Piedra del Inca *see* **Inca Point**

Punta Inca *see* **Inca Point**

Inca Point. 62°18' S, 59°12' W. On the NW side of Harmony Cove, on Nelson Island, in the South Shetlands. Francisco de Gurruchaga Refugio was established just N of this point by the Argentines in 1953. At that time, the Argentines recognized two isolated and distinctive rock stacks in the water in this vicinity, and they named both descriptively. One was named La Esfinge (i.e., "the sphinx"), and the other El Inca (i.e., "the Inca"), for its remarkable resemblance to the head of an Inca statue. These stacks gave their names to the points off which they lie, so the point near El Inca became Punta Inca, and the point near La Esfinge became Punta Esfinge. However, on a 1957 Argentine hydrographic chart, the names have been reversed (in error), and that error was perpetuated in the 1970 Argentine gazetteer, despite the 1958 geological map prepared by Juan Olsacher, which shows them the way they were meant to be (Olsacher also calls the stacks, respectively, Piedra de la Esfinge and Piedra del Inca). UK-APC accepted the (wrong) name Inca Point on Feb. 7, 1978, and US-ACAN followed suit.

Incisor Ridge. 71°40' S, 163°41' E. A ridge, 14 km long, forming the SW segment of the Molar Massif, E of Husky Pass, in the Bowers Mountains. Named by Malcolm Laird, in association with the massif. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Inclusion Hill. 77°15' S, 166°25' E. A prominent, steeply conical trachyte plug which in parts contains numerous inclusions of basalt. It rises to between 329 and 335 m above the bare, glaciated mountainside between McDonald Beach and the Mount Bird Ice Cap, about 6 km S of Cape Bird, on Ross Island. Explored by geologists of the Cape Bird party of NZGSAE 1958-59, and named descriptively by them. They built a rock cairn here. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Independence Hills. 80°25' S, 81°33' W. A line of rugged hills and peaks, 16 km long, with mainly bare rock E slopes, 5 km SE of the Marble Hills, in the Heritage Range, they form the S segment of the W wall of Horseshoe Valley. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1964, in continuation of the "heritage" theme prevalent in this area.

Punta Independencia *see* **O'Neill Point**

Independencia Argentina Refugio. 63°27' S, 57°10' W. Argentine refuge hut, opened by the Army on Oct. 21, 1967, just S of Mount Cardinall, Duse Bay, Trinity Peninsula. It was named after the Argentine day of independence, May 25.

Mount Inderbitzen. 78°49' S, 84°47' W. Rising to over 2600 m, 2.5 km S of Mount Milton, and 20 km SSE of Mount Craddock, in the S part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1994, for Anton Louis Inderbitzen (b. Dec. 9, 1935, Sacramento), associate chief scientist, Division of Polar Programs, NSF, 1983-86, and head of the Antarctic staff at the NSF from 1986 to 1991. He was responsible for the coordination and planning of all scientific activities within USAP, and for the formulation and enforcement of all U.S. environmental regulations in Antarctica. From 1991 he was deputy director for research at USGS.

Index Peak. 65°49' S, 64°26' W. A peak in the Fontaine Heights, it rises to over 1220 m (the British say about 1250 m), 12 km SE of Cape García, and S of Bigo Bay, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J, and was mapped in 1959 by FIDS cartographers, from these efforts. Named by UK-APC on July 7, 1959, for its likeness to an index finger, and also in association with the heights — Henri La Fontaine having been an indexer (*see* **Fontaine Heights**). It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Index Point. 73°21' S, 167°55' E. A low, ice-covered point that forms the E extremity of the Mountaineer Range, and lies at the terminus of Mariner Glacier, 2.5 km W of Emerging Island, on the coast of Victoria Land. So named by NZ-APC for its likeness to an index finger. US-ACAN accepted the name in 1966.

Indexsporn. 71°33' S, 163°07' E. A spur in the area of MacKinnon Glacier, near Fingernagelsporm (i.e., "fingernail spur"), in the Lanterman Range of the Bowers Mountains. Named by the Germans ("index finger spur").

India. An Indian observer sailed on the *Magga Dan* to Wilkes Station during ANARE 1960-61. India began Operation Gangotri in Jan. 1982, which was the setting up of Dakshin Gangotri (Station) on the Princess Astrid Ice Shelf. On Aug. 19, 1983 India was ratified as the 28th signatory of the Antarctic treaty, and on Sept. 12, 1983 achieved Consultative status within the Treaty system. That year India sent 28 scientists to its permanent weather station. In 1984 India became a member of SCAR. After Gangotri was buried in ice, India built her second station, Maitri, in March 1989, in the Schirmacher Oasis of central Queen Maud Land. India's ongoing Antarctic program is called IAP (Indian Antarctic Program), and is conducted by NCAOR (National Centre for Antarctic and Ocean Research, based in Goa). However, in this book the expeditions are referred to as IndAE, in oder to make it clearer. A third station, in the Larsemann Hills, was being planned for 2006, but never materialized. Then the idea was resuscitated in 2009-10, and construction began that season. The station was tentatively called Bharti, and would become functional in 2012. *See also* **Indian Antarctic Expeditions**.

India Bay. 69°59' S, 11°57' E. On the Princess Astrid Coast of Queen Maud Land. This was the berthing point for the Indian Antarctic expedition. Named by the Indians.

India Bay Camp. 69°56' S, 11°54' E. Indian field station on Nivlisen, Princess Astrid Coast, Queen Maud Land.

The *Indian*. A 247-ton sealing brig, built in Massachusetts in 1808, and owned by Messrs Kensworthy, Son & Burrell, of Liverpool, conducting business in the South Seas and Africa trade. One of the mates was Ferdinand Spiller. She arrived back in Liverpool on June 23, 1820, and Spiller became skipper, taking her down to the South Shetlands for the 1820-21 sealing season. After the expedition, Spiller took her to Pernambuco, and from there back to Plymouth, arriving on May 27, 1821, and then on to Gravesend on July 7, 1821. The vessel brought home some of the crew of the wrecked *Cora*, including Capt. Fildes, as well as 8 of the crew of the damaged *George*. She also brought back 20,000 fur seal skins. At the end of the year, she headed for South American waters, and was captured off the coast of Peru in 1822, by Bernardo O'Higgins' freebooters. The vessel was allowed to deteriorate, and in Feb. 1823, was lying in Valparaíso Harbor, in a most deplorable state. She was brought back to life, and Spiller was still in command in 1826.

Indian Antarctic Expeditions. These are the expeditions (IndAE). **IndAE 1981-83**. The First Indian Antarctic Expedition, abbreviated as IndAE 1. Code name: Operation Gangotri. It left Goa on the hired Norwegian ship *Polarsirkel*

on Dec. 6, 1981, under the command of Dr. Syed Zahoor Qasim (b. Dec. 31, 1926, Allahabad). 2nd-in-command was C.P. Vohra, from the Indian Geological Survey, who had climbed Everest in 1965. Also on the expedition were Dr. H.N. Siddiquie, of the National Institute of Oceanography, Dr. Arun Parulekar (1936-2002), and 17 others. They landed in Antarctica on Jan. 9, 1982. Between Jan. 9 and 18, 1982, the 21-man team put ashore in 70°45' S, 11°38' E, on the Princess Astrid Coast, and their landing place is now a historic site (q.v.). They set up a base camp in 69°59' S, 11°56' E, and a refuge hut very close by, and began operations in Jan. 1982. Two Chetak helicopters were flown by Indian Navy pilots. Studies conducted were oceanography, glaciology, seismology, and magnetism. Data were transmitted back to India via satellite, and, after 10 days on the ice, they left behind an automatic weather station at Schirmacher Oasis. They arrived back in India on Feb. 22, 1982. **IndAE 1982-84**. Led by Shri Vijay Kumar Raina, of the Indian Geological Survey, they went down on the *Polarsirkel*. Dr. C.R. Sridharan, of the Indian Met Office, was 2nd-in-command. There were another 10 scientists from various disciplines, a cinematographer, 7 Indian Navy personnel, including a doctor, 3 Air Force and 3 Army personnel. The aim was to select a site for a permanent Indian station, to prepare a landing strip for planes, to establish a radio link with India, and to continue scientific studies. The expedition left Goa on Dec. 1, 1982, and arrived in Antarctica on Dec. 20, 1982. They arrived back in India on March 21, 1983. **IndAE 1983-85**. On Dec. 3, 1983, the *Finn Polaris* left Goa, led by Harsh Gumar Gupta (b. 1942), and with 2 women as members (geologist Sudipta Sengupta and microbiologist Aditi Pant). There were 81 persons on the expedition, including the wintering-over personnel. Including the two ladies, there were 12 scientists. There were also 29 Indian Army personnel, led by Maj. Pavan Nair, of the Indian Corps of Engineers, and 12 Air Force personnel, mostly involved with the flying of the Russian MI-8 Chetak helicopters. There were 3 doctors, and cinematographer J.M. Vartak. On Dec. 6, 1983, they crossed the Equator, heading south, and on Dec. 26, 1983 they arrived in Antarctica. On Dec. 28, 1983 the construction crew moved to the site and made a camp using BAS tents. On Dec. 29, 1983, one of the helos crashed into the sea. All were rescued, but the chopper was finished. On Jan. 1, 1984, they set up Gangotri Station (known in India as Dakshin Gangotri, but not named until 1987-88) in 70°05, 12°00' E. From March 1, 1984, 12 personnel wintered-over, under Col. Sharma, and on March 29, 1984, the *Finn Polaris* arrived back in India. In 1997 Colonel Sharma would write *Citadel of Ice: The First Indian Wintering in Antarctica*. **IndAE 1984-86**. Led by Bimal B. Battacharyya, 83 men went south on the *Finn Polaris*, including a scientist from Mauritius, leaving Goa on Dec. 4, 1984, and arriving in Antarctica on Dec. 28, 1984. The main party, and the winterers from the 3rd Expedition, arrived back in India on March 25, 1985. A new party of 13 men wintered-over in Antarctica. **IndAE 1985-87**. The *Thuleland* left Goa on Nov. 30, 1985, with 88 expeditioners — 21 scientists, including 2 women — and 67 logistics personnel from the Army, Navy, and Air Force. They arrived in Antarctica on Dec. 24, 1985. The expedition was led by Manochar K. Kaul. After 69 days in Antarctica, the expedition returned, with the previous year's winterers, and leaving behind a new set of winterers. **IndAE 1986-88**. The *Thuleland* left Goa on Nov. 26, 1986, and arrived in Antarctica on Dec. 21, 1986, the expedition being led by Dr. Arun Parulekar. 18 men formed the summer contingent, and 6 men wintered-over. **IndAE 1987-89**. Dr. R. Sengupta led the expedition, on the *Thuleland*, which left Goa on Nov. 25, 1987. The post office was set up at Dakshin Gangotri, on Jan. 26, 1988. **IndAE 1988-90**. Dr. A. Sengupta led the expedition. On Nov. 29, 1988, the *Thuleland* left Goa. **IndAE 1989-91**. It left Goa on the *Thuleland*, Nov. 30, 1989, with 81 members on board. 25 would winter-over. Shri R. Ravindra led the expedition. They arrived in Antarctica on Dec. 27, 1989, and returned to India on March 27, 1990, bringing back the winterers of the previous expedition, and leaving behind a new batch. **IndAE 1990-92**. Dr. A.K. Hanjura led the expedition. The *Thuleland* left Goa on Nov. 27, 1990, and arrived in Antarctica on Dec. 20, 1990. They returned to India on March 25, 1991, having brought back the winterers from the previous year, and left behind a new group of winterers. **IndAE 1991-93**. Dr. S. Mukherjee led the expedition. On Nov. 27, 1991, the *Thuleland* left Goa, arriving in Antarctica on Dec. 23, 1991. They arrived back in India on March 24, 1992, bringing back the winterers from the previous year, and having left behind a new group of winterers. **IndAE 1992-94**. Dr. Vinod Dhargalkar led the expedition. The *Thuleland* left Goa on Dec. 5, 1992, and arrived in Antarctica on Dec. 28, 1992. **IndAE 1993-95**. Shri Sudhakar Rao led the expedition, which left Goa on Dec. 8, 1993, on the *Stepan Krasheninnikov*. **IndAE 1994-96**. Dr. S.D. Sharma led the expedition. The expedition left Goa on the *Polar Bird*, on Dec. 17, 1994, and arrived back in India in March 1995. **IndAE 1995-97**. Left Goa on Dec. 6, 1995, with 47 persons, including 30 scientific personnel, aboard the *Brinknes*. Shri Arun Chaturvedi led the expedition. Shri Ajay Dhar was 2nd-in-command. They landed in Antarctica on Jan. 1, 1996. Research included atmospherics, earth sciences, biology, human psychology, environmental engineering, and communications. The main party returned to India on March 21, 1996, on the *Polar Bird*, leaving behind 26 personnel to winter-over. Construction of a balloon-launching shelter was completed, as were new garbage and toilet incinerators. **IndAE 1996-98**. Left Goa on Dec. 12, 1996, on the *Polar Bird*, with 61 members, and arrived on Jan. 4, 1997. Dr. A.L. Koppar led the expedition. Lt. Cdr. S. Chandra Sekaran (meteorologist), Lt. Cdr. A. Sridharan (hydrographic officer). 26 members wintered-over at Maitri Station. New experiments were conducted on lake sediments for understanding the paleoclimatic condition; a seismic station was established; a wind power turbine was designed at Maitri to study the feasibility of wind energy; aerosol particles were studied, as was electrical conductivity of the atmosphere; bryophytes were catalogued and identified as a part of studies on biodiversity; and a systematic survey of the ice shelf and surrounding waters was conducted for collecting hydrographic data. Much work was done on improving Maitri Station. They arrived back in India on April 5, 1997. **IndAE 1997-99**. 51 personnel left Goa on Dec. 8, 1997, on the *Polar Bird*, including 3 German scientists from the University of Dresden. Shri K.R. Sivan led the expedition. They landed in Antarctica on Jan. 3, 1998, and the main party returned to India on March 31, 1998, leaving behind 25 personnel to winter-over. **IndAE 1998-2000**. They left Goa on Dec. 14, 1998, on the *Polar Bird*, under the command of Shri Ajay Dhar. Other personnel included Lt. Cdr. John Jacob Puthur, Lt. Cdr. S. Mani, K. Kumar, and K.U. Kumar. There was an Iranian scientist on board too. On March 30, 1999 the main team returned to India, leaving behind 26 personnel to winter-over. **IndAE 1999-2001**. Left Cape Town, South Africa, on Dec. 9, 1999, on the *Magdalena Oldendorff*. The 47 members included 30 scientists under the command of Shri Arun Chaturvedi, and 17 Army logistics personnel headed by Major Ravi Sangwan. There were two ladies — a medical doctor from India and a geologist from Peru. 25 persons wintered-over. The expedition returned to Cape Town on the *Polar Bird*. **IndAE 2000-02**. This was IndAE 20. Shri Marvin J. D'Souza led the expedition. Other personnel included Lt. Cdr. P. Mahato and Avijit Nag. The *Magdalena Oldendorff* left Cape Town on Dec. 30, 2000, with the expedition aboard. They arrived in Antarctica on Jan. 9, 2001. The expedition returned to Cape Town on the *Emerald Sea*, on March 18, 2001, having left behind a new batch of winterers. **IndAE 2001-03**. The expedition left Goa on Jan. 8, 2002, and picked up the *Magdalena Oldendorff* at Cape Town on Jan. 14, 2002. The 49 members, led by Shri R.P. Lal, included a Russian doctor. Other personnel included Lt. Cdr. N. Thapliyal, Lt. Cdr. Indu Prakash, Jai Prakash, and Devendra Kumar (hydrographic officers). **IndAE 2002-04**. Geophysicist Dr. Arun N. Hanchinal led the expedition, which left Goa on Jan. 10, 2003, and Cape Town on Jan. 14. Other personnel were: Lt. Cdr. Anirban Banerjee and R. Bhaskaran. The 48 members, including 33 scientists, arrived in Antarctica on Jan. 25, 2003. On March 27, 2003 the main party, along with the winterers from the 21st Expedition, left Antarctica, leaving behind 23 personnel to winter-over. They arrived back in Cape Town in April 2003. **IndAE 2003-05**. Shri S. Jayaram led the expedition. They left Cape Town on Dec. 18, 2003, on the *Emerald Sea*. Lt. Cdr. P.K. Srivastava and Lt. Cdr. M.P. Kakkad led the hydrographic team. S. Ramakrishna Kopali

(survey recorder). They returned to India on April 4, 2004. **IndAE 2004-06**. Shri Rajesh Asthana led the expedition. Lt. Cdr. Srikanth Mukku and R. Maddhu led the hydrographic survey team. **IndAE 2005-07**. Shri L. Prem Kishore led the expedition. The ship was the *Paardeberg*, which left Cape Town on Dec. 22, 2005. Lt. Cdr. J. Gurumani led the hydrographic survey team, assisted by Yashpal Kalra and Vinoj Kumar. On March 14, 2006, the *Paardeberg* arrived back in Cape Town. **IndAE 2006-08**. The ship was the *Emerald Sea*, which left Goa on Jan. 10, 2007. Jaya Paul (of the Geological Survey of India) led the expedition, whose main concern was the planning of the site for the 3rd Indian station. **IndAE 2007-09**. The *Emerald Sea* left Cape Town on Dec. 5, 2007, and arrived in Antarctica on Jan. 3, 2008. Dr. Arun Chaturvedi led the expedition. On April 11, 2008 they arrived back in Cape Town. **IndAE 2008-2010**. Led by Dr. Pradeep Malhotra. **IndAE 2009-11**. This was IndAE 29. Led by Dr. Shri P. Elango (he had wintered-over in 1997). Work began on the 3rd Indian station, Bharti. Climate change was the main thrust this season. The team that flew by air, left Goa on Nov. 2, 2009, bound for Cape Town, where they left on Nov. 6, bound for Maitri, arriving there on Nov. 7, 2009. The team going by ship left Goa on Dec. 1, 2009, bound for Cape Town, leaving there on Dec. 6, and arriving in the Larsemann Hills on Dec. 20, 2009. They left the Larsemann Hills on Feb. 14, 2010, bound for Maitri Station, arriving there on Feb. 22. On March 20, 2010, they left Maitri, arriving in Cape Town on March 29, and two days later they were back in India. There were 31 summer members and 23 winter members. The ships used that season were the *Ivan Papanin* and the *Vladimir Ignatjuk*.

Indian Rocks. 62°29' S, 60°16' W. A group of rocks in Hero Bay, E of Wood Island, off the N coast of Livingston Island, between that island and Desolation Island, in the South Shetlands. Charted by Fildes in 1820-21. Named by UK-APC on July 7, 1959, for the *Indian*. US-ACAN accepted the name in 1960. Last plotted by the UK, in late 2008.

Isla Indicador *see* **Indicator Island**

Isla Indicator *see* **Indicator Island**

Indicator Island. 65°15' S, 64°16' W. A tiny member of the Argentine Islands, about 185 m long, just over 200 m W of the NW end of Galíndez Island, in the Wilhelm Archipelago, opposite the W coast of the Antarctic Peninsula. Charted and named in 1935 by BGLE 1934-37, who had put a windsock on the island to indicate wind direction for their airplane. It appears on a British chart of 1947. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. The Chileans call it Isla Indicator, and, even though the Argentines often call it Isla Indicador, it appears on a 1953 Argentine chart as Isla Indicator, and that was the name accepted by the 1970 Argentine gazetteer.

Indonesia. There have been four Indonesian Antarctic expeditions. **Indonesian Antarctic Expedition 1**. 2000-01. Agus Supangat and Muhammad Luqman left Jakarta in Dec. 2001, on the first ever Indonesian Antarctic Expedition. Actually, they were the expedition. They traveled to Davis Station on the *Aurora Australis*, arriving on Feb. 13, 2002, spent a week at Davis, working on UVB radiation science on photoplankton, and returned to Hobart on the *Aurora Australis*. **Indonesian Antarctic Expedition 2**. 2002-03. Again, only two scientists, working at Davis Station and Mawson Station, in Jan. and Feb. 2003. They returned to Hobart on the *Aurora Australis*, on March 20, 2003. **Indonesia Antarctic Expedition 3**. 2003-04. This time the expedition consisted of one man, marine biologist Utami R. Kadarwati, who spent his time on the *Aurora Australis*, most of the time in the area of Heard Island (not in the Antarctic), from Dec. 2003 until Feb. 19, 2004, when the ship returned to Hobart. However, he did visit Davis Station and Mawson Station. **Indonesian Antarctic Expedition 4**. 2004-05. Two men this time, scientists Lusia Manu and Pita Dwi, left Fremantle on Dec. 23, 2004, on the *Aurora Australis*, and arrived at Davis Station on Feb. 5, 2005, spent two days there and arrived back in Hobart on Feb. 17, 2005.

Indre Brenabben *see* **Oku-hyoga Rock**

Indre Hovdeholmen *see* **Indrehovdeholmen**

Indrebergbreen *see* **Oku-iwa Glacier**

Indreberget *see* **Oku-iwa Rock**

Indrefjord *see* **Bell Bay**

Indrehovdeholmen. 69°11' S, 39°33' E. An island, 2.5 km W of Langhovde-kita Point, in the E part of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Photographed by LCE 1936-37, and mapped by Norwegian cartographers in 1946 from these photos, and named by them as Indre Hovdeholmen (i.e., "the inner knoll island"), for its position among the islands of the Langhovde Hills. US-ACAN originally called it Indrehovdeholmen Island, but later dropped the word "island."

Indrehovdeholmen Island *see* **Indrehovdeholmen**

Inept Cove *see* **Inepta Cove**

Caleta Inepta *see* **Inepta Cove**

Inepta Cove. 62°42' S, 60°18' W. On the E side of False Bay, Livingston Bay, in the South Shetlands. The name appears on a 1954 Argentine naval chart as Caleta Inepta (i.e., "inept cove"), so named because the cove is inadequate as an anchorage. US-ACAN accepted the name Inepta Cove, but on May 13, 1991, UK-APC named it (for themselves only) as Inept Cove.

Ensenada Inés María. 64°24' S, 61°29' W. A deep cove, surrounded by inaccessible ice cliffs, off Punta Fellow, the extreme SE of Murray Island, off the extreme S of Hughes Bay, on the W coast of the Antarctic Peninsula. At the back of the cove is a glacier which discharges icebergs into the water. Named by Chile, certainly, and probably by one of the crew of one of the Chilean expeditions, one imagines for a lady named Inés María.

Ineson Glacier. 64°04' S, 58°22' W. Flows NW into Gin Cove, James Ross Island. Surveyed by Fids from Base D in 1960-61. BAS personnel conducted geological work here between 1981 and 1983. Named by UK-APC on April 3, 1984, for Jonathan Ralph Ineson (b. 1955, Warwickshire), BAS geologist in the area (he did not winter-over). US-ACAN accepted the name.

[1]**Inexpressible Island**. 74°54' S, 163°39' E. Also called Oscar Island. An island, 11 km long (the New Zealanders say 4 km long, 0.8 km wide, and 400 m high), it forms the W shore of Evans Cove, in Terra Nova Bay, at the outer edge of the Nansen Ice Sheet, along the coast of Victoria Land. First called the Southern Foothills, as opposed to the Northern Foothills just to the north. Campbell's Northern Party wintered-over here in 1912, in a snow cave, and changed its name to what it is today. US-ACAN and NZ-APC both accepted the name. The Americans installed an automatic weather station here in 1984 (*see* **Manuela**).

[2]**Inexpressible Island** *see* **Oscar Point**

Inexpressible Island Automatic Weather Station. 74°54' S, 163°36' E. An American AWS at an elevation of approximately 260 feet, installed on Inexpressible Island, in Terra Nova Bay, Victoria Land.

Infantería Argentina Refugio. 63°33' S, 57°51' W. Argentine refuge hut opened by the Army on Oct. 18, 1967, at Stepup Col, between Broad Valley and Cugnot Ice Piedmont, at the E end of the Louis Philippe Plateau, on Trinity Peninsula.

Inferno Peak. 72°07' S, 165°59' E. Rising to about 2100 m, 5 km N of Le Couteur Peak, in the N end of the Millen Range, in Victoria Land. So named by the Southern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, because it contains granite/greywacke contact, with baking of the sedimentary rock imparting a reddish color to the peak. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Inferno Ridge. 79°26' S, 84°13' W. A narrow ridge, 13 km long, between Schneider Glacier and Rennell Glacier, in the Heritage Range. So named by the University of Minnesota Geological Party here in 1963-64, because the area is deeply dissected and composed of black rocks. US-ACAN accepted the name in 1966.

Isla Ingeniero Pereira *see* **Snodgrass Island**

Meseta de Ingenieros *see* **Louis Philippe Plateau**

Ingeniørhamrane. 71°33' S, 12°45' E. A group of nunataks in the southernmost part of the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("engineer peaks").

Ingham Glacier. 72°50' S, 168°38' E. A tributary glacier, 5 km W of Humphries Glacier, it flows southward into Borchgrevink Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Clayton Ernest "Bill" Ingham (b. July 16, 1926, Petone, NZ), geophysicist on Hallett Station's first win-

tering-over party, in 1957. NZ-APC accepted the name.

Estrecho Inglés *see* **English Strait**

Ingram, William Wilson. Known as Wilson Ingram. b. Dec. 6, 1888, Craigellachie, Banffshire, but raised in Dufftown, and Mortlach, also in Banff, son of printer James Ingram and his wife Margaret. After Aberdeen University, he served in World War I, becoming a captain, and then moved to Sydney. He was a lecturer at Sydney University from 1920, and from 1929 was director of the Kolling Institute of Medical Research, attached to the Royal North Shore Hospital, and published works on diabetes. He was chief medical officer and bacteriologist on both halves of BANZARE 1929-31. He was a lieutenant colonel in World War II. He married Dorothy Edith King. From 1974 to 1979 he was a consultant physician, and died in Sydney, on Nov. 25, 1982.

Cabo Ingrid *see* **Cape Ingrid**

Cape Ingrid. 68°46' S, 90°42' W. A high dark rock promontory which separates Norvegia Bay from Sandefjord Cove, on the NW shore of Peter I Island. Discovered by Eyvind Tofte in 1927, and named by him as Kapp Ingrid Christensen, for Lars Christensen's wife. US-ACAN accepted the name Cape Ingrid in 1952. The Argentines call it Cabo Ingrid, and, today, the Norwegians call it Kapp Ingrid.

Kapp Ingrid *see* **Cape Ingrid**

Kapp Ingrid Christensen *see* **Cape Ingrid**

Ingrid Christensen Coast. 69°30' S, 77°00' E. Also called Ingrid Christensen Land. That portion of the coast of East Antarctica between Jennings Promontory (72°33' E) and the W end of the West Ice Shelf (81°24' E), just to the E of the Amery Ice Shelf, it is, in effect, the coast of Princess Elizabeth Land. Discovered on Feb. 20, 1935 by Klarius Mikkelsen in the *Thorshavn*, and named by him for the wife of his boss, Lars Christensen. On that same day a landing party, including Caroline Mikkelsen, went ashore at the Vestfold Hills. US-ACAN accepted the name in 1947. The SW portion of the coast was discovered and photographed aerially in March 1947, during OpHJ 1946-47. ANCA has followed suit with the naming.

Ingrid Christensen Kyst *see* **Ingrid Christensen Coast**

Ingrid Christensen Land *see* **Ingrid Christensen Coast**

Ingvaldnuten. 72°16' S, 26°40' E. The easternmost peak of Isachsen Mountain, in the E part of the Sør Rondane Mountains. Named by the Norwegians for Gunnar Ingvald Isachsen (q.v.).

Inland Forts. 77°38' S, 161°00' E. A line of peaks extending between Northwest Mountain and Saint Pauls Mountain, on the N side of the upper Taylor Glacier, in the Asgard Range of Victoria Land. Discovered and named descriptively by BNAE 1901-04. US-ACAN accepted the name in 1964, and NZ-APC followed suit. Originally plotted in 77°39' S, 161°03' E, this feature has since been replotted.

Inman Nunatak. 74°49' S, 98°54' W. A nunatak, 10 km E of Mount Manthe, in the SE part of the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Martin Mack Inman, Jr. (b. May 1, 1922, Battle Creek, Mich. d. Aug. 20, 2010, Knoxville, Tenn.), aurora scientist at Byrd Station in 1960-61 and 1961-62.

Innard, Blaise. b. Oct. 29, 1817, Cannes. Ordinary seaman on the *Astrolabe* during FrAE 1837-40. On July 1, 1838 he became an able seaman, and left the expedition at Otago, NZ, on April 4, 1840.

Inner Crater. 77°32' S, 167°10' E. Embraces the crater within the floor of Main Crater, at the summit of Mount Erebus, on Ross Island (and so hence its name). It contains an active anorthoclase-phonolite lava lake. Named by US-ACAN on June 19, 2000. The name was accepted by NZ-APC on Feb. 20, 2001.

Inner Harbor. 64°19' S, 63°00' W. A small harbor, about 350 m wide, 27 m deep, and with a mud bottom, offering protection against the winds, in the Melchior Islands, in the Palmer Archipelago, it is formed by the semi-circular arrangement of Lambda Island (to the N), Delta Island (to the E), and Epsilon Island and Alpha Island (both to the S). Surveyed and roughly charted by the personnel on the *Discovery* in 1927, and probably named by them. Re-surveyed by the Argentines in 1942, 1943, and 1948. It appears on a 1943 U.S. Hydrographic Office chart, and on a British chart of 1947. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit in 1956 (different spellings of "harbour," of course). It appears in the 1955 British gazetteer. It appears as Puerto Interior (a translation) on a 1948 Argentine chart, and also in the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Inner Harbour *see* **Factory Cove**

Inner Sanctum. 60°40' S, 45°38' W. A small cove with a group of small islands at its mouth, S of North Point, Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed from the air by the Royal Navy in 1968. Named descriptively by UK-APC on Sept. 29, 2004.

Innerskjera *see* **Rookery Islands**

Mount Innes-Taylor. 86°51' S, 154°27' W. A tabular mountain, rising to between 2590 and 2730 m, 1.5 km N of Mount Saltonstall, on the S side of Poulter Glacier, where it joins the W side of Scott Glacier, near the S edge of the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd for Alan Innes-Taylor. US-ACAN and NZ-APC both accepted the name.

Innes-Taylor, Alan. b. Feb. 12, 1900, Little Berkhampstead, Herts, England, as Charles Alan Kenneth Innes-Taylor, son of printer Ranolf D. Innes-Taylor, a New Zealander, and his London wife Catherine. His great uncle was a prime minister of NZ. He was raised in Hertford, then came to the USA with his family in 1906, and then on to Ontario two years later. He enlisted in the Royal Canadian Flying Corps in 1917, during World War I. In 1919 he moved to the Yukon and became a Mountie the following year. After 5 years he began working the Yukon river boats, as a purser. He was dog driver on the *City of New York* during ByrdAE 1928-30, and was one of the shore party, chief of trail operations, during ByrdAE 1933-35. He lectured on Antarctica before World War II, and in that conflict was a captain in the U.S. Army Air Corps, teaching Arctic survival in Greenland. In 1941 he won the Carnegie Hero medal for saving a drowning woman off the North Carolina coast. He was promoted to lieutenant colonel during the Korean War. He wrote survival manuals, and was a pioneer in the Yukon Historical Archives. He died in Whitehorse, Yukon, on Jan. 14, 1983.

Innes-Taylor Inlet *see* **Nantucket Inlet**

Innes Wilson, James. b. Nov. 20, 1882, Lochee, near Dundee. He arrived in the Falkland Islands on April 17, 1903, aboard the *Oracana*, and on the same day was enrolled by the government as an itinerant schoolmaster (there were a lot of these in the Falklands). After five years working in various parts of the Falklands, he returned to Stanley in 1908, and was appointed acting government schoolmaster. Two months later he was made government customs officer and inspector of nuisances, and on Nov. 20, 1909 became the first stipendiary magistrate of South Georgia, arriving there on Nov 30 of that year, aboard the *Coronda* (his term was up on Oct. 19, 1914). Two weeks later, when the first post office opened on South Georgia, he was the postmaster. On Nov. 9, 1911, in Scotland, he married Jean Robertson, and, on his return, in 1912 he built a house at King Edward Point, that house remaining the center for British administration in South Georgia for decades. In 1915, upon another return from Scotland, he was appointed stipendiary magistrate of West Falkland, and also served as Falkland Islands Dependencies administrator on Deception Island for the summers of 1915-16 and 1916-17. As a geologist, in 1916-17, he accompanied a whaling fleet to the South Shetlands, the Palmer Archipelago, and Trinity Island, to collect geological specimens for the Falkland Islands government. He retired from government service on July 30, 1918, became manager of Fox Bay East sheep farm, and on Oct. 1, 1918 was appointed a JP. He stayed at the farm until Nov. 1924, and then the family returned to Scotland. From 1926 to 1930 he was in Canada, alone, working for the Hudson Bay Company. He died on Aug. 14, 1940, in Aberdeenshire, and his wife died in 1949, in the same county. Steve Palmer wrote an article in the 2007 issue of the *Falkland Islands Journal*, called "James Innes Wilson."

Innhovde *see* **Innhovde Point**

Innhovde Point. 69°52' S, 37°10' E. A lone, bare, rock point, along the inner, ice-filled shore of Fletta Bay, on the SW side of Lützow-Holm Bay, on the Prince Harald Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Innhovde

(i.e., "inner knoll"). US-ACAN accepted the name Innhovde Point in 1968.

Innsfjorden *see* **William Scoresby Bay**

Innviksletta *see* **Edward VIII Ice Shelf**

Inoceramus Point. 64°25' S, 58°02' W. The SE point at the entrance to Carlsson Bay, on James Ross Island, not far from Longing Gap (in Graham Land). It is backed by a ridge extending along the SE of Carlsson Bay, of which the lower section contains Cretaceous sedimentary rocks notable for the giant fossil mussels of the genus Inoceramus. Named by UK-APC on Dec. 2, 1993.

Gora Inostranceva. 70°15' S, 65°20' E. A hill in the Athos Range, in the Prince Charles Mountains. Named by the Russians for Aleksandr Aleksandrovich Inostrantsev (1843-1919), Russian geologist.

Inott, Robert. b. July 3, 1764, Nantucket, Mass., son of Joseph Inott and Elizabeth Gardner. He went to sea, and on Aug. 12, 1784, in Nantucket, married Judith Folger. He was captain of the *Samuel*, in Antarctic waters for the sealing seasons of 1820-22. He died in Nantucket on Nov. 12, 1825.

Inott Point. 62°32' S, 60°00' W. A point, 1.5 km NNE of Edinburgh Hill, on the E coast of Livingston Island, in the South Shetlands. Roughly charted by Scottish geologist David Ferguson in 1913, and later (1935) charted by the Discovery Investigations. On an Argentine chart of 1948, it was called Cerro Edimburgo (being confused with Edinburgh Hill). It appears on a 1953 Argentine chart as Piedra Neves, probably named after a member of ArgAE 1952-53 (*see also* **Stanley Island**). About this time, the Argentines were also referring to it as Punta de Toba (i.e., "tufa point," "tufa" being a volcanic rock). Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. It was up to UK-APC to bring some sort of order to the naming of this feature, and they did, on Aug. 31, 1962 naming it Inott Point, for Robert Inott. However, it appears on a 1964 Argentine chart as Punta Segunda (i.e., in relation to Edinburgh Hill). US-ACAN accepted the name Inott Point in 1993. Last plotted by the UK, in late 2008.

Inoue *see* **Takagawa, Sajiro**

Insanity. Used to be a danger. The cold and isolation had its effects on the pioneers. Only a few cases of insanity were reported, although one wonders if all the cases were talked about. Probably not. Certainly not. The sealers Hess and Pierce went insane during their enforced wintering-over in 1872 (*see* **King, James A.**). Two young sailors went insane on Bull's *Antarctic* expedition of 1894-95. Tollefsen and Knudsen went mad during BelgAE 1897-99, when the *Belgica* had to winter-over in 1898. Nansen, the cat, went insane too, and died on June 22, 1898 (*see* **Cats**). Stoker Whitfield went slightly insane after the winter-over with Scott in 1903, during BNAE 1901-04, and George Abbott followed suit in 1912, during BAE 1910-13. Sydney Jeffryes went mad during AAE 1911-14. There was the case of Malcolm Douglass, during USAS 1939-41. In 1954, Fred Bird, FIDS base leader at Port Lockroy, suffered major mental overload and confined himself to bed for a month. One of the U.S. Navy cooks wintering-over at McMurdo in 1956, during OpDF I, went insane, and had to be locked up in a padded room. At the end of OpDF II (1956-57) 8 of the 319 men who had just wintered-over had to be sent home suffering from mental disturbance. Now, that may not necessarily be insanity, but the implication is there. Then there was the case of Henry Brandt, at Wilkes Station, in 1959. A German, he had a nervous breakdown beginning in Feb. 1959, ran amok with a knife on April 7, 1959, and was locked up. On Dec. 3, 1959 a Neptune landed at Wilkes and took him to Melbourne, and from there he returned to Germany, where he recovered. The danger is nowhere near as great today, but it lurks.

Insects *see* **Fauna**

Inseki-hyogen. 72°00' S, 35°30' E. A vast, bare ice field around the Queen Fabiola Mountains. JARE have discovered many meteorites here since 1969, and thus named this feature, on Nov. 22, 1975 ("meteorite ice field).

Mount Insel. 77°23' S, 161°32' E. Rising to 1200 m, it is the highest point in the NE part of the Insel Range, in Victoria Valley, in Victoria Land. Named by VUWAE 1958-59, in association with the Range. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

[1]**Insel Range** *see* **Nordwestliche Insel Mountains**

[2]**Insel Range**. 77°24' S, 161°20' E. Also called Island Range. A series of ice-free, flat-topped peaks resembling islands (in German, Insel means "island"), which rise above the surrounding terrain, and separate McKelvey Valley from Balham Valley, in the area of Victoria Valley, in Victoria Land. Mount Insel is the most salient feature in the NE part of this range. Named descriptively by VUWAE 1958-59. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Insomnia. Known in Antarctica as "the Big Eye." It affects many people wintering-over, as well as those in the summer season who cannot get used to the perpetual light. It can become a bad problem.

Inspections. According to Article VII of the Antarctic Treaty, signatory countries have the right to inspect the Antarctic premises (i.e., the bases, ships and other areas that should be inspected, such as sites of special scientific interest, historic sites, specially protected areas) of another nation, or even of their own nation, or nobody's nation. Advance notice must be given (presumably so that no *real* secrets are discovered). However, there is not really much enthusiasm for these inspections, not only for budgetary reasons, but also the inconvenience that might be placed on a team already inconvenienced by the extreme cold and the rigors of work. Some good does come out of the process, however. In 1971 it was found that dogs were running free at Mirnyy and Casey stations, and this was stopped. The early inspections made by the inspecting countries were all casual in comparison to those made by the USA, who conducted most of these inspections. The Soviet bases (when the Soviet Union still existed) were main targets for the U.S. inspectors, naturally. This is a fairly comprehensive chronological list of the inspections. Season; country (or countries) making the inspection; and the stations (or other areas) inspected: **Nov.-Dec. 1963**: NZ. McMurdo, Pole, Byrd. **Dec. 1963**: Australia-UK. 3 American bases, and Scott. **1963-64**: USA. This was the first inspection by the USA, and Scott Base was the first target, on Jan. 9, and Dumont d'Urville was next (from the air only), on Jan. 10. Vostok was next, on Jan. 11, followed by Mirnyy on Jan. 15. They also inspected Base B, Base F, Videla, and Cerda. **1965-66**: Argentina. U.S. bases. **1966-67**: USA. Órcadas, Wilkes, Mawson, Showa, Sanae, Signy, Molodezhnaya. **1970-71**: USA. Casey, Mawson, Dumont d'Urville, Mirnyy. **1974-75**: USA. Frei, Brown, Base F, Bellingshausen. **1976-77**: USA. Marambio, Frei, Scott, Bellingshausen, Druzhnaya IV. **1976-77**: Argentina. U.S. bases. **1979-80**: USA. Esperanza, Brown, O'Higgins, Arctowski, Rothera, Bellingshausen. **1982-83**: USA. Marambio, Belgrano, Casey, Davis, Dumont d'Urville, Neumayer, Showa, Sanae, Halley, Mirnyy, Novolazarevskaya, Molodezhnaya, Leningraskaya. **1984-85**: USA. Jubany, Marsh, Frei, Great Wall, Arctowski, Faraday, Bellingshausen. **1985-86**: Australia. Dumont d'Urville, various Russians stations. **1986-87**: USA. Mirnyy. **1986-87**: Chile. Brown, Decepción, Ferraz, Great Wall, Arctowski, Faraday, Bellingshausen, Artigas. **1987-88**: USSR. Various stations. **1988-89**: USA. Dumont d'Urville, Gondwana, Baia Terra Nova, Scott, Cape Bird, Leningradskaya. **1988-89**: USSR. Everyone's stations. **1988-89**: NZ. Faraday, Rothera, Signy. **1988-89**: UK-NZ. San Martín, Órcadas, Ferraz, Carvajal, Marsh, Great Wall, Arctowski, King Sejong, Artigas, Palmer, Bellingshausen. **1988-89**: France-Germany. Everyone's stations. **1989-90**: Norway. Neumayer, Sanae, Halley. **1989-90**: Brazil. Stations belonging to China, Argentina, Korea, and Uruguay. **1989-90**: Chile. Decepción, Jubany, Ferraz, Great Wall, Arctowski, Juan Carlos I, Artigas, Bellingshausen. **1989-90**: China. Several countries' stations. **1990-91**: Australia. Zhongshan, Vicente, various huts in the South Shetlands belonging to the USA, Netherlands, and Poland. **1992-93**: Italy-Korea-UK. San Martín, Esperanza, Decepción, Ferraz, Arturo Prat, King Sejong, Juan Carlos I, Arctowski, Gabriel de Castilla, Faraday, Rothera, Base E, Base B, Fossil Bluff, Palmer, and several ships. **1993-94**: Sweden. Aboa, Neumayer, Georg Forster, Maitri, Novolazarevskaya, Sanae III and IV, Sarie Marais, Halley. **1994-95**: USA. Órcadas, Davis, Zhongshan, Neumayer, Dumont d'Urville, Showa, Mirnyy, Signy. **1994-95**: Argentina. King Sejong, Rothera, Signy. **1996-97**: Norway. Novolazarevskaya, Neumayer, Sanae IV, Maitri. **1998-99**: Belgium-France. The Australian stations, and the vessel *Aurora Australis*. **1998-99**: UK-Germany. Esperanza, Jubany, St. Kliment Ohridski, Frei, Es-

cudero, O'Higgins, Great Wall, Arctowski, Bellingshausen, Gabriel de Castilla, Juan Carlos I, Rothera, Palmer, Artigas, Elichiribehety. **2000-01**: Norway. Maitri, Novolazarevskaya, Sanae IV, Troll, and the site of the former Georg Forster. **2000-01**: USA. Jubany, Ferraz, St. Kliment Ohridski, Frei, Escudero, Great Wall, King Sejong, Arctowski, Bellingshausen, Juan Carlos I, Vernadsky, Artigas. **2003-04**: Finland. Troll, Sanae IV, Wasa, Neumayer, Aboa. **2004-05**: Australia. McMurdo, Scott, various historic sites and specially protected areas. **2004-05**: Peru-UK-Australia: 6 Argentine stations, Ferraz, St. Kliment Ohridski, 5 Chilean stations, the Czech station on James Ross Island, Vicente, Great Wall, King Sejong, Bellingshausen, the two Spanish stations, Vernadsky, Elichiribehety, Rothera, Eco-Nelson. **2005-06**: NZ-UK-USA: the dry valleys and various areas around McMurdo. **2006-07**: USA. Rothera, O'Higgins, Esperanza, Bellingshausen, Great Wall, Palmer (their own station), a tourist field camp on Petermann Island, and three tourist vessels. **2006-07**: Sweden-France-NZ. South Pole, Concordia. There were also whaling inspectors (*see* **Whaling**).

Inspiration Rocks. 73°26' S, 94°05' W. A group of rock outcrops at the N edge of Cache Heights, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains party here in 1960-61, and so named by them because, from here, you can see practically all of the Jones Mountains. US-ACAN accepted the name in 1963.

[1]**Instefjorden**. 70°04' S, 38°40' E. The innermost fjord branch of Havsbotn, at the head of Lützow-Holm Bay, between the Prince Harald Coast and the Prince Olav Coast, in Queen Maud Land. Name means "the innermost fjord" in Norwegian.

[2]**Instefjorden** *see* **Shirase Glacier**

Instekleppane *see* **Instekleppane Hills**

Instekleppane Hills. 70°02' S, 38°53' E. A group of low rock hills that protrude above the ice slopes on the E side of Shirase Glacier, close S of the SE extremity of Lützow-Holm Bay, between the Prince Harald Coast and the Prince Olav Coast, in Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Instekleppane (i.e., "the innermost lumps"). US-ACAN accepted the name Instekleppane Hills in 1966.

Insteodden *see* **Insteodden Point**

Insteodden Point. 69°58' S, 38°46' E. A rock point along the E side of Havsbotn, at the extreme SE corner of Lützow-Holm Bay, indeed, the innermost point in Havsbotn (hence its name in Norwegian — Insteodden — meaning "the innermost point"), between the Prince Olav Coast and the Prince Harald Coast, in Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Insteodden. US-ACAN accepted the name Insteodden Point in 1968.

Institut Geologii Arktiki Rocks. 70°56' S, 11°30' E. A group of scattered rock outcrops, extending in an E-W direction for 30 km, 11 km S of the Schirmacher Hills, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61. Named by the USSR in 1963, as Skaly Instituta Geologii Arktiki, for their Institute of Arctic Geology. US-ACAN accepted the name Institut Geologii Arktiki Rocks in 1970.

Skaly Instituta Geologii Arktiki *see* **Institut Geologii Arktiki Rocks**

Institute Ice Stream. 82°00' S, 75°00' W. Drains N from Ellsworth Land into the Ronne Ice Shelf, SE of Hercules Inlet. It was traversed by the Ellsworth-Byrd seismic party of 1958-59, and also by the USARP University of Wisconsin seismic party of 1963-64. It was delineated from radio echo-sounding data conducted by a joint team from the National Science Foundation (NSF), the Scott Polar Research Institute (SPRI), and the Technical University of Denmark (TUD), between 1967 and 1979, and named by UK-APC on April 3, 1984, for SPRI. *See also* **Foundation Ice Stream**.

Monte Instituto Antártico Argentino. 83°04' S, 46°30' W. A mountain in the Forrestal Range, in the Pensacola Mountains. Named by the Argentines, for their Antarctic Institute.

The *Instituto de Pesca No. I*. A 152.79-ton, 45.62-meter North Sea iron trawler, built in 1905 by A. Holly & Co., of Abderdeen, Scotland, as the *Princess Royal*. In 1909 she was sold to a Uruguayan fishing company, and, in 1912, sold again, being renamed the *Diez*. In 1914 she was acquired by the Instituto de Pesca (Fishing Institute), who renamed her *Instituto de Pesca No. I*, based out of Montevideo. She was loaned to Shackleton by the Uruguayan government in June 1916, so that he could make his 2nd (unsuccessful, as it turned out) attempt to rescue his men trapped on Elephant Island during BITE 1914-17. Captain Ruperto Elichiribehety in command. Also aboard were the following alféreces de navío (ensigns): Arnold Pedro Camps Molina (see under Camps), Ramón Folch Bonafont (chief engineer), Juan José Sanmartín, and Hector Castells Carafí (see under Castells), as well as Lt. George Ryan, seconded from the British Navy as navigator and UK representative. 26 crew in all. In 1953 the vessel was bought for 500 pesos by Sr. Hércules Héctor Gualla Araoz, and eventually scrapped. *See also* **Ryan, George**.

Instøy *see* **Nickols Island**

Intention Nunataks. 72°56' S, 163°46' E. A group of peaked nunataks between Solo Nunatak and the Forgotten Hills, at the SW edge of Evans Névé, and on the N side of Half Ration Névé, at the head of Aviator Glacier, in Victoria Land. It was intended to put a survey station here, but it never happened, because of weather and other reasons. Named by the Northern Party of NZGSAE 1963. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Île Intercurrence *see* **Intercurrence Island**

Isla Intercurrence *see* **Intercurrence Island**

Intercurrence Island. 63°55' S, 61°24' W. An island, 7 km long, it is the largest of the Christiania Islands, 13 km ENE of Liège Island, at the NE end of the Palmer Archipelago. The origin of this name is unknown, but it was named sometime in the 19th century, and probably for its position between Trinity Island and Liège Island. Roughly charted by Hoseason in 1824, it is on Powell's chart of 1828, and a British chart of 1839. De Gerlache, during BelgAE 1897-99, charted it as one of the Christiania Islands. However, on certain maps of SwedAE 1901-04, it appears as Isla Cristiania, or at least the S part of the island does, and this is because Nordenskjöld and all successive explorers in this region, thought that it was two islands, Intercurrence being the N one, and the S one being named by the Swedes as Cristiania Island, in association with the group. Charcot charted it during FrAE 1903-05, referring to it as Île Intercurrence, and informing the reader that the existence of the island had been in doubt until he proved it. Capt. Johannessen's map of 1920 gives Kristiania Island as an alternative to Intercurrence Island. Bagshawe's rough chart of 1921-22 (during the British Imperial Antarctic Expedition) refers to the SW part of Intercurrence Island as Christiania Island (he also thought it was a separate island). The Discovery Investigations survey of 1930-31 cleared up the confusion. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It is in the 1955 British gazetteer. It has appeared over the years translated into several languages, and often misspelled. The Chilean gazetteer of 1974 accepts Isla Intercurrence. It appears on a 1953 Argentine chart as Isla Intersección (a rough translation), and that was the name accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956.

Morena Interesnaja. 66°28' S, 100°32' E. A somewhat isolated moraine, almost due S of Apfel Glacier, in the Bunger Hills. Named by the Russians.

Puerto Interior *see* **Inner Harbor**

International Antarctic Glaciology Program. Known as IAGP. A co-operative venture by Australia, France, USSR, the UK, and the USA, conceived in 1968 and launched in 1969. They studied a large part of the East Antarctic ice sheet, between 60°E and 160°E, and between the coast and 80°S. Field work began in 1971 and continued for decades.

International Association of Antarctic Tour Operators. Known as IAATO. Founded in 1991.

International Biomedical Expedition to the Antarctic. 1980-81. Known as IBEA. Des Lugg (*see* **Lugg Island**) led a 5-nation, 12-man team on a 10-week journey of 800 km on the Polar Plateau, from Dumont d'Urville Station, to study human biology and medicine. It was the first expedition wholly devoted to the study of human responses to the Antarctic environment. The book *Man in the Antarctic: The Scientific Work of the International Biomedical Expedition*

to the Antarctic (IBEA) is the book to read on this subject.

International cooperation. Being the most hostile environment on Earth, Antarctica has inspired persons of all nations to help one another out, rather than drain their energies fighting, when much of the time it is all they can do to stay alive. Some of the sealers used to scrap a bit in the South Shetlands, but it was comparatively rare and nothing serious. When an expedition from one nation met one from another nation, relations were almost always friendly. Even when Dumont d'Urville met Ringgold off the coast of East Antarctica, during FrAE 1837-40 and USEE 1838-42, the lack of pleasantries was due to a misinterpretation of signals on both sides, rather than a deliberate snub, and to the fact that both sides behaved like absolute idiots. Scott and von Drygalski worked together scientifically in 1901-03; the Argentines rescued the Swede Nordenskjöld in 1903, helped Bruce in 1904, and went looking for Charcot's lost French expedition in 1905; Chile rescued part of Shackleton's British expedition of 1914-17; in 1929-31 BANZARE met the Norwegians and worked out an exploration agreement so that they would not be in each other's way; in 1947-48 RARE teamed up with FIDS. And so on. There are many cases of expeditions helping out others, icebreakers from one country freeing another country's ship from the pack-ice (often at risk to their own safety). But at no time was international cooperation better exemplified than during the International Geophysical Year (IGY), and its successor institution (so to speak), the Antarctic Treaty. During IGY, observers were invited from different countries to work at the bases of others (*see* **Exchange scientists**), and the scientific and military harmony evident in Antarctica over that long IGY "year" produced enormous results, not only for science, but also for the idea that a cold peace may have some influence on the cold war going on back home. Indeed, the Antarctic Treaty was inspired by this. Territorial claims made by certain countries have been put on hold (not disallowed), and everyone realizes that cooperation is best if Antarctica is to be preserved. The case of Leonid Kuperov (q.v.) is interesting as a single case of international cooperation. In Nov. 1967 Dr. John Brotherhood, BAS medical officer at Halley Bay Station, seriously injured his spine after a fall. By Dec. 2, two American Hercs (i.e., Hercules aircraft) were on their way from McMurdo to take him to NZ. In 1971, at Fossil Bluff Station, when BAS base leader Dick Walker broke his thigh, the Argentines came to his help with a plane and Dr. Busso. 3 days later they flew to Base T, then on to Buenos Aires. Another is the case of 26-year-old South African Louis Roode. At 2.45 P.M., on Nov. 3, 1987, a Herc, piloted by Lt. Cdr. Bradley Lanzer, USN, took off from McMurdo Station, and after 6 hours and 45 minutes landed at Sanae Station on the other side of the continent to pick up Roode, who had a kidney problem. Lanzer then flew Roode back to McMurdo via the South Pole, arriving at Williams Field (McMurdo's airport) at 7.34 A.M., on Nov. 4, 1987. Lanzer had traveled a total distance of 4291 miles, in 17 hours flight time, the longest non-stop flight (including landing and almost immediate takeoff at Sanae) ever started and completed in Antarctica. Roode was then flown to NZ. Another case was in Oct.-Nov. 1985, when the U.S. ship *Polar Duke* went to Chile and brought back 17 tons of snow-removal equipment and 41,000 gallons of fuel for the Chileans at Teniente Rodolfo Marsh Station, who could not begin their summer program because of a snowed-in runway and failure of equipment. In March 2006 a Uruguayan fisherman in Antarctic waters was hit on the head, and began suffering convulsions. New Zealand arranged for a Polish vessel (chartered by the Australian company Aurora Expeditions) to meet the fishing vessel, and one of the helicopters flew the man to a NZ camp at Cape Hallett. An Italian-owned Twin Otter flew in from Baia Terra Nova Station and flew the man to the American McMurdo Station, and from there he was evacuated to NZ. Antarctica abounds with such stories.

International Council of Scientific Unions. Founded in 1931, its mission being evident in its name. It met in Amsterdam in Oct. 1952, and established a committee to organize IGY (1957-58). In 1998 it changed its name to International Council for Science, although the old acronym ICSU was kept on.

International Geographical Congress. There were several such congresses over the years, all held by the International Geographical Union. The first was in Antwerp, in 1871. In 1922 the organization was permanently established in Brussels. Senior officer at the time of IGY (1957-59) was Hans Ahlmann, and in the 1980s Peter Scott held this honor.

International Geophysical Year. Better known as IGY. It was a long "year," and ran from July 1, 1957 to Dec. 31, 1958. The first, and to date, biggest international scientific onslaught on Antarctica, in which 67 countries participated in ambitious scientific programs on the continent. 12 major countries built a network of scientific stations — USA, UK, USSR, Argentina, Australia, Belgium, Chile, France, Japan, NZ, Norway, South Africa — studying oceanography, meteorology, glaciology, the sun, geomagnetism, seismology, the ionosphere, cosmic rays, aurora, airglow, rocketry, gravity measurements, and some biology, zoology, and geology. The stations were built before the event began, and scientists for the first time were able to concentrate on their studies without having to worry too much about staying alive. Their navies backed them up. IGY had its origins in the First International Polar Year, of 1882-83 (*see* **International Polar Years**), even though the context of that event so long before was almost wholly Arctic, as was the Second Polar year, in 1932-33. The International Polar Commission held their meetings every 50 years, and in 1949 Lloyd Berkner proposed a Third International Polar Year. On April 5, 1950, James Van Allen, the American physicist, held a small dinner party at his home in Silver Spring, Md., and proposed more frequent programs — every 25 years — to take advantage of technological development, the interest in the Poles, and, in addition, the maximum sunspot activity that was expected to take place in 1957-58. Actually, Berkner said to Oxford geophysicist Sydney Chapman, who was also present, "Well, Sydney, don't you think it's about time for another Polar Year?" "Good idea, Lloyd," replied Chapman (one of the few men privileged to be able to call Mr. Berkner by his first name). At first it was called the Third Polar Year, but in 1952 Chapman proposed a new name — International Geophysical year (IGY, for short). The idea grew, and the International Council of Scientific Unions (ICSU) adopted a formalized version. ICSU appointed a committee that became known as CSAGI (Comité Spéciale de l'Année Internationale), which co-ordinated planning for IGY. Chapman was president, Mr. Berkner vice-president, and Marcel Nicolet secretary. The French called the event L'année géophysique internationale (AGI). Plans widened to study the whole Earth, simultaneous studies all over the world were scheduled to take place, and satellites were to be launched by the USA and USSR for the exploration of space. World data centers were established to collect all the information and make it freely available to all scientists. Brussels became IGY headquarters in 1952, and in March 1953 the U.S. National Committee of IGY was established, with a staff of 48, chaired by aurora scientist Joseph Kaplan, professor of physics at UCLA. Alan Shapley, the vice-chairman, was a National Bureau of Standards man, and radio expert Hugh Odishaw became executive director. On May 1, 1953 the committee agreed to one U.S. station in Antarctica, and 3 satellite stations. By June 1953, 22 nations were taking part. The next big ICSU meeting came in Rome in 1954, featuring outer space and Antarctica as the main topics. By then 36 nations were involved. In the fall of 1954 the U.S. Committee appointed a U.S. Antarctic sub-committee, with Larry Gould as chairman, and Henry Wexler (director of met services at the U.S. Weather Bureau) as vice-chairman. Hugh Odishaw was also on this sub-committee, as was John Hanessian, who headed the IGY Regional Programs [Antarctic] Office. Byrd was in on it too, and Balchen, and Siple (representing the Army), and Richard B. Black, and Lincoln Washburn of the Army's Corps of Engineers, who headed SIPRE (Snow, Ice, and Permafrost Research Establishment). Grant Hillier of the State Department was there too, as well as others. Finn Ronne was a consultant. By 1955 Admiral George Dufek was also a member, and that year the Russians proposed setting up a station "near" the South Pole, a statement that did not go unnoticed by the Americans. In April 1955 Wexler became chief scientist for U.S. IGY in Antarctica, with Albert Crary as deputy. In July 1955 the first Antarctic Conference was held, in Paris, to plan the expeditions, and shortly thereafter, the Advance Parties went south. The USA's part in IGY really began in 1954-55, when the *Atka* cruised around

Antarctica's coastline looking for suitable base sites. On Dec. 17, 1955 the U.S. Navy arrived at McMurdo Sound in the form of Task Force 43, under the command of Admiral Dufek. Operation Deep Freeze had begun. Bert Crary was the senior U.S. scientist who co-ordinated all scientific activities for his country, while Admiral Byrd was the planner-in-chief, and titular overall head of the U.S. effort. Coastal bases were established first in the summer of 1955-56, and the U.S. started the first regular aircraft flights in from other countries. The next summer great tractor traverses were run over the continent (by other countries as well), setting up inland bases, and massive airdrop (and phenomenal work by the Seabees) created the South Pole Station. IGY was inaugurated by ICSU (to which the USA belongs, with its National Academy of Sciences) at one minute past midnight on July 1, 1957 (it had originally been going to run from Aug. 1957 to Aug. 1958), and was presided over by Professor Chapman. 66 nations were involved. Perhaps the highlight of the "season" was Fuchs leading the British Commonwealth Transantarctic Expedition 1957-58, the first party ever to cross the continent by land, even though BCTAE was not officially part of the IGY effort. Originally 69 scientists had gone down at the beginning of IGY, a number which grew dramatically over the course of the "year," and when IGY closed officially at midnight on Dec. 31, 1958, more than 10 tons of scientific data were brought out of Antarctica. One development of IGY was the Antarctic Treaty. However, it wasn't quite the end of IGY. The Russians having decided to stay on (thus alarming the Americans, who, all the time anyway, had suspected that the Russians were going to stay on) propelled the Americans to stay on too (the Americans had always intended to stay on; it was one of those Cold War games), the year 1959 was called (by some) International Geophysical Cooperation.

International Mount Erebus Seismic Study. IMESS. An international cooperation between the USA, Japan, and NZ. Begun in 1980-81, and ended in 1986. It was set up by Phil Kyle, in conjunction with Jurgen Kienle, Katsutada Kaminuma (*see* **Kaminuma Bluff**), Ray Dibble, and the Antarctic Division of NZ's DSIR.

International Polar Commission. In 1879, 11 participating countries met in Hamburg, and agreed to hold an International Polar Year in 1882-83. It was decided to hold one every 50 years, the second one being scheduled for 1932-33. IGY replaced the commission. *See* **International Polar Years**, below.

International Polar Years. Conceived by Lt. Karl Weyprecht, an Austrian naval man and Arctic explorer (who died in 1881 before it became a reality), and formally proposed by Georg von Neumayer, the International Polar Commission organized the first IPY that lasted from Aug. 1, 1882 to Aug. 31, 1883. 12 countries took part — UK, USA, France, Germany, Netherlands, Austria-Hungary, Sweden, Russia, Norway, Finland, Canada, and Denmark — with von Neumayer presiding. It was devoted almost wholly to Arctic research. Although 4 geomagnetic and meteorological stations were planned for the southern regions, only the German station at Royal Bay, in South Georgia (54°S) materialized. In 1927 Admiral Dominik of the Deutsche Seewarte proposed holding a 50th Jubilee of the first IPY, and they did, between Aug. 1932 and Aug. 1933. Antarctica was left out totally from this second IPY (the Depression was raging and going that far south was too expensive), in which 44 nations took part. In the Arctic, balloons went up to a height of 33,000 feet. The major result of these International Polar Years was the International Geophysical Year (IGY). The third IPY (or 4th, depending on if you count IGY as an IPY) began on March 1, 2007, and was continuing into 2009 (as this was written), sponsored by the International Council for Science. However, the age of IPYs was long gone, and the event failed to ignite the world, a world that had other, more pressing things to think about.

International Square. Where the foreign flags fly at McMurdo Station. It was constructed early in the 1972-73 season. It was later rebuilt.

International Symposium on Antarctic Geology. Later called ISAES (International Symposium on Antarctic Earth Sciences). Held under the auspices of SCAR. The first took place in Cape Town, in 1963. Successive ones were: Oslo, 1970; Madison, Wisc., 1977; Adelaide, 1982; Cambridge, England, 1987; Tokyo, 1991; Siena, Italy, 1995; Wellington, 1999; Potsdam, Germany, 2003; Santa Barbara, Calif., 2007.

International Symposium on Antarctic Glaciology. A series of meetings, sponsored by SCAR, and inevitably acronymed as ISAG. The first was held at Obergurgl, in Austria, Sept. 18-22, 1962. The second was held at Dartmouth College (NH), Sept. 3-7, 1968. The third symposium (ISAG3) took place at the Institute of Polar Studies, Ohio State University, in Sept. 1981, the first such meeting in 13 years. The fourth was held at Bremerhaven, in Sept. 1987. The fifth was at Cambridge, in Sept. 1993. The sixth was in Lanzhou, China, in Sept. 1998. The seventh (ISAG7) took place in Aug. 2003, in Milan.

International Transantarctic Expedition. 1988-90. This was American Will Steger's 6-man expedition, with 36 huskies, the first to cross Antarctica by ski, foot, and dog sledge only. Also on the expedition were: Geoff Summers (q.v.), from Britain; Jean-Louis Étienne; Qin Dahe (Chinese glaciologist; *see* **Dahe Glacier**), Keizo Funatsu (Japanese dog man, so to speak); and Victor Boyarsky (Russian scientist). They covered 3741 miles in 222 days, from the northern tip of the Antarctic Peninsula to Mirnyy Station, the longest ever trans-antarctic land traverse of any kind, completing the trek in March 1990. The vessel they used to get there was the *U.A.P.*

International Weddell Sea Oceanographic Expeditions. A series of scientific expeditions more commonly known by the initials IWSOE. The first one was Jan. 20-March 15, 1968. Its mission — to investigate the vast mass of the Weddell Sea, generally below ice, which had had extremely limited study up until that time. The *Glacier*, under Capt. O.L. Dawson, and the *General San Martín*, under Capt. Alfredo Bernardo Astiz, were the U.S. and Argentine icebreakers involved. They placed 4 Norwegian instrumented buoys on the continental slope of the Weddell Sea to measure, for 12 months, the temperatures and currents of the bottom water. Also, 70 oceanographic stations were placed on the ice all over the Weddell Sea in order to study the biological and physical characteristics of the sea. IWSOE 1969 was Part II of the experiment, a follow-up to the preceding year's effort. It went to pick up the results, and retrieve the 4 buoys submerged in the Weddell Sea, and surveyed and studied more of the Weddell Sea. The third phase of IWSOE began in 1977, and was designed to do what could not be done on the second. Overall the IWSOE gave a better understanding of Antarctic bottom water.

International Whaling Commission expeditions. This was a series of voyages undertaken by the IWC every summer in Antarctic waters, beginning in the season 1978-79, as part of the International Decade of Cetacean Research Program. Their primary objective was assessing Minke whales. This program was also known as SOWER (Southern Ocean Whale and Ecosystem Research). **1978-79**: Cruise leader was South African Peter B. Best, on the former whale catchers *Toshi Maru 16* and *Toshi Maru 18*, both provided by the Japanese. Mr. Best traveled on the *16* as senior scientist aboard, along with Australian Durant Hembree and Japanese Kazuo Yamamura, while on the *18* were Americans J.K. O'Leary and L. Tsunoda (senior scientist aboard), and Japanese Hidehiro Kato. They operated in what was called Area IV (70°E to 130°E). **1979-80**: Cruise leader was British scientist Joseph W. Horwood, on the *Kyo Maru 27* and the *Toshi Maru II*, both whale-scouting vessels provided by the Japanese Fisheries Agency. On the *Kyo* were Mr. Horwood (senior scientist), Mr. Tsunoda, and Mr. Kato. On the *Toshi* were Mr. Hembree (senior scientist), Japanese Fujio Kasamatsu, and South African M. Meyer. They worked in Area III (0°to 70°E). **1980-81**: Cruise leader was Mr. Best, on the *Toshi Maru II*, the *Kyo Maru 27*, and the *Vdumchivyy 34*, three whale-scouting vessels provided by the Japanese and the Russians. Traveling on the *Kyo* were Mr. Best (senior scientist), American Gerald G. Joyce, and Mr. Kasamatsu. On the *Toshi* were Mr. Tsunoda (senior scientist), New Zealand marine biologist Paul Ensor, and Japanese Nobuyuki Miyazaki. On the Russian catcher were Mr. Hembree (senior scientist), American Richard A. Rowlett, Russian A. Rovnin, and Mr. Kato. They worked in Area V (130°E to 170°W), and visited waters near the Balleny Islands, and also in waters south of NZ. **1981-82**: Cruise leader was Mr. Hembree, on the *Shonan Maru*, the *Shonan Maru 2*, and the *Vdumchivyy 34*, three whale-scouting vessels provided by the Japanese and the Russians. Traveling on the *Shonan Maru* were Mr. Hembree (senior scientist), American C. Potter, and Mr. Kasamatsu.

On the *Shonan Maru 2* were Mr. Joyce (senior scientist), Mr. Meyer, Japanese S. Nagata, and British scientist T. Waters. On the Russian catcher were Mr. Rowlett (senior scientist), Brazilians M. Baylon and P. Lourega, and Russians A. Karpenko and A. Sazhinov. They worked in Area II (60°W to 0°). **1982-83**: Cruise leader was Mr. Hembree, on the *Shonan Maru*, the *Shonan Maru 2*, and the *Vdumchivyy 34*. Messrs Hembree, Joyce, and Rowlett were the senior scientists on the three respective ships. They operated in Area I (60°W to 120°W). **1983-84**: Cruise leader was Mr. Joyce, on the *Shonan Maru*, the *Shonan Maru 2*, the *Kyo Maru 27*, and the *Vdumchivyy 34*. The senior scientists respectively were Mr. Ensor, Mr. Joyce, Mr. Kasamatsu, and Mr. Rowlett. They worked in Area VI (120°W to 170°W). **1984-85**: Cruise leader was Mr. Joyce, on the *Shonan Maru*, the *Shonan Maru 2*, the *Kyo Maru 27*, and the *Vdumchivyy 34*. Senior scientists were, respectively, Mr. Hembree, Mr. Joyce, Mr. Kasamatsu, and Mr. Rowlett. They returned to part of Area IV (70°E to 130°E). **1985-86**: Cruise leader was Mr. Joyce, on the *Shonan Maru*, the *Shonan Maru 2*, the *Kyo Maru 27*, and the *Vdumchivyy 34*. The senior scientists were, respectively, Mr. Joyce, Mr. Kasamatsu, Argentine Jorge F. Mermoz, and Mr. Rowlett. They returned to part of Area V (130°E to 170°W). **1986-87**: Cruise leader was Mr. Joyce, on the *Shonan Maru*, the *Shonan Maru 2*, the *Kyo Maru 27*, and the *Vdumchivyy 34*. Senior scientists were, respectively, Mr. Joyce, Mr. Rowlett, Mr. Kasamatsu, and Mr. Hembree. They returned to part of Area II (0°to 60°W). **1987-88**: Cruise leader was Mr. Joyce, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Joyce and Mr. Kasamatsu. They returned to part of Area III (0°to 70°E). **1988-89**: Cruise leader was Mr. Kasamatsu, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Kasamatsu and Mr. Ensor. They returned to part of Area III (0°to 70°E). **1989-90**: Cruise leader was Mr. Joyce, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Joyce and Mr. Ensor. They returned to part of Area I (60°W to 120°W). **1990-91**: Cruise leader was Mr. Joyce, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Joyce and Mr. Ensor. They returned to part of Area VI (170°W to 120°W). **1991-92**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and Mr. Rowlett. They returned to part of Area V (130°E to 170°W). **1992-93**: Cruise leader was Mr. Rowlett, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Japanese Shigetoshi Nisiwaki and Mr. Rowlett. They returned to parts of Area III (0°to 40°E). **1993-94**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and Japanese Hiroyuki Shimada. They returned to Area I (120°W to 60°W). **1994-95**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and Mr. Shimada. They returned to parts of Areas III and IV (40°E to 80°E). **1995-96**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and New Zealander Martin Cawthorn. They returned to part of Area VI (170°W to 140°W). This year they also began an assessment of blue whales. The two assessments would continue in the ensuing seasons. **1996-97**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and South African Ken Findlay. They returned to part of Area II (0°to 30°W). **1997-98**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and Luis Pastené. They returned to part of Area II (25°W to 60°W). **1998-99**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and Japanese Keiko Sekiguchi. They returned to part of Area IV (80°E to 130°E). **1999-2000**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and Mr. Findlay. They returned to parts of Areas I and II (80°W to 55°W). **2000-01**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Senior scientists were, respectively, Mr. Ensor and Japanese Koji Matsuoka. They returned to parts of Areas V, VI, and I (175°W to 110°W). **2001-02**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. Mr. Ensor was senior scientist on the *Shonan Maru*, and Mr. Matsuoka on the *Shonan Maru 2*. They returned to parts of Areas V and VI (130°E to 150°E and 170°W to 155°W). **2002-03**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. They returned to part of Area V (150°E to 170°W). **2003-04**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. They returned to parts of Areas V and VI (170°E to 170°W), and also to the Ross Sea. **2004-05**: Scientific leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. **2005-06**: Scientific leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. 0°to 70°E. **2006-07**: Scientific leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. **2007-08**: Scientific leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*. **2008-09**: Cruise leader was Mr. Ensor, on the *Shonan Maru* and the *Shonan Maru 2*.

Isla Intersección *see* **Intercurrence Island**

Intrusion Point. 64°52' S, 62°56' W. The NE tip of Bryde Island, on the W side of Paradise Harbor, it has well-exposed intrusive contact of a granitoid with basaltic lavas. Named by the Poles on Sept. 1, 1999.

Intrusive Spur. 73°30' S, 94°25' W. A rock spur along the N front of the Jones Mountains, 1.5 km W of Avalanche Ridge. Mapped by the University of Minnesota Jones Mountains Party here in 1960-61, and so named by them because the intrusive complex of the basement rocks of the Jones Mountains is well exposed on this spur. US-ACAN accepted the name in 1963.

Intuition Peak. 62°39' S, 60°02' W. A sharp peak, rising to 780 m, on Levski Ridge, 1.4 km NNW of Helmet Peak, and 5.4 km SE of Atanasoff Nunatak, in the Tangra Mountains, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the rather mysterious factor of scientific intuition, which has played such a vital role in science.

Inui-yama. 71°58' S, 27°13' E. A small peak, rising to 1308.2 m above sea level, at the NW extremity of Gropeheia, on Balchen Mountain, in the Sør Rondane Mountains. Photographed aerially by JARE 1981-82 and 1987, and surveyed from the ground by JARE 1987-88. Named by the Japanese on Oct. 23, 1989 (the name means "northwest mountain"). Apparently "inui" means "dog," and it seems that the dog, in Japanese, represents the number 10 or 11 on the face of a clock, hence NW. The Norwegians call it Inuitoppen.

Inuitoppen *see* **Inui-yama**

Bahía Inútil *see* **Curtiss Bay**

Islotes Inútil. 64°53' S, 62°55' W. Four little rocky islands, surrounded by rocks, between Punta Gutiérrez and Punta Soffia, off the E coast of Bryde Island, in Paradise Harbor, on the Danco Coast of Graham Land. The name appears for the first time on a 1951 Chilean chart, having been surveyed and named by personnel on the *Angamos* or the *Lautaro* during ChilAE 1950-51, and has been in use ever since. The name means "useless islands," but in this case the adjective "useless" does not refer to the islands (if it did, it would read "Islotes Inútiles"). There is some hidden meaning behind this, and it probably has something to do with someone or something on the *Lautaro* or the *Angamos*.

Punta Invencible. 64°54' S, 63°02' W. A point forming the W side of Mascías Cove (i.e., what the British call Sturm Cove), which indents the Danco Coast, on the W coast of Graham Land, immediately E of Mount Banck. Named by the Argentines. Name means "invincible."

Inverkeith Hill *see* **Mount Inverleith**

Inverleith *see* **Inverleith Harbor**

Bahía Inverleith *see* **Inverleith Harbor**

Mount Inverleith. 64°55' S, 62°45' W. Rising to 1495 m, near the edge of the plateau escarpment 3 km ENE of the head of Skontorp Cove, SE of Leith Cove, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. First roughly mapped by David Ferguson in 1913-14, and named by him as Inverleith Hill, in association with the cove. It appears as such on his 1921 chart. It appears, erroneously, as Inverkeith Hill, on a 1943 U.S. Hydrographic Office chart. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Mount Inverleith on Sept. 23, 1960, and it appears as such on a 1961 British chart. US-ACAN accepted the name in 1965.

Puerto Inverleith *see* **Inverleith Harbor**

Inverleith Harbor. 64°32' S, 63°00' W. A

small bay on the S side of Discovery Sound, between Andrews Point and Briggs Peninsula, along the NE coast of Anvers Island, in the Palmer Archipelago. It was used by whalers from about 1912 on, and named by them as Inverleith, or as Leith Harbour, for the town of Leith, near Edinburgh, the home port of Salevesen's, the great whaling operators. David Ferguson has it as Leith Harbour on his 1918 map. It appears on a British chart of 1929 as "Leith (Inverleith) Harbour," on a 1943 U.S. Hydrographic Office chart as "Leith Harbor (Inverleith Harbor)," and on a 1946 USHO chart as "Leith (Inverleith) Harbor." It appears on 2 separate Chilean charts of 1947, once as Bahía Leith, and once as Puerto Leith. In 1953, US-ACAN accepted the name Inverleith Harbor (they rejected Leith Harbor, because of the feature of that name in South Georgia), and it appears as such in the 1956 American gazetteer. On an Argentine chart of 1953 it appears as Puerto Goldriz. It appears on a 1954 British chart as "Inverleith (Leith) Harbour," and on Sept. 20, 1955, UK-APC also accepted the name Inverleith Harbour. It appears as such on British charts of 1956 and 1958. It was photographed aerially by FIDASE in 1956-57. On an Argentine chart of 1957, it appears as Puerto General Arenales, named for General Antonio Alvárez de Arenales (1770-1831), a Spanish soldier who served with Argentine patriots in Peru, and who was governor of the province of Salta, where he organized guerrilla groups in the war of independence. It appears as such in the 1970 Argentine gazetteer. It appears on a Chilean chart of 1962, as Bahía Inverleith, and that was the name accepted by the 1974 Chilean gazetteer (after they had rejected Puerto Inverleith). It appears erroneously on a 1962 U.S. Hydrographic Office chart, as Inverlieth Harbor.

Inverleith Hill *see* **Mount Inverleith**

Inverlieth Harbor *see* **Inverleith Harbor**

Invertebrates. Animals without a backbone. More than 90 percent of all living animals do not have a vertebral column. They range in size from minute protozoans to giant squids. There are many in Antarctica (*see* **Fauna**).

Isla Invierno *see* **Winter Island**

Inviksletta *see* **Seaton Glacier**

Io Peak. 70°47' S, 68°29' W. Rising to about 1000 m above sea level, W of Erratic Valley, at Ablation Valley, on Alexander Island. In association with Jupiter Glacier, it was named by UK-APC on Jan. 18, 2002, for one of the great moons of the planet Jupiter.

Bukhta Ion *see* **Huon Bay**

Ioannes Paulus II Peninsula. 62°32' S, 60°46' W. An ice-covered peninsula, 8.5 km wide, and 12.8 km long in a S-N direction, on the N side of Livingston Island, bounded by Hero Bay to the E and Barclay Bay to the W, in the South Shetlands. Its N extremity is formed by the ice-free Cape Shirreff. Named by the Bulgarians on April 11, 2005, for Pope John Paul II (1920-2005).

Mons Ioannis Pauli II. 80°20' S, 81°32' W. An ice-covered mountain ("mons" = "mountain" in Latin, fitting for a pope), with some lavic outcrops, rising 250 m above Horseshoe Glacier, about 1 km WNW of the main summit of the Patriot Hills, in Ellsworth Land. Named by the Italians on May 14, 2003, to commemorate the 25 years of Pope John Paul II's pontificate.

Baie de l'Ionosphère *see* **Ionosphere Bay**

Ionosphere Bay. 66°46' S, 141°35' E. A small bay bordering the E side of Cape Découverte, at Port-Martin, in the Géologie Archipelago. Charted by the French in 1951, and named by them as Baie de l'Ionosphère, for the ionospherics in Antarctica. US-ACAN accepted the translated name in 1962.

Isla Iota *see* **Peace Island**

Mount Iphigene. 76°31' S, 145°50' W. Just W of Ochs Glacier, at the neck of Guest Peninsula, between Marujupu Peak and the Birchall Peaks, in the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Discovered in 1929 by ByrdAE 1928-30, and named by Byrd for Mrs. Iphigene Ochs Sulzberger, daughter of Adolph Ochs and wife of Arthur Sulzberger (*see* **Sulzberger Bay**). It was originally plotted in 76°30' S, 145°54' W. US-ACAN accepted the name in 1947.

Ipólito Bouchard Refugio *see* **Groussac Refugio**

Colline Ippolito. 74°19' S, 160°05' E. Ice-free coastal foothills, about 1.12 sq km in area, and at a maximum altitude of about 150 m above sea level, on the E slopes of Mount Melbourne. Named by the Italians for Prof. Felice Ippolito (1915-1997), geologist, and vice president of the Italian National Scientific Commission on Antarctica. The Italian National Antarctic Museum was dedicated to him.

Iqbal Observatory. 71°28' S, 25°18' E. An automated weather station built by the Pakistanis in 1992-93, during their 2nd Antarctic expedition. It is 125 km N of Jinnah Station, in the Sør Rondane Mountains.

The *Iquique*. A 2216-ton Royal Canadian Navy frigate, built in 1943 by Morton, of Quebec, as the *Joliette*, and launched on Nov. 12, 1943, she was 301 feet long, had 5500 hp, and could travel at 17.7 knots maximum. On May 21, 1946 she was acquired by Chile, and arrived in that country on June 25, 1946. At the end of 1946 she was chosen to be one of the two ships for ChilAE 1946-47, the first Antarctic expedition from Chile, the other ship being the *Angamos*. The *Iquique* that season was commanded by Capt. Ernesto González Navarrete; 2nd-in-command was Capitán de corbeta Ernesto de la Fuente Fuentes; and the engineer was Capitán de corbeta Raúl del Canto M. She landed the first party at Capitán Arturo Prat Station (at that stage called Soberanía Station), and on Feb. 20, 1947, made a visit to Base E on Stonington Island, leaving this British station the following day. The skipper of the *Iquique* during ChilAE 1949-50 was Jorge Balaresque Buchanan (2nd-in-command was Jorge Domínguez K.), and on ChilAE 1952-53 was Capitán de fragata Victor Wilson Amenábar. She was sold in 1968.

Caletón Iquique *see* **Iquique Cove**

Ensenada Iquique *see* **Iquique Cove**

Islas Iquique *see* **Flyspot Rocks**, **Kirkwood Islands**

Punta Iquique *see* **Fierro Point**

Surgidero Iquique. 62°58' S, 60°40' W. A broad, very deep bay (the Spanish word "surgidero" implies an anchorage), with a smooth bottom, about 2.5 km wide at its mouth and about 1.5 km wide at its head, on the W coast of Port Foster, S of Punta Wensley (i.e., what the Argentines call Punta Murature), on Deception Island, in the South Shetlands. The W and S coasts of this bay are made up of an extensive beach formed of thick volcanic sand. Named by the Chileans for the *Iquique*. The Argentines call it Caleta Primero de Mayo. In the 1980s an error occurred in a certain gazetteer, an error that confused this feature with Iquique Cove (off Greenwich Island). Descriptors and coordinates became horribly mixed up, the mistakes were perpetuated in every other gazetteer and most other references, and no one ever spotted the mistake. Even decades later, certain authorities, vaguely realizing something was wrong, tried to fit a square peg into a round hole and made matters worse. Hopefully, this entry resolves the matter.

Iquique Cove. 62°29' S, 59°40' W. A small cove in the E side of Discovery Bay, right next to Capitán Arturo Prat Station, between Guesalaga Peninsula and González Island, off Greenwich Island, in the South Shetlands. Charted by ChilAE 1946-47, and named by them as Caletón Iquique, for the *Iquique*, which, at this cove, landed the first party that would occupy the station then known as Soberanía. A caletón is a big cove. This name appears on a Chilean chart of 1951, and was the name accepted by the 1974 Chilean gazetteer. However, today, the Chileans call it Ensenada Iquique. In 1964 the cove was re-charted by an RN Hydrographic Survey unit on the *Protector*, and they called it Iquique Cove on their 1965 map. It appears as such on a 1968 British chart, and that was the name accepted by UK-APC on Dec. 21, 1974. US-ACAN accepted the name in 1972.

Irakli Peak. 63°44' S, 58°34' W. Rising to 1336 m in the NW part of Trakiya Heights, 1.43 km NE of Antonov Peak, 3.24 km SW of Mount Canicula, 3.87 km WNW of Mount Daimler, and 3.56 km NNW of Bozveli Peak, it surmounts Russell West Glacier to the N and Russell East Glacier to the E, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the nature site of Irakli, on the Bulgarian Black Sea coast.

Iran. The country of Iran has other things on its mind aside from exploration in Antarctica. However, an Iranian scientist did accompany the Indian Antarctic Expedition of 1998-99.

Iratais Point. 62°28' S, 60°20' W. Forms both the S extremity and the vertex of the V-shaped Desolation Island, in the entrance to Hero Bay, Livingston Island, it is separated from the Miladinovi Islets to the S by Neck or Nothing Passage, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on

Dec. 15, 2006, for Iratais, the 9th-century hereditary kavhan (a sort of viceroy), governor of the Black Sea Region of southern Bulgaria, under Khan Krum the Terrible.

Pointe Irène. 66°40' S, 139°51' E. A low, rocky point, at the N extremity of Cape Géodésie, W of the Astrolabe Glacier, in Adélie Land. Named by the French in 1951. Irène was a dancer with the Ballet Russe of Monte Carlo. Georges Schwartz, a member of the 1951 expedition, and one of the first to visit this point, was, it seems, also a member of the Ballet Russe.

Irene Automatic Weather Station. 71°39' S, 148°39' E. A very isolated Italian AWS, installed in Nov. 2001, at an elevation of 2094.1 m, at Sitry Station, between Terra Nova Bay and Dumont d'Urville Station.

Mount Irene Frazier *see* **Mount Frazier**

The *Irigoyen*. Official name is the *Comandante General Irigoyen*. Argentine naval ship, built in Charleston, SC, as the *Cahuilla*, and launched on Nov. 2, 1944. In Jan. and Feb. 1966 she accompanied the *Lapataia* as that vessel made the first U.S. tourist ship cruise to Antarctica (*see* **Lindblad**, and **Tourism**). She took part in ArgAE 1973-74 (Captain Ricardo Hermelo); ArgAE 1990-91 (Captain Enrique A. Pérez); ArgAE 1991-92 (Captain Ricardo L. Alessandrini).

Punta Irigoyen *see* **Muñoz Point**

Irish South Aris Expedition *see* **South Aris Expedition**

Cape Irízar. 75°33' S, 162°57' E. A bold rocky headland of red granite, rising to about 180 m, and forming the N extremity of Lamplugh Island, off the coast of Victoria Land. Discovered by Scott on Jan. 18, 1902, during the early stages of BNAE 1901-04, and named by him for Julián Irízar. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Île Irízar *see* **Irízar Island**, **Jonassen Island**

Isla Irízar *see* **Irízar Island**, **Jonassen Island**

Monte Irízar *see* **Mount Irízar**

Mount Irízar. 62°59' S, 60°42' W. A mountain on Deception Island, in the South Shetlands. Named by the Russians (so says the SCAR gazetteer). The Argentines call it Monte Irízar.

Irízar, Julián. b. Jan. 7, 1869, Buenos Aires, of Basque origin. On March 11, 1884 he entered the Naval Academy. In 1898 he formed part of the commission that would oversee construction of the frigate *Presidente Sarmiento*, in Britain, and was an officer on that vessel's first round-the-world trip in 1899. An explosives expert, he was Argentine naval attaché in London and Berlin, from 1901, acquiring munitions and artillery, and then returned to Buenos Aires. He was captain of the *Uruguay* in 1903-04, during the relief of SwedAE 1901-04, and, as a result of this act was promoted to captain. From then until World War I he led the Argentine Naval Commission in Europe, and was promoted to rear admiral, and to vice admiral in 1926. On April 6, 1931 he became chief of the Naval Center, and in 1932 was designated National Maritime Prefect, and retired on Feb. 8, 1932. He died on March 17, 1935. His story is told in *Entre Packs & Icebergs* (i.e., "Between Packs and Icebergs"), by Miguel Hangel González, and published in 1998.

Irízar Crater. 62°59' S, 60°42' W. A large, old explosion crater between Monte Irízar and Decepción Station, at Port Foster, on Deception Island, in the South Shetlands. First charted by Don Hawkes in 1961. Named by the Poles on Sept. 1, 1999.

[1]**Irízar Island** *see* **Jonassen Island**

[2]**Irízar Island**. 65°13' S, 64°12' W. A little island, about 0.8 km long, 0.8 km NE of Uruguay Island, in the extreme NE part of the Argentine Islands, in the Wilhelm Archipelago, just a little way off the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted in 1904 by FrAE 1903-05, and named by Charcot as Île Irízar, for Julián Irízar (Charcot was seemingly unaware that the name Île Irízar had already been given out, by Nordenskjöld, to another island—*see* **Jonassen Island**). It was roughly re-charted in 1935-36, by BGLE 1934-37. It appears on an Argentine map of 1946 as Isla Irízar, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Irízar Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Photographed aerially in 1956-57, by FIDASE, and re-charted by a FIDS/RN survey of 1958.

Irízar Lagoon. 62°59' S, 60°42' W. A lagoon connected with Port Foster, between Mount Irízar and Decepción Station, inside Irízar Crater, on Deception Island, in the South Shetlands. Mapped by Don Hawkes in 1961. Named by the Poles on Sept. 1, 1999.

Irn Bru Buttress *see* **Repeater Buttress**

Irnik Point. 62°44' S, 61°23' W. An ice-free point on the NW coast of Snow Island, 3.5 km SW of Cape Timblón, 2 km SW of Mezdra Point, and 7.4 km NE of Byewater Point, in the South Shetlands. The shape of the feature has been advanced by a recent glacier retreat ENE of the point. Named by the Bulgarians on Dec. 15, 2006, for the legendary Khan Irnik, listed in the 8th-century *Nominalia of the Bulgarian Khans*.

Iron. Shackleton found iron in Antarctica, as did Mawson. It has since been found several times.

The *Ironbark*. Australian yacht, skippered by Trevor Robertson, which was in at Port Lockroy in 1998-99. She wintered here in 1999.

Ironside, Colin. b. Sept. 8, 1856, Peterhead, son of blacksmith Andrew Ironside and his wife Christian Alexander. He was named for his uncle, tailor Colin Alexander. He married Mary Ann, and had a family in Dundee. He was carpenter and harpooner on the *Polar Star*, during DWE 1892-93, and later became a shipyard carpenter in Dundee.

Ironside Glacier. 72°08' S, 169°40' E. A spectacular glacier, about 50 km long, it originates at the S side of Mount Minto, in the Admiralty Mountains, flows SE between Mount Whewell and Mount Herschel, or (to put it another way) between the range trending WNW from Mount Herschel and the parallel range trending in the same direction from Mount Sabine, and finally discharges into Moubray Bay in Victoria Land, at its mouth being joined by Honeycomb Glacier flowing in from the north. Named by NZGSAE 1958 for the impression of power given by the great icefall in its lower part NE of Mount Herschel. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Iroquois Plateau. 83°48' S, 54°00' W. A large, mainly ice-covered plateau, rising to about 1500 m, E of the S part of the Washington Escarpment, in the Neptune Range of the Pensacola Mountains. Surveyed from the ground in 1963-64, by USGS, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for the Iroquois helicopter (Bell UH-1), much used in Antarctica. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Irrgang, Horst E. *see* **Órcadas Station**, 1924

Irvin & Johnson, Ltd. Whaling company of Cape Town. Known as I & J, after its founders. Richard Irvin was born in the north of England in 1853, and was in the trawling business from the time he was a lad. He started a company, Richard Irvin & Sons, and by 1902 it had become a dynastic business, with several branches. Richard's son, George Driver Irvin went out to Cape Town in 1902 to investigate the possibilities there, and the following year established the African Fishing & Trading Co. Meanwhile, in 1867 in Sweden, Carl Ossian Johnson was born, and at the age of 12 ran away to become a ship's cabin boy, jumping ship in Cape Town. He went into the fishing business, and in 1909 merged with Irvin's company, in 1910 Irvin & Johnson being founded (it was still going in 2008). Carl Johnson died in 1949.

Mount Irvine. 77°38' S, 162°16' E. Rising to 2067 m, Immediately W of Hoehn Peak, between that peak and Vogler Peak, at the heads of Matterhorn Glacier and Bartley Glacier, in the Asgard Range of Victoria Land. Named by NZ-APC on Oct. 7, 1998, for Sir Robert Irvine (1929-1996), formerly vice chancellor of the University of Otago, chairman of the Ross Dependency Research Committee, and also of the Antarctic New Zealand board. US-ACAN accepted the name later in 1998.

Irvine Gardner Glacier *see* **Ketchum Glacier**

Irvine Glacier. 74°42' S, 63°15' W. A glacier draining SE for 60 km from between the Guettard Range to the NE and (to the SW) the Rare Range and the Latady Mountains, to enter the N part of Gardner Inlet, on the Orville Coast of Palmer Land. Discovered and photographed aerially at its mouth on Dec. 21, 1947, by RARE 1947-48, and named by Ronne as the John K. Wright Glacier, after John Wright (*see* **Wright Inlet**), and plotted in 74°39' S, 63°16' W, as the NE of two glaciers flowing into Gardner Inlet N of Mount Austin, the SW one being Wetmore Glacier. Surveyed from the ground by a com-

bined team of RARE personnel and Fids from Base E, in Dec. 1947. This situation appears on the 1948 American Geographical Society's map. However, in 1948, Ronne changed the name of this glacier from Wright to Irvine, for George J. Irvine, of the Engineer Depot at Fort Belvoir, Va., who had outlined the RARE photographic program. US-ACAN accepted this change in 1951. It appears as such on a U.S. Hydrographic Office chart of 1955, was photographed aerially by USN between 1965 and 1967, and appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the new name on Dec. 20, 1974. It appears as Glaciar Irvine on a Chilean map of 1966.

Isla Irving *see* **Irving Island**

Mount Irving. 61°16' S, 54°09' W. A prominent mountain, rising to about 1950 m, it dominates the S part of Clarence Island (it is the highest point on the island, and, indeed, in the entire group known unofficially as the Elephant Island group), in the South Shetlands. It was known to sealers in the 19th century. Photographed aerially by FIDASE in 1956-57. It was surveyed by the British Joint Services Expedition of 1970-71, and climbed by them on Dec. 6, 1970. They named it Mount Agnew, after the famous mountain climber Capt. (later Maj.) Crispin Hamlyn Agnew (b. May 13, 1944; from 1975, the 11th Baronet Agnew), who led the ascent. UK-APC named it Mount Bowles, on Dec. 20, 1974, in association with nearby Cape Bowles. However, the next day, Dec. 21, 1974, they renamed it Mount Irving, for Rear Admiral Sir Edmund George Irving (1910-1990), hydrographer of the Royal Navy, 1960-66, and a member of NERC, 1967-72. US-ACAN accepted the name Mount Irving in 1975. It appears as Mount Irving on a British chart of 1976. On Jan. 9, 1977, it was climbed again, by a new British Joint Services Expedition. The Argentines tend to call it Monte Bowles. Last re-plotted by the UK, in late 2008.

Irving, John James Cawdell "Jack." b. Jan. 22, 1898, Cowley, Oxford, son of schoolteacher John Irving and his wife Clara Cawdell. In the Navy from 1912, he fought in World War I, and was commissioned in 1917. He was married in 1921 in Cork, to Beryl Newington, and was first officer on the *Discovery II* during that vessel's first trip, 1929-30, under Capt. Peter Carey (who had married Irving's wife's sister). He was transferred as captain of the *William Scoresby*, 1930-31. Later a well-known writer and naval historian, he also served in the RN during World War II. In 1950 he was defeated in his Parliamentary race as Labour candidate for Bassetlaw, Nottinghamshire. He died on July 23, 1967, in Bangor, Wales.

Irving Glacier. 76°13' S, 160°16' E. Flows NW between the Coombs Hills and Wyandot Ridge, to enter Odell Glacier, in the Convoy Range of Victoria Land. Named (unofficially) in 1974, as Curreen Glacier, for S.J. Curreen, a NZ geologist, leader of a field party to the Darwin Mountains in 1968. Named by US-ACAN in 1999, as Irving Glacier, in association with Wyandot Ridge, for Capt. Ronald Karl Irving (b. Aug. 9, 1912, NY. d. Aug. 13, 1997, Virginia Beach), USN, commanding officer of a motor torpedo boat squadron during World War II, skipper of the *Stormes*, 1947-49, who served in Korea, and who was captain of the *Wyandot* during OpDF IV (i.e., 1958-59). He later served in Vietnam. He is buried in Arlington National Cemetery. NZ-APC accepted the name in 2004.

Irving Island. 66°25' S, 67°04' W. A small island, the most northeasterly of the Barcroft Islands, in the Biscoe Islands. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Laurence Irving (1895-1979), U.S. polar physiologist, founder and first director of the Institute of Arctic Biology, at Fairbanks, Alaska. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Isla Irving.

Irwin Glacier. 71°07' S, 163°25' E. A steep tributary glacier in the Bowers Mountains which flows NE from Edlin Névé, and which, at its terminus, merges with Montigny Glacier coming from the N, at which point both flow into the larger Graveson Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Carlisle S. Irwin, glaciologist who took part in the study of Meserve Glacier in 1966-67.

Cape Irwyn. 84°41' S, 170°05' W. Also called Cape Smith. A rock cape that forms the N extremity of the Lillie Range, in the foothills of the Prince Olav Mountains, at the edge of the Ross Ice Shelf. Named by the Southern Party of NZGSAE 1963-64, as Cape Smith, for Irwyn Smith, relief radio operator at Scott Base, 1963-64. NZ-APC accepted that name on April 19, 1966, and US-ACAN followed suit in 1968. However, the name Smith being too popular in Antarctica, in 2009 both NZ-APC and US-ACAN accepted the name Cape Irwyn.

Mount Isaac. 77°18' S, 161°19' E. Rising to 1250 m at the head of Alexander Valley, dividing the S part of the valley, 1.4 km (the New Zealanders say 2 km) SE of Mount Novak, in the Cruzen Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for Mike Isaac, geologist who led a scientific party during visits here in 1985 and 1992. US-ACAN accepted the name in 2006.

Mount Isabelle *see* **Mount Izabelle**

Isachsen, Gunnerius Ingvald "Gunnar." b. Oct. 5, 1868, Drøbak, Norway, son of sailor Nils Isachsen and his wife Cecilie Marie Sivertsen. He went into the cavalry, becoming a first lieutenant on Oct. 18, 1891. From 1898 to 1902 he was topographer with Sverdrup, on the *Fram*, in the Arctic. On Oct. 28, 1899 he became a rittmester within the cavalry, and on Dec. 15, 1903, in Haugesund, married Signe Amalie Eide. From 1903 to 1905 he was attached to the French Army in Algeria and Paris, and from 1906 to 1907 was on an expedition to Svalbard. In 1908-10 he led his own state-sponsored expedition to Spitsbergen. His wife died in Kristiania on July 7, 1911, he bought a farm in Asker, and was posted to Russia and Japan. On July 15, 1916, at Uvdal, he married Marie Sofie Fredrikke Steenstrup, and they lived in Asker, where they had 5 children. He was promoted to captain in 1917, and that year made a trip to New York, on the *Kristianiafjord*. In 1919 he was a technical delegate at the Paris peace conference, and, in 1923, he became director of the Norwegian Maritime Museum, in Oslo. He was promoted to major in 1924, and made other trips to New York, in the 1920s, as a diplomat. He was in Greenland in 1923-24, and in 1926-27 was an observer on a whaler in the Ross Sea, in Antarctica. He was co-leader, with Riiser-Larsen, of the *Norvegia* expedition of 1930-31. He died on Dec. 19, 1939, in Oslo. Marie died in 1958.

Isachsen Mountain. 72°11' S, 26°15' E. Also called Gunnar Isachsen Mountain. A large mountain, rising to 3425 m, 6 km SE of Mount Bergerson, on the W side of the upper part of Byrdbreen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Isachsenfjella, for Gunnar Isachsen. They plotted it in 72°16' S, 26°30' E. US-ACAN accepted the translated name Isachsen Mountain in 1962. The SCAR gazetteer listed a separate and unique feature named by the Russians as Gunnar Isachesenfjellet, with the coordinates 72°10' S, 26°22' E. Despite its very Norwegian name (it means "Gunnar Isachsen mountain"), and its extraordinary proximity to Isachsen Mountain, the gazetteer gives no hint at a relationship between the two features. *See also* **Gunnarkampen**, **Ingvaldnuten**, and **Majoren**.

Isachsenfjella *see* **Isachsen Mountain**

Isacke Passage. 66°54' S, 67°15' W. A marine channel in the E side of Hanusse Bay, forming the much-used N approach to Marguerite Bay through The Gullet, between Liard Island and Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1908-10. Named by UK-APC on Dec. 20, 1974, for Christopher John Isacke (b. 1930), RN, commander of the *Endurance*, 1972-74. US-ACAN followed suit with the naming in 1975.

Gora Isaeva. 70°46' S, 66°10' E. A hill, close to Mount Afflick, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Morena Isaeva. 72°06' S, 26°21' E. A moraine in the easternmost part of the Sør Rondane Mountains. Named by the Russians. The Norwegians call it Isaevmorenen.

Isaevmorenen *see* **Morena Isaeva**

Isaiah Bowman Glacier *see* **Bowman Glacier**

Isakson Nunatak. 74°50' S, 73°42' W. Rising to about 1300 m, 2.5 km SE of Christoph Nunatak, in the Lyon Nunataks, in Ellsworth Land, at the S end of Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1968, and from Landsat imagery of 1973-74. Named by US-ACAN in 1988, for Steven W. Isakson, upper atmospheric physicist from Stanford, who wintered-over at

Siple Station in 1975. UK-APC followed suit with the naming on Feb. 15, 1988.

The *Isatis*. French yacht, skippered by Jean and Claudine Lescure, which visited the South Shetlands and the Antarctic Peninsula in 1978-79.

The *Isatis II*. French yacht, skippered by Jean and Claudine Lescure, which visited the Antarctic Peninsula and the South Shetlands in 1980-81 and 1981-82 (South Shetlands only that season).

Mount Isbell. 82°22' S, 156°24' E. Rising to 2360 m, at the NE perimeter of the Geologists Range, 5 km W of Vogt Peak, in the Churchill Mountains. Named by US-ACAN in 2003, for John Isbell, of the department of geosciences, at the University of Wisconsin, at Milwaukee, investigator of Permian and Lower Triassic strata of the Darwin Mountains and the Churchill Mountains during several field seasons between 1992 and 2001, including work in this area. NZ-APC followed suit with the naming on Feb. 27, 2003.

Isbolkane. 73°39' S, 3°53' W. The ice slope on the S side of Belgen Valley, on the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. The name means "the ice partitions" in Norwegian.

Isbotnen. 68°49' S, 90°40' W. A corrie at the N side of Tofteaksla, in the NW part of Peter I Island. The name means "the ice corrie" in Norwegian.

Isbrecht Glacier. 72°14' S, 100°46' W. A small glacier flowing W from Thurston Island, between Cox Glacier and Hale Glacier. Named by US-ACAN in 2003, for JoAnn Isbrecht, of USGS in Flagstaff, Arizona, satellite image processing specialist, part of the USGS team that compiled the 1:5,000,000 scale Advanced Very High Resolution Radiometer maps of Antarctica, and the 1:250,000 scale Landsat TM image maps of the Siple Coast area in the 1990s.

Isbrynet *see* **Isbrynet Hill**

Isbrynet Hill. 73°09' S, 4°28' W. A partly ice-capped rock hill (really a nunatak), SW of Penck Ledge, rising above the ice slopes at the W side of the head of Penck Trough, between that trough and the Ritscher Upland, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and from additional air photos taken in 1958-59, during NorAE 1956-60, and named by them as Isbrynet (i.e., "the ice edge"). US-ACAN accepted the name Isbrynet Hill in 1966. The Germans call it Röbkeberg.

Isbul Point. 62°35' S, 61°12' W. A narrow, rocky point projecting 500 m from the coast of Ray Promontory into Svishtov Cove, in the NE extremity of Byers Peninsula, 600 m E of Start Point, 1.2 km WSW of Perelik Point, and 1.5 km SW of Essex Point, it forms the E side of the entrance to Belene Cove, on Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, after Kavhan Isbul, a prominent general and diplomat, regent of Bulgaria during the minorities of Khan Malamir and Khan Presian, in the 9th century.

Isca Valley. 80°01' S, 155°32' E. A narrow, ice-free valley lying next W of Ituna Valley, and 3 km ENE of Haven Mountain, in the Britannia Range. In keeping with the practice of naming features in this area connected to the historical Britannia, this valley was named by the 1978-79 geological party from the University of Waikato (in NZ), led by M.J. Selby, for one of the names given by the Romans to the River Exe. US-ACAN accepted the name.

Isdalen *see* **Isdalen Valley**

Isdalen Valley. 71°44' S, 12°30' E. An ice-filled valley between Aurdalsegga Ridge and Isdalsegga Ridge, in the Südliche Petermann Range of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-30, it was later plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Isdalen (i.e., "the ice valley"). US-ACAN accepted the name Isdalen Valley in 1970.

Isdalesegga *see* **Isdalsegga Ridge**

Isdalsegga Ridge. 71°45' S, 12°33' E. A rock ridge surmounted by Pinegin Peak, it forms the E wall of Isdalen Valley, in the Südliche Petermann Range of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and later plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Isdalsegga (i.e., "ice valley ridge"), in association with Isdalen Valley. US-ACAN accepted the name Isdalsegga Ridge in 1970.

[1]**Iselin Bank** *see* **Iselin Seamount**

[2]**Iselin Bank**. 73°00' S, 179°30' W. A submarine feature, N of Pennell Bank, in the Ross Sea. Discovered by personnel on the *Bear of Oakland* during ByrdAE 1933-35. The name was proposed by Dr. Steven Cande, for oceanographer Columbus O'Donnell Iselin II (1904-1971), of the Woods Hole Oceanographic Institute. US-ACAN accepted the name that year.

Iselin Seamount. 70°45' S, 178°15' W. Also called Iselin Bank (although not be confused with the other feature with this name, for which, see above). A submarine feature in the Ross Sea. Named by US-ACAN in 1964, for the American research ship *Iselin II*, belonging to the Woods Hole Oceanographic Institute, of Massachusetts. However, by 2004 it was apparent that this feature does not exist.

Iselin Trough. Its center is in 71°15' S, 170°15' W, but it extends between 71°00' S and 71°30' S, and between 169°00' W and 171°30' W. A submarine feature in the Ross Sea. In 1996 Steven Cande proposed the name, in association with Iselin Bank, and the name was accepted by international agreement in June 1997.

Isengard Bluff. 67°49' S, 65°18' W. An isolated bluff at the SW extremity of Tonkin Island, on the Bowman Coast, on the E side of the Antarctic Peninsula. Discovered by Mark Russell, a member of the Mapping and Geographical Information Centre (MAGIC) staff at BAS. Named by US-ACAN on Dec. 16, 2003, after Isengard, the home of Saruman, the wizard, in Tolkien's *Lord of the Rings*.

Île Iseult *see* **Yseult Island**

Isfjorden *see* **Amundsen Bay**

Isfossen. 73°07' S, 1°25' W. An icefall on the NE side of the Neumayer Cliffs, on the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. The name means "the ice cascades" in Norwegian.

Isfossnipa *see* **Isfossnipa Peak**

Isfossnipa Peak. 73°09' S, 1°30' W. A peak, 3 km SE of Austvorren Ridge, and surmounting the E part of the Neumayer Cliffs, in Maudheimvidda, in Queen Maud Land. Photographed from the air by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and from new air photos taken in 1958-59, during NorAE 1956-60, and named by them as Isfossnipa (i.e., "icefall peak"). US-ACAN accepted the name Isfossnipa Peak in 1966.

Mount Isherwood. 74°59' S, 113°43' W. A flattish, mainly ice-covered mountain with steep rock slopes, 6 km WSW of Mount Strange, in the Kohler Range of Marie Byrd Land. Lichens are to be found here. First photographed aerially in Jan. 1947 during OpHJ 1946-47. Named by US-ACAN in 1967, for William F. Isherwood, USARP geophysicist who took part in the South Pole-Queen Maud Land Traverse of 1965-66, and the Marie Byrd Land Survey of 1966-67.

Ishmael Peak. 69°53' S, 62°25' W. A conspicuous, detached rock peak, rising to about 600 m above sea level at the head of Scar Inlet, 6 km S of Spouter Peak, on the Oscar II Coast, on the E coast of Graham Land, it marks the N side of the head of Leppard Glacier. Surveyed by Fids from Base D in Dec. 1947 and again in Sept. 1955. Named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

Isidati-hyobaku. 72°36' S, 31°10' E. An icefall just S of the peak the Japanese call Isidati-yama, in the S part of the Belgica Mountains. Photographed aerially by JARE 1976, and surveyed from the ground by JARE 1979-80. Named by the Japanese on Nov. 24, 1981, in association with Isidati-yama.

Isidati-yama. 72°36' S, 31°14' E. A peak, rising to 2171 m above sea level, in the S part of the Belgica Mountains. Photographed aerially by JARE in 1976, and surveyed from the ground by JARE 1979-80. Named by the Japanese on Nov. 24, 1981 ("stood stone mountain").

Isla Isidoro Errázuriz *see* **Watkins Island**

Ising Glacier. 72°24' S, 0°57' E. Flows NW between Isingen Mountain and Kvitkjølen Ridge, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. First photo-

graphed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Isingbreen (i.e., "the icing glacier"). US-ACAN accepted the translated name in 1966.

Isingbreen *see* **Ising Glacier**

Isingen *see* **Isingen Mountain**

Isingen Mountain. 72°23' S, 1°04' E. A large, mostly ice-capped mountain mass, through which protrude several rock peaks, between Ising Glacier and Rogstad Glacier, in the central part of the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. First photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Isingen (i.e., "the icing"). US-ACAN accepted the name Isingen Mountain in 1966.

Isingsalen *see* **Isingsalen Saddle**

Isingsalen Saddle. 72°20' S, 1°02' E. An ice-saddle between Isingen Mountain and Salknappen Peak, in the central part of the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. First photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Isingsalen (i.e., "the icing saddle"), in association with Isingen Mountain. US-ACAN accepted the name Isingsalen Saddle in 1966.

Isingufsa *see* **Isingufsa Bluff**

Isingufsa Bluff. 72°21' S, 1°13' E. A rock bluff (the Norwegians describe it as a mountain slope) forming the NE corner of Isingen Mountain, in the central part of the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. First photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Isingufsa (i.e., "the icing bluff"), in association with Isingen Mountain. US-ACAN accepted the name Isingufsa Bluff in 1966.

Iskar Glacier *see* **Iskur Glacier**

Lednik Iskarski *see* **Iskar Glacier**

Isklakken *see* **Isklakken Hill**

Isklakken Hill. 71°56' S, 27°26' E. A small rocky nunatak, 3 km E of Balchen Mountain (the Norwegians say it is on the NW side of the mountain), at the E end of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Isklakken (i.e., "the ice lump"). US-ACAN accepted the name Isklakken Hill in 1966.

Iskollen *see* **Iskollen Hill**

Iskollen Hill. 72°51' S, 4°09' W. Also called Repke Mountain. A hill, ice- and snow-covered, with a few rock outcrops at the summit, SW of Raudberg Valley, in the SW part of Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Iskollen (i.e., "the ice hill"). US-ACAN accepted the name Iskollen Hill in 1966.

Gora Iskristaja. 72°08' S, 68°42' E. A nunatak on the Clemence Massif, on the E side of the Lambert Glacier. Named by the Russians.

Ozero Iskristoe. 70°45' S, 11°33' E. A lake between Krokevassfjellet and Sundvassheia, in the Schirmacher Hills, in Fimbulheimen, in Queen Maud Land. Named by the Russians (name means "sparkling lake"). The Norwegians call it Iskristoevatnet.

Iskristoevatnet *see* **Ozero Iskristoe**

[1]**Iskulen**. 68°49' S, 90°31' W. An ice dome dividing the glaciers Tålbreen and Haelbreen, in the N part of the coast the Norwegians call Von Bellingshausenkysten, on the E side of Peter I Island. Named by the Norwegians (it means "the ice bump").

[2]**Iskulen**. 71°57' S, 2°56' E. A bump or swelling in the ice, in the area of Troll Station, in the N part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Named descriptively by the Norwegians on Oct. 12, 2007.

Iskur Glacier. 62°38' S, 59°59' W. Flows N into Bruix Cove, at Moon Bay, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians in 2002, as Lednik Iskur, for the Iskur River, in Bulgaria. UK-APC accepted the translated name Iskur Glacier on July 8, 2003, and US-ACAN followed suit that year. Plotted by the UK in late 2008.

Iskverna. 70°34' S, 11°31' E. A depression in the ice shelf, it has crevasses in it, and lies about 10 km N of the Schirmacher Hills, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the ice mill").

Isla Dundee Refugio. 63°29' S, 56°14' W. Argentine refuge hut of 1951, built on Dundee Island, at the N of the Antarctic Peninsula.

Punta Isla Falsa *see* **False Island Point**

Canal Isla Negra *see* **Black Island Channel**

Bahía Isla Neny *see* **Neny Bay**

Island Arena. 79°49' S, 156°35' E. A broad valley occupied by a lateral lobe of the Darwin Glacier, it indents the N side of the Darwin Mountains, and is bounded to the N by Colosseum Ridge and to the S by Kennett Ridge. Richardson Hill, an island-like nunatak, rises above the ice of the valley. Named descriptively by VUWAE 1962-63. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1965.

Island groups. Below is a list of the most notable island groups in Antarctic waters, working from north to south, with those with western co-ordinates first, and those with eastern co-ordinates second. Only the first name of the group is given; the word "islands" is understood to come after the name in each case. Sometimes a group will be within another (larger) group, but this list is for reference only. The more important ones are in bold. **Western co-ordinates**: Governor, Inaccessible, **South Orkneys**, Larsen, Gosling, Weddell, Monk, Bruce, Flensing, Oliphant, Robertson, Murray, Seal, **South Shetlands**, Atherton, Rzepecki, Tupinier, Aitcho, Zed, Meade, Dunbar, Wideopen, Kevin, Wisconsin, Cohen, **Duroch**, Pordim, **Danger**, Tetrad, Christiania, Moss, Lajarte, Sigma, Paul, Rho, Psi, Tau, Theta, West Melchior, East Melchior, **Melchior**, Afuera, Pi, Omicron, Gaston, Racovitza, Rosenthal, Orne, Gossler, Casey, Joubin, Outcast, **Wauwermans**, Jigsaw, Bayard, Puzzle, Screen, Mumm, Dannebrog, Guyou, Myriad, Moureaux, Vedel, Stray, Cruls, Roca, Anagram, Forge, **Argentine**, Betbeder, Shelter, **Yalour**, Berthelot, **Pitt**, Symington, Lippmann, Trivial, Karelin, Triad, Martin, Palosuo, Sanctuary, Riddle, Vize, Thomsen, Büdel, Garde, Straggle, Hennessy, Llanquihue, **Biscoe**, Fish, Trump, Saffery, Taylor, Temnyje, Foote, Adolph, Bernal, Darbel, Owston, Fowler, Barcroft, Kidd, Nakaya, Bragg, McConnel, Pauling, Sillard, Rigsby, Bennett, Cornish, Brockhamp, Amiot, Léonie, Ward, Mikkelsen, Chatos, Esplin, Ginger, Rocca, Guébriant, Henkes, Consort, Courtier, Dion, Embassy, Line, Faure, **Debenham**, Reference, Refuge, Kirkwood, Terra Firma, Puffball, Johansen, Bugge, Mica, Glinka, Rhyolite, Trice, Waite, Eklund, Lindsey, Early, Schaefer, Sterrett, Edwards, Jaynes, McKinzie, Suchland, Brownson, Bakker, White. **Eastern co-ordinates**: Aagard, Balaena, Mariner, Vol'nyje, Nye, Taylor, Donovan, Frazier, Swain, Smith, Cronk, **Windmill**, Galten, Allison, Gillies, Haswell, Sheelagh, Tyulen'i, Stroiteley, Jagar, Dumoulin, Fram, Buffon, Davis, Double, Curzon, Triple, Sentinel, Rescapé, Blair, Patricia, Edwards, Hatch, Fletcher, Henry, Terra Nova, **Balleny**, Hannam, Burkett, Sirius, Mackellar, Laseron, Close, Hodgeman, Moyes, Kring, Tillett, Warnock, Klakkane, Boobyalla, Law, Endresen, Hobbs, Thorfinn, Sheehan, Douglas, Hydrographer, Waratah, Auster, Macey, Einstødding, Hogg, Wollesen, Wigg, Paterson, Parallactic, Canopus, Azimuth, Kellas, Klung, Shaw, Van Hulssen, Rouse, Jocelyn, Flat, Rookery, McMahon, Myall, Boree, Harvey, Wyatt Earp, Tryne, Zashchitnyye, Oyako, Donskiye, Lookout, Rauer, Terra Nova, Hyslop, Flatvaer, Svenner, Te, Sigaren, Ungane, Aviation, Systerflesene, Nøkkelholmane, Bølingen, Trilling, Søstrene, Stein, Sansom, Mitsudumoe, Sputnik, Lyall, Possession, Dellbridge, Razorback, Dailey.

Island Lake. 77°38' S, 166°26' E. A small lake close SE of Skua Lake, about 450 m E of Cape Evans, Ross Island, it has 2 small (unnamed) islands within it. Named by BAE 1907-09. US-ACAN accepted the name in 1968.

Island Range *see* **Insel Range**

Islands. The biggest individual Antarctic islands listed in order of area size (sq km) are: Alexander (49,070), Berkner (43,873), Thurston (15,700), Carney (8500), Roosevelt (7910), Siple (6390), Adelaide (4463), Spaatz (4100), Bear (3500), James Ross (2598), Ross (2460), Anvers (2432), Joinville (1607), Charcot (1500), King George (1384), Mill (1258), Sherman (1159),

Smyley (1000), Brabant (977), Livingston (973), Grant (768), Latady (700), Drygalski (694), Renaud (618), Masson (585), Elephant (558), Rothschild (500), Hearst (500), d'Urville (455), Coronation (450), Sturge (437). There are, of course, thousands and thousands of smaller ones.

Islands Point. 71°28' S, 169°31' E. A high rock cliffed point, rising to 411 m above sea level, separating Berg Bay from Relay Bay, along the W shore of Robertson Bay, in northern Victoria Land. Charted by the Campbell's Northern Party of BAE 1910-13, and so named by them because several small islands (including Sphinx Rock) lie just to its north. US-ACAN and NZ-APC both accepted the name.

Islas Malvinas Refugio. 63°25' S, 56°58' W. Argentine refuge hut, built in early 1958, on a rock surface at Nobby Nunatak, on Tabarin Peninsula, at the NE end of the Antarctic Peninsula, near the site of the old Antonio Moro Refugio. By later in the year it had lost its roof, and by 1960 was derelict. It was re-opened on Aug. 26, 1971, and the new one was rebuilt in 1988.

The *Islas Órcadas* *see* **The *Eltanin***

Islay. 67°21' S, 59°42' E. Also called Islay Island. An island, 3 km long, about 2.5 km N of Bertha Island, in the William Scoresby Archipelago. Discovered in Feb. 1936 by personnel on the *William Scoresby*, who named it for the Scottish isle. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Islay Island *see* **Islay**

Islote Ricardo Refugio. 64°53' S, 62°56' W. Argentine refuge hut built on a rock surface on the Danco Coast, on the W coast of Graham Land, on Nov. 12, 1953. It lasted until 1954.

Isocline Hill. 83°31' S, 157°36' E. A hill rising to between 100 and 200 m above the W side of Marsh Glacier, in the S part of Augen Bluffs, being connected to those bluffs by a col between 10 and 20 m lower than the height of the hill, in the Miller Range. So named by the Ohio State University Geological Party of 1967-68 because an isoclinal fold is well exposed on the side of this hill. US-ACAN accepted the name in 1970.

Isolation Point. 78°11' S, 167°30' E. A small volcanic peak projecting through the ice sheet covering the SE extremity of White Island, and situated at the easternmost point of the island, in the Ross Archipelago. Aptly named for its remote position by NZGSAE 1958-59. US-ACAN accepted the name in 1963.

Isopods. Crustaceans which lie on the sea bed near the shore. Crablike, and foraging, some are parasitic (*see also* **Fauna**).

Israel. The country of Israel has always been too busy fighting overwhelming odds at home to worry about Antarctica. However, in Dec. 1981, Didi Menusy, satirical columnist, arrived in Antarctica and claimed it for his country. Watched by an interested (but impartial) Graham Land seal, he planted the Star of David flag, and suggested that Mr. Begin might do better trying to annex the Antarctic continent than the Golan Heights. In the summer of 2003-04, the most remarkable initiative took place, an expedition called Breaking the Ice (q.v.).

Isrenna. 68°51' S, 90°29' W. A channel, about 3 km long, between Austryggen and Midtryggen, in the E part of the steep slope the Norwegians call Storfallet, in the NE part of Peter I Island. Named by the Norwegians ("the ice channel").

Isrosene *see* **Isrosene Mountains**

Isrosene Mountains. 71°53' S, 26°35' E. Two nunataks, 10 km WNW of Balchen Mountain, protruding through the W part of Byrdbreen, between that glacier and the ice field the Norwegians call Bulkisen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Isrosene (i.e., "the ice roses"). US-ACAN accepted the name Isrosene Mountains in 1966.

Isrugg *see* **Halvfarryggen Ridge**

Isryggen. 73°28' S, 14°09' W. An ice-covered ridge in the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians (name means "the ice ridge"). It is actually the SW end of the feature the Norwegians call Kraulberga (*see* **Kraul Mountains**).

Proliv Issledovatelej *see* **Issledovateley Strait**

Issledovateley Strait. 67°40' S, 45°45' E. Joins Alasheyev Bight and Vozrozhdeniya Bay, between the Myall Islands and Cape Gaudis, on the coast of Enderby Land. Photographed aerially by ANARE in 1956, and by SovAE 1957. Named by the Russians as Proliv Issledovatelej, presumably for the Arctic glacier of that name. The name was translated by ANCA.

Isstøa. 73°06' S, 1°42' W. An ice plain between Vestvorren Ridge and Austvorren Ridge, in the N part of the Neumayer Cliffs, in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the ice plain").

Isthmuses. An isthmus is a narrow strip of land bordered on two sides by water, connecting two larger land masses. The Spanish word for ithmus is "istmo." The main ones in Antarctica are: Istmo Almizclero, Dreary Isthmus, Istmo El Divisor, and Istmo Ibarguren.

Istind *see* **Istind Peak**

Istind Peak. 72°06' S, 2°23' W. Also called Sukkertoppen. Partly ice-covered, 1.5 km S of Tindeklypa, it is the easternmost peak in Ahlmann Ridge, in Maudheimvidda, W of Jutulstraumen Glacier, in Queen Maud Land. First photographed aerially, by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Istind (i.e., "ice peak"). US-ACAN accepted the name Istind Peak in 1966.

Istindhalsen *see* **Istindhalsen Saddle**

Istindhalsen Saddle. 72°05' S, 2°34' W. An ice saddle W of Istind Peak, between that peak and the Grunehogna Peaks, on the SE part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Istindhalsen (i.e., "the ice peak neck"). US-ACAN accepted the name Istindhalsen Saddle in 1966.

Istjørna. 70°44' S, 11°20' E. The westernmost lake in the Schirmacher Hills, in Queen Maud Land. Named by the Russians as Ozero Taloe (i.e., "the ice pond). The Norwegians translated this name as Istjørna.

Isvatnet. 70°41' S, 12°06' E. A lake on the NE side of the Schirmacher Hills, in Queen Maud Land. Named by the Norwegians ("the ice lake").

Isveggen. 74°23' S, 7°54' W. An ice wall, 13 km NE of Sembberget, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the ice wall").

Isvika *see* **Allison Bay**

Italia Valley. 62°11' S, 58°31' W. A small valley (however, it is still the largest valley in the area of Admiralty Bay, King George Islands, in the South Shetlands), ENE of Hervé Cove, in the S part of Ezcurra Inlet. There are 1961 FIDS references to it as Tern Valley, and also as Valley of Bibby (after Selwyn Bibby, who was on King George Island in the late 1950s), both of which are no longer used. It was the site of the 1975-76 Italian Antarctic expedition led by Renato Cepparo (*see* **Italy**), and was named by them as Conca Italia (i.e., "Italy valley"). Here they built their hut, Giacomo Bove Hut (or Campo Bove), of prefabricated buildings, in Jan. and Feb. 1976 the purpose of the party being science and mountaineering. The ship they used was the *Rig Mate* (q.v.). The hut was destroyed after 3 months. The valley is first referred to as Italia Valley in 1979, and that was the name accepted by the Poles in 1980, and also by UK-APC on April 3, 1984. It appears in the 1986 British gazetteer. US-ACAN also accepted the name. Last plotted by the UK in late 2008. The name means "Italy valley." *See* **Giacomo Bove Hut** for more details.

Italian Antarctic Expedition, 1881. It was an idea that never materialized, at least it was not able to be brought to fruition. Lt. Giacomo Bove (q.v.) and Cristoforo Negri, director of the Italian Geographical Society, conceived the plan, which was to sail at the end of May 1881, take deep-sea soundings in the Atlantic, then proceed to Montevideo, where they would hire a coal tender to ship fuel down to Tierra del Fuego, while the single expedition ship itself would head to the South Shetlands, then sail as far south as she could go, and winter over the first year in the Ross Sea, and the 2nd year in Enderby Land. They would conduct investigations in meteorology, geography, astronomy, and geomagnetics. Bove was designated leader. Based out of Genoa from early 1880, the expedition tried to get together the required 600,000 lire from government and public subscription, but no one cared. Instead, Bove solicited an expedition from the Argentine government to explore the coastlines of Patagonia and Tierra del Fuego, and left Italy on Sept. 3, 1882, on the *Europa*, bound for South America, followed on Oct. 3, 1881 by a group of scientists. Once assembled out there, they picked

up their ship, and flying the Italian flag, Bove still had hopes of making it to Graham Land. However, in July 1882 the new expedition foundered at Cape Horn when the ship was wrecked. Bove died in 1887, after an expedition to the Congo.

Italian Antarctic Expeditions. Known as ItAE. The expeditions have been: **ItAE 1985-86.** Led by Ezio Sterpone. They came down on the *Polar Queen*, to Terra Nova Bay, identified the site for Italy's first scientific station, Baia Terra Nova Station, and conducted the first Italian geological research on the continent. Known as ItAE I. **ItAE 1986-87**. Led by Celio Vallone on the *Finn Polaris*. This expedition built Baia Terra Nova Station, continued geological work in Terra Nova Bay, and began studies in earth sciences, and meteorology. Antarctic weather stations were installed (*see* **Automatic weather stations** for a list of these). The results achieved permitted Italy to become a Consultative member of the Antarctic Treaty system. **ItAE 1987-88**. Led by Mario Zucchelli, on the *Finn Polaris* and the *Polar Queen*. The station was enlarged during this expedition, and much more extensive study was done, especially in the field of marine biology. The first oceanographic campaign in the Ross Sea was carried out, and also undertaken was the first of seven geophysical marine prospecting campaigns from the *Explora* (*see under* **Italy**, and also **The *Explora***). **ItAE 1988-89**. Led by Mario Zucchelli on the *Barken*, the *Explora*, and the *Cariboo*. Baia Terra Nova Station was enlarged again, and earth sciences were studied extensively. Summer field camps were established at the Marinella Ice Sheet and the Nansen Ice Sheet. The *Barken* arrived at Terra Nova Bay on Dec. 12, 1988. **ItAE 1989-90**. Led by Roberto Cervellati on the *Barken* and the *Cariboo*. **ItAE 1990-91**. Led by Mario Zucchelli. This was the first time the *Italica* was used as the expedition's main ship. She arrived at Scott Base on Jan. 28, 1991, and returned to Lyttelton, NZ, on March 4, 1991. **ItAE 1991-92**. Led by Mario Zucchelli on the *Italica*. The ship arrived at Scott Base on Jan. 10, 1992. **ItAE 1992-93**. Led by Antonio Cucinotta. They were flown in, no ship this year. **ItAE 1993-94**. Led by Mario Zucchelli on the *Italica*. He was replaced in Dec. 1993 by Roberto Cervellati. **ItAE 1994-95**. This was the largest Italian Antarctic expedition to date, led by Mario Zucchelli on the *Italica*. He was replaced in Dec. 1994 by Umberto Ponzo. **ItAE 1995-96**. Led by Mario Zucchelli on the *Italica*. **ItAE 1996-97**. Led by Mario Zucchelli on the *Italica*. **ItAE 1997-98**. Led by Mario Zucchelli on the *Italica*. **ItAE 1998-99**. Led by Pierpaolo Mulargia on the *Italica*. He was replaced in Dec. 1998 by Augusto Lori. **ItAE 1999-2000**. Led by Pier Paolo Mulargia on the *Italica*. He was replaced in Dec. 1999 by Antonio Cucinotta, who was, in turn, replaced in Jan. 2000 by Umberto Ponzi. Concordia was opened as a summer station. **ItAE 2000-01**. The ship was the *Italica*. **ItAE 2001-02**. The ship was the *Italica*. **ItAE 2002-03**. The ship was the *Italica*. Baia Terra Nova Station became Mario Zucchelli Station. **ItAE 2003-04**. The ship was the *Italica*. **ItAE 2004-05**. The 20th Italian Antarctic expedition. The *Italica* arrived at Lyttelton, NZ, on Dec. 27, 2004, leaving there on Dec. 31, 2004, bound for Mario Zucchelli Station, which she reached on Jan. 10, 2004. She left there the following day, and on Jan. 12, 2005, began an oceanographic cruise, arriving back at Mario Zucchelli on Feb. 18, 2005, leaving there on Feb. 27, 2005, and arriving back in Lyttelton on Feb. 27. The following day she left for Italy. Giuseppe De Rossi was expedition leader. **ItAE 2005-06**. Led by Alberto Della Rovere on the *Italica*, which left Ravenna on Nov. 23, 2005, bound for Lyttelton, NZ, and from there on to Mario Zucchelli Station. The summer expedition ended on Feb. 20, 2006. **ItAE 2006-07**. This was the 22nd Italian Antarctic expedition. The members went down on the *Italica*. There were going to be three prongs to this expedition, the first being at Mario Zucchelli Station, the second at Dome C (Concordia), and the third an oceanographic voyage on the *Italica*. The third was canceled, and the ship was used just as transportation. **ItAE 2007-08**. The ship was the *Italica*. **ItAE 2008-09**. This year's expedition had to be canceled due to lack of funding. **ItAE 2009-10**. The *Italica* left Ravenna on Nov. 10, 2009, and arrived at Mario Zucchelli Station on Dec. 25, 2009.

The *Italica*. Italy's 6000-ton, 130-meter main expedition ship to Antarctica from 1990-91, under charter from Diamar. Built in 1981, in Vybirg, Russia, she was capable of 13.5 knots, and with the capacity to take 93 persons, she plied between Italy, Lyttelton, NZ, and Mario Zucchelli Station in Antarctica, often carrying helos on board. She also had a seasonal weather station on board, Italica AWS, installed in Sept. 1997, used while the ship was in the Ross Sea. She was in Antarctica most seasons (*see* **Italian Antarctic Expeditions**). Nicola Fevola was her skipper from 1990 to 1998, and from the 1998-99 season onwards Giuseppe Mancino was her skipper.

Picco Italica. 74°20' S, 165°17' E. A volcanic rock, about 3 km offshore, 5.5 km E of Edmondson Point, it rises from the sea bottom (300 m in depth) to its summit which is 5.7 m below the level of the sea. So named by the Italians on Feb. 22, 2002, because their expedition ship *Italica* hit the pinnacle during a 1996 hydrographic survey.

Italy. The Italian Antarctic Expedition, 1881 (q.v.) came to nought. The next one would be a long time coming. Pierre Dayné, the alpinista, despite his French name, was possibly the first Italian in Antarctica, as part of FrAE 1903-05. Lt. Franco Faggione was attached to the NZ party at Scott Base during IGY, 1957-58, and studied seismology there. In the 1967-68 season Carlo Mauri was a guest of the New Zealanders at Scott Base, explored the dry valleys in the area, and also climbed Mount Terror and Mount Erebus. Italy's National Research Council sent down an expedition of two members of the Genoa Institute of Oceanography to Antarctica in 1968-69, led by geologist Aldo G. Segré, and supported by NZ. Meteorologist Prof. Carlo Stocchino was the other member of the expedition. The 1968-69 season also saw the Club Alpino Italiano (CAI) Antarctic Expedition, wherein 4 members of that club were invited by the New Zealanders to work at Scott Base — Carlo Mauri (leader), mountain climbers Alessie Ollier and Ignazio Piussi, and geologist Dr. Marcello Manzoni. Mauri and Ollier worked with VUWAE and NZGSAE in the Boomerang Range, while Piussi and Manzoni worked at Vanda Station. They climbed Mount Erebus and 10 other peaks in the Wright Valley area. The next expedition was rather unusual, and was led by Giovanni Ajmone-Cat in the *San Giuseppe Due* (q.v.), which reached Antarctica in 1969, and again, on a new mission, arriving in Antarctica in 1974. This last was actually the second Italian Antarctic Expedition of the National Research Council. Mr. Segré led a 5-scientist team to Taylor Valley in 1973-74, again supported by NZ. In 1975-76 Renato Cepparo led an Italian science and mountain climbing expedition to the South Shetlands (*see* **Conca Italia** and **Giacomo Bove Hut**). Italy was ratified as the 24th signatory of the Antarctic Treaty on March 18, 1981, and on June 10, 1985 a law was passed putting into play the PNRA (National Program for Antarctic Research), under the patronage of the Ministry for Universities and Scientific Research and Technology, which provided for Italian research in Antarctica for the period 1985-91, this last date renewable come 1991. The program was executed by ENEA (Department of New Technologies, Energy and Environment) in agreement with the CNR (National Research Council). The scientific personnel came from the universities and other research institutes, as did much of the equipment. The disciplines to be studied were: earth sciences, atmospheric physics, cosmology, biology, medicine, environmental sciences, and technology. During the course of the first program the Italians increasingly stressed the study of global phenomena inside the atmosphere, the biosphere, and the geosphere. The first proper government expedition was in 1985-86 (*see* **Italian Antarctic Expeditions**). On Oct. 5, 1987 Italy became the 20th nation to achieve Consultative status within the Antarctic Treaty system. Each season from the 1987-88 season until the 1996-97 season (with the exception of 1992-93), Daniel Nieto Yabar led a geophysical expedition to Antarctica in the *Explora* (the *Gelendzhik* replaced the *Explora* for the 1995-96 season) to conduct seismic surveys in the Ross Sea (the last 3 seasons being in the Weddell Sea, not the Ross Sea). In Sept. 1988 Italy became a member of SCAR. Baia Terra Nova Station was the first proper government-sanctioned Italian scientific base in Antarctica, and was later re-named Mario Zucchelli Station. In Dec. 1997 the second base was officially opened — Dome C, or Concordia as it is sometimes known — actually a joint Italian-French venture. Since 1990-91 the main expedition ship has been the *Italica*.

The *Itasca*. A 53.55-meter American motor yacht, built in the Netherlands by J.K. Smit as the ocean-going salvage tug *Thames*. In 1979 she

was bought and converted into a yacht, and sold again in 1993. Registered in the Caymans (the name Itasca means "true beginning" in Latin), with New Zealander Allan Jouning as skipper, and with 7 passengers, she was in Antarctic waters in 1994-95, visiting the South Shetlands and the Antarctic Peninsula. She was back in 1997-98 (again under Capt. Jouning), 2002-03, and 2008-09.

Itase Automatic Weather Station. 72°49' S, 159°18' E. An Italian AWS in Victoria Land, installed in Nov. 1996, at an elevation of 2230 m. It was a seasonal AWS, in that it was installed in the November of a season, and dismantled the following February. It was operating in 1996-97, 1998-99, 2000-01, and then every season from 2006-07.

Isla Itatí. 65°52' S, 65°46' W. One of the Hennessy Islands, NNE of Dodman Island, off the Graham Coast, on the W coast of Graham Land. Named by the Argentines, for one of their towns.

Itibo-yama. 68°27' S, 41°27' E. A peak, rising to 52.9 m above sea level, in the N part of Cape Akarui, off the coast of Queen Maud Land. Surveyed by JARE 1975 and JARE 1980, and named by the Japanese on Nov. 24, 1981 (name means "one view mountain").

Itime Glacier *see* **Ichime Glacier**

Itime-hyoga *see* **Ichime Glacier**

Itiziku-ike. 69°11' S, 39°43' E. A dried-up lake in the NE part of the Langhovde Hills. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on June 22, 1972 (name means "fig lake").

ITT/Antarctic Services, Inc. Took over from Holmes & Narver, Inc., as the National Science Foundation's Antarctic support contractor, on April 1, 1980. It supplied services, managed seasonal construction activities, and provided maintenance and operational support at the U.S. stations on the continent. It provided technical and administrative support to USAP on a year-round basis. In short, its employees managed Pole Station, Palmer Station, and Siple Station, and also provided certain services at McMurdo (the U.S. Navy did the rest there until 1997). ITT's headquarters were at Paramus, NJ. They were replaced as contractor by Antarctic Support Associates (q.v.) in 1990.

Ituna Valley. 80°00' S, 155°45' E. A narrow, ice-free valley between Isca Valley and Lemanis Valley, it opens northward to Hatherton Glacier, 13 km WNW of Derrick Peak, in the Britannia Range. Named by the 1978-79 University of Waikato (NZ) geological party led by M.J. Selby, Ituna being the name used by the ancient Romans for the River Eden, in Britain. NZ-APC accepted the name, and US-ACAN followed suit.

Punta Ituzaingó. 66°00' S, 65°49' W. A point on the SW coast of Dodman Island, off Holtedahl Bay, off the Graham Coast, on the W coast of Graham Land. Named by the Argentines, for their city of Ituzaingó.

The *Itzumi*. Chilean ship, on ChilAE 1980-81 (Captain Juan Pellegrini). She worked in the Drake Passage and Bransfield Strait, on biological investigations of marine and Antarctic systems and stocks programs.

Vulcano di Fango Iulia. 75°57' S, 165°21' E. An elliptical-shaped submarine mud volcano, 2500 m by 1500 m, and trending NW-SE, with a base at 680 m, in the W part of the Ross Sea, about 47 km SSE from the Drygalski Ice Tongue, and 86 km WNW from Franklin Island. Discovered during the geophysical expedition aboard the *Explora*, 2005-06. Named by the Italians on Dec. 6, 2007 ("fango" means "mud," and "Iulia" means "Julia," which is an asteroid). *See also* **Vulcano di Fango Tergeste** (*under* **T**).

Ivan Alexander Point. 62°21' S, 59°03' W. The S extremity of Nelson Island, 4 km E of S of Ross Point, and 12.3 km WSW of Duthoit Point, in the South Shetlands. Named by the Bulgarians on Nov. 23, 2009, for Czar Ivan Alexander of Bulgaria, 1331-71.

Ivan Asen Cove. 63°01' S, 62°31' W. A cove, 1.2 km wide, which indents the SE coast of Smith Island, in the South Shetlands. Named by the Bulgarians in association with Ivan Asen Point. *See also* **Ivan Asen Point**.

Ivan Asen Point. 63°01' S, 62°31' W. A narrow, rocky point projecting 300 m from the SE coast of Smith Island, 12 km NE of Cape James, 20.6 km SW of Cape Smith, 3.7 km SSE of the island's summit, Mount Foster (2105 m), and 3.2 km SE of Sleveykov Peak, it forms the S side of the entrance to Ivan Asen Cove, in the South Shetlands. Named by the Bulgarians on Dec. 15, 2006, for Czar Ivan Asen II of Bulgaria, 1218-41.

The *Ivan Papanin*. A 10,125-ton, 166.31-meter Russian general cargo ship, built in 1990, in Kherson, and based out of Murmansk. Named for the Russian Arctic explorer. She left Antwerp on Nov. 6, 2007, and arrived at Crown Bay on Dec. 14, 2007, bringing the kit for Princess Elisabeth Station (the new Belgian base). In 2009-10 she brought down the Indian Antarctic Expedition.

Ivan Vladislav Point. 62°37' S, 61°14' W. Formed by an offshoot of Cherven Peak, this is the point on the N coast of Rugged Island, off the W coast of Byers Peninsula, 1.6 km WNW of Herring Point, 380 m E of Simitli Point, and 3.3 km ESE of Sheffield Point, Livingston Island, in the South Shetlands. The British mapped it in 1968, and the Spanish mapped it in 1993. Named by the Bulgarians on Dec. 15, 2006, after Czar Ivan Vladislav, 1015-18.

Lednik Ivana Mana. 73°17' S, 74°47' W. A glacier on the English Coast, on the W side of the Antarctic Peninsula. Named by the Russians for Ivan Man.

Ivanoff Head. 66°53' S, 109°07' E. A small rock outcrop, almost a headland, in fact probably an island, about 0.8 km long, attached to the continental ice of the Knox Coast by a saddle, 6.5 km W of the Hatch Islands, at the head of Vincennes Bay. Photographed aerially by OpHJ 1946-47, and mapped from these photos by American cartographers. Named by US-ACAN in 1956, as Brooks Island. In Feb. 1960, ANARE made helo landings here from the *Magga Dan*, and it was used as a rescue base by ANARE when a Hiller 12C helicopter, piloted by Peter Ivanoff, of Trans-Australia Airlines, crashed here on Feb. 13, 1960, in the worst operational crash in ANARE's history. Ivanoff and his passenger, surveyor David Cook, survived. An astrofix was obtained here on Feb. 19, 1960. In 1960 the Australians inadvertently named it Ivanoff Head, a name which, despite its becoming a target for wags, became an unofficial alternative to Brooks Island, and eventually won out, now being the official name. US-ACAN accepted the name Ivanoff Head in 1972. That same day, the name Brooks was reapplied to another feature (*see* **Brooks Point**).

Ivanov Beach. 62°36' S, 60°56' W. Extends 5 km in a SW-NE direction, on the SE coast of Barclay Bay, Livingston Island, in the South Shetlands. It is bounded by Nedelya Point to the SW, Rotch Dome to the SE, and Rowe Point to the NE. One of its features is Bilyar Point, 1.7 km NE of Nedelya Point, and there is another (minor) point on it, 1.1 km SW of Rowe Point. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for Lyubomir Ivanov (b. 1952), of the Atlantic Club of Bulgaria, topographic surveyor with BulgAE 1994-95, BulgAE 1995-96, and BulgAE 1996-97 (which he led). He drew up Antarctic maps, and was the founder of the Bulgarian Antarctic Place Names Commission.

Nunataki Ivanova. 70°10' S, 65°27' E. A group of nunataks close to Mount Seedsman, in the Athos Range of the Prince Charles Mountains. Named by the Russians.

Obryv Ivanova. 83°23' S, 50°30' W. A bluff on the SE side of the Saratoga Table, in the Forrestal Range, in the Pensacola Mountains. Named by the Russians.

Ivaylo Cove. 62°46' S, 61°15' W. A cove, 500 m wide, indenting the E coast of Snow Island for 900 m, in the South Shetlands, it is bounded by the 2 arms of the small Hall Peninsula (the southern arm of this peninsula being extended by a chain of rocks). The British mapped it in 1968, and the Bulgarians named it on Dec. 15, 2006, after Czar Ivaylo, 1277-79.

Mount Iveagh. 85°04' S, 169°38' E. A broad peak, rising to 3422 m, overlooking the E side of Mill Glacier, between that glacier and Keltie Glacier, 8 km NW of Mount White, on the E side of the Beardmore Glacier, in the Supporters Range. Discovered by BAE 1907-09, and named by Shackleton for Dublin brewer Edward Cecil Guinness, 1st Earl of Iveagh (1847-1927), a sponsor. US-ACAN accepted the name in 1952.

Iversen, Anders. b. Feb. 1884, Norway. His younger brother Ole Iversen, was a ship's captain. Anders married Henny Nansen, and they lived in Andebu, Norway. He was mate on the *Stavangerfjord*, then transferred to the *Sir James Clark Ross*, as gunner-captain of one of that factory's whale catchers, the *Star II*. He was with them on the expedition of 1923-24, and remained with the *Ross* for years. Gunnar Iversen

was skipper of the whale catcher *Kos II*, in 1937-38.

Iversen Peak. 84°37' S, 111°26' W. A peak, 5 km ENE of Urbanak Peak, at the NE end of the Ohio Range, in the Horlick Mountains. Surveyed in Dec. 1958 by the Horlick Mountains Traverse Party. Named by US-ACAN in 1962, for Frede Iversen, ionosphere physicist who wintered-over at Byrd Station in 1960.

Ives Bank. 67°40' S, 68°12' W. A marine bank, with a least depth of 11 m, in the S approaches to Ryder Bay, Adelaide Island, 1.5 km S of the Mikkelesen Islands. Charted in March 1981, during a survey from the *Endurance* that was conducted by Lt. Cdr. David Mure Ives (b. 1946), RN. Named by UK-APC on Dec. 15, 1982, it appears in the British gazetteer of 1986. US-ACAN accepted the name.

Ives Ice Rise. 71°53' S, 73°35' W. About 1.5 km long, near the head of Weber Inlet, Beethoven Peninsula, in the SW part of Alexander Island. Mapped by USGS from air photos taken by USN in 1967-68, and from U.S. Landsat imagery of 1972-73. Named by US-ACAN in 1988, for American composer Charles E. Ives (1874-1954). UK-APC accepted the name on Feb. 13, 1988.

Ives Tongue. 67°21' S, 59°29' E. A narrow tongue of land projecting from an island between Fold Island and the mainland of Kemp Land, on the coast of Enderby Land. Discovered and named in Feb. 1936 by personnel on the *William Scoresby*. US-ACAN accepted the name in 1965.

Cumbres Ivory *see* **Ivory Pinnacles**

Ivory Hills *see* **Ivory Pinnacles**

Ivory Pinnacles. 63°50' S, 59°09' W. Two ice-covered peaks rising to 1120 m (the Chileans say 1051 m), jutting out from the S part of a spur which extends N from the W side of the Detroit Plateau, in the direction of Poynter Hill, on the W side of Pettus Glacier, E of Charcot Bay, 14 km SE of Cape Kjellman, on the NW side of Trinity Peninsula, on the Davis Coast, on the W coast of Graham Land. Charted and named descriptively in July 1948, by FIDS from Base E. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, and in the British gazetteer of 1955. It was photographed aerially by FIDASE 1956-57. It appears on a Chilean chart of 1961, as Cumbres Ivory (which means the same thing), and as such in the 1974 Chilean gazetteer. The name has also been seen occasionally (but erroneously) as Ivory Hills.

Ivory Tower. 85°28' S, 142°24' W. A small peak rising to about 800 m, 2.5 km E of Fadden Peak, between the Harold Byrd Mountains and the Bender Mountains, in the Queen Maud Mountains. Visited by a USARP-Arizona State University geological party in 1977-78, and so named because it is composed of nearly all-white marble.

Iwa-zima. 68°59' S, 39°38' E. A conspicuously projecting island, off the NE end of East Ongul Island, in the NE part of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who did not name it. It was finally named by the Japanese, on Oct. 1, 1962 (name means "rock island").

IWSOE *see* **International Weddell Sea Oceanographic Expedition**

Mount Izabelle. 72°10' S, 66°30' E. Also spelled (erroneously) as Mount Isabelle. A bare rock mountain, trending E-W, 20 km SW of the Shaw Massif, and about 63 km SSW of the Fisher Massif, in the S part of the Prince Charles Mountains. Discovered on Nov. 28, 1956 from an ANARE Beaver aircraft, while engaged in aerial photography. Named by ANCA for Bernard A.H. "Bernie" Izabelle (b. July 25, 1928), weather observer who wintered-over at Mawson Station in 1957. He had been in the Arctic in 1949-50, and at Heard Island (53°S) in 1961. Later he worked in New Guinea. US-ACAN accepted the name in 1961.

Nunatak Izmajlova. 71°58' S, 35°40' W. One of two nunataks close together (the other being Nunatak Bocharova), in a very isolated position. The only other feature even remotely nearby is the glacier the Russians call Lednik Levashova. Named by the Russians. As these three features would be right in the middle of the Weddell Sea, given these co-ordinates, their very existence must be suspected. Even if the two nunataks are somehow undersea nunataks, the existence of a glacier in such a location would be rather surprising.

Morro Izquierdo *see* **Morro Jaña**

Ozero Izumrudnoe *see* **Izumrudnoje Lake**

Izumrudnoje Lake. 66°16' S, 101°00' E. In the Bunger Hills. Charted by SovAE 1956. Named by the Russians as Ozero Izumrudnoe. Name translated by ANCA.

Gora Izvestija. 70°32' S, 67°11' E. A hill on the White Massif, in the Aramis Range of the Prince Charles Mountains. Charted by SovAE 1956, and named by the Russians.

Bukhta Izvilistaja *see* **Izvilistaja Bay**

Izvilistaja Bay. 66°16' S, 100°38' E. A bay, in the Bunger Hills. Named by the Russians as Bukhta Izvilistaja. The name was translated by ANCA.

The *J121*. Chinese ship used on ChinARE I (the first Chinese Antarctic expedition; 1984-85). Skipper was Yu Deqing.

J.C. Automatic Weather Station. 85°42' S, 135°30' W. An American AWS, at an elevation of 549 m, installed in Nov. 1994, in the area of Kansas Glacier. Named for J.C. Armstrong (*see* **Deaths**, Nov. 23, 1994). On Jan. 20, 1997, a Twin Otter flew out to inspect it, but couldn't land due to fog. The AWS stopped operating in 1997, and was removed in Jan. 2000.

J. Carlson Bay *see* **Carlsson Bay**

Pointe J. Guéguen *see* **Guéguen Point**

Mount J.J. Thomson. 77°41' S, 162°15' E. A prominent hump-shaped peak along the N wall of of Taylor Valley, overlooking Lake Bonney, 4.5 km SE of Kottmeier Mesa, between Rhone Glacier and Matterhorn Glacier, in Victoria Land. Named by Grif Taylor in 1911, during BAE 1910-13, for Sir Joseph John "J.J." Thomson (1956-1940), British physicist and Nobel Prize winner who discovered the electron and the isotope, and also invented the mass spectrometer. Although the naming committees do not like initials in a feature's name, these have been retained in order to distinguish this feature from Mount Allan Thomson. US-ACAN accepted the name in 1972.

The *J.K. Hansen*. South African whale catcher, belonging to the United Whaling Company, of Durban. In 1953-54 she was catching for the factory whaling ship *Abraham Larsen* in Antarctic waters. Theodor Augensen was skipper. That season she took 51 blue whales, 235 fin whales, and 22 sperms, for a total of 308 whales, and 20,110 barrels of oil.

Mount J. Stubberud *see* **Mount Stubberud**

Monte Jabet *see* **Jabet Peak**

Pic Jabet *see* **Jabet Peak**

Jabet, Jacques-François. Known as "Le Bosco." He was with Charcot at Jan Mayen Island in 1902, and was boatswain on the *Français* during FrAE 1903-05. On Feb. 7, 1905, during that expedition, he and Pierre Dayné were the first to climb Savoia Peak, on Wiencke Island. He was back again with Charcot, on the *Pourquoi Pas?*, for FrAE 1908-10.

Jabet Peak. 64°49' S, 63°28' W. Rising to 545 m (the Chileans say 650 m), it marks the SW end of the Comer Range, 1.5 km NE of Port Lockroy, on the NW side of Wiencke Island, in the Palmer Archipelago. Probably first sighted in Feb. 1898, by BelgAE 1897-9. First roughly charted in 1905, by FrAE 1903-05, and named by Charcot as Pic Jabet, for Jacques Jabet (q.v.), who climbed in this area. It appears as Jabet Peak on a British chart of 1916, and that was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. However, it was often called The Ridge, and appears on a 1943 U.S. Hydrographic Office chart as "The Ridge (Jabet Peak)." It was surveyed by Operation Tabarin personnel from Port Lockroy in 1944, and by Fids from the same station in 1948. It appears as Monte Angamos on a Chilean chart of 1948, named for the *Angamos*. It appears on a 1949 Argentine chart as Monte Ridge, and on two 1953 Argentine charts variously as Monte Teniente and Monte Lomo. They called it Monte Teniente in connection, presumably, with the Monte Teniente (i.e., Stokes Hill) on Doumer Island. The name Monte Lomo is a rough translation of Ridge Mountain, and was the name accepted by the 1970 Argentine gazetteer. Today, the Chileans call it Monte Jabet, and the Argentines still call it Monte Lomo.

Jablonski Bay. 61°57' S, 58°21' W. Immediately E of Pottinger Point, it is part of Corsair Bight, on the N coast of King George Island, in the South Shetlands. Named by the Poles in 1984, for Boleslaw "Bolek" Jablonski, ornithologist, and a member of the Polish Antarctic Expeditions of 1978-79, 1979-80, and 1980-81, to King George Island. *See also* **Bolek Cove**.

Lake Jabs. 68°33' S, 78°15' E. A small lake next E of Club Lake, in the central part of Breidnes Peninsula, in the Vestfold Hills. The

area was photographed aerially by OpHJ 1946-47, by ANARE in 1954, 1957, and 1958, and by SovAE 1956. Named by ANCA for Brian Victor "Vic" Jabs, weather observer (radio) at nearby Davis Station in 1961. US-ACAN accepted the name in 1970.

Jaburg, Conrad John "Con." b. Sept. 29, 1931, Brooklyn, NY, but, from the age of 6 months, raised in West Palm Beach, Fla., son of Johan Coenraad Jaburg (later the owner of a fish market in West Palm Beach) and his wife Phyllis Annie Irene Ross (the great granddaughter of Sir James Clark Ross). He joined the Enlisted Naval Reserve in Dec. 1948, graduated from Palm Beach High School in June 1949, and in Sept. 1949 was in the regular Navy. After the Naval School of Mine Warfare, he was transferred to Pensacola as an aviation cadet, getting his wings and his commission as an ensign on Nov. 16, 1951. He was a flight instructor at Pensacola when he volunteered for OpDF. He completed his helicopter training in Aug. 1956, and joined VX-6, going up to Toronto to take delivery of the U.S. Navy's first de Havilland Otter airplane. On Nov. 9, 1956, he left Davisville, RI, on the *Wyandot*, to become the helo pilot at Ellsworth Station for the winter of 1957. It was Jaburg who closed Shackleton Station, and saw Fuchs off on his trip across Antarctica. On Jan. 17, 1958 he left Antarctica, by ship, bound for Buenos Aires, and from there to Sao Paolo, whence the Navy flew him back to Rhode Island, and from there back to Pensacola, as a flight instructor and maintenance test pilot at the helicopter training unit. On Dec. 26, 1958, he married Terri Thompson. He was a Sea Wolf pilot in Vietnam. He retired on July 1, 1974, as a captain, to Pensacola.

Jaburg Glacier. 82°42' S, 53°25' W. A broad glacier flowing W and NW between the Cordiner Peaks and the Dufek Massif, in the N part of the Pensacola Mountains. Mapped by USGS from 1964 USN air photos, and from ground surveys conducted during the USGS Pensacola Mountains Project of 1965-66, and plotted in 82°45' S, 53°00' W. Named by US-ACAN in 1968, for Con Jaburg. It has since been re-plotted. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Jack. A great husky on ByrdAE 1933-35, immortalized in his master Stuart Paine's book *The Long Whip* (1936). Known as Jack the Giant Killer, he could break trail for miles on end. Finn Ronne, who also drove him, called him "half man." Tough, independent, and strong, he was a Labrador-Newfoundland mix, and was found in Labrador and bought from the locals there. While leading teams in Antarctica he learned to pull a straight course with nothing to guide him. He also developed a feel for where the crevasses were, would circumvent them, and then return to his straight path. Byrd called him "the only hero of the expedition." He died at the age of 10, and was buried on a farm owned by Stuart Paine.

Lake Jack. 69°25' S, 76°06' E. A cigar-shaped lake just to the N of Blundell Peak, in the Larsemann Hills. A field campsite was set up here by members of the 1986-87 ANARE field party to allow biological work on a pair of lakes named Jack and Jill, after the nursery rhyme characters. There is an associated hill called Tumbledown Hill. All named by ANCA on Nov. 24, 1987. The Chinese call this feature Jingbo Hu.

Jack, Andrew Keith. Known as Keith. b. Sept. 9, 1885, Brighton, Vic. He started off as an insurance salesman, but by 1911 was teaching science at Dookie Agricultural College. He graduated from Melbourne in 1912, got his masters degree in 1914, and was physicist on the Ross Sea party during BITE 1914-17. He was also a physicist on the *Aurora* during the same expedition. He volunteered for the Australian Army in World War I, but was seconded to the government cordite factory, later being an explosives and safety expert. He retired in 1950, and died on Sept. 26, 1966, in Melbourne.

Jack Hayward Base. Established in 1985 on Ross Island, 200 yards from Scott's old base at Cape Evans, as the base for the In the Footsteps of Scott Expedition, and named for a benefactor. Essentially it was a 16 by 24 foot hut with a generator. Mike Stroud and John Tolson looked after it while Swan, Mear, and Wood were en route to the Pole.

Jack Paulus Skiway. Pole Station's landing field, named in the winter of 1981 for Lt. Cdr. John F. Paulus (q.v.).

Jacka Mountains *see* **Lazarev Mountains**

Jackass penguin. The true jackass penguin is *Aptenodytes demersa*, or *Spheniscus demersus*, and is found only off the coast of South Africa. Another species, the rockhopper penguin, is also called the jumping jackass, but this one is not found south of 60°S either. The gentoo penguin is often confused with, and often called, the jackass, and it is this one that writers mean when they say they saw a jackass penguin in Antarctica.

Mount Jackling. 77°54' S, 154°58' W. Just W of Mount Fitzsimmons, and 1.5 km S of Mount Frazier, in the N group of the Rockefeller Mountains, on Edward VII Peninsula, Marie Byrd Land. Discovered on Jan. 27, 1929, during an exploratory flight over this area by ByrdAE 1928-30. Named in 1940 by USAS, which explored the area. US-ACAN accepted the name in 1947.

Mount Jacklyn. 70°15' S, 65°53' E. A conical peak with a spur running W from the main snow slope on the NW face, it rises to about 300 m above the surrounding plateau to 1557 m above sea level, surmounts a horseshoe-shaped ridge 1.5 km S of Farley Massif, and is the easternmost peak of the Athos Range, in the Prince Charles Mountains of Mac. Robertson Land. First visited by Bill Bewsher's Southern Party of ANARE 1956-57, plotted in 70°16' S, 65°50' E, and named by ANCA for Robert Mainwaring "Bob" Jacklyn (b. Jan. 13, 1922), who wintered-over as cosmic ray physicist at Mawson Station in 1956. He had also been on Macquarie Island in 1951. US-ACAN accepted the name in 1962. It has since been re-plotted.

Mount Jackman. 72°24' S, 163°15' E. Rising to 1920 m, 13.5 km S of Mount Baldwin, in the Freyberg Mountains. Named by US-ACAN in 1964, for Warren Albert Jackman (b. Sept. 20, 1923, Los Angeles. d. April 24, 1985), USN photographer here with the USARP Victoria Land Traverse Party of 1959-60, which surveyed this area. NZ-APC accepted the name.

Jack's Donga. 66°14' S, 110°39' E. An Australian refuge hut established in 1972, at Vincennes Bay, on the Budd Coast, 9 km NE of Casey Station.

Monte Jackson *see* **Mount Jackson**

Mount Jackson. 71°22' S, 63°29' W. A massive mountain, near the SE end of the Dyer Plateau, in central Palmer Land, it is the highest point on the Antarctic Peninsula, and dominates the upland in the S part of Palmer Land. It rises to a majestic summit peak of 10,446 feet (3050 m) on the S and E, while the N flank is occupied by a vast cirque. In 1928 Wilkins turned back N at this point, on his expeditionary flight of that year. Discovered by USAS 1939-41, both aerially and from the ground, and named by them as Mount Ernest Gruening, for Ernest H. Gruening (*see* **Gruening Glacier**). They plotted it in 71°21' S, 63°10' W, and estimated its height as 4190 m (13,750 feet). It appears as such on a 1942 USAAF chart. The name was also seen as Mount Gruening, and Mount E. Gruening (this latter on Finn Ronne's 1945 map of USAS), but by 1943 it was generally being called Mount Andrew Jackson, for Andrew Jackson (1767-1845), the 7th president of the USA (1829-37), who signed the bill authorizing USEE 1838-42. It appears as Mount Andrew Jackson on a 1943 U.S. Hydrographic Office chart, but plotted in 71°31' S, 63°34' W. It appears on another chart, from the same organization, but plotted in 71°22' S, 63°10' W. However, it also appears on a 1943 USHO chart as Andrew Jackson Massifs. As Mount Andrew Jackson it appears on a 1946 USHO chart, plotted in 71°34' S, 63°10' W, and as Monte A. Jackson it appears on a 1946 Argentine map. In Nov. 1947 a FIDS party from Base E saw it from a distance, and estimated its height at more than 3050 m, but lower than originally estimated by USAS. It appears on Finn Ronne's 1948 map of RARE 1947-48, plotted in 71°22' S, 63°00' W. It appears on a 1949 Argentine chart as Monte Andrew Jackson, in a 1956 South American reference as Monte Jackson, and on a 1957 Argentine chart as Monte Andrés Jackson. UK-APC accepted the name Mount Andrew Jackson on Jan. 20, 1953, and US-ACAN followed suit that year. However, on Sept. 23, 1960, UK-APC renamed it Mount Jackson, and plotted it in 71°22' S, 63°22' W. US-ACAN followed suit in 1966, and it appears as such in the 1975 British gazetteer. It was surveyed by BAS personnel from Base T in 1964 (led by John Cunningham), who first climbed it on Nov. 23, 1964, and was mapped by USGS from USN air photos taken between 1966 and 1969. The coordinates were corrected to 71°22' S, 63°29' W, and as such it appears on the 1979 USGS sketch map of the N part of Palmer Land, and in the 1986 British gazetteer. Today, the Argentines call it Monte

Jackson, but the Chilean gazetteer of 1974 accepted the name Monte Andrew Jackson. The variant plottings of this feature are due to its size; the one chosen here is the British one.

Jackson, Alfred Perry. b. May 19, 1871, St. Johns Wood, London, son of well-to-do Irish glass merchant William Henry Jackson and his wife Charlotte Perry. His father died when he was a lad, and he became a merchant seaman with the Atlantic Transport Company, and was 3rd and then 2nd mate on the *Mohawk*, during the Third China War and the South African War. He transferred from the *America* to the *Terra Nova* as 1st mate, for the 1903-04 relief of BNAE 1901-04. He died in Camberwell in 1931.

Jackson, Archibald *see* **USEE 1838-42**

Jackson, David. b. 1865, Dundee. Bosun on the *Polar Star* during DWE 1892-93.

Jackson, Ian Thomas. b. 1937, Woolwich. He joined FIDS in 1958, as a meteorologist, and wintered-over at Base B in 1959 and 1960, the second year also as base leader.

Jackson Glacier. 74°47' S, 135°45' W. About 16 km long, it flows N from McDonald Heights into Siniff Bay, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for University of California physicist Bernard Vernon "Bernie" Jackson (b. 1942), scientific leader at Pole Station for the winter of 1971.

Jackson Hill. 68°35' S, 78°11' E. A prominent hill on the SE side of Scale Lake, on Breidnes Peninsula, in the Vestfold Hills. Named by ANCA for Peter G. Jackson, weather observer who wintered-over at Wilkes Station in 1967, and as weather observer-in-charge at Davis Station in the winter of 1969.

Jackson Peak. 82°50' S, 53°35' W. Rising to 1255 m, 3 km S of Sumrall Peak, it is the southernmost of the Cordiner Peaks, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Allen M. Jackson, VX-6 aviation electronics technician at Ellsworth Station in the winter of 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Jackson Pond. 77°32' S, 160°45' E. A frozen freshwater pond halfway between the terminus of Wright Upper Glacier and Anvil Pond, in The Labyrinth, in the McMurdo Dry Valleys. Named by US-ACAN in 2004, for geologist Jeffrey K. Jackson of Northern Illinois University who was a member of the core legging and processing team during the McMurdo Dry Valleys Drilling Project of 1974-75.

Jackson Tooth. 80°25' S, 23°16' W. A nunatak rising to 1215 m, it is the westernmost feature in the Pioneers Escarpment, in the Shackleton Range. Named by UK-APC on Jan. 5, 1972, for Maj. Frederick George Jackson (1860-1938), British Arctic explorer who, in 1895, designed the features of the pyramid tent, later to become standard equipment on British polar expeditions. He was leader of the famous Jackson-Harmsworth Arctic Expedition of 1894-97. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Fondeadero Jacob. 65°13' S, 64°33' W. An anchorage S of the Cruls Islands, in the S part of the Wilhelm Archipelago, off the W coast of the Antarctic Peninsula. Named by the Chileans for 1st Lt. Gerald Jacob Neumann (known as Lt. Jacob, of course), who, from the *Piloto Pardo*, conducted an exploration of Robert Island, in the South Shetlands, during ChilAE 1962-63.

The *Jacob Ruppert*. An 8257-ton, twin-hulled U.S. steel-plated freighter, formerly the lumber ship *Pacific Fir*, she was acquired on loan, at no charge, from the U.S. government, by Byrd, who re-named her for New York's famous brewer Jake Ruppert, owner of the New York Yankees baseball team, and used her for ByrdAE 1928-30 (Mr. Ruppert was chief sponsor of this expedition). W.F. Verleger was captain in 1933-34, and S.D. Rose in 1934-35, even though Commodore Hjalmar Gjertsen was in overall command of the ship during the expedition.

Jacob Ruppert Coast *see* **Ruppert Coast**

Jacobel Glacier. 77°44' S, 148°17' W. About 50 km long, it flows to the Sulzberger Ice Shelf, S of Hershey Ridge. Named by US-ACAN in 2003, for Robert W. "Bob" Jacobel (b. 1946), since 1989 professor of physics at St. Olaf College, Northfield, Minn. (chair since 2004), Antarctic researcher from 1986 onwards, working on a combination of ground-based radar and ice-core studies in West Antarctica.

Jacobs Island. 64°48' S, 64°01' W. A narrow island, 0.45 km long, between Hellerman Rocks and Laggard Island, SE of Arthur Harbor, off the SW coast of Anvers Island, in the vicinity of Palmer Station. Named by US-ACAN in 1974, for Lt. Cdr. Paul F. Jacobs, USN, officer in charge of Palmer Station in 1972. UK-APC accepted the name on Dec. 20, 1974.

Jacobs Nunatak. 84°17' S, 159°38' E. Rising to 2407 m above sea level, on the W side of the MacAlpine Hills, just W of the head of Sylwester Glacier. Plotted by USGS from air photos taken by USN, 1960-62. Named by US-ACAN in 1966, for U.S. Coast and Geodetic Survey geophysicist Willis Sumner Jacobs (b. Oct. 1930), who wintered-over at Pole Station in 1959, as USARP seismologist and geomagnetist. ANCA accepted the name.

Jacobs Peak. 80°04' S, 157°46' E. Rising to 2040 m, surmounting the N end of the ridge W of Ragotzkie Glacier, in the Britannia Range. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for John Douglas Jacobs, U.S. ionosphere physicist from Dartmouth College (University of Alaska), observing at Vostok Station in 1964. ANCA accepted the name.

Jacobs Peninsula. 81°52' S, 162°39' E. A massive peninsula, 9 km long and 5 km wide, extending E from the Nash Range into the Ross Ice Shelf. Rising to 800 m, and ice-covered except for fringing spurs, as at Cape May (the NE extremity of the massif). Named by US-ACAN in 2003, for Stanley S. "Stan" Jacobs, oceanographer with the Lamont-Doherty Earth Observatory, at Columbia University, who made physical and chemical observations in the southern ocean, including the Ross Sea, between 1963 and 2000. NZ-APC accepted the name on Feb. 27, 2003.

Jacobsen, Frithjof. b. May 20, 1874, Norway, son of tutor Oluf Jacobsen (owner of a navigation school in Sandefjord) and his wife Andrine. In 1904, he settled in Grytviken, in South Georgia, to become the assistant manager for the new whaling station there owned by Carl Anton Larsen's new Compañía de Pesca. He married Klara Oltte, and their daughter, Solveig, was born there in 1913 (she would die in 1996; *see* **Jacobsen Valley**). In 1914 he became manager. In 1921, he succeeded N. Jöndahl Hammer as the Buenos Aires manager of the Compañía Argentina de Pesca, a position he would hold until he died. Wiktor Esbensen, Carl Anton Larsen's son-in-law, replaced him at Grytviken. Don Frithjof was manager of the *Ernesto Tornquist*, 1927-31. In 1944 he became vice president of the company, and died on Dec. 27, 1953.

Jacobsen, Glen "Jake." b. Jan. 2, 1916, Loup Fork, Nebraska, son of Danish immigrant farmer Peter Jacobsen and his Nebraskan wife Edna. He graduated from the University of Washington, and joined the U.S. Navy, later moving to Seattle. He was 13 years in submarines, commanding 3 separate subs during World War II, and bringing back U-530, which had been interned in Argentina. After the war he was submarine adviser to the Turkish forces in the Black Sea, and commander of the *Atka* during the U.S. Navy Antarctic Expedition of 1954-55. His Danish wife and their 2 children lived in Buenos Aires at that time (he had met his wife there). He died in Aug. 1969.

Jacobsen Glacier. 82°58' S, 167°05' E. Flows ENE from Mount Reid, in the Holland Range, into the Ross Ice Shelf. Mapped by USGS from USN air photos taken in 1960, and from tellurometer surveys conducted in 1961-62. Named by US-ACAN in 1966, for Harold Jacobsen, master of the *Chattahoochee*, in Antarctica for OpDF 1964 (i.e., 1963-64) and OpDF 1965 (i.e., 1964-65).

Jacobsen Head. 74°02' S, 113°35' W. An ice-covered headland forming the NE point of Slichter Foreland, on the E side of Philbin Inlet, on Martin Peninsula, on the Walgreen Coast of Marie Byrd Land. First mapped by USGS from aerial photos taken in Jan. 1947 by OpHJ 1946-47, and plotted by them in 74°01' S, 113°20' W. Named by US-ACAN in 1967, for Glen Jacobsen. The feature has since been re-plotted.

Jacobsen Valley. 78°30' S, 85°39' W. A shallow valley, 3.5 km long and 1.2 km wide, descending northward from Mount Vinson, in the Sentinel Range, in the Ellsworth Mountains. It is bounded to the W by Branscomb Peak and Galicia Peak, and to the E by a minor ridge running between the E side of Mount Vinson (to the S) and Goodge Col (to the N). Draining the valley is a glacier tributary to Branscomb Glacier, part of the classical route to the summit of Mount Vinson. Mapped by the Americans in

1988. Named by the Bulgarians on Sept. 14, 2010, for Solveig Gunbjørg Jacobsen, who was born in Grytviken, South Georgia, on Oct. 8, 1913, daughter of Frithjof Jacobsen (q.v.). She died in 1996.

Jacobson, John "Jake." b. Sept. 28, 1868, Tromsø, Norway, son of Hans Jacobsen and his wife Britha Marie Johannesdatter. He was baptized in Tromsø on Nov. 7, 1868, as Johannes Joakim Hansen, which followed the old system of naming in Norway. Before he was two, his elder brother Jacob had died, and so had his father. A few years later Johannes Hansen became Johannes Jacobsen (with an "e"), in accordance with the new Norwegian naming system. His mother married again when John was 9, and, John, after growing up in his mother's home town of Alta, became a laborer. At the age of 19, he left Christiania (later called Oslo) on the *Geiser*, bound for New York, where he arrived on April 13, 1888. He went to Minneapolis, where he worked as a shoemaker, becoming an American citizen there in March 1893. In 1895 he enlisted in the U.S. Navy, and served in Cuba during the Spanish-American War. In 1901 he went back to Tromsø, to be part of the Baldwin-Ziegler Arctic expedition, and, on returning to the USA in 1902, with a (later to be somewhat famous) cross, anchor, and heart on his right forearm, he joined the U.S. Naval Reserve, as a sailmaker. He retired from the Navy in 1925, as a chief bosun's mate, and went on ByrdAE 1928-30, as a sailmaker, the oldest man on the expedition. On Feb. 22, 1929, halfway through the expedition, he and some other lads left Antarctica for NZ on the *City of New York*, and from there, rather than hang around in NZ for 6 months waiting for the 2nd half of the expedition, took the *Tahiti* to San Francisco, arriving there on April 12, 1929. From there they arrived in New York on April 19, where they were much fêted. Jacobson was described in the press as "rugged and tanned after half a century at sea," and a "veteran sailmaker." He then made his way back to Dunedin for the rest of the expedition. After the expedition they came back to the US. By 1939 Jake was in the U.S. Naval Home in Philadelphia, aged 71, and was still there in Aug. 1943. He probably died there.

Jacoby Glacier. 75°48' S, 132°06' W. A steep glacier flowing from the E slopes of the Ames Range, between Mount Boennighausen and Mount Andrus, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for William J. Jacoby, driller at Byrd Station in 1968-69.

Mount Jacqueminot *see* **Mount Jacquinot**

Jacques *See also* **Jaques**

Jacques, Greville Lawson "Bim." b. April 4, 1924, Sutton, Surrey, son of Hubert Jacques, editor of the *Surrey County Herald*, and his wife Elsie Violet Howick (after Hubert Jacques died in 1937, aged 49, she married G. Ross-Mumby, in 1939). He flew Wellington bombers during World War II, and, after the war, transferred to helicopters, joining Autair to become Lord Beaverbrook's personal pilot. In 1945 he was a flying officer, RAFVR, and in 1947 a flight lieutenant. On Aug. 23, 1947, at St. Luke's, Redcliffe Square, London, he married Anne Grace Lowe, and they lived in Cirencester, Glos. He was senior helicopter pilot with FIDASE 1955-57. He later lived in Sugnall, Staffs, and died there in Feb. 2005.

Jacques Peaks. 64°31' S, 61°50' W. Rising to 385 m, at the NW end of Reclus Peninsula, they are the most conspicuous feature on the peninsula, on the Danco Coast, on the W coast of Graham Land. The feature was shown on an Argentine chart of 1954, but unnamed. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground the same season by FIDS. Named by UK-APC on Sept. 23, 1960, for Bim Jacques (q.v.), who landed on one of these peaks to build a survey station. US-ACAN accepted the name in 1965.

Mont Jacquinot *see* **Mount Jacquinot**

Monte Jacquinot *see* **Mount Jacquinot**

Mount Jacquinot. 63°22' S, 57°53' W. A completely snow-covered pyramidal peak, rising to 475 m (the Chileans say 652 m), but with exposed rock on its N side, 5 km S of Cape Legoupil, 1.5 km E of Huon Bay, and almost 1 km E of Covadonga Harbor, on the N side of Trinity Peninsula. Probably sighted by Bransfield on Jan. 30, 1820, but named in 1837-40 by Dumont d'Urville as Mont Jacquinot, for Charles-Hector Jacquinot. On a British chart of 1839 it appears as Mount Jacquinot, and on an 1844 British chart as (erroneously) Mount Jacqueminot. It appears on a Spanish chart of 1861 as Monte Jacquinot, and on Friederichsen's map of 1895 as Jacquinot Berg. A 1901 British chart has it as Mount Jacquinot, and that is how US-ACAN accepted the name in 1952, also how it was accepted by UK-APC on Sept. 8, 1953, and how it is listed in the British gazetteer of 1955. On a 1908 Chilean map it appears as Cerro Jacquinot, and the Norwegians charted it as Jacquinotfjellet, in 1928. In the 1940s and 1950s the Chileans flirted with a couple of names, both revolving around the nickname of Rosa Marckmann Reijer, wife of President González Videla, to wit: Nevado Mitty (on a sketch of 1948), and Cerro Mitty (1951 chart). They also thought of Nevado General H. Carmona Vial (for General Horacio Carmona Vial), on a sketch of 1948, but that name was never used. However, the Chilean gazetteer of 1974 has it as Monte Jacquinot, as does the Argentine gazetteer of 1970.

Rocas Jacquinot *see* **Jacquinot Rocks**

Jacquinot, A. *see* **USEE 1838-42**

Jacquinot, Charles-Hector. b. March 4, 1796, Nevers, France, brother of Honoré Jacquinot. He entered the Imperial Navy at 16, and on May 15, 1820 was promoted to ensign. On May 22, 1825 he became a lieutenant, and on Jan. 22, 1836, a "capitaine de corvette." He was commander of the *Zélée* during FrAE 1837-40, and 2nd-in-command of the expedition under his best friend, Dumont d'Urville himself. He was promoted to "capitaine de vaisseau" on Dec. 21, 1840, and after Dumont d'Urville's death in 1842, he was given the responsibility of finishing the written account of the voyage. On Feb. 3, 1852 he was promoted to rear admiral, and was in command at Piraeus, Greece, during the Crimean War (1854-55). On Dec. 1, 1855 he was promoted to vice admiral. Soon after retiring from the Naval General Staff, he died in Nov. 1879, at Toulon.

Jacquinot, Honoré. b. Aug. 1, 1814, at Moulins-en-Gilbert, France, brother of Charles-Hector Jacquinot. Naturalist and assistant surgeon (surgeon 3rd class) on the *Zélée* during FrAE 1837-40. He and Hombron published the zoological results of the expedition. In 1848 he became a doctor, and practiced in Nevers. He died in 1887.

Jacquinot Berg *see* **Mount Jacquinot**

Jacquinot Rocks. 63°26' S, 58°24' W. A group of rocks about midway between Hombron Rocks and Cape Ducorps, NE of Marescot Point, and 1.5 km (the Chileans say 5 km) off the NW coast of Trinity Peninsula. Surveyed and charted by Fids from Base D in Sept. 1946, and named by them for Honoré Jacquinot. The feature appears on a 1949 British chart. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57. The rocks appear on a 1951 Chilean chart as Rocas Jacquinot, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines call them Rocas Jacquinot as well.

Jacquinotfjellet *see* **Mount Jacquinot**

Punta Jade *see* **Jade Point**

Jade Crater Lake *see* **Crater Lake**

Jade Point. 63°36' S, 57°35' W. A gently sloping rocky point forming the S limit of Eyrie Bay, Trinity Peninsula. The lower slopes of the point are permanently sheathed in greenish-tinged ice (hence the name). It appears on an Argentine map of 1958 as Cabo Circular. Named by UK-APC on Feb. 12, 1964, as Jade Point. US-ACAN accepted that name later that year. It appears on a 1974 British map. In the Argentine gazetteer of 1993 it appears as Punta Jade.

Jaeger Hills. 75°30' S, 65°40' W. A group of hills and nunataks, rising to about 1000 m, and running NE-SW for about 40 km between Matthews Glacier and McCaw Ridge, on the Orville Coast of Ellsworth Land. Mapped by USGS from their own ground surveys taken during the Antarctic Peninsula Traverse of 1961-62, and also from USN air photos taken between 1965 and 1967. Following a visit by a USGS field party in Dec. 1977, led by Peter Rowley (*see* **Rowley Massif**), this feature was named by US-ACAN for Cdr. James Walter Jaeger, USN, command pilot of a VXE-6 LC-130 that transported USGS field expeditions in 1976-77 and 1977-78. UK-APC accepted the name on Nov. 13, 1985.

Jaeger Table. 82°36' S, 52°30' W. The ice-covered summit plateau of the Dufek Massif, rising to about 2030 m at Worcester Summit, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground

by USGS during their Pensacola Mountains Survey of 1965-66, and mapped by USGS from these efforts. Named by Art Ford for Cdr. James Jaeger (*see* **Jaeger Hills**). US-ACAN accepted the name in 1978, and UK-APC followed suit on May 21, 1979.

Jaegyu Knoll. 63°28' S, 56°27' W. An undersea knoll (or submarine volcano), trending NW-SE, 9 km NW of Rosamel Island, in Antarctic Sound. It rises to a height of about 700 from the sea floor, its summit being about 280 m below the level of the surface of the sea. Its symmetrical shape is in the form of an elliptical cone. Discovered and first mapped in Dec. 2001, by swath bathymetry during a USAP cruise led by Eugene Domack on the *Nathaniel B. Palmer.* Named Jeon Jaegyu Knoll by Prof. Domack in June 2006, the shortened name Jaegyu Knoll was accepted by US-ACAN (undersea features department) on July 17, 2007. Jeon Jaegyu was a young Korean scientist at King Sejong Station in the 2003 field season. He took part in a rescue attempt for an overturned boat in Maxwell Bay, was thrown into the heavy seas, and died of hypothermia while making his way along the shore toward Teniente Rodolfo Marsh Station.

Jagar Islands. 66°35' S, 57°20' E. A group of small islands lying immediately off Cape Boothby, on the coast of Kemp Land, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Jagarane (i.e., "the hunters"). First visited by an ANARE party led by Phil Law on the *Nella Dan* in 1965. ANCA translated the name to Jagar Islands on July 29, 1965, and US-ACAN accepted that name in 1971.

Jagarane *see* **Jagar Islands**

Isla Jagged *see* **[1]Jagged Island and [2]Jagged Island**

Roca Jagged *see* **Jagged Rocks**

Rocas Jagged *see* **Jagged Rocks**

[1]Jagged Island. 61°54' S, 58°26' W. A high, conspicuous rocky island rising to an elevation of 66 m above sea level, with a jagged summit, 4 km NNW of Round Point, on King George Island, in the South Shetlands. Presumably known to sealers in the 19th century, it was surveyed and charted by the *Discovery II* in 1935, and first named by them (it seems). They plotted it in 61°53' S, 58°13' W. It appears on a 1938 British chart. US-ACAN accepted the name in 1953, and UK-APC followed suit on Sept. 20, 1955. Following aerial photography by FIDASE in 1956-57, and ground surveys by FIDS between 1957 and 1959, its position was corrected to 61°54' S, 58°29' W, and with the new coordinates is shown on a 1962 British chart and also in the 1977 British gazetteer. It appears on a 1946 Argentine chart as Isla Jagged, but on a 1953 Argentine chart as Isla Dentada (which means the same thing), the latter name being the one accepted by the 1970 Argentine gazetteer. It appears by error on a 1963 Argentine chart as Isla Owen. However, by 1978 one of the Argentine Antarctic expeditions had named it Isla Gregores, for Alférez de fragata (he became an alférez in 1905; he was later a capitán de fragata) José C. Gregores (b. Nov. 23, 1882, Buenos Aires). The 1974 Chilean gazetteer accepted the name Isla Jagged. It was re-plotted again by the British in late 2008. *See also* **Kellick Island**.

[2]Jagged Island. 65°58' S, 65°41' W. An island, 3 km long, off the entrance to Holtedahl Bay, 1.5 km E of Dodman Island, and 13 km W of Ferin Head, off the Graham Coast, on the W coast of Graham Land. FrAE 1908-10 may have seen it in 1909. Roughly mapped in 1935-36, by BGLE 1934-37, who so named it because it is jagged. It appears on a Chilean chart of 1947, as Isla Mellada (i.e., "notched island"). US-ACAN accepted the name Jagged Island in 1950, and UK-APC followed suit on Sept. 20, 1955. It appears on a 1953 Argentine chart as Isla Rosales, presumably named after Coronel de marina Leonardo Rosales (1792-1836), Argentine naval officer. However, it appears on 1957 and 1958 Argentine charts as Isla Vélez Sarsfield, named after Dr. Dalmacio Vélez Sarsfield (1800-1875), Argentine lawyer and statesman who wrote the Argentine Civil Code of 1869, and that was the name accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1974 accepted the name Isla Jagged.

Jagged Rocks. 63°24' S, 56°59' W. A group of rocks, partly awash, extending from the entrance to Hut Cove to near the center of that cove, in the E part of Hope Bay, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. First roughly charted in 1903 by Dr. J. Gunnar Andersson, during SwedAE 1901-04. Surveyed by FIDS in 1945, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and it appears on a 1950 British chart. US-ACAN accepted the name in 1952. It appears in the 1955 British gazetteer. It appears on an Argentine chart of 1953, as Rocas Denticuladas (which means roughly the same thing). The names Rocas Jagged and Rocas Dentadas were tried by the Argentines, but did not catch on. The name Rocas Denticuladas was the one accepted by the Argentine gazetteer of 1970. The Chileans call these rocks Rocas Olivares, for Marinero (maquinista) Luis Olivares, of the Chilean Navy, who took part in ChilAE 1948-49, and who, at Soberanía Station (later called Capitán Arturo Prat Station), had to spend 8 days on land. The largest of these rocks appeared in a 1957 Argentine chart as both Roca Jagged and Roca Denticulada. The latter name was the one accepted by the Argentines.

Jago Nunataks. 72°06' S, 164°40' E. A cluster of closely- spaced nunataks rising to an elevation of about 2300 m above sea level, with their central point about 5 km E of the S end of the Neall Massif, and in the upper reaches of Houliston Glacier, where the Concord Mountains meet the Freyberg Mountains, in Victoria Land. Named by NZ-APC in 1983, for James B. "Jim" Jago, geologist with the NZARP geological parties to this area in 1974-75 and 1980-81. US-ACAN accepted the name. Dr. Jago was later with the department of applied geology, at the South Australian Institute of Technology, at Adelaide.

Jahnsen, Johannes. b. Norway. He went to sea, and was cook on the *Southern Cross* during BAE 1898-1900.

Jahntinden. 74°45' S, 11°35' W. A mountain in Skjønsbergskarvet, in Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Gunnar Jahn (1883-1971), Resistance leader during World War II, imprisoned in 1944, and after the war became a politician. The word "tind" means "peak."

Jahre, Anders. b. May 25, 1891, Ramnes, Norway. A lawyer and whaling magnate out of Sandefjord, he owned the Kosmos Company. He died in 1982.

Jakobczyk, Walter John "Wes." Better known as Wes Jacobs, but also known as "Les," or "Jake." b. 1910, Newark, NJ, 5th of 7 children of house painter Jozef Jan Jakobczyk (Joe Jacobs) and his wife Honorata Rozalia Braja (a chef and restaurant owner, known as Honora), both of whom came over to the States from Cergowa, in Dukla, Poland. The family never officially changed their name to Jacobs, but to all intents and purposes that was how they were known in Newark. Honora brought over two nephews from Poland, and she and Joe adopted them. Edward was one, and his brother, also named Walter, was another. That meant there were now two Walters, so the older one changed his name (although not legally) to Wesley. After Morton Street Elementary School, Wes graduated from Central High, and then went to live with his older sister, Mrs John Ptak, in Great Kills, Staten Island. He joined the U.S. Navy in New York, in 1929, and was sent to the College of Engineering at the University of Southern California. He played football with the Navy in San Diego, served as a master mechanic on the battleship *California*, and was coxswain, trainer, and master of the crew that won the Iron Man trophy for the ship. He was on the *California* when the entire fleet came into New York Harbor in 1938. He learned to fly, and had 680 solo hours logged when he became chief motor machinist's mate and one of the pilots on the *Bear*, during USAS 1939-41. Just before leaving Boston for Antarctica, he flew to Newark to spend the last weekend with his family in Newark, then flew back to Boston to join the *Bear*. He was one of two Newark lads on that expedition, Roy Fitzsimmons being the other. During his part of the expedition, he was the diesel technician on the Snowcruiser. He was promoted to bosun's mate 1st class during the 2nd half of the expedition. After the expedition, and just before Pearl Harbor, he was posted to the Arctic, where he was in a plane crash that fractured his skull and broke his hands. He was the engineer chief petty officer who converted the Vanderbilt yacht into a subchaser, and was chief engineer on the *Plymouth*, off the North Carolina coast on Aug. 5, 1943, when he was torpedoed. He never married.

Rocher Jakobsen. 66°40' S, 140°00' E. A small rocky promontory overlooked by a steep cliff, on the W coast of Pétrel Island, in the Géologie Archipelago. The name was long in use

before it was officially accepted by the French. Guttorm Jakobsen (q.v.) was skipper of the *Norsel*.

Jakobsen, Guttorm. b. 1911, Belsnes, Tromsø, Norway. He went to sea as a deckboy on the *Heimen*, in 1927. He first went to Greenland on the *Heimland I*, in 1929, as a seaman, and in 1931 was back there on the *Heimen*. He became a mate before World War II, and after the war returned to Belsnes, to work for the family business, Jakobsen Brothers. He was skipper of the *Norsel*, 1949-52, 1955-56, and 1956-57. Then he and his brothers Helge, Gunnar, and Torgils, started the North Fisk Company together. It is said that he spent a total of 50 seasons in polar waters.

Jakobsenknatten. 74°33' S, 9°58' W. A mountain crag in the N part of XU-fjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for journalist Sigurd Jakobsen (b. 1910), Resistance leader during World War II, arrested in 1941, sentenced to death, but not executed.

Massif Jakova Gakkelja. 71°50' S, 6°45' E. A massif. Named by the Russians. The coordinates would put it on the E side of Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. It is difficult to imagine a massif in this area remaining unnamed by anyone else, especially the Norwegians, and it is possible that this Russian name is a synonym for Jøkulkyrkja itself.

Nunataki Jakova Koblenca. 82°40' S, 42°40' W. The Russians claim this as group of nunataks, and the coordinates would put it just SE of the Schneider Hills (which form the S half of the Argentina Range), in the Pensacola Mountains. However, it may well be the Russian name for the Schneiders themselves.

Gora Jakovleva. 72°04' S, 16°20' E. A somewhat isolated nunatak to the E of Bautasteinane, in the NE part of Steingarden, in the SE part of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Lednik Jakubova *see* **Dickey Glacier**

Nunatak Jakunina. 83°11' S, 49°01' W. A somewhat isolated nunatak, due W of Kovacs Glacier, on the SE side of the Lexington Table, in the Forrestal Range of the Pensacola Mountains. Named by the Russians.

Île Jallour *see* **Yalour Islands**
Îles Jallour *see* **Yalour Islands**
Jallour Isles *see* **Yalour Islands**
Jallour Islets *see* **Yalour Islands**
Jallous Islets *see* **Yalour Islands**
Jalour *see* **Yalour**

Ozero Jama. 73°19' S, 68°18' E. A lake immediately S of Morgan Glacier, in the central part of the McIntyre Bluffs, on the Mawson Escarpment. Named by the Russians.

Caleta Jambeli. 62°27' S, 59°44' W. An inlet between Orión Point and Canto Point, at Discovery Bay, on the NE coast of Greenwich Island, in the South Shetlands. Named by the Ecuadorians on July 6, 1990, after the town of Jambeli, in Ecuador.

Cabo James *see* **Cape James**

Cap James *see* **Cape James**

Cape James. 63°05' S, 62°42' W. A very notable cape of dark color, forming the SW point of Smith Island, in the South Shetlands, and rising to some 100 m above sea level, at the foot of which is a rock about 50 m high that resembles a step. Roughly charted by Weddell in 1820, when a landing was made nearby. Further charted as Cape James by Foster, during the *Chanticleer* Expedition of 1828-31, and it also appears on British charts of 1839 and 1938. Whether or not it was named by Foster, it certainly seems to have been named for Weddell. On de Gerlache's 1902 map of his BelgAE 1897-99 it appears as Cap James. US-ACAN accepted the name Cape James in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It was photographed aerially by FIDASE in 1956-57. The Argentines were calling it Cabo James as early as 1908, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Originally plotted in 63°06' S, 62°45' W, it was replotted by the UK in late 2008.

Isla James. 63°00' S, 62°30' W. A tiny island off the SE side of Smith Island, in the South Shetlands. Named by the Argentines, presumably in assocation with Cape James, which is on the SW side of Smith Island.

Mount James. 77°12' S, 161°29' E. Rising to 1700 m, between Mick Peak and Hott Peak, it is the highest mountain in the Helicopter Mountains, in the Saint Johns Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Barry Wendell James (b. 1953), helo pilot who supported USAP at McMurdo Sound and the McMurdo Dry Valleys for 10 austral field seasons, 1998-99 to 2007-08. NZ-APC accepted the name on April 7, 2008.

James, David Pelham. b. Dec. 25, 1919, son of Wing Commander Sir Archibald William Henry James, RAF, and his wife Bridget Mary Idol Guthrie. Educated at Eton. Captured during World War II while serving on small boats, he escaped on the second attempt. He was a temporary lieutenant, RNVR, when he became surveyor at Base D for the winter of 1945, during the 2nd phase of Operation Tabarin. In the July of that year, Operation Tabarin personnel became FIDS, and so James became one of the first Fids. He wrote *That Frozen Land* (*see* the Bibliography). He was also ADC to the governor of the Falkland Islands. On May 20, 1950, in London, he married the Hon. Jaquetta Mary Theresa Digby, daughter of the 11th Baron Digby. He won the MBE. From 1959 to 1964 he was Conservative MP for Brighton Kemp Town, and lost the 1964 election (by a mere 7 votes) probably due to his (over) publicized determined belief in, and continued quest for, the Loch Ness monster. From 1970 to 1979 he was MP for Dorset North. In 1979 he became David Guthrie-James. He died on Dec. 15, 1986, at his ancestral home of Torosay Castle, at Little Torosay, Criagnure, on the Isle of Mull, Scotland, and his ashes were scattered there. He was biographized by John Robson, in the book *One Man in His Time: The Biography of David James, Laird of Torosay Castle, Traveler, Wartime Escaper, and Member of Parliament* (1998, Spelmount, Staplehurst, England).

James, Reginald William "Jimmy." b. Jan. 9, 1891, Paddington, London, son of umbrella maker William George J. James and his wife Isabel Sarah Ward. While still a post-graduate student at the Cavendish Laboratory in Cambridge, he joined BITE 1914-17 as a physicist on the *Endurance*, and was on the famous Weddell Sea Party of that expedition. He served with the Royal Engineers during World War I, and then lectured in physics at Manchester University, specializing in X-ray crystallography. In 1937 he became professor of physics at the University of Cape Town. He died on July 7, 1964, in Rondebosch, Cape Town.

The *James Caird*. Shackleton's 22-foot-long open boat which made the trip from Elephant Island to South Georgia in 1916. The largest of the 3 longboats used by Shackleton on BITE 1914-17, it was named by him for his chief backer, Sir James Caird. In 1922 the boat was presented by John Rowett to Dulwich College. There is a book, *Shackleton's Boat: The Story of the James Caird*, by Harding McGregor Dunnett.

The *James Caird II*. A replica of the boat used by Shackleton on his epic trip from Elephant Island to South Georgia. Built by Skips & Baedebyggeri, in Denmark, she was launched on Oct. 1, 1999. Her mission was to recreate Shackleton's trip. She was shipped out to Buenos Aires in a crate, then on to Ushuaia, to await the arrival of expedition leader Arved Fuchs (b. April 26, 1953, Germany). They called the expedition Shackleton 2000. With Fuchs were Henryk Wolksi (b. 1951, Poland), Sigridur Ragna Sverridottir (b. 1971, Iceland), and Martin Friederichs (b. 1961, Germany), all permanent crew members of Fuchs' yacht *Dagmar Aaen*, which was constantly in attendance throughout the expedition, as were film crews, radio, inflatable rafts, good food, etc. The expedition began on Jan. 19, 2000, and by Jan. 29 they were at Point Wild, on Elephant Island. On Jan. 30, they set out for South Georgia, arriving there on Feb. 12, 2000. Then they crossed the island to Stromness. Fuchs wrote *In Shackleton's Wake*. For a related (and earlier) attempt, *see* **South Aris Expedition**.

James Caird Society. A charity established in 1994, in Cranbrook, Kent, with Shackleton's son as first president (he died in 1994, soon after the society was founded). He was succeeded by the explorer's granddaughter.

The *James Clark Ross*. Ice-strengthened British Royal research ship, built by Swan & Hunter, at Wallsend, for oceanographic and logistical supply work in polar climates, and launched by the Queen on Dec. 1, 1990. She (i.e., the vessel) was designed to be acoustically quiet, so as not to interfere with the acoustic systems on board. She supplied BAS stations in Antarctica, and was in Antarctic waters in 1991-92 (captains were Chris Elliott and Nicholas Anthony "Nick" Beer); 1992-93 (same skippers);

1993-94 (same skippers); 1994-95 (captains Chris Elliott and Michael Jeremy Stuart Burgan); 1995-96 (captains Elliott and Beer); 1996-97 (captains Elliott and Beer); 1997-98 (captains Elliott and Burgan); 1998-99 (captains Elliott and Burgan); and 1999-2000 (captains Elliott and Burgan). This latter season she was in Antarctic waters between Oct. 16 and Dec. 14, 1999. The leading crew members, aside from the skippers, were: Robert Patterson (chief officer), Dave Gooberman (2nd officer), Paul Hislop (3rd officer), Dave Cutting (chief engineer), Bill Kerwell (2nd engineer), George Stewart (bosun). Peter Foden was senior scientific officer on board, and Steve Mack was higher scientific officer. This stint was performed in two legs. The first leg was between Oct. 16 and Nov. 7, when she was in the Drake Passage, sometimes going south of 60°S. For the second leg, she set out from Port Stanley on Nov. 10, 1999. Mr. Mack was aboard still, and Geoff Hargreaves had joined the ship the day before, as scientific officer. They arrived at Port Lockroy Station on Nov. 14, 1999, dropped off two personnel there to operate the summer Antarctic museum, and then headed off to Rothera Station a few hours later. She arrived at the pack-ice, 25 miles out from Rothera, on Nov. 15, 1999, but, after several unsuccessful attempts to get in to the base, gave up on Dec. 8, 1999, and headed to Palmer Station, from where the 14 replacement personnel (and Hargreaves and Mack) would be transferred over to Rothera by Twin Otter. Hargreaves and Mack left Rothera on Dec. 13, 1999, in a Dash-7 aircraft, headed back to Stanley. Chris Elliott was captain until at least 2002. She was in Antarctica in 2002-03. The leading crew members that season were: Jerry Burgan (captain), Dave Gooberman (chief officer), Dave King (2nd officer), Paul Clarke (3rd officer), Duncan Anderson (chief engineer), Colin Smith (2nd engineer), Jim Stevenson (3rd engineer), Tom Elliot (4th engineer), Doug Trewet (deck engineer), Steve Mee (radio officer), and Colin Lang (bosun). That season, from Dec. 19, 2002 to Jan. 1, 2003, she was in the Drake Passage, many times going south of 60°S. She was back in 2003-04. At the end of this tour, Dave Gooberman left BAS after 6 years, and took a job as ship's inspector in Douglas, Isle of Man.

The *James Cook*. A 5401-ton, 89.5-meter Royal research ship, capable of 16 knots, she was owned by NERC, and built in 2006 by the Norwegian company Flekkefjord Slipp & Maskinbabrikk, of Norway, to replace the old *Charles Darwin*. The hull was built in Gdansk, Poland. She was launched by Princess Anne in Feb. 2007. The vessel's first skipper was Robin Plumley (q.v.).

James Duncan Mountains *see* **Duncan Mountains**

Mount James E. West *see* **Mount West**

James Forbes Glacier. 69°12' S, 158°01' E. A glacier flowing to the sea immediately S of Williamson Head, and 10 km WNW of Drake Head, in Oates Land, in Victoria Land. Named by ANCA on Aug. 12, 2010, for James Forbes.

James Island *see* **Smith Island**

James Lassiter Ice Barrier *see* **Ronne Ice Shelf**

The *James Monroe*. American sealing sloop of 80 tons and a crew of 7, commanded by Nat Palmer, as part of the Fanning-Pendleton Sealing Expedition of 1821-22 to the South Shetlands. John Dodge was 1st mate. With the *Dove*, under the command of George Powell, she discovered the South Orkneys in Dec. 1821. She left the South Shetlands on Jan. 30, 1822, and arrived back at Newport on April 15, 1822, with a cargo of oil.

James Nunatak. 69°59' S, 62°27' W. A conical nunatak, rising to 410 m, 8.75 km S of Lewis Point, on the Wilkins Coast, on the E coast of Palmer Land. Photographed aerially in Sept. 1940, by USAS 1939-41, and probably seen from the ground by a sledging party that explored this coast during the same expedition. In Nov. 1947 it was surveyed and charted by a combined sledging party of Fids from Base E and personnel from RARE 1947-48, and named by the FIDS for David P. James. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer.

Mount James Robertson *see* **Mount Robertson**

Île James Ross *see* **James Ross Island**

[1]**James Ross Island**. 64°15' S, 57°45' W. A large irregular-shaped island, 60 km long in a N-S direction, with a maximum elevation of 1630 m above sea level, it lies off Trinity Peninsula and the N tip of the Antarctic Peninsula, from both of which it is separated by the Prince Gustav Channel. It is rich in fossils. It was roughly charted on its E side in 1842-43, by RossAE 1839-43. On an 1894 U.S. Hydrographic Office chart, and also on Friederichsen's 1895 German map (as James Ross Insel), the name Ross Island was applied to an island about 45 km E of Seymour Island. But, in fact, this island was later proved to be non-existent. The land discovered by Ross was later (and erroneously) called Terre Louis Philippe (it appears that way on a chart of 1903). On charts from DWE 1892-93 and ScotNAE 1902-04 the island was shown as part of Palmer Land. Its insularity was proved in Oct. 1903 by SwedAE 1901-04, who charted it, and it was named by Nordenskjöld as James Ross Insel, for, of course, Sir James Clark Ross. The name appeared in English language translations of Nordenskjöld's maps as James Ross Island. On Sobral's chart of 1904, it appears as Isla de Haddington, named thus in association with Mount Haddington. It also appears as Haddington Land on one of Nordenskjöld's expedition charts. On Sobral's 1907 chart it appears as Isla Haddington, with the notation "proved to be an island." The Argentines were calling it Isla Ross as early as 1908, and, despite the fact that it appears on a 1945 Argentine chart as Isla James Ross, that (i.e., Isla Ross) was the name accepted by the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. The first to call it Ross Island was Charcot, in his maps of FrAE 1903-05 (he actually called it Île Ross), and it appears as Ross Island on British charts of 1921 and 1940. However, this name has been greatly discouraged (although not successfully, it would appear) in favor of the other (and more famous) island of that name in McMurdo Sound. On Charcot's maps of 1912 (from FrAE 1908-10) he calls it Île James Ross. The island was partly re-surveyed by Fids from Base E between 1945 and 1947, and they completed the survey between 1953-55. On a 1948 Argentine chart it appears as Isla María, as "a symbol of love and faith." US-ACAN accepted the name James Ross Island in 1947. It appears as such on British charts of 1948 and 1949, and UK-APC accepted the name on Sept. 8, 1953, it appearing in the 1955 British gazetteer. There are several other main islands in the group to which James Clark Ross Island belongs, and this group really demands a name. However, everyone has been reluctant to face this issue squarely, everyone, that is, but the Chileans, who call it Islas Ross (q.v.).

[2]**James Ross Island** *see* **Bull Island**, **Foyn Island**

The *James Stewart*. New Brunswick whaling ship under the command of Capt. Dougherty, she was in Antarctic waters in 1841, and spotted Dougherty Island (q.v.).

James W. Ellsworth Land *see* **Ellsworth Land**

Punta Jameson *see* **Jameson Point**

Jameson, James Charles. b. Aug. 3, 1907, Portsmouth. He joined the Merchant Navy in Jan. 1924, and by 1928 and 1929 was an able seaman plying the Atlantic on the *Aquitania* and the *Berengaria*, between Southampton and New York. He was an able seaman on the *Discovery II*, 1929-33, and on the *William Scoresby* 1934-35. He died in late 1973, in Exeter.

Jameson Island *see* **Jameson Point, Low Island**

Jameson Point. 63°18' S, 62°16' W. A point, 5 km N of Cape Garry, on the W coast of Low Island, in the South Shetlands. First roughly charted (but not named) by FrAE 1908-10. Photographed aerially by FIDASE in 1956-57, and more accurately delineated from these photos by FIDS cartographers. Named by UK-APC on Aug. 31, 1962, in order to preserve the name of Jameson in this area (Jameson Island was Weddell's name for Low Island). US-ACAN accepted the name in 1965. The Argentines call it Punta Jameson. Last plotted by the UK, in late 2008.

Jamesons Island *see* **Low Island**

Jamesway Camp. An American field camp, built in 1978-80, on the S side of the Sweeney Mountains, in Ellsworth Land. Named for the type of hut used.

Jamesway Huts. A Korean War invention. 16 by 16 foot frame-type tents built from a kit, and which can be added on to. They are erected by covering semi-circular, prefabricated wooden arches with insulated canvas panels called "blankets." A Jamesway hut resembles a Quonset hut or a Nissen hut. They were popular in Antarctica because they could be assembled rapidly and carried by Hercules LC-130 aircraft.

Jamieson Ridge. 80°27' S, 25°53' W. A narrow ridge, 1.5 km long, and rising to about 1200 m (the British say about 1150 m), at the SW end of the Herbert Mountains, in the Shackleton Range. Photographed by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station, 1968–71. Namd by UK-APC on Jan. 5, 1972, for Thomas Francis Jamieson (1829–1913), Scottish geologist whose work on the ice-worn rocks of Scotland led to a knowledge of the true origin of glacial striae, in 1862. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Mount Jamroga. 71°20' S, 163°06' E. Rising to 2265 m, 13 km E of Mount Gow in the rugged heights between Carryer Glacier and Sledgers Glacier, in the Bowers Mountains of Oates Land, in Victoria Land. Named by US-ACAN in 1970, for Lt. Cdr. John Joseph Jamroga (b. Dec. 29, 1927, Stamford, Conn.), who joined the U.S. Navy in June 1946, and was photographer here in 1967–68. He retired from the Navy in Oct. 1981.

The *Jan Wellem*. This was the former Hamburg Amerika Line steamer *Württemburg*, built in 1921. For a year she did the Hamburg to New York run, and was then transferred to the South American run. In 1935 she was sold to the Düsseldorf soap manufacturer Henkel, and converted that year into the 11,776-ton, 147-meter German floating factory whaling ship *Jan Wellem*, capable of 10.5 knots, run by the Erste Deutsche Walfanggesellschaft, and in Antarctic waters in 1936–37, under the command of Capt. Otto Kraul. Led by Dr. Wolfgang Frank, her crew of 240 took 920 whales that season, making 62,000 barrels of oil. She was back in 1937–38 (again under Capt. Kraul), and 1938–39, and then the war came. She was converted into a tanker, and on April 28, 1940, while taking part in the German invasion of Norway, the Nazis scuttled her at Narvik, in order to prevent her falling into Allied hands. However, she was refloated that August, repaired, and by 1943 was back in operation. In 1946 she was wrecked, and was broken up in the north of England in 1947.

Cerro Jaña. 62°28' S, 60°47' W. A hill rising to an elevation of 73 m above sea level, about 180 m SW of Cerro Puleche, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Ricardo Jaña Obregón, civil engineer with the Instituto Antártico Chileno, who did geodetic and cartographic work in the Cape Shirreff area in 1991.

Morro Jaña. 64°21' S, 56°57' W. A hill on the E side of Spath Peninsula, Snow Hill Island, off the NE coast of the Antarctic Peninsula. This feature was named by the Chileans, for Efraín Jaña Jirón, of the Chilean Army, on the *Maipo* during ChilAE 1954–55, and who wintered over at General Bernardo O'Higgins Station in 1955. The Chileans call it Morro Izquierdo (i.e., "left hill"), as opposed to its neighbor Morro Derecho (q.v.), just to the right.

The *Jane*. Scottish sealing brig of 154 tons owned by shipbuilder James Strachan of Leith and James Mitchell, a London insurance broker, and registered at Greenock. American-built, she had been seized by the British during the War of 1812, and was commanded by James Weddell for 3 successive Antarctic voyages, 1819–21, 1821–22, and 1822–24, with a 22-man crew. After the first voyage Weddell bought a share in the *Jane*. The second voyage, the *Jane* left London on Sept. 9, 1822, left Gravesend on Sept. 13, then went to Madeira, and on to Patagonia and the South Shetlands. On Feb. 20, 1823 the *Jane* reached a southing record of 74°15' S, 34°16' W, in the Weddell Sea. The *Jane*'s tender was the *Beaufoy of London*, commanded first by Michael McLeod and later by Matthew Brisbane. The *Jane* arrived back in Gravesend on July 18, 1824, nearly 3 weeks after the *Beaufoy*, with 66 casks of oil and 3076 sealskins. Weddell continued to command the *Jane* in the Atlantic until she was scuppered in 1829. Her loss was Weddell's loss.

Jane Bank. 61°45' S, 38°45' W. A submarine feature in the N part of the Weddell Sea, along the S margin of the South Orkneys. Discovered in 1996–97 on the *Hespérides*, during the SpanAE of that season. Named for Weddell's ship, the *Jane*.

Jane Basin. 62°15' S, 40°30' W. A back-arc (or marginal) basin in the N part of the Weddell Sea, along the S margin of the South Orkneys. Discovered in 1996–97 on the *Hespérides*, during the SpanAE of that season. Named for Weddell's ship, the *Jane*.

Jane Col. 60°42' S, 45°38' W. A col running at an elevation of about 150 m above sea level, W of Jane Peak, at the head of Limestone Valley, on Signy Island, in the South Orkneys. Named by UK-APC on Dec. 20, 1974, in association with Jane Peak. US-ACAN accepted the name in 1975.

The *Jane Maria*. American sealing brig of 170 tons, 74 feet long, built in New York in 1796. James Sheffield was her 1st mate in 1817–18, and her captain in 1818–19. On July 1, 1819 she was registered, and that day left for the Falkland Islands under the command of Capt. Robert Johnson. She formed part of the New York Sealing Expedition of 1820–21, and left Antarctica on March 9, 1821, to return to New York. She was back in the South Shetlands on Oct. 27, 1821, for the 1821–22 season, under the command of Capt. Abraham Blauvelt, still part of the New York Sealing Expedition.

Jane Peak. 60°43' S, 45°38' W. A conspicuous nunatak rising to 210 m (the British say 205 m), 0.8 km W of the N part of Borge Bay, on Signy Island, in the South Orkneys. Roughly surveyed by the personnel on the *Discovery II* in 1933, and again (more thoroughly) by FIDS in 1947, it was named by UK-APC on March 31, 1955, for the *Jane*. US-ACAN accepted the name in 1956.

Mount Jane Wade *see* **Mount Gray**

Mount Jane Wyatt *see* **Mount Wyatt**

The *Janequeo*. A 2380-ton, 58.3-meter Chilean tug, built in Norway in 1974, she was acquired by Chile in 1987, and, based out of Valparaíso, was used on ChilAE 1993–94 (Captain Jorge Chubretovic). She was taken out of service in 1998.

Rocher Janet *see* **Janet Rock**

Janet Rock. 66°33' S, 139°10' E. A small rock outcrop at the foot of the coastal ice cliffs, W of Pointe Ebba, between Cape Pépin and the Géologie Archipelago, 12 km WNW of Liotard Glacier, in East Antarctica. This area was photographed aerially by OpHJ 1946–47, but this particular rock was charted by the French in 1951–52, and they named it in 1953 as Rocher Janet, for 19th-century spiritualist and philosopher Paul Janet. US-ACAN accepted the translated name in 1955. There is also an apocryphal etymology, that the feature was named for Bob Dovers' wife, Dovers being with the French party that year. However, Dovers' wife's name was Wilma, so this is unlikely.

Mount Janetschek. 74°54' S, 162°16' E. Rising to 1455 m, between Mount Larsen and Widowmaker Pass, at the S side of the mouth of Reeves Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Heinz Georg Maria Janetschek (b. Aug. 3, 1913, Bludenz, Vorarlberg, Austria. d. March 30, 1997 — Easter Sunday, in Innsbruck), biologist at McMurdo, 1961–62.

Janke Nunatak. 75°53' S, 70°27' W. An isolated nunatak, rising to about 1280 m, 6 km NE of Carlson Peak (which is in the NW part of the Hauberg Mountains), on the Orville Coast, where Ellsworth Land meets Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for John William Janke, USARP radioman who wintered-over at Eights Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Janosy Hill. 78°09' S, 163°44' E. On the NE shore of Keyhole Lake, in Victoria Land. Named by US-ACAN in 1994, for geologist Robert John Janosy (b. 1969), with the Byrd Polar Research Center, a member of the geological field party to the Royal Society Range, 1991–92.

Janovskijnuddane *see* **Yanovskiy Rocks**

Nunataki Janovskogo. 69°15' S, 34°25' E. An isolated group of nunataks NE of Riiser-Larsen Peninsula, in the W part of the Prince Harald Coast. Named by the Russians.

Skaly Janovskogo *see* **Yanovskiy Rocks**

Jansen Peak *see* **Janssen Peak**

Jansenryggen. 74°41' S, 10°53' W. An ice ridge, 9 km long, in Pionerflaket, in the N part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians (name means "Jansen ridge") for Jan B. Jansen (b. 1889), professor at the University of Oslo, editor of *The Bulletin*, the leading newspaper of the Norwegian Resistance.

Pic Janssen *see* **Janssen Peak**

Sommet Janssen *see* **Janssen Peak**

Janssen Peak. 64°53' S, 63°31' W. A conspicuous peak, rising to 1085 m, and forming the SW end of the Sierra DuFief, in the SW part of

Wiencke Island, in the Palmer Archipelago. Discovered, roughly charted, and photographed in Feb. 1898, by BelgAE 1897-99. Charted by FrAE 1903-05, and named by Charcot as Sommet Janssen, for physician and astronomer Pierre-Jules-César Janssen (known as Jules Janssen). That name, and Pic Janssen, both appear on expedition maps from FrAE 1903-05 and FrAE 1908-10 respectively. It is reputed to appear on a 1953 Argentine chart as Pico Margalot, which surely has to be named for Pedro Francisco Margalot (b. Dec. 6, 1924, Corrientes), a member of Argentina's first flight to the Pole in 1961-62. However, this naming was considerably before his Antarctic involvement, which leaves a puzzle to be solved. US-ACAN accepted the name Janssen Peak in 1952, and it appears as such in the American gazetteer of 1956. It was surveyed by Fids on the *Norsel*, in April 1955, and UK-APC accepted the American naming on Sept. 8, 1957. It appears as such on a British chart of 1958. It appears on Argentine charts of 1957 and 1958, as Pico Gorriti, named after Juan Ignacio Gorriti (*see* **Covey Rocks**). It appears misspelled as Jansen Peak on a British chart of 1974.

The *Jantar*. Polish vessel, in Antarctic waters in 1984-85, skipper Jan Boruta (*see* **Boruta Point**). She took down the Polish geophysics expedition to the South Shetlands and the west side of the Antarctic Peninsula, in 1987-88, led by Aleksander Guterch. The skipper of the ship that season was Zbigniew Kulaga.

Jantar Hills. 64°52' S, 62°48' W. A group of hills composed mainly of Lower Cretaceous lavas, between Porphyry Glacier and Pluton Glacier, S of Leith Cove, Paradise Harbor, on the Danco Coast of Graham Land. Named by the Poles on Sept. 1, 1999, for the *Jantar*.

The *Jantine V*. Dutch yacht, skippered by Dick and Elly Koopmans, which visited the South Shetlands and the Antarctic Peninsula in 1989-90.

January Col. 83°24' S, 162°00' E. A high col on the N side of Claydon Peak, on the Prince Andrew Plateau, in the SE part of the Queen Elizabeth Range. Approached from New Years Pass by Hillary's Southern Survey Party, during BCTAE 1956-58, who, by this col were able to gain a view of the mountains to the N and E, and so named by them because they climbed it in Jan. 1958. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Janulis Spur. 85°07' S, 90°27' W. A rock spur extending eastward from the Ford Massif, between Green Valley and Aaron Glacier, in the Thiel Mountains. Named by surveying party members Peter Bermel and Art Ford in 1961, for the VX-6 pilot Lt. (later Cdr.) George Janulis, who flew the party into the Thiel Mountains. US-ACAN accepted the name in 1962.

Mount Janus. 71°04' S, 163°06' E. A bifurcated peak rising to 2420 m at the N side of the head of Montigny Glacier, in the Bowers Mountains of Oates Land, in Victoria Land. Named by Roger Cooper (*see* **Cooper Nunatak**), leader of an NZARP geological party to the area in 1981-82, for Janus, the old Roman god of doors and portals, who looked both ways. NZ-APC accepted the name, and US-ACAN followed suit.

Janus Island. 64°47' S, 64°06' W. A rocky island, about 315 m long, about 0.8 km S of Litchfield Island, and about 2.5 km SW of Palmer Station, off the SW coast of Anvers Island, in the Palmer Archipelago. The southernmost of the islands on the W side of the entrance to Arthur Harbor, it has 3 tiny satellites of its own, to the immediate north. Surveyed by FIDS in 1955. Named by UK-APC on Sept. 4, 1957, as Janus Islet, for the Roman god, because it guards Arthur Harbor. It appears as such on a British chart of 1958. On July 7, 1959, UK-APC redefined it, as Janus Island, and US-ACAN accepted that name in 1963.

Janus Islet *see* **Janus Island**

Japan. In 1910-12 the Japanese South Polar Expedition (q.v.) took place under the leadership of Nobu Shirase. In 1933 the Nippon Polar Research Institute was formed, at Sit-Shi, in Japan, and on Dec. 25, 1933, Mr. Shirase became its first president. In 1934-35 the first Japanese whaling factory, the *Tonan Maru*, sailed to Antarctica, with her catchers, and Japan has engaged in Antarctic whaling ever since, mostly off the coast of East Antarctica. However, World War II did put a dent in Japan's whaling interest, as it did with every other country, but in 1946-47 and 1947-48 they were allowed (by Viceroy MacArthur) to send whaling fleets to Antarctica. The second of these two seasons had 27 ships divided into 2 fleets. The UK observer on this expedition was A.V. Hemming, RN (ret.), and also present were 2 U.S. observers and a Norwegian. The expedition returned to Japan in April 1948, with 1321 whales. In 1955 an Antarctic Committee in the Science Council of Japan was formed, and an Antarctic program in the Ministry of Education was also begun. In 1956-57 the First Japanese Antarctic Research Expedition (Jare I) went to Antarctica for IGY, and set up Showa Station, the main Japanese base in Antarctica (see the entry below, **Japanese Antarctic Expeditions**). There has been a JARE almost every year since. In 1959 Japan was one of the original 12 signatories of the Antarctic Treaty, and later set up another couple of stations — Mizuho Station and Asuka Camp. The National Institute of Polar Research heads the JAREs, and maintains the scientific stations. In Dec. 1968 a team of 12 from Showa Station arrived at the South Pole after an 11-week traverse. The round trip was the longest ever to the Pole and back — 3200 miles. In 1995 the third actual scientific station, Dome Fuji, was built.

Japanese Antarctic Expeditions. Known as JARE. These are the modern day JAREs (but *see* **Japanese South Polar Expedition, 1912-13**). **JARE 1. 1956-58**. The expedition left Japan on Nov. 8, 1956, on the *Soya*, under the leadership of Dr. Takeshi Nagata. The skipper of the ship was Mitsuji Matsumoto. The auxiliary ship was the *Umitaka Maru*. There were 53 scientists and logistics support personnel, 240 tons of supplies, 18 Sakhalin sledge dogs, as well as a Cessna 180 light airplane and two Bell 47-6 helicopters to be used for reconnaissance. Masayoshi Murayama was part of this expedition. Between Jan. 1 and Jan. 6 the *Umitaka Maru* sailed south to Enderby Land to do studies in currents, under Professor T. Kumigori. On Jan. 7, 1957 the *Soya* arrived at the pack-ice. On Feb. 14, 1957 Showa Station was inaugurated, and the following day the *Soya* left, getting stuck in the pack-ice on Feb. 16, 1957. She was helped out on Feb. 28 by the Russian ship *Ob'*. Along with the *Umitaka Maru* (with Kumigori on board), the *Soya* returned via Cape Town to Tokyo, with 42 scientists and 77 crew, leaving behind in Antarctica the 11-man wintering party led by Eizaburo Nishibori, which carried out a reconnaissance of the Lützow-Holm Bay area. In Feb. 1957 they stored 260 drums of fuel, 5 tons of food, dynamite, and 6 sledges on a neighboring (and stationary) iceberg, as part of their reserves. In March the iceberg blew away in a blizzard. Geologist Tatsuo Tatsumi discovered uranium (q.v.). **JARE 2. 1957-59**. Left Japan on the *Soya* on Oct. 21, 1957, again under Dr Takeshi Nagata, Masayoshi Murayama was deputy leader, and the ship was again skippered by Capt. Mitsuji Matsumoto. On Dec. 20, 1957 the *Soya* arrived at the pack-ice, and became stuck here, unable to approach Showa Station. On Feb. 11, 1958 the 11 men from Showa were airlifted to the *Soya*, and on Feb. 14 Nagata abandoned JARE II due to the ice. They left behind, among other things, the 15 sledge dogs of JARE I. This caused a scandal in Japan and (much later) was the basis for a movie. **JARE 3. 1958-60**. Led by Takeshi Nagata. Masayoshi Murayama was deputy leader. The ship was the *Soya*, commanded by Mitsuji Matsumoto. When the *Soya* arrived at Showa Station they found two of the dogs, Taro and Jiro (q.v.) still alive. The 14-man wintering party, led by Mr. Murayama, re-opened Showa Station and enlarged it. SovAE visited them. **JARE 4. 1959-61**. Led by Tatsuro Tatsumi. They came down on the *Soya*. 15 men wintered-over at Showa Station under Tetsuya Torii. **JARE 5. 1960-62**. Led by Masayoshi Murayama. They came down on the *Soya*. 16 men wintered-over under Mr. Murayama. **JARE 6. 1961-63**. It was really only JARE 1961-62, as Torao Yoshikawa led the relief party down on the *Soya*, and closed Showa Station in Feb. 1962. There was no wintering-over party in 1962, and this was the last JARE for a few years. **JARE 7. 1965-67**. This was the first JARE since 1963. They came down on the *Fuji*. Masayoshi Murayama led the expedition. They re-established Showa Station, on Jan. 15, 1966. **JARE 8. 1966-68**. They came down on the *Fuji*. Tetsuya Torii led the expedition. Showa station was relieved. **JARE 9. 1967-69**. They came down on the *Fuji*. Masayoshi Murayama led the expedition. **JARE 10. 1968-70**. They came down on the *Fuji*. Kou Kusunoki led the expedition. **JARE 11. 1969-71**. They came down on the *Fuji*. Tatsuro Matsuda led the expedition. Mizuho Station was built in July 1970. **JARE 12. 1970-72**. They came down on the *Fuji*. Takashi Oguchi led the expedition.

JARE 13. 1971-73. They came down on the *Fuji*. Zenbei Seno led the expedition. **JARE 14. 1972-74**. They came down on the *Fuji*. Kou Kusunoki led the expedition. **JARE 15. 1973-75**. They came down on the *Fuji*. Masayoshi Murayama led the expedition. **JARE 16. 1974-76**. They came down on the *Fuji*. Yoshio Yoshida led the expedition. **JARE 17. 1975-77**. They came down on the *Fuji*. Takeo Yoshino led the expedition. **JARE 18. 1976-78**. They came down on the *Fuji*. Kou Kusunoki led the expedition. **JARE 19. 1977-79**. They came down on the *Fuji*. Takeo Hirasawa led the expedition. **JARE 20. 1978-80**. They came down on the *Fuji*. Yoshio Yoshida led the summer operation, and Michio Yamazaki led the winter operation. **JARE 21. 1979-81**. They came down on the *Fuji*. Koshi Kizaki (*see* **Mount Kizaki**) led the summer operation, and Sadao Kawaguchi led the winter operation. **JARE 22. 1980-82.** They came down on the *Fuji*. Yoshio Yoshida led the expedition. **JARE 23. 1981-83**. They came down on the *Fuji*. Takao Hoshiai led the expedition. **JARE 24. 1982-84**. They came down on the *Fuji*. Shinji Mae led the expedition. **JARE 25. 1983-85**. They came down on the *Shirase*. Takeo Hirasawa led the expedition. **JARE 26. 1984-86.** They came down on the *Shirase*. Sadao Kawaguchi led the summer operation, and Hiroshi Fukunishi led the winter operation. Asuka Camp was built in Dec. 1984. **JARE 27. 1985-87**. They came down on the *Shirase*. Yoshio Yoshida led the summer operation, and Yasuhiko Naito led the winter operation. **JARE 28. 1986-88**. They came down on the *Shirase*. Takao Hoshiai led the expedition. Mizuho Station was closed in 1987. **JARE 29. 1987-89**. They came down on the *Shirase*. Okitsugu Watanabe led the expedition. **JARE 30. 1988-90**. They came down on the *Shirase*. **JARE 31. 1989-91**. They came down on the *Shirase*. **JARE 32. 1990-92**. Susumu Kukubun led the expedition on the *Shirase*. Activities at Asuka Station were suspended on Dec. 22, 1991. An advance camp was established to prepare for the construction of the new station, Dome Fuji. Two Belgian scientists accompanied the expedition for the 1990-91 summer. **JARE 33. 1991-93**. The ship was the *Shirase*. **JARE 34. 1992-94**. The ship was the *Shirase*. **JARE 35. 1993-95**. Okitsugu Watanabe led the expedition on the *Shirase*. **JARE 36. 1994-96**. Yutaka Ageta led the expedition on the *Shirase*. Dome Fuji was finally occupied. **JARE 37. 1995-97**. The ship was the *Shirase*. **JARE 38. 1996-98**. The ship was the *Shirase*. **JARE 39. 1997-99**. The ship was the *Shirase*. **JARE 40. 1998-2000**. The ship was the *Shirase*. **JARE 41. 1999-2001**. Masaru Ayukawa led the expedition on the *Shirase*. **JARE 42. 2000-02**. The ships were the *Shirase* and the *Tangaroa*. **JARE 43. 2001-03**. The ships were the *Shirase* and the *Tangaroa*. **JARE 44. 2002-04**. They arrived in Antarctica in Dec. 2002 and left in Jan. 2004. Ships were the *Shirase* and the *Tangaroa*. 42 people wintered-over and 20 stayed for the summer. The bases were Showa Station and Dome Fuji Base (it was the last wintering-over operation at Dome F). There was a doctor with each team. **JARE 45. 2003-05**. The ship was the *Shirase*. 42 people wintered-over. Again, one doctor per team. **JARE 46. 2004-06**. Dec. 2004 to Jan. 2006. The ship was the *Shirase*. 37 people wintered-over. Again, one doctor per team. In the austral summer of 2005-06 a man had to be evacuated from Dome Fuji Station suffering from AV Block. He was flown back to Tokyo with a multi-national effort. **JARE 47. 2005-07**. The ship was the *Shirase*. 40 people at Showa Station. **JARE 48. 2006-08**. The ship was the *Shirase*. **JARE 49. 2007-09**. The ship was the *Shirase*, on her last trip. **JARE 50. 2008-10**. The ship was the chartered Australian ship, *Aurora Australis*. **JARE 51. 2009-11**. The ship was the new *Shirase*. *See also* **The *Hakurei Maru***.

Japanese South Polar Expedition. 1910-12. Japan's first venture into Antarctica, led by Nobu Shirase. Because Japan had never really explored outside their medieval world, Shirase had trouble getting backing for the expedition, but statesman Count Okuma came to his aid. **Nov. 29, 1910**: With hardly anyone caring, or noticing, the expedition skulked out of Tokyo, in the woefully inadequate *Kainan Maru*. The team had been picked for three qualities—"health, temperance, and simplicity." The expeditioners were: Shirase (leader), Terutaro Takeda (leading scientist), Keiichi Tada (secretary), Yoshitada Yoshino (in charge of clothing), Seizo Miisho (surgeon), Kitaro Miura (expedition cook), Genzo Nishikawa (expedition steward), and Ainu nationalists and dog handlers Shinkichi Hanamori and Yasunosuke Yamabe. The crew were: Naokichi Nomura (captain), Zensaku Tanno (1st mate), Tomoji Tsuchiya (2nd mate), Heitaro Sakai (3rd mate); helmsmen Gisaku Kamada, Ichimatsu Sato, and Kitaro (or Onitaro) Watanabe; Kotaro Shimizu (chief engineer), Susumu Muramatsu (2nd engineer); Yoshitake Shima (purser), Isaburo Yasuda (carpenter), seamen Yoshiji Fukushima, Kenajiro Shibata, Sajiro Takagawa (also known as Inoue), and Chikasaburo Watanabe; stokers Mioosaku Hamasaki, Rokugoro Takatori, and Sumimatsu Takatori; and Hirose Tokei (oiler; also known as Sasazaki). **Feb. 7, 1911**: The *Kainan Maru* arrived at Wellington, NZ, with 12 dogs aboard. **Feb. 11, 1911**: They left Wellington. **Feb. 26, 1911**: They saw their first icebergs. **Early March, 1911**: They reached the Ross Sea. **March 6, 1911**: They arrived at Victoria Land. The weather being totally against them, they were unable to land, however. **March 14, 1911**: They left Antarctica for Australia. **May 1, 1911**: They landed in Sydney, where they received a monumentally bad press, partly because they were Japanese (the "yellow peril" was at its height, as it always was in Australia in those days), partly because they were thought to be spies, and partly because they were going for the Pole, as was more "local" hero Scott. Although Shirase publicly re-stated that his intention was merely an exploration of Edward VII Land, they didn't believe him. Nomura and several other crew members returned to Japan to try to raise more funds, while Shirase and his expeditioners remained in parlous conditions in Sydney, unable to find food or lodgings. One helpful citizen allowed them access to his garden in Parsley Bay Reserve on which they built a pre-fabricated hut to eke out the rest of their stay. However, as soon as Professor Edgeworth David found out what was happening, he changed all that. **Nov. 19, 1911**: Phase 2 of the expedition left Sydney Harbour. Nomura had brought in some new team members. 1st mate Tanno had gone, and was replaced by 2nd mate Tsuchiya. 2nd mate was now the former 3rd mate, Sakai, and there was no 3rd mate for the 2nd half of the expedition. Tada, the secretary had become assistant naturalist to the new naturalist aboard, Masakichi Ikeda; 2nd engineer Muramatsu had taken Tada's place as secretary; and oiler Tokei had taken Muramatsu's place as 2nd engineer. Seaman Watanabe had become cook in place of Miura, and stoker Takatori had gone. Yukihiko Miyake was on board as a mate in training and translator, and cinematographer Yasunao Taizumi was also new to the expedition. The expedition now had 29 fresh Sakhalin sledge dogs. On board during a ceremony, Shirase presented Edgeworth David with his Samurai sword. **Jan. 3, 1912**: They sighted the Admiralty Range. **Jan. 16, 1912**: They were back at the Ross Ice Shelf, by which time Scott was at the Pole, and Amundsen had already been there; although Shirase could not have known any of this, he had already learned that if he did, indeed, succeed in getting to the Pole, he would come in third, at least. They visited the Bay of Whales, and discovered Kainan Bay and Okuma Bay. By chance, in 78°29' S, they met the *Fram*, which was waiting for Amundsen's return from 90°S. **Jan. 20, 1912**: As a gesture (for that is all it could be now) Shirase led the Dash Patrol (q.v.) south toward the Pole. **Jan. 28, 1912**: The Dash Patrol got as far south as 80°05' S. They had covered 260 km. While the Dash Patrol was heading south, the *Kainan Maru* went cruising the Edward VII Peninsula (as it became known later), and dropped a shore party at Biscoe Bay, that party sledging to the edge of the Alexandra Mountains, a range no one had ever seen before from close up. Getting back to the ship, they all returned to the Bay of Whales. **Feb. 2, 1912**: It wasn't until then that they could enter the Bay of Whales, where, with great difficulty, they managed to get the Dash Patrol back on board. **Feb. 3, 1912**: They left, and headed north. **March 23, 1912**: They arrived at Wellington. **April 2, 1912**: They left Wellington. **June 20, 1912**: They reached Yokohama, to a tremendous reception.

Japanese-Swedish Antarctic Expedition. Oct. 2007-March 2008. Known as JASE. A collaborative effort for the International Polar Year. 9 Swedish expeditioners in 4 tracked vehicles left Wasa (the Swedish station) bound for Kohnen Station, then on to Dome Fuji, and finally the Japanese station of Showa. Per Holmlund, Tomas Karlberg, Margareta Hansson, Susanne Ingvander, Stefan Gunnarsson, Sigvard Eriksson, Pär Ljusberg, Torbjörn Karkin, and Ivar Andersson. At the same time 8 Japanese expeditioners

in 4 tracked vehicles left Showa, bound for Wasa, following the same route, but in reverse. Shuji Fujita, Hiroyuki Enomoto, Naoko Shiga (a woman), Fumio Nakazawa, Kotaro Fukui, Hiroyuki Kaneko, Kazuyuki Taniguchi, and Shin Sugiyama. They met 1400 km later (for both parties) on the Polar Plateau, on Dec. 27, 2007, and exchanged two of the personnel (Mr. Enomoto and Mr. Sugiyama exchanged with Mr. Karlin and Mr. Andersson) and some scientific equipment, as well as sharing data. This is also known as the Japanese Swedish Antarctic Traverse (or JASAT). They did mapping, core-sampling, air analysis, and mapped the interior of the ice sheet.

Jaques. *See also* **Jacques**

Lake Jaques. 69°24' S, 76°18' E. About 3.5 km SW of Law-Racovitza Station, in the Larsemann Hills, with ice cliffs from the plateau forming its S shore. Named by ANCA.

Jaques Nunatak. 67°53' S, 66°12' W. A small nunatak, 5 km SSW of Mount Kennedy, in the Gustav Bull Mountains of Mac. Robertson Land. Mapped by Australian cartographers from ANARE air photos taken in 1956 and 1959. The position of this nunatak was fixed by John Manning, surveyor at Mawson Station, during an ANARE tellurometer traverse from Mawson to Church Mountain. Named by ANCA on Oct. 22, 1968, for George Anthony "Tony" Jaques, weather observer at Mawson in 1967, who was on that traverse. He also wintered-over at Casey Station in 1976. US-ACAN accepted the name in 1971.

Jaramillo, Miguel Ángel. Met man from the Observatorio Magnético de Pilar, in Córdoba Province, Argentina, who was 2nd-in-command of Órcadas Station in 1927.

Punta Jaraquemada. 69°18' S, 68°30' W. A point between Mount Guernsey and Cape Jeremy, in Marguerite Bay, on the W coast of the Antarctic Peninsula, between the Wordie Ice Shelf and the N entrance to George VI Sound. Named by the Chileans. The Argentines call it Cabo María Josefa. These are the co-ordinates given by SCAR, but they are to be treated cautiously.

Cerro El Jardin *see under* **E**

Jardine, Daniel "Dan." b. March 17, 1927, Airdrie, Scotland, son of James Jardine and his wife Nelly McLenachan. He joined FIDS as a geologist, in 1948, and wintered-over at Base G in 1949. He traveled much on King George Island. On his return to Port Stanley, he married Mary, a Falkland Islander, and he resigned from FIDS in June of that year. He returned to Scotland, worked as a teacher, and sold his bagpipes to get the fare to come to Canada — alone. In Toronto he met his second wife, Mary "Mae" Dickson, originally from Motherwell, and they returned to Scotland to get married in 1959. Then back out to Ontario, Dan joined Imperial Oil, and with them traveled the world, from Houston to the Khyber Pass (where he played his new bagpipes) to Calgary, where he was chief geologist for BP. He died in Calgary on Dec. 27, 1994.

Jardine Peak. 62°10' S, 58°30' W. Rising to 284 m (the British say about 225 m), 1.5 km SSW of Point Thomas, on the W side of Admiralty Bay, King George Island, in the South Shetlands. FIDS did geological work here in 1949, and the feature was photographed aerially in 1956 by FIDASE. FIDS surveyed it from the ground in 1958. Named by UK-APC on Sept. 23, 1960, for Dan Jardine. US-ACAN accepted the name later in 1960. Last plotted by the UK, in late 2008.

JARE *see* **Japanese Antarctic Research Expedition**

Jare IV Nunataks. 71°38' S, 36°00' E. The name Jare is also seen completely capitalized (i.e., JARE IV). A group of 4 aligned nunataks, 5 km NNE of Mount Gaston de Gerlache, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by BelgAE 1959-61, led by Guido Derom, who named them for Jare IV (*see* **Japanese Antarctic Research Expedition** 1959-61). In Nov.-Dec. 1960 a field party of this Japanese expedition reached this area and conducted geodetic and other scientific work. US-ACAN accepted the name in 1966.

Jarebrekka. 72°23' S, 23°51' E. A partly ice-covered slope, 27 km long, in the central part of the Sør Rondane Mountains. The name means "the edge slope" in Norwegian.

Jarek, José Eduardo *see* **Órcadas Station**, 1957, 1958, 1963, 1965

Jaren *see* **Jaren Crags**

Jaren Crags. 71°45' S, 6°44' E. A row of rock peaks, partly ice-capped, in the form of a bluff, just W of Storkvarvet Mountain, in the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Jaren (i.e., "the edge"). US-ACAN accepted the name Jaren Crags in 1967.

Jarina Nunatak. 76°23' S, 160°10' E. Rising to over 1600 m, 11 km WNW of the main summit of Trinity Nunatak, in the stream of Mawson Glacier, in Victoria Land. Named by US-ACAN in 1965, for Lt. Cdr. Michael Peter "Pete" Jarina (b. Dec. 2, 1919, Stamford, Conn. d. April 1, 2008, Bagdad, Fla.), who, immediately after graduation in 1942, enlisted in the U.S. Coast Guard, and in 1943 transferred to the U.S. Navy, so he could learn to fly. He was a VX-6 pilot in Antarctica in 1962. In 1965 he retired from the Navy, and spent 9 years in Southeast Asia, with Air America, piloting helicopters.

Jarl Nunataks. 71°55' S, 3°18' E. A small group of nunataks, 5 km N of Risen Peak (which marks the NE extremity of the Gjelsvik Mountains), in Queen Maud Land. Plotted from ground surveys and 1958-59 air photos taken by NorAE 1956-60, and named by the Norwegians as Jarlsaetet (i.e., "Jarl seat"), for Jarl Tønnesen, Norwegian meteorologist on that expedition (*see also* **Tønnesen Glacier**). US-ACAN accepted the name Jarl Nunataks in 1967.

Jarlsaetet *see* **Jarl Nunataks**

Jarman, Geoffrey Michael "Mike." b. 1934, Birmingham. He joined FIDS in 1960, as a geophysicist, and wintered-over at Halley Bay Station in 1961 and 1962, the second year as base leader. In 1970, in Bristol, he married Ilfra J. Pidgeon.

Jaron Cliffs. 76°23' S, 112°10' W. A line of steep, snow-covered cliffs on the S side of Mount Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Helmut P. Jaron (b. Sept. 15, 1912. d. Sept. 4, 1991, Louisa, Va.), aurora scientist at Byrd Station in 1963. He had also summered at Byrd Aurora Substation, in 1962-63.

Jarrett, William *see* **USEE 1838-42**

JASE 2007. An automatic weather station, at an elevation of 3661 m, installed on the Polar Plateau, and named for the Japanese-Swedish Antarctic Expedition of 2007-08, which installed it.

JASE 2008. An automatic weather station, at an elevation of 3400 m, installed in Dec. 2007. Named for the Japanese-Swedish Antarctic Expedition of 2007-08, which installed it.

Jasnorzewski Gardens. 62°09' S, 58°28' W. Meadows S of Arctowski Station, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for geodesist and astronomer Prof. Jerzy Jasnorzewski (1906-1989), who was in the Arctic in 1957-58, and, 20 years later, was a member of PolAE 1977-79.

The *Jason*. A 495-ton, 3-masted Norwegian sailing sealer built in 1881 for Chris Christensen of Sandefjord by Rodsverven (later re-named Framnaes Mekaniske Vaerksted, or Framnaes Mek., for short). In 1888 she landed Fridtjof Nansen and his crew on the coast of East Greenland, and in 1889 was sold to the Oceana Company (Christensen owned this company too), and was converted into a whaler. In 1890 Carl Anton Larsen, then 30 years old, became her skipper, and he took her down to Antarctic waters in 1892, on an expedition backed by the Germans, to look for right whales. 1st mate was Søren Andersen, and two of the seamen were Ole Jonassen and Anton Olsen. Ole Bjørnerud was the smith. Coincidentally, that same season the Dundee Whaling Expedition left Scotland, with the same purpose in mind. The *Jason* explored the South Orkneys, then headed down to Seymour Island, where they collected the first fossils found in Antarctica. They didn't catch whales, but they did snare a lot of seal oil. On her return to Norway, the *Jason* was re-fitted, and then left again, in Aug. 1893, again under the command of Larsen, but this time as the flag ship of a full-fledged expedition. Accompanying her were the *Hertha*, under Capt. Karl Julius Evensen, the *Castor*, under Capt. Morten Pedersen, and the supply ship *Ørnen*, under Capt. Carl Englund (this vessel is not to be confused with the later whale catcher, with the same name). About 100 men in all. The 3 lead ships explored extensively along both shores of the Antarctic Peninsula. They discovered the Oscar II Coast, the Foyn Coast, and the *Jason* penetrated as far south as 68°10' S along the east coast

of the Antarctic Peninsula. The three ships met up in South Georgia in April 1894, and it was on this trip that Larsen first had the vision of South Georgia as the future of the whaling industry. The ships arrived back in Norway in July 1894. In 1899 the *Jason* was sold to the Duke of Abruzzi for £5000, and he re-named her the *Stella Polaris*, and took her north in 1899. Ludwig Friederichsen (1841-1915) was the German cartographer who drew up the maps of the 1893 expedition.

Monte Jason *see* **Jason Peninsula**

[1]**Mount Jason** *see* **Jason Peninsula**

[2]**Mount Jason**. 77°29' S, 161°37' E. Rising to 1929 m, just W of Bull Pass, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59, for the mythological Greek hero. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Península Jason *see* **Jason Peninsula**

Tierra Jason *see* **Jason Peninsula**

Jason Insel *see* **Dallmann Nunatak**

Jason Island *see* **Jason Peninsula**

Jason Land *see* **Jason Peninsula**

Jason Peninsula. 66°10' S, 61°00' W. A large mountainous peninsula of irregular shape, about 60 km long in an E-W direction, with a width that varies between 3 and 16 km, and which rises in a cliffed form about 1555 m above, and extends for about 63 km into, the Larsen Ice Shelf, from the narrow neck of land E of Medea Dome, NE of Adie Inlet, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Its tip is Cape Framnes. Its coasts are indented by several marks. The peninsula has on it several snow-covered summits, and scores of nunataks (mostly named by the Argentines). Discovered from the seaward on Dec. 1, 1893, by Larsen, charted by him as part of the mainland, and named by him as Mount Jason, for his ship, the *Jason*. It appears as such on a British chart of 1901. The southernmost point of the peninsula (now known as Veier Head), Larsen thought to be an island, and named it Veier Island. Larsen was too far away to map the peninsula in detail, but in Oct. 1902 SwedAE 1901-04 were able to observe it from Borchgrevink Peak (on the landward side), and to say that the peaks seen by Larsen were, in fact, separated from the mainland by the Philippi Ice Rise. Consequently, it was renamed Jason Land, or Jasons Land. The Argentines called it Tierra Jason, or even Monte Jason, and all now admitted that it was separated from the mainland. It appears on a British chart of 1933 as Jason Island. Fids from Base D roughly surveyed the W side of the feature in Dec. 1947, but the E side could not be seen and therefore the exact nature of the feature could not be determined. On a 1948 Chilean map it appears as Isla General Baquedano, named for Gen. Manuel Baquedano (1826-1897), who commanded the Chilean Army in the war against Peru, 1879-82. In May-June 1953, Fids from Base D circumnavigated the feature, but the Philippi Ice Rise was not examined in detail. It was accepted from the previous FIDS survey that this area was marked by a channel filled with shelf ice, thus making the feature an island (as had been indicated on the 1933 British chart), thus it appears in the 1955 British gazetteer as Jason Island, but with the coordinates 66°10' S, 61°20' W. In Sept. 1955 Fids from Base D surveyed it again, and found a continuous neck of land extending E from the Philippi Ice Rise, thus ruling out the feature as an island. It first appears as Jason Peninsula on *National Geographic*'s 1957 map, and that was the name accepted by UK-APC on Sept. 4, 1957, and by US-ACAN in 1960. It appears as such on a British chart of 1961. It appears on a 1958 Argentine chart as Península Jason, and that is the name they use today, and which was also accepted by the 1974 Chilean gazetteer.

Jason Volcano *see* **Christensen Nunatak**

Jasonfjellet *see* **Mount Fritsche**

Jasoninsel *see* **Dallmann Nunatak**

Jasper Point. 62°11' S, 58°54' W. The NE entrance point of Norma Cove, just to the W of Collins Harbor, on Fildes Peninsula, King George Island, in the South Shetlands. The point is bounded by cliffs of black and buff rocks, in which occur veins of red and green jasper. On a 1968 British chart it appears in error as Suffield Point, and, perpetuating that error, it appears on a 1994 Brazilian map of Fildes Peninsula as Pontal Suffield, which means the same thing. BAS did geological work here in 1975-76. Named by UK-APC on Feb. 7, 1978, for the jasper, the feature appears in the 1980 British gazetteer. US-ACAN accepted the name. Last plotted by the UK, in late 2008.

The *Jastarnia Bor*. A 14,149-ton Polish cargo ship, built in 1971, Poland's Antarctic supply ship, 1995-97, capable of 20.7 knots. On Aug. 31, 1997, she was scrapped, in Bombay.

Jatko Peak. 77°11' S, 160°58' E. A sharp-pointed peak rising to 2050 m, 3 km NW of Dykes Peak, in the Clare Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Joyce Ann Jatko (b. Aug. 1949), environmental officer for the NSF's Office of Polar Programs, 1994-2003, U.S. representative to the SCAR Committee for Environmental Protection, and vice chairman of that committee for two terms. NZ-APC accepted the name on April 7, 2008.

Jato Nunatak. 72°21' S, 165°52' E. The name Jato is also seen completely capitalized (i.e., JATO Nunatak). A small but distinctive nunatak about halfway between Sphinx Peak and Mount Burton, 13 km W of Crosscut Peak, at the N end of the Barker Range, at the SW side of the Millen Range, on the Polar Plateau, in Victoria Land. Named by the Southern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for the 165-pound JATO (jet assisted take-off) solid-fuel rocket bottles used by American planes to assist them in take-offs with heavy loads or under tricky conditions requiring an extra boost (*see* **South Pole**, Oct. 31, 1956, for an interesting JATO story). NZ-APC accepted the name, and US-ACAN followed suit in 1964. *See also* **Disasters**, Dec. 4, 1971. The aircraft landing point was nearby.

Punta Jaume. 65°29' S, 63°45' W. A point to the NE of Holst Point, on the Graham Coast, on the W coast of Graham Land. Named by the Argentines.

Caleta Javiera *see* **Sally Cove**

Gora Javorskogo. 70°16' S, 65°40' E. A nunatak on the NE side of Mount Albion, in the S part of the Athos Range, in the Prince Charles Mountains. Named by the Russians.

Lake Jaya. 70°46' S, 11°41' E. A lake in the Schirmacher Hills, in Queen Maud Land. Named by the Indians.

Jaynes Islands. 73°59' S, 104°15' W. A cluster of small islands, about 30 km W of the SW end of Canisteo Peninsula, in the Amundsen Sea. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for James T. Jaynes, USN, equipment operator at Byrd Station in 1966.

Jean Charcot Land *see* [2]**Charcot Island**

Île Jean Rostand *see* **Rostand Island**

Colline Jeanne *see* **Jeanne Hill**

Monte Jeanne *see* **Jeanne Hill**

Mount Jeanne *see* **Jeanne Hill**

Pic Jeanne *see* **Jeanne Hill**

Sommet Jeanne *see* **Jeanne Hill**

Jeanne Hill. 65°04' S, 64°01' W. Rising to 195 m, about 400 m NW of Mount Guégen, and overlooking the S side of Port Charcot, on Booth Island, in the Wilhelm Archipelago, off the Graham Coast of Graham Land. Discovered and mapped on March 5, 1904, by FRAE 1903-05, and named by Charcot as Colline Jeanne, for his elder sister, Marie-Amélie-Jeanne-Claudine Charcot (b. 1865; known as Jeanne), who in Feb. 1896, in Paris, had married Alfred Edwards, the very rich and influential founder of *Le Matin* (in 1884). Jeanne was Edwards' 3rd of 6 wives, and the marriage was already over as Charcot was in Antarctica. On his return, the explorer found himself faced with a divorce of his own, and he and his sister lived together for a while. It also appears on the expedition maps as Pic Jeanne, and on a 1908 Charcot map as Sommet Jeanne (increasing steadily in importance as time went by). It appears on a 1930 British chart as Mount Jeanne, and on a 1937 French chart (erroneously) as Mont Sainte-Jeanne. It appears as Jeanne Hill on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1960. It appears on a 1953 Argentine chart as Colina Juana ("Juana" being the translation of "Jeanne"), and that was the name accepted by the Argentine gazetteer of 1970. It was photographed aerially by FIDASE in 1956-57. It appears on a Chilean chart of 1962 as Monte Jeanne, and that was the name accepted by the Chilean gazetteer of 1974. After her divorce from Edwards, Jeanne moved to Holland Park, in London, and in 1911 married Scotsman Arthur George Hendry, the headmaster of Chatham House School. They died together in Antibes, France, in June 1940.

Caleta Jebsen *see* **Port Jebsen**

Point Jebsen *see* **Jebsen Point**

Port Jebsen. 60°43' S, 45°41' W. A bay, immediately NE of Jebsen Point, on the W coast of Signy Island, in the South Orkneys. Roughly

charted by Petter Sørlle in 1912–13. Named in association with nearby Jebsen Point by Thoralf Moe, whose ship, the *Tioga*, was wrecked in this bay on Feb. 4, 1913. It appears on his 1913 chart (on another of his charts of that year it appears misspelled as Port Jebson), and also on a British chart of 1916. For some reason it appears on Sørlle's 1930 chart as Ticoca Havna (i.e., Ticoca Harbor; this name is a corruption of Tijuca; *see* **The *Tijuca***). It was recharted (as Port Jebsen) by the Discovery Investigations in 1933, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1945 as Caleta Jebsen, and that was the name accpted by the Argentine gazetteer of 1970.

Puerto Jebsen *see* **Port Jebsen**

Punta Jebsen *see* **Jebsen Point**

Rocas Jebsen *see* **Jebsen Rocks**

Jebsen, Bernhard. Manager of the whaler *Tioga*, in Antarctic waters in 1911–12 and 1912–13. Thoralf Moe was skipper.

Jebsen Point. 60°43' S, 45°41' W. On the S side of Port Jebsen, on the W side of Signy Island, in the South Orkneys. Charted in 1912–13 by Petter Sørlle, and perhaps named by him, although it may be a slightly older name. It was certainly named for Bernhard Jebsen or Wilhelm Jebsen (owner of the Corral Company, and thus of the *Tioga*, which sank here in 1913). It was further charted by the *Discovery II* in 1933, and named both as Jebsen Point and as Stevens Point, the latter for Albert Stevens. On Jimmy Marr's chart of 1935 it appears as Point Jebsen. US-ACAN accepted the name Jebsen Point in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, but (misspelled) as Jebson Point in the 1974 British gazetteer. The Argentines call it Punta Jebsen.

Jebsen Rocks. 60°43' S, 45°41' W. An extensive chain of islets and rocks, rising to an elevation of about 15 m above sea level, extending 0.8 km in an E-W direction, 0.8 km NW of Jebsen Point, off the W coast of Signy Island, in the South Orkneys. Charted (but not named) by Petter Sørlle in 1912–13. The feature appears on a 1913 chart drawn up by whaler Thoralf Moe, as Rauer Rocks (*see* **Rauer Islands** for the origin of this name). It was surveyed in 1933 by the Discovery Investigations, and appears on their 1934 chart as Jebsen Rocks, named in association with the point. That was the name accepted by US-ACAN in 1952, and by US-ACAN on Sept. 8, 1953. One does not know why the name Rauer was replaced by Jebsen. It appears on a 1952 Argentine chart as Rocas Jebsen, and that was the name accepted by the 1970 Argentine gazetteer.

Jebson *see* **Jebsen**

Jedamczyk, Fritz. b. 1892, Germany. He went to sea at 15, and in the 1930s was a sailor on the *Schwabenland* under Kottas for the North German Lloyd Line when he was, along with his ship, loaned to Ritscher for GermAE 1938–39.

Jefferson, Daniel *see* **USEE 1838–42**

Jefferson, Thomas *see* **USEE 1838–42**

Jeffery Head. 74°33' S, 111°54' W. Name sometimes seen (erroneously) as Jeffrey Head. A conspicuous rock bluff (or headland) on the W side of Bear Peninsula, overlooking the Dotson Ice Shelf, 6 km S of Brush Glacier, on the Walgreen Coast of Marie Byrd Land. First photographed aerially in Jan. 1947, during OpHJ 1946–47. Named by US-ACAN in 1967, for Stuart S. Jeffery, ionosphere physicist at Byrd Station in 1966. Originally plotted in 74°35' S, 111°45' W, but later re-plotted. Algae and lichens are to be found here.

Punta Jefford *see* **Jefford Point**

Jefford, Brian. b. March 21, 1922, Calcutta, India, son of Captain Jefford (who died near Madras at the end of World War II, while he was in code-breaking) and his wife Maud Evelyn "Eve" (who had been educated by the nuns in Darjeeling, and who taught music, and who went to Paris to train as a couturière). Brian's grandfather had once been with a Scottish regiment, and had come to Darjeeling years before. His uncle was a great white hunter. Brian went to school at St Paul's, in Darjeeling, joined the Indian Navy as an officer, and was seconded to the British Navy. In London he was snapped up by Ted Bingham for FIDS in 1947, as a surveyor. He left Tilbury on the *John Biscoe*, on Dec. 19, 1947, bound for Port Stanley, and wintered-over at Base D in 1948 and at Base G in 1949. In 1950, on his return to England, he joined the Indian Survey Company, and flew out to India. He later went surveying in East Africa, Western Australia, Tasmania, and NZ. It was in Tasmania that he met his future wife, Josephine "Jo" Goymour, a New Zealander, and they moved to NZ, where they were married in the late 1950s, and where he went into finance. He died on May 20, 1994, in Wangarei. Jo lives in Ruakaka, North Island, NZ. One of their sons was on the NZ skydiving team (he is now a pilot for Royal Brunei Air).

Jefford Point. 62°24' S, 57°41' W. A rock cliff with ice on top, 13 km ENE of Cape Foster, on the S coast of James Ross Island, at the SW end of Admiralty Sound. First roughly surveyed (but, apparently, not named) in Oct. 1902, by SwedAE 1901–04. Re-surveyed by Fids from Base D (actually by Brian Jefford) in Sept. 1948, the records were lost in the Hope Bay fire 2 months later. Re-surveyed by Fids from the same station in Sept. 1952, and named by them for Mr. Jefford. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963.

Jeffrey, Alan. He wintered-over at Davis Station in 1981, at Mawson Station in 1983, at Davis again in 1985, and at Mawson again in 1987 and 1997.

Jeffrey, Douglas George. b. Sept. 23, 1885, Folkestone, Kent, son of Scottish Baptist minister Robert Foster Jeffrey and his wife Emma Godwin. Raised partly in Belfast, he spent years as a merchant seaman, skippering several ships, and was a lieutenant commander in the RNR. He married Jessy Bruce, a Chicago girl, and they had a daughter. He was picked by Shackleton for BITE 1914–17, but instead served on a destroyer, then on Q boats, being highly decorated. He was with Shackleton on the *Quest*, 1921–22. Also on that expedition was Arthur Argles. In the 1920s Jeffrey worked for several oil companies in the USA and South America, and by 1928 had become a reporter and columnist, for, among others, the *New York Times*. On Sept. 9, 1928 he was arrested in Indianapolis for passing a bad check for $20. This just happened to forestall a case of bigamy on his part, and also the Antarctic air expedition he was planning for later in 1928 with Argles, which is why he had arrived in Indianapolis from Cincinnati in the first place 3 weeks before, on a fund-raising expedition, flying everywhere by plane and running up huge bills all over the place. He was obliged to leave the country, for Canada, and, lying about his age, commanded several ships for the Royal Canadian Navy during World War II, again with much distinction. He retired in 1947, and, after a shadowy period of political activity in Central America, threw himself into Conservative party politics in Scotland, being the man most responsible for rescuing Sir Alec Douglas-Home from obscurity after the future prime minister's 1945 defeat. For years in Lanark "the skipper," a mystery man appearing much younger than he actually was, was extremely active in politics. He died on March 23, 1972.

Jeffrey Head *see* **Jeffery Head**

Jeffries, Peter Harry. b. Jan. 19, 1931, Camberwell, London, son of Henry C. Jeffries and his wife Doris Mabel Hyne. He worked for the Met Office, often on ocean weather ships, and was meteorologist in the Advance Party of BCTAE 1955–58. On Jan. 28, 1957 he transferred to Halley Bay Station to be with the 2nd part (i.e., 1956–58) of the British Royal Society Expedition, and wintered-over there in 1957. He left there on Jan. 7, 1958, for Las Palmas, where he caught the *City of Port Elizabeth*, and arrived back in Plymouth on Feb. 20, 1958. He died in Nov. 2001, in Surrey.

Jeffries, William *see* **USEE 1838–42**

Jeffries Bluff. 73°18' S, 60°13' W. The ice-covered SW point of Kemp Peninsula, and the NE entrance point of Mossman Inlet, on the Lassiter Coast, on the E coast of the Antarctic Peninsula. Photographed aerially in Dec. 1940, during USAS 1939–41. Surveyed in Nov. 1947, by a joint sledging party of Fids from Base E and personnel from RARE 1947–48. Photographed aerially by USN between 1965 and 1967. In association with Cape Deacon to the NE, it was named by UK-APC on Dec. 9, 1982, for Margaret Deacon (née Jeffries), George Deacon's wife (*see* **Deacon, George**, for more information). It was plotted then in 73°48' S, 60°14' W, but by the time of the 1986 British gazetteer, the coordinates had been corrected. US-ACAN accepted the name.

Jeffries Glacier. 79°02' S, 28°12' W. Between Lenton Bluff and Marø Cliffs, flowing NW for at least 13 km through the Theron Mountains (the British say it flows SE from the Theron Mountains, a statement that is possible to reconcile with the American descriptor, but only just). Surveyed and first mapped by BCTAE

1956-57, and named by them for Peter H. Jeffries. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. The British plot it in 79°02' S, 28°05' W.

Jeffries Peak. 64°42' S, 61°58' W. Rising to about 950 m, S of Sadler Point, between Leonardo Glacier and Blanchard Glacier, southward of Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. In 1956-57, FIDASE photographed it aerially, and Fids from Base O surveyed it from the ground. Named by UK-APC on Sept. 23, 1960, for 18th-century U.S. physician John Jeffries (1744-1819), who, with J.P. Blanchard, made the first balloon crossing of the English Channel, in 1785. US-ACAN accepted the name in 1965.

Jeffryes, Sydney Harry. b. 1884, Allora, near Toowoomba, Qld, son of postmaster Henry "Harry" Jeffryes and his wife Helena White. His father died in 1902, and the family moved into Toowoomba. He was a radioman with the Australasian Wireless Company, when, in 1911 he applied for the post of radio operator with AAE 1911-14, but was turned down (Arthur Sawyer got the job). However, by the 2nd half of the expedition, he was needed, and went, replacing W.H. Hannam in 1913. It was Jeffryes who radioed the *Aurora* with the good and bad news that Mawson had returned to base, but alone. Unfortunately, Jeffryes went insane on the ice. In July 1913 he felt that his colleagues were out to get him, and threatened to take them to court. Then, on July 27, 1913, with 5 months to go before the party could be relieved, Jeffryes (who was the only radio operator they had), resigned. Bickerton had to teach himself Morse. On his return to Australia, Jeffryes was admitted to Ararat Asylum, in Victoria, which is where he died in 1942.

Jeffryes Glacier. 67°04' S, 143°59' E. A glacier flowing into Watt Bay, in George V Land. Named by ANCA on Aug. 12, 2010, for Sydney Jeffryes.

Jehan, Dudley Robert "Cuddles." b. Nov. 23, 1938, Guernsey. He joined FIDS in 1959, as a meteorologist, and wintered-over at Base F in 1960, and then at Halley Bay Station in 1961. In 1963 he was back at Halley Bay as general assistant and tractorman, and in 1964 as base leader there. He was later chairman of the newspaper the *Guernsey Post*.

Jekselen *see* **Jekselen Peak**

Jekselen Peak. 72°00' S, 2°33' W. A nunatak, rising to 1405 m, the highest peak in a small ridge 11 km ESE of Mount Schumacher, in the SE part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Jekelsen (i.e., "the molar"). US-ACAN accepted the name Jekelsen Peak in 1966.

Jelbart, John Ellis. b. Dec. 6, 1926, Ballarat. Australian physicist who, after university in Melbourne, joined ANARE in 1947 and spent Dec. 1947 to Feb. 1948 at Heard Island (53°S), working on cosmic ray physics. After a while working on a sheep station in Queensland, he went to Queen Maud Land in 1951 as assistant glaciologist and ANARE observer on the second stage of NBSAE 1949-52. He died when his Weasel fell into the sea on Feb. 24, 1951, at Maudheim.

Jelbart Basin. 70°35' S, 6°17' W. An undersea feature, with a depth of between 300 and 600 m, just N of the Jelbart Ice Shelf, off the coast of Queen Maud Land. It ranges between 70°20' S and 70°50' S, and between 5°20' W and 7°15' W. The name was proposed by Heinrich Hinze in Jan. 1997, and accepted by international agreement in June 1997, named in association with the ice shelf.

Jelbart Glacier *see* **Utstikkar Glacier**

Jelbart Ice Shelf. 70°30' S, 4°30' W. About 60 km wide, to the W of the Fimbul Ice Shelf, fronting on the Princess Martha Coast of Queen Maud Land, northward of Giaever Ridge. Mapped by Norwegian cartographers from ground surveys conducted during NBSAE 1949-52, and from air photos taken during the same expedition, and named by them as Jelbartisen, for John Jelbart. They plotted it in 70°45' S, 4°30' W. US-ACAN accepted the translated name Jelbart Ice Shelf in 1966, but with the coordinates 71°00' S, 5°00' W. It has since been replotted.

Jelbartisen *see* **Jelbart Ice Shelf**

Jellyfish. Class: Scyphozoa. Phylum: Cnidaria. Found in Antarctic waters. In 2007-08 specimens were found in the Ross Sea with 12-foot-long tentacles.

Jelschen, George. b. 1918, Germany. He went to sea as a machinist in 1937, and was engineer's assistant on the *Schwabenland* during GermAE 1938-39. Immediately the expedition arrived back in Hamburg, he signed on as machinist on the Norddeutscher Lloyd ship *Bremen* for a voyage across the Atlantic. Four more similar trips, one after the other, and then the war started.

Jenagletscher. 74°41' S, 162°36' E. A glacier immediately NE of Backwater Glacier, at the S end of the Eisenhower Range, in Victoria Land. Named by the Germans. The Germans do not make errors, nor are they given to mistakenly naming a feature that someone else has already named, but the New Zealanders may, just may, not be so careful. After all, Jenagletscher was probably named a year before Backwater Glacier. The coordinates for Backwater Glacier are perilously close to those of Jenagletscher.

Isla Jenie *see* **Pampa Island**

Mount Jenkins. 75°08' S, 69°10' W. Rising to 1705 m, 11 km NE of Mount Edward, it is the highest of the Sweeney Mountains, in Ellsworth Land. Discovered and photographed aerially by RARE 1947-48. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for W.H. Jenkins, hospital corpsman who wintered-over at Pole Station in 1963. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Jenkins, Elmo Harrison. b. Nov. 3, 1911, Millfield, O., but raised partly in Zanesville, son of Harrison "Harry" Jenkins and his wife Amy Hanson. Harry died, and Amy married again, to his brother, coal miner Arlington T. Jenkins. He joined the U.S. Navy, and was a bosun's mate 1st class on the *Bear* during both halves of USAS 1939-41. He died on July 13, 1977, in Zanesville.

Jenkins Heights. 74°48' S, 114°20' W. A broad, ice-covered area rising to an elevation of over 500 m, and covering some 25 sq miles, S of McClinton Glacier and W of Mount Bray, on Martin Peninsula, on the Bakutis Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN for Charles Jenkins, NOAA geophysicist, scientific leader at Pole Station in the winter of 1974.

Jenluise Bank. 64°00' S, 106°30' E. A submarine feature out to sea beyond Vincennes Bay. Named by international agreement, it appears in the 1988 U.S. gazetteer.

Glaciar Jenner *see* **Jenner Glacier**

Jenner Glacier. 64°27' S, 62°33' W. A glacier, 5 km long, it flows SW from the Solvay Mountains into the E arm of Duperré Bay, in the S part of Brabant Island, in the Palmer Archipelago. Shown (but not named) on an Argentine government chart of 1953. Mapped by FIDS cartographers in 1959, from aerial photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Edward Jenner (1749-1823) of small pox fame. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines now call it Glaciar Jenner.

Jennica Automatic Weather Station. 74°42' S, 164°06' E. An Italian AWS, installed in 2000, at an elevation of 20 m, in the area of Pozza Eneide, at Gerlache Inlet, in the NW corner of Terra Nova Bay. It stopped operating in Jan. 2004, and was removed in Dec. 2007.

Lake Jennings *see* **Jennings Lake**

Mount Jennings. 72°32' S, 166°15' E. Rising to about 2800 m, immediately S of Mount Roy, in the Barker Range, in the Victory Mountains of Victoria Land. Named by NZ-APC for Peter Jennings, field assistant and mechanic with the VUWAE Evans Névé field party of 1971-72. US-ACAN accepted the name.

Jennings, H. *see* **Órcadas Station**, 1908

Jennings Bluff. 66°42' S, 55°29' E. A dark, flat-topped outcrop, rising to 1320 m above sea level and about 100 m above the general surrounding ice level, in the Nicholas Range, 16 km N of Mount Storegutt, in Kemp Land, Enderby Land. It has a steep face on its E side, backing to an ice-scarp in the W. Discovered in Jan. 1930, by BANZARE 1929-31. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Brattstabben (i.e., "the steep stump"). Photographed aerially by ANARE in 1956, plotted anew by Australian cartographers from these photos, and renamed by ANCA on July 4, 1961, for Noel D. Jennings, assistant diesel mechanic at Mawson Station in 1960. US-ACAN accepted the Australian name in 1965.

Jennings-Fox, Leon Neville Eugene. Generally known on the ice as Leon Fox. b. Feb. 2, 1929. Meteorological observer who wintered-over on Heard Island in 1953, then as met observer and dog trainer at Mawson Station in 1955. He wintered-over at Macquarie Island in 1958, and at Davis Station in 1960. He wintered-over at Wilkes Station in 1962 and 1964, and at Macquarie Island again in 1966. *see* [1]**Mount Fox**.

Jennings Glacier. 71°57' S, 24°22' E. Between 16 and 24 km long, it flows N along the W side of the Luncke Range, between Mount Walnum and Brattnipane Peaks, in the north central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Jenningsbreen, for Lt. James C. Jennings, USN, co-pilot and navigator who flew over this area during OpHJ 1946-47. US-ACAN accepted the translated name Jennings Glacier in 1966.

Jennings Lake. 70°10' S, 72°32' E. A narrow meltwater lake, 5 km (the Australians say about 10 km) long, at the foot of Jennings Promontory, on the E margin of the Amery Ice Shelf. Delineated by U.S. cartographer John H. Roscoe in 1952, from air photos taken during OpHJ 1946-47, and named by him in association with Jennings Promontory. US-ACAN accepted the name in 1956. ANCA accepted the name on July 22, 1959, but as Lake Jennings.

Jennings Peak. 71°32' S, 168°07' E. Rising to 2320 m, in the SE part of the Dunedin Range, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Cedell "Dell" Jennings, Jr. (b. June 8, 1947), who joined the U.S. Navy in 1964, and who was an aviation electrician's mate 2nd class at McMurdo in 1968, not one of the first black Americans in Antarctica, but significant. He retired from the Navy in 1994.

Jennings Promontory. 70°10' S, 72°33' E. A rock promontory on the E margin of the Amery Ice Shelf, between Branstetter Rocks and Kreitzer Glacier. Mapped in 1952 by U.S. cartographer John H. Roscoe, and named by him for Lt. James C. Jennings (*see* **Jennings Glacier**). US-ACAN accepted the name in 1956. Visited by an ANARE party in 1958, and its position fixed. ANCA accepted the name on July 22, 1959.

Jennings Reef. 67°46' S, 68°50' W. A reef, mostly submerged, between Avian Island and Rocca Island, off the S end of Adelaide Island, E of Base T. Named by UK-APC on Feb. 12, 1964, for Ronald Anthony James Jennings (b. 1931, London), RN, coxswain on the survey motorboat *Quest* used by the RN Hydrographic Survey unit which charted this feature in 1963, from the *John Biscoe*. US-ACAN accepted the name later in 1964. It appears on a British chart of 1964.

Jenningsbreen *see* **Jennings Glacier**

The *Jenny*. On Sept. 22, 1860 (or was it Sept. 22, 1840?) the whaler *Hope* was in the Drake Passage, being blown by a tempest, when suddenly a monstrous tabular iceberg cracked up in front of them (Captain Brighton, the skipper, described it as an "ice barrier," the term "tabular berg" not having been coined yet). All at once the crew of the *Hope* saw a schooner emerging slowly from a chasm in the berg, her decks covered with ice and snow, her sails hanging in tatters and frozen shreds, her rigging broken and rotten. She was crushed and splintered, but still she sailed on. The worst part of it was that seven men (or was it five?) were standing upright on her deck, encased in steel-hard ice. The crew of the *Hope* went berserk, presuming it to be the *Flying Dutchman*. Captain Brighton got a small crew together, and they rowed over and went aboard. Passing the statues on deck, Brighton went below to the captain's cabin, and found the skipper sitting stiffly in a chair, pen in hand, poised to write in the log book which lay on the desk. Brighton spoke to the man, but there was no answer. This was because he'd been dead for 37 years (or was it 17 years? Not that it mattered. He was stiff as a board). Brighton found that the vessel was the British sealing schooner *Jenny*, from the Isle of Wight. He looked at the last entry the frozen skipper had made in his log book. It was dated May 4, 1823 (or was it Jan. 17?). It read: "No food for 71 days. I am the only one left alive." In a neighboring cabin was a woman, evidently the skipper's wife (at least, one hopes so), and there was also a dog. From what could be pieced together, the *Jenny*'s last port of call had been Callao. They had then headed down the west coast of South America, to Cape Horn, evidently on a hunt for seals in the South Shetlands, and there come to grief. The cold had preserved the ship. Capt. Brighton ordered the bodies buried at sea, and he later reported the incident to the Admiralty. Rosemary Dobson, Australian poet, brought this story to public attention in 1948, with her poem *Ship of Ice*. According to her, her source was an anonymous report called *The Drift of the Jenny, 1823-40*, an odd title, given that Miss Dobson gives 1860 as the date that the *Hope* found the stricken vessel. Anyway, this *Drift of the Jenny* was, apparently translated from an article written on pages 60-61 of the first volume of the German illustrated weekly, *Globus*. The origin of the story thus seems to be traced to the *Globus*. Obviously the story of the *Jenny* is an attractive one, many times told, but is is true? There was an 1816 schooner *Jenny*, 86 tons, but she belonged to Spittal & Co., of Kincardine (which is nowhere near the Isle of Wight), and was used in the Baltic trade. Her skipper in 1823 was Capt. McLean. Another schooner named *Jenny*, apparently a Frenchman (her skipper was Capt. Lami), had gone down off Tonnelier in 1819. Peter Jeans, in his book *Seafaring Lore and Legend*, repeats Rosemary Dobson's 1860 date for the finding of the *Jenny*, and he also gives the name Capt. Brighton, but Mr. Jeans got his material from Bill Beatty's 1960 book *A Treasury of Australian Folk Tales and Traditions* (Sydney: Ure Smith), and Mr. Beatty got his information from Rosemary Dobson. Bob Headland and the *Polar Record* both say the *Hope* discovered the *Jenny* in 1840, not 1860 (Mr. Headland seems to have got his date from the *Polar Record*), but where the *Polar Record* came up with 1840 is not known, unless they are assuming it was the schooner *Hope* that Mr. Headland lists in his book for that year, as supplying whalers at the Chatham Islands (not in Antarctica). And what about Captain Brighton? The *Hope* and the *Jenny* would probably (although not surely) both have been registered with Lloyd's, but there is no record of a suitable *Jenny*, and no record of any vessel named *Hope* skippered by a man named Brighton. In fact, there seems to be no record of a Captain Brighton (he does not show in the Lloyd's register of captains). The Admiralty records show nothing of the incident, neither do the newspapers. My guess is, the story was made up by the *Globus* in 1862, written by a writer inspired by the story of the *Fleetwood* (q.v.).

Île Jenny *see* **Jenny Island**

Isla Jenny *see* **Jenny Island**

Jenny Buttress. 61°59' S, 57°42' W. A rock buttress, 4 km N of Melville Peak, and rising to about 200 m above Destruction Bay, on the E side of King George Island, in the South Shetlands. Surveyed from the ground by Fids from Base G in 1948, photographed aerially by FIDASE in 1956-57, and further surveyed by FIDS in 1958. Named by UK-APC on Sept. 23, 1960 for the *Jenny*. US-ACAN accepted the name later in 1960. Last plotted by the UK, in late 2008.

Jenny Island. 67°44' S, 68°24' W. A rocky island, 3 km long, with a highest elevation of 500 m above sea level (the Chileans say 592 m), the island lies in the N part of Marguerite Bay, 5 km ENE of Cape Alexandra (the SE extremity of Adelaide Island), off the W coast of Graham Land. It is easy to identify because, ice-free in summer, it presents a hill of black rock with sharp peaks on its summit. Discovered and charted on Feb. 15, 1909, by FrAE 1908-10, and named by Charcot as Île Jenny, for Maurice Bongrain's wife, Jenny. It appears as Jenny Island on a British chart of 1914. Surveyed by Fids from Base E in 1948. The name Jenny Island was accepted by US-ACAN in 1950 and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Isla Juanita (which sort of means the same thing, that is if one doesn't mind missing the point of the exercise, which was to name it for Jenny Bongrain, whose name was not "Juanita"), and that was the name accepted by the Argentine gazetteer of 1970. It appears in the 1974 Chilean gazetteer as Isla Jenny.

Mount Jensen. 77°08' S, 162°28' E. A small peak, rising to over 1000 m (the New Zealanders say 914 m), just N of First Facet, in the Gonville and Caius Range (actually between the edge of that range and the Debenham Glacier), to the S of Granite Harbor, in Victoria Land. Mapped by the Western Journey Party during BAE 1910-13, and named by Grif Taylor. US-ACAN accepted the name in 1964, and NZ-APC followed suit. Harald Ingemann Jensen (1879-1966), born

in Denmark, was in Australia from the age of 6. He and Grif Taylor became friends at Sydney University, where Jensen was a young teacher and Taylor a pupil, and where, a year or two later, Jensen was assistant demonstrator in geology for Edgeworth David. Jensen was later a labor politician.

Jensen, Bernhard. b. 1853, Nøtterøy, Norway. A whaling skipper in the Arctic since 1877, he went as 2nd mate on the *Antarctic* Expedition 1893-95, and as captain of the *Southern Cross* during Borchgrevink's BAE 1898-1900. He was married to Josefine, and they lived in Tønsberg.

Jensen, Gullik Anton. b. Sept. 8, 1901, Breidablikk, Nøtterøy, Norway, son of ship's mate Gullik Anton Jensen and his wife Jenny Elise Beckmann. He went to sea in 1922, worked his way up through the mate ranks, and on June 22, 1929, in Nøtterøy, he married Rachel Elfrida Istre, and they lived at Teie, near Nøtterøy. He was skipper of the *Svend Foyn*, in Antarctic waters in 1932-33. In 1935-36 he was skipper of the *Strombus* (the last whaling season to Signy Island) and in 1937-38 of the *Terje Viken*. Rachel died in 1976, aged 72, and the skipper died on Jan. 20, 1982, in Tønsberg.

Jensen, Kristian. b. 1910, Norway. Signed on the *Wyatt Earp* on Aug. 1, 1935, at Larvik, as messboy, for Ellsworth's 1935-36 voyage to Antarctica. He had never been to sea before.

Jensen Glacier. 85°05' S, 170°48' E. A tributary glacier, about 16 km long, it flows N into Snakeskin Glacier, from between Lhasa Nunatak and the Supporters Range, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Kenard H. Jensen (b. Dec. 1935), USARP meteorologist at Pole Station in 1963.

Jensen Island. 66°32' S, 57°16' E. A small rocky island off the coast of Kemp Land, about 4.5 km NW of Cape Boothby. Visited in Feb. 1975 by ANARE personnel off the *Nella Dan*, and an astrofix was obtained. Named by ANCA for John Brench Jensen, skipper of the *Nella Dan* for several seasons in the 1970s and 80s (*see* **The *Nella Dan***).

Jensen Nunataks. 73°04' S, 66°05' W. A cluster of isolated nunataks, rising to about 1600 m, in the interior of southern Palmer Land, about 42 km NE of Mount Vang, on the SE part of the English Coast. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Curtis M. Jensen, USARP glaciologist at Byrd Station in 1965-66. The feature appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Jensen Rampart. 78°52' S, 160°08' E. Steep rock cliffs rising to 1600 m, 10 km W of Mount Speyer, and overlooking the N side of Mulock Glacier, at the SW edge of the Worcester Range. Named by US-ACAN in 2001, for Kate Jensen, NOAA field team leader at Pole Station. She also worked for Antarctic Support Associates and Raytheon at Pole Station.

Jensen Ridge. 60°42' S, 45°38' W. A ridge curving inland in a southeasterly direction from Foca Point toward Jane Col, on Signy Island, in the South Orkneys. Named by UK-APC on May 13, 1991, for Gullik Jensen. US-ACAN accepted the name.

Jensenhovden. 74°44' S, 11°37' W. A mountain ridge in the N part of Skjønsbergskarvet, in Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for teacher Magnus Jensen (b. 1902) a Resistance leader during World War II.

Jenzigberg. 74°39' S, 162°33' E. A peak on the N side of Backwater Glacier, at the S end of the Eisenhower Range, in Victoria Land. Named by the Germans.

Jeon Jaegyu Knoll *see* **Jaegyu Knoll**

Cabo Jeremías *see* **Cape Jeremy**

Cabo Jeremy *see* **Cape Jeremy**

Cape Jeremy. 69°24' S, 68°51' W. A cape, W of Mount Edgell, that projects from the W coast of the Antarctic Peninsula into Marguerite Bay, between the Wordie Ice Shelf and the N entrance to George VI Sound. It actually marks the E side of the N entrance to George VI Sound, as well as the S extremity of the Fallières Coast and the W end of an imaginary E-W line dividing Graham Land from Palmer Land. Discovered and surveyed in Sept. 1936, by BGLE 1934-37, and named by Rymill for Jeremy Gino Scott (b. 1934), son of James Maurice Scott (1906-1986), home agent for the expedition, and formerly a member of Gino Watkins' Arctic expedition. It appears on Rymill's chart of 1938, and also on a British chart of 1948, but sometime between 1941 and 1947 it broke off during the reconfiguration of George VI Sound, allowing water in where there wasn't any before. That was the position found by Fids from Base E who surveyed it again in Dec. 1948. It appears on a 1947 Chilean chart, translated as Cabo Jeremías. UK-APC accepted the name Cape Jeremy for the newly-configured cape on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer. It appears on a 1946 Argentine chart as Cabo Jeremy, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Jeroboam Glacier. 65°38' S, 62°40' W. A glacier flowing NE into Starbuck Glacier just E of Gabriel Peak, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Surveyed by BAS personnel from Base E in 1963-64. Named by UK-APC for the ship that met the *Pequod* in *Moby Dick*. UK-APC accepted the name on July 21, 1976, and US-ACAN followed suit that year.

Jersak Hills. 62°09' S, 58°09' W. A group of hills in the form of basalt plugs, 200 m high, SW of Arctowski Station, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Jozef Jersak, geomorphologist, first wintering-over base leader at Arctowski Station (winter of 1977).

Jespersen, Hans. b. Sept. 2, 1890, Stokke, Norway, son of sea captain Nils Karenius Jespersen and his wife Hanna Mathilde. He went to sea, working his way up through the mate ranks, and often accompanying his father on ships such as the *Bergensfjord*. In 1915-16 he was in the South Shetlands as one of the 1st mates on the *Roald Amundsen*. He married Dagny, and they lived in Sandeherred, near Sandefjord. In 1917 he was a gunner on the *Thor I*, and later that year became skipper of the *Bergensfjord*. In 1929 he was one of the whaling gunners who started the Skytteren Company, and was skipper of the *Skytteren*, in Antarctic waters in 1932-33. After World War II he and his wife became British subjects, and moved to Giffnock, near Glasgow. In 1948 he was seeking a patent on a new type of grenade harpoon, and in 1950 was managing a whaling station on the island of Harris.

Jesse Bay *see* **Jessie Bay**

Bahía Jessie *see* **Jessie Bay**

Jessie Bay. 60°44' S, 44°44' W. A bay, 6 km wide, between Cape Robertson and Cape Mabel, or, to put it another way, between Mackenzie Peninsula and Pine Peninsula, on the N side of Laurie Island, in the South Orkneys. Apparently seen by Powell and Palmer in 1821. It was roughly charted by Weddell on Jan. 13, 1823, when the name Saddle Island Bay was applied to the present feature shown extending NW to Saddle Island. It appears as such on his chart of 1825. Charted again on April 3, 1903, by ScotNAE 1902-04, and named by Bruce for his wife, Jessie Mackenzie, who had worked as a nurse in Bruce's father's London surgery, and whom he married in 1901. There is an anachronistic 1907 Argentine reference to it as Bahía de Isla Saddle. It appears on a 1930 Argentine chart as Bahía Uruguay, and on a 1947 Argetine chart as Bahía Jessie, but the name that was accepted by the 1970 Argentine gazetteer was Bahía Uruguay (i.e., this is not, as one might think, synonymous with Uruguay Cove, which is at the head of this bay). It was re-charted by the Discovery Investigations in 1933, and appears on their 1934 chart as Jessie Bay, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, but in the 1961 British gazetteer it appears, erroneously, as Jesse Bay.

Mount Jessie O'Keefe *see* **Mount Blackburn**

Jesson, Eric Edward. b. April 27, 1931, Kent, England, son of Frederick George Jesson and his wife Maud Emma Macey. He moved to Australia in 1957, and was seismic geophysicist at Mawson Station in 1958. He made the first gravity observations in the Larsemann Hills. He later lived in Brisbane.

Jesson Island. 69°23' S, 76°09' E. A small island, with a conical peak and a beach running E-W along its N shore, close to Solomon Island, and S of McLeod Island, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Eric Jesson. The Chinese call it Wa Dao.

Jester Rock. 67°52' S, 68°42' W. A small, isolated rock in Marguerite Bay, E of Emperor Island, midway between that island and Noble Rocks, in the Dion Islands. The Dion Islands were discovered and roughly charted in 1909, by FrAE 1908-10. This rock was surveyed by Fids from Base E in Oct. 1948, and named by UK-

APC on Sept. 20, 1955, for a court jester, in keeping with the courtly theme predominant among the features in this area. US-ACAN accepted the name in 1956 (after rejecting the proposed name Page Rock). It appears on a 1964 British chart.

The *Jesús María*. A Spanish galleon of 600 tons and 30 cannon, which was one of the fleet taken into southern waters in 1603 by Gabriel de Castilla.

Jetsam Moraine. 76°50' S, 161°36' E. A thin, sinuous medial moraine that arcs smoothly for 10 km from a point near Mount Razorback to beyond the far (NE) side of Black Pudding Peak, in the Prince Albert Mountains of Victoria Land. Its curved trajectory marks the contact between the ice of Benson Glacier and the ice of Midship Glacier. So named by a 1989-90 NZARP field party in association with Flotsam Moraines, and also because all supraglacial moraines are "floating" on the glacier ice, and drift similar to flotsam and jetsam. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Jett, Benjamin Franklin. b. April 5, 1900, Knoxville, Tenn., son of butcher John D. Jett (of Finnish extraction) and his wife Lennie. He joined the merchant marine, as a wiper, and by the mid-1920s had graduated to oiler and fireman. Benny was an oiler on the *City of New York*, during the first half of ByrdAE 1928-30, and when that ship returned to NZ after delivering Byrd and his men to Little America in early 1929, Benny left the expedition, making his way back to San Francisco, where, on June 12, 1929, he hopped on the *President Johnson* as a fireman, bound for New York. On Nov. 11, 1929, at Pier 33, in Brooklyn, he signed on as an oiler to the *Santa Maria*, which left on Nov. 21, 1929, for Talacahuano, Chile, and so continued his long career as an oiler on merchant ships, working through World War II, and on into the 1950s. He retired to San Francisco, and died on Nov. 15, 1975, in Bay Co., Fla.

Jetty Peninsula. 70°30' S, 68°54' E. An elongated, steep-sided, almost flat-topped arm of rock with some ice, separating the Beaver Lake area from the Amery Ice Shelf, and forming a peninsula that extends northward for 50 km from just E of Beaver Lake (in the Prince Charles Mountains) into the Amery Ice Shelf, in Mac. Robertson Land. Discovered and photographed aerially by ANARE in 1956, and mapped by Australian cartographers in 70°39' S, 68°47' E, from these photos. ANARE landings were made on Beaver Lake in 1957, 1958, and 1959. So named by ANCA because it looks like a jetty. US-ACAN accepted the name in 1961. An ANARE survey station was occupied on the N part of the peninsula in Feb. 1969, by the Prince Charles Mountains Survey Party. It has since been replotted.

Mount Jewell. 66°57' S, 53°09' E. About 5.5 km S of Mount Cordwell, and about 40 km SSW of Stor Hånakken Mountain, in Enderby Land. Plotted by Australian cartographers from 1957 ANARE air photos. Named by ANCA for Fred Jewell, geophysicist at Wilkes Station in 1961. US-ACAN accepted the name in 1965.

Jewell, William *see* **USEE 1838-42**

Jezek Glacier. 77°59' S, 162°13' E. On the SE side of Platform Spur, it flows NE into Emmanuel Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1992, for Kenneth C. Jezek, geophysicist with CRREL and NOAA, 1983-89. In 12 visits to the Arctic and Antarctic he conducted geophysical surveys using remote sensing techniques on measurement and properties of terrestrial ice and sea ice with work at Dome Charlie, the Ross Ice Shelf, and the Weddell Sea. From 1989 he was director of the Byrd Polar Research Center.

The *Ji Di*. A 152-meter Chinese supply ship to Antarctica, built in 1971. She carried down ChinARE III (1986-87), her skipper that season being Gu Xiang. She was back for ChinARE V (1988-89), ChinARE VI (1989-90), ChinARE VII (1990-91), ChinARE VIII (1991-92), and ChinARE IX (1992-93). Skipper for all these voyages was Wei Wenliang. The Chinese stations were relieved by air in 1993-94, and in 1994 the *Ji Di* was replaced by the *Xue Long*.

Jian Zui. 69°25' S, 76°03' E. A spur in the Larsemann Hills. Named by the Chinese.

Jiaoli He. 62°13' S, 59°00' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Jiemei Feng. 69°26' S, 76°00' E. A peak in the Larsemann Hills. Named by the Chinese.

Jigsaw Island *see* **Jigsaw Islands**

Jigsaw Islands. 64°55' S, 63°37' W. Two small islands NW of Cape Errera, off the SW coast of Wiencke Island, in the Palmer Archipelago. The feature was photographed aerially by FIDASE in 1956. An RN Hydrographic Survey unit on the *Protector* was on one of the islands in 1956-57, and they used it for a main triangulation station. They also charted it as one island, but did not name it. Later that summer season (1956-57), FIDASE surveyed and photographed it from the ground. They had great difficulty recovering the triangulation station, the surveyors piecing together the available information bit by bit to narrow down the exact location, hence the name Jigsaw Island (note: Singular) accepted by UK-APC on July 7, 1959, and by US-ACAN in 1960. It appears as such on a British chart of 1960. However, Tony Bancroft, a member of FIDASE, referred to it in 1958 as Jigsaw Islet. By 1964 it was known that there were 2 islands, separated by a narrow channel, and the name was pluralized accordingly, by both UK-APC and US-ACAN. It appears as such in the 1980 British gazetteer.

Jigsaw Islet *see* **Jigsaw Islands**

Jigsaw Rock Gut. 78°12' S, 162°52' E. A prominent gully on Rücker Ridge, lying 0.45 km W of Margaret Hill, in the Royal Society Range of Victoria Land. So named by NZ-APC in 1980 because of the intense and intricate folds interlocking like a jigsaw puzzle in the marble wall which forms the E side of the gully. US-ACAN accepted the name in 1994.

Lake Jill. 69°26' S, 76°05' E. Just to the SW of Blundell Peak, in the Larsemann Hills, its S edge being buried underneath the edge of an ice dome. Biological work was carried out here by a 1986-87 ANARE field party. Named by ANCA on Nov. 24, 1987. *See also* **Lake Jack**.

Jim Buttress. 67°32' S, 68°13' W. A small rock outcrop, rising to about 300 m about midway along Scotland Edge, between (on the one hand) the W end of Stork Ridge and (on the other) Badger Butress and the N edge of Reptile Rock, on Wright Peninsula, Adelaide Island. Photographed aerially by FIDASE in 1956-57. Named by BAS personnel from Rothera Station for James T. Kirk, of the starship *Enterprise*, the character in the TV series Star Trek. UK-APC accepted the name on Oct. 4, 2004. No word at all from US-ACAN on this name.

Isla Jiménez *see* **Killingbeck Island**

Jimmy Automatic Weather Station. 77°48' S, 166°42' E. An American AWS at an elevation of 200 m, near Arrival Heights, just NNE of McMurdo Station, Hut Point Peninsula, Ross Island. It operated from Dec. 5, 1981 to Dec. 31, 1982, and was re-activated on Feb. 1, 1987. Named for the son of Dr. Charles Stearns, the founder of the AWS project. It was removed in Dec. 1990.

Jim's Island *see* **Cobalescou Island**

Jinbgo Hu *see* **Lake Jack**

Jinbu Hu *see* **Progress Lake**

Jinggang Shan *see* **Blundell Peak**

Isla Jingle *see* **Jingle Island**

Jingle Island. 65°23' S, 65°18' W. An island, 2.5 km long, and 1.5 km NE of Weller Island, in the northeastern Pitt Islands, in the Biscoe Islands. Roughly charted (but not named) by ArgAE 1954-55. Photographed aerially by FIDASE in 1956. Named by UK-APC on July 7, 1959, for the Dickens character. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. Despite the fact that the Argentines call it Isla Jingle, the name accepted by the 1970 Argentine gazetteer was Isla Cabo Paredes, for Cabo 2nd class Paredes, who was on the *Uruguay* in 1904-05.

Jinks Island. 65°22' S, 65°38' W. An island, 8 km N of Pickwick Island, in the northwestern Pitt Islands, in the Biscoe Islands. Roughly charted (but not named) by ArgAE 1954-55, it appears on a 1957 Argentine government map. Photographed aerially by FIDASE in 1956. Named by UK-APC on July 7, 1959, for the Dickens character. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. It appears on a 1964 Argentine chart as Isla Pedro Nelson, and on a 1969 Argentine chart as Islote Pedro Nelson, named for Pedro Nelson (q.v.). The former name was the one accepted by the Argentine gazetteer of 1970.

Jinnah Antarctic Research Station. 70°24' S, 25°45' E. Pakistan's only scientific station in Antarctica, opened on Jan. 25, 1991 (during the first Pakistani Antarctic Expedition) as a summer station, on the Princess Ragnhild Coast of Queen Maud Land, and named for the greatest of all Pakistanis, the founder of the country, Muhammad Ali Jinnah. The 3 buildings could

accommodate 8 persons. By the time Jinnah II was built, this one was being called Jinnah I.

Jinnah II. 70°49' S, 25°11' E. A hut, built in 1992-93, during the 2nd Pakistani Antarctic Expedition.

The *Jinyo Maru*. Japanese freezer ship for Minke whaling in Antarctic waters in 1971-72. *See also* **The *Chiyo Maru***.

Mount Jiracek. 73°46' S, 163°56' E. Rising to 2430 m, at the W side of the head of Tinker Glacier, in the Southern Cross Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for George R. Jiracek, geophysicist at McMurdo, 1964-65.

Jirecek Point. 62°57' S, 62°33' W. On the NW coast of Smith Island, it forms the S side of the entrance to the cove the Argentines call Seno Cabut and the NE side of the entrance to Bourchier Cove, 1.1 km SSE of Markeli Point, and 2.35 km NNE of Villagra Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the Czech historian and Bulgarian educator Konstantin Jirecek (1854-1918).

Jiulong Bandao *see* **Priddy Promontory**

Jiuquan He. 62°13' S, 58°57' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Jiuzhai Gou. 71°42' S, 76°35' E. An isolated gully in Mac. Robertson Land. Named by the Chinese.

Jixue Gou. 62°13' S, 58°58' W. A gully on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese. There are some sources which give the coordinates as 62°23' S, 58°58' W, but that would place the feature in an impossible situation.

Joannes Paulus II Coast. 62°02' S, 58°37' W. A long, dangerous, glaciated coast, between Fildes Peninsula and Pottinger Point, on the NW side of King George Island, in the South Shetlands. Named by the Poles in 1980, for the Pope, John Paul II.

Glaciar Jobet. 64°38' S, 63°11' W. A glacier flowing SE toward Lion Sound, about 17.5 km SW of Ryswyck Point, on the SE coast of Anvers Island, in the Palmer Archipelago. Discovered by BelgAE 1897-99. It appears as Lion Glacier on the 1929 Discovery Investigations chart reflecting their 1927 survey, and appears with that name on a 1943 U.S. Hydrographic Office chart. It was named in association with Lion Sound and Lion Island. However, the feature was never taken up by either UK-APC or US-ACAN, under any name. The Chileans and Argentines certainly recognize this glacier. The Chileans named it Glaciar Jobet for Capitán de navío Ernesto Jobet Ojeda, commodore of ChilAE 1969-70, while the Argentines call it Glaciar León ("león" meaning "lion").

Jobson, Matthew Richard "Matt." b. 1972, Newcastle. A carpenter, he joined BAS, and wintered-over at Rothera Station in 1999 and 2000, at South Georgia in 2002, at Rothera in 2003, and at South Georgia in 2006.

Jocelyn Islands. 67°35' S, 62°53' E. A group of islands between the Flat Islands and the Rouse Islands, in the E part of Holme Bay, on the coast of Mac. Robertson Land. They include Petersen Island, Teyssier Island, and Verner Island. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named them Meholmane (i.e., "the middle islands"). During summer the islands have a number of Adélie penguin rookeries on them. Renamed by ANCA on July 22, 1959, for Miss Jocelyn Terry (later Evans) (1929-2007), ABC radio broadcaster from Australia to Antarctica. "Calling Antarctica" it was called, and lasted from 1954 to 1963. US-ACAN accepted the Australian naming in 1965.

Cape Joerg *see* **Cape Agassiz**

Península Joerg *see* **Joerg Peninsula**

Joerg Peninsula. 68°11' S, 65°10' W. A rugged mountainous peninsula, 33 km long in a NE-SW direction, and between 5 and 16 km wide, it projects into the Larsen Ice Shelf from the E side of the Antarctic Peninsula, between Trail Inlet and Solberg Inlet, just N of Mobiloil Inlet, on the Bowman Coast, on the E coast of Graham Land, and terminates in Three Slice Nunatak. It falls in the area first seen by Wilkins on his flight over on Dec. 20, 1928. Ellsworth photographed it aerially on Nov. 21, 1935, and from these photos it was roughly mapped by U.S. cartographer W.L.G. Joerg (*see* **Joerg Plateau**) in 1936. In 1940 it was again photographed from the air, this time by USAS 1939-41, who also surveyed it from the ground and charted it during a sledging trip in Dec. 1940. They named what was considered to be the E part of the peninsula as Clarkson Point, after Harry Darlington's aunt, Cora G. Clarkson. Cora (1898-1981) was born Cora Shields, and was the daughter of Philadelphia real estate man Peter Shields, and his wife Cora. Cora's older sister was Ethel (Harry Darlington's mother). Cora married banker Robert Livingston Clarkson (1892-1969) on June 2, 1923. It appears as such on a 1942 USAAF chart. On a 1943 U.S. Hydrographic Office chart the whole peninsula appears as Clarkson Point Peninsula. The E point shows up as Punta Clarkson on a 1946 Argentine chart, and that was the name accepted by the 1974 Chilean (sic) gazetteer. *See* **Punta Clarkson**. Following a survey of the peninsula by Fids from Base E between 1946 and 1948 the whole peninsula was named by UK-APC on Jan. 28, 1953, as Joerg Peninsula, for the above mentioned Joerg (*see* **Joerg Plateau**). They plotted it in 68°30' S, 65°00' W). US-ACAN accepted the name later in 1953. It appears as such on a British chart of 1954, in the 1955 British gazetteer, and on the 1979 USGS sketch map of the N part of Palmer Land. The entire peninsula appears on a 1957 Argentine chart as Península Joerg, and that was the name accepted (for the entire peninsula, that is) by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was again photographed aerially between 1966 and 1969, by USN. It has since been replotted. *See also* **Pylon Point**.

Joerg Plateau. 76°00' S, 67°00' W. A snow-covered upland scattered with mountain peaks, near the Orville Coast, in the area of the Ronne Ice Shelf. Named by Finn Ronne in 1947-48 during RARE for Wolfgang Louis Gottfried "W.L.G." Joerg (b. Feb. 6, 1885, Brooklyn. d. Jan. 7, 1952), U.S. cartographer, and chief of the U.S. Cartographic Records Branch of the National Archives from 1937 until his death. He was also an adviser to ByrdAE 1928-30, Byrd 1933-35, and USAS 1939-41, was chairman of the USBGN Special Committee on Antarctic Place Names, and was a member of the successor organization, US-ACAN, from 1947-52. The term is no longer used, at least not by anyone except, perhaps, the Russians.

Mount Joern. 72°35' S, 160°24' E. A ridgelike mountain, rising to 2510 m, 5 km NW of Mount Bower, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Albert T. Joern, scientist at Pole Station in 1968.

Johann Gregor Mendel Station. 63°49' S, 57°54' W. Also known as J.G. Mendel Station, or simply Mendel. The first and only Czech Republic Antarctic station (although *see* **Eco Nelson**). The originally planned site was on the E coast of King George Island, but international objection forced them to construct it on the N shore of Ulu Peninsula, at Brandy Bay, between Bibby Point and Cape Lachman, at the N end of James Ross Island, in the NE part of the Antarctic Peninsula. Planned in 2000 and 2001, construction began in the summer season of 2004-05, and was finished in 2005-06 (actually, late Feb. 2006). It was named for the geneticist. It was occupied in 2007-08.

Johannes Müller Crests *see* **Müller Crest**

Johannes-Müller-Kamm *see* **Müller Crest**

Fondeadero Johanessen *see* **Johanessen Harbor**

Johannesen, Julius. b. Dec. 28, 1866, Norway. Chief engineer on the *Antarctic* during the *Antarctic* Expedition 1893-95. On his 28th birthday, he lost the tip of his left forefinger and broke his right leg just above the instep during an accident on board. After the expedition, he went to work at Jensen and Dahl's shipbuilding yard at Fredrikstad, and then was back in Antarctica, as 2nd engineer on the *Southern Cross*, for BAE 1898-1900.

Johannessen, Hans T. Skipper of the whale catcher *Don Ernesto*, which relieved Órcadas Station in 1925-26 and 1926-27.

Johannessen, Johan. Skipper of the *Bombay*, 1917-18, and possibly other seasons too. This is the Capt. Johannessen who made up a chart in 1919-20.

Johannessen, Magnus. b. 1908, Norway. Although he had never been to sea before, he signed on at Larvik, Norway, on Aug. 1, 1935, on the *Wyatt Earp*, as steward, for Lincoln Ellsworth's expedition to Antarctica.

Johannessen, Olav. b. 1917, Norway. Captain of the *Norsel*, 1954-56.

Johannessen Harbor. 65°26' S, 65°25' W. A

sheltered anchorage to the E and NE of Snodgrass Island, in the Pitt Islands, in the northern Biscoe Islands. First entered by the *Norsel* on March 30, 1955, surveyed in April by Fids on board, and named by UK-APC on Sept. 4, 1957 (as Johannessen Harbour), for Olav Johannessen (q.v.), skipper of the vessel. US-ACAN accepted the name in 1963, and it appears (without the "u" in "harbour," of course) in the 1964 American gazetteer.

Johannessen Nunataks. 72°52' S, 161°11' E. An isolated ridge-like outcropping of rocks, about 6 km long, in the S extremity of the Outback Nunataks, about 24 km S of Mount Weihaupt. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Karl R. Johannessen, meteorologist at McMurdo in 1967-68.

Islas Johansen *see* **Johansen Islands**

Islotes Johansen *see* **Johansen Islands**

Mount Johansen. 70°30' S, 67°13' E. A crest, rising to 1554 m, at the W end of a ridge 4 km long, in the south-central part of the White Massif, and rising 244 m above Charybdis Glacier, on the N face of the Aramis Range, in the Prince Charles Mountains. First visited in Dec. 1956 by Bill Bewsher's ANARE Southern Party. Named by ANCA on July 22, 1957, for Sgt. Geoffrey Raymond "Geoff" Johansen (b. Feb. 8, 1926), RAAF sergeant, official photographer, and air frame fitter for the Beaver and Auster aircraft, at Mawson Station in 1956. US-ACAN accepted the name in 1962.

Johansen, Aage J.W. *see* **Órcadas Station**, 1936, 1938, 1941, 1944

Johansen, Axel. Steward and cook on the *Southern Cross* during BAE 1898-1900.

Johansen, Bendik N. "Ben." b. June 26, 1889, Tromsøysund, Norway, son of Johan Bendiksen and his wife Marit Pedersen. Sailing master and ice pilot, he had been in the Arctic when he joined the *City of New York* for ByrdAE 1928-30. He started as 2nd mate, becoming 1st mate and ice pilot later in the expedition. He left for NZ on the *City of New York* on Feb. 22, 1929, but came back to complete the 2nd half of the expedition. He also took part in ByrdAE 1933-35, being sailing master and ice pilot on the *Jacob Ruppert* for the first half of the expedition, and sailing master and 1st officer on the *Bear of Oakland* during the second half. In 1939-41 he was ice pilot on the *Bear* during USAS. He lived in Brooklyn and in Tromsø, with his wife Anna, and in 1944 was awarded American citizenship. He was still alive in 1948.

Johansen, Fredrik Hjalmar. Known as Hjalmar Johansen. b. May 15, 1867, Skien, Norway, son of jailer (and later town hall janitor) Jens Johannesen (sic) and his wife Maren Pedersdatter. A skier, a good dog-driver, and a lieutenant in the infantry, he was with Nansen in the Arctic for two expeditions, one in 1893, as a stoker on the *Fram*, and on the second, 1895-96, he and Nansen alone sledged toward the North Pole, failing to reach it, yet establishing a northing record. They were rescued by the Jackson expedition, and returned home as heroes. Johansen was promoted to captain, and on Aug. 7, 1898, he married Hilda Øvrum, and they set up house in Kristiania (later called Oslo). In 1899 his book came out, *With Nansen in the North*, and so did his son Trygve, on July 10. On Sept. 11, 1900, his daughter was born. But his steady drinking forced him to leave the Army, and in 1907 he was living, broke, in a flophouse in Tromsø, his marriage broken, and Nansen helped him out by getting him a place on an expedition to Spitsbergen. He was forced on Amundsen by Nansen for NorAE 1910-12, despite the alcoholism. He caused Amundsen disciplinary problems at Framheim, and on the expedition's return to Hobart in 1912, Johansen was sent home in disgrace to Norway, where he succumbed to drink again and became a wino in Oslo. A tragic figure all around, he shot himself to death in a public park in the center of town, in the early morning of Jan. 9, 1913. Nansen paid for his funeral. A biography came out in 1997, *Der tredje mann*, by Ragnar Kvam.

Johansen, Karl Moe. b. July 28, 1880, Norway. A baker, he went whaling in the South Shetlands during the 1914-15 season, and died of blood poisoning on Jan. 7, 1915. His Russian friend, Max Slavonski, fell overboard in the Belgica Strait, on the same day, and both were buried in the Whalers Bay Cemetery on Deception Island. It is tempting to read something into this coincidence, but one will never know.

Johansen, Ludvig Hjalmar Kallevig. Known as Hjalmar Johansen. b. Feb. 25, 1872, Moss, Norway, son of sailor Johan Johannesen and his wife Helene Gregersdatter. He was a sailor on the *Belgica* during BelgAE 1897-99, under de Gerlache, an expedition that included Amundsen. After the expedition he returned to Moss, went to work in a glass factory there, and on Aug. 18, 1900, married in Soon, in Akershus, Hilda Jeanette Gathu Martinsdatter (also known as Stensrud). He died on Feb. 19, 1914, in Moss. Hilda died in the same place, in 1948.

Johansen, Per-Tønder. b. 1897, Norway. He went to sea in 1916, and was skipper of the *Wyatt Earp* from July 1, 1938, during Ellsworth's last expedition to Antarctica, 1938-39.

Johansen Islands. 69°03' S, 72°54' W. A group of 5 small, low, partly snow-covered islands, 20 km WNW of Cape Vostok, off the NW coast of Alexander Island. Discovered by personnel on the *Bear* in 1940, as that ship was coming in to establish East Base in 1940, during USAS 1939-41, and named by them for Bendik Johansen. The group appears on a USAAF chart of 1942, but plotted in 68°45' S, 72°00' W. On a U.S. Hydrographic Office chart of 1943 it appears in 69°05' S, 72°50' W. US-ACAN accepted the name in 1947, but with the coordinates 69°03' S, 72°52' W, which is also how it appears on a 1952 British chart, and how it was accepted by UK-APC on Dec. 20, 1974. It has since been slightly replotted. It appears on a 1946 Argentine chart as Islas Johansen, and that was the name accepted by the 1970 Argentine gazetteer. It appears on a 1962 Chilean chart as Islotes Johansen, and that was the name accepted by the 1974 Chilean gazetteer.

Johansen Peak. 86°43' S, 148°11' W. Also called Mount Hjalmar Johansen, and Mount Thurston. A prominent peak, rising to 3310 m, 5 km ESE of Mount Grier, in the La Gorce Mountains, in the Queen Maud Mountains. Discovered by Byrd on Nov. 28-29, 1929, during his flight to the South Pole. Mapped by Quin Blackburn in 1934 during ByrdAE 1933-35. In 1911 Amundsen had named a peak in this general area as Mount H. Johansen, for Hjalmar Johansen. Amundsen was speeding toward the Pole at the time and did not have much time to plot geographic features with much accuracy. In order to preserve Johansen's name in this area, this particular peak was thus named by US-ACAN in 1967.

Johansenbotnen. 74°42' S, 11°13' W. A corrie, or cirque, in the NW part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for student Einar Johansen (1915-1996), Resistance leader during World War I.

Johanssen, Daniel. b. July 30, 1873, Tromsø, Norway. Able seaman on the *Gauss* during GermAE 1901-03.

Johansson, Axel L. *see* **Johnson, Axel L.**

Johansson, Karl. b. 1879, Sweden. Stoker on the *Antarctic* during SwedAE 1901-04.

The *John*. A 142-ton sealing snow, built in the USA, and taken as a prize during the War of 1812. She was owned by (and named for) John Milner, a London mast maker (he also owned the *Lady Francis*). On Aug. 25, 1820, she left Gravesend, in Kent, under the command of Capt. John Walker, and then left Deal on Aug. 27, 1820, bound for the South Shetlands and the 1820-21 season. On March 3, 1821, she left the South Shetlands, and arrived back in Plymouth on June 11, 1821, and to London on June 22, 1821, with 11,100 sealskins. On Aug. 18, 1821, she left London, bound for the South Shetlands again, and the 1821-22 season, again under Walker, and (apparently) Thomas Kincaid. She left the South Shetlands, and headed for Peru's whaling grounds. She was in at Valparaíso on April 28, 1822. She finally returned to London on April 5, 1824, under Walker, with 120 casks of oil and one cask of sealskins.

Pico John *see* **John Peaks**

Picos John *see* **John Peaks**

Playa John *see* **John Beach**

John, David Dilwyn. Known as Dilwyn John. b. Nov. 20, 1901, St Brides Major, Bridgend, Wales, son of Vale of Glamorgan farmer Thomas John. After the University of Wales (zoology) he became, in 1925, a member of the zoological staff of the Discovery Committee, studying krill. He was chief scientist on the *William Scoresby* from Dec. 1927 to April 1929; was one of the senior zoologists on the *Discovery II* cruise of 1929-31; was leader of the *Discovery II* cruise of 1931-33; and zoologist on the 1933-35 cruise. In 1935 he joined the Natural History Museum, being in charge of recent echinoderms for years, finding time to be an anti-aircraft

officer during World War II. From 1948 he was director of the National Museum of Wales, in Cardiff. He died in Wales on Oct. 2, 1995.

John Beach. 62°39' S, 60°46' W. At the W side of the entrance to Walker Bay, on the S coast of Livingston Island, in the South Shetlands. Fildes roughly charted it in 1820-21, and named it descriptively as Black Point. Re-charted by the Discovery Investigations in 1935, and photographed aerially by FIDASE in 1956-57. As there was another Black Point on Livingston Island, this one was renamed John Beach by UK-APC on July 7, 1959, for the sealing brig *John*. US-ACAN accepted the name in 1960.

[1]**The *John Biscoe*.** Often referred to, of course, as the *Biscoe*. The first of two FIDS ships to be named for the 19th-century Antarctic navigator John Biscoe (q.v.), this wooden ship of 899 tons, and 184 feet 6 inches long, was built by the American Car and Foundry Company, in Wilmington, Delaware, and launched on May 23, 1944, as a U.S. Navy netlayer called the *Satinwood*. However, upon completion, on Aug. 5, 1944, she was immediately transferred to the Royal Navy, and renamed the *Pretext*. In 1947 she was purchased by the British as the first actual FIDS-owned relief vessel (as opposed to leasing, which FIDS had been doing until then). She was employed as such from 1947 to 1956. She had a diesel electric motor, and was capable of 14 knots, and could take 48 FIDS, cramped tightly in triple bunks. **Dec. 15, 1947**: The *John Biscoe* was officially named (or rather, re-named) at Deptford, by Mrs. Creech Jones, wife of the secretary of state for the colonies. **1947-48 cruise**. **Dec. 19, 1947**: The *John Biscoe* left Tilbury on her first FIDS mission, bound at 9 knots for the Falkland Islands. Skipper was A.M. McFie. First mate was the Irish peer, Lord Headley (q.v.). The cook was named Jack. Also on board, aside from the Fids going south, was reporter Brian "Dudley" Bevis. **Dec. 20, 1947**: The *Biscoe* made it out of the Thames Estuary, and into the North Sea. **Dec. 27, 1947**: The *Biscoe* passed Madeira, after going via the Channel Islands, the Bay of Biscay, and Cape Finisterre. **Jan. 1, 1948**: New Years' for the *Biscoe* at the Cape Verde Islands. **Jan. 6, 1948**: The *Biscoe* crossed the Equator. **Jan. 17, 1948:** The *Biscoe* sighted Montevideo, where André Liotard joined them for a tour of FIDS bases later in the season. Also joining the ship was an old Norwegian whaling skipper and a younger engineering officer, who were going down to Deception Island to inspect the ruins of the old Norwegian whaling station there. **Jan. 25, 1948**: The *Biscoe* arrived at Port Stanley. **Jan. 31, 1948**: The *Biscoe* left Port Stanley for a tour of all FIDS bases, but heavy seas threatened her cargo, and she had to take refuge for the night in Sparrow Cove. **Feb. 1, 1948**: The *Biscoe* left Sparrow Cove, heading south. Also aboard was Roy "Bill Bailey," an ionosphericist doing a summer tour of the FIDS bases, to see which one would be suitable for him to erect an ionospheric transmitter and apparatus at. **Feb. 4, 1948**: The *Biscoe* sighted her first small iceberg at 3.49 P.M., and at 4.50 P.M. her first big one, in 60°36' S, 59°36' W. **Feb. 5, 1948**: The *Biscoe* sighted Livingston Island at 6.35 A.M. Later that day she arrived at Deception Island. **Feb. 8, 1948**: At 10.30 A.M. the *Biscoe* left Deception Island for Signy Island. **Feb. 10, 1948**: After an iceberg-strewn journey, the *Biscoe* sighted the South Orkneys in the afternoon, and in the late evening reached Signy Island. **Feb. 12, 1948**: The *Biscoe* left Signy Island about 3.30 A.M. **Feb. 14, 1948**: The *Biscoe* arrived at Admiralty Bay (Base G), before breakfast. **Feb. 18, 1948**: The *Biscoe* back at Deception Island. **Feb. 21, 1948**: The *Biscoe* and Finn Ronne's ship, the *Port of Beaumont, Texas*, spent the night together at Marguerite Bay, along with the two American icebreakers, *Edisto* and *Burton Island*. **Feb. 22, 1948**: The *Biscoe* arrived at Stonington Island (Base E), and later that day headed for the Argentine Islands (Base F). **Feb. 25, 1948**: The *Biscoe* arrived at Base F. **Feb. 26, 1948**: The *Biscoe* left Base F for Port Lockroy. **March 15, 1948**: The *Biscoe* back at Port Stanley, after her inspection of the FIDS bases. **April 1, 1948**: the *Biscoe* was due to set out again for the bases, to re-supply them, but had engine trouble. The *Fitzroy* did the job instead, and the *Biscoe* did the local ferrying work around the Falklands that the *Fitzroy* normally did. **Late April 1948**: The *Biscoe* left for London, for a refitting and overhaul. **July 1948**: the *Biscoe* arrived back in Southampton, after 7 months away, and a tour of 20,000 miles. Just before arriving, she had docked at Cherbourg to make a gift of some huskies to Liotard's French Antarctic expedition then about to leave for the south. At Southampton the *Biscoe* was re-sheathed in greenheart (a wood to protect her against the ice), and living accommodations were improved. **1948-49 cruise**. **Oct. 13, 1948**: The *John Biscoe* left Southampton with 6 new Fids aboard, and supplies and mail for the bases. The new skipper was Harry Kirkwood (and he would remain skipper until 1950), and the new chief engineer was Herbert Ward (until 1955). All the ship's officers had been seconded from the RN at their own request, and the crew were Falkland Islanders. Also aboard was Joss Thomas, of the Colonial Office News Branch, seconded to FIDS as press officer for 6 months. **Nov. 22, 1948**: The *Biscoe* at Port Stanley. **Nov. 29, 1948**: The *Biscoe* left Port Stanley, headed for the FIDS bases, and followed by the *Sparrow*. **Dec. 3, 1948**: The *Biscoe* and the *Sparrow* arrived in the South Orkneys, the earliest ever summer arrival in those islands. **Dec. 4, 1948**: Those Fids due to leave Signy Island Station did so, on the *Biscoe*, and the ships then pressed on for Admiralty Bay. **Dec. 7, 1948**: The two ships ran down what would (the following year) be named Prince Charles Strait, and took the first lines of soundings in this stretch of water. **Dec. 8, 1948**: In the morning the *Biscoe* and the *Sparrow* arrived at Base G (Admiralty Bay), late, due to fog, pack-ice, and heavy gales, but a strong north-easterly prevented any communication at all with the base for 2 whole days. **Dec. 10, 1948**: While the *Biscoe* was moored at Admiralty Bay, Capt. Kirkwood held an inquest into the death at Base G of Eric Platt. Death by misadventure was the verdict. **Dec. 11, 1948**: The two ships left for Deception Island. **Dec. 15, 1948**: The two ships arrived at Deception Island, late, due to drift ice, and once at the island, only the *Biscoe* could get in. The *Sparrow* had to wait outside the harbor. **Dec. 17, 1948**: The *Sparrow*'s fuel was running low, so she had to return to Port Stanley. **Jan. 15, 1949**: The *Biscoe* left Port Stanley for the FIDS bases. Joss Thomas was again the reporter this season, and Bob Moss, the photographer, was also aboard. **Very early Feb. 1949**: The *Biscoe* made 6 attempts to get into Hope Bay (Base D), but couldn't do so because of the ice. **Feb. 2, 1949**: On the 2nd attempt, the *Biscoe* finally got through the pack ice at Admiralty Bay, to begin helping the *Sparrow* out of the pack-ice which had locked her in there. **Feb. 4, 1949**: The *Biscoe* finally got into Hope Bay, and took the 5 Fids off—Frank Elliott, Bill Sladen, Brian Jefford, Stephen McNeile, and John O'Hare. After the fire there in November, the 5 remaining Fids (Dick Burd and Mike Green had died) had been living in tents. **Feb. 13, 1949**: The *Biscoe* left Base G heading for Port Lockroy. **Feb. 14, 1949:** The *Biscoe* arrived at Port Lockroy. **Feb. 18, 1949**: The *Biscoe* left Port Lockroy, heading for Base F, where Dan Jardine and Ken Pawson were then deposited. **March 7, 1949**: The *Biscoe* left Port Stanley, bound first for South Georgia, with Miles Clifford, governor of the Falkland Islands, aboard, to do his annual tour of the FIDS bases. Also aboard was Robert Boumphrey, colonial office auditor in Port Stanley. **March 28, 1949**: The *Biscoe* arrived at Base F. **March 30, 1949**: The *Biscoe* left Base F. **March 1949**: The *Biscoe*, with Governor Clifford, still aboard, attempted to get in to Stonington Island (Base E) to relieve the FIDS party there, but couldn't do so because of the pack-ice. Clifford made the decision to return to Port Stanley, and leave the men to their fate. There was no other option. **April 2, 1949**: Lassie, one of the dogs, hanged herself over the side of the *Biscoe* during a violent storm. **April 3, 1949**: The *Biscoe* pulled into Deception Island. **April 6, 1949**: The *Biscoe* left Deception Island for Base G, arriving there at 9.30 P.M., and dropping off Ken Pawson and Dan Jardine for the winter. **April 11, 1949**: The *Biscoe* arrived back in Port Stanley. **June 11, 1949**: The *Biscoe* left Port Stanley, bound for the UK. **July 14, 1949**: The *Biscoe* arrived back in Southampton. It was quite a day, ornithologically speaking. One of the captured sheathbills bound for London Zoo was frightened by a dog, and jumped overboard. Momentarily forgetting that its wings had been clipped, it hit the water with a thud. There it was, floating in the Solent, squawking and drowning. Bill Sladen's attempts to rescue it came to naught, but an intrepid seaman, at great risk to himself, managed to get the bird out from between the quay wall and the ship's side. Just as everyone was breathing a sigh of relief, a huge turkey vulture, also on its way to London Zoo, took off and alighted on the back of a terrified photog-

rapher. **1949-50 cruise**. **Oct. 11, 1949**: After modifications (for example, a steel shoe on her bows), the *John Biscoe* left Southampton, bound for Port Stanley. Capt. Kirkwood was skipper again. Aboard were 16 Fids, and 2 crated aircraft — a Norseman amphibian and an Auster. The crew of 40 were mostly Falkland Islanders. The ship was carrying 150 tons of cargo, including 26 tons of Welsh coal for the FIDS bases. Very much on everyone's mind was the trapped FIDS party at Base E. **Nov. 26, 1949**: The *Biscoe* left Port Stanley, bound for the FIDS bases. Lt. Richard Brook was one of the officers. Douglas Liversidge, a Reuters correspondent, was also on board. **Dec. 3, 1949**: The *Biscoe* reached Deception Island. **Dec. 9, 1949**: The *Biscoe* arrived at Base G. **Dec. 13, 1949**: The *Biscoe* left Base G, with 6 suspected cases of measles aboard. **Dec. 16, 1949**: Two more members of the *Biscoe*'s crew came down with measles, making a total of 8. The crew was now reduced to 4 seamen and a greaser. In addition to this, the ship's radar equipment had broken down, and her diesel generators badly needed overhauling. **Dec. 25, 1949**: After visiting Deception Island and Admiralty Bay, the *Biscoe* Christmased at South Georgia. Two attempts to get into Signy Island had failed, and there had been no attempt (by the *Biscoe*) to rescue the men at Base E. **Jan. 1, 1950:** The *Biscoe* back in Port Stanley. **Jan. 17, 1950**: The *Biscoe* left Port Stanley, bound first for Deception Island, with Miles Clifford, the governor of the Falklands, aboard. **Jan. 20, 1950**: The *Biscoe* arrived at Deception Island. **Jan. 25, 1950**: The *Biscoe* arrived at Port Lockroy. **Jan. 30, 1950:** The *Biscoe* at the Argentine Islands (Base F). **Feb. 10, 1950:** The *Biscoe* in at Stonington Island, to take off the remaining men from Base E who had not previously been flown off. **Feb. 12, 1950**: The *Biscoe* left Stonington Island. The governor transferred to the *Bigbury Bay*, and would arrive back at Port Stanley on Feb. 22. **Feb. 16, 1950**: The *Biscoe*, at Deception Island, was visited by a very friendly, but protesting, Argentine contingent. This was very typical of those days. The Argentines, Chileans, and British all claimed the same wedge of Antarctica, and every so often one party would visit another, bottles of booze in hand, and usually a movie, and have a slap-up dinner and night's entertainment, while, at the same time, and with some embarrassment, protest the presence there of the other party. Only on one or two occasions did any of these very civilized gentlemen ever take it more seriously. **March 5, 1950**: The *Biscoe* arrived back at Port Stanley, having called at all the FIDS bases. **March 20, 1950**: The *Biscoe* left Port Stanley, bound for the FIDS bases. **March 24, 1950**: The *Biscoe* arrived at, and soon thereafter left, Base G, for Deception Island. **March 27, 1950**: The *Biscoe* left Deception Island for Port Lockroy. **March 28, 1950**: The *Biscoe* arrived at Port Lockroy. **March 29, 1950**: The *Biscoe* left Port Lockroy, heading for Base F, and then, same day, back to Lockroy. **March 30, 1950**: The *Biscoe* left Port Lockroy. **April 11, 1950**: The *Biscoe* left Deception Island, bound for Port Stanley. **June 15, 1950**: The *Biscoe* left Port Stanley, bound for the UK. **July 19, 1950**: The *Biscoe* arrived in Southampton, after a tour of 9 months and 50,000 miles. Aboard were 8 full-grown huskies and 2 pups, born in the Falklands. They were to be quarantined, and then trained for a role at the upcoming Festival of Britain. **1950-51 cruise**. **Oct. 13, 1950**: The final trials of the *John Biscoe* after re-fitting (overhauled machinery, new radar equipment and steering equipment, re-sheathing with greenheart). **Oct. 16, 1950**: The *Biscoe* left Southampton, bound for Port Stanley. The new skipper was Bill Johnston (Captain Bill), the man most identified with both vessels of this name (see below for what has gone down in history as the "new *John Biscoe*"). He was the first skipper of this ship who was Merchant Navy (rather than Royal Navy), and would remain as skipper until 1955, when he would go to the new *John Biscoe*. Chief engineer, Herbert Ward, same thing. The ship was carrying Fids (including Major Ken Butler), anthracite, and canned goods for the FIDS bases, and 2 trained sheepdogs for Falkland Islands shepherds. **Nov. 16, 1950**: The *Biscoe* arrived at Port Stanley. **Nov. 19, 1950**: The *Biscoe* left Port Stanley for the FIDS bases. **Dec. 14, 1950**: The *Biscoe* left South Georgia, bound for Port Stanley. **Dec. 17, 1950**: The *Biscoe* arrived at Port Stanley. **Jan. 13, 1951**: The *Biscoe* left Port Stanley, bound first for South Georgia. **Jan. 17, 1951**: The *Biscoe* arrived at South Georgia. She would then go on to the other FIDS bases. **Easter Sunday 1951**: The *Biscoe* left Port Stanley for her 4th trip to FIDS bases that season. Her first port of call was Deception Island. Then on to Port Lockroy, the Argentine Islands, back to Deception, then Admiralty Bay, and Signy Island, then back to South Georgia. **April 17, 1951**: The *Biscoe* left South Georgia, bound for Port Stanley. **April 22, 1951**: The *Biscoe* arrived back at Port Stanley, in one of the thickest fogs in living memory. **July 26, 1951**: The *Biscoe* arrived back in Southampton, after a 9-month tour and 40,000 miles. Aboard were 7 sheathbills, caught by Bill Sladen in the South Orkneys. There was also a brace of flightless Falkland Islands steamer ducks. There had been three when they set out from Port Stanley, but the third was last seen paddling like mad toward Rio. **1951-52 cruise**. **Oct. 22, 1951**: After a refit, the *John Biscoe* left Southampton in the afternoon, bound for Port Stanley. A crew of 30, and 18 passengers. **Dec. 7, 1951**: The *Biscoe* left Port Stanley for her tour of FIDS bases. **Jan. 3, 1952**: The *Biscoe* arrived back in Port Stanley, after her tour of the FIDS bases. **Jan. 26, 1952**: The *Biscoe* left Port Stanley for the FIDS bases, but with the main purpose of re-establishing Hope Bay (Base D) after the 1948 fire. **Jan. 30, 1952**: The *Biscoe* arrived in the evening at Hope Bay, only to find an Argentine party ensconced there. **Feb. 1, 1952**: After a day's delay due to bad weather, offloading began from the *Biscoe*, not a good idea, as it turned out. The Argentines had, in truth, warned the Fids that they would resist, with arms, a British landing here, and they proceeded to do just that. They forced the unarmed Fids back on to the *Biscoe*, and formal protests then began. Then, after it had all blown over very quickly — there were big British guns heading toward Hope Bay — ("sorry, our man on the spot made an error") — the landing continued. **July 1952**: The *Biscoe* arrived back in Southampton. **1952-53 cruise**. **Oct. 20, 1952**: After an extensive refit, the *John Biscoe* left Southampton, bound for Port Stanley. 17 Fids were aboard, as well as food and stores for the bases. **Jan. 14, 1953**: The *Biscoe* left Port Stanley for her second trip to the FIDS bases that season. At Darwin Harbor she damaged her rudder and steering gear, and had to return to the Falklands, and then go up to Montevideo for repairs. The *Biscoe* finally left Port Stanley, bound for Southampton. The new radio operator (just for that trip) was Bill Meehan, who had replaced Bill Bonner, the long-time radioman who had quit to go to work on South Georgia whale catchers. **June 11, 1953**: The *Biscoe* arrived in Southampton, whereupon she was granted new status as a Royal research ship (RRS). She took part in the Spithead review. **1953-54 cruise**. **Oct. 1, 1953**: The *John Biscoe* left Southampton, bound for Port Stanley. Capt. Bill Johnston was still skipper. First officer was H.M. Pries, 2nd officer was Norman Brown, and 3rd officer was Raymond Le Pivert. **June 22, 1954**: The *Biscoe* arrived in Southampton. **1954-55 cruise**. **Oct. 4, 1954**: The *John Biscoe* left Southampton. **Nov. 27, 1954**: The *Biscoe* arrived at Port Lockroy. **Dec. 3, 1954**: The *Biscoe* left Port Lockroy at 9 A.M. **March 7, 1955**: The *Biscoe*, with the governor of the Falklands aboard, arrived at Port Lockroy, in company with the *Norsel*. **March 24, 1955**: The *Biscoe* arrived at Port Lockroy. The governor threw a party on board. **June 19, 1955**: The *Biscoe* arrived in Southampton. **1955-56 cruise**. **Oct. 12, 1955**: The *John Biscoe* sailed from Southampton, under the command of Capt. Harry Kirkwood. 29 ship's crew, and 18 Fids. John Heap was also aboard. This was to be the vessel's last trip from the UK to Port Stanley under the name *John Biscoe*. She would be replaced by the brand new *John Biscoe*. **Dec. 5, 1955**: The *Biscoe* left Port Stanley. **Dec. 9-10, 1955**: At South Georgia. **Dec. 12-14, 1955**: At Signy Island. **Dec. 16-17, 1955**: At Base D (Hope Bay). **Dec. 17-18, 1955**: At Base B (Deception Island). **Dec. 19, 1955**: At Copper Point and then Port Lockroy Station. **Dec. 20, 1955**: The *Biscoe* left Port Lockroy Station. **Dec. 20-21, 1955**: At Base N (Anvers Island). **Dec. 21-22, 1955**: At Base F (Argentine Islands). **Dec. 22, 1955**: The *Biscoe* arrived at Deception Island (Base B). **Dec. 26, 1955**: The *Biscoe* left Base B for Base G (Admiralty Bay). **Feb. 11, 1956**: The *Biscoe* arrived at Hope Bay (Base D). **Feb. 11-12, 1956**: The *Biscoe* arrived at Duse Bay. **Feb. 12-14, 1956**: The *Biscoe* back at Base D. **Feb. 14-15, 1956**: The *Biscoe* back at Base B. **Feb. 16-17, 1956**: The *Biscoe* at Base N. **Feb. 18, 1956**: The *Biscoe* at Base F. **Feb. 19, 1956**: The *Biscoe* in Darbel Bay and Crystal Sound. **Feb. 19-21, 1956**: The *Biscoe* in Matha Strait. **Feb. 21, 1956**: The *Biscoe* arrived at

Detaille Island (Base W). **March 9, 1956**: The *Biscoe* arrived at Port Lockroy, in company with the *Shackleton*. **March 1956**: The Royal NZ Navy made arrangements to buy the *John Biscoe*, for £20,000, for transporting Ed Hillary and his men to Antarctica for the 1956-57 season. **March 19, 1956**: The *Biscoe* arrived at Port Lockroy with mail, en route to Base W. **June 9, 1956**: The *Biscoe* arrived back in Southampton, at the end of her last FIDS tour. She would very soon be replaced by the bigger, better new *John Biscoe*. **June 11, 1956:** The new *John Biscoe* was launched (see the entry below). **1956**: The name of the old *John Biscoe* was changed back to the *Pretext*. **Aug. 15, 1956**: In Southampton, the old *John Biscoe* (now, albeit briefly, the *Pretext* again), having been refitted by John I. Thorneycroft & Co., at Southampton, was commissioned as the *Endeavour* (q.v.), under which name she went back to Antarctica as a NZ ship, under the command of skipper Harry Kirkwood, who had been seconded to the RNZN for 2 years. Her story continues, therefore, but under the entry *Endeavour*.

[2]**The *John Biscoe*.** This is what has always been called (and will always be remembered as) the new *John Biscoe*. She was a replacement for the old *John Biscoe* (for what became of the old *John Biscoe*, see the entry above). British royal research ship (RRS) of 1584 tons, launched on June 11, 1956, at the shipyard of Fleming & Ferguson, in Paisley, by Lady Patricia Lennox-Boyd, wife of the colonial secretary. Bill Johnston (who had just spent a year skippering the *Shackleton*) was the new *Biscoe*'s skipper from 1956 to 1965, and Herbert Ward her chief engineer. **Oct. 21, 1957**: At 3 P.M., the *John Biscoe* left Southampton, for St. Helena, then on to Tristan da Cunha, and finally South Georgia, arriving first at King Edward Point, where she clipped the end of the jetty. Then on to Stromness to refuel, then to the Falkland Islands. Mike Smith was first officer on this cruise. **Nov. 27, 1957**: The *John Biscoe* arrived at Port Stanley. **Dec. 12, 1957**: The *John Biscoe* arrived at South Georgia. Ray Butler was U.S. observer on this cruise. **Dec. 18, 1957**: The *John Biscoe* at Powell Island. **Dec. 22, 1957**: The *John Biscoe* arrived at Signy Island. **Dec. 24, 1957**: The *John Biscoe* spotted Elephant Island in the distance, to port. **Dec. 25, 1957**: The *John Biscoe* spotted King George Island to starboard, and then dropped anchor in Admiralty Bay. **Dec. 30, 1957**: The *John Biscoe* arrived at Hope Bay. **Dec. 31, 1957**: The *John Biscoe* arrived at Port Lockroy. She then left for Base F, dropping off the RN Hydrographic Survey unit at Winter Island. **Jan. 9, 1958**: The *John Biscoe* met the *Lientur* at Port Lockroy. A Chilean observer came aboard for the *John Biscoe*'s cruise. **Jan. 19, 1958**: The *John Biscoe* rendesvoused with the *Shackleton* at the Lemaire Channel. **Jan. 20, 1958**: The *John Biscoe* arrived at Base J, at 10.30 P.M. **Jan. 21, 1958**: The *John Biscoe* left Base J. **Feb. 8, 1958**: The *John Biscoe* arrived at Base W. **Feb. 8-14, 1958**: The *John Biscoe* toured around Detaille Island. **Feb. 14, 1958**: The *John Biscoe* set out on the trip back to Port Stanley, and, on the way, to relieve the other FIDS bases. However, 35 miles NW of Alexander Island, they were prevented from getting into Marguerite Bay by the pack-ice. **Feb. 14-15, 1958**: They couldn't see the coast. **Feb. 15-20, 1958**: They were stuck in the ice in Hanusse Bay. **Feb. 20, 1958**: The *John Biscoe* got to Anvers Island and Port Lockroy. **Feb. 20-24, 1958**: The *John Biscoe* was in at Hope Bay (Base D). **Feb. 25-28, 1958**: The *John Biscoe* was in at Base B (Deception Island). **Feb. 28, 1958**: The *John Biscoe* arrived at Greenwich Island. **March 1-3, 1958**: The *John Biscoe* was in at Admiralty Bay (Base G). **March 3, 1958**: The *John Biscoe* arrived at Greenwich Island. **March 4, 1958**: The *John Biscoe* arrived at Base B (Deception Island). **March 4-7, 1958**: The *John Biscoe* was en route from Base B to Base Y (Horseshoe Island). **March 7, 1958**: They reached Base Y. **March 8, 1958**: The *John Biscoe* arrived at Blaiklock Island. **March 9-12, 1958**: The *John Biscoe* was in at Base E (Stonington Island). **March 13-14, 1958**: The *John Biscoe* was in at Base W. **March 14-15, 1958**: The *John Biscoe* was in at Base J (Prospect Point). **March 15-16, 1958**: The *John Biscoe* was in at the Argentine Islands (Base F). **March 16, 1958**: The *John Biscoe* was at Port Lockroy and Danco Island (Base O). **March 17-18, 1958**: The *John Biscoe* was in at Base B (Deception Island). **March 20-22, 1958**: The *John Biscoe* was in at Base G (Admiralty Bay). **March 22, 1958**: The *John Biscoe* was at Base D (Hope Bay). **March 23-24, 1958**: The *John Biscoe* was in at Duse Bay. **March 25, 1958**: The *John Biscoe* was at Hope Bay (Base D), and left there the same day, bound for Port Stanley. **March 29, 1958**: The *John Biscoe* arrived back at Port Stanley. **April 14, 1958**: The *John Biscoe* arrived at Signy Island. **April 15, 1958**: The *John Biscoe* left Signy Island. **June 3, 1958**: The *John Biscoe* arrived back in Southampton. **April 20, 1959**: The *John Biscoe* in at Signy Island, and then back to Port Stanley, with Pete Richards aboard bound for the hospital. **1960**: Tom Woodfield was chief officer. John Cole joined the crew as 3rd mate. **March 19, 1960**: The *John Biscoe* arrived at Base Y. Professor David Griffiths, the gravity expert, "Gravity Griff," was aboard for a tour of the Antarctic Peninsula. George Edwards, the official FIDS photographer, was also aboard. **March 22-29, 1960**: The *John Biscoe* stuck in ice south of the Argentine Islands. **March 30, 1960**: The *John Biscoe* reached Base F. **March 31, 1960**: The *John Biscoe* arrived at Port Lockroy. **April 1, 1960**: The *John Biscoe* in the Bellingshausen Sea. **April 2, 1960**: The *John Biscoe* arrived at Deception Island. **April 7, 1960**: The *John Biscoe* left Deception Island, went to Robert Island, and spent the night at Livingston island. **April 11, 1960**: The *John Biscoe* arrived at Signy Island. **April 14, 1960**: The *John Biscoe* arrived at South Georgia, leaving there the same day, bound for Port Stanley. **April 23, 1960**: The *John Biscoe* left Port Stanley, bound for the UK. **June 6, 1960**: The *John Biscoe* arrived in England. **Nov. 1, 1960**: The *John Biscoe* sailed from Southampton to relieve FIDS bases. **Feb. 3, 1961**: The *John Biscoe* arrived at Adelaide Island, to set up the new base there. **March 10, 1961**: The *John Biscoe* arrived at Stonington Island, in a full gale. **June 1961**: The *John Biscoe* arrived back in England. **Oct. 1961**: The *John Biscoe* left Southampton to relieve FIDS bases. **1962-63**: The *John Biscoe* relieved BAS bases. **Oct. 1963**: The *John Biscoe* left Southampton, bound for Montevideo, where she refueled, then on to Port Stanley and the BAS bases. **Jan. 9, 1964**: The *John Biscoe* became icebound in about 66°S. **Jan. 30, 1964**: The *John Biscoe*, still drifting with the pack, was off the NW coast of Adelaide Island. **Feb. 10, 1964**: The *John Biscoe* finally free of the ice. **1964-65**: Bill Johnston and Thomas Woodfield skippers for a season. **1965-66**: Thomas Woodfield was skipper, until 1969. **1966-67**: The *John Biscoe* relieved BAS bases. **1967-68**: The *John Biscoe* relieved BAS bases. **1968-69**: Thomas Woodfield and Maurice John Cole skipper. **1969**: John Cole skipper, until 1972, when he retired. **1969-70**: The *John Biscoe* relieved BAS bases. **1970-71**: The *John Biscoe* relieved BAS bases. **1971-72**: The *John Biscoe* relieved BAS bases. **1972**: Edmond Malcolm Stuart Phelps took command, until 1975. **1972-73**: The *John Biscoe* relieved BAS bases. **1973-74**: The *John Biscoe* relieved BAS bases. **1974-75**: The *John Biscoe* relieved BAS bases. **1975-76**: Christopher Robert Elliott and Stuart James Lawrence were skippers. **1976-77**: Chris Elliott and Malcolm Phelps, skippers until 1978. **1978-79**: Skipper was Malcolm Phelps. **1979-80**: Phelps and Elliott were skippers. **1980-81**: Phelps was skipper. That season the ship broke a propellor, and was towed to port by the *Endurance*. **1981-82**: Phelps and Elliott were to remain skippers until the *Biscoe*'s last year. **1982-83**: The *John Biscoe* relieved BAS bases. **1983-84**: The *John Biscoe* relieved BAS bases. **1984-85**: The *John Biscoe* relieved BAS bases. **Nov. 16, 1985**: Under the command of Chris Elliott, she was on her way from the Falklands to Rothera Station when she got caught in the pack-ice west of the Antarctic Peninsula, and on Nov. 18 the 64 persons aboard evacuated and were flown to the *Polar Duke*. On Nov. 20, she was freed, and the crew went back aboard the £20 million vessel. **1986-87**: The *John Biscoe* relieved BAS bases. **1987-88**: The *John Biscoe* relieved BAS bases. **1988-89**: The *John Biscoe* relieved BAS bases. **1989-90**: The *John Biscoe* relieved BAS bases. **1990-91**: The *John Biscoe* relieved BAS bases. **1991**: The *John Biscoe* was replaced by the *Sir James Clark Ross*. She was sold, became the *Fayza Express*, and was scrapped on March 2, 2004, at Aliaga, Turkey.

John Bowman Peak *see* **Bowman Peak**

John Carlson Bucht *see* **Carlsson Bay**

John Hayes Hammond Inlet *see* **Hammond Glacier**

John Hays Hammond Glacier *see* **Hammond Glacier**

The *John Laing*. A 72-foot (22-meter) steel-hulled ketch that took to Antarctica the British Army Antarctic Expedition of 2001-02.

John Nunatak. 81°12' S, 85°19' W. Also called Granite Knob. An isolated granite nunatak, 6

km N of the Pirrit Hills. It was examined by USARP geologists Ed Thiel and Cam Craddock on Dec. 13, 1959, in the course of an airlifted geophysical traverse along the 88th meridian west. Named by US-ACAN in 1962, for Orlan F. John (**see Deaths**, 1960).

John O'Groats. 67°01' S, 142°42' E. The E point of land on the rocky cape on which the base was built at Cape Denison, in East Antarctica, during AAE 1911-14. Named by Mawson, for the most northerly tip of the Scottish mainland, and it appears as such on the expedition maps. ANCA accepted the name.

John Peak *see* **John Peaks**

John Peaks. 60°43' S, 45°04' W. Prominent, snow-covered peaks rising to 415 m, on the extreme SW of Powell Island, in the South Orkneys. Probably discovered by Powell and Palmer in Dec. 1821. Surveyed in 1933 by personnel on the *Discovery II*, who named them for D.D. John. The feature appears on their 1934 chart, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1952 Argentine chart as Picos John, but on a 1953 chart of theirs as Pico John (i.e., in the singular), which may somehow reflect the error made on a 1937 French chart which had the feature as John Peak. Regardless, the Argentine gazetteer of 1970 accepted the name Picos John.

John Quincy Adams Glacier *see* **Adams Glacier**

Cape John Rodgers. 78°30' S, 164°00' W. On the W side of the Bay of Whales. Named by ByrdAE 1928-30, presumably for John Rodgers, the U.S. naval hero (1772-1838). The feature is gone now, due to massive reconfiguration of the Bay of Whales, but it does appear in the NZ gazetteer of 1958.

Bahía John Rymill *see* **Rymill Bay**

John Shepard Island *see* **Shepard Island**

Cape John Wheeler *see* **Cape Wheeler**

Johnny penguin *see* **Gentoo penguin**

[1]**Mount Johns**. 72°31' S, 66°33' E. An isolated, almost flat-topped, steep-sided rock outcrop in the southern Prince Charles Mountains, on the W side of the Lambert Glacier, in Mac. Robertson Land. Discovered in Dec. 1956, during an ANARE photographic flight. Named by ANCA for David H. Johns, physicist who wintered-over at Mawson Station in 1957. He had also wintered-over at Macquarie Island in 1954.

[2]**Mount Johns**. 79°37' S, 91°14' W. A solitary nunatak, rising to 90 m above the ice surface, about 80 km W of the Heritage Range of the Ellsworth Mountains. Discovered on Jan. 27, 1958, by the Marie Byrd Land Traverse Party of 1957-58, and named by US-ACAN in 1960, for Bob Johns.

Johns, David Hubert. b. Aug. 19, 1929. A reserve lieutenant in the Australian Corps of Engineers when he became cosmic ray physicist at Mawson Station in 1957. He had been on Macquarie Island in 1954. He retired from the Army as a lieutenant colonel, and lived in Hobart.

Johns, Harold Alfred. b. 1888, Portsmouth, son of self-employed rag sorter Alfred B. Jones and his wife Fanny. An able seaman, he arrived back in Southampton on the *Asturias,* on June 12, 1929, from Buenos Aires, and joined the *Discovery II*, for several Antarctic trips, 1929-35. He died in Portsmouth in Dec. 1946.

Johns, Robert H. "Bob." b. 1932. U.S. Weather Bureau meteorologist. The first black to winter-over in Antarctica, when he did so at Byrd Station in 1957. In 1958 he went to Alaska, and died there of a pulmonary infection that year.

Johns Cirque. 77°20' S, 161°01' E. On the E side of McLean Buttress, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for Bjorn Johns, project manager from 1996 to 2005 of University NAVSTAR Consortium, a consortium of 30 U.S. universities that provides support of surveying, mapping, and other applications of the GPS system to USAP. NZ-APC accepted the name on Sept. 12, 2005.

Johns Glacier. 85°48' S, 136°30' W. An arc-shaped glacier, 13 km long. it flows eastward around the N side of Doumani Glacier to join Kansas Glacier, in the N part of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. (later Lt. Cdr.) Ernest Houston Johns (b. Dec. 24, 1932. d. Aug. 10, 1998, Silver Springs, Fla.), USN, who began his Antarctic career as a yeoman 1st class on the *Wyandot* during OpDF III (i.e., 1957-58), and was then a chief yeoman on OpDF 61 (i.e., 1960-61).

Johns Hopkins Ridge. 78°08' S, 162°28' E. A prominent ridge running northward from Mount Rücker for 10 km, in the Royal Society Range. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1964, for the famous American university, which has sent many researchers to Antarctica. NZ-APC accepted the name.

Johns Knoll. 71°59' S, 7°59' E. A crevassed ice-knoll (apparently the ice surface reflection of the underlying rock) in the lower part of Vinje Glacier, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Johnsbåen (i.e., "John's sunken rock"), for John Snuggerud (*see* **Snuggerud Glacier**). US-ACAN accepted the name Johns Knoll in 1967.

John's Peak. On Coronation Island, in the South Orkneys. A term no longer used.

John's Range *see* **Saint Johns Range**

Johnsbåen *see* **Johns Knoll**

Johnsbrotet. 71°22' S, 4°20' W. An ice slope in the N part of Giaever Ridge, out toward the Jelbart Ice Shelf, on the Princess Martha Coast of Queen Maud Land. Named by the Norwegians for John Giaever. The word "brot" signfies "broken."

Johnsen, Johann Ludvig. Sail maker on the *Deutschland*, during GermAE 1911-12.

Johnsen, Rolf L. *see* **Johnson Peaks**

Caleta Johnson *see* **Johnsons Dock**

Cape Johnson. 74°04' S, 165°09' E. An ice-covered cape, forming the N entrance point of Wood Bay, at the E side of the terminus of Tinker Glacier, about 27 km south-westward of Cape Sibbald (with which it has sometimes been confused), on the coast of Victoria Land. Discovered by Ross in 1841, and named by him for Capt. Edward John Johnson, RN (1794-1853), a member of the Magnetic Compass Committee of the Admiralty. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Dársena Johnson *see* **Johnsons Dock**

Fondeadero Johnson *see* **Johnsons Dock**

Johnson, Axel L. b. 1885, Sweden. A whaler on the *Svend Foyn I*, in Antarctic waters in 1915-16, who died in a shipboard explosion on March 5, 1916.

Johnson, Captain. British commander who took the *Mellona* down to the South Shetlands for the 1821-22 sealing season. His first name was probably Thomas. Something happened, and Capt. James Laing took over from him, and brought the ship back to London.

Johnson, Christopher Charles. b. Dec. 31, 1935, Falkland Islands. Served in the engine-room of the *John Biscoe*, in Antarctic waters, 1953-61, and 1972-87, first as a rating, then as 3rd engineer.

Johnson, Colin. b. Sept. 26, 1930. He joined FIDS in 1956, as a radio operator, and wintered-over 4 times in Antarctica, first in 1957, at Base B, then at Base W in 1958. In 1960 and 1961 he was at Halley Bay Station, the second year also as base leader. On March 26, 1962 he arrived back in Southampton on the *Kista Dan*. With ex-Fid Graham Talmadge, he went to Australia, and they ran a garage for 5 years, and later in the 1960s Johnson was living in Fiji.

Johnson, Francis *see* **USEE 1838-42**

Johnson, Francis Robert "Frank." Some called him "Narra." b. Aug. 5, 1933. Radio officer-in-charge at Mawson Station in 1968, 1970, and 1974. He was at Macquarie Island in 1975.

Johnson, Franklyn. b. Feb. 27, 1916, St. Michael, Alaska, son of Inuit laborer (later a gas engineer on a tug boat) Alex Johnson (whose father, Axel, a Russian-speaking Finn, had come to Alaska in 1877, and married an Inuit) and his Inuit wife Malora (known as Malorie). Therefore, Franklyn was three-quarters Inuit. He went to Antarctica as a wiper on the *North Star*, during USAS 1939-41. He died in Nov. 1950, in Alaska. *See* **Eskimos in Antarctica**.

Johnson, Frederick Lawrence "Big Fred" (he was 6 foot 2). b. Nov. 27, 1929, Retford, Notts, son of train driver Fred Johnson and his wife Jessie Robinson. He did his national service in the RAF, training as a medical assistant. He went to work in the Met Office, and in 1951 saw a notice for volunteers for FIDS, went to London for the interview, and later that year shipped out of Southampton on the *John Biscoe*, bound for Rio (see Tony Wilson's entry for the itinerary of the ship). He was FIDS meteorologist at Signy Island Station in the winter of 1952, then summered at the Falklands, and wintered-over again at Base F in 1953. He left Base F in 1954 for Base

B, then on to Port Stanley, then to South Georgia, Montevideo, then back to Southampton. On his return to England he continued his education, getting his degree in mathematics and physics, and marrying Marjorie Oldham in 1956. He was 11 years in the research department at Metro Vickers, and then became the technical manager of a couple of ceramics companies, finally settling in Darwen, Lancs.

Johnson, Henry *see* **USEE 1838-42**

Johnson, Hans J. Able seaman on the *Southern Cross* during BAE 1898-1900.

Johnson, Ian Philip. b. NZ. Senior lab technician in Antarctica, 1965-66, and at Scott Base during the winters of 1966 and 1968.

Johnson, James. British captain, and owner, of the Liverpool sealer *Hannah* during the 1820-21 season in the South Shetlands. The ship was wrecked on Dec. 25, 1820. Subsequently, on Aug. 20, 1821, Johnson became skipper of the *Romeo*, and took her down to the South Shetlands for the 1821-22 sealing season.

Johnson, John. Skipper of the New Bedford sealer *Cornelia*, visiting the South Shetlands in 1821-22, then pressing on to Valparaíso.

[1]**Johnson, Robert**. American sealing captain in the South Shetlands in 1820-21, on the *Jane Maria* (he also commanded the ship's accompanying tender, the *Sarah*, and indeed, the entire expedition), as part of the New York Sealing Expedition. In Jan. 1821 he made an exploratory cruise as far south as 66°S, 70' W. He returned to New York, and in 1821-22, skippered the *Wasp* from New York to the Falklands, and then on to the South Shetlands, for the 2nd part of the expedition. In 1822, upon his return to New York, he relinquished command of the *Wasp* to Ben Morrell, and took command of the *Henry*. The two ships left New York on June 30, 1822, and were back in Antarctica for the 1822-23 season. In 1826 he sailed out of New York again, on a voyage to the South Seas, and in 1827 he left NZ. He was never seen again.

[2]**Johnson, Robert** *see* **USEE 1838-42**

Johnson, Robert E. U.S. Naval lieutenant (reputed to be a heavy drinker) who commanded the *Relief* in the early stages of USEE 1838-42. At Tierra del Fuego, still on the way south, he transferred to the command of the *Seagull*, and spent Dec. 10-17, 1838, looking for the thermometers Foster had left on Deception Island some years before (*see* ***Chanticleer*** **Expedition**), but did not find them. He was transferred again, before the disappearance of the *Sea Gull* in 1839, and was detached at Honolulu in Nov. 1841.

Johnson, Robert Rowland. b. July 7, 1920. Son of Valley A. Johnson, of San Diego. He joined the U.S. Navy, and served as a seaman 1st class on the *Bear*, during USAS 1939-41. For the 2nd half of the expedition he was promoted to Bosun's mate 2nd class. He now lives in Jacksonville, Fla.

Johnson, Samuel. Crew member on either the *Huntress* or the *Huron*, probably the *Huntress*, who deserted in the South Shetlands during the 1820-21 season, probably to join a British sealing gang working on one of the islands.

Johnson, T. b. NZ. Crewman on the *Jacob Ruppert*, 1933-34, i.e., during the first half of ByrdAE 1933-35.

[1]**Johnson, William**. The carpenter on the *Huron*, in the South Shetlands, 1820-22. He was from Connecticut, probably New Haven.

[2]**Johnson, William** *see* **USEE 1838-42**

Johnson, William Floyd. Known as Floyd. b. 1922, Ada, Okla., son of vapor spray salesman Henry D. Johnson and his wife Moselle. He was with the U.S. Weather Bureau for years. He wintered-over at Pole Station in 1957, was the U.S. representative at Ellsworth Station after IGY (1957-58), when that station was taken over by Argentina, and in 1961-62 was scientific leader at Camp Sky-Hi (which would become Eights Station). He married Alfreda "Pete," and they lived in SC. He died in SC on Feb. 16, 2007.

Johnson Bason *see* **Johnsons Dock**

Johnson Bluff. 84°49' S, 170°31' E. A conspicuous rock bluff overlooking the E side of Keltie Glacier, where that glacier meets the Beardmore Glacier, 8 km ENE of Ranfurly Point. Named by US-ACAN in 1966, for Dwight L. Johnson, USARP biologist at McMurdo in 1963.

Johnson Col. 78°22' S, 85°10' W. Situated at 1800 m, 3 km WSW of Mount Farrell, in the central part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Earl Frank Johnson (d. Dec. 14, 2010), USN, of Middlebury Heights, Ohio, utilitiesman who wintered-over at South Pole Station in 1957. Getting back to McMurdo was interesting (*see* **South Pole**, Oct. 26, 1957). He retired as chief petty officer, after 20 years in the USN as a Seabee.

Johnson Dock *see* **Johnsons Dock**

Johnson Glacier. 74°55' S, 134°45' W. Flows N between McDonald Heights and Bowyer Butte into the Getz Ice Shelf, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Roland L. Johnson, USN, bosun's mate on the *Glacier*, 1961-62.

Johnson Harbour *see* **Johnsons Dock**

Johnson Hill. 77°15' S, 166°26' E. A glaciated hill rising to abour 230 m, and composed of basalt and red basalt agglomerate, between the southernmost Adélie penguin rookery and the edge of the ice-cap on the ice-free lower W slopes of Mount Bird, on Ross Island. To the S it slopes to Shell Glacier, and to the N to Fitzgerald Stream. Named by the Cape Bird party of NZGSAE 1958-59, for Charles Johnson, USGS geologist (*see* **Johnson Nunataks**). NZ-APC accepted the name.

Johnson Island. 72°52' S, 93°54' W. An ice-covered island about 14 km long and 8 km wide, in the Abbot Ice Shelf, about 22 km SE of Dustin Island. At first it was thought (by personnel on the *Glacier* in Feb. 1961) to be an ice rise. Remapped by USGS from air photos taken in 1966. Named by US-ACAN in 1968, for Theodore L. Johnson, electrical engineer at Byrd Station in 1964-65.

Johnson Mesa. 63°50' S, 57°55' W. A large mesa, N of Abernethy Flats, between Crane Col and Bibby Point, on the Ulu Peninsula of James Ross Island. Named by UK-APC on Nov. 15, 2006, for Joanne S. Johnson (b. 1977), BAS geochemist. Her work led to a completely new proxy for recognizing past ice sheets using alteration mineral chemistry.

Johnson Neck. 79°27' S, 82°20' W. A relatively low, ice-drowned neck of land (or isthmus) which joins the Dott Ice Rise to the E side of Pioneer Heights, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Douglas J. Johnson, meteorologist at Byrd Station in 1965.

[1]**Johnson Nunatak**. 70°19' S, 72°53' S. An isolated nunatak about 6 km E of the S end of the Linton-Smith Nunataks, on the E side of the Amery Ice Shelf. Photographed aerially during OpHJ 1946-47. Named by ANCA on May 18, 1971, for Frank R. "Narra" Johnson, radio officer at Mawson Station in 1968, 1970, and 1974. He took part in the ANARE Prince Charles Mountains Survey of 1971, and wintered-over at Macquarie Island in 1975.

[2]**Johnson Nunatak** *see* **Lyon Nunataks**

Johnson Nunataks. 85°02' S, 92°30' W. Two isolated rock crags, or nunataks, 5 km W of Reed Ridge, along the NW side of the Ford Massif, in the Thiel Mountains. Named by geologists Peter Bermel and Art Ford, for American geologist Charles G. Johnson, on the *Glacier* in 1958-59. US-ACAN accepted the name in 1962. *See also* **Johnson Hill**.

Johnson Peak. 83°43' S, 89°16' W. A low mountain, rising to 2010 m, which forms the W part of the Hart Hills. Named by US-ACAN in 1982, for Robert J.R. Johnson, newspaper correspondent attached to the USARP Pagano Nunatak-Hart Hills Expedition of 1964-65.

Johnson Peaks. 71°21' S, 12°26' E. A cluster of detached peaks marking the N extremity of the Mittlere Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and plotted from these photos. Re-mapped by Norwegian cartographers working from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Johnsonhorna (i.e., "Johnson peaks"), for Rolf L. Johnsen [sic], who wintered-over as cook and steward at Norway Station in 1959, during NorAE 1956-60. US-ACAN accepted the name Johnson Peaks in 1970. The Germans call this feature Schneidengruppe. *See also* **Rolfstind**.

Johnson Spire. 79°59' S, 158°59' E. A mountain with a spire-like summit rising to 1570 m, between Cranfield Icefalls and Gaussiran Glacier, in the NE part of the Britannia Range. Named by US-ACAN in 2000, for Bradish F. Johnson, chief of USGS's Optical Science Laboratory, with responsibility for calibrating aerial mapping cameras used in Antarctica. He conducted GPS

observations during the USGS-Ohio State University Transantarctic Mountains Deformation Project, 1999-2000. NZ-APC accepted the name on Feb. 20, 2001.

Johnson Spur. 78°37' S, 84°00' W. A rocky spur, 10 km SSE of Taylor Spur, on the E side of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Floyd Johnson (*see* **Johnson, William Floyd**).

Johnsonhøgna. 74°57' S, 12°30' W. A partly ice-capped mountain in the NW part of the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Colin Johnson (q.v.), one of the first to visit the Heimefront Range.

Johnsonhorna *see* **Johnson Peaks**

Glaciar Johnsons *see* **Johnsons Glacier**

Johnsons Bason *see* **Johnsons Dock**

Johnsons Dock. 62°40' S, 60°22' W. A cove forming a small natural dock in the NE side of South Bay, on Hurd Peninsula, along the SE coast of Livingston Island, in the South Shetlands. It widens and deepens toward the interior. Charted by Fildes, it appears on his 1821 chart variously as Johnsons Dock, Johnson's Dock, and Jonson's Dock. Presuming Fildes named it, he may have done so after Thomas Jonson (sic), RN, one of the signatories of the report, dated Feb. 23, 1821, on the wreck of Fildes' brig *Cora* in Blythe Bay, on Jan. 6. Alternately, it may be named for the captain of the *Mellona*, whose name was Johnson (perhaps Thomas Johnson). Powell's chart of 1822 also uses both spellings — Johnson's Dock and Johnsons Dock — and on his 1824 map he shows it as Johnson Dock. Davis's log of Dec. 11, 1821, shows it as Johnson Bason or Johnson's Bason (the word "bason" is presumably meant to be "basin"). Pendleton's log of Jan. 9, 1822 has it as Johnson Harbour (the Americans were still generally spelling the word harbor with a "u" then). In the 1820-23 period Weddell independently named it Jones's Basin, and it appears that way on his 1825 chart. Morrell, in 1832, refers to it as Johnson's Harbour, and states that it was named for Robert Johnson, commander of the *Jane Maria* (which may well be true). It appears as Johnson's Dock on a British chart of 1916, on a 1948 Argentine chart as Fondeadero Johnson (which means about the same thing), and on a 1954 Argentine chart as Caleta Johnson (which means "Johnson cove"). US-ACAN accepted the name Johnsons Dock in 1953, and it appears as such on a British chart of 1954. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. UK-APC accepted the name Johnsons Dock on July 7, 1959, and it appears (by error) as Johnson's Rock in the 1974 British gazetteer. It appears on an Argentine chart of 1957, as Fondeadero Johnsons (i.e., with an "s" on the end), and that was the name accepted by the 1970 Argentine gazetteer. It appears on a 1962 Chilean chart as Dársena Johnson, and that was the name accepted by the 1974 Chilean gazetteer. There is a difference between the two Spanish words "fondeadero and "dársena." The first implies an anchorage in general, and the second implies a built-up dock.

Johnsons Glacier. 62°40' S, 60°22' W. A glacier flowing NW from Hurd Dome into Johnsons Dock, at South Bay, Livingston Island, in the South Shetlands. Named by SpanAE 1994-95, as Glaciar Johnsons, in association with the dock. The Spanish monitored the dynamics of this glacier for several seasons after that. In 2003, US-ACAN accepted the translated name Johnsons Glacier, and UK-APC followed suit on July 8, 2003. Last plotted by the UK, in late 2008.

Johnson's Island *see* **Half Moon Island**

Johnsonufsa. 74°19' S, 9°29' W. A crag in the ice between Arntzenrustene and Lütkennupen, in the NE part of Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for surgeon brothers Anton Gisle Johnson (1893-1967) and Gunnar Johnson (1895-1957), Resistance leaders during World War II with their third brother, farmer Carl Fredrik Holmboe Johnson (b. 1891), and their cousin Alexander Lange "Alex" Johnson (1910-1989), a minister (later a bishop), all of them in different parts of Norway.

Isla Johnston *see* **Lobel Island**

Islas Johnston *see* **Lobel Island**

[1]**Mount Johnston**. 64°44' S, 61°48' W. Rising to 2150 m (as recorded by Maj. James Harris, leader of the 2nd party ever to climb it; the height was later estimated at 2310 m), it has two snow-covered summits, and surmounts the Graham Land plateau between Wilhelmina Bay (to the WSW) and Hektoria Glacier, on the Danco Coast. Surveyed by Fids from Base D in Sept. 1955. Named by UK-APC on Sept. 4, 1957, for Capt. William Johnston. It appears on a British chart of 1959. US-ACAN accepted the name in 1963. First climbed in Jan.-Feb. 1957, by Fids from Reclus Peninsula and then again in Dec. 2001, by the British Army Antarctic Expedition (led by Major Harris).

[2]**Mount Johnston**. 71°31' S, 67°24' E. Rising to 1770 m, it is the highest and southernmost peak of the Fisher Massif, just W of the Lambert Glacier, in the Prince Charles Mountains. First visited in Oct. 1957 by Bruce Stinear and his ANARE party. Named by ANCA on April 29, 1958, for RAAF flying officer (promoted to flight lieutenant in 1957, he would retire as a squadron leader) Douglas Malcolm "Doug" Johnston (b. June 9, 1928), 2nd pilot at Mawson Station for the winter of 1957. He made the first aircraft landing on sea-ice. US-ACAN accepted the name in 1961.

Pasaje Johnston *see* **Johnston Passage**

Johnston, Thomas Harvey. Known as "T.H.J." b. Dec. 9, 1881, Balmain, Sydney, son of Irish-born foreman mason Thomas Johnston and his Australian-born wife, Mary McLeod. On Jan. 1, 1907, at Petersham, he married Alice Maude Pearce. Professor of zoology and of botany at the University of Adelaide, he was Australia's leading prickly pear expert, and was chief biologist for both halves of BANZARE 1929-31. He died of a coronary thrombosis in Adelaide on Aug. 30, 1951.

Johnston, William "Cap'n Bill." He was also known by some as "Kelly." b. March 3, 1908, Northern Ireland. He went to sea in 1924, as an apprentice merchant seaman with the Head Line, in 1933 qualified as a master mariner, and served as such in the Falkland Islands before World War II, in 1936 becoming 1st mate on the *Lafonia*, and later skipper of that vessel. He was in the RN during that conflict, skippering rescue tugs in the Mediterranean, and in 1946 went back to the Falklands, as captain of the new *Lafonia*, until 1950. He skippered the old, wooden FIDS relief ship *John Biscoe* from 1950 to 1955, the *Shackleton* from 1955 to 1956, and the new *John Biscoe* from 1956 to Oct. 1965, when he retired. He died on Feb. 27, 1968.

Johnston, William Reid. Ordinary seaman on the *William Scoresby*, 1926-27, and able seaman on the same vessel, 1927-30.

Johnston Fjord. 69°24' S, 76°04' E. A fjord with steep, almost vertical walls, on the W side of Stornes Peninsula, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988. The Chinese call it Shennong Wan.

Johnston Glacier. 74°25' S, 62°20' W. A glacier flowing in a SSE direction along the N side of Mount Owen into the head of Nantucket Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Discovered aerially on Nov. 21, 1947, by RARE 1947-48, and roughly mapped by Finn Ronne, who named it Mount Freeborn Johnston, for Henry Freeborn Johnston (1888-1975), Canadian-born magnetic observer at the Department of Terrestrial Magnetism, at the Carnegie Institution, in Washington, DC, 1910-46, who was helpful to the expedition. It appears as such on the 1948 American Geographical Society's map. But it appears on Ronne's map of that year as Johnston Glacier, and that was the name accepted by US-ACAN in 1949, and by UK-APC on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. It was re-mapped by USGS from USN air photos taken between 1965 and 1967, and appears on their 1969 sketch map of Ellsworth Land-Palmer Land. By 1978 it was being referred to by the Argentines as Glaciar Hernández (it had been named thus by one of the Argentine Antarctic expeditions), for José Hernández (*see* **Midas Island**). The Chileans call it Glaciar Ferrada, for Ariel Ferrada Radic, Chilean seismologist on the *Maipo* during ChilAE 1954-55. Note: The British plot it in 74°21' S, 62°55' W.

Johnston Heights. 85°29' S, 172°47' E. Snow-covered heights rising to 3220 m, they form the SE corner of Otway Massif, in the Grosvenor Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1970, for David P. Johnston, USARP geologist here in 1967-68.

Johnston Passage. 67°37' S, 69°24' W. A N-S channel separating the Amiot Islands from Cape Adriasola (in the the SW part of Adelaide Island). Charted by an RN Hydrographic Survey

unit on the *John Biscoe* in 1963, and named by UK-APC on Feb. 12, 1964, for Capt. Bill Johnston. US-ACAN accepted the name later in 1964. The British plot it in 67°38' S, 69°21' W.

Johnston Peak. 66°16' S, 52°06' E. Also called Mount Harvey Johnston, and Harvey Johnston Peak. A sharp, dark peak, about 12 km N of Mount Marr, about 17.5 km NW of Douglas Peak, and about 22 km SW of Simmers Peak, in Enderby Land. Discovered in Jan. 1930 by BANZARE, and named by Mawson for T. Harvey Johnston. US-ACAN accepted the name, as did ANCA.

Johnston Spur. 74°23' S, 63°02' W. A spur, rising to about 1000 m in the central part of the Guettard Range, and extending eastward to the NE flank of Johnston Glacier, on the Lassiter Coast, on the SE coast of Palmer Land. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed from the air by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Thomas M. Johnston, USN, equipment operator who wintered over at Pole Station in 1965. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Mount Johnstone. 85°03' S, 167°45' W. Rising to 1230 m, on the E side of Liv Glacier, about 4 km SW of Mount Blood, in the Queen Maud Mountains. Named by US-ACAN in 1966, for C. Raymond Johnstone, who wintered-over as USARP logistics officer at McMurdo in 1965.

Johnstone, Colin. b. 1923. FIDS meteorologist who left Southampton in 1955, bound for Montevideo, and from there to winter-over at Base B in 1956 and at Hope Bay (Base D) in 1957.

Johnstone Glacier. 71°52' S, 163°53' E. A small glacier, 1.5 km E of Zenith Glacier, flowing from the S extremity of the Lanterman Range, in the Bowers Mountains. Named by NZGSAE 1967-68, then working in northern Victoria Land, for Ian Johnstone, chief scientific officer at Scott Base in 1967-68. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Johnstone Lake. 68°30' S, 78°24' E. A basically oval-shaped hypersaline lake, about 500 m long by 200 m wide, in the Vestfold Hills, and surrounded by a well developed marine terrace, about 4.5 km WNW of Platcha. Named by ANCA.

Johnstone Ridge. 80°08' S, 156°40' E. A minly ice-free ridge, it extends about 12 km northward from Mount Olympus, toward the S side of Hatherton Glacier, on the W side of Lieske Glacier, in the Britannia Range of Victoria Land. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Graeme N. "Johnny" Johnstone, New Zealand scientist who wintered-over as a usarp at Byrd Station in 1962 and 1964 (actually, in 1962 he wintered-over at Byrd Aurora Substation). In 1959-60 he had been an engine fitter in the NZ Antarctic Flight, and wintered-over at Scott Base in 1960. ANCA accepted the name on Aug. 27, 1975.

Johnston's Point *see* **Orford Cliff Refuge**

Joice Icefall. 72°23' S, 166°21' E. An icefall, 5 km wide, with a drop of 250 m, it flows from the Polar Plateau, through the Millen Range, into Lensen Glacier (a tributary of Pearl Harbor Glacier). Named by the Southern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for Ian Joice, field assistant to the party. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Joides Basin. 75°00' S, 174°00' E. The name Joides is also seen completely capitalized (i.e., JOIDES Basin). A NE trending submarine basin of the central Ross continental shelf, i.e., beneath the Ross Sea. Named by international agreement in June 1988 for the Joint Oceanographic Institutions for Deep Earth Sampling.

The *Joides Resolution*. A 143-meter blue and white research vessel, which began operating in 1978, as the *Sedco BP/471*, an oil exploration ship. In 1984, now owned by Overseas Drilling, she was converted into a scientific research vessel, and in Jan. 1985 began operating as a drill ship for the Ocean Drilling Project. Renamed after Captain Cook's *Resolution*, but known affectionately as the "J.R.," she was the ship used by J.O.I.D.E.S, a joint geographical and hydrographical expedition between the UK, Canada, France, West Germany, Japan, and the USA, in at Prydz Bay in 1987-88, the successor to the *Glomar Challenger*. Skippers were Gerard Kuster and Ed Oonk.

Joines, John *see* **USEE 1838-42**

Joint British-American Weddell Coast Sledge Party *see* **Weddell Coast Sledge Party**

Joint Services Expedition *see* **British Joint Services Expedition**

Isla Joinville *see* **Joinville Island**

Islas Joinville. 63°15' S, 56°00' W. A group of islands NE of Trinity Peninsula, comprising, for the main part, the three large islands (working from N to S) of d'Urville Island, Joinville Island, and Dundee Island. Also included in the group are the smaller Bransfield Island and Paulet Island. They are separated from the NW tip of the Antarctic Peninsula by Antarctic Sound. This is the famous Joinville Island group that no naming body has ever had the courage to name officially except the Chileans.

Terre (de) Joinville *see* **Joinville Island**

Joinville Island. 63°15' S, 55°45' W. A completely ice-covered island, about 62 km long in an E-W direction, and about 16 km wide, between d'Urville Island and Dundee Island, i.e., it is the central of the 3 large islands running N-S in the group the Chileans call Islas Joinville, separated from the NE tip of Trinity Peninsula by Antarctic Sound. Discovered and roughly charted on Feb. 27, 1838, by FrAE 1837-40, and, along with (what later became known as) d'Urville Island (which they thought was joined to Joinville Island) named by Dumont d'Urville as Terre Joinville, for François-Ferdinand-Philippe-Louis-Marie, Prince de Joinville (1818-1900), 3rd son of the Duc d'Orléans. It appears as such on the expedition map of 1838, and on a British chart of 1839 (translated as Joinville Land). On one of the French expedition's maps of 1842 it appears as Terre de Joinville. It was further charted in 1842-43, by RossAE 1839-43, who thought that the three islands, Dundee, d'Urville, and Joinville, were all joined, and they appear as such on the expedition's 1844 map as Joinville Island. On an 1861 Spanish chart it appears as Tierra Joinville, but this chart is derivative, and is only important in that it was an early recorded usage of that name in Spanish. There is an 1872 reference to it as Joinville's Land, and an 1885 reference to it as Prince de Joinville Land. DWE 1892-93 re-charted the area in Jan. 1893, and proved Joinville Island to be separate from Dundee Island. It was further charted in Dec. 1902, by SwedAE 1901-04, and this time shown to be separated from d'Urville Island. This was the first time the islands were shown to be separated one from the other. The island we know today appears on Sobral's 1904 Argentine chart as Isla Joinville, and it appears as Joinville Island on British charts of 1916 and 1927. However, Wordie, in 1921, refers to it (oddly) as Joinville Peninsula. US-ACAN accepted the name Joinville Island in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was surveyed by Fids from Base D in 1953-54. There is a 1948 Chilean reference to it as Isla Luis Risopatrón, named for the Chilean geographer (*see* **Luis Risopatrón Station**), but the name that appears on a 1954 Chilean chart was Isla Joinville, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57, and in 1960-61 an RN Hydrographic survey was conducted in this area from the *Shackleton* and the *Protector*. In the 1974 British gazetteer it appears, erroneously, as Joinville Strait.

Joinville Land *see* **Joinville Island**

Joinville Peninsula *see* **Joinville Island**

Joinville Strait *see* **Joinville Island**

Jökelen *see* **Mount Elkins**

Jøkulberget. 74°33' S, 7°39' W. A mountain, mostly covered with ice and snow, 18 km ESE of the mountain the Norwegians call Sembberget, in the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the glacier hill").

Jøkulfallet. 71°51' S, 6°42' E. A steep ice slope on the N side of Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Jøkulfallet (i.e., "the glacier fall"). US-ACAN accepted the name without modification in 1967.

Jøkulgavlen *see* **Jøkulgavlen Ridge**

Jøkulgavlen Ridge. 72°42' S, 3°21' W. A prominent, flat-topped ridge forming the S part of Jøkulskarvet Ridge, in the Regula Range, in the NE part of the Borg Massif, in Maudheim-

vidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Jøkulgavlen (i.e., "the glacier gable"). US-ACAN accepted the name Jøkulgavlen Ridge in 1966.

Jøkulhest *see* **Jøkulhest Dome**

Jøkulhest Dome. 71°52' S, 6°42' E. An ice-capped summit of Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by the Norwegians from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and nmed by them as Jøkulhest (i.e., "the glacier horse"). US-ACAN accepted the name Jøkulhest Dome in 1967.

Jøkulkyrkja *see* **Jøkulkyrkja Mountain**

Jøkulkyrkja Mountain. 71°53' S, 6°40' E. A large, broad, ice-topped mountain rising to 2965 m, with several radial rock spurs, E of Lunde Glacier, in the easternmost part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Jøkulkyrkja (i.e., "the glacier church"), in association with Katedralen Canyon and Kapellet Canyon. US-ACAN accepted the name Jøkulkyrkja Mountain in 1967. The Russians call it Massiv Jakova Gakkelya.

Jøkulmerra. 74°30' S, 7°33' W. A nunatak, 19 km E of Semmberget, in the Heimefront Range, in the S part of Maudheimvida, in Queen Maud Land. Named by the Norwegians ("the glacier mare").

Jøkulskarvet *see* **Jøkulskarvet Ridge**

Jøkulskarvet Ridge. 72°40' S, 3°18' W. A large mountain ridge with a partly ice-capped summit, just NE of Høgfonna Mountain, in the Regula Range, in the NE part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Jøkulskarvet (i.e., "the glacier mountain"). US-ACAN accepted the name Jøkulskarvet Ridge in 1966.

Mont Joli *see* **Mount Joli**

Mount Joli. 66°40' S, 140°01' E. A small rocky mass with 3 summits, the highest being 38 m, on the NE side of Pétrel Island, in the Géologie Archipelago. Charted by the French in 1951, and named by them as Mont Joli, for the summit in the European Alps (close to Mont Blanc). US-ACAN accepted the name Mount Joli in 1962.

Roca Joliette *see* **Joliette Rock**

Joliette Rock. 62°29' S, 59°40' W. A notable black rock, rising to an elevation of 2 m above sea level, 50 m NW of González Island, at Discovery Bay, Greenwich Island, in the South Shetlands. Projecting from it for a distance of about 100 m toward the NW is a rocky shoal whose pinnacles stick out of the sea. Named by ChilAE 1946-47, it appears on a 1951 Chilean chart as Roca Joliette, the *Joliette* being the original name of the *Iquique*. The name was accepted by the 1974 Chilean gazetteer. UK-APC accepted the translated name on March 31, 2004. Last plotted by the UK, in late 2008.

Jolliffe, Thomas Albert. b. March 9, 1887, Greenwich, Kent, son of the chief yeoman of the Royal Naval College Thomas Jolliffe and his wife Lydia Jane Andrews. After Royal Hospital School, in Greenwich, Tom joined the Navy, and was commissioned. He married Emily Lilian Mountifield in 1915, in Alverstoke, Hants, which is where they lived. He was promoted on June 4, 1917 from acting lieutenant to lieutenant. In the 1920s he was a lieutenant commander, in command of emergency destroyers at Rosyth, and on May 1, 1926 was placed in command of the *Cherwell*, a fishery protection gunboat. He was commander (retired) when he became skipper of the *William Scoresby*, 1931-32. He and his family moved to Barrow-in-Furness, and in 1942 his son Kenneth, a lieutenant in the Marines, was killed in the eastern Mediterranean, during World War II, aged 25. The commander died on Sept. 21, 1979, in Tynemouth.

Jon Islet *see* **Låvebrua Island**

Islote Jona *see* **Jona Island**

Jona Island. 66°55' S, 67°42' W. One of the smaller of the Bennett Islands, in Hanusse Bay, 5 km N of the E end of Weertman Island, off Adelaide Island. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Franco P. Jona (b. 1922, Pistoia, Italy), U.S. physicist who, in 1951, made an accurate determination of the elastic constant of a single crystal of ice. US-ACAN accepted the name in 1965. The Argentines call it Islote Jona.

Isla Jonassen *see* **Jonassen Island**

Rocas Jonassen. 63°32' S, 56°41' W. A group of rocks lying off Jonassen Island, off Trinity Peninsula. Named by the Argentines (*see* **Jonassen Island**).

Jonassen, Ole. b. 1874, Norway. Seaman on the *Jason*, during Carl Anton Larsen's expedition to Antarctica in 1892-93. He was back with Nordenskjöld, on SwedAE 1901-04, during which expedition he was one of the main party on Snow Hill Island.

Jonassen Island. 63°32' S, 56°41' W. An island, abut 3 km long and 3 km wide, in the S entrance to Antarctic Sound, it is separated from Tabarin Peninsula by Fridtjof Sound, and from Andersson Island (0.8 km to the S) by Yalour Sound, at Trinity Peninsula, off the NE tip of the Antarctic Peninsula. Roughly charted on Feb. 27, 1838, by FrAE 1837-40, when the name Rosamel Island was given collectively to this island and Andersson Island (*see* **Rosamel Island**, but for a slightly longer history of these two islands, *see* **Andersson Island**). It appears as such on Dumont d'Urville's 1842 map. On Jan. 15, 1902, SwedAE 1901-04 charted it as a separate island, and Nordenskjöld named it (subsequently) Île Irízar, for Capt. Julián Irízar. It appears as Irízar Island on British charts of 1921 and 1948. It was surveyed by Fids from Base D between 1945 and 1947. It appears on an Argentine chart of 1946 as Isla Irízar (which is what the Argentines had been calling it since 1908), and on a 1953 Argentine chart as Islote Irízar, but the name accepted by the Argentine gazetteer of 1970 was Isla Irízar. However, it appears on a British chart of 1949 as Jonassen Island, named for Ole Jonassen, and that name was accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1953. It appears as such in the 1955 British gazetteer. The reason for the change is that in 1904, during FrAE 1903-05, Charcot, apparently unaware that the name Île Irízar had already been given to a feature, so named another island in the Argentine Islands. Charcot's island has been given much more publicity over the years than Nordenskjöld's, but, because of the confusion, and despite lack of seniority, Charcot's island got to keep the name Irízar, while the Swedes' was changed to Jonassen Island (which is more fitting, anyway). It appears on a 1961 Chilean chart as Isla Jonassen, and that name was accepted by the 1974 Chilean gazetteer.

Canal Jones *see* **Jones Channel**

[1]**Cape Jones** *see* **Jones Ridge**

[2]**Cape Jones**. 73°17' S, 169°13' E. A dark-colored, vertical bluff, immediately SE of Mount Lubbock, it forms the S tip of Daniell Peninsula, NW of Coulman Island, on the E coast of Victoria Land. Discovered in Jan. 1841 by Ross, and named by him for Capt. William Jones, RN. Borchgrevink called it Cape Constance during BAE 1898-1900, for the woman he would marry on Sept. 7, 1906, in Tendring Essex, Constance Prior Standen (1869-1960). US-ACAN accepted the name Cape Jones in 1947, and it appears in the 1958 NZ gazetteer.

Mount Jones. 77°14' S, 142°11' W. Rising to 12,040 feet, it is the northernmost summit of the Clark Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1940 by members of West Base during USAS 1939-41, and named for Clarence Fielden Jones (1893-1991), professor of economic geography at Clark University (*see* **Clark Mountains**). US-ACAN accepted the name in 1947.

Punta Jones *see* **Jones Point**

Jones, Charles. b. 1873, Dundee. Ordinary seaman on the *Polar Star* during DWE 1892-93.

Jones, David Protheroe McNaughton "Dave." b. Wales. Ex-RAF, he graduated from the University of Wales in 1952, became a doctor in Cardiff in 1956, and joined FIDS in 1957, wintering-over as medical officer at Base F, in 1958. He was also in Greenland. He had married Glenys R. Davies in Bridgend, 10 days before he sailed for Antarctica. In 1971 he left Bridgend for Innisfail, Alberta, Canada.

Jones, Denise. She wintered-over at Casey Station in 1985, at Mawson Station in 1987, at Macquarie Island in 1990, and at Davis Station in 1994.

Jones, Elmo G. b. Sept. 3, 1935, Hamilton Co., Tex., son of Virgil I. Jones and his wife Ina Bryan. He was a Disney cameraman at McMurdo in the winter of 1956, along with Lloyd Beebe. On June 17, 1972, in Los Angeles, he

married Cecilia Morales, and died in Los Angeles on Nov. 6, 2003.

Jones, Eric Burton. b. Oct. 7, 1938, Coventry. He joined FIDS in 1957, as a radio operator, and wintered-over at Base O in 1958, Base B in 1959, and Halley Bay Station in 1961. He died in July 1997, in Swansea.

Jones, Harold David "Dave." b. Jan. 4, 1919, Swinton, near Rotherham, Yorks. He joined the RAF, and became a flight sergeant. As flight engineer on a bomber, he was shot down during World War II, and spent 3 years as a pow. In 1946 he joined FIDS as an airplane mechanic, and was one of the few men ever to spend 3 successive winters in Antarctica, at Base E (Stonington Island)—1947, 1948, and 1949. He was part of the team that discovered Jones Channel in 1949. He died on Nov. 30, 2004, in Hampshire.

Jones, Herbert Lloyd. Mess boy on the *Discovery II*, 1934-35, and fireman on the same vessel, 1935-39. This may be Herbert Lloyd-Jones, i.e., last name Lloyd-Jones.

Jones, John. b. May 23, 1807, Milford, England. He joined the *Zélée* as an ordinary seaman at Hobart, on Dec. 26, 1839, and left the expedition on Feb. 21, 1840, at Hobart. In that time he had been in Antarctica.

Jones, John *see* **USEE 1838-42**

Jones, Leslie. b. Dunedin, NZ. When the *Eleanor Bolling* pulled out of Dunedin on Jan. 20, 1930, heading south for the 4th Antarctic relief trip during ByrdAE 1928-30, Jones was aboard as a crewman. Byrd refers to him as J. Jones.

Jones, Lois Marilyn. b. Sept. 6, 1934, Berea, Ohio. In the 1969-70 season, this geochemist from Ohio State was included in USARP and led an all-women geology research team to the dry valleys (*see* **Women in Antarctica**), notably the Wright Valley and Taylor Valley in Victoria Land. On Nov. 19, 1969 she became one of the first women ever to stand at the South Pole. Before she went she received a letter of commendation from President Nixon. She died on March 13, 2000.

Jones, Neville Vincent. b. Feb. 13, 1936, Bethesda, near Bangor, in North Wales, son of slate quarryman William Hugh Jones and his wife Morfudd Williams. After school in Bethesda, he went to University College of North Wales, at Bangor, with zoology as an ambition, but after graduation studied teaching, and in 1959 was snaffled by FIDS recruiter Bill Sloman. The role of biologist was taken, so after a crash course in meteorology, he took the *Kista Dan* out of Southampton, bound for Port Stanley, in the Falkland Islands, and from there took the *John Biscoe* to Base G, where he wintered-over in 1960. In 1961 he spent 4 months on South Georgia, and then wintered-over again, at Signy Island Station, in 1961. Back at Bangor he was a demonstrator in zoology at the university, at the same time getting his PhD, with a thesis on freshwater insects (his specialty at this time was insects in the high-altitude freshwater lakes of Wales, in particular the caddis fly). In 1964 he married Brenda Evans, and from 1965 was an ecologist and a professor at the University of Hull, in Yorkshire, retiring in 1998, as dean of the School of Life Sciences. Recently he has made five trips to Antarctica, first on the *Marco Polo*, and more recently on one of the Saga Line's ships, lecturing for tourists.

Jones, Sydney Evan. Known as Evan Jones. b. Aug. 1887, Adelaide, but raised in Queensland. After Sydney University, he was medical officer with the Western Party on AAE 1911-14. He was medical superintendent of Broughton Hall, New South Wales' first psychiatric clinic for volunteer patients (he had started work there in 1921), specializing in psychiatric medicine and occupational therapy, from 1925 until he died of cancer on Feb. 17, 1948.

Jones, Thomas *see* **USEE 1838-42**

Jones, William *see* **USEE 1838-42**

Jones Bluffs. 74°46' S, 110°20' W. High, mainly snow-covered bluffs, S of Holt Glacier, on the E part of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. First mapped from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Lt. Cdr. (later Capt.) Stanley W. Jones (b. Jan. 8, 1926, New Orleans. d. May 25, 2007, McLean, Va.), who joined the U.S. Navy in March 1944, and who piloted aircraft for magnetometry studies during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67). He retired from the Navy in Jan. 1972.

Jones Buttress. 81°37' S, 160°34' E. A wedge-shaped feature similar to Brown Buttress (which is located 3 km to the S), it projects from the E side of the Surveyors Range into Dickey Glacier. Named by US-ACAN in 2003, for Llewellyn Ramsay Jones, who wintered-over at Hallett Station as a scientific officer on the geomagnetic project. NZ-APC accepted the name on Feb. 27, 2003.

Jones Channel. 67°30' S, 67°00' W. A once ice-filled marine channel (*see* **Jones Ice Shelf**), 13 km long and between 1.5 and 3 km wide, between Blaiklock Island and the S part of Arrowsmith Peninsula, it connects Bourgeois Fjord with the head of Bigourdan Fjord, off the W coast of Graham Land. Discovered by Dave Jones of the FIDS in 1949, and named for him by UK-APC on March 31, 1955. US-ACAN accepted the name in 1956. The Argentines call it Canal Jones.

Jones Escarpment. 70°00' S, 64°21' E. A curving ice escarpment extending for about 16 km in a southerly direction from the Riddell Nunataks, and facing eastward, about 19 km NNW of Mount Starlight, in the Prince Charles Mountains of Mac. Robertson Land. Recorded on terrestrial photos taken by Rob Lacey (q.v.), surveyor out of Mawson Station in 1955; mapped by Australian cartographers from these photos, and from ANARE air photos taken in 1965. Named by ANCA for W. Keith Jones, geophysicist at Wilkes Station in 1960. US-ACAN accepted the name in 1970.

Jones Glacier. 66°36' S, 91°30' E. A channel glacier, 10 km long and 8 km wide, it flows N from the continental ice into the Davis Sea, close E of Krause Point. First delineated by U.S. cartographer Gard Blodgett in 1955, working off air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for Ensign Teddy E. Jones, USNR, photo interpreter with the Naval Photographic Interpretation Center, who served with OpW 1947-48 as recorder and assistant with parties establishing astronomical control stations along the Wilhelm II Coast, the Knox Coast, and the Budd Coast.

Jones Ice Shelf. 67°31' S, 67°01' W. The ice shelf that once occupied the Jones Channel, between Blaiklock Island and the S part of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Named by UK-APC on Dec. 15, 1982, in association with the channel. US-ACAN accepted the name. However, even as it was being named, the ice shelf was in continuous retreat, and U.S. Landsat images of March 2005 showed that all the shelf ice had disappeared, which means that this feature is no longer.

Jones Mountains. 73°32' S, 94°00' W. An isolated group of mountains, extending for about 45 km in a generally E-W direction, on the Eights Coast of Ellsworth Land, overlooking the Bellingshausen Sea, about 80 km S of Dustin Island. First seen on Feb. 27, 1940, on a flight from the *Bear*, during USAS 1939-41. The expedition's charts show mountains in this approximate area. They appear in distant air photos taken on Dec. 30, 1946, during OpHJ 1946-47. On Jan. 22, 1960, they were observed from an aircraft by geologists Ed Thiel and Cam Craddock, and named by them for chemist Thomas Oswell "Tom" Jones (b. May 13, 1908, Oshkosh, Wisc. d. March 7, 1993, Bethesda, Md.), an NSF executive for many years. He was senior official in charge of USARP, 1958-78, and was at McMurdo in 1957-58, where, among other things, he played the organ in the chapel. From 1965 to 1969 he was director of the division of environmental science, and from 1969 to 1978 deputy assistant director for national and international programs. US-ACAN accepted the name in 1961. Camp Minnesota (*see under* **M**) was here.

Jones Nunatak. 69°47' S, 159°04' E. At the head of Noll Glacier, in the Wilson Hills, about 28 km S of Parkinson Peak, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Aviation Boatswain's Mate Frank E. Jones, USN, with VX-6 as a member of the aircraft ground handling crew at Williams Field during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). ANCA accepted the name on July 31, 1972.

Jones Peak. 85°05' S, 172°00' W. A mainly ice-free peak rising to 3670 m, 8 km WNW of Mount Fisher, at the head of De Ganahl Glacier, in the Prince Olav Mountains. Named by US-ACAN in 1966, for John M. Jones, program officer of the committee on polar research, at the National Academy of Sciences.

Jones Peninsula. 71°55' S, 100°50' W. An ice-covered peninsula, 8 km W of Hughes Penin-

sula, in the NW part of Thurston Island. Named by US-ACAN in 2003, for Ensign Robert H. Jones, navigator and 2nd pilot of the Mariner aircraft in the eastern group of OpHJ 1946–47, which obtained aerial photos of this peninsula and coastal areas adjacent to Thurston Island.

Jones Point. 64°39' S, 62°18' W. A point projecting from the NE coast of Arctowski Peninsula into Wilhelmina Bay, 10 km SE of Cape Anna, on the Danco Coast, on the W coast of Graham Land. First charted by BelgAE 1897–99. In 1956 it was photographed aerially by FIDASE, and in 1956–57 was surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for Sir Bennett Melvill Jones (1887–1975; known as Melvill Jones, Melvill being his mother's name; he was knighted in 1942), Francis Mond professor of aeronautical engineering at Cambridge, 1919–52, and author of the 1925 book *Aerial Surveying by Rapid Methods*, a pioneer work on the subject. His main contribution to aeronautics, however, was his demonstration of the importance of streamlining in aircraft design. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Punta Jones.

Jones Ridge. 66°36' S, 99°25' E. A cape in the form of a small rock ridge, the westernmmost of the Obruchev Hills, it is marked by a sharp peak at its seaward end, protruding above the lower reaches of the Denman Glacier, between that glacier and the Scott Glacier, right at the point where the Denman meets the coast of Queen Mary Land. Discovered by the Western Base Party of AAE 1911–14, and named by Mawson as Cape Jones, for Dr. Sydney E. Jones. At that stage, Mawson believed that the feature marked the W end of the prominent rock cliffs at the E side of the Denman. Re-defined by US-ACAN in 1955. It seems that ANCA did not go along with this change, for on Nov. 28, 1955, they accepted the name Cape Jones.

Jones Rocks. 66°34' S, 97°50' E. Coastal rock outcrops, about 6 km SW of Avalanche Rocks, on the E shore of the Bay of Winds, in Queen Mary Land. Discovered by the Western Base Party during AAE 1911–14, and named by Mawson for Dr. Evan Jones. US-ACAN accepted the name in 1953, and ANCA followed suit on Nov. 21, 1960.

Jones Terrace. 77°29' S, 162°05' E. A prominent ice-free terrace S of Mount Peleus, it rises 800 m from the floor of the central Wright Valley to a summit of over 1000 m above sea level, at the S end of the E segment of the Olympus Range, in Victoria Land. Named by US-ACAN in 1997, for Lois Jones. NZ-APC accepted the name.

Jones Valley. 83°55' S, 56°50' W. A snow-covered valley running SW from Bennett Spires, between West Prongs and Elliott Ridge, toward Academy Glacier, in the S part of the Neptune Range, in the Pensacola Mountains. In 1963–64 this feature was surveyed from the ground by USGS and photographed aerially by USN, and USGS mapped it from these efforts. Named by US-ACAN in 1968, for Lt. (jg) James G.L. Jones, USN, a member of the wintering-over party at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Jones's Basin *see* **Johnsons Dock**

Jongens Island. 67°36' S, 62°47' E. A little island, rising to an elevation of 13 m above sea level, hard by Kerry Island, in the Flat Islands, about 3 km NW of Mawson Station, in Holme Bay. Named by ANCA on March 3, 2009, for Sjoerd "Sojo" Jongens (b. 1950, The Hague), Australian electronics and communications engineer who wintered over as a member of ANARE, at Mawson Station in 1980, and at Macquarie Island in 1986. He joined Greenpeace in 1987, and wintered-over as radio operator at their World Park Base (q.v.) in 1988. In 1989 he left Australia and moved back to the Netherlands, and died on Nov. 12, 2008, in a bicycle accident in Amsterdam, while on his way to work at Greenpeace. The island is visible from Béchervaise Island, and it is likely that Sojo would have seen it.

Jonkers Mesa. 64°11' S, 57°09' W. A lobed mesa, rising to anywhere between 350 m and 450 m above sea level, and capped by 3 contiguous snow domes that are diminishing in size, it it aligned NE-SW between Ekelöf Point and Cape Gage, in the E part of James Ross Island. Named by UK-APC on Nov. 15, 2006, for Hendrik Albert Jonkers (b. 1952), BAS paleontologist and student of Antarctic pectinid fossils.

Mount Jord. 77°31' S, 162°26' E. Immediately NE of Mount Ulla, in the Asgard Range of Victoria Land. Named by US-ACAN in 1998 as Mount Harris, for William M. Harris (*see* **Harris Hill**), but on Jan. 30, 1998 NZ-APC objected to that name, and on Oct 7, 1998 they accepted Mount Jord, named (in keeping with other features in the area to do with old Norse mythology), for the earth goddess Jord. US-ACAN accepted the new name in 1999.

Jorda, Henry Pastor "Hank." b. Aug. 26, 1919, Brooklyn, elder son of Spanish immigrant merchant Henry Jorda and his Swedish immigrant wife Eleanor. He later lived in San Francisco. He was a lieutenant commander, USN, when he became a pilot with VX-6 during OpDF 1955–56. He flew an R5D down from Christchurch, NZ, to McMurdo Sound in Dec. 1955, and made one of the first long range flights into Wilkes Land, on Jan. 5, 1956. On Jan. 8, 1956, he piloted the first Deep Freeze flight to the Pole, with Admiral Byrd aboard the Skymaster (they did not land). On Oct. 16–17, 1956 he flew Admiral Dufek from Christchurch, NZ, to McMurdo, the first flight in for OpDF II. He married Jeune Rose Fitz-William. He died on Feb. 28, 1981, in Hillsborough, Fla., and was buried in Arlington National Cemetery.

Jorda Glacier. 81°18' S, 159°49' E. About 24 km (the Australians say about 28 km) long, it flows eastward from the E slopes of the Churchill Mountains, i.e., from the slopes between Mount Coley and Pyramid Mountain, and merges with the lower Nursery Glacier just before the latter enters the Ross Ice Shelf. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Hank Jorda. ANCA accepted the name on Aug. 27, 1975, but with the coordinates 81°18' S, 159°14' E.

Jordan Nunatak. 72°09' S, 101°04' W. Between the heads of Rochray Glacier and Cox Glacier, in the SW part of Thurston Island. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1970, for Joe Jordan, a spec6 with the U.S. Army Aviation Detachment, helicopter mechanic on the Ellsworth Land Survey of 1968–69. First plotted in 72°09' S, 101°16' W, it has since been replotted.

Jordanoff Bay. 63°50' S, 59°52' W. A bay, 5 km wide, indenting the Davis Coast for 4.9 km between Wennersgaard Point and Tarakchiev Point, on the W coast of Graham Land. Named by the Bulgarians on Nov. 23, 2009, for Bulgarian-American aviation pioneer Assen Jordanoff (1896–1967), who built the first Bulgarian airplane in 1915, and took part in the construction of B-17s and other U.S. planes.

Jordanrücken. 71°00' S, 162°22' E. A ridge, named by the Germans, for Dr. Heinz Jordan, geologist from Hanover, who was on GANOVEX III (1982–83). Given that the Germans are not prone to inexactitude, or carelessness, one must assume that this ridge and Adams Ridge, in the Bowers Mountains, are not one and the same, despite their coordinates being practically identical.

Jorff, Charles *see* **USEE 1838–42**

Isla Jorge *see* **Jorge Island**

Islote Jorge. 64°50' S, 64°32' W. About 1665 m ENE of Buff Island, near the W mouth of Bismarck Strait, S of Anvers Island, it is one of the two tiny islands comprising the Walsham Rocks (q.v. for more detail). The other is Islote Edgardo.

Jorge Cove. 64°13' S, 56°38' W. A small cove between La Plata Point and Cape Wiman, in front of Silent Valley, on Seymour Island. Named by the Poles on Sept. 1, 1999, for Jorge Carlos Lusky, of the Instituto Antártico Argentino, who was on several Antarctic expeditions.

Canal Jorge VI *see* **George VI Sound**

Jorge Island. 62°23' S, 59°46' W. One of the Aitcho Islands, 0.8 km SE of Passage Rock, in English Strait, in the South Shetlands. Named by ChilAE 1949–50 as Isla Jorge, for the son of Capt. José Duarte, commander of the *Lautaro*. It appears as such on a Chilean chart of 1961, and was the name accepted by the Chilean gazetteer of 1974. UK-APC accepted the name Jorge Island on Nov. 3, 1971, and it appears that way in the 1974 British gazetteer. US-ACAN accepted the British translation in 1972. Also known as Jorge Rock.

Jorge Rock *see* **Jorge Island**

Mount Jorgen Stubberud *see* **Mount Stubberud**

Jørgensen, Alf. Commander of the Norwegian whale catcher *Firern* in 1936–37.

Jørgensen, Ole K. b. 1865, Sandefjord, Norway. He became a whaler, worked his way up through the mate ranks, and married Dorothea.

He had had Arctic experience when he became skipper of the experimental whaling ship *Tulla* in Antarctica, in 1911–12. This vessel worked out of the first whaling station in the South Orkneys, and her whale catcher was the *Havfruen*. He died in 1912.

Jorgensen Nunataks. 83°43' S, 164°12' E. Two rock nunataks rising above the ice-covered ridge which descends eastward from Mount Picciotto, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for Arthur E. Jorgensen, USARP meteorologist who wintered-over at Pole Station in 1958.

La Joroba *see* **The Hump**

Monte Joroba *see* **The Hump**

Pico Joroba *see* **The Hump**

Punta Jorobada *see* **Léniz Point**

Islotes Jorquera *see* **Myriad Islands**

Jorquera Glacier. 62°29' S, 59°39' W. Flows W into Discovery Bay, S of Ash Point, on Greenwich Island, in the South Shetlands. Charted by ChilAE 1964–65, and named by them as Glaciar Jorquera, for Capitán de fragata Pedro Jorquera Goicolea, who was in command of naval operations during ChilAE 1960–61. UK-APC accepted the name Jorquera Glacier on March 31, 2004, and US-ACAN followed suit in 2005. Plotted by the UK in late 2008. For more on Don Pedro Jorquera, *see* **Myriad Islands**.

Jorum Glacier. 65°14' S, 62°03' W. Flows E into Exasperation Inlet, on the Oscar II Coast, on the E coast of Graham Land, just N of Caution Point. Surveyed by Fids from Base D in Nov. 1947 and again in Oct. 1955. A jorum is a large drinking bowl used for punch, and UK-APC named it thus on Sept. 4, 1957, because the head of this glacier looks like one. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

Isla José Hernández *see* **Midas Island**

Islote José Hernández *see* **Midas Island**

Joseph Cook Bay *see* **Cook Ice Shelf**

Mount Joseph Haag *see* **Haag Nunataks**

Mount Josephine. 77°33' S, 152°48' W. A low-lying peak, rising to 487 m, and marked by prominent rock outcrops, 10 km SE of Bowman Peak, in the Alexandra Mountains of Marie Byrd Land. Discovered on Dec. 5, 1929 by Byrd on the Eastern Flight, during ByrdAE 1928–30, and named by him during ByrdAE 1933–35 for Josephine Clay Ford (1923–2005), daughter of Edsel Ford. US-ACAN accepted the name, and NZ-APC followed suit.

Mount Josephine Petras *see* **Mount Petras**

Joss, Leslie Kenneth George. b. Aug. 26, 1892, Sydney, son of George T. Joss and his wife Edith E. Parkinson. He joined the Merchant Navy. On Sept. 17, 1911, he pulled into Sydney as an able seaman on the *Echunga*, from Port Lincoln, made his way down to Hobart, and there, on Nov. 17, 1911, joined the *Aurora*, as an able seaman, at £5 per month, for the first part of AAE 1911–14. He left the expedition at Sydney, on April 24, 1912, where he immediately signed on as an able seaman on the merchant ship *Poltalloch*, which left Newcastle on July 3, bound for San Francisco, where he arrived on Sept. 18, 1912. On Feb. 26, 1915, he arrived in Sydney from Greenock, in Scotland, as 2nd mate on the *Wallarah*. On May 20, 1915, he pulled into Sydney as 3rd mate on on the *Port Kembla*, out of Brisbane. By the end of 1915 he was 4th mate on the *Kadina*, on the Melbourne to Sydney run, and by April 1916 was 3rd mate on the same vessel. On Feb. 21, 1917, he got his master's certificate in Adelaide, and on March 21, 1917, joined the RANR, as a sub lieutenant. In the space of 9 months he served on the *Cerberus*, the *Parramatta*, and the *Encounter*, and then resigned on Jan. 16, 1918. On April 17, 1918, he signed on as mate on the *Wray Castle*, on that vessel's run from Melbourne to New York, arriving there on Sept. 12. Then he went to live in Glasgow, in Scotland, but soon went back to sea, and at the end of 1921 was 2nd mate on the *Yankalilla*, on the Sydney to Newcastle run. In 1931 he was living in Melbourne, still sailing. He died on Dec. 29, 1937, in South Australia.

Joss, Timaru William. b. 1904, Stewart Island, NZ, son of Joseph Walter Joss. He became a crewman on the *Bear of Oakland*, 1934–35, i.e., during the 2nd half of ByrdAE 1933–35. In 1937 he married Katerina Pauro, and was still sailing as a merchant able seaman into World War II. He died in NZ, in 1955.

Joss, William "Bill." b. NZ, son of James Joss. Crew member, taken aboard as a last minute replacement on Stewart Island, NZ, in late Nov. 1894, on Bull's *Antarctic* Expedition 1893–95. Bull described him as "an old, experienced whaler, accustomed to harpooning and lancing, and, most important of all, very cheery."

Jotunheim Valley. 77°38' S, 161°13' E. A high, mainly ice-free valley to the E of Mount Wolak and Utgard Point, in the Asgard Range of Victoria Land. Saint Pauls Mountain stands at the head of this valley. In keeping with other features named in the area from old Norse mythology, this was named by Graeme Claridge (q.v.) in 1978, for the home of the giants. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Jouanard, Jules. b. July 26, 1816, Painpol, France. He joined the *Zélée* as an ordinary seaman at Talcahuano, Chile, on April 11, 1838, just after the scurvy ship had pulled into port, during FrAE 1837–40.

Joubert Rock. 68°12' S, 67°40' W. A submerged rock with a least depth of 6 fathoms, 8 km SW of Pod Rocks, and 14 km WSW of Millerand Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Discovered and charted in 1966 by an RN Hydrographic Survey unit on the *John Biscoe*, and named for that ship's 3rd officer, Arthur Bruce Douglas Joubert (b. 1940, Ipswich, Suffolk; known as Bruce), officer of the watch at the moment the rock was discovered. Mr. Joubert had apprenticed on the T & H Harrison Line, doing the American and South African runs, and joined the *Biscoe* in the mid-1960s. In 1967 he went to South Africa, and later went into agricultural engineering. UK-APC accepted the name on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears in the 1974 British gazetteer.

Île(s) Joubin *see* **Joubin Islands**

Îlots Joubin *see* **Joubin Islands**

Islas Joubin *see* **Joubin Islands**

Islotes Joubin *see* **Joubin Islands**

Joubin Archipelago *see* **Joubin Islands**

Joubin Islands. 64°47' S, 64°26' W. Also called the Joubin Archipelago. A group of small islands in the lee of the S part of Anvers Island, 5 km SW of Cape Monaco, at the SW end of the Palmer Archipelago. They include Hartshorne Island, Dakers Island, Bielecki Island, McGuire Island, Trundy Island, Howard Island, Ouellette Island, Robbins Island, and Tukey Island. Discovered and charted by FrAE 1903–05, and named by Charcot as Îlots Joubin, for French naturalist, Louis-Marie-Adolphe-Olivier-Édouard Joubin (1861–1935), who was responsible for the publication of the expedition's biological reports, and who also signed the instructions for the expedition. They also appear on various Charcot maps as Île Joubin and Îles Joubin, and on a British chart of 1908 as Joubin Islands. They appear on a British chart of 1948 as Joubin Islets, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Photographed aerially by FIDASE in 1956, and, based on maps produced from these photos, UK-APC, on July 7, 1959, redefined them as Joubin Islands, and US-ACAN accepted this new name in 1963. They appear on a Chilean chart of 1947 as Islas Joubin, but on one of their 1962 charts as Islotes Joubin, the latter name being the one accepted by the Chilean gazetteer of 1974. The Argentine gazetteer of 1970 accepted Islas Joubin.

Joubin Islets *see* **Joubin Islands**

Joughin Glacier. 73°46' S, 62°24' W. East of the Watson Peaks, it flows SE into Wright Inlet, on the Lassiter Coast. Named by US-ACAN on July 7, 2008, for Ian Joughin, electrical engineer who pioneered the use of interferometric synthetic aperture radar to estimate surface motion and topography of glaciers in Antarctica and Greenland. He has used remote sensing, field work, and modeling, to study ice dynamics since the early 1990s. UK-APC accepted the name on Sept. 15, 2008.

Punta Jougla *see* **Jougla Point**

Jougla Peninsula *see* **Jougla Point**

Jougla Point. 64°50' S, 63°30' W. Forms the W side of the entrance to Alice Creek, in Port Lockroy, on the W side of Wiencke Island, in the Palmer Archipelago. The small peninsula forming the S shore of Port Lockroy was discovered in 1904 by FrAE 1903–05, and named by Charcot as Presqu'île Jougla (i.e., "Jougla peninsula"). Following a 1944 survey by personnel from Port Lockroy Station during Operation

Tabarin, they decided that the peninsula thus named was really too small to deserve the title "peninsula," and reapplied the name Jougla to the present feature, a situation accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1950, and which appears in the 1955 British gazetteer. It appears on a Chilean chart of 1955, as Punta Jougla, and that was the name accepted by the Chilean gazetteer of 1974. The firm of Lumière et Jougla provided the photographic plates for Charcot's expedition.

Presqu'île Jougla *see* **Jougla Point**

Joungane *see* **Joungane Peaks**

Joungane Peaks. 72°04' S, 0°17' W. A line of about 4 small peaks, just N of Storjoen Peak, in the Gburek Peaks, which form the W end of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Plotted from air photos taken during GermAE 1938-39. Re-mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Joungane (i.e., "the young ones," meaning young skuas). US-ACAN accepted the name Joungane Peaks in 1966.

Jourdain, Jonny. b. Jan. 28, 1811, L'Éguille, France. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Journal Peaks. 72°41' S, 64°55' W. Two groups of separated peaks and nunataks, rising to about 1650 m, and trending E-W for about 13 km, 28 km SE of the Seward Mountains, in central Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Surveyed from the ground by BAS personnel from Fossil Bluff Station in 1974-75. Named by US-ACAN for the *Antarctic Journal of the USA* (*see* the Bibliography). UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Lake Joyce. 77°43' S, 161°37' E. A lake, 0.8 km long, and 42 m deep, it is covered by 6 m of very clear ice, and lies along the N side of Taylor Glacier, where that glacier turns to flow down toward Lake Bonney, in Pearse Valley, just S of Taylor Valley, in southern Victoria Land. Studied by VUWAE 1963-64, and named by leader Warwick Prebble for Ernest Joyce. US-ACAN accepted the name in 1966.

Mount Joyce. 75°36' S, 160°49' E. A prominent dome-shaped mountain rising to 1830 m, 13 km NW of Mount Howard, and also NW of Mount Bowen, in the Prince Albert Mountains, on the divide between Mawson Glacier and David Glacier, in Victoria Land. Mapped by BAE 1907-09, and named by them for Ernest Joyce. US-ACAN accepted the name.

Joyce, Ernest Edward Mills. b. Dec. 22, 1875, in a Coastguard cottage in Feltham, near Bognor, Sussex, son of sailor Joseph Joyce (from Painswick, Glos; son of a coachman) and his wife Frances Halton Mills (from Millbrook, Cornwall). In 1879 the family moved to Plymouth, in 1880 to Bristol, and in 1881 to Birmingham, where Violet Jane, the last of 5 children, was born. Then the father left the sea and the family moved again, to Southwark, in London, where Joseph Joyce became the caretaker of a tenement block called Ponsonby's Buildings. First, Fred, the oldest son, left home, then in 1891, on the death of his father, Ernest joined the Royal Navy, and would serve with the RN Brigade in the South African War. In Simons Bay, South Africa, he was a seaman on the *Gibraltar* when he transferred to the *Discovery* for BNAE 1901-04. On his return he was promoted to petty officer 1st class, bought his way out of the Navy in 1905, but re-enlisting in 1906. According to Joyce, he was in a bus, passing Shackleton's office in London, when the great expeditioner saw him, got someone to rush out and get him, and recruited him on the spot for his BAE 1907-09. Again, Joyce bought his way out of the Navy, and on the expedition he was in charge of provisions and dogs. He bought dogs in Copenhagen for AAE 1911-14, and helped ship them to Tasmania, but did not go to Antarctica on that expedition, going to work instead for the Sydney Harbour Trust. In Sydney he joined BITE 1914-17, and became 2nd-in-command of the Ross Sea depot-laying party on that expedition. He was one of the 3 depot-layers to survive, and took over from Aeneas Mackintosh as leader. After the expedition, he was in hospital for a while, then married Beatrice E. Curtlett, a NZ woman from Christchurch, 7 years younger than himself, and in 1918 tried unsuccessfully to join the Navy again. In Sept. 1919, after a car crash, he wound up in hospital again, returning to England shortly thereafter. In 1920 he was due to go on the British Imperial Antarctic Expedition, Cope's adventure, but in the end he never went. He also applied to go on the British Everest expedition of 1921-22, but was rejected. By now calling himself Ernest Mills-Joyce (i.e., he had hyphenated his name), or just Mills Joyce, working as a doorman at the Strand Palace Hotel in Piccadilly, and fast approaching poverty, he wrote *The South Polar Trail* in 1929, a somewhat inaccurate and self-serving book. Inspired by being at Gino Watkins' funeral service, in 1932, in late 1933 he began planning his own £200,000 air expedition to Antarctica for Aug. 1934, with 3 planes, to explore commercial possibilities. "Byrd and Ellsworth aren't leading expeditions for fun," he said. It never happened. He died on May 2, 1940, at the Ecclestone Hotel, in London, where he was working as a doorman.

Joyce, John Raymund Foggan "J.J." b. 1907, Morpeth, Durham, son of Robert Foggan Joyce. It was claimed (for him, rather than by him), that he was a nephew of Ernest Joyce (*see* above), but this is not true. A captain in the Royal Engineers, he was geologist at Base E with FIDS from the time the base opened, on Feb. 23, 1946, through the winter of 1946, and into 1947, when he returned to the UK, via Doumer Island, Deception Island, and Admiralty Bay, where he collected specimens. He worked on these at the British Museum when he got back home, and finally got his degree in 1947. In 1949 he went to the Imperial College of London, where he got his PhD, in geophysics. Then he went to West Africa. He died of a heart attack on Dec. 19, 1963, in Aylesbury, Bucks.

Joyce Glacier. 78°01' S, 163°42' E. A small glacier between Miers Glacier and Garwood Glacier, in southern Victoria Land, immediately N of Péwé Peak, and draining from the névé NE of Catacomb Hill, on the E side of the upper part of Blue Glacier, and terminating 3 km up-valley (west) of the snout of Garwood Glacier, which would have been a tributary to it in times of more intense glaciation. Named by the NZ Blue Glacier Party of BCTAE 1957-58, for Ernest Joyce, and plotted by them in 78°02' S, 163°50' E. After debating the name Hubley Glacier (*see* **Mount Hubley**), US-ACAN accepted the name Joyce Glacier in 1960. The feature has since been re-plotted.

Joyce Peak. 77°28' S, 168°12' E. Rising to over 1400 m above sea level, W of the main summits of Giggenbach Ridge, and 8.5 km SSE of Wyandot Point, in the N central part of Ross Island. Named by US-ACAN in 2000, for Karen Joyce, a long-term employee of Antarctic Support Associates (ASA), who, from 1990 onwards, was in Antarctica 10 times, including a winter-over, assisting with the computers in the Crary Science and Engineering Center. NZ-APC accepted the name on Feb. 20, 1991.

Juan Carlos I Station. 62°39' S, 60°23' W. Its full name is Rey Juan Carlos I Station. Its site was scouted by the 1986-87 Spanish expedition on the *Nuevo Alcocero*, led by Antonio Ballester Nolla, and the station itself was built by the first real Spanish expedition (the following year). **1987-88 summer**: The station opened in Jan. 1988, 12 m above sea level, 40 m from the coast, on Hurd Peninsula, Livingston Island, in the South Shetlands. It is 1.7 km away from the Bulgarian station St. Kliment Ohridski (q.v.). It was the first Spanish scientific station in Antarctica, and was named after the king of Spain. There were 9 persons there that summer. The technical personnel were: Jaime Ribes Lorda (base leader), Elías Meana, Félix Moreno, and Roldán Sanz. The scientists were Sr. Ballester (leader), Josefina Castellví (biologist and oceanographer; born 1935, Barcelona), Juan Rovira, Juan Comas, and Mario Manriquez. Sr. Ballester suffered a stroke, and Miss Castellví took over the coordination of the scientific investigations. A post office was opened there that season. **1988-89 summer**: Sr. Ribes Lorda was base leader again, and Elías Meana and Leopoldo García Sancho were also there. Josefina Castellví was scientific leader. **1991 winter**: Josefina Castellví (leader). **1993-94**: Alberto Castejón (leader). **1994**: Josefina Castellví (leader). **1994-95**: Alberto Castejón (leader). **1995-96**: Alberto Castejón (leader). **1996-97**: Javier Cacho and Alberto Castejón (leaders). **1997-98**: Alberto Castejón (leader). **1999-2000**: Manuel Bañón (leader). It remains the main such base in Antarctica. Summer only, it is supplied by the Spanish vessels *Hespérides* and *Las Palmas*.

Colina Juana *see* **Jeanne Hill**

Isla Juanita *see* **Jenny Island**

Base Jubany *see* **Jubany Station**

Jubany Station. 62°14' S, 58°40' W. Argentine scientific station, on a rock surface 5 m above sea level, on the south coast of Potter Cove, on King George Island, in the South Shetlands, 7 km from King Sejong Station (South Korea), and close to Presidente Eduard Frei Station (Chile). Originally it was a refugio (refuge hut), built by the Argentines on Jan. 27, 1948. Apparently it did not have a name. On July 30, 1949, a FIDS survey party from Base G found the refugio unoccupied, but they found a commemorative plaque on the beach nearby, left there by Dallmann in 1873-74. It was re-built on Nov. 21, 1953, by ArgAE 1953-54, called Refugio Naval Potter, set up for the purpose of supplying fresh water to Argentine ships in the area. The ships that helped in its building that year were the *Bahía Aguirre*, the *Bahía Buen Suceso*, the *Chiriguano*, the *Yamana*, the *Sanavirón*, and the *Punta Loyola*. **1953-54 summer**: 3 men. Luis Tártara, a guardiamarina, was the first base leader. The name of the refugio was changed to Estación Aeronaval Caleta Potter. **1954-55 summer**: González Abadie (leader). A new living quarters was added, and the name of the base became Estación Científica Teniente Jubany (a name proposed by the Grumman Goose pilots the previous year), but more popularly known as Base Teniente Jubany, or Base Jubany, for short, named for naval aviator José Jubany (killed in an air accident near Río Gallegos on Sept. 14, 1948). **1955-56 summer**: Field work conducted. **1956-57 summer**: Field work conducted. **1957-58 summer**: Two scientific groups from the Instituto Antártico Argentino conducted geological surveys, collected rocks, and studied beach levels. Otto Schneider (geophysicist) and Osvaldo C. Schauer (geologist) led each of the two groups. **1959-60 summer**: Field work conducted. **1960-61 summer**: Field work conducted. **1961-62 summer**: Field work conducted. **1981-82 summer**: The station was re-opened on Feb. 12, 1982, having been transferred to the Instituto Antártico Argentino, and officially re-designated a scientific station, Estación Científica Teniente Jubany. Its 11 buildings could take 100 people in the summer, and 20 in the winter. It had a resident doctor, and an infirmary with 2 berths and X-ray equipment;; and a lab that monitored greenhouse effect gasses. Available were 2 Unimog vehicles, 3 different types of caterpillar tractors, 2 skidoos, sexticycles, and 3 motorized rubber boats. **1982 winter**: Ricardo Diego Gibson (leader). **1983 winter**: Ángel González (leader). **1984 winter**: Ernesto del Prete (leader). **1985 winter**: Rodolfo del Valle (leader). **1986 winter**: Rufino Comes (leader). **1987 winter**: Ricardo Casaux (leader). **1988 winter**: Domingo Nemesio Ledesma Escalante (mechanical engineer and base leader). **1989 winter**: José Torcivia (leader). **1990 winter**: Mariano Memolli (leader). **1991 winter**: Román Chekaloff (leader). **1992 winter**: Román Chekaloff (leader). **1993 winter**: Artillery Major Víctor Alejandro Forster (leader). **Jan. 19, 1994**: the Dallmann Laboratory (q.v.), a research lab, was inaugurated. It was run in co-operation with the Alfred Wegener Institute in Germany. **1994 winter**: Guillermo Tarapow (leader). **1995 winter**: Guillermo M. Palet (leader). **1996 winter**: Adolfo Irusta (leader). **1997 winter**: Carlos Uberti (leader). **1998 winter**: Claudio César López (leader). **1999 winter**: Claudio César López (leader). **2000 winter**: cavalry Major Alfonso Parcel (leader). **2001**: a permanent seismological station was installed. It has continued as a winter and summer station.

Jubilee Peak. 61°08' S, 54°02' W. Rising to about 500 m, at the N end of Clarence Island, W of Cape Lloyd, in the South Shetlands. On Feb. 2, 1977, it was first climbed by the British Joint Services Expedition, who named it thus in honor of the Queen's Silver Jubilee of that year. UK-APC accepted the name on June 11, 1980. US-ACAN, after a delay that was in direct proportion to the surprise one feels on considering that such a salient feature was not named well before it was, did not accept the name until 1993.

Juckes, Lewis Menne "Lew." b. Jan. 14, 1942, South Africa. He joined BAS in 1963, as a geologist, and wintered-over at Halley Bay Station in 1964 and 1965. He returned to England in Feb. 1966, and stayed there, working for a steel company before he retired.

Juckeskammen. 74°59' S, 12°22' W. A mountain crest in the Tottan Hills, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians after Lew Juckes.

Rocas Judas *see* **Judas Rock**

Judas Rock. 63°52' S, 61°07' W. A rock awash, marking the S extremity of a shoal area which extends northward from it for 5 km in an otherwise clear passage, 8 km W of the SW end of Trinity Island, on the E side of Gerlache Strait, W of Skottsberg Point, in the Palmer Archipelago. Shown on an Argentine government chart of 1950 (but apparently not named), and photographed aerially by FIDASE 1956-57, it was named Judas Rock by UK-APC on Sept. 23, 1960, because its isolated danger poses the threat of betrayal. US-ACAN accepted the name later in 1960. It appears on a British chart of 1988. The Argentines call this feature Rocas Judas (i.e., in the plural).

Mount Judd. 85°04' S, 170°26' E. A prominent bare rock mountain, rising to over 2400 m, and surmounting the ridge running N from Mount White, in the Supporters Range of the Queen Maud Mountains. Named by US-ACAN in 1966, for Robert C. Judd, USARP meteorologist with the U.S. Weather Bureau, who wintered-over at Pole Station in 1964, and who summered-over at Hallett Station in 1964-65.

Judd, Brian Maxwell. b. Rotorua, NZ. Engineer who wintered-over at Scott Base in 1964 and 1965.

Judge and Clerk Islands. Outliers of Macquarie Island, and therefore not in Antarctica proper.

Judith Glacier. 80°29' S, 158°49' E. A glacier, 14.5 km long (the Australians say 17 km), flowing NE from Mount Hamilton into Byrd Glacier, which it joins just E of Mount Tuatara, in the Queen Maud Mountains. Mapped from USN air photos. Named by US-ACAN in 1965, for Cdr. Joseph Henry Judith, Jr. (b. Nov. 17, 1920. d. March 18, 2004, Calif.), USN, commander of the *Edisto* during OpDF 64 (i.e., 1963-64).

Juergens Island. 77°53' S, 165°02' E. An island 2.5 km E of West Dailey Island, in the Dailey Islands, in McMurdo Sound. Named by US-ACAN in 2001, for Eric D. Juergens, of Antarctic Support Associates, co-manager of a USAP project to clean up Antarctic waste sites, beginning in 1991. He was director of safety, environment, and health activities, 1992-99, with heightened emphasis on environmental protection.

Skaly Jugo-Vostochnye. 71°35' S, 67°37' E. A quite isolated group of rocks in the Prince Charles Mountains. Named by the Russians.

Pik Juhana Smuula. 71°06' S, 65°37' E. A peak on the W side of Mount Hay, in the Prince Charles Mountains. Named by the Russians.

Mount Jukkola. 71°51' S, 64°38' W. A sharp, pyramidal peak, or nunatak, rising to about 1700 m, in the S central margin of the Guthridge Nunataks, in the Gutenko Mountains of central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN in 1976, for U.S. Navy builder Lt. Lloyd Alvin Jukkola (b. 1946), officer-in-charge of Palmer Station during the winter of 1973. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Jule Peaks. 72°00' S, 5°33' W. A small group of isolated peaks, in the southernmost part of Giaever Ridge, about 55 km WNW of Borg Mountain, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Juletoppane ("the Christmas peaks"). US-ACAN accepted the name Jule Peaks in 1966. "Jule" is pronounced "Yule."

Cap Jules *see* **Cape Jules**

Cape Jules. 66°44' S, 140°55' E. A large, rocky cape with a small cove along its N end, 5 km W of Zélée Glacier Tongue. Discovered by FrAE 1837-40, and named Cap Jules, by Dumont d'Urville, for his son Jules (which was also the admiral's own name). Charted in 1912-13 by AAE 1911-14, and again by BANZARE in 1931. The French, under Barré, established an astronomical control here in 1951. US-ACAN accepted the name.

Juletoppane *see* **Jule Peaks**

Île Juliette. 66°40' S, 139°57' E. There are two islets, very close together, in Baie Pierre Lejay, at the extreme SW of the Géologie Archipelago and of Gouverneur Island. Both were named by the French in 1977 — Îlot Roméo and the other, to the S, Îlot Juliette — in association with Shakespeare's play. Later, the French redefined them as îles rather than îlots.

Îlot Juliette *see* **Île Juliette**

Isla Julieta *see* **Kármán Island**

Base Julio Escudero *see* **Escudero Station**

Julio Ripamonti Base. 62°12' S, 58°53' S. Known informally as Ripamonti. Established in

1982 as Refugio Arquitecto Julio Ripamonti, by the Chilean Air Force, 50 meters above sea level, 100 meters from the coast, on Ardley Island, Maxwell Bay, King George Island, in the South Shetlands, as a summer station, and transferred in 1988 to the Instituto Antártico Chileno, when it became an actual station. Named for Julio Ripamonti (*see* **Picnic Passage**). It had 4 buildings, and could accommodate 4 persons. It was later abandoned, and in 2006 dismantled and removed.

Julio Ripamonti Refugio *see* **Ripamonti Refugio**

The *Julius Foch*. West German Fisheries research vessel which, with the *Walther Herwig*, was in the Bellingshausen Sea in 1977-78, conducting a krill and fish investigation (*see* **West Germany**). Skipper was H. Polley.

Juma He. 62°13' S, 58°58' W. A stream at the N tip of the Antarctic Peninsula. Named by the Chinese.

Les Jumeaux *see* **La Balance** (under **L**)

Mount Jumper. 78°14' S, 85°36' W. Rising to 2890 m, 11 km E of Mount Viets, in the central part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and from USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Maj. Jesse T. Jumper.

Jumper, Jesse T. b. Nov. 23, 1917, Warsaw, Alabama, son of Thomas Jumper and his wife Minnie. Raised in Meridian, Miss., where, in 1942, he enlisted in the Air Corps, as an aviation cadet, and fought in World War II. He entered the USAF in 1951, and was a major when he was one of the men who helped build South Pole Station in 1956-57. He retired in 1971 as a colonel, and died on Sept. 3, 1984. He was buried in Biloxi National Cemetery.

Gora Junaja. 67°49' S, 48°52' E. A mountain on the E side of the Condon Hills, due E of Mount Norvegia, in Enderby Land. Named by the Russians. In exactly the same coordinates is Gora Jizhnaja, which ANCA calls Mount Yuzhnaya (q.v.). It is possible that Gora Junaja and Gora Juzhnaja are the same feature.

Cabo Juncal *see* **Cape Juncal**

Cape Juncal. 62°58' S, 56°27' W. A prominent cape forming the NW extremity of d'Urville Island, in the Joinville Island group, off the N tip of the Antarctic Peninsula. Named in 1956 by the Argentines as Cabo Juncal, for their country's naval victory of 1827, and it appears as such on a government chart of that year. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D between 1958 and 1961. UK-APC accepted the name Cape Juncal on Feb. 12, 1964, and US-ACAN followed suit that year. It appears on a 1966 Russian chart as Mys Khunkal (which means the same thing).

Junction Corner. 66°30' S, 94°41' E. A point at the W side of the Shackleton Ice Shelf, where that body meets the mainland. Discovered and descriptively named by AAE 1911-14. US-ACAN accepted the name in 1948.

Junction Knob. 77°36' S, 161°39' E. A small but distinctive peak, at the junction of the névé areas of Odin Glacier and Alberich Glacier, in the Asgard Range of Victoria Land. Named descriptively by NZ-APC. US-ACAN accepted the name in 1976.

Junction Spur. 79°53' S, 157°29' E. A rocky spur marking the E extremity of the Darwin Mountains, right where Darwin Glacier meets Hatherton Glacier. Mapped and descriptively named by the Darwin Glacier Party of BCTAE 1956-58. US-ACAN accepted the name in 1965.

June *see* **June Island**

Mount June. 76°16' S, 145°07' W. A mountain, 10 km W of Mount Paige, in the Phillips Mountains of Marie Byrd Land. Discovered in Dec. 1929 during a fly-over on ByrdAE 1928-30, and named by Byrd as Mount Harold June, for Harold June. In 1966, the name was shortened by US-ACAN.

June, Harold Irving. b. Feb. 12, 1895, near Stamford, Conn., son of farmer Irving June and his wife Emma L. Field. A gas-engine specialist, he worked as Harold Vanderbilt's machinist for some years, served in World War I, and then became a navy flier. He was pilot and radioman on ByrdAE 1928-30. Between March 7 and 10, 1929 he was one of the 3 men trapped in the Rockefeller Mountains (*see* **Airlifts**). He was also one of Byrd's companions on the historic flight to the South Pole on Nov. 29, 1929, in the *Floyd Bennett*. He came back to Antarctica on ByrdAE 1933-35, and was co-leader of the party that set up Bolling Advance Weather Station for Byrd to winter-over alone at in the winter of 1934. He married Christine Muller, and died on Nov. 22, 1962, in Hartford, Conn.

June Island. 68°08' S, 67°07' W. Close SW of Audrey Island, in the Debenham Islands, off the W coast of Graham Land. Surveyed and charted in 1936, by BGLE 1934-37, and named by John Rymill as June (that's it, just June), for June Debenham (b. 1924), Frank Debenham's 3rd daughter (from 1945, Mrs. Philip John Quarles Back). It appears as such on Rymill's chart of 1938, and on a British chart of 1947. It appears as June Island on a 1946 U.S. Hydrographic Office chart, and on a 1950 British chart, and that was the name accepted by US-ACAN in 1949, and by UK-APC on Sept. 8, 1953.

June Nunatak. 85°14' S, 169°29' W. The central of 3 nunataks in mid-stream of the upper Liv Glacier, 6 km SE of Mount Wells, in the Queen Maud Mountains. Named by the Southern Party of NZGSAE 1962-63, for Harold June. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Jungk Hill. 78°12' S, 166°26' E. A mostly ice-free hill, 2.7 km NE of Mount Aurora, on Black Island, in the Ross Archipelago. Named by US-ACAN in 2001, for Robert A. "Bob" Jungk (b. 1940), of Antarctic Support Associates, who was engaged in the development and expansion of the Black Island communications system for several years beginning in 1989. He was ASA project engineer for the USAP Unattended Satellite Earth Station, which became operational in 1995.

The *Junior*. A 378-ton whaling ship owned by Messrs D.R. Greene & Co. (i.e., Daniel Greene), of New Bedford. Under the command of Silas Tinkham, she left New Bedford on Dec. 15, 1847, and, after an unsuccessful cruise in the Indian Ocean (only 100 barrels of sperm oil), she touched in at Hobart Town for new recruits, and to sell off her sperm (she sold 60 barrels). Tinkham learned that there were whales to be had in Antarctic waters, so, on Nov. 27, 1848, the *Junior* left Hobart, alone, heading south, reached 65°S, skirted the edge of the pack-ice, and crossed the Antarctic Circle, but saw no land, and no sperm whales. On Feb. 5, 1849 they gave up. One good thing — the weather was fine. On March 15, 1849 they touched in at Wangaroa Bay, NZ, and left there on the 20th, heading north for the Bering Straits, where they were more successful. Bradley Sillick Osbon wrote an account of the voyage.

Juno Peaks. 71°58' S, 69°47' W. Two steep-sided nunataks with a little rock to the W of them, this feature rises to 875 m, and forms part of an E-W ridge 10 km SW of Mimas Peak, and also SW of Herschel Heights, in the S part of Alexander Island. Surveyed from the ground by BAS between 1961 and 1973, and, in keeping with the naming of features in this area for planets and their satellites, named by UK-APC on Dec. 20, 1974, for Juno, one of the asteroids between the orbits of Mars and Jupiter. US-ACAN followed suit with the naming in 1975.

Skaly Junye *see* **Henriksen Nunataks**

The *Jupiter*. British yacht, skippered by Roberto Migliaccio, which visited the South Shetlands and the Antarctic Peninsula in 1994-95.

Ostrov Jupiter *see* **Jupiter Island**

Jupiter Amphitheatre. 71°34' S, 161°51' E. A beautiful, steep-sided, glacier-filled valley in the eastern Morozumi Range. One gets into it between Sickle Nunatak and Mount Van Veen. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by NZGSAE 1967-68, for the airplanes of that name. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Jupiter Glacier. 70°57' S, 68°30' W. A small glacier, 16 km long, and 8 km wide at its mouth, it flows SE between Ganymede Heights and Calypso Cliffs, into George VI Sound, S of Ablation Valley, in the E part of Alexander Island. First photographed aerially by Ellsworth on Nov. 23, 1935, then again in Oct. 1936, by BGLE 1934-37. BGLE also roughly surveyed it from the ground, and it appears on Stephenson's map of 1940. W.L.G. Joerg, American cartographer, mapped this glacier in 1936, from Ellsworth's photos. Surveyed in 1948 and 1949 by Fids from Base E, and, in association with the names of other features in this area named for planets, named by them for the planet Jupiter. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a Russian chart of 1961 as Lednik Yupiter (which means the same thing).

Jupiter Island. 66°08' S, 101°08' E. An island

in the Bunger Hills, discovered by SovAE 1956, and named by them as Ostrov Jupiter, for the planet. ANCA gave it the name Jupiter Island.

Jurabach. 62°14' S, 58°59' W. A little stream that flows SE out of the lake the Germans call Jurasee, on Fildes Penninsula, King George Island, in the South Shetlands. Named by the Germans.

Jurasee. 62°13' S, 59°00' W. A little lake on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Jurassic Nunatak. 74°20' S, 73°04' W. A small nunatak, 2.5 km NE of Triassic Nunatak, in the Yee Nunataks, in Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1968. Named by US-ACAN, in association with Triassic Nunatak, for the Jurassic period in Earth's geological history (i.e., there is not meant to be any implication that this nunatak is composed of Jurassic rock).

Île Jurien *see* **Jurien Island**

Isla Jurien *see* **Jurien Island**

Islote Jurien *see* **Jurien Island**

Jurien Island. 63°32' S, 59°49' W. A small island, NE of Cape Leguillou (the N tip of Tower Island), in the Palmer Archipelago. Charted by FrAE 1837-40 on March 4, 1838, and named by Dumont d'Urville as Île Jurien. It appears as such on his chart of 1838, and in a French atlas of 1847. It appears on a Spanish chart of 1861, as Isla Jurien. In 1921 the confusion with Dumoulin Rocks (just to the N) began; it appears (in error) on a British chart as Dumoulin Island, and does so again in 1948. That year, 1948, and again in 1949, it also appears on a British chart as Dumoulin Islet. So convinced were the British of Dumoulin Islet, that they put it into their gazetteer of 1955. The Americans were calling it Dumoulin Rock as early as 1943, and US-ACAN so named it in 1956, after having rejected Dumoulin Islands. It appears on a Chilean chart of 1947 as Isla Dumoulin, and on a 1949 Argentine chart as Islote Dumoulin. The French were calling it Île Dumoulin (on a 1951 chart), or even Îles Dumoulin. It was because of this confusion that US-ACAN rejected the name Dumoulin Islands in 1956. The British correctly identified this feature following FIDASE air photos of 1956-57, and UK-APC named it on Sept. 23, 1960, as Jurien Island, and it appears as such on a British chart of 1962. US-ACAN followed suit with the British naming later in 1960. The day of Dumoulin for this feature had come to an end. Today, the Argentines call it Isla Jurien, or Islote Jurien, and the Chileans favor Islote Jurien. Originally plotted in 63°29' S, 59°51' W, it has since been replotted. Kendall Rocks (q.v.) are also just to the N. Vice admiral Pierre-Roch Jurien de Lagravière (1772-1849) was, at the time of Dumont d'Urville's expedition, the commander-in-chief of the port of Toulon, and a supporter of the expedition.

Nunataki Juriga Birgera. 83°16' S, 57°34' W. Nunataks in the Neptune Range of the Pensacola Mountains. Named by the Russians for Yuri Birger, a Russian Antarctic expeditioner of 1961, and former Moscow cab driver.

Hrebet Jurija Gagarina *see* **Gagarin Mountains**

Jurpollen *see* **Kitano-ura Cove**

Punta Jurva *see* **Jurva Point**

Jurva Point. 65°50' S, 65°49' W. The extremity of a small peninsula forming the southeasternmost point on Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57, and first shown accurately on an Argentine government chart of 1957. In keeping with other features in the area named for sea-ice specialists, this one was named by UK-APC on July 7, 1959, for Risto Jurva (1888-1953), oceanographer and director of the Finnish Institute of Marine Research from 1947 until his sudden death, a pioneer in sea-ice studies. It appears on a British chart of 1960. The Argentines call it Punta Jurva (which means the same thing). ChilAE 1950-51 called it Punta Reyes, for Capt. Carlos Reyes G., of the Chilean Army, on board the *Lautaro* during that expedition. It appears as such in the Chilean gazetteer of 1974, and that is what the Chileans still call it. US-ACAN accepted the name Jurva Point in 1971.

Vpadina Jushchenko. 60°53' S, 70°15' E. A submarine feature, out to sea beyond the Wilkes Land coast. Named by the Russians.

Jussieu Canyon. 65°15' S, 143°00' E. A submarine feature, as deep as 3200 m, W of the Wega Channel, off the coast of Antarctica directly S of Tasmania. It is really a canyon system. The Laboratoire de Géologie Dynamique is located within Pierre et Marie Curie University, on Place Jussieu, Paris.

Mount Justman. 84°35' S, 172°56' W. Rising to 740 m, in the N section of the Gabbro Hills, midway between Olliver Peak and Mount Roth, on the edge of the Ross Ice Shelf. Named by US-ACAN in 1966, for Lt. Cdr. Leroy George Justman (1916-1992), USN, assistant ship operations officer on the staff of the commander, U.S. Naval Support Force, Antarctica, in 1964.

Jutland Glacier. 71°55' S, 166°12' E. A large tributary glacier, 24 km long and 6 km wide (the New Zealanders say it is over 30 km long, and 5 km wide), it flows NW from a common divide with Midway Glacier (it flows opposed to the flow of that glacier), to join the flow of Greenwell Glacier NW of Boss Peak, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named, in accordance with other features in the area named after famous battles, by the Northern Party of the NZ Federated Mountain Clubs Expedition, which explored this area in 1962-63, in honor of the great World War I naval battle. US-ACAN accepted the name in 1964.

Jutuldalen. 72°00' S, 2°49' E. A valley in the area of Jutulhogget (in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land), in association with which it was named ("the giant's valley") by the Norwegians on Oct. 12, 2007. With all these features beginning with "Jutul," it is worth bearing in mind that that word is also another name for a troll (these features being in the vicinity of Troll Station).

Jutulgryta *see* **Jultulgryta Crevasses**

Jutulgryta Crevasses. 71°16' S, 0°27' E. A crevasse field 19 km long, to the E side of the mouth of Jutulstraumen Glacier, on the Fimbul Ice Shelf, on the Princess Martha Coast of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and from air photos taken in 1958-59 during the long NorAE 1956-60, and named by them as Jutulgryta (i.e., "the giant's cauldron"). US-ACAN accepted the name Jutulgryta Crevasses in 1966.

Jutulhogget *see* **Jutulhogget Peak**

Jutulhogget Peak. 72°02' S, 2°51' E. A high, steep-sided peak in the E ridge of Jutulsessen Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Jutulhogget (i.e., "the giant's peak"). The original Jutulhogget is in Norway, and is that country's largest canyon. US-ACAN accepted the name Jutulhogget Peak in 1966.

Jutulpløgsla *see* **Jutulpløgsla Crevasses**

Jutulpløgsla Crevasses. 72°28' S, 1°35' W. A crevasse field halfway up Jutulstraumen Glacier, in its middle and W part, about 14 km SE of Nashornet Mountain, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and from air photos taken in 1958-59, during the long NorAE 1956-60, and named by them as Jutulpløgsla (i.e., "the giant's plowed field"). US-ACAN accepted the name Jutulpløgsla Crevasses in 1966.

Jutulrøra *see* **Jutulrøra Mountain**

Jutulrøra Mountain. 72°15' S, 0°27' W. A prominent mountain in the W part of the Sverdrup Mountains, 10 km S of Straumsvola Mountain, and overlooking Jutulstraumen Glacier, in Fimbulheimen, in Queen Maud Land. First plotted from the aerial photos taken by GermAE 1938-39. Remapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and from air photos taken in 1958-59, during the long NorAE 1956-60, and named by them as Jutulrøra (i.e., "the giant's pipe"). US-ACAN accepted the name Jutulrøra Mountain in 1966.

Jutulsessen *see* **Jutulsessen Mountain**

Jutulsessen Mountain. 72°02' S, 2°41' E. A large mountain, rising to 2370 m, 11 km N of Terningskarvet Mountain, and 100 km W of Svarthamaren, in the N part of the Gjelsvik Mountains, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and from air photos taken in 1958-59, during the long NorAE 1956-60, and named by them as Jutulsessen (i.e., "the giant's seat"). US-ACAN accepted the name Jutulsessen Mountain in 1966. The Germans call it Mayrkette (see that entry for the history of Mayrkette). NorAE 1984-85 set up an automatic weather station here.

Jutulstraumen *see* **Jutulstraumen Glacier**

Jutulstraumen Glacier. 71°35' S, 0°30' W. A large glacier, 190 km long, it flows N between (on the W) Kirwan Escarpment, Borg Massif, and Ahlmann Ridge and (on the E) the Sverdrup Mountains, into the Fimbul Ice Shelf, between Maudheimvidda and Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and from air photos taken in 1958-59, during NorAE 1956-60, and named by them as Jutulstraumen (i.e., "the giant's stream"). US-ACAN accepted the name Jutulstraumen Glacier in 1966.

Gora Juzhnaja *see* **Mount Yuzhnaya**

Holmy Juzhnye. 66°11' S, 100°17' E. A hill in the Bunger Hills. Named by the Russians.

[1]**Skaly Juzhnye**. 70°30' S, 9°00' E. A nunatak on the Fimbul Ice Shelf. Named by the Russians.

[2]**Skaly Juzhnye**. 80°44' S, 25°39' W. One of the Du Toit Nunataks, in the Shackleton Range. Named by the Russians.

Ostrov Juzhnyj *see* **Juzhnyje Island**

Juzhnyje Island. 66°11' S, 100°18' E. The southernmost large island of the Taylor Islands, in the Bunger Hills. The highest point on the island is among the cliffs along the N coast. From there a saddle runs across to another, rounded, peak toward the center of the island, and there is a gully running northward on the W side of the island toward the saddle. The island was charted by SovAE 1956, and named by them as Ostrov Juzhnyj. ANCA translated the name.

Mount K. Olsen *see* **Olsen Crags**

Mount K. Prestrud *see* **Mount Prestrud**

Mount K. Sundbeck *see* **Mount Sundbeck**

Kaa Bluff. 63°52' S, 58°06' W. A flat-topped bluff E of, and overlooking, Stoneley Point, forming the northernmost termination of the ridge that projects NW from Davies Dome, on James Ross Island. Named by UK-APC on Nov. 15, 2006, after Kaa, the character in Rudyard Kipling's *Jungle Book*.

Ostrov Kabile *see* **Kabile Island**

Kabile Island. 62°26' S, 59°57' W. An island extending 700 m in a S-N direction, 0.7 km E of Pavlikeni Point, 1 km N of Crutch Peaks, and 2.2 km WSW of Ongley Island, off the N coast of Greenwich Island, in the South Shetlands. Mapped by the Chileans in 1966 and by the British in 1968. Named by the Bulgarians on Nov. 4, 2005, as Ostrov Kabile, for the ancient Thracian town of Kabile, which was situated near the present Bulgarian town of Yambol. English-speaking persons translated this as Kabile Island.

Kabuto-dake. 71°49' S, 34°50' E. A small nunatak about 35 km W of Mount Gaston de Gerlache, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1973, and named descriptively by the Japanese on Nov. 22, 1975 (the name means "helmet nunatak").

Kabuto-iwa *see* **Kabuto Rock**

Kabuto Rock. 68°03' S, 43°36' E. A large, blunt coastal rock exposure, almost a small mountain, rising to 83 m above sea level, projecting from the edge of the coastal ice halfway between Chijire Glacier and Rakuda Glacier, 18 km W of Carstensfjella, on the Prince Olav Coast of Queen Maud Land. Mapped from JARE 1962 aerial photographs, and named by the Japanese on May 1, 1963, as Kabuto-iwa (i.e., "helmet rock"), because of its shape. US-ACAN accepted the name Kabuto Rock in 1964. The Norwegians call it Hjelmen (a translation from the Japanese).

Kado-misaki *see* **Kado Point**

Kado Point. 69°39' S, 39°22' E. A rocky coastal point along the E side of Lützow-Holm Bay, it marks the W extremity of the Skallen Hills, on the coast of Queen Maud Land. It also marks the N entrance point of Skallevika. First mapped in 1946 by Norwegian cartographers from aerial photographs taken by LCE 1936-37. Further mapped from ground surveys and aerial photographs taken by JARE between 1957 and 1962, and in much more detail (1:25,000) from surveys and aerial photos taken by JARE in 1969. Descriptively named Kado-misaki (i.e., "corner point") by the Japanese on June 22, 1972. US-ACAN accepted the name Kado Point in 1975.

Kagami-daira. 72°35' S, 31°10' E. A bare ice field in the central part of the Belgica Mountains. Photographed aerially by JARE in 1976, and surveyed from the ground in 1979-80. Named on Nov. 24, 1981, by the Japanese. The name means "mirror flat," because of its extremely flat surface.

Kagami-ura. 67°56' S, 44°30' E. An inlet indenting the W side of Shinnan Rocks, on the W side of Shinnan Glacier, in Queen Maud Land. Mapped from aerial photos taken by JARE in 1962, and from a ground survey by JARE in 1974. Named on March 12, 1977 by the Japanese (the name means "mirror inlet").

Kagge, Erling. b. Jan. 15, 1963, Norway. A lawyer who, in 1990, with Børge Ousland, walked to the North Pole in 51 days, the first ever such unsupported expedition. In the 1992-93 season he performed his most amazing feat — he walked 814 miles to the South Pole accompanied (as it were) only by Jimi Hendrix. This was the first ever unsupported (except for the music of the aforementioned late lamented guitarist) solo expedition to the Pole. In 1994 he climbed Mount Everest. He has also sailed the Atlantic twice, rounded the Horn, read philosophy at Cambridge, become a publishing magnate, art collector, and lecturer, and written books.

Kaggen *see* **Kaggen Hill**

Kaggen Hill. 72°03' S, 26°25' E. A small, ice-covered nunatak-type hill standing in Byrdbreen, 11 km E of Mount Bergersen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, plotted by them in 72°06' S, 26°37' E, and named by them as Kaggen (i.e., "the keg"). US-ACAN accepted the name Kaggen Hill in 1966. The feature has since been replotted.

Kahiwi Maihao Ridge. 78°05' S, 164°00' E. An ice-free ridge running in an E-W direction at a height of between 1045 and 1075 m above sea level between Findlay Ridge in the S and Marshall Ridge in the N, or between Marshall Valley and Miers Valley, near the center of the Denton Hills, on the Scott Coast of Victoria Land. Named by NZ-APC in March 1994. The name means "finger ridge" in Maori. US-ACAN accepted the name later in 1994.

Kahl, Carlos *see* **Órcadas Station**, 1929

Isla Kahn. 64°21' S, 61°35' W. A small island in the shape of a half moon, in a bay on the N coast of Bluff Island, off the W coast of Graham Land. Once thought to be part of Challenger Island (it appears as such on Chilean charts of 1962 and 1963, and also in the 1974 Chilean gazetteer), it is in fact a separate island, 550 m to the W of Challenger Island. Named by the 7th Chilean Antarctic Expedition in honor of naval captain Alberto Kahn Wiegand (see below).

Kahn Wiegand, Alberto. Leader of ChilAE 1952-53. On March 3, 1953, upon his return to Chile, he was appointed director of the Naval Academy, a post he held until Feb. 9, 1954. He was later a rear admiral.

Gora Kahovskogo. 72°01' S, 63°11' E. An isolated mountain in the S part of the Prince Charles Mountains. Named by the Russians.

Kai-no-hama *see* **Kaino-hama Beach**

Kainan Bay. 78°10' S, 162°30' W. Also called Helen Washington Bay. An ice-port, about 1.5. km wide, indenting the front of the Ross Ice Shelf for 13 km, 59 km NE of the NW end of Roosevelt Island, and about 50 km NE of the old Bay of Whales. Discovered in Jan. 1902 by BNAE 1901-04. It was here that Shirase landed on Jan. 16, 1912, and he named it for his ship, the *Kainan Maru*. US-ACAN accepted the name in 1947. It has an ice shelf, on which Little America V was located in 1955-56. Originally plotted in 78°07' S, 162°30' W, it has since been re-plotted.

The *Kainan Maru*. The name means "opener of the south," or "Southern Pioneer," in Japanese. A small, 100-foot-long, 204-ton three-masted wooden Japanese fishing schooner, originally called the *Hoko Maru*, she was the vessel used to transport Shirase's Japanese South Polar Expedition of 1911-12. A used 18 hp auxiliary engine was fitted so that the ship might negotiate the Antarctic waters with more ease, and she was also reinforced with steel. Naokichi Nomura was the skipper. After the expedition the ship was sold for 20,000 yen.

Kainan Maru Seamounts. 64°50' S, 34°35' E. An undersea feature, 2224 m deep, just N of the nose of Gunnerus Ridge, out to sea beyond the Prince Harald Coast of Queen Maud Land. Named by international agreement, after the *Kainan Maru*.

Kaino-hama Beach. 69°01' S, 39°34' E. A small beach lying 350 m S of Kitami Beach, along the cove the Japanese call Naka-no-ura (and which the Norwegians call Hornpollen), on the S side of East Ongul Island, in the E part of Lützow-Holm Bay. Mapped from ground surveys and aerial photos taken by JARE 1957-62, and named by the Japanese on May 1, 1963 as Kai-no-hama (i.e., "beach of shells"). US-ACAN accepted the name Kaino-hama Beach in 1968.

Kairuri Peak. 83°17' S, 164°15' E. A flat-topped, wedge-shaped peak, rising to about 1800 m, to the W of Bunker Cwm, 16 km W of Mount Miller, in the Holland Range. Discovered and named by NZGSAE 1959-60. NZ-APC accepted the name on May 24, 1961. "Kairuri" is a Maori word for a surveyor.

Cabo Kaiser *see* **Cape Kaiser**

Cap Kaiser *see* **Cape Kaiser**

Cape Kaiser. 64°14' S, 62°01' W. The NE point of Lecointe Island, just E of Brabant Island, and 13 km WSW of the extreme S of Two Hummock Island, in the Palmer Archipelago. Discovered by BelgAE 1897-99, charted by them on Jan. 24, 1898, and named by de Gerlache as Cap Kaiser, for engineer Georges Kaiser, professor of geography at the University of Louvain, a member of the Belgian Royal Geographical Society, and a supporter of the expedition. He wrote the important book *Au Canada*. The feature appears as Cape Kaiser on Dr. Frederick Cook's 1900 English language version of the expedition map, and as such on British charts of 1909 and 1948. In 1952, US-ACAN accepted the name Cape Kaiser, and UK-APC followed suit on Sept. 8, 1953. It appears on a Chilean chart of 1947, as Cabo Kaiser, and that is the name that appears in the Chilean gazetteer of 1974, and also in the Argentine gazetteer of 1970. FIDASE photographed it aerially in 1956-57.

Isla Kaiser *see* **Lecointe Island**

Kaiser Wilhelm Archipelago *see* **Wilhelm Archipelago**

Kaiser Wilhelm Inseln *see* **Wilhelm Archipelago**

Kaiser Wilhelm Land *see* **Wilhelm II Land**

Kaiser Wilhelm II Coast *see* **Wilhelm II Land**

The *Kaiyo Maru*. In 1979-80 this 93-meter, 2630-ton ship, along with the *Shinano Maru*, formed an expedition sent out by the Japanese Fisheries Agency. The *Kaiyo Maru* made biological investigations of marine Antarctic systems and stocks between Dec. 1979 and Jan. 1980. The *Shinano Maru* went krill hunting (*see* **The *Shinano Maru***). Keiji Nasu was chief scientist for the expedition, and Toshiharu Takahashi was skipper of the *Kaiyo Maru*. The *Kaiyo Maru* was back in southern waters in 1980-81, for the same purpose, with the same skipper (Takahashi), in an expedition led by Masaaki Murano, and which also included the new ship *Umitaka Maru* (q.v.). The *Kaiyo Maru* was back in 1983-84, skippered by Shinnosuke Sueki, on an expedition led by Masaaki Murano and Yuzou Komaki (*see* **The *Umitaka Maru*** for more details of this expedition). In 1984-85 the *Kaiyo Maru* was back alone, on another Japanese Fisheries Agency expedition in the Drake Passage, led by Mr. Komaki. Capt. Sueki was skipper again. In 1987-88 she was off the northern tip of the Antarctic Peninsula, surveying krill, in a one-ship expedition led by Yasuhiko Shimazu of the Japanese Fisheries Agency. Capt. Sueki was still skipper. In 1990-91 she was back for another fisheries voyage, led by Mikio Nganobu, krill surveying in the Scotia Sea and off the Antarctic Peninsula. Teruo Morooka was skipper of the ship. From 1992 she was researching salmon in the northern Pacific Ocean. She was back in Antarctic waters, on two similar fisheries voyages, both led by Mikio Nganobu —1994-95 (skipper was Hitomi Gomyo) and 1999-2000 (skipper was Yoshihiro Kikuchi).

Kaka Nunatak. 77°17' S, 166°52' E. The most prominent of the Kai Nunataks, rising to about 1400 m near the center of the group, 3 km SE of the summit of Mount Bird, in the NW part of Ross Island. Named by NZ-APC on Feb. 20, 2001, for one of the native birds of NZ. US-ACAN had accepted the name on June 19, 2000.

Kakapo Nunatak. 77°13' S, 166°48' E. Rising to about 1200 m above sea level, it is one of 2 similar nunataks that lie 500 m apart (Takahe Nunatak is the other, just to the NE) and appear to be part of an ice-covered crater rim, 5.5 km NNE of Mount Bird, in the NW part of Ross Island. Named by NZ-APC on Feb. 20, 2001, for one of the native birds of NZ. US-ACAN had accepted the name, on June 19, 2000.

Kakari-iwa. 71°45' S, 35°56' E. A small rock exposure 5.5 km SE of Mount Gaston de Gerlache, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1973, and named by the Japanese on Nov. 24, 1981 (name means "hanging rock").

Kaki Ponds. 77°42' S, 162°42' E. A few small ponds, 0.3 km N of the terminus of Marr Glacier, in Taylor Valley, in Victoria Land. Named by the NZ-APC on Jan. 30, 1998, for their native stilt-like bird, the kaki. US-ACAN accepted the name later in 1998.

Kakure-iwa *see* **Kakure Rocks**

Kakure Rocks. 67°57' S, 44°47' E. Two small, rocky, nunatak-like exposures along the E wall of Shinnan Glacier, at the E extremity of the Prince Olav Coast and the W extremity of Enderby Land. Mapped by the Japanese from ground surveys and air photos taken by JARE in Jan. 1962, and named by them on May 1, 1963, as Kakure-iwa (i.e., "hidden rocks"). US-ACAN accepted the name Kakure Rocks in 1968. The Norwegians call them Løyndesteinane (which means the same thing).

Ostrov Kalach *see* **Kalach Island**

Kalach Island. 66°13' S, 100°54' E. In the Bunger Hills, on the coast of Queen Mary Land. Charted by SovAE 1956, and named by the USSR as Ostrov Kalach. The Australians call it Kalach Island.

Kalafut Nunatak. 77°46' S, 145°36' W. Marks the SE end of the Haines Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and again, later, by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for John Kalafut, USARP glaciologist at Byrd Station in 1966-67 and 1968-69.

Kalb, Bernard. b. Feb. 4, 1922, NYC. Brother of correspondent Marvin Kalb (b. 1930). Famous *New York Times* foreign correspondent, from 1947 to 1962, who went to Antarctica on the *Glacier*, to cover OpDF I. In 1962 he became CBS's bureau chief in SE Asia and India, covering the Vietnam War. He anchored CBS Morning News from 1970 to 1972, and was with Nixon in China in 1972. He and his brother wrote the book *Kissinger*, in 1974. In 1980 both brothers went over to NBC. As assistant secretary of state for public affairs and state department spokesman (1984-86), Bernard Kalb was with Reagan at the summit with Gorbachev in 1985.

Kaldager, Alf. b. 1875, Sandeherred, Norway, son of ship's pilot Michael Andreasen Kaldager and his wife Lovise Marie Hansdatter. He went to sea at 16, and was sailing master on the *Sir James Clark Ross* during Carl Anton Larsen's 1923-24 whaling expedition in Antarctica, occasionally skippering the catcher *Star I* in that season. He would sometimes travel with his wife Ingeborg. He died in 1952.

Kalerak, John. Known as Jimmy. b. Aug. 4, 1903, White Mountain, over the river from Chinik (later called Golovin), Alaska, as John Apangoluck, son of Inupiaq Indian Wikpahinalak "William" Apangoluck and his wife Snelingan "Annie" Pooyourghok. John and his brothers Andrew and William, and his sisters Josephine and Martha, all got their last name Kalerak from the fact that White Mountain was a Kawerack Indian village. As a teenager he became a cook on boats plying the waters of the great Northwest. He married in 1930, and settled down in Seattle. He was the affable 2nd cook on the *North Star* before and during USAS 1939-41, one of the few Eskimos (q.v.) ever to go to Antarctica. He later lived in Long Beach, Calif., and died in Los Angeles on Dec. 19, 1982.

[1]**Lednik Kalesnika** *see* **Manning Glacier**

[2]**Lednik Kalesnika**. 82°04' S, 41°25' W. A glacier N of the Panzarini Hills and the Argentina Range, at the NE end of the Pensacola Mountains. Named by the Russians, for S.V. Kalesnik (*see* **Manning Glacier**).

Lednik Kaliakra *see* **Kaliakra Glacier**

Kaliakra Glacier. 62°35' S, 60°09' W. It extends 7 km in an E-W direction, and 8 km in a N-S direction, draining NE into the N part of Moon Bay, in the NE part of Livingston Island, in the South Shetlands. Its head is bounded to the N by Miziya Peak, Samuel Peak, and Perperek Knoll; to the NW by Gleaner Heights and Leslie Hill; to the W by Gurev Gap, Hemus Peak, Elhovo Gap, Leslie Gap, and Radnevo Peak; to the S by Bowles Ridge; and to the SE by Melnik Ridge. Its crevassed lower portion also receives ice from the area between Leslie Hill and Samuel Peak. Roughly mapped by the British in 1968, and in more detail by the Argentines in 1980, it was named by the Bulgarians in 1995 (and officially on Aug. 19, 1997), as Lednik Kaliakra, after Nos Kaliakra, a cape on the Black Sea coast of their home country. UK-APC accepted the name Kaliakra Glacier on July 8, 2003, and US-ACAN followed suit that year. It was last plotted by the UK, in late 2008.

Kalicki Point. 62°09' S, 58°34' W. The W tip of Dufayel Island, near the center of Ezcurra Inlet, in Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in

1980, for Capt. Tadeusz Kalicki, skipper of the *Antoni Garnuszewski* during PolAE 1977–78.

Lednik Kaliningradskij. 74°05' S, 68°00' E. A glacier near the S part of the Lambert Glacier. Named by the Russians for their port Kaliningrad, from which many an Antarctic expediton sailed.

Kallen. 72°17' S, 26°15' E. A mountain between Isachsen Mountain and Imingfjellet, in the SE part of the Sør Rondane Mountains. Name means "the old man" in Norwegian. *See also* **Kjella** (the old woman).

Kallenberg, Paul. b. Feb. 15, 1905, Roslindale, Boston, but grew up partly in Dedham, Mass., son of German immigrants, machinist Henry L. Kallenberg and his wife Sophie. He trained as a baker, went to sea in 1931, and became an able seaman. He served as a messman, baker, and galleyman on the *Bear of Oakland* (and subsequently the *Jacob Ruppert*), during both halves of ByrdAE 1933–35, and married a NZ girl, Mary. He served on many Hamburg-American Line ships in the 1930s, as a trimmer or baker (a considerable difference in trades). He later lived in Santa Monica, Calif., and died in May 1987.

Vrah Kalofer *see* **Kalofer Peak**

Kalofer Peak. 62°41' S, 60°01' W. A sharp, rocky peak rising to 300 m in Levski Ridge, 900 m S of Radichkov Peak, 550 m NW of M'Kean Point, 2 km ESE of Serdica Peak, and 2.1 km NE of Christoff Cliff, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on April 11, 2005, as Vrah Kalofer, after the town of that name in central Bulgaria. The British and Americans use the translated name Kalofer Peak.

Kaloyan Nunatak. 62°37' S, 59°52' W. Rising to 400 m in Delchev Ridge, NE of Sozopol Gap, 1.7 km ENE of Elena Peak and 3.5 km WSW of Renier Point, it surmounts Pautalia Glacier to the S, and Sopot Ice Piedmont to the W, N, and NE, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named on Feb. 17, 2004 by the Bulgarians for Czar Kaloyan, of Bulgaria, 1197–1207, and mapped in 2005 from the Bulgarians' Tangra 2004/05 topographic survey.

Skala Kal'veca *see* **Kal'vets Rock**

Kal'vecknatten *see* **Kal'vets Rock**

Kal'vets Rock. 71°47' S, 11°09' E. A rock outcrop, 3 km WSW of the summit of Mount Flånuten, on the W side of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered by GermAE 1938–39, and plotted from air photos taken by that expedition. It was re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during that same long expedition. Re-mapped again by SovAE 1960–61, and named by them as Skala Kal'veca, for O.A. Kal'vets, a Russian pilot. US-ACAN accepted the name Kal'vets Rock in 1970. The Norwegians call it Kal'vecknatten (which means the same thing).

Kalvholmen *see* **Kurumi Island**

Kamada, Gisaku. b. 1885, Ishikawa, Japan. One of the helmsmen on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910–12.

Lake Kamakshi. 70°46' S, 11°44' E. In the Schirmacher Hills, on the coast of Queen Maud Land. Named by the Indians.

Lake Kamala. 70°46' S, 11°43' E. In the Schirmacher Hills, on the coast of Queen Maud Land. Named by the Indians.

Kamb Glacier. 77°55' S, 162°39' E. A broad, elevated glacier, 6 km long, flowing NE from Fogle Peak into Condit Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1992, for glaciologist Barclay James Kamb (b. 1958), of the division of geological and planetary sciences, at the California Institute of Technology, who, from the 1980s was a principal USARP investigator on the West Antarctic ice sheet, and one of the leading names in the investigation of the Marie Byrd Land ice streams. He drilled deep bore holes into the base of ice streams on the Siple Coast, with the intention of finding out why ice streams can move faster than the surrounding ice sheet.

Kamb Ice Stream. 82°15' S, 145°00' W. Flows W to the Siple Coast, between Siple Dome and Whillans Ice Stream. Originally named Ice Stream C (*see* **Macayeal Ice Stream** for further details). Renamed by US-ACAN in 2003, for Barclay Kamb (*see* **Kamb Glacier**). NZ-APC followed suit with the naming on May 15, 2003. The Americans built Upstream C Camp near here, in 82°26' S, 136°56' W.

Kamchiya Glacier. 62°37' S, 60°31' W. A glacier on Livingston Island, extending 5 km in an E-W direction and 2.5 km in a N-S direction, S of the glacial divide between the Drake Passage and the Bransfield Strait, it flows into South Bay between Ereby Point and Memorable Beach, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the Kamchiya River, in northeastern Bulgaria.

Kame Island. 67°58' S, 44°12' E. A small island, 6 km E of Cape Ryugu, close to the shore of Queen Maud Land. Mapped by the Japanese from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them as Kame-zima, or Kame-shima (i.e., "turtle island") because of its shape. US-ACAN accepted the name Kame Island in 1968. The Norwegians call it Skjelpadda, which means the same thing. The Russians tend to call it Ostrov Dubinin, after A.I. Dubinin (*see* **Dubinin Trough**).

Kame-no-se. 71°42' S, 35°48' E. A round-topped mountain, rising to 2416 m, which makes up the NW part of Mount Gaston de Gerlache (the most southerly massif in the Queen Fabiola Mountains). Surveyed by JARE in 1960, and named descriptively by the Japanese on March 22, 1979 (name means "back of turtle").

Kame-shima *see* **Kame Island**

Kame-zima *see* **Kame Island**

Kamelbreen *see* **Rakuda Glacier**

Kamelen *see* **Kamelen Island**, **Rakuda Rock**

Kamelen Island. 67°31' S, 61°37' E. Rising to an elevation of 45 m above sea level, 5 km W of the Einstoding Islands, and about 5 km NW of Oldham Island, in the N part of the Stanton Group. The Stanton Group as a whole was mapped and named by Mawson in Feb. 1931, during BANZARE 1929–31, then photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who called this particular island Kamelen (i.e., "the camel"). US-ACAN accepted the name Kamelen Island in 1973.

Gora Kameneckogo. 71°39' S, 11°28' E. A hill in the Humboldt Mountains of Queen Maud Land. Named by the Russians.

Kamenev Bight. 69°55' S, 9°30' E. A shallow embayment, about 40 km wide, 100 km NW of the Shirmacher Hills, in the ice shelf fringing the coast of Queen Maud Land. Its W end is Cape Krasinksiy. Photographed aerially in 1958–59, during the long NorAE 1956–60, and mapped by Norwegian cartographers from these photos. Re-mapped in 1961 from ground surveys conducted by SovAE 1961. Named by the USSR as Zaliv Sergeja Kameneva, for Sergei Sergeyevich Kamenev (1881–1936), head of the Russian Army and later chairman of the Soviet Arctic Commission, who organized Arctic expeditions. US-ACAN accepted the translated name Kamenev Bight in 1970.

Kamenev Nunatak. 71°41' S, 63°00' W. A ridge-like nunatak rising to about 1400 m, inland from, and W of the head of, Odom Inlet, 11 km W of Mount Whiting, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1972–73. Mapped by USGS in 1974, and named by US-ACAN in 1976, for Yevgeniy Nikolayevich Kamenev, Soviet geologist, exchange scientist who wintered-over at McMurdo Station in 1972, and who was in Palmer Land in 1972–73, as a member of the USGS geological and mapping party to the Lassiter Coast. UK-APC accepted the name on July 21, 1976.

Bukhta Kamenistaja *see* **Rocky Cove**

Vpadina Kamenistaja. 73°25' S, 61°53' E. A depression on the Massif Drakon, in the southern part of the Prince Charles Mountains. Named by the Russians.

Kamenistaya Inlet *see* **Rocky Cove**

Kamenistaya Platform. 70°35' S, 68°47' E. On Jetty Peninsula, near the Amery Ice Shelf. Soyuz Station is at its foot.

Mys Kamennyj *see* **Lapidary Point**

Ostrov Kamennyj. 69°19' S, 76°37' E. An island off the Ingrid Christensen Coast. Named by the Russians.

Kame-shima *see* **Kame Island**

Kami-kama. 69°16' S, 39°46' E. A semicircular depression indenting the upper part of Simo-kama, in the S part of the Langhovde Hills. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on June 22, 1972 (the name means "upper kettle"), in relation with Simo-kama (which means "lower kettle").

Kaminski Nunatak. 83°36' S, 54°12' W. A cone-shaped nunatak, rising to about 1690 m above sea level, 2.4 km SE of Rivas Peaks, at the S end of Torbert Escarpment, in the Neptune Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped from these efforts by USGS themselves. Named by US-ACAN in 1968, for Francis Kaminski, aerographer who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Kaminuma Bluff. 77°36' S, 168°57' E. A bold, ice-covered bluff rising to over 200 m near the shore, midway between Cape Mackay and Cape Crozier, on the SE part of Ross Island. Phil Kyle suggested the name, for Katsutada Kaminuma, professor of earth sciences at the National Institute of Polar Research, in Japan. He was with the Dry Valleys Drilling Project, 1974-75 and 1975-76; and was on the Antarctic Search for Meteorites, 1976-77. He was the leading Japanese member of, and a founding member of, IMESS (International Mount Erebus Seismic Study), and, as such, worked in the McMurdo Sound area in 1979-80, 1982-83, 1983-84, 1985-86, and 1986-87. US-ACAN accepted the name in 2000.

Kaminuma Crag. 77°38' S, 162°26' E. A craggy, island-like nunatak, about 1.2 km long, rising to 1750 m in the uppermost névé area of the Newall Glacier, in the Asgard Range of Victoria Land. Named by US-ACAN for Katsutada Kaminuma (*see* **Kaminuma Bluff**).

Mount Kammuri. 69°13' S, 39°45' E. Rising to 340 m (the Japanese say 352.9 m), 2.5 km SSE of Mount Choto, in the central part of the Langhovde Hills, on the coast of Queen Maud Land. Mapped from ground surveys and air photos taken by JARE between 1957 and 1962. Named Kammuri-yama (actually Kanmuri-yama), meaning "crown mountains," by the Japanese on Nov. 22, 1973. US-ACAN accepted the name Mount Kammuri in 1975.

Kammuri-yama *see* **Mount Kammuri**

Lake Kamome. 69°01' S, 39°35' E. A small lake between Lake Midori and Lake Tarachine, in the S part of East Ongul Island, in the Langhovde Hills, in Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE in 1957, and named by them on May 1, 1963, as Kamome-ike (i.e., "the seagull pond). US-ACAN accepted the name Lake Kamome in 1968.

Kamome-ike *see* **Lake Kamome**

Mys Kamp *see* **Camp Point**

Kamp Glacier. 71°45' S, 25°24' E. A glacier, 13 km long, flowing NW between (to the W) the Austkampane Hills and (to the E) Nordhaugen Hill, Mehaugen Hill, and Sørhaugen Hill, in the Sør Rondane Mountains. Photographed aerially during OpHJ 1946-47, and mapped from these photos in 1957 by Norwegian cartographers, who named it Kampbreen (i.e., "crag glacier"), in association with Austkampane. US-ACAN accepted the name Kamp Glacier in 1966.

Kampbreen *see* **Kamp Glacier**

Kampekalven *see* **Kampekalven Mountain**

Kampekalven Mountain. 71°56' S, 7°46' E. Rising to 2200 m, NE of Klevekampen Mountain, it forms the NE end of the Filchner Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially during GermAE 1938-39. It was surveyed from the ground during NorAE 1956-60, and photographed aerially in 1958-59, during the same expedition, and mapped from these efforts by Norwegian cartographers, who, in association with neighboring Klevekampen Mountain, named this feature Kampekalven (i.e., "the crag calf"). US-ACAN accepted the name Kampekalven Mountain in 1967.

Kampen. 66°29' S, 53°07' E. A nunatak, rising to about 1500 m above sea level, about 15 km SW of Armstrong Peak, in Enderby Land. Mapped by Norwegian cartographers in 1946 from air photos taken by LCE 1936-37, and named by them ("the hill-top").

Kampesteinen. 72°19' S, 26°40' E. A nunatak, SE of Isachsen Mountain, in the E part of the Sør Rondane Mountains. The Russians call it Gora Behtereva.

Gora Kamskaja *see* **Kamskaya Peak**

Kamskajatoppen *see* **Kamskaya Peak**

Kamskaya Peak. 71°57' S, 13°25' E. Rising to 2690 m, it is the highest peak of Dekefjellet Mountain, in the Weyprecht Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and plotted from these photos. Surveyed from the ground by NorAE 1956-60, photographed aerially in 1958-59, during the same expedition, and mapped again by Norwegian cartographers from these efforts. Re-mapped by SovAE 1960-61, and named by the USSR in 1966 as Gora Kamskaja, probably for the Kama River, in their homeland. US-ACAN accepted the translated name Kamskaya Peak in 1970. The Norwegians call it Kamskajatoppen, which means the same thing.

Kanak Peak. 79°16' S, 158°30' E. A conspicuous ice-free peak, rising to 2410 m above sea level, 11 km NW of Mount Gniewek, and N of the head of Carlyon Glacier, in the Cook Mountains. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Lt. Cdr. Robert Anthony Kanak (b. Nov. 21, 1925, Chicago. d. Nov. 1978, Norfolk, Va.), USN, skipper of the *Durant* during OpDF 63 (i.e., 1962-63). On Dec. 23, 1965, now a commander, he took command of the *Vogelgesang*, and was skipper until Jan. 24, 1967.

Kaname Island. 69°21' S, 37°36' E. A small, isolated island, 33 km (the Japanese say 40 km) NW of Padda Island, in Lützow-Holm Bay. Discovered by Japanese helicopter fly-overs in 1969-70, and named by them on June 22, 1972 as Kaname-jima (i.e., "pivot island"). The island formed the pivot of a fan-shaped floating ice tongue extending from Fletta Bay. US-ACAN accepted the name Kaname Island in 1975.

Kaname-jima *see* **Kaname Island**

Kaname-zima *see* **Kaname Island**

Mount Kane. 73°58' S, 62°59' W. Rising to about 1650 m, 10 km WSW of Squires Peak, in the Playfair Mountains, on the Lassiter Coast of southern Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1967. Named by US-ACAN in 1968, for Alan Frost Kane (b. March 1940), USN, construction mechanic who wintered-over at Pole Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. Mr. Kane writes novels.

Kane, George S. *see* **Keene**

Kane Rocks. 85°18' S, 166°45' E. A ridge of rocks, trending E-W for 5 km, forming a rock median between the upper reaches of Koski Glacier and Vandement Glacier, in the Dominion Range. Named by US-ACAN in 1966, for Henry Scott Kane, USARP cosmic radiation scientist with the Bartol Research Foundation, who wintered over at Pole Station in 1964. He was also a member of the South Pole-Queen Maud Land Traverses of 1964-65 and 1965-66.

Kanefsky, Sidney. b. Jan. 29, 1917, Philadelphia, son of Russian Jewish immigrant parents, broker Leon Kanefsky and his wife Ethel. Sid's father died in the 1920s, and Ethel was forced to take a job is a dry goods store. Sid joined the U.S. Navy, and was a very tall (6 foot 6) seaman 1st class on the *Bear*, during USAS 1939-41. He was promoted to coxswain during the 2nd half of the expedition. He lived for decades in Philadelphia, and died in San Mateo, Calif., on March 7, 1999.

Kani Rock. 68°02' S, 43°12' E. A rock exposure, rising to an elevation of 109 m above sea level, between Umeboshi Rock and Chijire Rocks, on the coast of Queen Maud Land. Mapped by the Japanese from ground surveys conducted by JARE between 1957 and 1962, and from 1962 JARE air photos, and named by them on May 1, 1963, as Kani-iwa (i.e., "crab rock"; its shape resembles a crab). US-ACAN accepted the name Kani Rock in 1968. The Norwegians call it Krabba (which means the same thing).

Kani-iwa *see* **Kani Rock**

Kanitz Nunatak. 63°30' S, 57°47' W. A rocky peak rising to over 600 m in the S foothills of the Laclavère Plateau, 8.43 km S of Ami Boué Peak, 9.81 km ESE of Dabnik Peak, 6.15 km N of Cain Nunatak, and 9.84 km W by S of Theodolite Hill, overlooking Broad Valley to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Kanitz, in western Bulgaria.

Mount Kanmuri *see* **Mount Kammuri**

Kanmuri-yama *see* **Mount Kammuri**

Kannheiser Glacier. 72°10' S, 101°42' W. A glacier, 6 km long, 20 km ESE of Cape Flying Fish, on Thurston Island, it flows S into the Abbot Ice Shelf. First delineated from air photos taken in Dec. 1946, during OpHj 1946-47. Named by US-ACAN in 1960, for Lt. Cdr. William R. Kannheiser (b. April 20, 1922. d. Sept. 25, 1999, Toms River, NJ), USN, helicop-

ter pilot on the *Glacier* here in 1960. Originally plotted in 72°10' S, 101°52' W, it has since been replotted.

The *Kanon I*. A 236-ton, 103-foot-9-inch whale catcher, built in 1911 at Porsgrund, Norway, for the Laboremus Company. In 1919 she was sold to Hans Wolden, in Buenos Aires, and renamed the *Viking*. Laboremus bought her back in 1922, and renamed her the *Kanon I*. In 1926 she was sold to the Compañía Ballenera del Ecuador, in Guayaquil (Hans Borge, manager), and renamed the *Cañón*. In Sept. 1927 the Anglo-Norse Company bought her, and renamed her the *AN4*, and in May 1929 she was bought again, by the Falkland Shipowners Company, of London. Later that year Christian Salvesen's bought her, and renamed her the *Sjoa*, and even later that year Gustav Bull's Sevilla Company bought her and renamed her the *Sonja*. In Jan. 1930 Waalman & Bugge bought her, and sold her later that year to the Polhavet Company, who renamed her *Sjoa*. In 1934 she was sold to Paulsen's, and ended her career as a whale catcher, being converted into a tug named the *Sannesund*. She ran aground in 1949 on her way from Kristiansand to Larvik, and was condemned. However, she was sold to Oluf Ellingsen in 1952, and became the cargo ship *Olaf*. In 1974 she was sold to Nils Nilsen, and in 1998 to an owner in Britain, where she still plies the waters.

Kansas Glacier. 85°42' S, 134°30' W. A steep glacier, 40 km long, it runs NE from Stanford Plateau to enter Reedy Glacier just N of Blubaugh Nunatak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for the University of Kansas, in Lawrence, which has sent several researchers to Antarctica.

Kaochaduiyuan Tan. 62°15' S, 58°59' W. A beach on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Kapellet *see* **Kapellet Canyon**

Kapellet Canyon. 71°53' S, 6°47' E. An indentation into the E side of Jøkulkyrkja Mountain, it is really a corrie, with steep rock and ice walls, in the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Kapellet (i.e., "the chapel"). US-ACAN accepted the name Kapellet Canyon in 1967.

The *Kapitan Bondarenko*. A 7684-ton, 133-meter Soviet cargo ship, sister vessel to the *Mikhail Somov*, built in 1966 by Leninskogo, of Komsomolsk. She took part in SovAE 1985-87 (Capt. Stepan Filippovich Kharchenko). In 1985 she was trapped in the ice off Marie Byrd Land for 133 days. In 1986 she broke a rudder off Russkaya Station. It took 6 solid days to effect a temporary repair, and then she made for NZ, for proper repairs. She was sold to the Chinese in 1989.

The *Kapitan Dranitsyn*. A 12,228-ton, 131-meter Russian icebreaker, built in Finland (completed in 1980), in Antarctic waters in 1994-95 (Capt. Viktor Terkhov) and again in 2000-01 (captains Ivan Karavka and Oleg Agafonov), both times visiting the South Shetlands, the South Orkneys, and the Antarctic Peninsula.

The *Kapitan Gotskiy*. A 139.1-meter Soviet diesel electric cargo ship of the icebreaker class, built in 1965. She was in Antarctic waters for SovAE 1976-78 (Captain Vladimir Yevgen'yevich Konchenko), SovAE 1983-85 (Capt. Grigoriy Solomonovich Matusevich), and SovAE 1985-87 (Capt. German Mikhaylovich Kuzin).

The *Kapitan Khlebnikov*. A 134-meter Russian icebreaker, out of Vladivostok, in Antarctic waters in 1992-93 (Capt. Piotr Golikov), visiting the South Shetlands, the South Orkneys, and the Antarctic Peninsula. In 1993-94, Viktor Vasilyev was skipper, and took her from the Antarctic Peninsula to the Ross Sea, landing passengers at Peter I Island and Sturge Island (the latter in the Balleny Islands). In 1994-95, back under the command of Capt. Golikov, she sailed from Australia and NZ to the Ross Sea, again landing passengers on Sturge. She ran aground at Commonwealth Bay, but was undamaged. In 1995-96 (under Vasilyev) and again in 1996-97 (under Golikov), she visited the South Shetlands, South Orkneys, and the Antarctic Peninsula, in the latter season circumnavigating Antarctica, visting 16 stations, and landing passengers on Peter I Island. She visited the South Shetlands, the South Orkneys, and the Antarctic Peninsula on her cruises of 1997-98 (Capt. Golikov), 1999-2000 (Capt. Vasilyev), and 2000-01 (Capt. Vasilyev), in the last season, on Jan. 11, 2001, reaching 78°37' S, in the Bay of Whales. She was able to get farther south than any other ship before, due to the massive re-configuration of the Bay of Whales when the iceberg B-15 calved off from the Ross Ice Shelf. With a carrying capacity of 116 passengers, and 60 crew, she later ran tourists to the Arctic as well. She was back in Antarctic waters in 2005-06 (helping out the Americans).

The *Kapitan Kondrat'yev*. Russian ship that took part in SovAE 1977-79 (Captain Lev Berosovich Vertinskiy), and SovAE 1986-88 (Captain Rukhlan Akhpamovich Zaynigabdinov).

The *Kapitan Ledochowski*. A 5957-ton, 122.1-meter Polish ice-strengthened cargo/training vessel, built in 1974 in Szczecin. She was in Antarctic waters in 1979-80, skippered by Tadeusz Draczkowski, but was not part of the PolAE of that year. In 1989, she was sold by the Polish Shipping Company, to the Chinese, registered in Panama, and her name was changed to the *Zheng He*. In 1999, she was sold again, to another Chinese firm, and renamed *Yu Ying*.

The *Kapitan Markov*. A Russian freighter that took part in SovAE 1978-80 (Captain Grigoriy Solomonovich Matusevich), SovAE 1980-82 (Capt. Matusevich), and SovAE 1982-84 (Capt. Mikhail Andreyevich Petrov).

The *Kapitan Myshevskiy*. Russian ship that took part in SovAE 1982-84 (Captain Gennadiy Semenovich Sergienko), SovAE 1984-86 (Captain Sergienko), and SovAE 1987-89 (Capt. Aleksey A. Anasenko).

Kapitan Peak. 62°05' S, 58°29' W. Rising to 210 m above sea level, above Crépin Point, E of Wegger Peak, at Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980 (name means "captain").

Mount Kaplan. 84°33' S, 175°19' E. A massive mountain, rising to 4255 m, the highest and largest in the Hughes Range (it forms the S end of that range), 5 km SE of Mount Wexler, and to the SE of the head of Canyon Glacier. Discovered and photographed aerially by Byrd on Nov. 18, 1929. Surveyed by Bert Crary in 1957-58, and named by him for Joseph Kaplan (1902-1991), chairman of the U.S. National Committee for IGY, 1957-58, and one of the creators of the (then) new science of aeronomy. US-ACAN accepted the name in 1962.

Isla Kappa *see* **Kappa Island**

Kappa Island. 64°19' S, 63°00' W. About 0.85 km long, immediately S of Beta Island, and close E of the Theta Islands, on the W side of Melchior Harbor, in the Melchior Islands, in the Palmer Archipelago. Explored and roughly surveyed by the Discovery Investigations personnel of the *Discovery* in 1927, and named by them for the Greek letter. It appears on their chart of 1929. Further surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1948, it appears on an Argentine chart of 1946 as Isla Kappa. UK-APC accepted the name Kappa Island, on Sept. 8, 1953, and it appears as such in the British gazetteer of 1955, and on a 1960 British chart. US-ACAN accepted the name Kappa Island in 1956. It appears on a 1953 Argentine chart as Isla Donati. In 1957 the island and surrounding rocks appear on an Argentine chart as Islotes 1er Teniente López, named for 1st Lt. José Facundo López, Argentine Air Force pilot who made the first Argentine flight to Antarctica, in 1951 (*see* **The *Cruz del Sur***). Another chart of 1957 has the main island as Isla 1er Teniente López. A 1959 chart has the island and rocks as Islas 1er Teniente López. It appears in the 1974 Chilean gazetteer as Isla Kappa, and in the Argentine gazetteer of 1970 (just the main island) as Isla 1er Teniente López. The island was photographed aerially by USN in 1968-69.

Kappen Cliffs. 76°56' S, 162°22' E. Steep rock cliffs, 9 km long and rising to about 600 m, which form the S edge of the Kar Plateau, on the Scott Coast of Victoria Land. Named by US-ACAN in 1999, for Prof. Ludger Kappen, of Kiel University, who conducted extenstive lichen ecophysiology research in the Cape Geology area. NZ-APC accepted the name on Nov. 4, 1999.

Kappenkuppe. 70°51' S, 167°05' E. A peak in the area of Yule Bay, in northern Victoria Land. Name means "cap peak" in German.

Kappvika. 65°52' S, 54°00' E. A small bay off Cape Batterbee, in Enderby Land. Named by the Russians ("cape bay").

Kar Plateau. 76°56' S, 162°20' E. A small plateau, snow-covered except for an almost vertical rock scarp rising to about 600 m and marking its S side (this rock scarp is now called Kappen Cliffs). The plateau itself rises gently toward

the NW to the heights of Mount Marston, just to the N of Mackay Glacier Tongue, at the W side of Granite Harbor, on the Scott Coast of Victoria Land. Charted and named by BAE 1910–13. Kar means "snow" in Turkish. US-ACAN accepted the name in 1952. Originally plotted in 76°54' S, 162°40' E, it has since been replotted.

Kar Terrace *see* **Alb Valley**

Karaali Rocks. 75°22' S, 137°55' W. A small group of rocks along the E side of the mainly snow-covered Coulter Heights, 8 km E of Matikonis Peak, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Atok Karaali, Turkish ionosphere physicist at Plateau Station in 1968.

Karamete-misaki *see* **Karamete Point**

Karamete Point. 69°09' S, 35°26' E. A coastal rock exposure just eastward of Kita-karamete Rock, on the E side of the Riiser-Larsen Peninsula, on the N part of the Prince Harald Coast, in Queen Maud Land. Surveyed by JARE 1961, and named Karamete-misaki (i.e., "back gate point") by the Japanese, on May 1, 1963. US-ACAN accepted the name Karamete Point in 1975.

Lednik Karandina. 79°10' S, 28°40' W. A glacier, due E of Mount Faraway, in the Theron Mountains of Coats Land. Named by the Russians.

Karavelova Point. 62°30' S, 60°04' W. A point, 2 km S of Pomorie Point, 3.75 km NW of Inott Point, and 6.8 km SE of Williams Point, it forms the S side of the entrance to Lister Cove, on the NE coast of Varna Peninsula, Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra Survey of 2004–05, and named by them on April 11, 2005, for Ekaterina Karavelova (1860–1947; née Velikova-Peneva), Russian-born translator, author, and woman activist, and wife of Petko Karavelov, prime minister of Bulgaria.

Gora Karbysheva. 80°30' S, 28°09' W. A hill, due S of Butterfly Knoll, in the W part of the Shackleton Range. Named by the Russians.

Kardam Buttress. 62°39' S, 60°05' W. A sloping buttress, with precipitous and partly ice-free W slopes, it projects 1 km northwards from St. Ivan Rilski Col into Huron Glacier, 1.3 km E of Komini Peak, 1 km W of Plana Peak, and 700 m S of Nestinari Nunataks, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra Survey of 2004–05, and named by them on Nov. 4, 2005, for Bulgarian ruler Khan Kardam, 777–802.

Kardzhali Point. 62°35' S, 61°11' W. A rocky point on the NW coast of Ray Promontory, 700 m S of Essex Point, and 1.88 km E of Start Point, in the NW extremity of Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the Spanish in 1992, and again by the Bulgarians in 2009, and named by the Bulgarians on Nov. 23, 2009, for the city of Kardzhali, in southern Bulgaria. *See also* **[2]Perelik Point**.

Kåre Bench. 71°29' S, 12°10' E. A small, flat-topped mountain, rising to 1810 m, 1.5 km S of Mount Hansen, and just SW of Daykovaya Peak, at the N end of the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and plotted from these photos. Re-plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Kåreseten, for Kåre Hansen, meteorologist on the 1958–59 part of that expedition. US-ACAN accepted the translated name Kåre Bench in 1970. *See also* **Mount Hansen**.

Kårefallet. 73°18' S, 14°08' W. An ice-fall, N of Dagvola, in the Kraul Mountains of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Kåre M. Bratlien, administrator with the Norsk Polarinstitutt, and a member of NorAE 1968–69. Name means "Kåre's falls."

Islotes Karelin *see* **Karelin Islands**

Karelin Bay. 66°30' S, 85°00' E. An indentation in the middle of the N part of the West Ice Shelf, immediately NW of Leskov Island. Mapped by SovAE 1956, and named by the Russians as Bukhta Karelina, for Dmitri Borisovich Karelin (1913–1953), professor of oceanography, a meteorologist, and sea ice-forecasting pioneer. US-ACAN accepted the translated name in 1971.

Karelin Islands. 65°35' S, 65°35' W. A group of islands, 5 km in extent, and 5 km SE of Tula Point, off the NE coast of Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956–57. First accurately shown (but not named) on an Argentine government chart of 1957. Named by UK-APC on July 7, 1959, for Dmitri Karelin (*see* **Karelin Bay**). US-ACAN accepted the name in 1971. The Argentines call it Islotes Karelin. The feature appears on a 1962 Chilean chart as Islas Uribe, named for the *Almirante Uribe*, and it appears as such in the 1974 Chilean gazetteer.

Bukhta Karelina *see* **Karelin Bay**

Lake Karentz. 77°16' S, 161°48' E. An ice-covered lake, 2 km long, W of Mount Swinford and Ringer Glacier, in the Ringer Valley, in the Saint Johns Range, in Victoria Land. The lake receives melt from short glaciers on the headwall of the Ringer Valley, and from slopes in the Mount Swinford area. Named by US-ACAN in 2005, for Deneb Karentz (b. Feb. 14, 1952), USAP marine biologist with 17 field seasons in Antarctica between 1986 and 2005, including research at Palmer Station and McMurdo, and at lakes in the McMurdo Dry Valleys, and on several cruises in the Bellingshausen Sea and the Ross Sea from 1992 onwards. Most of her work was on the effects of ozone depletion on marine plankton. She was the instructor of the advanced biology course at McMurdo. She was later professor of biology at the University of San Francisco. NZ-APC accepted the name on Sept. 12, 2005.

Kåreseten *see* **Kåre Bench**

The *Karl*. Norwegian whale catcher. In 1916–17 she visited Órcadas Station (although the *Undine* was the actual relief vessel that season). Her skipper that season was O.J. Naess. She relieved Órcadas in 1924–25 (unknown skipper).

Cape Karl Andreas *see* **Cape Andreas**

Hrebet Karla Libknehta *see* **Liebknecht Range**

Nunatak Karlik. 70°52' S, 67°11' E. In the Prince Charles Mountains. Named by the Russians.

Lednik Karlova. 81°38' S, 161°35' E. A glacier, almost due W of Mount Kolp, along the W side of the Ross Ice Shelf. Named by the Russians.

Karlovo Peak. 62°37' S, 59°50' W. Rising to over 300 m on Delchev Ridge, 560 m ENE of Mesta Peak, and 1.4 km SW of Renier Point, it surmounts the E extremity of Sopot Ice Piedmont to the N, in the Tangra Mountains, on Livingston Island, in the South Shetlands. Its NW slopes are partly ice-free, and its SE slopes are precipitous. Named by the Bulgarians on Feb. 17, 2004, for their town of Karlovo.

Roca Karlsen *see* **Karlsen Rock**

Karlsen, Adolf Martinius. b. May 8, 1858, Vestre Moland, Norway, son of Carl Mathias Tønnesen and his wife Caroline Andrea Abrahamsdatter. When the method of surnames changed in Norway, he took the name Carlsen, but later changed it to Karlsen. He was a seaman on the *Southern Cross* during BAE 1898–1900.

Karlsen, Anders. b. 1864, Sweden, as Anders Carlsson. Ship's engineer, long in Tønsberg, Norway (hence the spelling in his name), he married at 17 to a Tønsberg girl, Gustava, and they had, among other children, George K. Karlsen (q.v.). In 1892 the family moved to Sandefjord. Father and son went on SwedAE 1901–04 as, respectively, 1st and 2nd engineer of the *Antarctic*.

Karlsen, Arnt. b. 1896, Norway. He moved to South Africa in 1912, joined the Union Whaling Company, and for years was a legend in harpooning circles as the top gun of the Antarctic. He died in Durban on June 14, 1951. The company named a whale catcher after him.

Karlsen, George Konrad. b. 1883, Tønsberg, Norway, son of Anders Karlsen (q.v.) and his wife Gustava. He was a stoker who went as 2nd engineer of the *Antarctic* during SwedAE 1901–04. On July 26, 1908, in Rogaland, Norway, he married Olga Magdalena Kristiansdatter.

Karlsen, Lauritz. Norwegian skipper of the *Fleurus*, between 1926 and 1930, who was in at the South Shetlands and South Orkneys in 1926–27 and 1927–28.

Karlsen Cliffs. 64°20' S, 56°58' W. Forms the NW coast of Spath Peninsula, Snow Hill Island. Named by UK-APC on Dec. 1, 1995, for Anders Karlsen. US-ACAN accepted the name in 1996.

Karlsen Rock. 60°21' S, 46°00' W. A submerged rock, 16 km NNW of Penguin Point (the NW point of Coronation Island), in the South Orkneys. It is the most northerly piece of land in Antarctica. Petter Sørlle charted it in 1912–13, during his running survey of the South Orkneys, and named it (so says the British gazetteer) pos-

sibly for Axel Karlsen, a Norwegian whaling gunner. On Sørlle and Borge's chart of 1913 it appears as Karlsens Rocks, and is located NW of Melsom Rocks. It appears on a British chart of 1916 as Karlsen Rocks, and is misspelled on a 1917 British chart as Kartsen Rock. On Sørlle's chart of 1930 it appears as Karlsenboen, but positioned SW of Melsom Rocks. It appears on a 1930 Argentine chart as Roca Karsten, and on a 1930 British chart as Karsten Rock. It was further charted by the Discovery Investigations in 1933, and appears on their 1934 chart as Karlsen Rock, a name that was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. However, it does appear, pluralized, on a 1950 British chart, as Karlsen Rocks (which was an error). It appears on a 1952 Argentine chart as Roca Kartsen, on another of their charts (from 1957) as Rocas Kartsen, but by 1960 they had it straight, as Roca Karlsen, and that was the name accepted by the 1970 Argentine gazetteer.

Karlsenboen *see* **Karlsen Rock**

Karlsens Rocks *see* **Karlsen Rock**

Karm *see* **Karm Island**

Karm Island. 66°59' S, 57°27' E. Between 2.5 and 3 km long, 1.5 km SE of Shaula Island, in the S part of the Øygarden Group. Photographed by LCE 1936-37, mapped by Norwegian cartographers in 1946 from those photos, and named by them as Karm (the name means "coaming"—i.e., a fixture on a ship to prevent water from getting in). First visited in 1954 by an ANARE sledging party led by Bob Dovers. US-ACAN accepted the name Karm Island in 1961. ANCA also accepted the name.

Kármán Island. 64°24' S, 61°22' W. A little island, about 1.5 km long, about 5 km SSE of Valdivia Point (which forms the NW side of the entrance to Salvesen Cove), off the S coast of Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Named by UK-APC on Feb. 7, 1978, for Dr. Theodore von Kármán (1881-1963), Hungarian engineer who, during World War I, pioneered helicopters. He came to the USA, and helped pioneer JATO rockets during World War II. It appears in the 1980 British gazetteer, and on a 1988 British chart. In 1978 ArgAE named it (for themselves only) as Isla Julieta, after one of the ships in Admiral Brown's fleet of 1814. The Chileans named it (for themselves only) as Isla Diatomeas, for the greenish-colored slime covering the ice below sea level here. This covering is made up of corpuscles of various forms, living beings of silicose shells, which are characterized as a lower form of algae. The Americans do not seem to have commented on the name of this island.

Karnare Knoll. 78°39' S, 85°08' W. A narrow, rocky col, extending 1.7 km in an E-W direction at an elevation of about 2100 m, and with a depression in its E part, it links the SE slopes of Mount Craddock with the NE ridge of Mount Strybing, in the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS in 1988. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Karnare, in southern Bulgaria.

Karnobat Pass. 62°39' S, 60°02' W. Running at an elevation of 720 m above sea level, on Levski Ridge, it is bounded by Helmet Peak to the S and by Intuition Peak to the N, 5.4 km E of Lozen Saddle, in the Tangra Mountains of Livingston Island, in the South Shetlands. It provides overland access from Devnya Valley to the area of Iskar Glacier. Surveyed by the Bulgarians during their Tangra Survey of 2004-05, and named by them on April 11, 2005, for the town of Karnobat, in eastern Bulgaria.

Karo Hills. 85°34' S, 154°10' W. Rounded, ice-free foothills extending for 20 km along the W side of the terminus of Scott Glacier, from Mount Salisbury NNW to the edge of the Ross Ice Shelf. Discovered and roughly mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for Rear Admiral Henry Arnold Karo (known as Arnold Karo) (1903-1986), director of the U.S. Coast and Geodetic Survey, 1955-65.

Karoro Pond. 77°40' S, 162°14' E. At the E foot of Mount Darby, and at the NW foot of Mount J.J. Thomson, along the N wall of the Taylor Valley, in Victoria Land. Named by NZ-APC, for one of their native birds. The name was accepted by US-ACAN in 1998.

Ozero Karovoe. 70°45' S, 11°49' E. A lake at the NE side of Russeskaget, in the Schirmacher Hills, in Fimbulheimen, in Queen Maud Land. The name means "bottom lake" in Norwegian. The Norwegians call it Karovoevatnet.

Karovoevatnet *see* **Ozero Karovoe**

KARP *see* **South Korea**

Ostrov Karpejkina. 67°17' S, 46°25' E. An island just W of Kirkby Head, on the coast of Enderby Land. Named by the Russians.

Massif Karpenko. 81°35' S, 26°00' W. A massif, SE of Recovery Glacier, and S of the Shackleton Range. Named by the Russians.

Punta Karpf *see* **Karpf Point**

Karpf Point. 66°54' S, 64°23' W. A notable, steep point of land in the shape of a small tower, rising to 1177 m above sea level above the plateau along the N side of Mill Inlet, 4.8 km S of Mount Vartdal, on the Foyn Coast, on the E coast of Graham Land. Charted in 1947 by Fids from Base D, photographed from the air the same year by RARE 1947-48, and named by FIDS for Alois Theodor Karpf (b. 1844), librarian of the Kaiserliche and Königliche Geographische Gesellschaft, in Vienna, and joint author (with Josef Chavanne and Franz Ritter von Le Monnier) of the polar bibliography, *Die Literatur über die Polar-Regionen der Erde* (1878). Actually the name was originally given to a point to the NNW of the present feature, and that was the way UK-APC accepted it on Jan. 22, 1951. US-ACAN followed suit in 1952. It appears as such on a British chart of 1952. The Argentines took this up, as Punta Karpf, and that was the way it appeared in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer. However, BAS personnel from Base E surveyed it in 1963-64, and UK-APC re-applied the name to this feature in 1977, and US-ACAN followed suit.

The *Karpinskiy* *see* **The *Akademik Aleksandr Karpinskiy***

Mount Karpinskiy. 72°12' S, 18°25' E. An isolated mountain, about 14 km S of Zhelannaya Mountain, in the Russkiye Mountains of Queen Maud Land. Observed and mapped by SovAE 1959, and named by the USSR as Gora Karpinskogo, for Aleksandr Petrovich Karpinskiy (1847-1936), president of the Academy of Sciences of the Russias. US-ACAN accepted the translated name Mount Karpinskiy in 1971. The professor also gave his name to the ship *Akademik Aleksandr Karpinsky* (q.v.).

Gora Karpinskogo *see* **Mount Karpinskiy**

Karposh Point. 62°43' S, 61°15' W. An ice-free point on the N coast of Snow Island, 2.3 km W of the extreme NE point of President Head, 2.5 km ESE of Gostun Point, and 4.8 km ESE of Cape Timblón, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Karposh, leader of a 1689 Bulgarian uprising.

Roca Karsten *see* **Karlsen Rock**

Karsten Rock *see* **Karlsen Rock**

Gory Kartografov. 68°18' S, 49°38' E. A group of nunataks immediately N of Trubyatchinskiy Nunatak, and immediately W of Krasnaya Nunatak, in the Nye Mountains of Enderby Land. Named by the Russians, for their cartographers.

Ostrov Kartografov *see* **Kartografov Island**

Kartografov Island. 69°12' S, 157°43' E. A small coastal island in the W part of the mouth of Harald Bay, in Oates Land. Photographed aerially during OpHJ 1946-47, again by SovAE 1957-58, and then by ANARE in 1959. Named by the Soviets in 1958 as Ostrov Kartografov, for their cartographers. ANCA translated the name as Kartografov Island, which was the name accepted by US-ACAN in 1970.

Roca Kartsen *see* **Karlsen Rock**

Rocas Kartsen *see* **Karlsen Rock**

Kartsen Rock *see* **Karlsen Rock**

Kasabova Glacier. 63°56' S, 59°54' W. A glacier, 6 km long and 3.5 km wide, it flows northwestward, and then turns S of Chanute Peak to flow westward into Orléans Strait, at the head of Lanchester Bay, on the Davis Coast, on the W coast of Graham Land. Named by the Bulgarians on Nov. 23, 2009, for Rayna Vasileva Kasabova (1897-1969). At 15 she was working in the First Field Mobile Hospital, during the First Balkan War, and, on Oct. 30, 1912, as a lark more than anything, pilot Stefan Kalinov ("the Black Prince") asked her if she wanted to be his propaganda leaflet dropper while he flew over the Turkish city of Adrianople in his plane, the *Voazen*. She jumped gaily in, the plane was riddled with Turkish bullets along the way, but she did the job.

Mount Kaschak. 84°02' S, 56°40' W. Rising to 1580 m, 6 km W of Gambacorta Peak, in the S part of the Neptune Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped from these efforts by USGS. Named by US-ACAN in 1968, for John P. Kaschak, USN, who wintered-over as aviation machinist at Ellsworth Station in 1958. UK-APC

accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Kasco Glacier *see* **Waverly Glacier**

Ostrov Kashalot *see* **Fuller Island**

Kaspichan Point. 62°31' S, 59°52' W. A point, its shape enhanced by recent glacier retreat N of the point, next W of Hebrizelm Hill, 1.3 km WNW of Triangle Point, 2 km SSW of Tile Ridge, and 2 km SE of Yovkov Point, on the SW coast of Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their 2004-05 Tangra survey, and named by them on Dec. 15, 2006, for the town of Kaspichan, in northeastern Bulgaria.

Kasprowy Hill. 62°10' S, 58°30' W. Rising to 270 m above sea level, N of Italia Valley, above Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for a popular skiing mountain in the Tatra Mountains of Poland.

Gora Kastanaeva. 76°01' S, 140°40' W. Named by the Russians. This is all the SCAR gazetteer says of this feature. However, it lies in almost exactly the same coordinates as Milan Rock, along the E margin of Land Glacier, 2 km SE of Mount Hartkopf, in Marie Byrd Land. The name "gora" in Russian can mean hill or mountain, but, in Antarctica it is used mainly to signify a nunatak (the Russians also use the word "nunatak" to signify a nunatak). A rock, in Russian, is generally known as "skala," which leads one to consider the possibility that Gora Kastanaeva is the Russian name for Mount Hartkopf.

Kastor Nunatak *see* **Castor Nunatak**

Kasumi Glacier. 68°20' S, 42°21' E. A wide glacier flowing to the sea just E of Kasumi Rock, and about 78 km E of Carstensfjella, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by the Japanese as Kasumi-hyoga (i.e., "the haze glacier). US-ACAN accepted the translated name Kasumi Glacier. The Norwegians call it Disbreen (which means the same thing).

Kasumi-hyoga *see* **Kasumi Glacier**

Kasumi-iwa *see* **Kasumi Rock**

Kasumi Rock. 68°22' S, 42°14' E. Also called Mondai Rock. A flat and low (less than 50 m above sea level), but substantial (1.7 sq km in area) rock exposure, on the Prince Olav Coast of Queen Maud Land, between Ichime Glacier and Kasumi Glacier, 90 km W of Carstensfjella. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by the Japanese on Oct. 1, 1962, as Kasumi-iwa (i.e., "hazy rock"). US-ACAN accepted the name Kasumi Rock in 1964. The Norwegians call it Disheia (which means the same thing).

Kasuri-iwa. 71°21' S, 35°33' E. A small rock exposure, just N of Mount Fukushima, in the N part of the Queen Fabiola Mountains. Surveyed by JARE in 1970, and named by the Japanese ("splashed-pattern rock").

Isla Kat *see* **Cat Island**

Katabatic winds *see* **Winds**

Katabotnen *see* **Kata-no-kubo**

Sedlovina Katalunska *see* **Catalunyan Saddle**

Kata-no-kubo. 72°03' S, 27°40' E. A semicircular depression in the N part of Berrheia. Mapped by Japanese cartographers from JARE air photos taken in 1981-82 and 1987, and named by them on Oct. 23, 1989 (name means "shoulder depression"). The Norwegians call it Katabotnen.

Katedralen *see* **Katedralen Canyon**

Katedralen Canyon. 71°52' S, 6°33' E. An ice-filled canyon with steep rock cliffs, it is an indentation in the NW side of Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Katedralen (i.e., "the cathedral"). US-ACAN accepted the name Katedralen Canyon.

Cabo Kater *see* **Cape Kater**

Cap Kater *see* **Cape Kater**

Cape Kater. 63°46' S, 59°54' W. A cape, fringed by rocks, it forms the NW point of Whittle Peninsula, and marks the W side of the entrance to Charcot Bay, on the Davis Coast, on the W coast of Graham Land. Discovered by Foster during the *Chanticleer* Expedition of 1828-31, and (it was almost certainly this cape that was) named by him, for Capt. Henry Kater (1877-1935), British mathematician and physicist, who made important experiments with pendulums and telescopes, and who was a planner of Foster's *Chanticleer* expedition. Foster roughly sketched this area in Jan. 1829. This cape was definitely marked as Cape Kater on a 1901 British chart, which supports the probability of the correctness of Foster's naming. In Dec. 1902, SwedAE 1901-04 mapped the area in much greater detail, and Nordenskjöld re-named this cape as Kap Gunnar, or Kap Gunnar Andersson, after Gunnar Andersson. FrAE 1908-10 refers to it as both Cap Gunnar and Cap Kater. On Capt. Johannessen's whaling chart of 1919-20, it appears as Gvas Point, for the whale catcher *Gvas* (*see* **Gvas Bay**). However, it appears as Cape Kater on a 1938 British map, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine map of 1946, as Cabo Kater, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazettter. The feature was further surveyed from a distance by Fids from Base D, in Nov. 1948; it was photographed aerially by FIDASE in 1956-57; and again surveyed from the ground by Fids from Base D, in 1959-60.

Rocas Kater *see* **Kater Rocks**

Kater Felsen *see* **Kater Rocks**

Kater Rocks. 63°46' S, 59°53' W. A small cluster of rocks, rising to about 22 m above sea level, 1.5 km NW of Cape Kater, on the Davis Coast, on the W coast of Graham Land. Roughly charted in Dec. 1902, by SwedAE 1901-04, and named by Nordenskjöld as Kater Felsen, in association with the cape. UK-APC accepted the name Kater Rocks on Sept. 23, 1960, and US-ACAN followed suit that year. The feature appears on a British chart of 1962. The Argentines call it Rocas Kater.

Mount Katherine Paine *see* **Mount Paine**

Mount Kathleen. 83°46' S, 172°48' E. Also seen (erroneously) as Mount Catherine. Rising to about 900 m, NE of Mount Robert Scott, it is the central and highest summit on Ebony Ridge, and the northernmost of the mountains in the Commonwealth Range, overlooking the E side of the Beardmore Glacier at that glacier's junction with the Ross Ice Shelf. Shackleton discovered it in 1908 and named it for his sister, Kathleen Shackleton (1884-1961). US-ACAN accepted the name in 1951, and NZ-APC followed suit.

Katie Automatic Weather Station. 77°42' S, 167°42' E. An American AWS at Windless Bight, at an elevation of 39 m. It was installed on Feb. 9, 1983, ceased operating on Jan. 5, 1986, and was removed. *See also* **Windless Bight Automatic Weather Station**.

Kats Pillar *see* **Petes Pillar**

Mount Katsufrakis. 82°58' S, 161°38' E. A projecting-type mountain on the E side of the Markham Plateau, in the Queen Eizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966 for John Katsufrakis.

Katsufrakis, John Peter. b. Sept. 2, 1925, Dawson, New Mexico (after World War II, Dawson became a ghost town). Greek-American radio scientist, one of Antarctica's most seasoned veterans. At the time that he won the National Science Foundation's Distinguished Public Service Award in 1981, he had spent 17 summers in Antarctica, and altogether made a total of 22 trips to the continent. He was a USARP radio scientist at McMurdo in 1963-64, and at Byrd Station 1964-65 and 1965-66. He helped put Siple Station together in the early 1970s. From the late 1950s until he retired in the 1980s he was associated with Stanford University, either as a student, research engineer, or professor, and he died of cancer on Nov. 27, 1994, in Los Gatos, Calif. A cat who wintered-over at McMurdo in 1971 (brought down to the ice by Harold MacPherson) was named Katsufrakis, after John. That season she got out into the antenna fields, and almost froze to death. One of her ears, and part of her tail had to be amputated.

Katsui Strait. 62°06' S, 57°57' W. A narrow boat passage from King George Bay to Sherratt Bay, between Penguin Island and King George Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for vulcanologist Dr. Yoshio Katsui (b. 1926), of the department of geology and mineralogy at the University of Hokkaido, co-author (with Óscar González-Ferrán —*see* **Mount González**) of the first (1970) geological map of the Penguin Island volcano.

Kattaugo *see* **Kattaugo Rocks**

Kattaugo Rocks. 69°46' S, 37°31' E. Two small and exposed rocks (or nunataks) in the icefall the Norwegians call Nesbrekka, 8 km E of Såta Nunatak, and E of Fletta Bay, at the base of Botnneset Peninsula, on the S side of Lützow-Holm Bay, on the Prince Harald Coast. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Kattaugo (i.e., "the cat's eyes"). US-ACAN accepted the name Kattaugo Rocks in 1968.

Mount Kauffman. 75°37' S, 132°25' W. A prominent volcanic mountain rising to 2365 m, and which surmounts the NW end of the Ames Range, in Marie Byrd Land. Algae and lichens are to be found here. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN for Cdr. Steven King Kauffman (b. April 26, 1926, Los Angeles), USN, of the Civil Engineers Corps, assistant chief of staff for civil engineering, in Antarctica 1964-65 and 1965-66, to oversee all aspects of civil engineering for the USA on the continent, visiting all the stations several times (including Vostok), and who led the building at Plateau Station in 1965-66.

Kauffman Glacier. 71°15' S, 61°18' W. A broad, smooth glacier, 11 km long, flowing eastward into the head of Palmer Inlet, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS in 1974, from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Thomas A. Kauffman, USARP biologist and scientific leader at Palmer Station in 1973. UK-APC accepted the name on July 21, 1976.

Kaunen *see* **Tankobu Peak**

Kavanagh, William "Ginger." b. 1884, Australia (his gravestone and NZEF record both say he was born in Australia; the book *Polar Castaways* says he was 30 when taken on in 1915, and that he was from Windsor, England. One cannot find a William Kavanagh in the British records that fits this description, so it may have been Windsor, NSW. Even that looks wrong, as one cannot find a William Kavanagh in Windsor, NSW). He was in Sydney, working as a casual laborer on the *Aurora* during that vessel's refit, when he was taken on as able seaman (at £6 a month) on the *Aurora*, 1914-16. He was described as a "good-natured able seaman, with scores of impossible yarns." He then served the rest of World War I as a private in the Canterbury Regiment, of the NZ Expeditionary Force, was seriously wounded on the Western Front. He died on Nov. 29, 1918, and is buried in Anderson's Bay Cemetery, in Dunedin.

Kavarna Cove. 62°41' S, 60°50' W. A cove, 3 km wide, indenting the S coast of Livingston Island for 1.2 km between Elephant Point and Bond Point, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the town of Kavarna, in the NE part of Bulgaria.

Gory Kavrajskogo *see* **Kavrayskiy Hills**

Kavrayskiy Hills. 70°27' S, 161°05' E. A line of mostly ice-covered coastal hills SW of Rennick Bay, and along the W side of the lower end of Rennick Glacier. The Serrat Glacier runs through these hills. Charted by SovAE 1958, and named by them as Gory Kavrajskogo, for Vasiliy V. Kavrayskiy (1884-1954), geodesist and cartographer. US-ACAN accepted the translated name Kavrayskiy Hills in 1975, and NZ-APC followed suit. The individually named hills include (working from N to S): Blohmhügel, Pazifikblick, White-Landspitze, Takamurawand, Sternhügel, McGovarin-Hügel, Ulitzka-Landspitze, and Schuberthügel.

Kawanori-dai. 69°01' S, 39°26' E. A small terrace on Ongulkalven Island, 1.5 km W of Ongul Island, in the Flatvaer Islands, off the Prince Olav Coast. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on March 22, 1994. The word "dai" signfies "hill," and "kawanori " is the Japanese name for a species of green algae named Prasiola.

Cerro Kaweshkar. 62°28' S, 60°47' W. A hill N of the marine passage the Chileans call Paso Estrecho, and near the W coast of Cape Shirreff, on Livingston Island, in the South Shetlands. Named by scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, for the Kaweshkar, or Alacalufes, seafaring nomads in the extreme S part of Chile, who, until the 20th century, inhabited the islands between the Gulf of Penas and the Magellan Strait. In 1881, eleven Kaweshkar were taken to Paris and exhibited in the zoo there. Today, only 15 full-bloods remain.

Islote Kay *see* **Islote Silva**

Kay Island. 74°04' S, 165°19' E. A small island, 3 km E of Cape Johnson, in the N part of Wood Bay, Victoria Land. Discovered in 1841 by RossAE 1839-43, charted by them as a group of 3 islands in 74°00' S, 169°40' E, and named by Ross as the Kay Islets (name also seen later — and erroneously — as the Kay Islands), for Lt. Joseph Henry Kay (b. 1815, London. d. July 17, 1875, South Yarra, Vic.), geophysicist who set sail as 3rd lieutenant on the *Terror* during RossAE 1839-43, but remained in Hobart to man the magnetic observatory there before the expedition went to Antarctica. Only two of the islands were seen in 1924, and by the 1960s, apparently only one remained, Kay Island. US-ACAN accepted the name Kay Island in 1966. However, NZ-APC accepted the name Kay Islets for the two island seen in 1924, they plot them in 74°00' S, 167°45' E, and describe them as about 29 km off Cape Sibbald. They say the E islet is very steep, and the W one is low and very small.

Kay Islands *see* **Kay Island**

Kay Islets *see* **Kay Island**

Kay Nunatak. 68°41' S, 64°40' W. A dark, rocky nunatak, rising to about 500 m, at the S side of Mobiloil Inlet, it forms the northernmost outlier of Hitchcock Heights, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Wilkins photographed it aerially on Dec. 20, 1928, and Ellsworth did the same on Nov. 23, 1935. It appears on the 1937 map made by American cartographer W.L.G. Joerg working from photos taken during those 2 flights. It was named Punta Patricio Lynch, by ChilAE 1946-47, for Patricio Lynch (1824-1886), Chilean naval officer and patriot, and it appears as such on their 1947 chart. On Dec. 22, 1947, it was re-photographed aerially by RARE 1947-48. In 1953, US-ACAN re-defined it, and named it Kay Nunatak, for John D. Kay of the American Geographical Society, who was one of the first to make a map of this area (*see* **Briesemeister Peak**, for more details). It appears as such on a 1955 U.S. Hydrographic Office chart. It was surveyed from the ground by Fids from Base E in Nov. 1958. UK-APC accepted the name Kay Nunatak on Aug. 31, 1962.

Kay Peak. 75°14' S, 110°57' W. A pyramidal peak rising to 760 m, near the end of the large spur descending NW from the Mount Murphy massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Lt. Cdr. William "Bill" Kay, USN, leader of the Seabee construction unit at Pole Station in 1971 and 1973.

Kaya-hyoga. 69°50' S, 37°11' E. Two ice streams joined N of Innhovde Point to form a glacier, which then flows N into Fletta Bay, on the SW side of Lützow-Holm Bay. Roughly mapped (but not named) by Norwegian cartographers in 1946 from air photos taken during LCE 1936-37. Re-surveyed by JARE between 1957 and 1984, and named by the Japanese on April 24, 1989 (name means "Kaya glacier"), for Seiji Kaya (1898-1988), president of the Science Council of Japan, and a great promoter of JARE during the 1950s. The Norwegians translated the name as Kayabreen (which means the same thing).

Kayabreen *see* **Kaya-hyoga**

Kayak Bay. 64°18' S, 62°13' W. A bay, 1.5 km wide, on the inner (west) side of Pampa Passage, indenting the E coast of Brabant Island, in the Palmer Archipelago. Malpighi Glacier and Mackenzie Glacier flow into this bay. Roughly charted in Feb. 1898, by BelgAE 1897-99, but not named at that time. Mapped on a continuing basis by Argentine Antarctic expeditions from 1947-48 onwards, and included in what the Argentines call Bahía Pampa (i.e., Pampa Passage, or what the British call Freud Passage). Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Nov. 13, 1985, as Kayak Bay, for the sea canoes used by the British Joint Services Expedition, as they passed through the bay on the first ever circumnavigation of Brabant Island in Feb. 1985. US-ACAN accepted the name. It appears on a British chart of 1988.

Kaye Crest. 72°06' S, 4°24' E. A ridge between the Preuschoff Range and the Gablenz Range, in the Mühlig-Hofmann Mountains of Queen Maud Land. This may be what Ritscher called Kaye-Kamm (i.e., "Kaye crest") during GermAE 1938-39. That feature was in this area somewhere, but the Germans' mapping was not accurate, so modern geographers have allocated this feature to bear the name. US-ACAN ac-

cepted this situation in 1970. The SCAR gazetteer has Kayekamm being the same as Langfloget Cliff, and gives its coordinates as 72°06' S, 4°22' E. However, it also lists, as a separate entity, Kaye Crest, with the coordinates 72°06' S, 4°24' E. Despite the proximity of the features, they are not one and the same.

Kayekamm *see* **Kaye Crest**

Ostrov Kazak *see* **Kazak Island**

Kazak Island. 68°40' S, 77°50' E. About 1 km S of Mule Island, off the S part of the Vestfold Hills. Mapped (but, apparently, not named) by Norwegian cartographers in 1946, from air photos taken during LCE 1936-37. Re-photographed aerially during OpHJ 1946-47, and again by SovAE 1956, and by ANARE in 1957 and 1958. Named by the Russians as Ostrov Kazak, for Kazakhstan. ANCA translated the name.

Kazanlak Peak. 62°38' S, 59°57' W. A rocky peak rising to 430 m in Delchev Ridge, on the side ridge descending from Delchev Peak toward Rila Point, 750 m NW of Peter Peak, and 700 m SE of Ghiaurov Peak, in the Tangra Mountains, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for Kazanlak, the town in central Bulgaria.

Kazanowska, Maria. Commander, USN. She was on the Antarctic Treaty inspection team aboard the *Polar Star* in 1982-83. She was the first woman at a Japanese station, when the team landed to inspect Showa Station in Feb. 1983. She retired as a captain.

Gora Kazanskaja *see* **Kazanskaya Mountain**

Kazanskajatoppen *see* **Kazanskaya Mountain**

Kazanskaya Mountain. 71°58' S, 13°15' E. Rising to 2690 m, it forms the N end of Snøskalegga Ridge, in the Weyprecht Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Mapped (but apparently not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Remapped by SovAE 1960-61, and named by the USSR in 1966, as Gora Kazanskaja, for either Our Lady of Kazan (i.e., the Russians' Virgin Mary), the patron saint of the city of Kazan, or (more likely) one of the several Russian scientists with the name Kazanskaya. US-ACAN accepted the name Kazanskaya Mountain, in 1970. The Norwegians call it Kazanskajatoppen.

Nunataki Kazarina. 83°09' S, 50°37' W. A group of nunataks SW of Henderson Bluff, in the Forrestal Range, in the Pensacola Mountains. Named by the Russians.

Kaze-sima. 69°12' S, 39°22' E. Two low and small islands in a group, 10 km W of the N part of the Langhovde Hills. Discovered and photographed aerially (in color) by JARE in 1991, and named by the Japanese (name means "wind island") on Jan. 29, 1996.

Kazichene Cove. 63°15' S, 62°14' W. A cove, 2.2 km wide, indenting the NW coast of Low Island for 2 km between Punta Fernández and Solnik Point, in the South Shetlands. Named by the Bulgarians on Nov. 23, 2009, for Kazichene, a settlement in the W part of Bulgaria.

Mount Kazukaitis. 72°02' S, 100°55' W. In the Walker Mountains, at the base of Hughes Peninsula, in the W part of Thurston Island. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47, and plotted in 72°01' S, 101°09' W. Named by US-ACAN in 1961, for chief photographer's mate Frank Kazukaitis (b. May 29, 1927, St. Louis), who joined the U.S. Navy in March 1945, was in Korea in 1951, and in Antarctica in 1960 and for several years thereafter. He recorded features of the Walgreen Coast and the Eights Coast, during the USN Bellingshausen Sea Expedition of Feb. 1960. He retired from the Navy in July 1968. The feature has since been replotted.

Kea Nunataks. 77°17' S, 166°51' E. A line of several nunataks, trending NW-SE for 2.5 km, almost 2 km SE of the summit of Mount Bird, on Ross Island. Named by NZ-APC on June 19, 2000, for the native mountain bird of New Zealand. US-ACAN accepted the name later in 2000.

Kealey Ice Rise. 77°15' S, 83°00' W. About 60 km long and 24 km wide, it forms a W lobe of the larger Fowler Ice Rise, just N of the junction of Talutis Inlet and Carlson Inlet, at the SW side of the Ronne Ice Shelf. Mapped by USGS from imagery provided by NASA's Earth Resources Technology Satellite (ERTS-1), 1973-74. Named by US-ACAN in 2004, for Lt. Gerald P. Kealey, USN, medical officer at Pole Station in 1971. UK-APC accepted the name on July 13, 2004.

Kean, Jackey. Oiler and fireman on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Kearns, William Henry "Bill," Jr. b. 1924, Massachusetts, son of marine engineer William Henry Kearns, Sr, and his wife Lillian Rose. His mother died when he was 12. He attended Amherst and Georgetown School of Foreign Service, and in the summer of 1946 took part in Operation Nanook, in the Arctic. As a Lt. (jg), USN, he was co-pilot and navigator of the Martin Mariner (*George I*) which crashed on Dec. 30, 1946, on Thurston Island, during OpHJ 1946-47. He was actually piloting the plane at the time of the crash, and broke his arm. On June 4, 1949, at Arlington, Va., he married Mary Louise Gallen, and later lived in Florida. His son David wrote the book, *Where Hell Freezes Over*.

Kearns Peninsula. 72°03' S, 99°13' W. A broad, ice-covered peninsula between Potaka Inlet and Peake Inlet, on the N side of Thurston Island. Named by US-ACAN in 2003, for Bill Kearns.

Keates, Edwin. Name also seen spelled as Keats. Of Bideford, Devon. In 1843 he married Susan Gibbs, in Bideford, and they had quite a large family there. He was captain of the Bristol barque *Louise*, in Antarctic waters in 1859. In 1862 he took command of a brand new Bristol clipper, the *Bristolian*, bound for Melbourne, and in 1863 bought the *Native Pearl*, taking her down several seasons to Heard Island and the Prince Edward Islands. He died at sea on Nov. 20, 1867, and his ship was sold in 1868, to Ford & Co., out of Swansea. Susan raised the children in Bideford, did a little needle work, dressmaking, but she was all right financially. She went to live in Kingsbridge, and died there in 1905.

Keating Massif. 81°00' S, 156°34' E. A rugged, mainly ice-covered massif, including Mount Fries, it is 20 km long in a NW direction, rises to about 2370 m, at the S edge of the head of Byrd Glacier, and forms the SW boundary of Zeller Glacier, in the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Colin Keating, secretary for justice in NZ, 1997-2000. He had had much to do with NZ's involvement in Antarctica while working for the Ministry of Foreign Affairs and Trade. US-ACAN accepted the name later in 2003.

Kebbell, William Rhodes Clarke. b. Jan. 13, 1896, Plaistow, Essex, son of boot store manager James Kebbell and his (perhaps not actual) wife Sarah. He joined the Royal Navy as a cook, and on Oct. 29, 1922, he arrived in London from Cape Town, on the *Gascon*, and the following year married Violet Emma Maskey at Plaistow, which is where they lived. He was cook on the *Discovery II*, 1929-31, and chief cook on the *William Scoresby*, 1931-32. He died in Elstree, Herts, in 1967.

Keble Hills. 78°00' S, 164°10' E. An imposing line of granite hills running W-E, N of Garwood Valley, on the coast of southern Victoria Land. Named by NZ-APC on Feb. 1, 1994. The SCAR gazetteer says that it was named after "Keble (1877-1969), a New Zealand botanist, taught by Hooker Jun, who surveyed plants of NZ and the sub-Antarctic." That is a rather cryptic descriptor. There was a botanist, a grand old man named Rev. William Keble Martin, whose dates match those of this mysterious Keble, but he was British. However, he was known as Keble, rather than, say, Bill. He may have studied under Joseph Dalton Hooker (who was, in a sense, a "junior," his father also being a famous botanist). When he was 87 his best-seller *Concise British Flora in Colour* was published. US-ACAN accepted this rather odd name in 1994.

Keble Valley. 77°13' S, 166°27' E. A valley, running to the SE, inland of the NZ hut at Cape Bird, Ross Island. Predominantly ice-free, it comprises glacial moraine of basalt and scoria, and contains streams flowing toward the shore, as well as associated mosses and algal growth. Named by NZ-APC on Sept. 14, 2001, for Keble College, Oxford.

Keck, Ancell Christopher. Known as "Boggie," and as a child as "Spark Plug," he later went by the name Christopher, but, as an adult, was always known as Jack or "Red." b. Oct. 1, 1914, Rogers, Ark., son of farmer George Washington Russell Keck and his wife Martha Ann "Mattie" Robinson. A star basketball and football player at Rogers High School, he joined the U.S. Navy,

and was selected to represent the San Diego Naval Station, as a leading seaman on the *Bear* during both halves of USAS 1939-41. During the second half of the expedition, he became a baker 2nd class. He served in the Army during World War II, then returned to Rogers, and ran a grocery store, also becoming sexton of the cemetery there. He died in Benton, Ark., on June 4, 1983.

Kedd, John *see* **USEE 1838-42**

Keddie, Henry "Harry." b. Oct. 14, 1863, Dundee, son of John Keddie and his wife Isabella Hutcheson. His mother married again, to musician and sail maker Lewis F. Miller. Harry also married an Isabella, a sack machinist. He was an able seaman, a harpooner on the *Balaena* during DWE 1892-93, and also served on the expedition as doctor and barber's assistant. "A jolly, chubby little man," said Burn Murdoch, who, in his reminiscences (*see* the Bibliography) spelled his name Kiddy (due to the Dundee accent).

Keel Hill. 85°06' S, 174°13' W. A small, ice-free hill, on the N side of McGregor Glacier, about 2.5 km E of Crilly Hill, in the Queen Maud Mountains. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65, for Specialist 5th Class Elbert E. Keel, a member of the supporting U.S. Army Aviation Detachment which supported the expedition. US-ACAN accepted the name in 1966.

Keel Island. 67°21' S, 59°20' E. A small island, about 3 km long and 1.5 km wide, about 1.8 km S of Fold Island, on the E side of Stefansson Bay, off the coast of Enderby Land. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kjølen (i.e., "the keel"). Visited by an ANARE party led by Peter Crohn in 1956. ANCA translated the name as Keel Island, on Feb. 18, 1958, and US-ACAN accepted that name in 1965.

Cabo Keeler *see* **Cape Keeler**

Cape Keeler. 68°51' S, 63°13' W. An ice-covered cape, rising gently northwestward to 518 m above sea level, it forms the SW entrance point of Revelle Inlet, on the Wilkins Coast, on the E coast of Palmer Land, projecting into the Larsen Ice Shelf, just N of Hearst Island. Discovered on Dec. 20, 1928 by Wilkins as he flew over. Or rather, it is probably that feature seen by him, plotted by him in 69°35' S, 64°55' W, and described by him as marking the S tip of Graham Land and the NE entrance point of what he called Casey Channel. It was named by him for Fred E. Keeler of the Lockheed Aircraft Company (Wilkins used a Lockheed Vega monoplane). Wilkins' description appears on a British chart of 1933. American cartographer W.L.G. Joerg and his team, working from Wilkins' maps, tentatively placed the cape to the NNW of Cape Mayo. On a 1939 U.S. Hydrographic Office chart, the cape is plotted in 69°38' S, 62°42' W, which presumably reflects Joerg's plotting. It was surveyed from the ground in Dec. 1940, by USAS 1939-41. It appears on a 1942 USHO chart, plotted in 68°55' S, 63°13' W (which, presumably, reflects the USAS plotting), and on a similar 1943 chart, in 68°55' S, 63°30' W. On another USHO chart, of 1946, it appears in 68°48' S, 63°10' W, and US-ACAN, in 1947, accepted the name, and the coordinates of 68°47' S, 63°15' W. It appears as Cabo Keeler on a 1946 Argentine chart, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The cape was re-surveyed in 1947-48 by a joint RARE/FIDS team, and the RARE's Cape Keeler Advance base was here (*see* **Ronne Antarctic Research Expedition**). It first appears with the modern-day coordinates on Finn Ronne's 1949 map of that expedition, and those were the coordinates accepted by UK-APC on Jan. 28, 1953, and which appear in the 1955 British gazetteer. US-ACAN also accepted those new coordinates.

Keenan, Samuel *see* **USEE 1838-42**

Keene, George Swain. b. May 4, 1798, Nantucket, Mass., son of Moses Keene and his wife Anna Swain. Captain of the Stonington sealer *Sarah E. Spear*, in the South Shetlands, 1851-52 and 1853-54. Then he took command of the *Tekoa*, and was in and out of the South Shetlands over the period 1854-56. He married Fanny, and they lived in Stonington. In the 1870s, after his wife died, he moved out to Napa, Calif., quite well-off, and was still alive in 1881.

The Keep *see* **Keep Rock**

Keep Rock. 62°48' S, 61°37' W. A small rock in water, 1.3 km WSW of Castle Rock, off the W side of Snow Island, in the South Shetlands. Following a 1951-52 RN Hydrographic Survey led by Lt. Cdr. Frank Hunt, RN, it was named by him as The Keep, in association with Castle Rock, and appears as such on his 1952 chart. UK-APC re-named it Keep Rock, on Sept. 22, 1954, and it appears as such in the 1955 British gazetteer. US-ACAN accepted the newer name in 1956.

Kehle Glacier. 78°56' S, 160°18' E. Flows SW from the W slopes of the Worcester Range in the vicinity of Mount Seyer and Mount Dawson-Lambton, into Mulock Glacier. Named by US-ACAN in 1965, for Ralph Kehle, glaciologist at Little America, 1959-60. NZ-APC accepted the name.

Keim Peak. 70°44' S, 159°52' E. A noteworthy pointed ice-free rock peak, rising to 2045 m, on the S spur of the Pomerantz Tableland, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Mike B. Keim, USN, VX-6 aerial photographer in Antarctica in 1962-63 and 1963-64. ANCA accepted the name on June 9, 1964.

Mount Keinath. 74°32' S, 163°57' E. Rising to 1090 m, on the E side of the terminus of Boomerang Glacier, in the Deep Freeze Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Gerald E. Keinath, biolab administrator at McMurdo in 1965-66.

Keipen. 72°19' S, 25°48' E. A mountain, W of the upper part of Mjell Glacier, in the SE part of the Sør Rondane Mountains. Named descriptively by the Norwegians ("the oar-lock").

Mount Keith. 70°54' S, 163°19' E. Rising to 1530 m, and surmounting the E end of the ridge between Rastorguev Glacier and Crawford Glacier, in the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for John D. Keith, USN, builder at Pole Station in 1965.

Keith Island *see* **Half Moon Island**

The *Kekilistrion*. French yacht, skippered by Olivier Pauffin de Saint-Morel, which visited the Antarctic Peninsula in 1990-91, and the South Shetlands and the Antarctic Peninsula in 1992-93, 1993-94, 1996-97, and 1997-98.

Kelczewski, Anthony Walter "Tony." b. June 12, 1915, Schenectady, but raised part of the time in the nearby village of Niskayuna, NY, son of Polish immigrant laborer Franciszek "Frank" Kelczewski (he had once been a Polish cavalry officer) and his wife Ida Zarzycki, both from Warsaw. Tony quit school after the 7th grade, and joined the New York State National Guard. On Nov. 15, 1933, he enlisted in the U.S. Navy, his first ship being the *Salt Lake City*, which he was on for over three years. He was persuaded by a lieutenant to change his name to Anthony Walter Wayne (after John Wayne, who had, of course, also changed his name), and became the light heavyweight wrestling champion of the Atlantic Fleet. After helping deliver three destroyers to the Arctic for the British, he was handpicked by Byrd to go to Antarctica as a seaman 1st class on the *Bear*, for USAS 1939-41. He married Agnes Carol Pusz in Boston, then immediately boarded the *Bear* for colder climes, while his new wife went to stay with her parents in Passaic, NJ. After the expedition (he quit after the first half of the expedition; too cold), he served in both the Atlantic and the Pacific, being highly decorated (he was in the North Atlantic on the *Texas* during the time the *Bismarck* was a predator in those waters). He was chief master at arms on the *Franklin*, and served on that ship with his younger brother Walter, until the edict came down from the top that brothers couldn't serve on the same ship (the five Sullivan brothers had recently all perished on one ship). He became chief petty officer on the *San Diego*, for a year and a half, and was then transferred to Pensacola, where he became chief warrant officer. After the war he became a deep sea diver in the Navy, and retired on Aug. 31, 1958. He and Agnes left their home in NJ, and moved to San Diego, then on to Fontana, Calif., where they lived for 40 years, with Tony working as the head usher for St. Joseph's Church. They finally moved back to Schenectady. Agnes died on March 17, 2005. Tony, at 95, is one of the last survivors and one of the only only persons alive today who was in Antarctica before World War II. Wayne Head was named for him in 2011.

Kell, David. bapt. Nov. 7, 1779, Tynemouth, Northumberland, son of George Kell and his wife Ann Dixon. He went to sea, rising through the mate ranks, and on July 16, 1797, in St

Botolph Aldgate, he married Ann Golding, and they remained in that London parish for some years before moving to Chapman Street, St George in the East, raising a family as they went. He was skipper of the London sealer *Nereiad*, in South Shetlands waters in 1822–23. The family moved to Deptford, Kent, where Ann died. Capt. Kell continued to live with his daughter Elizabeth, until he died in early 1847, in Greenwich.

Kellas Islands. 67°33' S, 62°46' E. Two small islands, 0.8 km S of the Parallactic Islands, in Holme Bay, Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1958 and 1959. Named by ANCA for William R.A. "Bill" Kellas, weather observer at Mawson Station in 1960. He had also wintered-over at Macquarie Island in 1957. US-ACAN accepted the name in 1965.

Cordillera Keller *see* **Keller Peninsula**
Cordón Keller *see* **Keller Peninsula**
Ensenada Keller *see* **Keller Inlet**
Macizo Keller *see* **Keller Peninsula**
Massif Keller *see* **Keller Peninsula**
Península Keller *see* **Keller Peninsula**
Seno Keller *see* **Keller Inlet**

Keller Inlet. 74°16' S, 61°10' W. An ice-filled bay, about 10 km wide, and indenting the Lassiter Coast for about 16 km in a NE-SW direction, between (on the one hand) Cape Little and (on the other) Cape Fiske and Cape Light, on the E coast of Palmer Land. Photographed aerially in Dec. 1940 by USAS 1939–41, and again on Nov. 21, 1947, by RARE 1947–48. In Dec. 1947 it was surveyed from the ground by a joint team of RARE personnel and Fids from Base E. Named by Finn Ronnie for Louis Keller, of Beaumont, Tex., who contributed supplies to RARE. It appears on a 1948 American Geographic Society map, and was the name accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer. It appears on a 1952 Argentine chart as Seno Keller, but on a 1957 Argentine chart as Ensenada Keller, which was the name accepted by both the Argentines and the Chileans. It was photographed aerially by USN between 1965 and 1967, and appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. There is an ice tongue in the inlet, and the Argentines call it Glaciar Las Heras (q.v.).

Keller Massif *see* **Keller Peninsula**

Keller Peninsula. 62°04' S, 58°24' W. A high perninsula, rising to a height of 265 m above sea level (the Chileans say 1900 feet), it separates Mackellar Inlet from Martel Inlet, at Admiralty Bay, on the S central side of King George Island, in the South Shetlands. Charted in Dec. 1909, by FrAE 1908–10, and named by Charcot as Massif Keller. It was appearing in English as Keller Massif by 1921. It was re-charted by the Discovery Investigations in 1927, and appears on their 1929 chart as the Keller Range, a name that also appears on their charts resulting from their further surveys of 1935 and 1937. That was the name accepted by UK-APC on Sept. 20, 1955, and also by US-ACAN. It appears translated as Cordillera Keller on a Chilean chart of 1947, and that was the name accepted by the Chilean gazetteer of 1974. In a couple of 1955 references it was also seen variously as Cordón Keller and Macizo Keller, meaning, respectively, Keller Range and Keller Massif. On Sept. 23, 1960, UK-APC accepted the new definition Keller Peninsula, and US-ACAN followed suit that year. It appears as such on a 1961 chart, and on a 1962 British chart. The FIDS Base G was here, as was (is) the Brazilian scientific station of Comandante Ferraz. It appears on a 1970 Argentine map as Península Keller, and that is what the Argentines call it today. Last plotted by the UK, in late 2008.

Keller Range *see* **Keller Peninsula**

Kelley, William Howard. b. 1907, Wadestown, NZ. In Dunedin on Dec. 9, 1929 he signed on as a coal passer on the *City of New York* during ByrdAE 1928–30. He was with the ship as she arrived back at NYC in 1930 at the end of the expedition.

Kelley, William Thomas "Bill." Bill Kelley is a mystery. What we know for sure is his name, and that he joined FIDS in 1951, as a radio operator, and wintered-over at Base F in 1952 and 1953. Other Fids put his birth year as about 1923, and say he was born in Bradford. They say he was a little guy, about 5 foot 4, and that he was married, unusual for a Fid. They also say he was not in good health, even then. This should make it relatively easy to find him, but nothing computes, given that information. There is no William T. Kelley born in Yorkshire, marrying in Yorkshire, or dying in Yorkshire, who would fit the bill. All the four possible William T. Kelleys are southerners. However, the old Yorkshire phone books are, or may be, more revealing. A certain W.T. Kelley appears at 4 Thomas Place, Shipley, in 1957, and is there again in 1958. From 1959 through 1966 he is at 16 Springfield Grove, Bingley, and then, in 1968 (and only for that year) back in Shipley, at 9 Glenair Drive. He does not appear anywhere after that.

Kelley Massif. 70°39' S, 63°35' W. A rugged mountain massif, 16 km long, and rising to about 1700 m, immediately W of the Eland Mountains, and along the S side of Clifford Glacier, in the north-central part of Palmer Land. Photographed aerially by USN between 1966 and 1969, and mapped by USGS in 1974, from those photos. Named by US-ACAN in 1976, for Capt. Hugh A. Kelley, USN, commander of Antarctic Support Activities during OpDF 68 (i.e., 1967–68) and OpDF 69 (i.e., 1968–69). UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Kelley Nunatak. 85°39' S, 146°44' W. On the N side of Leverett Glacier, 19 km NE of Mount Gould. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Herbert O. Kelley, radioman who wintered-over at Byrd Station in 1958.

Kelley Peak. 80°10' S, 82°50' W. Rising to 1710 m, it forms the S end of the Liberty Hills, in the Heritage Range. Named by US-ACAN in 1967, for air crewman Charles C. Kelley, USN (*see* **Deaths**, 1966).

Kelley Spur. 82°37' S, 52°08' W. A rock spur, rising to about 1500 m on the S side of the Dufek Massif, about 3 km E of Spear Spur, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965–66, during their Pensacola Mountains Project, and mapped by them from these efforts. Named by US-ACAN in 1968, for Samuel Kelley, VX-6 photographer in Antarctica many times between 1964 and 1970. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Kellick, Captain *see* **Kellock, Adam**

Kellick Island. 61°55' S, 58°24' W. An island, 0.8 km long, 1.5 km NE of Round Point, off the N coast of King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS between 1957 and 1959. It appears erroneously as Isla Dentada on a 1957 Argentine chart (Isla Dentada being the Argentine name for Jagged Island, which lies immediately to the N). Named by UK-APC on Sept. 23, 1960, as Kellick Island, for Captain Adam Kellock (sic). US-ACAN accepted the name later in 1960. It appears on a 1963 U.S. Hydrographic Office chart. Last plotted by the UK, in late 2008.

Gora Kellja. 71°58' S, 14°38' E. A nunatak just N of Ormehausen Peak, at the N end of the Linnormen Hills, in the Payer Mountains of Queen Maud Land. Named by the Russians.

Kellock, Adam Dickenson. b. Aug. 22, 1798, Torpoint, Cornwall, son of James Kellock and Elizabeth Wilson. He was baptized in the local parish church of Antony, on Aug. 6, 1799. This is almost certainly the Capt. Kellick, skipper of the Plymouth sealer *Henry*, in at the South Shetlands for the 1821–22 season. This would make him a very young captain (23 years old), but this really poses no problem, as George Powell, for example, was about the same age, in the same period. The captain of the *Henry* is seen in Lloyd's Shipping Register as Killick. Regardless, he reported about 20 U.S. vessels in South Shetlands waters that season. Adam Kellock was definitely skipper of the *Exquisite*, in the South Shetlands for the 1831–32 sealing season. While there, he met up with John Biscoe's expedition. Adam Kellock was skipper of the East Indiaman *Dryade* in 1828. In the 1830s a Capt. Kellock (almost certainly Adam Kellock) commanded the East Indiaman *Cestrian*, and in 1836 purchased a tiger at auction, which he presented to Liverpool Zoo. In the 1830s he went into business in Liverpool with his brother Henry Gray Kellock (d. 1858), as Lloyd's brokers and provision merchants, but in 1842 they went bankrupt, and Adam became skipper of the P & O steamer *Bentinck*. On Dec. 4, 1847, in Calcutta, while still on the *Bentinck* (he would be skipper until the 1850s) Adam Dickenson Kellock, master mariner, married Georgiana Howard Wilkinson, a girl born in Bombay, and 27 years his junior. Their first two daughters, Jessie Miller Kellock

and Fanny Kellock, were born in Calcutta in 1848 and 1850 respectively, and then the family returned to England, setting up house first in Lewisham, just outside London, and then on the Millbrook Road, in Southampton, where Jessie died on Feb. 24, 1856, and their last two children were born, Adam Cardigan Kellock (in 1855; named for Lord Cardigan, of the Crimean War) and Minnie Gordon Kellock (in 1857). From 1854, during the Crimean War, Capt. Kellock was in command of the new troop steamer *Himalaya*, which, unfortunately, ran aground. He then moved over to the *Euxine*, and on Feb. 24, 1856, two of his daughters, Jessie and Edith, died young. In 1857, in Glasgow, he supervised the construction of P& O's new ship the *Nemesis*, and fulfilled a similar function the next year with the *Benares* and the *Salsette*. He died in Freemantle, Millbrook, Southampton on Jan. 3, 1862. He was described as a "nice, gentlemanly man," and was very tall. His widow married again, on Sept. 10, 1863, at St. Mary's, Brompton, in Kensington, to John Henry Dundas, Irish Army surgeon with the 89th, who took her back to India, and by whom she had a daughter, Kathleen. Young Adam went to work as a clerk for P & O.

Kellogg Glacier. 71°51' S, 62°41' W. About 14 km long, at the base of Condor Peninsula, it flows SE along the N side of Boyer Spur and merges with the N side of Gruening Glacier just inland from the NW head of Hilton Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Karl S. Kellogg, geologist with the USGS Lassiter Coast party of 1972-73. UK-APC accepted the name on July 21, 1976. It appears in the 1977 British gazetteer.

Kellogg Valley. 77°29' S, 161°11' E. A high hanging valley rising to about 1400 m, for the most part free of ice, between Mount Boreas and Mount Aeolus, it opens N to McKelvey Valley, 500 m below, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 1997, for husband and wife glacial geologists Thomas B. Kellogg and Davida E. Kellogg, of the department of geological sciences and the Institute of Quaternary Studies, at the University of Maine, who, in several seasons between 1976 and 1990, collaborated in a study of the glacial history of the McMurdo Sound area, including field work on the McMurdo Ice Shelf, the Ross Ice Shelf proper, in the Ross Sea, and in the McMurdo Dry Valleys. NZ-APC accepted the name.

Kellum, John *see* **USEE 1838-42**

Mount Kelly. 70°47' S, 164°19' E. A prominent peak, rising to 1110 m, 5 km NW of Mount Burch, and about 17.5 km SE of Platypus Ridge, in the W part of the Anare Mountains. Named by ANCA for 2nd Lt. Ronald M. "Ron" Kelly, officer-in-charge of the Army amphibious motor vehicle detachment here in 1962 with the ANARE party led by Phil Law. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Kelly, Guy L. b. Aug. 25, 1912, Lynn, Mass., son of Irish furniture man John E. Kelly and his wife Cora B. Bernard. The name is variously seen as Kelley, but his father is definitely Kelly on his 1910 marriage certificate. Guy was raised at his Bernard grandparents' home in Lynn. After a stint as a milkman, he joined the merchant marine as an oiler, and as such was on the *Jacob Ruppert* during ByrdAE 1933-35. He died in Jan. 1969, in Nahant, Mass.

Kelly, Ruth. b. Holyoke, Colo., daughter of Holyoke Market butcher Lee W. Kelly and his wife Gladys. A schoolteacher, she became an airline stewardess, and, as such, with Pat Hepinstall, was one of the first two women ever to visit an American Antarctic station (she was the blonde one), when the first ever commercial flight to Antarctica, a double-decker Pan-Am stratocruiser, carrying 37 Seabees, landed in 15 below at McMurdo from Christchurch in bright daylight at 8.14 P.M., on Oct. 15, 1957, after a 9 hour 50 minute flight. Capt. Ralph Walter Savory (b. Oct. 14, 1909. d. Jan. 18, 2010, aged 100), Pan-Am chief pilot, Northern Division, was the pilot. This was 500 miles closer to the South Pole than any women had ever been before. The girls didn't stay long, 3½ hours, but enough to take part in a dog-sledging race between the Americans and the New Zealanders. John Yeckley drove the American sledge team, and Neil Sandford drove the NZ one — Ruth was with the Americans and Pat was with the NZ team. The timekeeper's watch froze, and the race was declared a draw. They also went to tea with the lads, and judged a beard contest (Capt. Dickey won). They took off back for NZ at precisely midnight. Both stewardesses were headed for London, where, after a short stay, they joined the London to San Francisco flight.

Kelly, Thomas. Seaman and deckhand on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Kelly Automatic Weather Station. 89°00' S, 179°36' W. An American AWS, installed on the Polar Plateau, at an elevation of 2950 m, on Jan. 27, 1993, and named for a son of Mike Savage, former AWS researcher. It was removed on Jan. 22, 1994.

Kelly Glacier. 72°19' S, 168°55' E. A steep tributary glacier flowing SW from Mount Peacock in the Admiralty Mountains, to enter Tucker Glacier close S of Mount Titus. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. Anthony J. Kelly, USN, who wintered-over as medical officer at Hallett Station in 1961. NZ-APC accepted the name.

Kelly Nunataks. 77°17' S, 141°44' W. A group of nunataks marking the E extremity of the Clark Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for John David Kelly, USARP ionosphere physicist at Byrd Station in 1958.

Kelly Plateau. 81°24' S, 159°30' E. An ice-covered plateau, about 24 km long, and between 3.2 and 6.4 km wide, on the E side of the Churchill Mountains, between the lower parts of Jorda Glacier and Flynn Glacier. Its bluff-like E side is bounded by Starshot Glacier. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Cdr. George R. Kelly (b. Oct. 20, 1923, El Dorado, Ill.), who joined the U.S. Navy in July 1942, and who was commander of VX-6 in 1964 (during his stint as CO, they nicknamed VX-6 "Kelly's Awful Airline"). He is famous for flying the lead Herc from Cape Town to McMurdo on Oct. 2, 1963, the historic flight that opened a new passageway to the Antarctic continent. He retired from the Navy in July 1975. ANCA accepted the name.

Kelmelis Hills. 77°59' S, 163°36' E. A group of hills rising to 1070 m, between Brodie Ponds and Joyce Glacier, midway up Blue Glacier on its E margin, in Victoria Land. Named by US-ACAN in 1992, for John A. Kelmelis, USGS cartographer, manager of polar programs, with the USGS's Office of International Activities, 1984-87.

Kelp gull *see* **Gulls**

Glaciar Kelsey *see* **Kelsey Glacier**

Mount Kelsey. 80°27' S, 22°19' W. Rising to about 1370 m, between M'Clintock Bastion and Blanchard Hill, in the Pioneers Escarpment, in the E part of the Shackleton Range. Named by UK-APC on Jan. 5, 1972, for Henry Kelsey (1667-1724), known as "the Boy Kelsey," English fur trader and sailor, employee of the Hudson's Bay Company, the first European to have seen what are now Alberta and Saskatchewan, and the first white man known to have adopted North American Indian methods of life and travel (including the use of pemmican as food), in 1691. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Kelsey, Lawrence Dewolf, Jr. b. July 9, 1926, Berkeley, Calif., son of Lawrence Dewolf Kelsey, a civil engineer with the railroad, and his wife Ethel M. Easson. In 1943, during World War II, he joined the merchant marine, and on Oct. 19, 1943, at Los Angeles, he shipped out on his first ship, the *Hugh McCulloch*, as a 17-year-old radio operator, going to Algiers. A year later he transferred to the *City of Virginia Victory*, and, after working in Afghanistan, was studying radio engineering in Washington when he heard that Finn Ronne was putting together an Antarctic expedition. So, he went south as radio operator on RARE 1947-48. He later lived in Baltimore.

Kelsey Cliff. 74°30' S, 62°18' W. A prominent cliff, running in a NW-SE direction and at an elevation of about 300 m above sea level, close SE of Mount Owen, at the head of Nantucket Inlet, and on the SW side of Johnston Glacier, at the E end of the Guettard Range, on the Lassiter Coast, on the E coast of Palmer Land. First seen from the air on Nov. 21, 1947, by RARE 1947-48, and surveyed (in part) in Dec. 1947, by a joint FIDS/RARE sledging party. Named by US-ACAN in 1968, and UK-APC followed suit on Dec. 20, 1974. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer

Land. *See* **Kelsey Glacier** for a history of the naming.

Kelsey Glacier. 74°25' S, 62°35' W. A minor tributary of Johnston Glacier, on that glacier's SW side, on the Lassiter Coast, on the E coast of Palmer Land. Named by Finn Ronne during RARE 1947-48, as D.M. Little Glacier, for Delbert Little (*see* **Cape Little**), and it appears as such on a 1948 American Geographic Society map. That year, Ronne changed the name to Kelsey Glacier, after the Kelsey family of Sacramento (*see* **Kelsey, Lawrence**). In 1949, US-ACAN, after rejecting the names Delbert Little Glacier and Little Glacier, accepted Kelsey Glacier, and UK-APC followed suit. It appears in the 1955 British gazetteer, and also on a U.S. Hydrographic Office chart of that year. It appears on a Chilean map of 1966, as Glaciar Kelsey. However, USN air photography of 1965-67 showed no significant tributary glacier on the SW side of Johnston Glacier, and so Kelsey Glacier was done away with in 1968, and the name Kelsey re-applied to Kelsey Cliff.

Cape Keltie. 66°03' S, 133°26' E. An ice-covered cape, it is the terminus of a stubby peninsula 17.5 km W of Cape Cesney, on the Wilkes Coast. Discovered from the *Aurora* during AAE 1911-14, and roughly charted from a distance of about 16 km, in 66°05' S, 133°E. Mawson described it as the most northerly part of the Wilkes Coast. It is the most northerly part W of Davis Bay, but aerial photos taken by OpHJ 1946-47, and by ANARE, show that the coast E of the Dibble Iceberg Tongue extends farther north. Named by Mawson for Sir John Scott Keltie (1840-1927), Scottish geographer; librarian of the Royal Geographical Society, 1885-92; and secretary of the same august institution, 1892-1915. US-ACAN accepted the name in 1947, and ANCA followed suit. Positively identified and re-plotted in 1955, by U.S. cartographer Gard Blodgett, working from the OpHJ photos.

Mount Keltie. 79°15' S, 159°29' E. Rising to 2640 m, midway between Mount Kosco and Mount Chalmers, in the Conway Range, on the W side of the Ross Ice Shelf. Discovered during BNAE 1901-04, and named for Sir John Scott Keltie (*see* **Cape Keltie**). US-ACAN and ANCA both accepted the name.

Keltie Glacier. 84°53' S, 170°20' E. A large tributary glacier, 50 km long, it flows from Pain Névé, SW around the S extremity of the Commonwealth Range, to the S of the Hughes Range, and then NW to enter the E side of the Beardmore Glacier at Ranfurly Point, in the Queen Maud Mountains. Shackleton discovered it in 1908, while on his way to the Pole during BAE 1907-09, and named it for Sir John Scott Keltie (*see* **Cape Keltie**). US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Keltie Head. 63°48' S, 57°40' W. A rounded headland with vertical cliffs which rise to a small ice dome 395 m high (the British say 190 m and the Chileans say 430 m), it forms the extreme NW point of Vega Island, and the E entrance point of the N end of Herbert Sound, S of Trinity Peninsula. Discovered and mapped in Oct. 1903, by SwedAE 1901-04, and named by Nordenskjöld as Kap Scott Keltie, for Sir John Scott Keltie (*see* **Cape Keltie**). It appears as Cape Scott Keltie on Nordenskjöld's English-language maps of the expedition, and as such it appears on a 1921 British chart. It shows up on Charcot's 1912 map of FrAE 1908-10, as Cap Scott Keltie. The Argentines were calling it Cabo Scott Keltie as early as 1908, and that name was the one accepted (with or without a hyphen between the names Scott and Keltie) by the Chilean (sic) gazetteer of 1974. It was further surveyed by Fids from Base D in Dec. 1945. It was named Cabo Lynch by ArgAE 1952-53, for Col. Francisco Lynch (b. 1795. Assassinated in 1840), a patriot who took part in the Argentine war of independence, and it appears as such on their 1953 chart. Cape Scott Keltie was the name accepted by US-ACAN and UK-APC, and it appears as such in the 1955 British gazetteer. On Sept. 23, 1960, UK-APC redefined it as Keltie Head, and it appears as such on a 1962 British chart. US-ACAN followed the British lead in 1964.

Kelvin Crests. 69°10' S, 66°34' W. A line of steep-sided elevations with ice-covered cliffs, rising to about 1150 m, and running for 8 km in a NE-SW direction, on the N side of Airy Glacier, near that glacier's junction with the Forster Ice Piedmont (at the NE end of that ice piedmont), on the Fallières Coast, on the W side of the Antarctic Peninsula. Roughly surveyed by BGLE 1934-37, and photographed aerially by RARE 1947-48. In Dec. 1958, Fids from Base E surveyed it from the ground, but from the SE only (so says the British gazetteer; the American one says from the SW; the British are probably the ones to be trusted here). Named by UK-APC on Aug. 31, 1962, for Belfast-born physicist William Thomson, 1st Baron Kelvin (known as Lord Kelvin) (1824-1907), the first British scientist to be elevated to the peerage. US-ACAN accepted the name later in 1962. The feature was completely mapped by USGS in 1974.

Cabo Kemp *see* **Cape Kemp**

Cap Kemp *see* **Cape Kemp**

Cape Kemp. 64°52' S, 63°39' W. A cape forming the SW tip of Doumer Island, and the E entrance point of the S end of the Neumayer Channel, in the Palmer Archipelago. Upon the cape rises a mountain 400 m high. First roughly charted (but not named) by FrAE 1903-05. Surveyed more accurately in 1927 by the personnel on the *Discovery*, and named by them for Dr. Stanley Kemp. It appears as such on their 1929 chart. It appears on a 1937 French chart as Cap Kemp, and on a 1943 U.S. Hydrographic Office chart as Camp Kemp (sic). It was surveyed again by personnel from Port Lockroy in 1944, during Operation Tabarin. It appears on a 1949 Argentine chart as Cabo Kemp, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Cape Kemp was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer, and on a British chart of 1958. It was re-charted by an RN Hydrographic Survey unit in 1956-58.

Mount Kemp *see* **Mount Kempe**

Península Kemp *see* **Kemp Peninsula**

Kemp, Brian. b. Nov. 6, 1930, Southwark, son of Frederick Kemp and his wife Lilian May Knowler. RAF met man who joined FIDS in 1951, as a meteorologist, and wintered-over at Base D in 1952 and 1953, and at Base Y in 1955. He retired from the RAF in Dec. 1984, at St. Mawgam, Cornwall, moved to Lincolnshire, and died in Peterborough, in Nov. 1985, of cancer, the first of the 1955 Horseshoe Island group to die.

Kemp, Frederick William. Perhaps from Hull. Name also seen as Kempe. Fireman on the *Morning* during the 1902-03 relief of BNAE 1901-04.

Kemp, George Richard. b. 1862, Flamborough, near Bridlington, Yorks, son of Norfolk parents, fisherman Richard Kemp and his wife Maria King. At 14, he became a fisherman, like his father, but then went to sea as a Merchant Navy able seaman. He married Elizabeth (well, he didn't really marry her, as such), and moved to Hull, where he had several children. He was on various ships, including the *Nimrod*, during the first half of BAE 1907-09. He signed on to that ship in Poplar (in London) on July 26, 1907, and was discharged in Lyttelton on Dec. 19, 1907, therefore did not go to Antarctica. He was still sailing in 1914. Elizabeth died in Hull in 1932, but what became of George is unknown.

Kemp, Peter. British sealing captain, working for Daniel Bennett of Rotherhithe. In 1813, he was appointed skipper of the *Recovery*, but did not sail on her. But he did skipper the *Diane* in 1814 and again in 1815-16, both times going to the South Seas. From 1816 to 1818 he was master of the *Indispensable*, and then, in 1818-19 skipper of the *King George*, at South Georgia. He was appointed skipper of the *Ann* in late 1819, and in early 1820 left England, bound ultimately for the South Shetlands and the 1820-21 sealing season. The *Ann* foundered on Dec. 30, 1820. Still working for Bennett (*see also* **Powell, George**), he joined the *Magnet* as skipper on July 12, 1833, his orders being to go into Antarctic waters to find new sealing grounds. On July 14, 1833 the ship left London, with 19 men aboard, sailing to the Kerguélen Islands, leaving there on Nov. 26, 1833 for the ice. The following day they sighted and charted an island thought to be Heard Island (53°S), and in early December they reached the pack-ice. On Dec. 26, 1833 they discovered Kemp Land (otherwise known as the Kemp Coast). They found no new sealing grounds, and headed north back to the Kerguélens. Sailing toward South Africa, Kemp fell overboard on April 21, 1834, and was drowned. David Rankin, the mate, took the ship home (or, at least, to South Africa).

Kemp, Stanley Wells. British marine biologist, zoologist, and oceanographer. b. June 14, 1882, Kensington, London, son of piano teacher Stephen Benjamin Kemp and his wife Clara Wells Beasley. From 1903 to 1909 he was assistant naturalist in the Fisheries branch of the Department of Agriculture for Ireland, and in 1910 was

appointed superintendent of the zoological section of the Indian Museum, in Calcutta. He married Agnes Green in 1913. After many years in India, he became director of research with the Discovery Committee, 1924-36, and led the first *Discovery* cruise, of 1925-26, the 1926-27 cruise of the *Discovery* and the *William Scoresby*, and the first cruise of *Discovery II*, in 1929-31. In 1936 he became director of the Plymouth Laboratory, and died on May 16, 1945, at Plymouth.

Kemp Coast *see* **Kemp Land**

Kemp Lake. 67°25' S, 59°23' E. A rectangular lake, about 0.5 km by 0.3 km in area, flanked on the W by the ice of Dovers Glacier, and about 0.3 km W of (and at the base of) Kemp Peak, flowing from the NW corner of that peak via a short stream to tidal water. Named by ANCA on March 12, 1992, in association with the peak.

Kemp Land. 67°30' S, 57°30' E. Also called Kemp Coast. Between the head of Edward VIII Bay (in 56°25' E) and William Scoresby Bay (in 59°34' E), in eastern Enderby Land, or, as Mawson himself defined it in 1930 (during BANZARE 1929-31), that stretch of the East Antarctica coastline that lies between Enderby Land and Mac. Robertson Land. Discovered by Peter Kemp on Dec. 26, 1833, and named by him, for himself. In 1936 the coast was re-charted by personnel on the *William Scoresby*.

Kemp Peak. 67°26' S, 59°24' E. A prominent peak, rising to 340 m, close SE of Stefansson Bay, in the Stillwell Hills. Discovered on Jan. 30, 1930, by BANZARE, and named by Mawson as Stanley Kemp Peak, for Dr. Stanley Kemp. Mapped by Norwegian cartographers in 1946, from air photos taken by LCE 1936-37, and named by them as Hornet (i.e., "the horn"). It looks as if the Norwegians were unaware that this was Mawson's Kemp Peak. For some time this peak was known in English-language circles as Horn Peak, but, in the 1950, ANARE explorers found it to be Stanley Kemp Peak, and the (shortened) name Kemp Peak was accepted by ANCA. US-ACAN followed the Australian lead in 1962.

Kemp Peninsula. 73°08' S, 60°15' W. An irregular, ice-covered peninsula, rising to 305 m above sea level, it is 42 km long in a N-S direction, between 8 and 20 km wide, and projects to the E between Mason Inlet and Mossman Inlet, at the N end of the Lassiter Coast, on the E coast of Palmer Land. Cape Mackintosh forms its N point, and Jeffries Bluff its S point. Discovered and photographed aerially (with the exception of its N part) in Dec. 1940, by personnel from East Base, during USAS 1939-41. Re-photographed aerially by RARE 1947-48, and in Nov. 1947 it was surveyed from the ground by a combined sledging team of RARE personnel and Fids from Base E. Named by FIDS for Dr. Stanley Kemp. UK-APC accepted the name on Jan. 20, 1953, and US-ACAN followed suit that year. It appears on a 1954 British chart, and also in the 1955 British gazetteer. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and also on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1957 Argentine chart as Península Kemp, and that is what the Argentines call it today. The 1974 Chilean gazetteer also accepted that name.

Kemp Rock. 71°58' S, 171°06' E. A large insular rock between Foyn Island and Bull Island, in the Possession Islands. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1969, for William R. Kemp, USN, VX-6 photographer who was on the flight of Jan. 15, 1958, which photographed the Possession Islands.

Nunatak Kempbell *see* **Campbell Nunatak**

Mount Kempe. 78°19' S, 162°43' E. Rising to 3005 m (the New Zealanders say about 2987 m), SE of Mount Huggins, between that mountain and Mount Dromedary, in the Royal Society Range of Victoria Land, on the W side of the Ross Sea. Discovered by BNAE 1901-04, and named by them for mathematician and mountain climber Alfred Bray Kempe (1849-1922; knighted in 1912), treasurer of the Royal Society. US-ACAN and NZ-APC both accepted the name.

Kempe, Arthur. b. 1743, Veryan, Cornwall. 2nd lieutenant on the *Adventure* during Cook's second voyage, 1772-75. In fact, he was related to Tobias Furneaux, commander of the *Adventure*. On the way out, at Cape Town, he was promoted to 1st Lt. He married Sally Coryton. He later commanded the *Wolf*, retired as a full admiral, and died in 1823, in Budock, Cornwall.

Kempe, Frederick William *see* **Kemp**

Kempe Glacier. 78°18' S, 162°54' E. A short alpine glacier, bounded on the N by Dismal Ridge, and on the S by the ridge connecting Mount Kempe and Mount Dromedary, it is fed chiefly from névé fields on the N slopes of Mount Kempe, and flows NE toward Roaring Valley from the area of Mount Kempe. Named by VUWAE 1960-61, in association with the mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1974.

Kendal Islands *see* **Kendall Rocks**

Rocas Kendall *see* **Kendall Rocks**

Kendall, Edward Nicolas. b. 1799, son of Captain Kendall, RN, and grandson of Admiral Kendall, RN. After studying at the Royal Naval College, at Portsmouth, he entered the Navy in 1814, as a midshipman. Specializing in surveying, he had Arctic experience when he went as a lieutenant on the *Chanticleer* Expedition of 1828-31. He made the first survey of Deception Island in Jan.-March 1829. He died of kidney trouble in Southampton, on Feb. 12, 1845, while serving as marine superintendent of the P & O Line.

Kendall, John Arthur. Some called him "Ken." Born in Sept. (we know that from a Fid's diary; no birth year), probably in the early 1920s (that is an estimate from Fids who served with him). FIDS radio operator at Signy Island Station in 1949, and again in 1950, at Base G (Admiralty Bay), where he was also base leader.

Kendall Basin. 80°15' S, 25°39' W. An ice-free cirque in the N part of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Percy Fry Kendall (1856-1936), British glacial geologist, sometime professor of geology at Leeds. It appears in the British gazetteer of 1974. US-ACAN accepted the name.

Kendall Crater. 62°58' S, 60°35' W. An old explosion crater, immediately W of Ronald Hill, on the E coast of Port Foster, Deception Island, in the South Shetlands. Mapped by Don Hawkes in 1961. Named by the Poles on Sept. 1, 1999.

Kendall Group *see* **Kendall Rocks**

Kendall Point. 62°55' S, 60°44' W. The westernmost point of Kendall Terrace, Deception Island, in the South Shetlands. Mapped by Don Hawkes in 1961. Named by the Poles on Sept. 1, 1999.

Kendall Rocks. 63°30' S, 59°49' W. A group of off-shore rocks, some of them in the shape of a pillar, 5 km N of Tower Island, in the Palmer Archipelago, to the W of the Antarctic Peninsula. First mapped by Bransfield in 1820-21, but not named by him. The *Chanticler* Expedition of 1828-31 was in this area in 1829, saw the islands, and charted them together with what later became known as the Dumoulin Rocks. Foster called this combined feature the Kendall Group, or Kendall's Group, after Lt. Edward N. Kendall, of that expedition. However, charting the rocks from one position only, as they did, and from a distance at that, they made a mistake, and plotted them some way to the NW. On an 1838 British map the rocks appear as the Kendal Islands (sic), and on an 1839 British chart as Kendall Rocks. When Dumont d'Urville's FrAE 1837-40 came here on March 4-5, 1838, they found no such islands in Foster's position. However, they did find the rocks themselves, to the SE, and charted them correctly at 5 km off Tower Island, naming them Îles Dumoulin, or Îlots Dumoulin, after C-A. Vincendon-Dumoulin, of that expedition. Up to the time of World War I, some charts from various countries were still showing these rocks in Foster's misposition, but, more and more, it was becoming apparent that there was no group in Foster's position. The Catodon Rocks (q.v.) appear erroneously as Kendall Rocks on Capt. Johannessen's 1919-20 whaling chart. In 1917, on a British chart, the term Kendall Rocks was used to describe what would later become the Kendall Rocks and the Dumoulin Rocks, grouped together, and that situation was repeated on a 1938 British chart, and (as Rocas Kendall), on a Chilean chart of 1947. It was also the situation accepted by US-ACAN in 1952 and by UK-APC on Sept. 8, 1953, appearing that way in the British gazetteer of 1955. However, following FIDASE aerial photography in 1956, on Sept. 23, 1960 UK-APC restricted the use of the name Kendall Rocks to that group in the SW, while the group in the NW was given the name Dumoulin Rocks. They appear that way on a 1962 British chart, and US-ACAN accepted that situation. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer have accepted that

situation too, as Rocas Kendall and Rocas Dumoulin.

Kendall Terrace. 62°54' S, 60°41' W. An ice-free, volcanic ash terrace extending along the NW side of Deception Island, between Stonethrow Ridge and Bynon Hill, in the South Shetlands. Surveyed by Fids from Base B in Jan. 1954. Named by UK-APC on Sept. 4, 1957, for Lt. Edward N. Kendall. US-ACAN accepted the name in 1963. Last plotted by the UK, in late 2008.

Mount Kendrick. 86°22' S, 156°40' W. A massive, ice-covered mountain, rising to 3610 m, surmounting the E side of the Nilsen Plateau, at the head of Bartlett Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Capt. Harold E. Kendrick (b. April 24, 1921, McMinnville, Oreg.), who joined the U.S. Navy in March 1942, and who was AAT chief of staff, operations and plans, on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 67 (i.e., 1966-67). He retired from the Navy in June 1974.

Kenfield Nunatak. 73°46' S, 99°03' W. An isolated nunatak, about 13 km SE of the head of the Cosgrove Ice Shelf, and about 28 km ENE of Pryor Cliff, at the extreme N end of the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Richard E. Kenfield, topographer at Byrd Station, 1963-64.

Kennar, Thomas. b. Oct. 11, 1876, Brixham, Devon, son of Thomas Kennar, a mate on the fishing boat *Expert*, out of Gulval, Cornwall, and his wife Susan Gravells. At the age of 11 he joined his father in the fishing fleet, and in 1891 entered the Royal Navy, working his way up to petty officer 2nd class in 1901. He had been on the *Magnificent*, when he joined BNAE 1901-04. A ballooning course at Aldershot was followed by his trip to Antarctica. On April 2, 1904, after the expedition, he was specially promoted to petty officer 1st class, and in Nov. 1909 to acting chief petty officer. He served on the cruiser *Duke of Edinburgh*, from April 1915 to Aug. 1918, including taking part in the Battle of Jutland, during World War I, and in 1919 left the Royal Navy. In 1922 he went to work for the Union Castle Line, as an able seaman, and was with them, in that capacity, for the Russian run during World War II, on the *Llanstephan Castle*. On April 23, 1944, he joined the *Ninella*, and died on board, off Karachi, on Aug. 3, 1945, of heat and exhaustion.

Kennar Valley. 77°46' S, 160°25' E. A small valley, ice-free except for a lobe of ice marginal to Taylor Glacier at the mouth, to the immediate W of Turnabout Valley, and W of Finger Mountain, in the Quartermain Mountains of southern Victoria Land. It seems that the name first appears on a 1961 NZ Lands and Survey department map compiled from NZ ground surveys conducted between 1957 and 1960, and also from USN air photos taken during that period. It was plotted in 77°46' S, 160°20' NZ-APC accepted the name, presumably given for Thomas Kennar. US-ACAN accepted the name in 1992. It has since been replotted.

Cape Kennedy. 66°30' S, 98°32' E. On the E side of Melba Peninsula, 6 km SW of David Island, in Queen Mary Land. Discovered by the Western Base Party during AAE 1911-14, and named by Mawson for A.L. Kennedy. US-ACAN accepted the name in 1948, and ANCA followed suit.

[1]**Mount Kennedy** *see* **Kennedy Peak**

[2]**Mount Kennedy**. 67°52' S, 66°13' E. A small, bare peak, just under 2 km S of Mount Rivett, in the Gustav Bull Mountains of Mac. Robertson Land. It was seen on airplane flights off the *Discovery*, during BANZARE 1929-31, on Dec. 31, 1929, and Jan. 5, 1930. BANZARE made a landing near here, at Scullin Monolith, on Feb. 13, 1931, and Mawson mamed it for A.L. Kennedy. Well, sort of. Mawson found 3 peaks in this general area, and named them Hinks, Rivett, and Marsden (see those features for more details). Rivett and Hinks did not wish their names to appear on maps, and so Mawson deleted their names. Air photos from OpHJ revealed, in fact, 4 peaks, and US-ACAN and ANCA both named all 4 after the 4 men, regardless of whether they wanted a name or not.

Kennedy, Alexander Lorimer. b. April 23, 1889, Woodside, South Australia. An engineering graduate of Adelaide University, he was cartographer, magnetician, and 2nd surveyor with the Western Base Party during AAE 1911-14. He did a remarkable job, and, on his return was appointed magnetic observer for South Australia, for the Carnegie Institution, in Washington. He served in World War I with the Australian Tunnelling Corps, and from 1921 to 1925 was chief assistant of Adelaide Observatory, and at Mount Stromlo Observatory from 1925 to 1927. In 1928 he went to Western Australia, as a mining engineer. He was back with Mawson for the 2nd half of BANZARE 1930-31, this time as replacement physicist for Morton Moyes. He was at the Australian Motor Vehicle Technical Training Centre during World War II. He died in Perth, in 1972.

Kennedy, Duncan. b. Jan. 28, 1888, Greenock, Scotland. He was ditched by his parents as an infant, and grew up with his grandmother, Elizabeth Kennedy, in a slum tenement in Milton, Glasgow, which was an even worse fate, especially given his grandmother's mental instability. His childhood is obscure, but when he was 12 he was convicted of a crime, and sent to do his two-year punishment aboard the *Empress*, an industrial school ship stationed in the Gareloch, on the Clyde. During World War I he served in the Pilotage Service, and after the war was a fisherman. He was a netman on the *Discovery II*, 1929-34. There is a rumor that he served in the Royal Navy, possibly as a petty officer, but Navy records seem to disprove this. Alfred Saunders, the photographer on the Discovery Investigations, said of Kennedy, "He had a persistent but unwitting habit of mispronouncing names. One of his jobs was to look after chemical and other scientific stores in the hold. To him, sulphuric acid became 'sulfricated acid,' hydrochloric acid became 'hydraulic acid,' and formalin became 'formamint.'" He once thought a sailor might have "discolated" his leg. During World War II he served as bosun on the *Alice*. He died in Torbay, Devon, in 1974.

Kennedy, Lawrence Henry "Sails." b. Oct. 26, 1894, Lynn, Mass., son of machinist John Henry Kennedy and his first wife Cynthia A. Babcock (a Canadian). After his mother died in 1902, John H. married again, and took the family to Northbridge, Mass., but eventually they returned to East Lynn. Sails left school at 14, became a machinist like his father, but joined the U.S. Navy in 1912, as a seaman. By 1920 he was serving on the USS *Montana*, at Bremerton Navy Yard, in Washington state. He was sail maker on the *Bear of Oakland*, during ByrdAE 1933-35, going back to the USA halfway during the expedition, and then returning for the 2nd half, this time on the *Jacob Ruppert*. He became a bosun's mate 1st class, and served on the *Edouard Jeramec*, as storekeeper, during World War II. He died on July 10, 1962, and is buried in Arlington National Cemetery.

Kennedy Cove. 64°45' S, 64°05' W. In Wylie Bay, N of Loudwater Cove, on Anvers Island, in the Palmer Archipelago. Named by US-ACAN in 1998, for Henry Kennedy, deputy director of the Antarctic Peninsula System, for ITT Antarctic Services, 1985-90. He managed the conversion of the *Polar Duke* from an oil industry supply vessel into a polar research ship; managed the construction of that vessel's replacement, the *Laurence M. Gould;* and was responsible for the procurement of the *Nathaniel B. Palmer*. He also worked on specialized technical projects with Antarctic Support Associates from 1990 onwards. UK-APC accepted the name on April 23, 1998.

Kennedy Glacier. 77°39' S, 162°12' E. A steep glacier. 1.3 km long, flowing E from the Kottmeier Mesa into the upper Matterhorn Glacier, in Victoria Land. Named by US-ACAN in 1997, for Henry Kennedy (*see* **Kennedy Cove**). NZ-APC accepted the name.

Kennedy Peak. 67°13' S, 99°11' E. A small peak protruding above the continental ice to a height of 1162 m above sea level, 3 km (the Australians say 7 km) S of Mount Barr Smith, on the W side of Denman Glacier, in Queen Mary Land. Discovered by the Western Base Party during AAE 1911-14, and named by Mawson as Mount Kennedy, for A.L. Kennedy. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken by OpHJ 1946-47, and comparing these to the AAE charts. US-ACAN accepted the name Kennedy Peak in 1956, and ANCA followed suit.

Kennedy Ridge. 78°24' S, 162°08' E. An ice-covered, notably straight ridge, 7 km long, extending W from Mount Moxley between Potter Glacier and Wirdnam Glacier, in Victoria Land. Named by US-ACAN in 1995, for Nadene Kennedy, polar coordination specialist at the NSF's Office of Polar Programs. She was in Antarctica at least 10 times, working on the tourist program.

Kennel Peak. 75°01' S, 133°44' W. A small,

but notable, rock peak, rising to over 800 m, about 0.8 km N of Rockney Ridge, in the Demas Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1969. Named by US-ACAN in 1974, for A. Alexander Kennel, ionosphere physicist and station scientific leader at Pole Station in 1969.

Kenneth Nunatak *see* **Kenneth Ridge**

Kenneth Ridge. 70°57' S, 71°30' E. The northernmost of 3 rock outcrops in the N part of the Manning Nunataks, the S one being Tester Nunatak and the central one being Mitchell Nunatak. Photographed aerially by OpHJ 1946-47, and again by ANARE in 1957. Visited by SovAE 1965, and by ANARE in 1969. Named by ANCA on May 18, 1971, for Kenneth A. "Ken" Smith, radio officer at Mawson Station in 1969, who surveyed here that year with the ANARE Prince Charles Mountains Survey Party. US-ACAN accepted the name in 1973. The Russians apparently call it Gora Kenneth (i.e., Kenneth Nunatak), which is, perhaps, really a better name.

Monte Kennett *see* **Mount Kennett**

Mount Kennett. 67°03' S, 65°10' W. A distinctive snow and rock mountain, rising to 1360 m, on the N side of Fricker Glacier, between that glacier and Quartermain Glacier, on the Foyn Coast, on the E side of Graham Land. Features on this coast were photographed aerially by USAS 1939-41 and RARE 1947-48, and by USN in 1968. This feature was mapped by FIDS in 1947-48, surveyed by BAS personnel from Base E in 1963-64, and named by UK-APC on Dec. 20, 1974, for Peter Kennett. US-ACAN accepted the name in 1975. It appears in the British gazetteer of 1976. The Argentines call it Monte Kennett.

Kennett, Peter. b. Feb. 12, 1939, Croydon, Surrey, son of Gerald and Alice Kennett. He was recruited by Bill Sloman of the FIDS in 1960, and left England in late Sept. 1960, as a marine geophysicist on the *Shackleton*, working in Antarctic waters until April 1961, between the Antarctic Peninsula and the South Sandwich Islands. He was back in Antarctica for the 1961-62 summer season, again on the *Shackleton*, but this time spent a brief time on the *Protector* as well. He wintered-over as BAS general assistant at Base E in 1963, and was with the BAS Larsen Ice Shelf Party of 1963-64 (*see* **Larsen Ice Shelf Party, 1963-64**). In 1964 he left for Britain on the *John Biscoe*. In Nov. 1964 he was flown to Texas, and from there to Punta Arenas, Chile, taking the *Shackleton* to Antarctic waters, where he performed a function similar to that of his early 1960s expeditions. He left BAS in Aug. 1965, and became a teacher of geology, science, and geography, retiring in 2000 to teach teachers in Sheffield.

Mount Kennett Rawson *see* **Rawson Plateau**

Kennett Ridge. 79°51' S, 156°45' E. A rocky ridge, about 10 km (the Australians say about 13 km) long, it descends eastward from the NE end of the Midnight Plateau, into the Darwin Mountains. Discovered and mapped by VUWAE 1962-63, and named by them for James Peter Kennett (b. Sept. 3, 1940), geologist with the expedition, and a graduate student at VUW. ANCA accepted the name, and US-ACAN followed suit in 1965. Mr. Kennett, a marine geologist, got his PhD at VUW in 1965, moved to the USA in 1966, and got his doctorate from VUW in 1976. He was at the University of Rhode Island, and went from there in 1987, to be professor in geological sciences at the University of California, at Santa Barbara, where, from 1987 to 1997, he was director of the Marine Science Institute.

Kenney, Richard Ralph "Dick." b. Feb. 18, 1929, Wells, Somerset, son of Horatio Charles Kenney and his wife Edith E. Smalley. He was an organist and chorister at Wells Cathedral, then joined FIDS in 1953, as assistant surveyor, and wintered-over at Base D in 1954 and 1955, making a detailed local survey of the area between Hope Bay and Duse Bay, including the Jan. 1956 survey of Kenney Glacier. In 1957, in Wells, he married Irene D. Colenutt. He died of cancer in Dec. 2000, in Taunton.

Mount Kenney. 84°44' S, 175°28' W. A sharp, conspicuous summit in the Cathedral Peaks, 5 km E of Shackleton Glacier, and about 16 km NW of Mount Wade, it rises to 2030 m (the New Zealanders say 2072 m), out of a mass of irregular mountains in the foothills of the Prince Olav Mountains. Discovered and photographed aerially on Feb. 16, 1947, during OpHJ 1946-47. Named by US-ACAN in 1962, for 1st Lt. Leroy S. "Pete" Kenney, USMCR, VX-6 helo pilot who flew reconnaissance on the Byrd Station trail in 1956-57.

Kenney Glacier. 63°25' S, 57°02' W. A glacier, 1.5 km long, flowing NW from between The Pyramid and The Saddlestone, into Depot Glacier, near the head of Hope Bay, on Trinity Peninsula, at the N end of the Antarctic Peninsula. Roughly surveyed by FIDS in Dec. 1945, again in 1948, and more accurately in Jan. 1956, and named by them during that latter survey for Dick Kenney. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963.

Kenney Nunatak. 78°04' S, 161°30' E. A conspicuous nunatak in Waddington Glacier, 2.5 km SSW of Ugolini Peak, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, for Frank J. Kenney, USGS cartographer, a member of the USGS field team for the International GPS campaign at Byrd Station, McMurdo Station, and the Pine Island Bay area, in 1991-92. They established the first continuous-tracking GPS reference station in Antarctica.

Kennicutt Point. 74°30' S, 165°29' E. The S entrance point of Wood Bay, on the Borchgrevink Coast, about 16 km N of Cape Washington, on the Ross Sea coast of northern Victoria Land. Named by US-ACAN in 2005, for Mahlon Kennicutt II, of the geochemical and environmental research group at Texas A & M, a USAP investigator of marine-habitat change in McMurdo Sound and Arthur Harbor, during several seasons between 1990 and 2005. NZ-APC accepted the name on Sept. 12, 2005.

Kent Cooper Glacier *see* **Cooper Glacier**

Kent Gap. 83°17' S, 50°30' W. An ice-filled pass running at an elevation of about 1700 m above sea level, and connecting the heads of May Valley and Chambers Glacier, and marking the divide between the Lexington Table and the Saratoga Table, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their 1965-66 Pensacola Moutnains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Kenneth R. Kent, USN, electronics technician who wintered-over at Ellsworth Station in 1957. Mr. Kent brought to the ice bagpipes, which he played, thus bringing cheer to all around him. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Kent Glacier. 82°50' S, 163°10' E. Flows E from the E side of Markham Plateau, in the Queen Elizabeth Range, for about 24 km (the New Zealanders say about 16 km), then enters Lowery Glacier. Named by the Northern Party of NZGSAE 1960-61, for the English county. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Kent Plateau. 80°44' S, 157°50' E. An ice-covered plateau, about 22 km long and about 7 km wide, rising to over 1800 m above sea level, and extending N from the area between Mount Egerton and Kiwi Pass to that of Mount Hamilton, in the Churchill Mountains. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for Lt. Cdr. Donald F. Kent, USN, chief supply officer to Admiral Dufek, at the beginning of OpDF. ANCA accepted the name on Aug. 27, 1975.

Mount Kenyon. 85°10' S, 174°52' W. A prominent mountain, rising to 2260 m, just to the E of Shackleton Glacier, and at the S side of the MacGregor Glacier, where those two glaciers meet, 1.5 km NW of Shenk Peak, in the N part of the Cumulus Hills. Named by Al Wade (q.v.), leader of the 1962-63 USARP Shackleton Glacier Party, for his alma mater, Kenyon College, Gambier, Ohio. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Península Kenyon *see* **Hollick-Kenyon Peninsula**

Kenyon, Kenneth "Kenny." b. Sept. 22, 1930, in Brentford, Mdsx. An able seaman in the Royal Navy, he was one of the first in at Suez, in 1956, and was shot in the leg on the beach. He was seconded to FIDS in 1957 as a general assistant, and wintered-over at Base J in 1958, and at Signy Island Station in 1959. In the 1957-58 summer season he was part of the RN Hydrographic Survey unit on the *Protector* (as a seaman assistant). He died in Southampton in Dec. 1991.

Kenyon Peaks. 84°33' S, 163°36' E. A small group of basalt peaks, 5 km NW of Storm Peak, in the Marshall Mountains, at the extreme S of the Queen Alexandra Range. Named by the Ohio State University party here in 1966-67, for

D. Kenyon King, field assistant with the party. US-ACAN accepted the name in 1968.

Kenyon Peninsula *see* **Hollick-Kenyon Peninsula**

Mount Keohane. 77°36' S, 162°59' E. Immediately NW of Lake Fryxell, rising to 1250 m between Canada Glacier and Huey Gully, on the N side of Taylor Valley, in Victoria Land. Named by US-ACAN in 1997, for Patsy Keohane. NZ-APC accepted the name.

Keohane, Patrick "Patsy." b. Feb. 12, 1878, Lickowen, co. Cork, but grew up in Courtmacsherry, son of lifeboatman Tim Keohane (who would help rescue survivors from the *Lusitania* in 1915). He joined the RN, and was a petty officer on the *Talbot*, the same ship as Teddy Evans. Later, when he was serving on the *Repulse*, he was selected by Evans to go on BAE 1910-13. He fell into 8 crevasses in 25 minutes, still a record. He was one of the party who found Scott in 1912. He left a diary. He served in World War I, then became Coast Guard district officer for the Isle of Man. He died at his home in Plymouth, on Aug. 30, 1950.

Mount Kerckhove de Denterghem. 72°37' S, 31°08' E. Rising to 2400 m, just N of Mount Collard, in the Belgica Mountains. Discovered by BelgAE 1957-58, and named by Gaston de Gerlache, the leader of the expedition, as Mont De Kerckhove de Denterghem, for Count Charles de Kerckhove de Denterghem, a patron of the expedition that year. The name, when translated into English by US-ACAN in 1966, was slightly abbreviated.

Kerguélen Islands. Not in the Antarctic, but they are a sub-Antarctic group. They form part of Terres Australes et Antarctiques.

Kerguélen Plateau. 60°00' S, 83°00' E. A sub-surface feature beyond Gribb Bank. Named by international agreement.

Kerick Col. 64°05' S, 58°24' W. A col running N-S at an elevation of about 150 m between Gin Cove and Rum Cove on the W side of James Ross Island. Crisscross Crags rise at the E side of this col. Surveyed by Fids from Base D in 1960-61. BAS geological work was done here between 1981 and 1983. In keeping with naming several features in this area after characters in Kipling's *Jungle Book*, this one was named by UK-APC on April 3, 1984, for Kerick Booterim. It appears in the 1986 British gazetteer. US-ACAN accepted the name.

Kerlu Bay *see* **Darbel Bay**

Kermadec, Félix-Casimir-Marie Huon de *see under* **Huon de Kermadec**

Kermen Peninsula. 62°27' S, 59°30' W. A peninsula, 1.5 km long, that forms the S extremity of Robert Island, in the South Shetlands. It is bounded by Micalvi Cove to the NW and Bransfield Strait to the SE, and the SW half is snow-free in summer. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Kermen, the town in southeastern Bulgaria.

Mount Kernot *see* **Øydeholmen**

Cape Kerr. 80°03' S, 160°26' E. A high, snow-covered cape (or bluff) with steep sides, marking the N entrance point of Barne Inlet (the terminus of Byrd Glacier), along the W edge of the Ross Ice Shelf. Discovered by Scott during BNAE 1901-04, and named by him for Scotsman Lord Walter Talbot Kerr (1839-1927), admiral of the fleet, 4th son of the 7th Marquess of Lothian, and one of the sea lords who supported the expedition. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Mount Kerr. 70°26' S, 65°38' E. About 0.8 km S of Mount Creighton, in the Porthos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1965. Named by ANCA for Anthony G. "Tony" Kerr, physicist at Mawson Station in 1967. US-ACAN accepted the name in 1971.

Punta Kerr *see* **Kerr Point**

Kerr, Alexander John. They called him "Krasky." b. Dec. 2, 1892, Upton Park, East Ham, London, and raised in Prittlewell, Essex, son of ship's master John Charles Kerr and his wife Emily Susan Crafford (she had previously been married to another seaman, Bristol-born Alexander Farquhar Knowles, who had died in 1885). He joined the Merchant Navy fresh out of school, and was working on oil tankers when he became 2nd engineer on the *Endurance*, during Shackleton's BITE 1914-17. His father died just before he set out. On his return to England, he married Lilian Mitchell, in Romford, and they settled in East Ham. In the last stages of World War I he worked on minesweepers in northern Russian waters, and after the war moved with his family to Ilford. He was back with Shackleton, as chief engineer on the *Quest*, 1921-22. He went back to working on tugs in and around the Port of London, and retired in 1934, to become a wholesaler in Ilford. He was a founding member of the British Antarctic Club. He died on Dec. 4, 1964, in a hospital in Stepney.

Kerr, George. b. NZ. Crewman on the *Jacob Ruppert*, on the first half of ByrdAE 1933-35.

Kerr, Gilbert. b. May 15, 1870, Glencorse, Edinburgh, son of gardener and domestic laborer Duncan Kerr and his wife Janet Cunningham. He was working as a grocer in a shop in Edinburgh, and living with his brother, Duncan, when he became an ordinary seaman (and lab assistant) on the *Scotia* during ScotNAE 1902-04, but he is more famous as the first bagpiper in Antarctica. He went to the Arctic with Bruce in 1907.

Kerr Cove *see* **Mackintosh Cove**

Kerr Inlet. 80°04' S, 160°15' E. An ice-filled inlet, 1.5 km wide, at the W side of Cape Kerr, in the N part of Barne Inlet, along the W edge of the Ross Ice Shelf. Named by US-ACAN in 2000, in association with the cape. NZ-APC accepted the name on Feb. 20, 2001.

Kerr Point. 64°42' S, 62°38' W. A point, 3 km SE of Georges Point, on the E side of Rongé Island, and on the W side of Errera Channel, off the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. In 1956-57, it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for Adam John Kerr (b. 1933), 2nd officer of the *Shackleton*, here in 1956-57. US-ACAN accepted the name in 1965. The Argentines call it Punta Kerr.

Kerry Island. 67°36' S, 62°47' E. A little island, hard by Jongens Island, in the Flat Islands, about 3 km NW of Mawson Station, in Holme Bay. Named by ANCA on April 29, 2009, for Knowles Kerry, the "father of ANARE's marine biology program." He led several voyages to Antarctica. US-ACAN accepted the name.

Kerseblept Nunatak. 62°29' S, 59°27' W. A rocky hill protruding above the ice of Yakoruda Glacier to an elevation of 90 m above sea level, 4 km S of Hrabar Nunatak, and 3.5 km W of Lloyd Hill, on Greenwich Island, on the coast of McFarlane Strait, in the South Shetlands. Mapped by the Bulgarians during their Tangra Survey of 2004-05, and named by them on on Nov. 4, 2005, for the Thracian king Kerseblept, 359-341 BC.

Mount Kershaw. 67°32' S, 66°58' W. Rising to 1180 m above the Jones Ice Shelf and Kosiba Wall, in the NE end of Blaiklock Island, off the W coast of Graham Land. Named by UK-APC on May 13, 1991, for Giles Kershaw. US-ACAN accepted the name.

Kershaw, Dennis. b. May 18, 1931, Rochdale, Lancs. He joined FIDS in 1955, as an assistant surveyor, and wintered-over at Base N in 1956 and at Base O in 1957. He died in April 2000, in Blackburn, Lancs.

Kershaw, John Edward Giles. Known as Giles. b. Aug. 27, 1948, Kerala, India. Airline captain with Britannia Airlines, and senior BAS pilot, 1974-79. He was the pilot who assisted the Trans-Globe Expedition in the Antarctic in 1980-81, and who flew Lady Virginia Fiennes to the South Pole. He and two Canadian partners, Pat Morrow and Martyn Williams, set up Adventure Network International. He died in an Antarctic plane crash on the Jones Ice Shelf on March 5, 1990, and was buried at the foot of Mount Kershaw.

Kershaw, Michael David "Mike." b. 1934, Rochdale, Lancs. He joined FIDS in 1958, as a diesel electric mechanic, and wintered-over at Base B in 1959, and at Base G in 1960, the second time also as base leader. In 1963 he married Pauline Harrison, in Littleborough, Lancs, which is where they lived.

Kershaw Ice Rumples. 78°45' S, 75°40' W. A large area of disturbed ice between Fletcher Ice Rise and Korff Ice Rise, in the SW part of the Ronne Ice Shelf. The feature appears on air photos taken by USN in the 1960s, and also on U.S. Landsat images from 1973-74. Mapped from the air by BAS on radio echo-sounding flights from Siple Station, in Marie Byrd Land, Jan. 21-24, 1975. Named by UK-APC on Dec. 8, 1977, for Giles Kershaw (q.v.), pilot of the Otter aircraft that made those flights. US-ACAN accepted the name. The British plot this feature in 78°39' S, 75°43' W.

Kershaw Peaks. 64°56' S, 63°08' W. A group of 5 main peaks, the highest rising to 820 m, W

of the mouth of Miethe Glacier, E of Cape Willems, on the Danco Coast, on the W coast of Graham Land. In 1956–57 this feature was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for Dennis Kershaw of the FIDS. It appears on a 1961 British chart. US-ACAN accepted the name in 1965.

Kesseltal. 71°38' S, 160°20' E. A valley on the NW side of Mount McKenny, at the SE end of the Daniels Range, in the Usarp Mountains of Oates Land, in Victoria Land. Named by the Germans.

Kessens Peak. 86°51' S, 146°41' W. Rising to 2660 m, 8 km SE of Mount Paine, in the La Gorce Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Gerard R. Kessens of VX-6, photographer here during OpDF 66 (i.e., 1965–66) and OpDF 67 (i.e., 1966–67).

Kessler, Charles Leroy. Known as "Kess." b. Jan. 29, 1903, Washington, D.C., son of U.S. Navy Yard foreman Leroy P. Kessler and his wife Katherine A. Gleason. He joined the U.S. Marines on Oct. 21, 1922, and was a corporal and orderly on duty at the press room of the Navy Department, when he went with Byrd to the North Pole, then went to China. He resigned from the marines in 1928, and became a seaman on the *Eleanor Bolling* during ByrdAE 1928–30. The Depression hit him hard (*see* **King, Harry**), but he bounced back. From 1942 to 1946 he was a commander in the U.S. Navy (1942–46), retiring as a captain, and was director of the Selective Service System for Virginia. He later went into public relations. He revisited Antarctica in 1962 and 1965, and died in Jan. 1976, in Richmond, Va.

Kessler Peak. 83°37' S, 167°50' E. A conspicuous, cone-shaped peak, rising to 2180 m, in the Queen Alexandra Range, at the E side of Lennox-King Glacier, 6 km WSW of Mount Rotolante. Named by US-ACAN in 1966, for Charles L. Kessler.

Kester Peaks. 82°49' S, 48°23' W. Three aligned rock peaks standing together 8 km S of Mount Malville, on the E side of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965–66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Larry T. Kester, VX-6 photographer during OpDF 1964 (i.e., 1963–64), when this feature was photographed. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Cape Ketchum *see* **Cape Fiske**

Ketchum, Gerald Lyle "Jack." b. Dec. 5, 1908, Seattle, son of William Merton Ketchum (known as Merton) and his wife Edith Leone Bennett. When Jack was 6, his parents divorced, and he was raised in a foster home in Bellingham, Wash., until his parents remarried, when he was 15. He left school at 17, and entered the Naval Academy. No one will ever forget how he arrived at the Academy, rolling down the Severn River on a log, like they did in Washington state. At least, that's the legend. He graduated, and became an ensign in 1931. He married in 1933. In 1945 he was on the destroyer *Perkins* when that vessel was sunk in the Pacific. After the war he went back to the Academy, as an instructor. He was commander of the *Burton Island* during OpHJ 1946–47, and commander of Task Force 39 which conducted OpW 1947–48. His 2-ship exploration of McMurdo Sound in early 1948 was the last time Americans visited that indentation until late 1955, during OpDF I, on which Ketchum was deputy commander (under Admiral Dufek) of Task Force 43. He was in charge of overall administration and icebreaker operations. He retired as a rear admiral, in 1959, to his wife's home, Pine Bluff, Arkansas. He died on Aug. 22, 1992, in Plano, Tex.

Ketchum Canyon. 64°00' S, 131°00' E. A submarine feature off the Wilkes Coast. Named by international agreement for Jack Ketchum.

Ketchum Glacier. 75°00' S, 63°45' W. A glacier flowing E for about 80 km, between the Latady Mountains and the Scaife Mountains, into Gardner Inlet, on the Lassiter Coast, at the base of Palmer Land. Discovered aerially on Nov. 21, 1947, by RARE 1947–48, and surveyed from the ground in Dec. 1947 by a combined sledging team composed of RARE personnel and Fids from Base E. Named by Ronne as the Irvine Gardner Glacier, for Irvine C. Gardner, and it appears as such on the American Geographical Society's 1948 map of Antarctica. Later in 1948 Ronne changed the name to Ketchum Glacier, for Jack Ketchum (q.v.), skipper of the *Burton Island* which broke the ice to free Ronne's ship from Marguerite Bay, so that RARE could get home (*see* **Gardner Inlet** for a more detailed history of these name changes). US-ACAN, in 1949, after rejecting the name Gardner Glacier, accepted Ketchum Glacier, and it appears as such on a 1955 U.S. Hydrographic Office chart, and also on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It was re-photographed aerially by USN between 1965 and 1967. UK-APC did not accept the name until Dec. 20, 1974.

Ketchum Ridge. 76°33' S, 162°20' E. The largest ridge that extends E from the S part of the Endeavour Massif, in the Kirkwood Range. Named by US-ACAN in 1999, for Jack Ketchum. NZ-APC accepted the name on Nov. 4, 1999.

Ketelersbreen. 72°03' S, 23°22' E. A glacier, 12 km long, between Viking Heights and Vengen Spur, in the central part of the Sør Rondane Mountains. Named by the Norwegians (name means "the Ketelers glacier"), for Belgian ionosphere physicist Roger Ketelers, who took part in the Belgian-Netherland Antarctic Expedition of 1964–65.

Punta Ketley *see* **Ketley Point**

Ketley, John. b. Jan. 6, 1935, London, son of professional soldier Arthur Henry Ketley and his wife Gladys Carter. Educated in India and (from the age of 12) in London, he entered the Directorate of Colonial Services in 1951, as a trainee cartographer. He trained as a topographic surveyor while doing his National Service (he was with Wally Herbert in Egypt). Demobbed in June 1955, he went back to the drawing board, saw an ad in the *Daily Telegraph* for FIDS, was interviewed in London by Johnny Green, and on December 27, 1955, left the UK on the *Shackleton*, wintering-over as assistant surveyor at Base O in 1956 and at Base N in 1957. In March 1958 he relieved Wally Herbert on the survey of Greenwich Island, and in April 1958 he returned to the UK on the *John Biscoe*. He went into oil exploration surveying, working in many countries, finally Denmark in 1966 where he went to work for a Danish land survey firm at Aarhus. He worked there until he was made redundant in Jan. 1992. He had married Elly Kjaegaard in 1976, and continued to live in Denmark, running marathons until 2001, and long distance cycling.

Ketley Point. 64°42' S, 62°46' W. Forms the W end of Rongé Island, off the W coast of Graham Land. Charted by BelgAE 1897–99. Named by UK-APC on Sept. 23, 1960, for John Ketley. US-ACAN accepted the name in 1965. The Argentines call it Punta Ketley.

The *Ketos*. Refrigeration ship, part of the fleet belonging to the British whaler *Balaena*, in Antarctic waters in 1948–49.

Keuken Island *see* **Keuken Rock**

Keuken Rock. 68°35' S, 77°50' E. A small island (actually a large insular rock), 1.5 km W of Gardner Island, and 2.3 km SW of Barratt Island, off the Vestfold Hills. Photographed by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers. Later named by ANCA as Keuken Island, for Jannes Keuken, weather observer (radio) at Davis Station in 1959. US-ACAN accepted the name Keuken Rock in 1965.

Kevin Islands. 63°17' S, 57°44' W. A cluster of small islands and rocks, lying close to the N coast of Trinity Peninsula, midway between Halpern Point and Coupvent Point. Named by US-ACAN in 1964, for Kevin M. Scott, USARP geologist here in 1961–62, with the University of Wisconsin. He carried out independent studies in the Gerlache Strait that season.

The Keyhole. 78°07' S, 163°41' E. A narrow defile, or slot, carved by the ice, between Adams Glacier and Hidden Valley. So named by VUWAE 1960–61 (who used it on several occasions that summer) because it provides the only low-level entrance to Hidden Valley, and is the key to easy passage between Lake Miers and Ward Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1973.

Islote Keyhole *see* **Keyhole Island**

Lake Keyhole. 78°08' S, 163°41' E. A very small lake, about 92 m in diameter, to the S (i.e., on the Hidden Valley side) of The Keyhole, in association with which it was named by VUWAE 1960–61. NZ-APC accepted the name, and US-ACAN followed suit in 1974.

Keyhole Island. 68°47' S, 67°20' W. A small, rocky island, 8 km SE of the Terra Firma Islands,

in the SW part of Mikkelsen Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed in Nov. 1948 by Fids from Base E, and named by them as Keyhole Islet, for the ice-arch that had formed at the margin of the ice cap covering the island. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. However, on July 7, 1959, UK-APC redefined it as Keyhole Island, and it appears that way on a British chart of 1961. US-ACAN accepted the new name in 1963. The Argentines call it Islote Keyhole.

Keyhole Islet *see* **Keyhole Island**

Keys Glacier. 74°48' S, 114°00' W. Flows NE from Jenkins Heights, between Ellis Ridge and Mount Bray, on Martin Peninsula, on the Bakutis Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967. Named by US-ACAN in 1978, for Keith W. Keys, USN, air controller at Williams Field, at McMurdo, 1975-76.

Keys Hill. 77°17' S, 166°35' E. Rising to about 100 m above sea level, at the head of Shearwater Glacier, 3.3 km WSW of the summit of Mount Bird, in the NW part of Ross Island. Named by NZ-APC on Feb. 20, 2001, for Gordon Keys, leader of long-term NZARP atmospheric research, 1985-95. US-ACAN accepted the name later in 2001.

Keys Point. 77°14' S, 166°22' E. A projecting point of land at McDonald Beach, 1.5 km NW of Inclusion Hill, in the NW part of Ross Island. Named by Phil Kyle for John R. "Harry" Keys, NZ geochemist who worked several seasons during the 1970s and 1980s under the auspices of NZARP and USAP on investigations into the origins of salts in the area of McMurdo Sound, the Mount Erebus volcano, and the quantity, shapes, and sizes of icebergs in the Antarctic marine environment. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Mount Keyser. 66°56' S, 52°23' E. Also called Keyser Nunatak. About 5.5 km ENE of Mount Ryder, in the E part of the Tula Mountains of Enderby Land. Mapped by Australian cartographers from ANARE air photos taken in 1957. Named by ANCA for Dave Keyser (*see* **Keyser Ridge**). US-ACAN accepted the name in 1966.

[1]**Keyser Nunatak** *see* **Mount Keyser**

[2]**Keyser Nunatak**. 77°36' S, 145°55' W. A large nunatak, rising to 605 m, at the N side of the terminus of Reynolds Glacier, in the Haines Mountains of Marie Byrd Land. Mapped by USAS 1939-41, and again by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. (jg) Teddy H. Keyser, USN, Hercules aircraft navigator in Antarctica during OpDF 68 (i.e., 1967-68).

Keyser Ridge. 73°57' S, 63°28' E. A snow-covered rock ridge, trending for 17.5 km in a NE-SW direction, 41 km SSE of Mount Bayliss, and about 68 km SE of the summit of Mount Menzies, in the Prince Charles Mountains of Mac. Robertson Land. Mapped by Australian cartographers from ANARE air photos taken in 1957 and 1960. Named by ANCA for David O. "Dave" Keyser, radio officer from Perth, who wintered-over at Mawson Station in 1961. He was also a member of the ANARE field party that failed to reach this feature in 1961 due to impassable crevasses. US-ACAN accepted the name in 1970. *See also* **Seavers, James**.

Keystone Cliffs. 71°35' S, 68°13' W. Rising to 610 m (the British say 250 m), they mark the E face of the sedimentary ridge between Mercury Glacier and Venus Glacier, on the E coast of Alexander Island, on the W side of George VI Sound. The coast in this vicinity was first seen and photographed by Ellsworth, as he flew over on Nov. 23, 1935, and was first plotted in 1936, by U.S. cartographer W.L.G. Joerg, working from Ellsworth's photos. The cliffs were roughly surveyed in 1936 by BGLE 1934-37. Surveyed in more detail by Fids from Base E in 1948, and so named by them because the geologic structures revealed in these cliffs provided the key to the general tectonic structure of the area. The feature appears named on Fuchs' map of 1951, and was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in, 1956.

Khamsin Pass. 69°29' S, 67°45' W. A pass running N-S at an elevation of about 750 m above sea level, between the Relay Hills and the Kinnear Mountains, southward of the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Palmer Land. It was an important pass for BGLE 1934-37 (who roughly surveyed it in Oct. 1936), and for subsequent FIDS expeditioners (and others, such as Argentines), as it allowed easy access from the ice shelf into Palmer Land. It appears on a 1959 Argentine map as Paso 24 de Septiembre, named thus to commemorate the day when Gen. Belgrano beat the Spanish at the battle of Tucumán, in 1812. Re-surveyed by BAS personnel from Base E in 1970-72. In keeping with the practice of naming certain features in this area after famous winds of the world, this one was named by UK-APC on Dec. 8, 1977, for the khamsin, the warm southerly buster blowing into Egypt out of the Sahara. It appears as such in the 1980 British gazetteer. US-ACAN accepted that name.

Khmara Bay. 67°20' S, 49°00' E. A small bay, directly S of the Zubchatyy Ice Shelf and Sakellari Peninsula, in the E part of Casey Bay, in Enderby Land. Photographed aerially by ANARE in 1956, and explored by personnel off the *Lena*, during SovAE 1957. They named it Bukhta Hmary, in 1957 for I.F. Khmara (*see* **Khmara Island**, and **Deaths**, 1956). ANCA accepted the name Khmara Island on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Khmara Island. 66°33' S, 93°00' E. A small, low island, 1.5 km SW of Haswell Island, in the Haswell Islands, and less than 1 km NW of Mirnyy Station, on the coast of Queen Mary Land. Charted by SovAE 1956, and named by the Russians in 1957 as Ostrov Hmary, for I.F. Khmara (*see* **Deaths**, 1956). ANCA translated the name on Oct. 11, 1960, originally as Khmary Island, and then as Khmara Island, and US-ACAN accepted the name Khmara Island in 1971.

Khmary Island *see* **Khmara Island**

Mount Khmyznikov. 71°52' S, 11°39' E. Rising to 2800 m, in the N part of the Skeidsnutane Peaks, in the Betekhtin Range, in the SE part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered aerially by GermAE 1938-39, and plotted from air photos taken by that expedition. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1966, as Gora Hmyznikova, for hydrographer P.K. Khmyznikov. US-ACAN accepted the name Mount Khmyznikov in 1970. The Norwegians call it Chmyzikovnuten.

Khufu Corrie. 71°19' S, 68°19' W. A corrie, or cirque, measuring about 0.5 km by 0.5 km, formed between Drune Hill to the N and Khufu Peak to the S, at Fossil Bluff, Alexander Island. In FIDS scientific reports of the early 1960s, it was called Fossil Bluff Glacier (obviusly, in association with the bluff itself), but on April 23, 1998, UK-APC named it Khufu Corrie, in association with the peak. US-ACAN followed suit with that naming in 1999. However, it is also informally called Moraine Corrie, or Moraine Corrie Valley.

Khufu Peak. 71°20' S, 68°19' W. Rising to about 745 m above sea level, near the center of the Fossil Bluff massif, in the E part of Alexander Island. It is an important stratigraphic and sedimentological locality. For years, since the early 1960s, FIDS and BAS personnel had called this feature Pyramid. But, there were too many features in Antarctic with a name like that, so on Feb. 18, 1988, UK-APC named it Khufu Peak, after the pharaoh Khufu, whose tomb is the great pyramid of Giza. US-ACAN accepted that name. For a parallel, *see* **Giza Peak**.

Mys Khunkal *see* **Cape Juncal**

Khyber Pass. 60°43' S, 45°36' W. A steep-sided pass between Rusty Bluff and the NE side of McLeod Glacier, on Signy Island, in the South Orkneys. It was (is) a well-used route by BAS personnel providing access to Gourlay Peninsula from Moraine Valley. Named by UK-APC on May 13, 1991, for the Kyber Pass in India, although that name had been in use by BAS for many years. US-ACAN accepted the name.

Khyber Pools. 60°43' S, 45°36' W. A small group of pools within the Khyber Pass, on Signy Island, in the South Orkneys. They were formed by deglaciation in the 1980s. Named by UK-APC on Sept. 29, 2004, in association with the pass.

Mount Kibal'chich. 71°56' S, 14°19' E. Rising to 2500 m, the higher of the Kvaevenutane Peaks, in the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from those photos. Re-mapped by Norwegian cartographers

from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61. Named finally by the USSR, in 1963, as Gora Kibal'chicha, for Nikolay Ivanovich Kibal'chich (1854-1881), Russian inventor and revolutionary. US-ACAN accepted the translated name Mount Kibal'chich. The Norwegians call it Kibal'chichtoppen (which means the same thing).

Gora Kibal'chicha *see* **Mount Kibal'chich**

Kibal'chichtoppen *see* **Mount Kibal'chich**

Skaly Kibalina. 79°50' S, 155°45' E. A group of rocks due E of Scheuermann Spur, in the S part of the Darwin Mountains. Named by the Russians.

Kibergbreen. 74°52' S, 11°48' W. A glacier, about 35 km long, between Sivorgfjella and the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians, in association with the nearby valley they call Kibergdalen.

Kibergdalen. 74°56' S, 11°34' W. A valley, about 19 km long, between Sivorgfjella and the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Kiberg (name means "Kiberg valley"), a small fishing village in Finnmark, that provided ant-Nazi information to the Russians during World War II.

Kichenside Glacier. 67°46' S, 47°36' E. Also called Shaw Glacier. A glacier, between 24 and 28 km long, and between 5 and 9 km wide, it flows NE into the S part of the Hannan Ice Shelf, on the coast of Enderby Land. Mapped by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA on July 4, 1961, for James Charles "Jim" Kichenside (b. July 28, 1930), RAAF squadron leader (later a wing commander), officer commanding the Antarctic Flight at Mawson Station in 1960, and who flew the Beaver aircraft. US-ACAN accepted the name in 1965.

Islotes Kidd *see* **Kidd Islands**

Kidd Islands. 66°27' S, 65°59' W. A small group of islands within Darbel Bay, just S of the Darbel Islands, off the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and that season also surveyed from the ground by Fids from Base W. Named by UK-APC on Sept. 23, 1960, for Dudley Arthur Kidd (1863-1921), physicist specializing in ice crystals in the 1880s. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call them Islotes Kidd.

Kiddie, Harry *see* **Keddie, Henry**

Cabo Kidson *see* **Cape Kidson**

Cape Kidson. 73°24' S, 60°45' W. An abrupt rock scarp rising to 305 m above sea level, it forms the N entrance point of New Bedford Inlet, and the W entrance point of Mossman Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, by USAS 1939-41. It appears named on a 1943 U.S. Hydrographic Office photograph. On Nov. 21, 1947, the cape was photographed aerially by RARE 1947-48, and in Dec. 1947 was surveyed from the ground by a combined sledging team of RARE personnel and Fids from Base E. Named by FIDS for Edward Kidson (b. March 12, 1882, Bilston, Staffs. d. June 12, 1939, Wellington), NZ meteorologist, director of meteorological services, 1927-39, and author of the meteorological reports of BAE 1907-09 and AAE 1911-14. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, in the 1955 British gazetteer, and on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It appears on an Argentine chart of 1957 as Cabo Kidson, and that is what the Argentines call it to this day. The Chilean gazetteer of 1974 accepted the same name.

Kidson Channel. 66°29' S, 98°53' E. A channel, between 6 and 11 km wide, separating David Island from Davis Peninsula, in Queen Mary Land. Named by AAE 1911-14, for Edward Kidson (*see* **Cape Kidson**). ANCA accepted the name on March 7, 1991.

Kidson Island. 67°12' S, 61°11' E. Also seen spelled (erroneously) as Kidston Island. About 0.8 km long, 24 km NNE of Byrd Head, off the coast of Mac. Robertson Land. Discovered on Feb. 18, 1931 by BANZARE, and named by Mawson for Edward Kidson (*see* **Cape Kidson**). US-ACAN accepted the name in 1947, and ANCA followed suit.

Kidston Island *see* **Kidson Island**

Kieffer Knoll. 82°29' S, 162°39' E. A rocky knoll marking the extreme NE corner of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Hugh Hartman Kieffer (b. Oct. 31, 1939, Norwich, Conn.), planetary physicist at Roosevelt Island in 1961-62. He later worked on the Russian Mars mission.

Kiel, Max R. b. Joseph, Oreg., son of timber laborer Oscar R. Kiel and his wife Roma Irene Davis, of Joseph, Oregon. Seabee construction driver 2nd class known as "Fat Max." While part of a tractor party, sledging fuel to be cached on the trail to Marie Byrd Land (for the party led by Jack Bursey), he died on March 5, 1956, when the 35-ton D-8 tractor he was driving plunged 100 feet into a crevasse 110 miles from Little America V. He died instantly. Alvah G. "Big Ed" Edwards went down on a rope, but couldn't get him out of the tractor and Max remains there. It was the 2nd death during OpDF (*see* **Deaths**). Max's father had died in 1952, and after Max died, Roma married Ralph Tippett, and died in 1975.

Kiel Field. Also called Max Kiel Airfield. The 6000-foot-long runway behind Little America V during IGY (1957-58). It was named for Max Kiel, within a week after his death.

Kiel Glacier. 78°08' S, 154°00' W. A large, active, heavily crevassed glacier, about 16 km wide and 26 km long, descending SW from the Rockefeller Plateau, just E of the Rockefeller Mountains, and flowing into Prestrud Inlet, in Edward VII Land. Partially delinated from air photos taken during ByrdAE 1928-30, and subsequently seen by several U.S. air missions over the area. Named by US-ACAN in 1960, for Max Kiel. NZ-APC accepted the name.

Kieler Pass. 71°02' S, 166°15' E. Due N of the ridge the Germans call GANOVEX-Kette, which in turn is N of Mount Griffin, in the Anare Mountains of Victoria Land. Named by the Germans.

Cape Kiellman *see* **Cape Kjellman**

Kienle Cirque. 78°04' S, 167°21' E. An ice-filled cirque, 3 km wide, the largest cirque on the W side of White Island, in the Ross Archipelago. Named by US-ACAN in 1999, for vulcanologist Juergen Kienle (b. Dec. 7, 1938. d. April 28, 1996), of the Geophysical Institute, at the University of Alaska, at Fairbanks, a USAP team leader for the investigation of volcanic activity at nearby Mount Erebus every summer season between 1980-81 and 1985-86. He wrote *Volcanoes of North America*. NZ-APC accepted the name on Nov. 4, 1999.

Kienle Nunataks. 77°28' S, 168°36' E. Three aligned nunataks to the N of Mount Terror, trending E-W for 1.5 km, and rising to about 1700 m, in the NE part of Ross Island. The central nunatak is 4 km NNE of the summit of Mount Terror. Named by Phil Kyle, for Juergen Kienle (*see* **Kienle Cirque**). US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Kiesbach. 62°12' S, 58°56' W. A little stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Kiev Peninsula. 65°15' S, 63°41' W. An oval-shaped, mostly ice covered peninsula, projecting 35 km in a NW direction from the W coast of Graham Land, it is bounded by Flandres Bay to the NE and by Beascochea Bay to the SW, and is separated from the Wilhelm Archipelago to the NW by Lemaire Channel and Penola Strait. Mapped by the British in 1976. Named by the Bulgarians on Sept. 14, 2010, for the capital city of the Ukraine. The Ukrainian Vernadskiy Station is situated on nearby Galíndez Island.

Mount Kiffin *see* **Mount Kyffin**

Vrah Kikish *see* **Kikish Crag**

Kikish Crag. 62°42' S, 60°15' W. A peak with a steep, snow-free W slope, this feature rises to 650 m on Friesland Ridge, 710 m WSW of Stambolov Crag, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Vrah Kikish, for Kikish, a summit in Vitosha National Park, in Bulgaria. It has been translated into English.

Kikko Terrace. 68°08' S, 42°40' E. A rocky terrace rising to 150 m above sea level, about 2.5 km SSE of Cape Hinode. Mapped by Japanese cartographers from JARE air photos taken in 1962, and from JARE ground surveys conducted in 1972-73, and named by them on Nov. 22, 1973, as Kikko-ga-hara (i.e., "tortoise shells terrace"). US-ACAN accepted the name Kikko Terrace in 1975.

Kikko-ga-hara *see* **Kikko Terrace**

Kilby Island. 66°16' S, 110°31' E. A rocky is-

land, about 300 m long, close NE of McMullin Island, in the entrance to (i.e., on the S side of) Newcomb Bay, in the Windmill Islands, on the Budd Coast. First plotted from air photos taken in 1947 during OpHJ 1946–47, and in 1948 during OpW 1947–48. Named by US-ACAN in 1956, for Arthur L. Kilby, USN, chief photographer's mate on OpHJ (he was with the central task group) and OpW. ANCA accepted the name on July 4, 1961.

Kilby Reef. 66°17' S, 110°32' E. A small, isolated reef, which uncovers at low water, and which has depths of less than 6 m extending 27 m southwards, it lies about 200 m SE of Kilby Island, and about 2.5 km from the summit of Shirley Island, in the Windmill Islands. First surveyed and charted in Feb. 1957, by Lt. R.C. Newcomb, USN, of the *Glacier*. Re-charted by Tom Gale in 1962, during an ANARE hydrographic survey of Newcomb Bay and its approaches led by Phil Law on the *Magga Dan*. Named by US-ACAN in 1963, in association with the island. ANCA accepted the name.

Kiles Way *see* **Bransfield Strait**

Kiletangen *see* **Kiletangen Ice Tongue**

Kiletangen Ice Tongue. 69°57' S, 26°25' E. A narrow projection of the ice shelf on the E side of Tangekilen Bay, along the Princess Ragnhild Coast of Queen Maud Land. First photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kiletangen (i.e., "the wedge tongue"). US-ACAN accepted the name Kiletangen Ice Tongue in 1970.

Kiley, Thomas Ross. b. Aug. 25, 1928, Queens, NY, son of government railroad clerk Ross Clifford Kiley and his wife Mary. The family moved to Pueblo, Colo., and on Feb. 16, 1946, at Fort Logan, T.R. enlisted as a private in the Army Air Corps. His first posting was Hawaii. He was the photographer's mate 1st class who flew on the R5D with Hal Kolp over the South Pole on Jan. 3, 1956, the 3rd ever such flight. He later lived in Venus, Fla., and died on June 7, 1975.

Kilfoyle Nunataks. 70°43' S, 65°51' E. Two nunataks, 2.75 km SW of Mount Dowie, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Brian P. Kilfoyle, physicist at Mawson Station in 1966. US-ACAN accepted the name in 1971.

Kilifarevo Island. 62°22' S, 59°47' W. An island, with an area of 640 m by 350 m, lying 850 m NW of Jorge Island, 460 m N of the Riksa Islands, and 350 m SE of Morris Rock, in the Aitcho Islands, on the W side of English Strait, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the town of Kilifarevo, in northern Bulgaria.

Killer Nunatak. 71°54' S, 160°28' E. A lone granite nunatak, rising to 2080 m, near the center of Emlen Peaks, 8 km NW of Mount Phelen, and 13 km S of Mount Cox, in the Usarp Mountains. So named by the Northern Party of NZGSAE 1963–64 because its distinctive outline resembles that of the dorsal fin of a killer whale. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Killer Ridge. 77°12' S, 162°06' E. A dark ridge, rising to over 1000 m (the New Zealanders say about 1200 m), at the N side of Miller Glacier, between that glacier and Crisp Glacier, and between Debenham Glacier and Mackay Glacier, in the W portion of the Gonville and Caius Range, in Victoria Land. Charted in Jan. 1912, by the Granite Harbour Geological Party, during BAE 1910–13, and so named by Grif Taylor because it looks like a killer whale in outline. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Killer whale. Order: Cetacea (whales); suborder: Odontoceti (toothed whales); family: Delphinidae (dolphins). *Orcinus orca*, known as Orca, or killer whale, is, actually, the largest of the dolphins by far, and is also called the blackfish and grampus. It can grow to 33 feet long, and weigh 11 tons, and is one of the most intelligent of all aquatic animals. Its black and white color and sheer size make it hard to miss. Killers hunt in packs and can use sophisticated methods to get their prey, which include penguins, other birds, seals, baleen and toothed whales, and other dolphins, in fact anything, even blue whales, but not humans, despite provocation, even though, as goes without saying, a killer whale could rip a human being to pieces if it was a fair contest. In fact, nothing is able to prey on the killer whale, except man. Killer whales cruise right to the edge of the Antarctic pack-ice, appearing even in McMurdo Sound. With their 44 conical teeth acting as a trap, they swallow their prey whole, as all dolphins do, but their name "killer whale" is misleading in that they are no more "killers" than any other whale. An adult needs to consume 150 pounds of seafood per day in order to stay alive. Females produce young every 8 years or so, and the calves are 7 feet long at birth, living in the pod (or family group) for several years. Males live to be about 60, and females to 80 or 90.

Killer Whale Rocks. Unofficial name for a group of rocks 1.6 km W of Palmer Station, between Janus Island and Litchfield Island.

Caleta Killermet *see* **Killermet Cove**

Killermet Cove. 64°52' S, 63°07' W. On the SW side of Bryde Island, it is the southern of 2 coves indenting the W side of the island, off the Danco Coast, on the W coast of Graham Land. In 1956–57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. So named by FIDS because, on May 11, 1957, 3 members of their circumnavigation of Bryde Island were chased into this cove in their dinghy by 6 killer whales. UK-APC accepted the name on Sept. 23, 1960, and it appears on a 1961 British chart. US-ACAN followed suit with the naming in 1965. The Argentines translated it as Caleta Killermet.

Killingbeck, John Basil. b. 1936, Essex. Just after getting his bachelor's degree from Bristol in 1960, in geography, he joined FIDS in 1961, as a glaciologist, and wintered-over as base leader at Base B, and as general assistant at Base T in 1962. He drove huskies in the Arctic, in fact he was the last dog handler before they banned dogs. In 1979, in St Austell, Cornwall, he married Jennifer M. Wrigley (Jenny Coverack), who wrote (and performs in) a one-woman play about Scott's widow. They live in Devon. Mr. Killingbeck was a lecturer on tourist ships to Antarctica (e.g. the *Orlova*, 2004-05).

Killingbeck Island. 67°34' S, 68°05' W. A small island 1.5 km E of Rothera Point, off the SE coast of Adelaide Island, off the W coast of the Antarctic Peninsula. Surveyed by Fids from Base T in 1961–62. Named by UK-APC on Nov. 3, 1971, for John Killingbeck. US-ACAN accepted the name in 1965 (at least that is what the American gazetteer says; it also says UK-APC named it in 1964). It appears in the British gazetteer of 1974, and on a British chart of 1980. It was further surveyed by an RN Hydrographic Survey unit in 1976–77. By 1978, the Argentines were calling it Isla Cerrito, after the famous battle of 1812. The Chileans call it Isla Jiménez, after seaman Héctor Jiménez I., who displayed a high spirit of sacrifice in his diving to find two anchors in Antarctic waters during ChilAE 1951–52.

Kilroy Bluff. 81°15' S, 159°42' E. An ice-covered bluff rising to 1040 m, on the W side of Nursery Glacier, at the junction of that glacier with Jorda Glacier, in the Churchill Mountains. The E face of the bluff is indented by twin cirques that resemble eyes. Under certain light conditions, the appearance of the bluff is reminiscent of the ubiquitous Kilroy graffiti of World War II: the top half of a bald head peering over a wall, with a long nose, beady eyes and a little hand on each side of the head, and the message, "Kilroy was here." Named by US-ACAN in 2003. NZ-APC accepted the name on Feb. 27, 2003.

The *Kim*. French yacht, skippered by Daniel Gazanion (b. July 10, 1948, Aubenas), in Antarctic waters in 1980–82. She visited the Antarctic Peninsula, then wintered-over at Petermann Island in 1981, then visited the South Shetlands and South Georgia.

Kimbrey, John Martin. Royal Marine sergeant, mountain climber and Skidoo expert, who wintered-over on Brabant Island with Chris Furse's party during the British Joint Services Expedition, 1983–85. Appendicitis thwarted his plans at the last moment to go on a similar expedition to Smith Island, in the South Shetlands, in 1990. Other Smith Island expeditions also had to be canceled, and finally, in 1994, now a warrant officer, he got to go there. He was awarded the MBE in 1996.

Kincaid, Thomas. Bob Headland in his *Chronology*, has him as co-skipper (with John Walker) of the London sealer *John*, in South Shetlands waters in 1821–22. However, this Kincaid does not appear anywhere in the 1823 Lloyd's Shipping Register (the *John* does, with John Walker as captain). This may be the Capt. Kincaid who took the *Catherine* out of Greenock on Sept. 7, 1826, bound for Bombay. A few days out, he found three boy stowaways, and dropped them off on Ailsa Rock with a few biscuits to

survive on. He may be connected to the Kincaids of Greenock.

Mount Kinet. 73°14' S, 165°54' E. A large, rounded mountain, rising to 2180 m, on the S side of the upper Meander Glacier, 8 km SE of Hobbie Ridge, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for American biologist Urbain Joseph Kinet (b. Sept. 16, 1909, Belgium. d. Aug. 7, 1989, Sonoma, Calif.), who made ecological investigations in the Terra Nova Bay area in 1965-66.

The *King*. A 1030-ton Argentine Navy Patrol ship, 77 m long, built at the Arsenal Shipyard, at the naval base of Río Santiago, and launched on Nov. 3, 1943. Sister ship of the *Murature*, she was capable of 18 knots, and had a carrying capacity of 180 men. After a lot of modifications, she joined the Argentine Navy on July 28, 1946. Capitán de corbeta Alicio E. Ogara had taken command on July 17, and came aboard on Oct. 18, 1946. She took part in ArgAE 1947 (her commander was Ogara). On March 17, 1947, with the *Murature*, she visited Port Lockroy. She also visited Deception Island, and installed a lighthouse at Cape Ann. She returned to Ushuaia, then to Buenos Aires, and in April 1947 Capitán de corbeta José M. Cabello took over command (he came aboard on May 28, 1947). She was on ArgAE 1947-48 (under Capt. Cabello), and on ArgAE 1948 (Capitán de corbeta Helvio N.A. Guozdén took command on Feb. 7, 1948). She took part in the naval review at Buenos Aires, in 1948, and on Dec. 19, 1948 Capitán de corbeta Héctor Varela took over command (came aboard Jan. 15, 1949). She never went back to Antarctica after her 1948 trip, but the good old ship was still going, in excellent condition, in 2009, she and the *Murature* being the oldest ships in the fleet.

Cabo King *see* **King Point**

[1]**Cape King** *see* **King Point**

[2]**Cape King**. 73°35' S, 166°37' E. Forms the seaward end of the rocky W wall of Wylde Glacier, where that glacier enters Lady Newnes Bay, in the Ross Sea, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Geoffrey Alan Munro King, NZ ionosphere physicist at Hallett Station in 1958. He was a member of the search party after the Oct. 1958 Globemaster crash. He later lived in Colorado. NZ-APC accepted the name on Dec. 4, 1968.

[1]**Mount King**. 67°01' S, 52°49' E. A large, smooth-crested mountain in the E extremity of the Tula Mountains, in Enderby Land. Discovered in Dec. 1958, by an ANARE dog sledge party led by Graham Knuckey, and plotted by them in 67°04' S, 52°52' E. Named for Peter Wylie King (q.v.), a member of the party. It has since been replotted by the Australians.

[2]**Mount King**. 69°53' S, 69°26' W. A flat-topped, mainly ice-covered mountain, rising to 1890 m, S of Sedgwick Glacier, between that glacier and Tumble Glacier, and connected by an ice-covered spur with the Douglas Range to the W, at George VI Sound, on the NE coast of Alexander Island. Photographed aerially and roughly surveyed from the ground in Oct.-Nov. 1936, by BGLE 1934-37. Re-surveyed by Fids from Base E in 1948, and named by them for William Bernard Robinson King (1889-1963), Woodwardian professor of geology at Cambridge, 1943-55. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

[3]**Mount King** *see* **King Ridge**

King, Edward Charles. b. April 14, 1954, Liverpool, son of George H. King and his wife Thelma L. Orrell. BAS geophysicist in Antarctica for 6 summers between 1987-88 and 1998-99, developing the use of portable seismology systems.

King, Elijah *see* **USEE 1838-42**

King, Harry Reginald. b. 1902, Brooklyn, son of Liverpool-born Federal steamer captain Andrew Gibson King and his Canadian wife Minnie. After graduating from Columbia, he became a Merchant Marine officer, and was 2nd mate on the *Eleanor Bolling*, 1928-29, i.e., during the first half of ByrdAE 1928-30. He was replaced in 1929 by Harry Adams. By Nov. 1932, he was down on his luck; he, Creagh, Erickson, Cody, Kessler, and Gawronski, all were; a Thanksgiving Turkey that year at the Seaman's House, in New York's West Side, helped stave off the starvation for a while.

King, James A. The story of James King is one thing; over the last ten decades the telling of the story of Mr. King has been one of error, perpetuated error, and a classic example of derivative research, i.e., research conducted solely within the bounds of secondary material, rather than using primary sources. The first major American Antarctic historian, Edwin Swift Balch — and there are many who still think he was the greatest — wrote an article for the Feb. 1904 edition of the *Journal of the Franklin Institute*, in the form of an addendum to his great work of 1901. The reason for his addendum was that he had uncovered new facts, but, unfortunately, he had been speaking to old sealing skippers Fuller, Alfred, and Lynch, and from their misrememberings, he set down the story of Mr. King, and got it horribly wrong. The unforgivable thing is that all subsequent Antarctic writers (this author included, in the first edition of this book), with the exception of Bob Headland in his 2009 revised edition (see Bibliography) accepted without question the words of the great Balch. The three old salts had the story essentially right, but their memory of the details was faulty. This is fundamentally how Balch told the King story (he actually got it from Tom Lynch): In 1876 the *Florence*, under the command of Capt. James Buddington, of Groton, and the *Francis Allen* (wrong spelling — should be the *Francis Allyn*), under the command of Robert Glass, left Stonington, bound for the South Shetlands and the 1876-77 sealing season. Mr. King (no first name, but Balch does say he was from Yonkers) was mate on the *Florence*. Anyway, King landed with a crew on Ragged Island, and they got stranded when weather conditions prevented either ship from taking them off. They were forced to winter-over at Potter Cove, under the shelter of their boat. The whole gang died, except King, who was rescued by Glass in the *Francis Allen* (sic) the following year. In 1880, Captain Lynch saw the remains of the shelter and the local whaling boat that King's party used (so Balch tells us). That's the story. However, there are problems. One is that the *Florence* didn't seal in the South Shetlands in 1876-77. Another, actually the main, problem, is that the story, this "Robinson Crusoe" tale, first appeared in the *New York Herald* in May 1873, a full three and a half years before Balch has the event happening. The *Herald* story ran throughout May and June of 1873, with King being interviewed constantly, and becoming a minor celebrity. Newspapers from all over the world picked it up, as far away as New Zealand. From these articles, and from other research, this is what happened (or rather, this is a lot closer to what happened). James A. Walsh, alias King (his words), was born in 1837, in Astoria, NY, and raised there. He went to sea, whaling and sealing, and was in the Arctic with Capt. Sidney O. Buddington (who, by 1871 was captain of the *Polaris*). On July 26, 1871 King shipped at New York as a boat steerer, being sent to New London to complete the crew of the schooner *Franklin*, which, at that point, was getting fitted out in that port for a voyage to the South Shetlands, as tender to the bark *Peru*, which was, at that moment, in the South Seas. The *Franklin* (under the command of Capt. James M. Holmes) sailed a few days later, but, 9 days out, sprang a leak, and was forced to head back to New London for repairs. Finally, on Aug. 26, 1871, the schooner sailed out of New London, arriving in the South Shetlands after a 100-day trip. There can be no question King was on this trip, for he is on the crew list, as James A. King, 34, born NY, residence NY. It even gives his height (5'9"). About 100 miles off the Falklands, the *Franklin* met up with the *Peru*, and both ships headed for Cape Horn, for wood and provisions, which they loaded in a hurry, and then made for the South Shetlands, which they reached in eight days. Putting into Potter Cove, they found the *Francis Allyn* (Capt. Robert Glass) and the *Golden West* (Capt. Ben Rogers). The *Peru* remained in port while the *Franklin* (now under the command of Capt. Gilderdale of the *Peru*) went off looking for elephant seals. The *Franklin* remained 25 days at South Beach, and the crew got 200 barrels of blubber. Then they sailed for Penguin Island, where they left two separate sealing gangs, one commanded by Captain Holmes and the other by James M. Buddington, 2nd mate of the *Peru*. At that point a strong northeast gale blew up, and drove the *Franklin* away from the island. They headed for Desolation Island, and it was 12 days before they got back to Penguin Island, where they found a board that had been put up with a notice on it saying "Gone to Potters Cove." Capt. Gilderdale left two men on Desolation Island — an Indian,

Charles Pierce, of Groton, Conn., and the 3rd mate, Edward Townsend (of Glen Cove, Long Island, NY), and then the *Franklin* went off into the Yankee Strait, found a humpbacked whale, and lost 22 days in getting him cut up and on board. They picked up the two men from Desolation Island, and on their return to South Beach, Townsend came on board and told them he had found a seal rookery on the other side of Livingston Island, at a place known as North Beach. The ship was lying in Rugged Island Cove, off Window Island, when the skipper ordered six men (from both the *Franklin* and the *Peru*) to go ashore at North Beach — King, Townsend, Charles Gardner (of North Stonington, Conn.), Pierce, William Hess (a German, living in Camden, NJ), and Pedro Montaro da Silva (a Cape Verde islander) to form a sealing gang and take the small whaling boat ashore. King, being the boat-steerer, steered the small craft, and they landed on Window Island. Cassidy and Buddington came along too, took off the 600 skins taken earlier by Cassidy, and returned to the *Peru*. 10 days later the *Peru* returned, and King and his 5 companions turned over 1767 skins. They stayed on Window Island, Captain Gilderdale left them a further 6 days provisions, and a new big club for each man. "Kill all you can," shouted Capt. Gilderdale from the ship, "and we will be back for you within a week, 10 days at the furthest." This was standard sealing practice. As the *Peru* sailed away, the six lads went to work, and within five days had killed an almost unbelievable 4000 seals and skinned them, stacking them up neatly on a rock. That's 800 seals a day, or 160 seals a day per man. They couldn't have worked more than 10 hours a day, it's simply not possible, so, say 10 hours, that's 16 seals per man clubbed to death and skinned each and every hour, that's about one every 4 minutes. This has to be a myth. When the seals had all gone, and still no ship, neither the *Peru* nor the *Franklin*, after about 22 days (a necessary estimate by King, as it was always daylight) the men decided to leave for Potter Cove, which was anyway a general rendezvous place for sealing ships. There they might find even more skins. They left a note on a board, "We have left for St. George's Island [i.e., King George Island]; call for us there." And they rowed to Potter Cove on or about May 13, 1872. When the *Franklin* and *Peru* came back, they found the skins and the board, and sailed to Potter Cove, but couldn't land because of the breakers and the encroaching ice (it was May, after all, by this time). They fired guns and rockets, but no men appeared in answer, and then the two ships were forced to leave for South America, stranding the six men, who thus became involuntary winterers-over in Antarctica. At first they lived wholly on penguins [wrongly called "pelicans" in some 1873 newspaper reports], and two casks of bread left there by Ben Rogers of the *Golden West* (Rogers had needed the space on board for his 4000 seal skins, which is why he had dumped the bread). They built a primitive hut from wooden planks, with a workable stove inside, and the six men now burned seal blubber to stay alive through the winter. They also used sealskin to make clothes. Soon the snow had covered the hut, and the men had to dig a way out of the door, in a zig zag fashion, so as to avoid the main blast of the wind. On Sept. 25, 1872, their provisions running desperately low, they decided to take the boat to Penguin Island, but got stuck in what they called Morality Bay, and had to leave the boat. They only got back to shore by jumping from floe to floe. They lost their boat — provisions, compass, and tinder box, and they all had frozen feet. They slept that night in the snow, under a heavy northeast gale, and in the morning set out to return to Potter Cove. The snow was up to their waists, and Gardner lay down and wouldn't get up. They were forced to leave him, and never saw him again. At Penguin Point, only about 8 miles from the hut, Montaro da Silva did the same thing, and became stiff instantly. That left King and three companions, Townsend, Hess, and the Indian. They reached the hut, but Hess and Pierce's feet were so gangrenous, and Townsend's feet were so swollen, it was just a matter of time before something awful happened. One of the party lost his nose to frostbite. King forayed out every day in search of penguin eggs, Townsend could do little except hobble about the hut, and the other two were in desperate pain, the smell from their feet becoming unbearable. One day, after a ten-mile walk looking for eggs, King became sick, and that night did not bode well at all. However, King had recovered by the following morning, yet he was so weak and emaciated, that he coud no longer chase penguins. One day, he and Townsend saw a leopard seal lying there, and, taking a board each, they fought the animal for an hour until it died. The meal revived them somewhat, as they had been living almost exclusively on penguin flesh, which contains little of nutritional value. By October spring was coming and the ice started to break, but Hess and the Indian had gradually become insane. The party found an old boat that had been left by the *Francis Allyn*, and, thinking that Capt. Gilderdale (of the *Peru*) might have left provisions at South Beach (on Livingston Island), three of the lads (Pierce and Hess had recovered a bit by now) decided to take the boat there, 60 miles away, through ice-strewn seas. It had no sails or oars, so they fashioned paddles from three pieces of board. Although King asked them not to go, told them it was a foolish idea (they felt they might as well die trying, rather than stay there and slow King down), said that ships were bound to arrive at Potters Cove in November, he helped them launch the boat, and it was the last he saw of them. He was now on his own, and he was getting weaker. His food had almost run out, and the supply of seal blubber was down to almost nothing. Then, 9 days or so after the three men had left, King's fire stopped altogether. Another month went by, and King, wearing his sealskins, a pair of sandals, and a long red beard, curled up in a corner of the hut and went to sleep. Five days later, on Nov. 22, 1872, he was awakened by a man named Smith (*see* **The *Nile***) yelling to his colleagues, "There is a skeleton in this hut." King was on his feet in an instant. It was the crew of the sealing bark *Nile.* The *Nile* had left New London four months before as part of a sealing fleet which also included the *Franklin* and the *Florence*. The three ships were also bent on trying to find King and his men. There is a curious name in the crew list of the *Franklin* that year — John J. King, 21, born in New York, residing in New York. When they found him, King was described as "somewhat benumbed." John Glass, 2nd mate of the *Nile*, came in to the hut, recognized King, and said, "Why, King, are you all that is left?" Then Capt. John Williams came in, and said, "Where in hell did you come from? Go aboard the ship with Mr. Church [Erastus Church, Jr., 1st mate]." They looked for the three missing men, but all they found was a portion of the boat and a sailor's coat, on the beach near Cape Shirreff, 30 miles from the hut. King went back to Pernambuco, on the *Nile*, where he found the U.S. consul, who gave him money and took his statement. Then King took the *Lizzie P. Simmons* (Capt. Jerry Potts) back to New York, where he arrived in late April 1873. He went to Washington, and his case against the *Franklin* and the *Peru* was laid before the government. Then the press started in. They described King as a "strong, muscular man of more than medium height, and with great breadth of chest. His hands are almost blue from frequent frosting, and his face indicates long and continued exposure. He dresses very neatly in citizen's clothes, and has very little of the swagger and importance of the sailor about him." King signed on to the *Franklin* again, and left New London on July 22, 1873, bound again for the South Shetlands, this time as 3rd mate. In 1876-77 he was a crewman on the *Mary Chilton*, out of New London, again in at the South Shetlands. He's described as 35, born in Astoria, NY, height 5 foot 10. That's all fairly straightforward, allowing for a few inaccuracies. One must remember that this was a story covered extensively by the press in May and June 1873, ie. as soon as King got back to civilization. Then the story was forgotten, until Balch blundered onto the scene.

King, John *see* **USEE 1838-42**

King, Peter Wylie "Pete." b. Oct. 14, 1921, Lewisham, near London, son of David Wylie King and his wife Gertrude Parkinson. A radio officer in the Merchant Navy during World War II, he also served as radioman with the RAF for 2 years, and spent an equal time on a Norwegian cargo vessel. He moved to Adelaide (South Australia) in Oct. 1946, and wintered-over on Macquarie Island in 1948. In 1951 he was back in England, and joined FIDS, serving as radio operator at Base D for the winters of 1952 and 1953. For the next two years he was sparks on the *John Biscoe*, calling at South Georgia and the Antarctic bases. He went back to Australia, and wintered-over at Mawson Station in 1957 and 1958, at Casey Station in 1977, and at Macquarie Island again in 1979. As of 2009, he lives in a nursing home in Tasmania, but commuted 5

hours to get to the Midwinter Dinner in Hobart in June 2008.

King, Samuel H. b. 1824, Montville, Connecticut. A New London sealer who served on the *William C. Nye* from 1841 under James M. Buddington and by 1846 was 3rd mate under Capt. Henry F. Church on the same ship. By 1851 he was 1st mate on the *Jefferson*, under James M. Williams, and by 1856 was captain of the bark *Tenedos*, leaving New London on Aug. 6, 1856 and spending four summer seasons in Antarctic waters between 1856–57 and 1859–60. From 1862 to 1864 he was on the *Pioneer* and the *Isabel* in Hudson's Bay. He married Martha, and they lived in Waterford, Conn.

King, William H. *see* **USEE 1838–42**

King Cliffs. 72°18' S, 96°07' W. Ice-covered cliffs with numerous rock exposures, forming the S side of the N (i.e., the larger) arm of Morgan Inlet, on Thurston Island. First investigated in 1960 by the USN Bellingshausen Sea Expedition, and plotted in 72°14' S, 96°10' W. Named by US-ACAN in 1970, for Charles E. King, geologist here with the Ellsworth Land Survey in 1968–69. It has since been replotted.

King-David Junction. Unofficial American name given to a dry valley in southern Victoria Land.

King Edward Plateau *see* **Polar Plateau, Edward VIII Plateau**

King Edward VII Land *see* **Edward VII Land, Edward VII Peninsula**

King Edward VII Peninsula *see* **Edward VII Peninsula**

King Edward VII Plateau *see* **Polar Plateau**

King Edward VIII Gulf *see* **Edward VIII Bay**

The *King George*. A 264-ton Liverpool sealing brig, built in 1803, and owned by Thomas Tobin, Charles Horsfall, John Taylor, John Livingston, William Potter, and T.C. Potter, all prominent Liverpool businessmen. She was in at South Georgia in 1817–18 under the command of Capt. Francis Todrig (by that time Thomas Duell, Todrig's new son-in-law, was one of the owners), and again in 1818–19, under Peter Kemp (who, in 1818, had become a quarter owner). She left her home port on Sept. 26, 1820, under the command of Capt. John Roberts, bound for Tristan da Cunha, then on to the Falkland Islands, and finally the South Shetlands and the 1820–21 sealing season. Working mainly out of Rugged Island, she was the first vessel to anchor in Potter Cove. She was driven out to sea by the weather, and was badly damaged in a gale on Jan. 2, 1821. Eight of the crew were left ashore, to be picked up later by the *Indian*. She took 1820 (i.e., one thousand eight hundred and twenty) fur seal skins, and 2 tons of elephant seal oil, and was back in Buenos Aires on April 17, 1821, and then on to Rio on June 17, 1821, from there to Cork, and then on to London, where she arrived on May 31, 1821. On Oct. 11, 1821, she left London, and Gravesend on Oct. 17, bound for the South Shetlands and the 1821–22 sealing season, again under the command of John Roberts. Upon arriving at South Georgia, on Nov. 23, 1821, they assembled a tender from a kit they had brought with them, and named it the *Success*. Robert Black was placed in command of the *Success*, and the two vessels headed down to the South Shetlands, for the 1821–22 sealing season. The two vessels stayed together in 1823, went to Tristan da Cunha, took on more crewmen, and wound up in Cape Town, where Charles Bryant took command of the *King George* and the *Success* was dismantled. The *King George* went on to Hobart, arriving there on July 17, 1823. In 1824 she was whaling in the Pacific, and was condemned at Guayaquil.

Détroit de King George *see* **Nelson Strait**

King George Bay. 62°06' S, 58°04' W. A bay indenting the S coast of King George Island for 10 km, between Lions Rump on the one hand, and, on the other, Turret Point and Penguin Island, in the South Shetlands. Bransfield landed here on Jan. 22, 1820, and 2 days later named this feature as Georges Bay, or George's Bay, for the king of England, still George III (but only just; he died 5 days after Bransfield named it). When Bransfield learned of the royal succession, he immediately renamed it for the new king, George IV. It appears as Saint George's Bay on Powell's 1822 chart, and on British charts of 1838 and 1944 as Saint George Bay, thus elevating Prinny to a status he richly deserved. This canonization was perpetuated for decades. Charcot called it Baie Saint Georges, and the Spanish and Argentines called it Bahía San Jorge. On British charts of 1921 and 1948, and on a USAF chart of 1942, it appears as King George Bay, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It was re-charted by the Discovery Investigations on Jan. 1, 1937. Part of the bay appears on a French map of 1937 as King George Bay Anchorage, but as the French did not have a presence anywhere near here in the 1930s, this name must be discounted. It appears on a 1946 Argentine map as Bahía de Rey Jorge, and on a Chilean chart of 1947 as Bahía Rey Jorge, which was the name accepted by the Chilean gazetteer of 1974. It appears on a 1949 Argentine chart as Bahía King George, on a 1953 Argentine chart as Bahía 25 de Mayo, and on a 1958 chart as Bahía Veintecinco de Mayo, commemorating the date self-rule was proclaimed in Buenos Aires in 1810. Those last two names were both accepted by the Argentine gazetteer of 1970. It was photographed aerially by FIDASE in 1956–57, and was last plotted by the UK, in late 2008.

King George Bay Anchorage *see* **King George Bay**

King George Island. 62°00' S, 58°17' W. An island with the look of a moderately high massif rising to a maximum elevation of 655 m, 69 km long, and 26 km wide at its broadest, and completely covered in a thick ice-cap from which emerge some peaks, lying NE of Nelson Island and SW of Elephant Island, it extends from 57°35' W to 59°02' W, and is the largest of the South Shetland Islands. Discovered and roughly charted on its N coast by William Smith on Oct. 16, 1819. He landed on it (it was the first landing in Antarctica), included it under the overall name New South Britain, and claimed it for Britain. Someone named it around this time, as King George Island, or King George's Island, and it may not have been Smith. It may have been Bransfield in 1820. Whoever it was probably named it for George III, who died in 1820. The name was then made to commemorate the new king, George IV (*see* **King George Bay**, for a discussion of this). It was the scene of much sealing in the early 1820s, and sealers made charts of the island, or, anyway, of its coasts. In Jan. 1821, von Bellingshausen arrived here. He did not land, but he named it Ostrov Waterloo, after the battle a few years before. This became Waterloo Island in English, although the name never caught on, except among the Soviets (today the Russians tend to call it Ostrov King George). US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. The Chileans call it Isla Rey Jorge, and the Argentines call it Isla 25 de Mayo (*see* **King George Bay**). There have been at least 7 scientific stations on the island. Last plotted by the UK, in late 2008.

King George VI Channel *see* **George VI Sound**

King George VI Sound *see* **George VI Sound**

King Georges Strait *see* **Nelson Strait**

King Glacier. 83°29' S, 170°18' E. Close NW of Mount Ida, it flows N from the Queen Alexandra Range, between Beaver Glacier and the Beardmore Glacier, into the Ross Ice Shelf. Named by US-ACAN in 1966, for Lt. Hugh A. King, officer-in-charge of Hallett Station in 1964.

King Haakon VII Plateau. This is the Polar Plateau (q.v.), whereon lies the South Pole. It was named thus on Dec. 14, 1911, by Amundsen, for his king, but the term Polar Plateau is now used instead.

King Haakon VII Sea *see* **Haakon VII Sea**

[1]**King Island**. 65°30' S, 64°03' W. A small island close to the S central shore of Beascochea Bay, W of Chiloé Point, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956–57, and from ground surveys conducted by Fids from Base W that same season. Named by UK-APC on July 7, 1959, for Charles Glen King (1896–1988), U.S. biochemist and Vitamin C pioneer. It appears on a British chart of 1960. US-ACAN accepted the name in 1965.

[2]**King Island** *see* **King Peninsula**

King Leopold and Queen Astrid Coast *see* **Leopold and Astrid Coast**

King Nunataks. 69°35' S, 65°08' E. A group

of nunataks about 17 km NE of Summers Peak, in the larger group called the Stinear Nunataks, in Mac. Robertson Land. Mapped by Australian cartographers from ANARE air photos. Named by ANCA for David F. "Dave" King, aircraft engineer with the ANARE Prince Charles Mountains surveys of 1970 and 1971. Note: The coordinates for this group match 100 percent down to the tiniest detail those of the Whiteout Nunataks (q.v.), also named by ANCA.

King Oscar Land *see* **Oscar II Coast**

King Peak. 85°21' S, 88°12' W. A rock peak rising to 2200 m, on the E end of the Bermel Escarpment, 2.5 km WNW of Mount Powell, in the E part of the Thiel Mountains. Named by Bermel and Ford (*see* **Bermel Escarpment** for more details of these two gentlemen), for Clarence King (1842-1901), first director of USGS, 1879-81. US-ACAN accepted the name in 1962. Mr. King had the most bizarre double life; by day he was Clarence King, the famous geologist, and by night he was Jim Todd, a black Pullman porter, living with former Georgia-born Alabama slave Ada Copeland (who was 20 years younger than King), and producing 5 children. Ada never knew he was white until he had died. Martha Sandweiss wrote the book *Passing Strange*.

King penguin. *Aptenodytes patagonicus*. Its Spanish name is "pingüín real" (i.e., "royal penguin"). Discovered by Miller. 3 feet tall, it is similar to the emperor penguin (making the king the second largest species of penguin), but the king has brighter yellow coloring than its bigger cousin. It weighs 30 to 40 pounds, and lays a single egg. Kings are not seen in Antarctica proper (i.e., south of 60°S) anymore, although in 1833 some were seen in the South Shetlands, and in the late 1940s a Yorkshireman who happened to find himself at Base E, an expert on penguins, thought he saw a colony of kings. He was mistaken. They were emperors, which caused a perspective-setting merriment among his fellow Fids (all of whom knew the difference between an emperor and a king) that has never died down to this day. It is doubtful whether the species was ever a resident of true Antarctic climes (too cold), but some sources say that they used to live in the South Shetlands and South Orkneys, but were exterminated by the sealers.

King Peninsula. 72°12' S, 100°15' W. An ice-covered peninsula, about 160 km long, and about 30 km wide, S of Thurston Island, it forms the S side of Peacock Sound, and projects from the continental ice sheet, trending W between the Abbot Ice Shelf and the Cosgrove Ice Shelf, and terminating in the Amundsen Sea. Photographed aerially by OpHJ 1946-47, and at first thought to be a long island, King Island, as it was named by US-ACAN in 1960, for Fleet Admiral Ernest Joseph King (1878-1956), USN, who approved the preliminary work for OpHJ. It was plotted in 73°12' S, 101°00' W. Suspicions about its peninsularity were there right from the start, and grew in the late 1950s and early 1960s, until they were finally proved after studying USN air photos taken in 1966. US-ACAN accepted the new name, King Peninsula, and it has since been replotted.

King Pin. 77°27' S, 163°10' E. A nunatak rising to 820 m above Wilson Piedmont Glacier, about midway between Mount Doorly and Hogback Hill. Named by VUWAE 1958-59, for the U.S. helicopter, *King Pin*, which flew the party to this area, and performed a similar service for other NZ parties. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

King Point. 63°09' S, 55°27' W. The NW entrance point of Ambush Bay, on the N coast of Joinville Island, 15 km WNW of Fitzroy Point. Discovered and roughly charted on Dec. 30, 1842, by Ross, who named it Cape King, for Capt. (later Rear Admiral) Philip Parker King, RN (1793-1856), naval surveyor. It appears as such on a U.S. Hydrographic Office chart of 1894, and also on a British chart of 1901. It is shown on a British chart of 1938, plotted in 63°04' S, 55°45' W. It appears on a Chilean chart of 1947, as Cabo Rey, and that was the name accepted by the Chilean gazetteer of 1974 (they really, really could have done better than that). Fids from Base D surveyed it in 1953, and found it to be a point rather than a cape. UK-APC accepted the name King Point on Sept. 4, 1957, and it appears as such on a 1961 British chart. US-ACAN followed suit with the British naming in 1963. It appears in the 1970 Argentine gazetteer, as Cabo King, but they named it after Sgt. Maj. Santiago King, of the Argentine Navy.

King Range. 71°52' S, 165°03' E. A mountain range, about 22 km (the New Zealanders say 50 km) long and 8 km wide, in the NW part of Victoria Land. It is bounded on the W by Rawle Glacier and the Leitch Massif, on the NW by Black Glacier, and on the NE and E by the head of Lille Glacier. Mapped by USGS from ground surveys, and USN air photos taken betwen 1960 and 1963. Named by US-ACAN in 1964, for Cdr. James P. King, USN, staff meteorological (aerological) officer on OpDF 63 (i.e., 1962-63) and OpDF 64 (i.e., 1963-64). NZ-APC accepted the name.

King Ridge. 84°38' S, 64°05' W. A narrow ridge, 5 km long, and rising to about 990 m, 3 km SW of Wrigley Bluffs, NE of Mount Woods, in the Anderson Hills, in the central part of the Patuxent Range, in the Pensacola Mountains. Following USN air reconnaissance from Ellsworth Station in 1957-58, the name Mount King was applied by Finn Ronne to a feature in this area, after Col. Joseph Caldwell "J.C." King (1900-1977), U.S. Army, CIA Western Hemisphere Division chief in the 1950s and 1960s, who had helped get government support for Ronne on RARE 1947-48. It appears as such on Ronne's map of 1961. However, during the Antarctic Peninsula Traverse of 1961-62, there was found to be no such mountain, and 1964 USN air photos proved that. So, in 1968, US-ACAN re-applied the name King to this ridge. UK-APC accepted this new situation on Nov. 3, 1971, and it appears as such in the 1974 British gazetteer.

King Sejong Station. 62°13' S, 58°45' W. South Korea's only Antarctic scientific station. Part of the Korean Antarctic Research Program (KARP), it was established on Feb. 17, 1988, on Barton Peninsula, 70 m from the coast, and 6 km from Jubany Station, on King George Island, in the South Shetlands. Named for a king of the Yi dynasty. It consists of 6 major buildings and 2 research observatories. **1988 winter**: Soon-Keun Chang (leader). **1989 winter**: Yea-Dong Kim (leader). **1990 winter**: Jae-Sam Yang (leader). **1991 winter**: Soon-Keun Chang (leader). **1992 winter**: Suan Kim (leader). **1993 winter**: Dong-Yup Kim (leader). **1994 winter**: Kee-Soo Nam (leader). **1995 winter**: Soon-Keun Chang (leader). **1996 winter**: Yea-Dong Kim (leader). **1997 winter**: Hong-Kook Choo (leader). **1998 winter**: Sang-Hoon Lee (leader). **1999 winter**: Ho-Sung Chung (leader). **2000 winter**: Bang-Yong Lee (leader). Station leaders after 2000 (unknown).

King Valley. 77°37' S, 162°03' E. A small ice-free valley above Conrow Glacier, and W of Horowitz Ridge, in the Asgard Range of southern Victoria Land. Named by Roy E. Cameron, leader of a USARP biological party here in 1967-68, for Jet Propulsion Lab scientist Jonathan Alan King (b. Aug. 20, 1941, Brooklyn), a member of the party. Dr. King was later, for many years, professor of molecular biology at MIT. US-ACAN accepted the name in 1969.

King Wilhelm II Land *see* **Wilhelm II Land**

Kingsland, Charles *see* **USEE 1838-42**

Kingyo-iwa *see* **Kingyo Rock**

Kingyo Rock. 68°37' S, 41°00' E. A large, linear coastal rock, about 5 km S of Cape Omega, and lying on the S side of Omega Glacier, where that glacier meets the sea, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE during the period 1957-59, and so named by them on Oct. 1, 1962, as Kingyo-iwa (i.e., "goldfish rock"), for its shape. US-ACAN accepted the name Kingyo Rock in 1968. The Norwegians call it Gullfisken (i.e., "the goldfish").

The *Kinjo Maru*. Named also spelled *Kinjyo Maru*. This was the old *Nisshin Maru I*, which, in 1954, was refitted as the 11,051-ton whaler *Kinjo Maru*. She was in Antarctic waters every season from 1954-55 until 1960-61, when she transferred to the North Pacific, where she whaled until 1964.

The *Kinjyo Maru* *see* **The *Kinjo Maru***

Montañas Kinnear *see* **Kinnear Mountains**

Kinnear Mountains. 69°32' S, 67°40' W. A small group of mountains, rising to a height of over 875 m (the British say about 950 m), between Khamsin Pass to the W and Forster Ice Piedmont and Prospect Glacier to the E, at the S margin of the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Graham Land. Discovered and roughly surveyed in Sept. 1936, by BGLE 1934-37, and named by them for Scottish ornithologist Norman Boyd Kinnear (1882-1957; knighted 1950), with the British Museum of Natural History, who helped the expedition.

From 1947 to 1950 Kinnear was director of the Museum, and also a member of the FIDS scientific committee. Surveyed in more detail by Fids from Base E between 1946 and 1949, and photographed aerially by RARE 1947–48. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. Re-surveyed by Fids from Base E in Nov. 1958. It appears on a 1959 Argentine chart as Cordón Santa Micaela, but today the Argentines tend to call it Montañas Kinnear. It appears on a British chart of 1960, as the Kinnear Range.

Kinnear Range *see* **Kinnear Mountains**

Cabo Kinnes *see* **Cape Kinnes**

Cape Kinnes. 63°22' S, 56°33' W. An ice-cliffed cape forming the W extremity of Joinville Island, off the NE end of the Antarctic Peninsula. Probably first seen in Jan. 1893 by DWE 1892–93, who named it for Dundee merchant and ship owner Robert Kinnes (1854-1940), who equipped the expedition's four ships. *See* **Welchness** for more on Mr. Kinnes. It appears on the expedition's chart of 1893, and then on U.S. Hydrographic Office charts of 1894 and 1943 (albeit on the latter, Kinnes is misspelled as Kinness). It was re-surveyed by Fids on the *Trepassey*, in Jan. 1947, and appears on their 1949 chart of that expedition. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer, and on a British chart of 1962. It was re-surveyed in 1953–54, by Fids from Base D. The Argentines were calling it Cabo Kinnes as early as 1908, and therefore should have known better than to show it on a 1949 chart as Cabo Kinness. They should have known even better than to allow it that way into their 1970 gazetteer. The Chileans, of course, spelled it correctly, as Cabo Kinnes, in their 1974 gazetteer.

Kinnes Cove *see* **Suspiros Bay**

Kinness *see* **Kinnes**

Kinntanna *see* **Kinntanna Peak**

Kinntanna Peak. 71°53' S, 8°21' E. A sharp peak, rising to 2725 m, about 1.5 km N of Holtanna Peak, in the E part of Fenriskjeften Mountain, in the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Kinntanna (i.e., "the molar"). US-ACAN accepted the name Kinntanna Peak in 1967.

Kinsella Peak. 83°41' S, 56°53' W. A peak rising to about 1050 m, along the S side of Gale Ridge, 8 km W of Mount Cowart, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed by USGS in 1965–66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for William R. Kinsella, USN, aviation electronics technician who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Cape Kinsey. 69°19' S, 158°48' E. An ice-covered cape on the E side of Davies Bay, on the coast of Oates Land, in Victoria Land. Discovered in Feb. 1911 by Harry Pennell, on the *Terra Nova*, and named by him for Kent-born lawyer Joseph James Kinsey (1852–1936), a master at Dulwich (Shackleton's school) who moved to Christchurch, NZ, in 1880, and became a shipping magnate (Kinsey, Barns & Co.). His firm in Christchurch was the NZ headquarters for BNAE 1901–04, and he was official representative in Christchurch, of BAE 1907–09 and BAE 1910–13. He was knighted in 1919. Photographed aerially during OpHJ 1946–47, and plotted from these photos in 69°20' S, 158°35' E. Visited in March 1961, by an ANARE party led by Phil Law off the *Nella Dan*. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959. It has since been replotted.

Mount Kinsey. 84°55' S, 169°18' E. Rising to 3110 m (the New Zealanders say 3352 m), at the E edge of the Beardmore Glacier, 8 km SW of Ranfurly Point, in the Supporters Range, to the S of Keltie Glacier, between that glacier and Mill Glacier near their confluence with the Beardmore, in the Queen Maud Mountains. Named by Shackleton in 1909, during BAE 1907–09, for J.J. Kinsey, who conducted the affairs of the expedition in NZ (*see* **Cape Kinsey**). US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Kinsey Ridge. 75°23' S, 139°08' W. A flat-topped, partly ice-covered ridge in the middle of Strauss Glacier, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for James H. Kinsey, aurora scientist at Byrd Station in 1963. He had also summered at Byrd Aurora Substation in 1962–63. Originally plotted in 75°20' S, 139°08' W, it has since been replotted.

Kinter Nunatak *see* **Kintner Nunatak**

Kintner Nunatak. 74°55' S, 71°19' W. The southernmost of the Sky-Hi Nunataks, rising to about 1450 m, in eastern Ellsworth Land. Named by US-ACAN in 1988, as Kinter Nunatak (sic), for Paul M. Kintner, Jr. (b. July 11, 1946), who, in 1980–81, carried out research at Siple Station on VLF wave emissions and interaction. On his return to the USA, he joined the faculty of the School of Electrical Engineering, at Cornell. UK-APC accepted the name on Feb. 15, 1988. Given that Professor Kintner is not exactly obscure, UK-APC spotted the misspelling (14 years later), and renamed it in 2002. Apparently, US-ACAN has not yet done so.

Morena Kinzhal. 70°23' S, 66°45' E. A moraine on the SW side of Else Platform, at the N end of Jetty Peninsula, in Mac. Robertson Land. Named by the Russians.

Zaliv Kinzhal *see* **Kinzhal Bay**

Kinzhal Bay. 66°14' S, 101°01' E. A bay in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Zaliv Kinzhal. ANCA accepted the name Kinzhal Bay.

Kinzl Crests. 67°05' S, 66°18' W. Three peaks, rising to 2135 m (the British say about 1860 m), 5 km E of Salmon Cove and Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land. Mapped in 1959–60 by FIDS cartographers from aerial photography by FIDASE in 1956–57, and from ground surveys conducted by Fids from Base W between 1957 and 1959. In 1960 the U.S. Hydrographic Office confused this feature with Gravier Peaks. Named by UK-APC on Sept. 23, 1960, for Hans Kinzl (1898–1979), Austrian glaciologist. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965.

Kip Peak. 84°31' S, 164°28' E. A summit rising to over 3000 m, 3 km NE of Tempest Peak, on a NE-trending ridge in the Queen Alexandra Range. Named by US-ACAN in 1995, for Christopher A. "Kip" Miller, geologist at Ohio State University, who conducted field research in this area in 1990–91.

Kipling Mesa. 63°54' S, 58°12' W. A roughly triangular mesa up to 2.5 km long, and rising to elevations of between 450 and 550 m above sea level, S of Rink Point, and about 4 km NNW of Virgin Hill, on James Ross Island. Named by UK-APC on Nov. 15, 2006, for Rudyard Kipling (1865–1936), Nobel Prize-winning British poet and author of *The Jungle Book*. Several features in this area have been named for characters in that book.

Kirby, Allen W. *see* **USEE 1838–42**

Kirby Cone. 85°54' S, 136°26' W. A distinctive sharp peak on the spur which extends N from the NW end of the Michigan Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Charles H. Kirby, radioman at Byrd Station in 1961.

Kirchner Peak. 79°59' S, 159°22' E. A somewhat isolated peak, rising to 1170 m, 3 km NNE of Gaylord Ridge, in the Nebraska Peaks, in the E part of the Britannia Range. Named by US-ACAN in 2000, for Joseph F. "Joe" Kirchner, a member of the USARP geophysical field party during the Ross Ice Shelf Project, in 1974–75 and 1976–77. NZ-APC accepted the name on Feb. 20, 2001.

Kiri-dake *see* **Kiri Nunatak**

Kiri Nunatak. 68°42' S, 50°36' E. A nunatak in an isolated group of nunataks, about 40 km W of the Sandercock Nunataks (that is the distance given by the Japanese; the Australians say about 63 km), and 70 km SE of the Nye Mountains, in Enderby Land. Discovered by a JARE glaciological traverse party in Dec. 1970, and named by them as Kiri-dake (i.e., "fog nunatak"). The reason for the name is that that particular JARE was promoted by Prof. H. Ohura, of Hokkaido University, whose research interest was fog. The Japanese accepted the name on Nov. 22, 1973. On Aug. 27, 1975, ANCA translated the name.

Kiridasi-misaki. 67°56' S, 44°29' E. One of 2 promontories that project westward from the Shinnan Rocks, in Queen Maud Land. Mapped by Japanese cartographers from 1962 JARE air photos and from 1972 JARE ground surveys, and named descriptively by them on March 12, 1977 (name means "knife promontory.")

Gora Kirilova. 82°39' S, 162°57' E. A nunatak just SE of Nottarp Glacier, in the Queen Elizabeth Range. Named by the Russians.

Kirk Glacier. 72°02' S, 169°09' E. A tributary glacier flowing SE along the S side of Fischer Ridge, into Ironside Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Edward Kirk, USN, commissaryman at McMurdo Station in 1967.

Kirkaldy Spur. 76°38' S, 159°48' E. Name also seen erroneously as Kirkcaldy Spur. On the NW side of Coxcomb Peak, in the NW part of the Shipton Range, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for John Francis "Jack" Kirkaldy (1908-1990), professor of geology at Queen Mary College, London. NZ-APC accepted the name, and US-ACAN followed suit in 1965, as did ANCA on Aug. 10, 1966.

Mount Kirkby. 70°26' S, 65°15' E. A very large and prominent, linear, flat-topped mountain, about 9 km long in an E-W direction, and 4 km wide at the W end, tapering toward the E, rising to 2438 m above sea level (460 m above the plateau), about 5 km E of the Crohn Massif, on the N face of the Porthos Range, in the Prince Charles Mountains. First visited in Dec. 1956 by Bill Bewsher's ANARE Southern Party. Named by ANCA on July 22, 1957, for Syd Kirkby, who was with the party. US-ACAN accepted the name in 1965.

Kirkby, Sydney Lorrimar "Syd." b. June 13, 1933, Perth, Western Australia, son of meterologist (and later businessman) Sydney Frederick Kirkby and his wife Frances Winifred Lorrimar. Raised in Fremantle, he contracted polio at the age of 5, and his father built him up again. A surveyor since the early 1950s, he wintered-over at Mawson Station in 1956, and in Nov. 1956 was a member of Bill Bewsher's famous ANARE Southern Party, the first group to penetrate the Prince Charles Mountains with dogs. On May 19, 1957, he married Beatrice Joy Fratel. He was back at Mawson for the winter of 1960, and in the fall of that year, after collecting dogs, sledges and supplies from Mawson, he and two companions, Ric Ruker and Ken Bennett, were dropped from the expedition relief ship, near Proclamation Island, on the coast of Enderby Land, and traveled 400 km through Enderby Land from the Napier Mountains to Mawson Station. In 1961-62 he was on the *Thala Dan* cruise around the coast of Oates Land, and was back in Antarctica in 1962-63 and 1964-65, in the latter season leading the team that established an Electronic Distance Measuring traverse from Mawson to Enderby Land. He was awarded the MBE in 1965. From 1965 to 1980 he worked with the Division of National Mapping. In 1980 he was officer-in-charge at Mawson. He retired to Queensland. On May 17, 1997, he married Judith Lois Lang (they had been together since Sept. 1983). One of the great traverse specialists, Syd Kirkby surveyed more Australian territory, anywhere in the world (including Australia itself) than any other man in history.

Kirkby Glacier. 70°43' S, 166°09' E. A glacier, about 30 km long, flowing NW from the central Anare Mountains to the sea, just N of Arthurson Bluff, and about 5 km from Cape North, in northern Victoria Land. Named by ANCA for Syd Kirkby (q.v.), ANARE surveyor on the *Thala Dan* during the cruise along this coast led by Phil Law in 1962. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Kirkby Head. 67°17' S, 46°29' E. A sheer coastal outcrop on Tange Promontory, with the continental ice reaching almost to the top of its S side, at the E side of the entrance to Alasheyev Bight, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE aerial photos. First visited in Nov. 1960 by Syd Kirkby, for whom it was named by ANCA on July 4, 1961. US-ACAN accepted the name in 1965. The Russians call this feature Skaly Shesterikova. *See also* **Skala Nezametnaja**.

Kirkby Shoal. 66°15' S, 110°31' E. A small shoal area with depths of less than 18 fathoms, and extending about 140 m westwards and SSW, a couple of hundred meters NW of Stonehocker Point, on Clark Peninsula, and 3.4 km from the summit of Shirley Island, in the Windmill Islands, off the Budd Coast. Discovered during a 1962 ANARE hydrographic survey of Newcomb Bay and its approaches on the *Thala Dan*, led by Phil Law, and first charted by Tom Gale, who was on that expedition. Named by ANCA for Syd Kirkby. US-ACAN accepted the name in 1963.

Kirkcaldy Spur *see* **Kirkaldy Spur**

Mount Kirkpatrick. 84°20' S, 166°25' E. An ice-free mountain rising to 4528 m (the New Zealanders say 4518 m), it is the highest point in the Queen Alexandra Range, 8 km W of Mount Dickerson, overlooks the Beardmore Glacier, and stands midway on the W flank of that glacier, and S of The Cloudmaker. Discovered by BAE 1907-09, and named by Shackleton for Alexander Bryce Kirkpatrick (b. 1865), Glasgow stockbroker, one of the original sponsors of the expedition. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Kirkpatrick Glacier. 75°09' S, 136°00' W. A tributary glacier, about 20 km long, it flows W along the S side of McDonald Heights, to enter the E side of Hull Glacier, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Cdr. Thomas W. Kirkpatrick, U.S. Coast Guard, ship operations officer with U.S. Naval Support Force, Antarctica, during OpDF 72 (i.e., 1971-72) and OpDF 73 (i.e., 1972-73).

Islotes Kirkwood *see* **Kirkwood Islands**

Monte Kirkwood *see* **Mount Kirkwood**

Mount Kirkwood. 63°00' S, 60°39' W. A steep-sided massif, rising to 452 m, 5 km W of Entrance Point, in the extreme S part of Deception Island, in the South Shetlands. First charted (but, apparently, not named) by Foster in 1829. Surveyed in 1948-49 by an RN Hydrographic Survey unit led by David Penfold on the *John Biscoe*, and named by him as Mount David, for his elder son David A.C.D. Penfold (b. 1939, Bromley, Kent). It appears as such on their 1949 chart, and was the name accepted by UK-APC on Nov. 15, 1951, and by US-ACAN in 1953. It appears on a Chilean chart of 1953 as Monte David, and that was the name accepted by the 1974 Chilean gazetteer. However, as perfectly good a name as Mount David is, it was changed in favor an even better name, Mount Kirkwood, named for Harry Kirkwood, skipper of the *Biscoe* during the survey. It appears as such on a British chart of 1953, and was the (new) name accepted by UK-APC and US-ACAN. It was named by ArgAE 1952-53 as Monte Goyena, presumably for 19th-century independence fighter Benito José Goyena (1789-1871), and appears as such on their 1953 chart. However, there is a 1978 reference to it as Monte Kirkwood, which indicates that that is what the Argentines are tending to call it today. Last plotted by the UK, in late 2008. Note: A curiosity. The Chilean gazetteer says that ChilAE 1947-48 named it Monte David, for geologist David Reed, leader of the British base (they presumably mean Base B, on Deception Island). One, there were no geologists at Base B in the several seasons after the war. Two, there was no leader of Base B (or any other base) named Reed, or David, even remotely near this time frame. Three, there was Jack Reid, but he was at Admiralty Bay, and he was not a geologist. Four, why would the Chileans name a feature after a Fid?

Kirkwood, Henry W. "Harry." Some wags called him "Harry Plywood." b. Aug. 9, 1910, Liverpool. He joined the RNR, and on July 1, 1933, as an acting sub lieutenant, he was transferred to the *Vivid*. He was 3rd officer on the *Discovery*, 1933-35, and 2nd officer, 1935-38, several times in Antarctica. During the course of these expeditions, on July 10, 1934, he was promoted to sub lieutenant, and to lieutenant on Aug. 24, 1935. He was one of the party who found Lincoln Ellsworth and Hollick-Kenyon in Jan. 1936. He served in World War II, in command of the *Puffin* and other ships, won the DSC and bar, and was promoted to lieutenant commander. On Dec. 31, 1946 he was promoted to commander. He was skipper of the *John Biscoe*, 1948-50, won the OBE in 1950, and was captain of the *Endeavour* (the *John Biscoe* renamed), 1956-58. Indeed, he had recommended his ship for use in BCTAE 1955-58, and skippered her during the expedition, being loaned to the expedition for 2 years, at the rank of acting captain. On Aug. 12, 1958, he became boom defence officer for Portsmouth, Portland, and Southampton, and then went out to Singapore, as commander of the naval base there. He retired as a captain on Aug. 9, 1960, and in 1961 created the British Residency Marine department, in the New Hebrides. He retired in 1965 (Frank Hunt took over), and he died in Scarborough, Yorks, on Sept. 25, 1977.

Kirkwood Islands. 68°22' S, 69°00' W. A

scattered group of reefs and rocks with one larger island, on the SW side of Faure Passage, 24 km SSW of the Faure Islands, off the Fallières Coast of Graham Land. ChilAE 1946-47 named a group of islands in this area as Islas Iquique, after the *Iquique*, and this was probably the group. Same thing with ArgAE 1948-49, who named them Islotes del Centro (because they are in the central part of Marguerite Bay). In 1948 RARE 1947-48 named them the Gabbro Islands, for the type of rock exposed here. Sighted in Feb. 1949 by Fids on the *John Biscoe*, who made a running survey of the islands in Feb. 1950, and named by them as the Kirkwood Islets, for Harry Kirkwood. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. An Argentine chart of 1956 has the name Islotes Harriague, referring to either this group or the Faure Islands. On July 7, 1959, UK-APC redefined this group as the Kirkwood Islands, and US-ACAN followed suit in 1963. ArgAE 1959-60 named them Islotes Marinero Ciotti, after a sailor on the *Madryn*, who died on active service in 1942-43 (not in Antarctica). They appear on that expedition's 1960 chart, and, as cumbersome as the name is, it was accepted by the Argentine gazetteer of 1970. They appear on a Chilean chart of 1962 as Islotes Kirkwood, and that was the name accepted by the 1974 Chilean gazetteer. An American chart of 1975 shows Kirkwood Island. This may be a mistake, or it may refer to the main island in the group. An American automatic weather station was installed here in May 2001, at an elevation of 30 meters.

Kirkwood Islets *see* **Kirkwood Islands**

Kirkwood Range. 76°30' S, 162°00' E. A massive coastal range of mountains extending N-S between, on the one hand Mawson Glacier and, on the other Fry Glacier and Mackay Glacier, in southern Victoria Land. Features in this range include Shoulder Mountain, Mount Creak, Mount Endeavour, Mount Chetwynd, and Mount Gauss. A broad, low-level platform on the seaward side of the range is occupied by the Oates Piedmont Glacier. Named by the NZ Northern Survey Party of BCTAE 1956-58, for Harry Kirkwood. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Kirsty Island. 67°36' S, 68°16' W. A small island with outcrops of reddish rock, just W of Lagoon Island, and E of Léonie Island, in Ryder Bay, Adelaide Island. Photographed aerially by FIDASE in 1957. The island was used by scientists at Rothera Station as a site for marine research and recreation. Named by UK-APC on Sept. 29, 2004, for BAS marine biologist Kirsty Margot Brown who was killed by a leopard seal on July 22, 2003 (*see* **Deaths in Antarctica**).

Kirton Island. 67°30' S, 63°38' E. A small coastal island, the southern of two islands rising to about 30 m above sea level in the Robinson Group, 5 km W of Cape Daly, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who, apparently, did not name it. First visited in July 1959 by an ANARE party from Mawson Station. Named by ANCA on Oct. 11, 1960, for Malcolm Kirton (b. Oct. 11, 1932), geophysicist at Mawson in 1959, and seismologist at Wilkes Station in 1963. US-ACAN accepted the name in 1965.

Ensenada Kirwan *see* **Kirwan Inlet**

Kirwan, John William Patrick. b. Nov. 15, 1938, Stockport, Cheshire, as John O'Kirwan (he would drop the O') son of William O'Kirwan and Josephine van der Poel. After graduating in physics (with honors) from university in Manchester, he joined FIDS in June 1960, and trained to be a geophysicist at Eskdalemuir Observatory, in Dumfriesshire. He left Southampton in Nov. 1960, bound for Montevideo and Port Stanley, and from there on to Deception Island for a short stop, and then to Base F, where he wintered-over as geophysicist in 1961 and 1962. He left Antarctica on the *Shackleton*, arriving back in England in May 1963 (by which time FIDS had become BAS). After writing up his results at Edinburgh University, he joined Schlumberger (the oilfield services corporation) in Jan. 1964, and in April 1966 he married Lieselotte Schwedt. He later moved to Winchester.

Kirwan Escarpment. 73°25' S, 3°30' W. A prominent NW-facing escarpment, trending NE-SW for about 150 km, and featuring cliffs of a moderate height as well as prominent rock spurs interspersed with glaciers and steep ice slopes, S of Penck Trough and the Ritscher Upland, and N of Amundsenisen, in Queen Maud Land. At least the N end of this escarpment, i.e., the Neumayer Cliffs, was included in the air photos taken by GermAE 1938-39, but even then was not revealed clearly. Mapped more accurately by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Named by US-ACAN in 1962, for Archibald Laurence Patrick "Larry" Kirwan (1907-1999), director and secretary of the Royal Geographical Society. The Norwegians call it Kirwanveggen.

Kirwan Inlet. 72°21' S, 68°50' W. An ice-filled inlet, 20 km wide at its mouth, indenting the coast for 11 km, it opens on George VI Sound, and merges almost imperceptibly with the rising ice slopes at the SE corner of Alexander Island. Roughly mapped by FIDS in 1949, and named them for Laurence P. Kirwan (*see* **Kirwan Escarpment**). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Ensenada Kirwan.

Kirwanveggen *see* **Kirwan Escarpment**

Lednik Kiselëva. 65°54' S, 102°57' E. A glacier. Named by the Russians for Yegor Kiselyov. This glacier may well be the Russian name for another glacier (*see* **Lednik Angarskij** for details of this).

Kiselyov, Yegor. Leading seaman on the *Vostok* during von Bellingshausen's expedition of 1819-21. He kept a journal, which was only discovered in the 1930s, in Suzdal', and published in 1941, in the travel journal *Vokrug Sveta* (*Round the World*) (No. 4, pp. 40-43).

Kista *see* **Kista Nunatak**

The *Kista Dan*. A Danish ship that had several incarnations, the two main ones being as ANARE's relief vessel to Antarctica between 1953 and 1957, and then as a FIDS relief vessel between 1957 and 1967. **1952:** The *Kista Dan* was built by Lauritzen's Shipyards, at Aalborg, Denmark, with a view to using her in the newly-developing lead-mining trade in eastern Greenland. She was 1239 tons, 213 feet long, 37 feet in width, and with 1560 hp diesel engines capable of 12 knots. She had a welded icebreaker hull, and a fully-enclosed crow's nest, complete with navigational instruments. She also had 2 holds, and a heavy lift derrick. She could take 24 passengers. Bill Pedersen was 2nd mate. **1952-53**: The *Kista Dan* was in the area of the Weddell Sea, while they were making the Alan Ladd movie *Hell Below Zero*. Hans Christian Petersen was captain, and his wife Edna was on board, acting as a stand-in for the movie. Danish crew, including Bill Pedersen (second mate). **March 5, 1953**: The *Kista Dan* arrived in Southampton from South Georgia. **Dec. 11, 1953**: The *Kista Dan* arrived in Melbourne from Europe, chartered from the Danes by ANARE as their first real expedition ship to the Antarctic proper. Petersen still skipper. Mikkelsen (1st mate), Bill Pedersen (2nd mate), John Hansen (coxswain). **Dec. 12, 1953**: The *Kista Dan* left Melbourne. **Dec. 31, 1953**: The *Kista Dan* arrived back in Melbourne. **Jan. 4, 1954**: The *Kista Dan* left Melbourne. **Jan. 9, 1954**: The *Kista Dan* reached Heard Island. **Jan. 23, 1954**: The *Kista Dan* left the Kerguélen Islands, bound for Antarctica. **Feb. 1, 1954**: The *Kista Dan* entered the pack-ice. **Feb. 11, 1954**: The *Kista Dan* arrived at Horseshoe Harbor. **Feb. 23, 1954**: The *Kista Dan* left the new Mawson Station. **March 1, 1954**: The northbound *Kista Dan* passed the Vestfold Hills. **March 4, 1954**: The *Kista Dan* headed out of Antarctic waters. **March 31, 1954**: The *Kista Dan* back in Melbourne. From here she would go to the Arctic, and work there for the summer, then back down to Melbourne in time for the austral summer. This would be a pattern until the Australians replaced the *Kista Dan* in 1957. **Jan. 7, 1955**: The *Kista Dan* left Melbourne, bound for Heard Island. **Jan. 22, 1955**: The *Kista Dan* reached Heard Island, and from there left for Antarctica. **Feb. 10, 1955**: The *Kista Dan* arrived at Prydz Bay. **March 23, 1955**: The *Kista Dan* arrived back at Melbourne. **Dec. 5, 1955**: The *Kista Dan* arrived in Melbourne, under Capt. Petersen. She had been painted bright red for visibility in polar conditions (she had formerly been white), the first ship to do this. **Dec. 6, 1955**: The *Kista Dan* left Melbourne, bound for Macquarie Island. **Dec. 11, 1955**: The *Kista Dan* arrived at Macquarie Island, with 6 ewes, a ram, poultry, and 150 seedling trees. **Dec. 16, 1955**: The *Kista Dan* left Macquarie Island. **Dec. 22, 1955:** The *Kista Dan* arrived back in Melbourne. **Dec. 27, 1955**: The *Kista Dan* left Melbourne, bound for Antarctica. **Jan. 5, 1956**: The *Kista Dan* arrived at Davis Bay. **Jan. 9, 1956**: The *Kista Dan* left

Davis Bay. **Jan. 19, 1956**: The *Kista Dan* in Vincennes Bay, and at the Balaena Islands. **Jan. 20, 1956**: The *Kista Dan* left the Balaena Islands. **Jan. 21, 1956**: The *Kista Dan* arrived at the Windmill Islands. **Jan. 30, 1956**: The *Kista Dan* arrived at Mirnyy Station. **Jan. 31, 1956**: The *Kista Dan* arrived at the Haswell Islands. **Feb. 10, 1956**: The Kista Dan got caught in the ice in the Davis Sea. **Feb. 13, 1956**: The *Kista Dan* blasted her way out of the ice. **Feb. 17, 1956**: The *Kista Dan* arrived at Mawson Station. **March 4, 1956**: The *Kista Dan* left Mawson Station, bound for Heard Island. **March 9, 1956**: The *Kista Dan* arrived at Heard Island, and left later that day. **March 11, 1956**: The *Kista Dan* arrived at the Kerguélens. **March 14, 1956**: The *Kista Dan* left the Kerguélens. **March 26, 1956**: The *Kista Dan* arrived back at Melbourne, with 24 Huskies on board. **Nov. 27, 1956:** The *Kista Dan* left Melbourne, bound for Macquarie Island, with a new skipper, Kaj Hindberg. **Dec. 2, 1956:** The *Kista Dan* arrived at Macquarie Island. **Dec. 6, 1956**: The *Kista Dan* left Macquarie Island. **Dec. 11, 1956:** The *Kista Dan* arrived back in Melbourne. **Dec. 17, 1956:** The *Kista Dan* left Melbourne, bound for Antarctica. **Jan. 10, 1957**: The *Kista Dan* in the area of the Vestfold Hills. **Jan. 11, 1957**: The *Kista Dan* in the area of the future Davis Station. **Jan. 12, 1957**: Offloading began at Davis Station. **Jan. 20, 1957**: The *Kista Dan* left Davis Station. **Jan. 25, 1957**: The *Kista Dan* in Vincennes Bay. **Feb. 2, 1957**: The *Kista Dan* arrived at Mawson Station at midnight. **Feb. 17, 1957**: The *Kista Dan* left Mawson, bound for Davis. **Feb. 20, 1957**: The *Kista Dan* arrived back at Davis Station. **Feb. 21, 1957**: The *Kista Dan* left Davis, headed for the Kerguélen Islands. **Feb. 27, 1957**: The *Kista Dan* at the Kerguélens. **March 12, 1957**: The *Kista Dan* arrived back in Melbourne. **Jan. 20, 1958**: The *Kista Dan* left Davis Station. **March 1960**: While transporting FIDS personnel from base to base, the *Kista Dan* got caught in the pack-ice at Marguerite Bay, and had to be rescued by the *Glacier*. The *Glacier*'s tow ropes were too big for the little ship, and so the American cutter smashed ice while the *Kista Dan* followed. **Dec. 3, 1960**: The *Kista Dan* left Southampton, bound for Montevideo. **Dec. 28, 1960**: The *Kista Dan* arrived at Montevideo, where they took on board an Otter aircraft. **Dec. 30, 1960**: The *Kista Dan* left Montevideo, bound for Port Stanley. **Jan. 2, 1961**: The *Kista Dan* arrived at Port Stanley. **Jan. 7, 1961**: The *Kista Dan* left Port Stanley. **Jan. 11, 1961**: The *Kista Dan* arrived at Base B, where the Otter was offloaded. **Jan. 12, 1961**: The *Kista Dan* at Admiralty Bay (Base G). **Jan. 29, 1961:** The *Kista Dan* arrived at Halley Bay. **March 19, 1961**: The *Kista Dan* arrived in Southampton. **1961**: Capt. Hindberg left the *Kista Dan*, replaced by Leif A. Petersen. **Feb. 4, 1962**: The *Kista Dan* left Halley Bay, bound for Southampton. **March 26, 1962**: The *Kista Dan* arrived with several Fids, back at Southampton. **1962-63**: Capt. Petersen. **1963-64**: Capt. Petersen. **Dec. 2, 1963**: The *Kista Dan* left Southampton. **1964-65**: Capt. Petersen. **1965-66**: Capt. Anders Jacobsen. **1967**: The *Kista Dan* was sold by Lauritzen's to the Karlsen Shipping Co., in Halifax, N.S., and renamed the *Martin Karlsen*. **1967-68:** As the *Martin Karlsen,* she did an Argentinian tour to Antarctica with ArgAE 1967-68 (Captain O. Ivanissevich). She served in the Arctic for the Bedford Insitute of Oceanography, in 1979 was sold to the Bowring Steamship Co., and transferred to one of their subsidiaries, the Bearcreek Oil & Shipping Co., and renamed the *Benjamin Bowring*. In 1980-81, skippered by Oliver St. John Steiner, she was conducting seismic surveys in the Ross Sea, and then was chartered to the Trans-Globe Expedition until the end of 1982. She was trapped in the ice until rescued by the *Polar Star*. In 1983 she was sold to Halba Shipping, in London, and renamed the *Arctic Gael*. In 1984 she was sold to Freighters & Tankers, Ltd., renamed the *Olimpiakos*, and laid up. They took her to Cos, where she was fitted out as a yacht by Greek shipping tycoon John Goulandris. However, she was laid up until June 1997, when she was bought by Polar Ventures, with a view to using her in Antarctic waters pollution control. However, so long being laid up had made her unseaworthy, so Polar Ventures was forced to sell her in 1998 to a breaker's yard in Turkey, where she was scrapped.

Kista Nunatak. 69°47' S, 37°17' E. A nunatak, 0.8 km S of Såta Nunatak, on the SE side of Fletta Bay, on the SW coast of Lützow-Holm Bay, on the Prince Harald Coast. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Kista (i.e., "the chest"). US-ACAN accepted the name Kista Nunatak in 1968.

Kista Rock. 69°44' S, 74°24' E. A small island, about 1.5 km N of Mount Caroline Mikkelsen, it is the southernmost of a chain of small islands trending N-S off the coast of East Antarctica. Photographed by LCE 1936-37, and first plotted (but not named) from these photos in 1946 by Norwegian cartographers. Named by the ANARE personnel who landed here by aircraft on Aug. 26, 1957 (they obtained an astrofix), for their ship, the *Kista Dan*. ANCA accepted the name on April 29, 1958, and US-ACAN followed suit in 1961.

Kista Strait. 67°35' S, 62°51' E. The body of water between the Flat Islands and the Jocelyn Islands, in Holme Bay, off the Mawson Coast of Mac. Robertson Land. Photographed by LCE 1936-37, and first plotted (but not named) from these photos by Norwegian cartographers in 1946. First navigated by the *Kista Dan* in 1954, en route to what was to become Mawson Station. Named by ANCA on July 4, 1961. US-ACAN accepted the name in 1965.

Kistler Valley. 82°30' S, 51°30' W. A mostly ice-filled valley in the east-central part of the Dufek Massif, between Sapp Rocks and Forlidas Ridge, and which heads in the amphitheatre between Nutt Bluff and Preslik Spur, in the Pensacola Mountains. Named by US-ACAN in 2001, for Ronald Wayne Kistler (b. May 18, 1931, Chicago), USGS research geologist from 1960, whose lab research and scientific reporting with Art Ford (q.v.) between 1979 and 2000 on the geochronology and petrology of the Dufek intrusion of the northern Pensacolas was critical for the understanding of the evolution of this major igneous complex.

Kita-hanare-iwa. 71°17' S, 35°54' E. A small rock exposure at the NE extremity of the Queen Fabiola Mountains. Surveyed by JARE in 1960. Named by the Japanese on Nov. 24, 1981 (name means "north solitary rock").

Kita-iwa-jima *see* **Kita-iwa-zima**

Kita-iwa-zima. 68°59' S, 39°37' E. A small island, with a highest point of 6.3 m above sea level, about 300 m N of Iwa-zima, off East Ongul Island. Named by the Japanese on July 10, 2008. The name is also seen as Kita-iwa-jima.

Kita-karamete-iwa *see* **Kita-karamete Rock**

Kita-karamete Rock. 69°04' S, 35°23' E. A very small rock exposure about 13 km NW of Minami-karamete Rock, in the E part of the Riiser-Larsen Peninsula, in Queen Maud Land. Photographed aerially by JARE in 1970-71. The Japanese named it Kita-karamete-iwa (i.e., "north back gate rock") on June 22, 1972. They plotted it in 69°08' S, 35°09' E. US-ACAN accepted the name Kita-karamete Rock in 1975, and with new coordinates.

Kita-nagaone. 72°34' S, 31°16' E. The northern of 3 parallel ridges, in the N part of the Belgica Mountains. Photographed aerially by JARE in 1976, and surveyed by JARE 1979-80. Named by the Japanese on Nov. 24, 1981 (name means "nothern long ridge").

Kita-no-seto *see* **Kirano-seto Strait**

Kita-no-seto *see* **Kitano-seto Strait**

Kitano-no-ura *see* **Kitano-ura Cove**

Kita-teøya. 69°03' S, 39°34' E. The northernmost of the Te Islands. Photographed aerially by LCE 1936-37, and first mapped as part of the island group by Norwegian cartographers in 1946, using these aerial photos. Accurately mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by the Japanese on March 12, 1977 (the name means "the northern of the Teøyane" — Teøyane being the Norwegian name for the group).

Kita-zima. 68°56' S, 39°37' E. The most northeasterly of the Flatvaer Islands. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. More accurately mapped by Japanese cartographers from ground surveys conducted by JARE in 1957, and named by them on June 22, 1972 (name means "north island").

Kitami Beach. 69°01' S, 39°34' E. A beach, about 500 m long, along the innermost (southern) part of Kitano-ura Cove, on the N side of East Ongul Island, in the Flatvaer Islands, off the Prince Olav Coast. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE in 1957, and named by them on May 1, 1963, as Kitami-hama (i.e., "north-looking beach"). US-ACAN accepted the translated name Kitami Beach in 1968. The Norwegians

call it Nordvendfjøra (which means the same thing).

Kitami-hama *see* **Kitami Beach**

Kitano-seto Strait. 69°00' S, 39°35' E. A narrow strait between Nesøya and East Ongul Island, in the Flatvaer Islands. Photographed by LCE 1936-37, and mapped by Norwegian cartographers in 1946 from these photos. Surveyed by JARE in 1957, and named by the Japanese on May 1, 1963, as Kita-no-seto (i.e., "northern strait"), because of its N location within the island group. US-ACAN accepted the name Kitano-seto Strait in 1970.

Kitano-ura *see* **Kitano-ura Cove**

Kitano-ura Cove. 69°00' S, 39°36' E. An indentation in the N side of East Ongul Island, in the Flatvaer Islands, off the Prince Olav Coast. Photographed by LCE 1936-37, and mapped in 1946 by Norwegian cartographers from these photos. Surveyed by JARE in 1957, and named by the Japanese on May 1, 1963, as Kitano-ura, or Kita-no-ura (i.e., "the northern cove"). US-ACAN accepted the name Kitano-ura Cove in 1968. The Norwegians call it Jurpollen (i.e., "udder poll"—a "poll" being a small, rounded Norwegian fjord).

Kitchen, Joseph. Appointed captain of the *Ann*, on July 27, 1821, he took that vessel to the South Shetlands for the 1821-22 season. Apparently he had been a mate on the *Cora*.

Kitchen Point. 62°23' S, 59°21' W. A low, rocky spit, it forms the E point of Robert Island, 8.8 km SW of Harmony Point (the W extremity of Nelson Island), in the South Shetlands. Being ice-free, it stands out due to its dark color. Named by ChilAE 1946-47, as Punta Labbé, for Custodio Labbé Lippi (*see* **Labbé Rock**). It appears as such on a Chilean chart of 1951, and was the name accepted by the Chilean gazetteer of 1974. The trouble was/is, ChilAE 1946-47 had, apparently, named another feature as Punta Labbé (in Discovery Bay, Greenwich Island, not too far away), and so there were, for a while (and may still be) two points named by the Chileans as Punta Labbé. This point on Robert Island was photographed aerially by FIDASE in 1956-57. UK-APC found the double naming intolerable (and rightly so), and so, on Aug. 31, 1962, named the Robert Island one as Kitchen Point, for Joseph Kitchen. As such, it appears on a British chart of that year. In one of the bizarrely inappropriate of all Antarctic place-name translations, the Argentines have rendered it as Punta Cocina (i.e., "kitchen point"). Last plotted by the UK, in late 2008. In 2005, UK-APC accepted the name Labbé Point (q.v.) for the one on Greenwich Island. US-ACAN have not become involved in any way with this feature.

Kitching Ridge. 85°12' S, 177°06' W. A prominent rock ridge on the W side of Shackleton Glacier, between Bennett Platform and Matador Mountain, in the Queen Maud Mountains. Named by US-ACAN in 1971, for South African vertebrate paleontologist James William Kitching (b. Feb. 6, 1922. d. Dec. 24, 2003), who first found fossils here while he was an exchange scientist with the Ohio State University's Byrd Institute of Polar Studies 1970-71 geological party.

Kite Stream. 77°23' S, 162°07' E. A meltwater stream in the Victoria Valley, it flows W from Victoria Lower Glacier into Lake Vida, in the area of Wright Valley, in southern Victoria Land. Named by US-ACAN for Steven Kite, University of Maine geological field assistant with the Victoria Valley party of 1977-78. Mr. Kite was conducting research into the glacial geology of the Victoria Valley when, not as part of his research, he found a 43-pound meteorite iron in a moraine 0.5 km inland from Victoria Lower Glacier.

Kiten Point. 63°53' S, 58°26' W. Forms the S side of the entrance to Chudomir Cove, 4.3 km SW of Pitt Point, 7.56 km SE of Mount Reece, and 7.15 km NW of Lagrelius Point, on James Ross Island, at Prince Gustav Channel, in the area of the Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the town of Kiten, in southeastern Bulgaria.

Lago Kitesch *see* **Lake Kitezh**

Kiteschbach. 62°12' S, 58°58' W. A little stream that flows on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans, in association with nearby Lake Kitezh, which this stream feeds ("Kitesch" being the German form of the name).

Lake Kitezh. 62°12' S, 58°58' W. A lake, 0.5 km long, NW of Ardley Cove, near the center of Fildes Peninsula, it is the largest of many lakes on that peninsula, on King George Island, in the South Shetlands. Used as a reservoir by nearby Bellingshausen Station and Teniente Rodolfo Marsh Station. The name Ozero Kitezh was used in a 1973 geographical report by two 1971 wintering-over members of Bellingshausen, Leonid Sergeyevich Govorukha and Igor Mikhaylovich Simonov (base leader), and was named after the legendary Russian city of Kitezh that disappeared into the water rather than be taken by the Mongols. The 2 Russians translated the name as Lake Kitezh in their English-language versions, and that was the name accepted by UK-APC on Feb. 7, 1978, and the one that appears in the 1980 British gazetteer. US-ACAN accepted that name too. It appears as such on a British chart of 1990. It appears on a 1984 Brazilian map as Lago Kitesch.

Ozero Kitezh *see* **Lake Kitezh**

Kitney Island. 67°31' S, 63°04' E. A small island, about 1.5 km ENE of Smith Rocks, off the coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who, although they did not name this island individually, plotted it as part of a small group named by them as Spjotøyskjera (*see* **Wiltshire Rocks**). Re-mapped by Australian cartographers from 1956 ANARE air photos. Named by ANCA for Victor J. "Vic" Kitney, supervising radio technician who wintered-over at Mawson Station in 1968 and 1983. US-ACAN accepted the name in 1973.

Proliv Kitovyj *see* **Kitovyy Strait**

Kitovyy Strait. 67°39' S, 45°59' E. A strait between the McMahon Islands and the Thala Hills, on the coast of Enderby Land. Photographed aerially by ANARE in 1956, and by SovAE 1957, the latter naming it Proliv Kitovyj (i.e., "whale strait"). ANCA translated the name as Kitovyy Strait on July 31, 1972.

Kitson, Edward Wollaston "Ned." b. March 7, 1888, Paynsford, Newton Abbot, Devon, son of Captain (later major) Edward Kitson, of the Indian Army (who had been at Lucknow with Campbell), and his wife Henrietta Althea Karskale, and also younger brother of Admiral Sir Harry Kitson. He joined the Navy in 1903, was promoted to sub lieutenant in 1908, and to lieutenant in 1909. In World War I he was navigator on various ships, including the *Psyche*, the *Prince Rupert*, the *Cornwall*, and the *Suffolk*, and in 1917 was promoted to lieutenant commander. From 1922 to 1923 he was navigating officer on the *Calcutta*, and in 1923 was promoted to commander. In 1924 he married Evelyn Marjorie, known as Marjorie (his brother also married a Marjorie), and later that year went out to South Africa to be King's harbormaster at Simonstown. From 1928 to 1930 he was on the *Kent*, with the China Squadron, as fleet navigating officer, then on the staff of the Navigation School, and finally was assistant King's harbormaster at Devonport and Bereham, a job he relinquished in Sept. 1933. On his 46th birthday, 1934, he retired as captain, and lived at Lustleigh, Devon. World War II brought him back into action, and he was given command of the *Carnarvon Castle* on April 10, 1942. He was in Antarctica in 1942-43, but on this cruise he contracted an illness, and died on Feb. 18, 1944.

Kitticarrara Glacier. 77°43' S, 163°02' E. A short, steep glacier, 1.5 km S of Howard Glacier, and S of Nussbaum Riegel, in the Kukri Hills, flowing ESE into Ferrar Glacier, in southern Victoria Land. Named by Frank Debenham of Grif Taylor's Western Journey Party, during BAE 1910-13, for a sheep station near Jugiong, NSW. Frank Debenham suggested the name. US-ACAN accepted the name in 1964, and NZ-APC followed suit. The station was named for Kitticarrara Creek, and the word "kitticarara" is an Aborigine name for the brown kingfisher (*Dacelo gigas*).

Kivi Peak. 86°22' S, 129°39' W. Rising to 2390 m, it marks the S end of Cleveland Mesa, on the E side of the Michigan Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Stephen Kivi (b. Oct. 11, 1940. d. Sept. 1968), a graduate of the University of Florida, utilitiesman at Byrd Station in 1962. Mr. Kivi, of Lake Worth, was shot to death by 2 sheriff's men in Marion County, Fla., while a burglary suspect. Two years later his widow, Jo Ann (they had been married 3 years) sued the sheriff's department for $200,000 dollars, and lost.

Kiwi Pass. 80°48' S, 158°00' E. Also called Kiwi Saddle. A high pass in the range just NE

of Mount Egerton, in the Churchill Mountains. Named by the Northern Party of NZGSAE 1960-61, who used this pass to cross the range. A kiwi, is, of course, a New Zealander. NZ-APC accepted the name, and ANCA followed suit on Nov. 24, 1961. US-ACAN accepted the name in 1965.

Kiwi Saddle *see* **Kiwi Pass**

Kiwibukta. 68°52' S, 90°26' W. A small bay between the point the Norwegians call Michaylovodden and the most northeasterly part of the coast they call Vostokkysten, on the E side of Peter I Island. The sea in this bay is green, like the color of kiwi fruit. Named by the Norwegians ("kiwi bay").

Kizahashi Beach. 69°28' S, 39°35' E. A beach with many steps (representing the old shoreline), at the W head of Osen Cove, Skarvsnes Foreland, on the coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1962 and 1973, and named by them on June 22, 1972, as Kizahasi-hama, or Kizahashi-hama (i.e., "stair beach"). US-ACAN accepted the name Kizahashi Beach in 1975.

Kizahashi-hama *see* **Kizahashi Beach**

Kizahasi-hama *see* **Kizahashi Beach**

Mount Kizaki. 70°45' S, 65°46' E. A mountain 6 km SW of Mount Dowie, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Koshiro "Koshi" Kizaki, of the department of geology and mineralogy, at Hokkaido University, in Sapporo, glaciologist at Mawson Station in 1966. He was later at the geological laboratory at Ryukyu University, in Naha. He led JARE 21 (1979-81). US-ACAN accepted the name in 1971.

Kizer Island. 77°16' S, 150°48' W. An ice-covered island about 24 km long, it is the most westerly of the large, grounded islands in the Sulzberger Ice Shelf, 16 km SW of Cronenwett Island. Mapped by USGS from ground surveys, and USN air photos taken between 1962 and 1965. Named by US-ACAN in 1966, for Lt. (later Lt. Cdr.) Theodore Louis Kizer (b. Jan. 17, 1936), USN, helicopter pilot on the *Glacier*, who sighted the island aerially on Jan. 26, 1962. Originally plotted in 77°14' S, 150°50' W, it has since been replotted.

Kjakebeinet. 73°48' S, 14°52' W. A mountain, E of Steinkjeften, in the S part of the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. Named descriptively by the Norwegians (the name means "the jaw bone").

Kjelbotn, Olav Kornelius. b. Oct. 5, 1898, Fosnes, Nord-Trøndelag, Norway, as Olav Kristoffersen, son of farm owner Kristoffer Kjeldbotnet and his wife Oline Johannesdatter (the Norwegians followed a different naming pattern in 1898). He was an Olympic skier (1928, St. Moritz), and in 1933, during a Norwegian whaling expedition, with Devold and Riiser-Larsen, he attempted a sledging exploration of the Princess Ragnhild Coast. He had had much Arctic experience with dogs and sledging. He died on May 17, 1966, in Namsos, Norway.

Kjelbotn Peak. 72°14' S, 26°34' E. Rising to 3210 m, SE of Isachsen Mountain, between that mountain and Devold Peak, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Kjelbotnnuten (i.e., "Kjelbotn peak"), for Olav Kjelbotn. US-ACAN accepted the name Kjelbotn Peak in 1966.

Kjelbotnnuten *see* **Kjelbotn Peak**

Kjella. 72°16' S, 26°11' E. A mountain at the E side of Mjell Glacier, in the Sør Rondane Mountains. Name means "the old woman" in Norwegian. *See also* **Kallen** ("the old man").

Kjellberg, Sigvard. b. Sweden. Photographer with the Norwegian air unit of NBSAE 1949-52.

Kjellberg Peak. 72°56' S, 3°45' W. A small rock peak at the head of Frostlendet Valley, N of Huldreslottet Mountain, about 6 km W of Ryvingen Peak, in the S part of the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NBSAE 1949-52, and from air photos taken during the same expedition, and named by them as Kjellbergnuten, for Sigvard Kjellberg. US-ACAN accepted the name Kjellberg Peak in 1966.

Kjellbergnuten *see* **Kjellberg Peak**

Cabo Kjellman *see* **Cape Kjellman**

Cape Kjellman. 63°44' S, 59°24' W. Marks the E entrance point of Charcot Bay, on the W side of Trinity Peninsula, dividing that peninsula from the Davis Coast, on the W coast of Graham Land. Charted in Nov.-Dec. 1902, by SwedAE 1901-04, and named by Nordenskjöld for Prof. Frans Reinhold Kjellman (1846-1907), Swedish botanist and Arctic explorer. It appears on a 1911 chart, as Cape Olsen, presumably named for Hjalmar Olsen (q.v.). It appears as Cape Kjellman on a British chart of 1921, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Jan. 28, 1953. It appears as such in the 1955 British gazetteer, and also on a 1962 British chart. It appears on a 1947 Chilean chart as Cabo Kjellman, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was surveyed by Fids from Base D in 1948, and again between 1959 and 1961. It appears, misspelled, as Cape Kiellman, in the 1974 British gazetteer.

Kap Kjellman *see* **Cape Kjellman**

Kjerka *see* **Mount Kjerka**

Mount Kjerka. 68°03' S, 66°04' E. Rising to 863 m, at the S end of the Gustav Bull Mountains, 17.5 km (the Australians say about 22 km) S of Mount Marsden, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kjerka (i.e., "the church"). US-ACAN accepted the name Mount Kjerka in 1947. ANCA named it Church Mountain on Aug. 20, 1957. The feature was a terminal station in a tellurometer traverse from Mawson Station by John Manning in 1967.

Kjerringa. 71°54' S, 2°50' E. A small nunatak S of Gubben, in the N part of Jutulsessen Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the wife"). Where there is a wife, there is a husband [*see* [2]**Gubben**]. Note: As the English do, the Norwegians often refer to their wife as "the old woman."

Mount Kjerringa. 66°29' S, 55°11' E. An isolated peak, rising to 1220 m, 13 km N of Aker Peaks, and 44 km (the Australians say about 50 km) westward of Magnet Bay, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kjerringa (i.e., "the wife"). US-ACAN accepted the name Mount Kjerringa in 1961, and ANCA followed suit. It is also seen as Kjerringefjell (i.e., "the wife mountain").

Kjerringefjell *see* **Mount Kjerringa**

Kjølen *see* **Keel Island**

Kjølrabbane *see* **Kjølrabbane Hills**

Kjølrabbane Hills. 72°16' S, 3°22' W. A small group of craggy, mountainous hills, between Lyftingen Peak and Styrbordsknattane Peaks, S of Wilson Saddle, near the SW end of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NBSAE 1949-52, and from air photos taken during the same expedition, and named by them as Kjølrabbane (i.e., "the keel hills"). US-ACAN accepted the name Kjølrabbane Hills in 1966.

Kjørboe, Frithjof Randulff. b. April 27, 1872, Tønsberg, Norway. He married Laura Marie, and they lived in Vallø, in Sem. He supervised the building of the whaler *Teie*, in Denmark, and was captain of the *Hektoria* in 1914-15, and of the *Benguela* in 1915-16, both for the Hektor Company.

Kjuka *see* **Kjuka Headland**

Kjuka Headland. 69°36' S, 39°44' E. A bare rock headland, rising to 300 m, just N of Telen Glacier, and 14 km S of Skarvsnes Foreland, on the E side of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kjuka (i.e., "the small cake"). US-ACAN accepted the name Kjuka Hills in 1968.

Kjukevåg *see* **Kjukevåg Bay**

Kjukevåg Bay. 69°36' S, 39°41' E. A small bay on the E coast of Lützow-Holm Bay, formed between the seaward projection of Telen Glacier and the coast just northward, between Kjuka Headland and Kjukevågsodden, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kjukevåg (i.e., "Kjuka bay"), in association with nearby Kjuka Headland. US-ACAN accepted the name Kjukevåg Bay in 1968.

Kjukevågsodden. 69°16' S, 39°38' E. An ice-covered point on the S side of Kjukevåg Bay, in the inner part of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Named by the Norwegians (name means "Kjukevåg point"), in association with the bay.

Kjuklingen *see* **Kjuklingen Nunatak**

Kjuklingen Nunatak. 68°13' S, 58°27' E. One of the Dyer Nunataks, 2.5 km E of Mount Gjeita, in the Hansen Mountains. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kjuklingen (i.e., "the chicken"). US-ACAN accepted the name Kjuklingen Nunatak in 1967.

Gora Kjuri. 71°20' S, 12°22' E. A nunatak at the W end of the Johnson Peaks, in the northernmost part of the Mittlere Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Kjuringen *see* **Rayner Peak**

KK-dalen. 74°42' S, 10°29' W. An ice depression between Sivorgfjella and XU-fjella, in the Heimefront Range of Maudeheimvidda, in Queen Maud Land. Named by the Norwegians ("the KK valley"), for Koordinasjons Komitteen ("the coordination committee"), which played a vital role in the Resistance in Norway during World War II.

Kladara Beach. 62°32' S, 59°46' W. A beach, 2 km long, and snow-free in summer, forming the S side of Yankee Harbor, on the SW coast of Greenwich Island, in the South Shetlands. It is bounded to the W by the base of Provadiya Hook, to the S by Oborishte Ridge, and to the E by the terminus of Solis Glacier. Roughly mapped by early sealers, in 1822, and again by the British in 1968, the Chileans in 1971, the Argentines in 1980, and the Bulgarians in 2005 and 2009. Named by the Bulgarians on Dec. 6, 2010, for the ancient and medieval fortress of Kladara in southeastern Bulgaria.

Klakegga. 72°04' S, 36°08' E. A mountain ridge forming the easternmost part of Bergersenfjella, in the E part of the Sør Rondane Mountains, in Queen Maud Land. Name means "frozen ground ridge" in Norwegian. The Russians call it Hrebet Vishnevskogo.

Klakemulen. 72°06' S, 26°00' E. The southernmost peak in Mount Bergersen, in the E part of the Sør Rondane Mountains. Named by the Norwegians (name means "the frozen ground snout"). The Russians call it Gora Botkina.

Klakkane *see* **Klakkane Islands**

Klakkane Islands. 67°15' S, 59°46' E. A group of small islands 2.5 km E of Farrington Island, and 9 km NNE of Couling Island, in the William Scoresby Archipelago, off the coast of Kemp Land, in Enderby Land. Photographed aerially in Jan. 1937 by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named them Klakkane (i.e., "the lumps"). US-ACAN accepted the name Klakkane Islands in 1963, and ANCA followed suit on May 18, 1971.

Klakknabben *see* **Klakknabben Peak**

Klakknabben Peak. 73°57' S, 5°42' W. A low, somewhat isolated nunatak, 3 km NE of Gavlpiggen Peak, in the SW part of the Urfjell Cliffs, just N of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Klakknabben (i.e., "the lump peak"). US-ACAN accepted the name Klakknabben Peak in 1966.

Klarius Mikkelsenfjell *see* **Mikkelsen Peak**

Klebelsberg Glacier. 67°23' S, 66°19' W. A glacier, about 11 km long and 3 km wide, at the S side of Finsterwalder Glacier, it flows NW from the central plateau of Graham Land toward the head of Lallemand Fjord, at the Loubet Coast, on the W coast of Graham Land. With Finsterwalder Glacier and Haefeli Glacier, its mouth merges with Sharp Glacier, where that glacier enters the fjord. First partially surveyed from the E (i.e., from the plateau) in 1946-47, by FIDS, and named by them in 1948 for Raimund von Klebelsberg (1886-1967), Austrian glaciologist. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Photographed aerially by FIDASE in 1956-57, it appears on a British chart of 1957.

Klein Glacier. 86°48' S, 150°00' W. A broad glacier near the edge of the Polar Plateau, it flows NW into Scott Glacier immediately S of the La Gorce Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. Cdr. Verle Wesley Klein (b. April 1933), USN, VX-6 pilot during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Kleiner Sledgergletscher. 71°33' S, 163°12' E. A tributary glacier to Sledgers Glacier, in the Bowers Mountains. Named by the Germans (name means "little Sledgers Glacier").

Kleinschmidtgipfel. 73°40' S, 4°15' W. A peak, due S of Enden Point, on the Kirwan Escarpment, in Queen Maud Land. Named by the Germans for Dr. Georg Kleinschmidt, geologist from Darmstadt, who was on GANOVEX III (1982-83).

Kleinschmidtklippen. 71°29' S, 160°15' E. A rock, due W of Swanson Glacier, in the Usarp Mountains. Named by the Germans for Dr. Georg Kleinschmidt (*see* **Kleinschmidtgipfel**).

Klekowski Crag. 62°08' S, 58°30' W. A steep rocky crag resembling a wall, rising to about 400 m, on the S side of Lange Glacier, between that glacier and Polar Committee Icefall, at Admiralty Bay, King George Island, in the South Shetlands. It appears on a Polish map of 1979, as Klekowski Ridge, named for Romuald Zdislaw Klekowski (b. 1924), director of the Institute of Ecology, at the Polish Academy of Sciences, and a sponsor of Arctowski Station and the Polish Antarctic expeditions, and that was the name accepted officially by the Poles in 1980. However, it appears on a 1980 Polish map as Turnia Klekowskiego, and that was the name (translated as Klekowski Crag) that was accepted by UK-APC on April 3, 1984. It appears as such in the 1986 British gazetteer.

The *Klem*. Whale catcher in Antarctic waters in 1934-35, along with the *Splint*. Both vessels, working for the factory *Pioner*, got crushed by the ice on April 1, 1935, 100 miles E of Joinville Island, and sank in 63°S, 53°28' W. *See* **The *Splint***. There was also a whale catcher called *Klem II*, for which see the entry [1]**The *Silva***.

Klementsen, Klement. b. Norway. Bosun on the *Southern Cross* during BAE 1898-1900.

Klenk, Eugen. Sailor on the *Schwabenland* during GermAE 1938-39.

Klenke, William Henry, Jr. b. Oct. 19, 1909, NYC, son of lawyer William Henry Klenke and his wife Gertrude Chatillon. After a stint in the Marine Corps, as a private, he became an airplane mechanic. When Ellsworth and Hollick-Kenyon went missing, during the Ellsworth Expedition, 1935-36, the *Wyatt Earp* had to radio for another plane to be sent from the States. This was a Gamma 2D aircraft, called the *Texaco 20*, and it was sent to Magallanes, Chile. A mechanic for this plane had to make his way down from the USA, and Klenke was that mechanic. After hitching from his home on East 72nd Street, Manhattan, he bummed a ride with hot-shot pilot Russ Thaw (son of the notorious Evelyn Nesbit) who crashed in Atlanta on Dec. 10, 1935, on the way down. Unhurt and undeterred, Klenke then picked up a lift with the country's ace pilot, Dick Merrill, who got him most of the way to Chile, and from there he caught another ride to Magallanes, where, on Dec. 22, 1935, he boarded the *Wyatt Earp* with the *Texaco 20*, which had already arrived there. He died in San Diego on Nov. 18, 1979.

Klenova, Marie Vasil'yevna. Last name also seen as Klyonova, or Klënova. b. 1898. Soviet professor and marine geologist, the first woman to do research in Antarctica. A member of the Council for Antarctic Research of the USSR Academy of Sciences, she had worked for 30 years in the North Polar regions, and produced the first seabed map of the Barents Sea. She then went to Antarctica in the summer of 1956 with a Soviet oceanographic team to map uncharted areas of the coast. She worked on the *Ob'* and the *Lena*, making shipboard observations, and at Mirnyy Station too. There were 7 other women aboard the *Ob'*. She died in 1976.

Kleppen Island. 66°43' S, 57°10' E. A small island, rising to an elevation of about 85 m above sea level, SE of Martin Island, and about 6 km W of Austnes Skerries, in the N part of Edward VIII Bay, on the coast of Enderby Land. Photographed aerially by LCE 1936-37. Plotted in 1946 from these photos by Norwegian cartographers, who named it Kleppen (i.e., "the lump"). They thought Martin Island (q.v.) was part of Kleppen, but that was disproved by ANARE field parties in the 1950s. Consequently, in 1958, ANCA allocated names for the two islands — Martin Island (which the Norwegians call Utvikgalten) and Kleppen Island (which the Norwegians call Kleppen).

Lednik Kleptuza *see* **Kleptuza Glacier**

Kleptuza Glacier. 64°36' S, 63°16' W. A glacier, 10 km long and 10 km wide, flowing nothward from the E slopes of Mount Hector in the Trojan Range and the N slopes of the Osterrieth Range, to enter Fournier Bay E of Madzharovo Point and W of Studena Point, on Anvers Island, in the Palmer Archipelago. Named by the

Bulgarians on Nov. 23, 2009, as Lednik Kleptuza, for the karst spring of Kleptuza, in Velingrad, in southern Bulgaria. The name has been translated into English.

Klevegadden. 72°01' S, 7°40' E. A steep mountain crag on the SE side of Klevekåpa Mountain, in the Filchner Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the closet track").

Klevekampen *see* **Klevekampen Mountain**

Klevekampen Mountain. 71°58' S, 7°41' E. A large, mainly ice-free mountain, 5 km E of Kubus Mountain, in the N part of the Filchner Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Klevekampen (i.e., "the closet crag"). US-ACAN accepted the name Klevekampen Mountain in 1967. The Russians call it Gora Slozhnaja.

Klevekåpa *see* **Klevekåpa Mountain**

Klevekåpa Mountain. 72°02' S, 7°37' E. A mostly ice-capped mountain, rising to 2910 m, with an abrupt SE rock face, close NW of the mouth of Snuggerud Glacier, in the Filchner Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Klevekåpa (i.e., "the closet cloak"). US-ACAN accepted the name Klevekåpa Mountain in 1966.

Klevetind *see* **Klevetind Peak**

Klevetind Peak. 71°59' S, 7°37' E. Rising to 2910 m, immediately S of Klevekampen Mountain, in the Filchner Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Klevetind (i.e., "the closet peak"). US-ACAN accepted the name Klevetind Peak in 1967.

Mount Kleynshmidt *see* **Enden Point**

Kliffbach. 62°12°S, 59°00' W. A little stream that flows on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Mount Kliment Ohridski *see* **Mount Ohridsky**

Vrah Kliment Ohridski *see* **Mount Ohridsky**

Klimov Bluff. 74°52' S, 114°02' W. Partly ice-free bluff, facing E, 1.5 km SE of Mount Bray, at the SE end of Jenkins Heights, on the W side of Kohler Glacier, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Lev V. Klimov, Soviet exchange scientist who wintered-over at McMurdo Station in 1966, and who was on the USARP Marie Byrd Land Survey Party of 1966–67. Originally plotted in 74°51' S, 113°52' W, it has since been replotted.

Skaly Klimuka. 79°35' S, 159°10' E. A group of rocks S of Soyuz-17 Cliff, on the N side of Carlyon Glacier, in the Cook Mountains. Named by the Russians.

Klinck Nunatak. 72°04' S, 63°59' W. An isolated nunatak rising to about 1800 m, between the Blanchard Nunataks and the Holmes Hills, in the south-central part of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1978, for Jay C. Klinck, USN, construction mechanic who wintered-over at Palmer Station in 1970. He was back wintering-over at Siple Station in 1973, as part of the USARP operational support. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Klinckowström, Axel Alexander Camille Rudolf Emanuel. A Swedish baron and scientist. b. Dec. 24, 1867, in the Swedish legation at Darmstadt, in Hessen. He married Olof Gyldén's sister, Thyra. He went on the relief expedition of 1903–04, on the *Frithiof*, to try to rescue Nordenskjöld's party during SwedAE 1901–04, and took time to study penguins. He died on May 12, 1936, at Stafsund, Ekerö, Sweden.

Kling, Alfred. b. June 25, 1882, Westhofen, Germany, but raised partly in the towns of Steele and Wetter, son of Ernst Kling and his wife Lina. He became an officer with the Hamburg-Amerika Line, and in 1908 was 2nd officer on the *Amerika*. He is most famous as being navigator on the *Deutschland* during GermAE 1911–12. During the expedition, he, König, and Filchner went looking for New South Greenland in June 1912. On Dec. 19, 1912, after the expedition, while they were at South Georgia, Kling officially became skipper of the *Deutschland*. During World War I he was a lieutenant on the *Seeadler*, and after the war got his captain's license, became a Chilean citizen, married Erna, and lived in Hamburg. His mother, Lina, and his two brothers, Fred and Gene, had come over to the States in 1902, and lived in Youngstown, Ohio, where the boys worked in steel. One of the brothers, Fred, was chief engineer of the Youngstown District of the Carnegie Steel Company. Alfred would often come and visit, even into the 1920s.

Klinger Ridge. 74°43' S, 114°00' W. An ice-covered ridge S of Martin Peninsula, extending NE from Jenkins Heights between McClinton Glacier and Dorchuck Glacier, on the Bakutis Coast of Marie Byrd Land. Mapped by USGS in 1974 from ground surveys, USN air photos taken between 1959 and 1967, and U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for Charles Klinger, of the Lockheed Missiles and Space Company, aurora photometrist and scientific leader at Pole Station for the winter of 1973.

Klisura Peak. 62°42' S, 60°11' W. Rising to about 600 m in Friesland Ridge, 3.8 km SSW of Lyaskovets Peak, 2.7 km S by E of Mount Friesland, 1.8 km E of Simeon Peak, 1.75 km N by E of Preslav Crag, and 2.5 km W by N of the summit of Peshev Ridge, it overlooks Macy Glacier to the NE, E, and SE, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Bulgarian town of Klisura.

Gora Kljuv. 72°37' S, 68°12' E. A nunatak, due W of Styles Glacier, at the N end of the Mawson Escarpment. Named by the Russians.

Klo Rock. 63°55' S, 60°46' W. A rock on which the sea breaks, off Borge Point, at the E side of the entrance to Mikkelsen Harbor, on Trinity Island, in the Palmer Archipelago. Charted and named (probably) in 1914–15 by Hans Borge. It appears on his chart of 1915. "Klo" means "claw." ArgAE 1950–51 established a beacon on the rock, and called the rock Islote Sudoeste (i.e., "southeast islet"), a name that was accepted by the Argentine gazetteer of 1970. On a 1961 U.S. Hydrographic Office chart it appears as Islote Sudoeste Beacon. ChilAE 1952–53 named it Roca Le Cerf. The British gazetteer says it was named descriptively ("cerf" means "stag" in French). If this is true, it seems odd that they didn't name it "Roca Ciervo"; i.e., why use a French word? The Chilean gazetteer is silent on the subject. Anyway, it appears as such on a Chilean chart of 1962, and was the name accepted by the Chilean gazetteer of 1974. UK-APC accepted the name Klo Rock on Sept. 23, 1960, and US-ACAN followed suit that year. It appears as such on a British chart of 1961. On an American chart of 1963 it appears erroneously as Klo Rocks.

Klo Rocks *see* **Klo Rock**

Kloa *see* **Kloa Point**

Kloa Point. 66°38' S, 57°19' E. A prominent coastal point projecting into the sea from the E side of the Edward VIII Plateau, 5 km N of Cape Gotley, and about 9 km S of Cape Boothby, in Kemp Land. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kloa (i.e., "the claw"). ANCA accepted the name Kloa Point on April 29, 1958, and US-ACAN followed suit in 1961. Its position was fixed by Chris Armstrong, of ANARE, in 1959. Kloa Rookery (q.v.) is on its S side.

Kloa Rookery. 66°39' S, 57°16' E. An emperor penguin rookery on the sea ice on the S side of Kloa Point, in Kemp Land. Discovered from an ANARE Beaver aircraft by Peter Clemence in 1957. Named by ANCA.

Das Kloster *see* **Cathedral Crags**

Banka Klotik. 67°39' S, 45°45' E. A bank in Issledovateley Strait, between the Myall Islands and Cape Gaudis, close W of the Thala Hills, on the coast of Enderby Land. Named by the Russians.

Klotoppen *see* **Takano-tume-mine**

Valle Klotz *see* **Klotz Valley**

Klotz Valley. 62°09' S, 58°56' W. A wide, flat valley, on both sides of an intermediate spur, it contains lagoons, and a river that drains Bellingshausen Dome, at the N end of Fildes Peninsula, King George Island, in the South Shetlands. About 1996, the Chileans named it

Valle Klotz. UK-APC "acknowledged" the name Klotz Valley, on June 6, 2007. Last plotted by the UK, in late 2008.

Klovningen. 72°03' S, 2°28' E. The most southwesterly height of Grjotlia, the W slope of Jutulsessen Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (it means "the klovning," i.e., one of the two pieces into which a log is split).

Klovninggryta. 72°02' S, 2°29' E. A snowfield in the area of Troll Station, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with nearby Klovningen. The word "gryta" means "pan."

Klovningsalen. 72°02' S, 2°29' E. A saddle in the area of Troll Station, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with nearby Klovningen. The word "salen" means "the saddle."

Cape Klövstad. 71°39' S, 170°06' E. A bold, rugged rock point between Colbeck Bay and Protection Cove, at the S extremity of Robertson Bay, between Murray Glacier and Newnes Glacier, in northern Victoria Land. First charted by BAE 1898-1900, and named by Borchgrevink for Herluf Klövstad. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Kløvstad, Herluf. b. April 2, 1868, Kristiania (later Oslo), Norway, son of blacksmith and wheelwright Olaus Herlufsen Kløvstad and his wife Karen. He was the doctor on BAE 1898-1900, who wintered-over in Antarctica with Borchgrevink. He moved to Vardø soon after the expedition returned to Europe, and died of nerve fever not long afterwards, in 1900.

Kloyd Island *see* **Cloyd Island**

Klück, Karl. b. July 5, 1869, Selesen bei Stolp, Pomerania. Able seaman and replacement cook on the *Gauss* during GermAE 1901-03. He was back as cook on the *Deutschland*, drafted by Capt. Richard Vahsel, for GermAE 1911-12.

Klumpane *see* **Klumpane Peaks**

Klumpane Peaks. 71°57' S, 3°24' W. A group of small rock nunataks, N of Flårjuven Bluff, on the E side of the mouth of Strengen Valley, on Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Klumpane (i.e., "the lumps"). US-ACAN accepted the name Klumpane Peaks in 1966.

Klumpen. 72°08' S, 25°08' E. A peak in the SE part of Mefjell Mountain, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("the lump").

Klung Island. 67°33' S, 62°59' E. Largest of the Klung Islands, in Holme Bay, Mac. Robertson Land, it lies about 2 km ENE of Welch Island. The Klungs were photographed aerially by LCE 1936-37, and mapped from these photos in 1946, by Norwegian cartographers who named the group Klungholmane (i.e., "the bramble islands"). This largest of the group was named individually by ANCA on Oct. 11, 1960, as Klung Island, in association with the group. US-ACAN accepted the name in 1965.

Klung Islands. 67°33' S, 63°00' E. A group of small islands (Klung Island being the largest), 0.8 km E of Welch Island, in the NE sector of Holme Bay, Mac. Robertson Land, about 7 km NE of Mawson Station. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named the group Klungholmane (i.e., "the bramble islands"). ANCA accepted the name Klung Islands on Feb. 18, 1958, and US-ACAN followed suit in 1961.

Klungholmane *see* **Klung Islands**

Nunataki Klyki. 70°44' S, 10°40' E. A group of nunataks, NW of the ice slope the Norwegians call Larsenbrekka, in Fimbulheimen, in Queen Maud Land. Named by the Russians.

km. Stands for kilometers.

Knaackberg. 70°47' S, 163°35' E. A peak, due E of Buckinghamspitze, in the Bowers Mountains of Oates Land, in northern Victoria Land. Named by the Germans.

Knack Point. 85°15' S, 118°50' W. At the termination of a flat-topped spur which marks the N end of the Long Hills, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Joseph Val Knack (b. Oct. 24, 1932, Lawrence, Kans. d. June 28, 2010), National Weather Service meteorologist at Byrd Station in 1958.

Knallen *see* **Knallen Peak**

Knallen Peak. 72°16' S, 3°56' W. A small rock peak, 3 km W of Pyramiden Nunatak, at the E side of the head of Schytt Glacier, on the N side of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Knallen (i.e., "the explosion"). US-ACAN accepted the name Knallen Peak in 1966.

Knappane *see* **Knappane Peaks**

Knappane Peaks. 72°38' S, 4°12' W. A line of separated rock peaks just W of Nålegga Ridge, on the W side of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Knappane (i.e., "the buttons"). US-ACAN accepted the name Knappane Peaks in 1966.

Knappen *see* **Knappen Peak**

Knappen Peak. 69°27' S, 39°40' E. A bare rock peak, rising to 220 m, just E of Osen Cove, on the NE side of Skarvsnes Foreland, on the E side of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Knappen (i.e., "the button"). US-ACAN accepted the name Knappen Peak in 1968.

Knapstad, Peder. b. Sept. 18, 1885, on the family farm at Kinn, Norway, son of Anders Knapstad and his wife Elen. Carpenter and whaler who died of a fracture of the skull on March 14, 1931, during the last season of Norwegian whaling in the South Shetlands. He was buried in the Whalers Bay Cemetery on Deception Island. His cross was the only one found after the volcano blew on the island in 1969.

Knattane *see* **Knattane Peaks**

Knattane Peaks. 66°04' S, 52°56' E. A group of 3 peaks, about 7 km NE of Simmers Peaks, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named them Knattane (i.e., "the crags"). ANCA accepted the name Knattane Crags on July 31, 1972. The name is also seen as Knottane (a variation of Knattane).

Knattebrauta *see* **Knattebrauta Nunataks**

Knattebrauta Nunataks. 72°27' S, 0°18' E. A line of nunataks (the Norwegians call it an ice wall with bare crags) trending NE-SW, 6 km N of Robin Heights, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Knattebrauta (i.e., "the crag slope"). US-ACAN accepted the name Knattebrauta Nunataks in 1966.

Knattskjera *see* **Sansom Islands**

Knausen. 66°22' S, 53°13' E. A peak, rising to about 1230 m above sea level, about 9 km NW of Armstrong Peak, in the Napier Mountains of Enderby Land. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it ("the crag"). ANCA accepted the name, without modification, on July 31, 1972.

Knerten *see* **Knerten Rocks**

Knerten Rock. 71°33' S, 2°52' W. A small, isolated rock, 11 km N of Vesleskarvet Cliff, in the NW part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Knerten (i.e., "the nipper"). US-ACAN accepted the name Knerten Rock in 1966.

Knetschberg. 73°44' S, 165°47' E. A peak on the S side of Mount Casey, in the Mountaineer Range of Victoria Land. Named by the Germans.

Knezevich Rock. 76°10' S, 112°00' W. A rock outcrop on the lower part of the N slope of Mount Takahe, in Marie Byrd Land, at the E side of the mouth of Clausen Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Nick Knezevich, Jr., USN, electronics technician at Pole Station in 1974.

The Knife Edge. Informal name given by the Fids of Port Lockroy Station to a very narrow, undulating ridge of ice connecting the lower end of Harbour Glacier to the snow and rocky slopes

above the rookery nearby. About 20 or 30 feet above the average level of the snow valley at its foot, and several times this distance above the sea on the other side [*see* Ken Pawson's book *Antarctica*].

Knife Point. 60°43' S, 45°37' W. A point along the S side of Borge Bay, on the W side of Factory Cove, 1.5 km SE of Mooring Point, on the E side of Signy Island, in the South Orkneys. The Discovery Investigations surveyed Borge Bay in 1927, and this feature appears on their 1929 chart of that expedition, but probably reflects a descriptive name given earlier by whalers in the area. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer.

Knight, Stephen *see* **USEE 1838–42**

Knight Island. 64°55' S, 64°01' W. An island, 2.5 km long, 1.5 km W of Reeve Island, in the W part of the Wauwermans Islands, in the Wilhelm Archipelago. It appears on an Argentine chart of 1960, apparently unnamed. Re-charted by an RN Hydrographic Survey unit on the *Protector*, in 1956–57. Named by UK-APC on July 7, 1959, for the character in *Canterbury Tales*. It appears on a British chart of 1960. US-ACAN accepted the name in 1960.

Knight Nunatak. 69°23' S, 158°52' E. A lone coastal nunatak, 6 km (the Australians say 9 km) SSE of Cape Kinsey and 5 km NE of Mount Conrad, in the Goodman Hills, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Melvin W. Knight, USN, yeoman 1st class, with the Operations Division of U.S. Naval Support Force, Antarctica, responsible for handling office routine in Washington, DC, Christchurch, NZ, and McMurdo, during OpDF 67, OpDF 68, OpDF 69, and OpDF 70. ANCA accepted the name on July 31, 1972.

Knight Rocks. 62°49' S, 61°35' W. A group of small rocks, 7 km WNW of Monroe Point (which is on the SW end of Snow Island), in the South Shetlands. So named by UK-APC on Sept. 22, 1954, after Lt. Cdr. Frank Hunt's RN Hydrographic Office survey of 1951–52, because of their proximity to Castle Rock and Keep Rock to the N. It appears in the 1955 British gazetteer. US-ACAN accepted the name in 1956. The Argentines call them Rocas Caballero (which means the same thing). Last plotted by the UK, in late 2008.

Knippovich Nunatak. 68°04' S, 49°22' E. A rock outcrop in the N part of the Nye Mountains, about 6 km N of Mount Underwood, in Enderby Land. Photographed aerially by ANARE in 1957 and 1958, and by SovAE 1962, and named by the latter as Gora Knippovicha, for Nikolay Mikhailovich Knippovich (1862-1939), Russian leader of several expeditions to the Barents Sea in the 1890s and early 20th century. ANCA translated the name.

Gora Knippovicha *see* **Knippovich Nunatak**

Knob Lake. 60°42' S, 45°37' W. The central lake in Three Lakes Valley, in the NE part of Signy Island, in the South Orkneys. BAS personnel from Signy Island Station did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for the glacier-scoured rock knob forming a small island near the S end of the lake. US-ACAN accepted the name in 1975.

Knob Point. 77°48' S, 166°40' E. A rounded coastal point projecting from the W side of Hut Point Peninsula, Ross Island, into Erebus Bay, 2.5 km to the W of Castle Rock, and just to the N of Danger Slopes. Named by Gerald Kooyman (*see* **Kooyman Peak**), here in 1963–65, but the descriptive name had been used by others before him. US-ACAN accepted the name in 1968.

Knobble Head. 63°10' S, 56°33' W. Also spelled Nobble Head. A conspicuous rock exposure forming the NE extremity of Bransfield Island, off d'Urville Island, in Antarctic Sound. Surveyed by Fids from Base D in 1960–61, and named descriptively by them. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Knobhead. 77°55' S, 161°32' E. Also called Knobhead Mountain. A massive, ice-free mountain, rising to 2400 m (the New Zealanders say 2529 m), S of the W end of the Kukri Hills, it overlooks Ferrar Glacier and Taylor Glacier at their point of apposition, in Victoria Land. Discovered by BNAE 1901–04, and named descriptively by them. US-ACAN accepted the name, and NZ-APC followed suit.

Knobhead Moraine. 77°51' S, 161°36' E. A conspicuous moraine of large boulders to the N of Knobhead, in the Quartermain Mountains of Victoria Land. It continues northward between Cavendish Rocks and the W end of the Kukri Hills as a medial moraine in lower Taylor Glacier. Discovered by Armitage during BNAE 1901–04, and named by him in association with Knobhead. US-ACAN accepted the name in 1992.

Knobhead Mountain *see* **Knobhead**

Knoedler, David Joseph. b. June 1924, Mosinee, Wisc., son of paper mill accountant William Knoedler and his wife Beatrice. He graduated from Loyola University in 1950. Lt., USN, at the Naval Medical Research Laboratory, at New London, Conn., and at the Naval Gun Factory Dental Clinic in Washington, DC. He was the dentist at McMurdo Base, during OpDF I (i.e., 1955–56). He had a dental field unit (there was no dentist at Little America V that year), complete with drill, folding chair, overhead light, silver alloy, mercury, etc. He retired from the Navy as a lieutenant commander, and later lived in Wisconsin.

Knokane. 71°59' S, 2°49' E. A feature of indeterminate nature (the gazetteers don't help), in the area of Troll Station, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007. The name means "the knuckles."

Knoldebucht *see* **Cierva Cove**

The Knoll. 77°31' S, 169°21' E. A snow-free knoll, rising to 365 m, 0.8 km N of Cape Crozier (which it surmounts), at the E extremity of Ross Island. Discovered by BNAE 1901–04, and named aptly by them. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Knolls. Small, rounded hillocks, or mounds. *See* Algie, Allen, Andenes, Anderle, Anderson, Bardin, Blümcke, Bruns, Butterfly, Clark, Crary, Dalmatian, Davis, Dennis, Dobrich, Erma, Evans, Explora, Feyerharm, Fowler, Gabrovo, Gould, Granite (knolls), Gruvleflesa (knolls), Heiskanen, Imhof, Jaegyu, Johns, Kieffer, The Knoll, Kubrat, Kullen, Linton, Lundström, Malamir, Marble (knolls), Mefford, Mercator, Perperek, Polarstern, Radomir, Rezen, Ringgold, Roberts, Samokov, Sentinel, Shabla, Sigurd, Silistra, Sirius, Spanish, St. Sofroniy, Sørsdal, Stepaside, Svoge, Tukhchiev, Wynn (knolls), and Zemen.

The *Knorr*. A 2685-ton U.S. Navy ship launched in 1968, and named for Ernest R. Knorr, 19th-century American hydrographer and cartographer. Sister ship of the *Melville*, she was 279 feet long, was capable of 11 knots, and had 2756 sq feet of laboratory space. In 1970 she was delivered to her operators, the Woods Hole Oceanographic Institution, to be used as an academic research vessel all over the world. In 1978–79 she was in waters south of NZ (but not in Antarctica), and was in Antarctic waters in 1983–84 (Capt. Emerson Hiller), facilitating studies in biology, chemistry, geology, geophysics, and physical oceanography. She could carry a crew of 22, a party of 32 scientists, and 2 technicians, for up to 60 days at sea. In 1985 she was in on the discovery of the wreck of the *Titanic*. She had a complete overhaul in 1991, and was back in Antarctic waters in 1992–93 (Capt. Carl Swanson), on an oceanographic voyage with the *Surveyor*. In 2006 she was re-fitted to take the latest core-sampling technology.

Knott Nunatak. 70°40' S, 69°27' W. A nunatak, rising to about 750 m, on the SE side of the Purcell Snowfield, W of Snick Pass, and 1.5 km NW of the N end of the LeMay Range, on Alexander Island. Mapped by Searle of the FIDS in 1959–60 from air photos taken during RARE 1947–48. Surveyed by BAS in 1973, and named by UK-APC on Dec. 8, 1977, for Christopher Edward Knott (b. 1944), BAS general assistant who wintered over at Base E in 1975, and at Base T in 1976. He plane tabled this area. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Knottane *see* **Knattane Peaks**

Knotten *see* **Knotten Nunatak**

Knotten Nunatak. 71°37' S, 2°19' W. A small nunatak, 8 km SW of Krylen Hill, in the N part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Knotten (i.e., "the knob"). US-ACAN accepted the name Knotten Nunatak in 1966.

Knøttet. 72°08' S, 20°19' E. A small nunatak NE of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians ("a very little thing").

Cabo Knowles *see* **Cape Knowles**

Cape Knowles. 71°48' S, 60°53' W. A cliffed, rocky cape, rising to 305 m above sea level, it projects from the Black Coast, just above Hilton Inlet, and marks the N side of the entrance to that inlet, and also forms the SE point of Condor Peninsula, on the E coast of Palmer Land. Discovered and surveyed by members of East Base in 1940, during USAS 1939–41. Named by them for Paul H. Knowles (q.v.), who led the sledging party that surveyed the coast as far south as Hilton Inlet. It is shown on a USAAF chart of 1942, plotted in 71°45' S, 60°50' W. It appears on an Argentine chart of 1946, as Cabo Knowles, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Cape Knowles in 1947. It was re-surveyed by a joint sledging team of personnel from RARE 1947–48 and Fids from Base E, and, on Dougie Mason's FIDS map of 1950, it is shown in 71°48' S, 60°50' W. UK-APC accepted the name Cape Knowles on Jan. 28, 1953, and it appears as such (and with Mason's coordinates) in the 1955 British gazetteer. Further photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1973, it appears with the correct coordinates in the 1977 British gazetteer.

Knowles, Charles *see* **USEE 1838–42**

Knowles, Paul Howard. b. June 24, 1909, San Anselmo, Calif. He graduated in geology in 1938, and was living in Seattle as a geologist at the University of Washington when he became a geologist at East Base during USAS 1939–41. In the 1950s he worked for the Atomic Energy Commission. He married Pauline, and they lived in Tacoma, Wash., and then Carson City, Nev. He died on Feb. 21, 1978, in Sacramento.

Knowles, William Edward "Bill." Also known as Billy. b. Feb. 16, 1875, Liverpool, son of block maker Thomas Knowles and his wife Kate, who was a dressmaker. When he was a child, the family moved to Lyttelton, NZ. He joined the Merchant service, and was an able seaman on the *Morning*, during the 1903 relief of Scott's expedition. He was back in Antarctica as an able seaman, signing on to the *Terra Nova* in Nov. 1910, at Lyttelton, during BAE 1910-13. He was later a waterside worker in Lyttelton, but when World War I broke out, he joined the NZ Squadron as a seaman on the *Philomel*. When the ship approached the Turkish town of Alexandretta, Billy was one of the landing party, and was one of three men killed during that skirmish, on Feb. 8, 1915, leaving a widow, Helen Jane.

Knowles Passage. 66°26' S, 110°28' E. A marine passage between Holl Island and Petersen Island, in the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946–47, and in 1948 during OpW 1947–48. Named by US-ACAN in 1962, for Lt. Lloyd C. Knowles, USN, engineer officer on the *Burton Island* here during OpW. ANCA accepted the name on Oct. 23, 1962.

Mount Knox. 77°32' S, 163°16' E. Rising to about 800 m at the W extremity of the MacDonald Hills, on the N side of Taylor Valley, in Victoria Land. Named by NZ-APC in 1998, for George A. Knox, formerly of the zoology department at the University of Canterbury, in NZ. Prof. Knox made many visits to Antarctica, and established the university's Antarctic Research Unit that was active from 1961 to 1981. He was the NZ delegate to SCAR, 1971–86, and president of SCAR, 1978–82. US-ACAN accepted the name later in 1998. Originally plotted in 77°35' S, 163°01' E, it has since been replotted.

Knox, James William "Jimmy." b. July 21, 1922, Northwich, Cheshire. In 1942–43 he was in the RAF, serving in Trinidad (a year before Ted Gutteridge and Ken Pawson). He moved to the Falkland Islands, and from there, in 1947, he joined FIDS as a radio operator, went to London for the interview and for training, and left Tilbury on Dec. 19, 1947, on the *John Biscoe*, bound for Port Stanley. He was at Base B for the winters of 1948 and 1949, being the main radio co-ordinator for all the FIDS stations for those two winters. At the end of his tour he returned to Port Stanley, and from there to Montevideo, where he caught the *Alcantara* back to Southampton, arriving there on Jan. 30, 1950. He died in Aug. 1999, in Birkenhead.

Knox, Samuel Richardson. b. Aug. 28, 1811, Charlestown, Mass., son of Robert Knox and Ann Richardson. He entered the Navy as a midshipman in 1828, serving in the Mediterranean and Pacific, and was a passed midshipman on USEE 1838–42. He was commander of the *Flying Fish* on its first (non-Antarctic) cruises, and in 1840 was acting master of the *Vincennes*, in Antarctica. Between 1843 and 1845 he was in the Mediterranean again, on the *Plymouth*. In the Mexican War he assisted in the capture of the Castle of San Juan de Ulloa, and during the Civil War was attached to a blockading squadron in the Gulf of Mexico. He retired as a captain, and died on Nov. 22, 1883, at Everett, Mass. He never married.

Knox Basin *see* **South Indian Basin**

Knox Coast. 66°30' S, 105°00' E. That portion of the coast of Antarctica between Cape Hordern (in 100°31' E) and the Hatch Islands (in 109°16' E), to the W of Vincennes Bay, on the coast of Wilkes Land. Discovered by Wilkes in Feb. 1840, and named by him as Knox's High Land, for Samuel R. Knox. The name has also been seen as Knox Land. US-ACAN accepted the name Knox Coast in 1947, and ANCA followed suit on Aug. 11, 1955.

Knox Land *see* **Knox Coast**

Knox Peak. 84°49' S, 116°39' W. A small but distinctive rock peak, or nunatak, between Vann Peak and Lackey Ridge, at the W end of the Ohio Range. Surveyed by the Horlick Mountains Traverse party in Dec. 1958. Named by US-ACAN in 1962, for Arthur S. Knox, Antarctic cartographer with USGS.

Knox-Little Nunatak. 67°33' S, 55°11' E. An isolated nunatak, about 25 km SW of Mount Øydeholmen, in Kemp Land. Plotted by Australian cartographers from 1959 ANARE air photos. Named by ANCA on Aug. 27, 1975, for Mike Knox-Little (b. Sept. 23, 1943), radio operator who wintered-over at Casey Station in 1972; at Mawson Station in 1974, 1976, 1979, 1982, and 1987; and at Davis Station in 1990. He also wintered-over on Macquarie Island in 1985.

Knox's High Land *see* **Knox Coast**

Knuckey, Graham Alexander. b. July 2, 1934. Surveyor at Mawson Station in 1958. He died on Dec. 24, 1969.

Knuckey Island. 69°23' S, 76°04' E. The largest of a group of 3 islands about 1.1 km NW of the W end of Stornes Peninsula, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Graham Knuckey. The Chinese call it Sanyuan Dao.

Knuckey Peaks. 67°54' S, 53°32' E. A group of isolated peaks extending WSW-ENE, 50 km SE of the McLeod Nunataks, and 24 km W of the Doggers Nunataks, in Enderby Land, about 115 km W of the Leckie Range. Discovered and positioned in Dec. 1958, by an ANARE dog-sledge party and named by ANCA on July 22, 1959, for a member of that party, Graham Knuckey (q.v.). US-ACAN accepted the name in 1961.

Knuckle Reef. 67°50' S, 67°22' W. A reef SW of Beacon Head, Horseshoe Island, on the Fallières Coast, on the W coast of Graham Land. Surveyed by FIDS between 1955 and 1957, and so named by them because individual rocks on the reef, when exposed at low tide, resemble the knuckles of a clenched fist. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. It appears on a British chart of 1961.

Knudsen, Engebret. b. Feb. 16, 1876, Porsgrunn, Telemark, Norway, son of Thorvald Knudsen and his wife Maren Sofie Sorensen. He was one of the seamen who went insane on the *Belgica* during BelgAE 1897–99. He died in 1900.

Knut Rocks. 71°24' S, 13°02' E. Several small rock outcrops on a north-facing slope (the Norwegians describe them as steep mountain crags) 8 km E of Deildegasten Ridge, and NE of Ødegaardhøgda, in the SW portion of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Knutsufsene (i.e., "the Knut bluffs"), for Knut Ødegaard, radio operator during the 1958–59 segment of the expedition. US-ACAN accepted the name Knut Rocks in 1970.

Mount Knut Sundbeck *see* **Mount Sundbeck**

Knutsufsene *see* **Knut Rocks**

Knutzen Peak. 78°30' S, 85°57' W. A sharp, rocky summit rising to 3373 m, at the N edge of Taylor Ledge, in the Sentinel Range. Named by US-ACAN in 2006, for Donald H. Knutzen, USGS topographic engineer in the Sentinels in 1979–80.

Ko-iwa *see* **Ko-iwa Rock**

Ko-iwa Rock. 68°42' S, 40°33' E. A small rock exposure, 5.5 km W of Oku-iwa Glacier, and about 10 km NE of Tama Glacier, on the W part of the Prince Olav Coast, in Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962 as Ko-iwa (i.e., "the little rock"). US-ACAN accepted the name Ko-iwa Rock in 1968. The Norwegians call it Veslenuten, which means the same thing.

Ko-iwa-zima. 69°00' S, 39°38' E. Name also seen as Koiwa-zima. A small, low island, just S of Iwo-zima, off East Ongul Island, at the E side of the entrance to Lützow-Holm Bay. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Named by the Japanese on March 22, 1994, the name meaning "small rock island."

Ko-minato. 69°11' S, 39°40' E. An inlet, indenting the N side of the Lanhgovde Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Surveyed by JARE in 1957, mapped by Japanese cartographers from that survey, and named by them on Oct. 1, 1962 (name means "the small harbor"). The Norwegians call it Vesalvika, which means the same thing.

Koala Island. 67°34' S, 47°53' E. A small island close W of Pinn Island, and N of the E end of McKinnon Island, on the W side of Casey Bay, off the coast of Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for their native animal. US-ACAN accepted the name in 1965.

Kobourgkogel. 71°12' S, 164°29' E. A cone on the W side of Mount Dockery, in the Everett Range, on the Pennell Coast of Victoria Land. Named by the Germans.

Glaciar Koch *see* **Koch Glacier**

Koch Glacier. 64°27' S, 62°30' W. A glacier, 5 km long, immediately E of Jenner Glacier, it flows SSW into Chiriguano Bay, on the S side of Brabant Island, in the Palmer Archipelago. It appears (unnamed) on a 1953 Argentine chart. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Robert Koch (1843-1910), German bacteriologist, discoverer of the tubercule bacillus. He won the Nobel Prize in medicine in 1905. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Glaciar Koch.

Koci Cliffs. 78°04' S, 161°36' E. On the S side of Grootes Peak, on the SE side of the Colwell Massif, in Victoria Land. Named by US-ACAN in 1994, for Bruce Raymond Koci (b. Jan. 10, 1943, St. Paul, Minn. d. Nov. 13, 2006, Madison, Wisc.), of the Polar Ice Coring Office, at the University of Alaska, an authority in ice drilling with broad experience for many years in Greenland and Antarctica. From 1977 to 1980 he was a member of the Ross Ice Shelf Project. He created the ICECUBE hot-water drill later used at the South Pole to construct the biggest neutrino detector ever built.

Islote Koechlin *see* **Koechlin Island**

Koechlin Island. 66°42' S, 67°38' W. Off the NE coast of Alexander Island, in the entrance to Buchanan Passage, about 7 km S of the Sillard Islands. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and FIDASE 1956-57, and from ground surveys conducted in 1958 by Fids from Base W. Named by UK-APC on Sept. 23, 1960, for René Koechlin (1866-1951), Swiss glaciologist. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965. The Argentines call it Islote Koechlin.

Bahía Koegel *see* **Suspiros Bay**

Koehler Nunatak. 74°52' S, 98°08' W. An isolated nunatak, about 30 km ESE of Mount Manthe, at the SE margin of the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1970, for Walter Koehler, helicopter pilot with the U.S. Army Aviation Detachment, in the area in 1968-69 for the Ellsworth Land Survey.

Koenig Valley. 77°36' S, 160°47' E. An ice-free valley, just E of Mount Thor, in the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Ervon R. Koenig, scientific leader at McMurdo Station in 1972, and station manager there in 1973-74 and 1974-75.

Koerner, Roy Martindale "Fritz." b. July 3, 1932, Portsmouth, Hants, son of Bernard W. Koerner and his wife Minnie Martindale. After gaining his BA and MA from Sheffield, he joined FIDS in 1957, as senior meteorologist and glaciologist at Base D for the winters of 1958 and 1959. It was here he met Wally Herbert. He was the comedian on the base, kept things going sometimes. He was in the Arctic in 1961-62, becoming involved in snow stratigraphy studies. He was back in Antarctica as glaciologist with the Byrd Station Traverse, 1962-63. In 1963 he became a research associate in the geography department at Ohio State University, married Anna in 1964, and was in the Arctic again that year, and again in 1965 and 1966. For all this work he was awarded a PhD from the London School of Economics. In the 1966-67 summer he was at Plateau Station in Antarctica. In 1968-69 he went with Wally Herbert on the Trans-Arctic Expedition. He joined the Department of Energy, Mines, and Resources, in Ottawa, as a research scientist, at the same time being adjunct professor of geography at Carleton University. He lived in Canada, and died on May 26, 2008.

Koerner Bluff. 76°00' S, 133°04' W. A bare rock bluff along the NW margin of Mount Bursey, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Fritz Koerner.

Koerner Rock. 63°19' S, 57°05' W. A small but conspicuous rock outcrop, rising to about 600 m, S of Mount Bransfield, and 6 km SW of Cape Dubouzet, Trinity Peninsula. Surveyed by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Fritz Koerner. US-ACAN accepted the name later in 1964.

Koerwitz Glacier. 85°42' S, 154°24' W. A low-gradient glacier flowing NE from Mount Griffith in the Hays Mountains, to the Karo Hills. ByrdAE 1928-30 was the first to see and roughly map it. Named by US-ACAN in 1967, for Peter H. Koerwitz, biolab manager at McMurdo in 1965.

Koether Inlet. 72°01' S, 97°15' W. An ice-filled inlet, indentating the N coast of Thurston Island for about 30 km between Evans Peninsula and Edwards Peninsula. Delineated from air photos taken by VX-6 in Jan. 1960, during the USN Bellingshausen Sea Expedition of Jan.-Feb. 1960. Named by US-ACAN in 1960, for Ensign Bernard Gustave Koether, of NY, navigator on the *Glacier*. He was promoted to Lt. (jg) and had a marriage waiting for him on his return to the USA. Originally plotted in 71°56' S, 97°20' W, it has since been replotted.

Koettlitz, Reginald. b. Dec. 23, 1861, Ostend, Belgium, son of Maurice Koettlitz, a minister of the reformed Lutheran Church, and his wife Rosetta, who ran a ladies college and boarding school in Dover. Epitomizing the Franco-Prussian jokes of the day, the 1871 census for Hougham, Kent refers to the good pastor as a Prussian spy! Reginald studied at Guy's Hospital and had been 7 years in practice as a country doctor in Dover when he went on the Jackson-Harmsworth Expedition to the Arctic in 1894-97. A phytoplankton expert and bacteriologist, he spent much of 1899 on the Weld-Blundell expedition across Abyssinia and Somaliland, and 1900 in Brazil. In 1901 he married a French girl named Marie. He was picked to go on the *Discovery* as surgeon during BNAE 1901-04. After the expedition, he returned to Dover, and in 1911 emigrated to South Africa. On Jan. 10, 1916, at Cradock Hospital, Somerset, South Africa, he died of influenza, which also struck down his wife within a few days.

Koettlitz Glacier. 78°15' S, 164°15' E. A large glacier, about 60 km long, and converging to a width of about 8 km in its upper reaches, it drains the Koettlitz Névé, in the vicinity of Mount Cox, and flows between Brown Peninsula and the mainland of southern Victoria Land. The W half of this glacier is covered with silt and raised moraine material, is deeply cut by thaw streams, and is scarreted with bastions of pinnacle ice which, in the upper reaches, attain a height of 18 m. The E side of the glacier is smoother, but contains long undulations, icefalls, ridges, and gullies. There is no rock wall bordering the side of the glacier, the ice merging imperceptibly with the slopes of Brown Island, Mount Morning, and Mount Discovery to the SW. About 24 km southward of Cape Chocolate, the Koettlitz reaches sea level, having here a width of 20 km (the New Zealanders say 13 km). From this point it continues as a floating sheet of stagnant ice into the Ross Ice Shelf at McMurdo Sound. This ice barrier has a height of between 1.5 and 8 m, but the contours and limits undergo considerable change from year to year. The extension of this glacier on the W side of McMurdo Sound is a vast field of chaotic ice. Discovered during the summer of 1902-03, by BNAE 1901-04, and named by them for Regi-

nald Koettlitz. US-ACAN accepted the name in 1947, and NZ-APC followed suit. Originally plotted in 78°20' S, 164°30' E, it has since been replotted.

Koettlitz Névé. 78°27' S, 163°00' E. The névé in the vicinity of Mount Cox, which feeds the Koettlitz Glacier, in Victoria Land. Named by US-ACAN in association with the glacier.

Koffer *see* **Coffer Island**

Mount Koger. 77°50' S, 159°33' E. A mostly ice-free mountain, rising to 2563 m, forming the N end of the Lashly Mountains, near the polar plateau of Victoria Land. Named by US-ACAN on July 17, 2007, for Ronald G. Koger, project director of Antarctic Support Associates (ASA), 1992–98, during which period Mr. Koger oversaw the transfer of Antarctic logistical support from the Navy to ASA.

Cape Kogot'. 67°40' S, 45°54' E. On Alasheyev Bight, in the Thala Hills of Enderby Land, about 3 km E of Molodezhnaya Station. Photographed by ANARE in 1956, and by SovAE 1957, and named by the latter expedition as Mys Kogot' (i.e., "cape claw"). ANCA translated it as Cape Kogot, on July 31, 1972, and it is also seen as Kogot Point.

Mys Kogot' *see* **Cape Kogot'**

Nunatak Kogot'. 73°31' S, 65°26' E. A nunatak, SW of Mount Rubin, in the southern Prince Charles Mountains. Named by the Russians.

Kogot Point *see* **Cape Kogot'**

Kohl-Larsen, Ludwig. b. April 5, 1884, Landau-in-der-Pfalz, Germany, as Ludwig Kohl. A surgeon, he first went to South Georgia in 1911, as part of GermAE 1911-12, but developed appendicitis, and had to stay on South Georgia, thus not going to Antarctica. He married Carl Anton Larsen's daughter, Margit, became Ludvig Kohl-Larsen, and was surgeon on the *Sir James Clark Ross* expedition of 1923-24. In 1928-29 he was back at South Georgia, filming the wildlife, his wife accompanying him. He later became an anthropologist, studying the Lapps in Scandinavia, and tribes in Iran and East Africa. He was the first to go to Laetoli, in Tanganyika, and found the jaw of *Australopithecus afarensis* in 1934. In 1935 he discovered *Africanthropus njarasensis*, and in 1939 *Meganthropus africanus*. His book, *South Georgia: Gateway to Antarctica*, was translated into English in 2003 by William Barr. He died on Nov. 12, 1969, in Bodensee.

Mount Kohler. 77°17' S, 145°35' W. Rising to 480 m, on the S side of Boyd Glacier, 6 km E of Mount Woodward, in the Ford Ranges of Marie Byrd Land. Mapped in 1940 by USAS 1939–41, and named by Byrd for Herbert Vollrath "Herb" Kohler, Jr. (b. 1939), and Ruth DeYoung Kohler II, son and daughter of Herbert Vollrath Kohler, the head of the plumbing fixtures company, and a sponsor of ByrdAE 1933-35. US-ACAN accepted the name in 1970.

Kohler, A. On May 14, 1912, at Sydney, he signed on to the *Aurora* as a crew member, at £5 per month, for the 2nd voyage south during AAE 1911-14. He left the expedition at Lyttelton, NZ, on March 19, 1913. There were at least three A. Kohlers (or Köhler) plying the Antipodean seas in this time period, all German. The best bet is a 20-year-old able seaman who pulled into Sydney as a crewman on the *Hohenfels*, on May 10, 1912, only 4 days before the *Aurora*'s Kohler signed on for Antarctica in that very town.

Kohler, Henry Conrad *see* **The *Vema***

Kohler Dome. 76°02' S, 134°17' W. A rounded, snow-covered elevation, rising to 2680 m, that rises slightly above the general level of the extreme E part of the Mount Moulton massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN for Robert E. Kohler, of the U.S. Coast and Geodetic Survey, geomagnetist and seismologist at Byrd Station in 1970.

Kohler Glacier. 74°55' S, 113°45' W. A distributary of the Smith Glacier, it flows northward through the middle of the Kohler Range into the Dotson Ice Shelf, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1967, in association with the range.

Kohler Head. 75°48' S, 162°51' E. A small headland on the NE side of Whitmer Peninsula, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for John L. Kohler, USN, construction electrician at McMurdo Station in 1965-66 and 1966-67.

Kohler Range. 75°05' S, 114°15' W. A mountain range, about 60 km long, behind the Dotson Ice Shelf, between Smith Glacier and the base of Martin Peninsula, in Marie Byrd Land. The range consists of 2 ice-covered plateaus that are oriented E-W, and which are punctuated by several rock peaks and bluffs, including Mount Isherwood, Mount Strange, Mount Bray, Morrison Bluff, and Early Bluff. The 2 plateaus are separated by the Kohler Glacier which runs northward through the range. Discovered by Byrd on a flight from the *Bear* on Feb. 24, 1940, during USAS 1939–41, and named by him as the Walter Kohler Range, for Walter Jodok Kohler, Sr. (1875-1940), one of the heads of the Kohler plumbing fixtures company, governor of Wisconsin from 1929 to 1931, and a supporter of ByrdAE 1933-35. Mr. Kohler also furnished the seaplane from which this discovery was made. US-ACAN accepted the name in 1947, and in 1966 they shortened the name to Kohler Range.

Kohmyr Ridge *see* **Komhyr Ridge**

Mount Kohnen. 75°00' S, 134°47' W. A peak on the SW corner of Bowyer Butte, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Heinz Kohnen (b. Feb. 5, 1938, Oberhausen. d. July 25, 1997, Nienberge, near Münster), Münster University geophysicist at Byrd Station in 1970-71. In 1979-80 he led the expedition on the *Polarsirkel* to establish Georg von Neumayer Station, the first German scientific station in Antarctica. From 1982 he was chief of logistics at the Alfred Wegener Institute. Kohnen Station (also called Heinz Kohnen Station) was named after him.

Kohnen Station *see* **Heinz Kohnen Station**

Koi Peak. 77°44' S, 162°42' E. A sharp peak, close S of Kaki Ponds, in the Kukri Hills of Victoria Land. Named by NZ-APC on Jan. 30, 1998, presumably for the carp of that name. US-ACAN accepted the name later in 1998.

Kokalyane Point. 62°38' S, 61°18' W. On the W coast of Rugged Island, 800 m N of Cape Benson, and 2.5 km S of Cape Sheffield, in the South Shetlands. Mapped by the Spanish in 1993 and by the Bulgarians in 2009. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Kokolyane, in western Bulgaria.

Koke-daira *see* **Koke Strand**

Koke Strand. 69°13' S, 39°40' E. A low flat beach just southward of Mount Choto, in Fukuro Cove, between the N and S parts of the Langhovde Hills, on the coast of Queen Maud Land. There is a notable moss deposit here, measuring 15 by 30 m. Biological work was done here by JARE. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on May 1, 1963 as Koke-daira (i.e., "moss beach"). US-ACAN accepted the name Koke Strand in 1975.

Kokiche Col. 63°46' S, 58°54' W. An ice-covered col extending for 650 m at an elevation of about 800 m above sea level, linking the Aureole Hills to the NW with the Detroit Plateau to the SE, 3.5 km NE of Bendida Peak, 12.15 km E by N of Poynter Hill, 5 km S by E of Tinsel Dome, and 7.79 km SW of Zlatolist Hill, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Kokiche, in southern Bulgaria.

Nunatak Kokkinaki *see* **Partridge Nunatak**

Gora Koksharova. 73°33' S, 64°22' E. A nunatak, NW of Mount Ruker, in the southern Prince Charles Mountains. Named by the Russians.

Nunataki Kol'cova. 80°34' S, 28°30' W. A group of nunataks, SE of Lister Heights, in the W part of the Shackleton Range. Named by the Russians.

Kolich Point. 77°21' S, 163°33' E. A rock point midway between Spike Cape and Gneiss Point, on the E coast of Victoria Land. Named by US-ACAN in 1976, for Thomas M. Kolich, geophysicist on the Ross Ice Shelf Project in 1973-74 and 1974-75.

Banka Koljuchka. 67°39' S, 45°57' E. One of 2 banks occupying the same coordinates immediately W of Cape Feoktistov, in the Thala Hills of Enderby Land, and both named by the Russians. The other is Banka Oreshek.

Koll Rock. 67°24' S, 60°41' E. A large rock, 0.8 km SE of Oom Island, it is the second largest in a group of rocks in the W side of Oom Bay, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kollskjer (i.e., "knoll rock"). ANCA

renamed it on July 22, 1959 (but for themselves only) as Blake Island, for Roger Blake (*see* **Blake Nunataks**). US-ACAN accepted the name Koll Rock in 1965.

Kolleisen. 71°39' S, 20°11' E. An ice area, 27 km long and 18 km wide, in the westernmost part of the Sør Rondane Mountains. Named by the Norwegians ("hill ice").

Kollen *see* **Kollen Island**, **McLeod Island**

Kollen Island. 67°07' S, 58°20' E. Rising to a height of about 75 m above sea level, off the E side of Hoseason Glacier Tongue, in Kemp Land. Named by ANCA (so says the SCAR gazetteer), although it is a Norwegian name meaning "the hill."

Kollskjer *see* **Koll Rock**

Kolobar Nunatak. 63°42' S, 58°14' W. A rocky hill rising to 587 m in the SW part of the Cugnot Ice Piedmont, 3.59 km NE of Panhard Nunatak, 4.29 km SE of Chochoveni Nunatak, and 5.66 km SW of Levassor Nunatak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Kolobar, in northeastern Bulgaria.

Koloc Point. 74°10' S, 111°39' W. An ice-covered point marking the N extremity of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Delineated from air photos taken in 1947 during OpHJ 1946-47. Named by US-ACAN in 1967, for Lt. Cdr. Bohumil Koloc, Jr., USN, helicopter pilot in Antarctica during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67). Originally plotted in 74°11' S, 111°24' W, it has since been replotted.

Mount Kolodkin. 71°45' S, 12°37' E. Rising to 2525 m, 2.5 km SE of Pinegin Peak, in the Südliche Petermann Range of the Wohlthat Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966 as Gora Kolodkina, for Lt. Col. Ya. L. Kolodkin, designer of the *Vostok* and *Mirnyy*, von Bellingshausen's ships. US-ACAN accepted the translated name Mount Kolodkin in 1970. The Norwegians call it Kolodkinhøgda (which means "Kolodkin heights").

Gora Kolodkina *see* **Mount Kolodkin**

Kolodkinhøgda *see* **Mount Kolodkin**

Gora Kolokol'nja. 72°39' S, 68°11' E. A nunatak, due W of Styles Glacier, on the N end of the Mawson Escarpment. Named by the Russians.

Nunatak Kolonna. 70°13' S, 64°31' E. On the SE side of Mount Starlight, at the W end of the Athos Range, in the Prince Charles Mountains. Named by the Russians.

Kolosh Glacier. 65°45' S, 64°18' W. A glacier, 6.7 km long and 3.6 km wide, on Magnier Peninsula, it drains the W slopes of Lisiya Ridge N of Mount Bigo, and flows northwestward into Bigo Bay next S of the terminus of Nesla Glacier, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1971. Named by the Bulgarians on Sept. 14, 2010, for Kolosh Peak, in Konyavska Mountain, in western Bulgaria.

Cape Kolosov. 66°29' S, 50°16' E. A point along the W side of the ice-covered peninsula that forms the E side of the entrance to Amundsen Bay, 6 km N of the Sheelagh Islands, on the ice coast of Enderby Land. Photographed aerially by ANARE in 1956, and again by SovAE 1958, and named by the USSR as Mys Kolosova, for V. Kolosov, polar aviation navigator who died in the Arctic. US-ACAN accepted the translated name Cape Kolosov in 1961, and ANCA also accepted that name. The name is also seen misspelled as Mys Koposova.

Kolosov Point. 70°38' S, 163°42' E. In Ob Bay, just N of Platypus Ridge. Discovered and photographed by SovAE 1958, and named after a polar aviator who died in the Arctic.

Mys Kolosova *see* **Cape Kolosov**

Gora Kolosovskogo. 71°41' S, 11°36' E. A nunatak, immediately NE of the mountain the Norwegians call Kvervenuten, in the Humbolt Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Mount Kolp. 81°39' S, 161°42' E. A mainly ice-free coastal mountain, rising to 1010 m, 11 km WNW of Cape Laird, on the W side of the Ross Ice Shelf. Named by US-ACAN in 1965, for Hal Kolp.

Kolp, Hal Richard. b. July 30, 1916, Akron, O., son of rubber factory foreman (and later salvage man) Hal G. Kolp and his wife France D. "Frankie" Fischer. He joined the U.S. Marine Corps as a private on May 14, 1940, and on June 30, 1940, was posted as a cadet to the Marine Barracks, Naval Air Station, at Pensacola, to be a flier. He served in World War II and Korea, and was a lieutenant colonel and head of VX-6 during OpDF I (1955-56) (the only Marine to be CO of VX-6). On Jan. 3, 1956, he made an unscheduled flight over the South Pole (*see* that date, under **South Pole**), the 3rd ever flight over the Pole. He flew the 5th long-range exploratory flight of OpDF I, in an R5D, on Jan. 7, 1956, going direct to 71°S, 146°E (the South Magnetic Pole; the first time a plane had ever flown over this point), then to 69°S, 130°E. From there he headed north and skirted the coast of Wilkes Land until he had to return. The trip was 2350 miles. He saw the *Kista Dan* far below. On Jan. 13, 1956, he and 10 fliers, and AP correspondent Saul Pett, flew in a Skymaster over the Pole, with Benny Goodman's music playing on a tape. He died on May 24, 1980, in Tustin, Calif. His wife Rosemary died in 1999.

Pik Kolpak. 73°07' S, 66°11' E. A peak, SW of Mount Stinear, in the southern Prince Charles Mountains. Named by the Russians.

Koltermann Peak. 77°29' S, 160°23' E. Rising to 2166 m, in the E part of the McAllister Hills, W of the Olympus Range, in Victoria Land. Named by US-ACAN on July 14, 2004, for Maj. David Koltermann, of the 109th Airlift Wing, New York Air National Guard, co-pilot of the LC-130 Herc in a pre-season McMurdo to Pole flight, on Oct. 16, 1999. NZ-APC accepted the name on Nov. 30, 2004.

Kolven *see* **Kolven Island**

Kolven Island. 67°33' S, 61°29' E. The eastern of 2 small islands (Stedet Island is the other, 0.75 km to the W), close NE of Falla Bluff, in Utstikkar Bay, in the Prince Charles Mountains of Mac. Robertson Land. Probably first seen by BANZARE under Mawson in Feb. 1931. Mapped by Norwegian cartographers in 1946 from aerial photographs taken by LCE 1936-37, and descriptively named by them as Kolven (i.e., "the club"). The Americans unofficially adopted the name Kolven Island, but it was renamed by ANARE on July 22, 1959, as Alfons Island, for Alfons "Alf" Bolza, weather observer at Mawson Station in 1958. However, in 1970, US-ACAN accepted the name Kolven Island.

Gora Komandnaja *see* **Komandnaya Nunatak**

Komandnaya Nunatak. 72°12' S, 14°31' E. The eastern and highest of the Rokhlin Nunataks, in the S part of the Payer Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Soviet cartographers from ground surveys and air photos taken during SovAE 1960-61, and named by them in 1966 as Gora Komandnaja (i.e., "command nunatak"). US-ACAN accepted the name Komandnaya Nunatak in 1970.

Komandor Peak. 62°06' S, 58°29' W. Rising to about 300 m above sea level, E of Admiralen Peak, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980 (name means "commodore").

Gora Komarova. 70°49' S, 66°19' E. A nunatak, SW of Mount Bunt, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Komatsu Nunatak. 71°55' S, 161°11' E. A very prominent nunatak, rising to 1840 m near its center, 6 km W of the summit of Mount Van der Hoeven, in the W part of the Helliwell Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Stanley K. Komatsu (b. 1941), USARP biologist at McMurdo Station in 1966-67 and 1967-68.

The *Komet*. Hilfskreuzer (auxiliary cruiser) 45 of the German Navy, the smallest of all the hilfskreuzers. Built in 1937 by Deschimag of Bremen for North German Lloyd, as the *Ems*, she was converted at Howaldtswerke in Hamburg, being re-commissioned into the German Navy on June 2, 1940, as the *Komet*. 3,287 tons and 115 meters long, she carried 6 torpedoes, 30 mines, and one Arado AR196A-1 airplane, as well as a 11.5-ton motor minelaying boat named the *Meteorit*. She ran on two 6-cylinder two-stroke diesel engines at 14.5 knots (top speed). She made precisely two cruises as the *Komet*. On the first, between July 3, 1940 and Nov. 26, 1941, under the command of Capt. Robert Eyssen, she covered 87,00 miles in 516 days, crossing the

equator eight times, and sinking several enemy ships. Eyssen was promoted to rear admiral during the trip. At first she headed north into the Arctic, then through the Bering Straits, into the Pacific. The *Komet* cruised along the Antarctic coast between Cape Adare and the Shackleton Ice Shelf, in the austral summer of 1940-41, looking for the Anglo-Norwegian whaling fleets, but, not finding them, headed north again. On her second cruise, under Capt. Ulrich Brocksien, she was sunk off Cherbourg by British motor torpedo boat 236 on Oct. 14, 1942, after 6 days at sea.

Kometsubu-jima *see* **Kometsubu-zima**

Kometsubu-zima. 69°14' S, 39°35' E. A little island, 12 km WSW of Cape Koyubi, in the Langhovde Hills. It resembles a drop of rice, and because of that was so named by the Japanese on July 10, 2008.

Komhyr Ridge. 82°47' S, 160°10' E. A prominent ridge immediately E of Hoschstein Ridge, in the NW part of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys and USN aerial photos taken between 1960 and 1962. Named by US-ACAN in 1966, as Kohmyr Ridge (i.e., they spelled it wrong), for Walter Dmytro Komhyr (b. 1931, Canada; in the USA from 1961) USARP atmospheric physicist at Hallett Station and Pole Station in 1963-64, and again, at the Pole, 1975-76. The name was corrected in the 1990s.

Komini Peak. 62°39' S, 60°07' W. A peak with precipitous rocky W slopes, rising to 744 m, 1.25 km N of Levski Peak, 1.7 km NE of Lyaskovets Peak, 1.5 km E of Zograf Peak, and 1.4 km SE of Lozen Nunatak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for Komini Peak, in Vitosha Mountain, in western Bulgaria.

Kominko-Slade Automatic Weather Station. 79°28' S, 112°05' W. An American AWS, installed on the West Antarctic Ice Sheet in Jan. 2006, at an elevation of 1833 m, named for the Twin Otter pilots Chuck Slade and John Kominko, who flew it in and helped install it.

Koms Glacier. 72°03' S, 25°18' E. A glacier, 8 km long, flowing N between Mefjell Mountain and Komsa Mountain, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Komsbreen, in association with Komsa Mountain. US-ACAN accepted the translated name Koms Glacier in 1966.

Komsa *see* **Komsa Mountain**

Komsa Mountain. 72°05' S, 25°21' E. A mountain (the Norwegians describe it as a mountain ridge), rising to 2960 m between Koms Glacier and Salen Mountain, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by OpHJ 1946-47, and named by them as Komsa (i.e., "the Lapp cradle"). US-ACAN accepted the name Komsa Mountain in 1966.

Komsbreen *see* **Koms Glacier**

The *Komsomolets-23*. Soviet whaler which landed at Young Island, in the Balleny Islands, in March 1958. Captain Aleksey Nikolayevich Solyanik. The vessel conducted a survey of the area, and really disproved the existence of Macey's Island and Swain's Island. She was back at Young Island, captain unknown, in 1959.

Sopka Komsomol'skaja *see* **Komsomol'skaya Hill**

Komsomol'skaya Hill. 66°33' S, 93°01' E. Rising to 35 m, just N of the main section of Mirnyy Station, immediately S of Mabus Point, on the coast of East Antarctica. Discovered and roughly sketched by AAE 1911-14. Photographed aerially by OpHJ 1946-47. Re-photographed aerially by Mirnyy personnel during SovAE 1956, and named by them as Sopka Komsomol'skaja (i.e., "young communist hill"). ANCA accepted the translated name on Oct. 11, 1960, and US-ACAN followed suit in 1961.

Komsomol'skaya Station. 74°06' S, 97°30' E. Soviet IGY station built in 1957 as an operational support station, 250 km inland from the coast of Queen Mary Land, at a height of 3500 m. Name means "young communist." **1957 winter**: Vasiliy Sergeyevich Pelevin (leader). **1958 winter**: Mikhail Alekseyevich Fokin (leader). **1959 winter**: Maksim Mikhaylovich Lyubarets (leader). The station was closed after the 1959 winter. **1961-62**: opened for the summer. **1982-83 summer**: it was opened, then closed after the summer. **1985-86**: it was re-opened, and was open again for the following two summers (1986-87, and 1987-88).

Pik Komsomol'skij *see* **Komsomol'skiy Peak**

Poluostrov Komsomol'skij. 70°20' S, 7°40' E. A peninsula, S by SW of Dublitskiy Bay, on the coast of Queen Maud Land. Named by the Russians.

Komsomol'skiy Peak. 75°45' S, 63°25' E. A partly snow-covered peak rising above the ice plateau about 208 km (the Australians say about 240 km) SSE of Mount Menzies, in Mac. Robertson Land. Discovered aerially by SovAE on Dec. 7, 1958, on a flight from the Pole of Relative Inaccessibility to Mirnyy Station, and named by them as Pik Komsomol'skij (i.e., "Communist peak"). Photographed aerially by ANARE in Dec. 1960. ANCA accepted the name Komsomol'skiy Peak on May 18, 1971, and US-ACAN followed suit in 1973.

Kon-Tiki Nunatak. 82°33' S, 159°52' E. Rising to 1300 m, and raft-like (hence the name, given for Thor Heyerdahl's 1947 trans-Pacific raft), surmounting Cooper Icefalls, in the center of Nimrod Glacier. Discovered and named by NZGSAE 1961-62. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Kondofrey Heights. 63°50' S, 58°34' W. Heights rising to 1119 m and extending for 9.2 km in an E-W direction and 7.5 km in a N-S direction, on Trinity Peninsula, E of the Detroit Plateau, S of Victory Glacier, and W of the Prince Gustav Channel. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Kondofrey, in western Bulgaria.

Skaly Kondratjuka. 80°24' S, 160°15' E. A group of rocks on the NE side of Mount Madison, on the Shackleton Coast, on the W side of the Ross Ice Shelf. Named by the Russians.

Kong Håkon VII Hav *see* **Haakon VII Sea**

Kong Håkon VII Vidde *see* **Polar Plateau**

Kong Oscar II Land *see* **Oscar II Coast**

Kongming Shan. 72°00' S, 75°10' E. A hill in the Grove Mountains of Princess Elizabeth Land. Named by the Chinese.

Kongur Glacier. 62°54' S, 62°26' W. Flows for 2.7 km from the NW slopes of the Imeon Range, W of Mount Christi, into the Drake Passage, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4 of that year, after the peak and nature reserve of Kongur, on Belasitsa Mountain, in SW Bulgaria.

König, Felix. b. 1880, Gratz, Austria. He was on the *Deutschland* with Filchner during GermAE 1911-12, as an alpinist. It was Dr. König who acquired the huskies in Greenland for the expedition. He, Filchner, and Kling went out looking for New South Greenland in June 1912. After this disastrous expedition, and upon his return to Europe, he planned a 1913-14 Austrian expedition to the Filchner Ice Shelf, with about 30 men and 150 dogs, to start in July 1914 from Trieste on the *Österreich* (formerly the *Deutschland*, the ship used for GermAE 1911-12). There was to be no alcohol on board. However, Shackleton (and the war) beat him to it, and it was aborted. König never went to Antarctica again.

Kønig Haakon *see* **King Haakon**

König Oskar II Land *see* **Oscar II Coast**

Gory Konovalova. 67°45' S, 45°45' E. A group of rock outcrops at the head of Freeth Bay, in Enderby Land, just E of Campbell Glacier. The most notable feature within this group is Gorodkov Hill. Named by the Russians.

Pik Konovalovoj. 82°46' S, 53°23' W. A peak, SE of Jaburg Glacier, in the Pensacola Mountains. Named by the Russians.

Konow, Magnus. Norwegian whaling magnate who, with Johan Rasmussen, owned the Rosshavet Company (which, in turn, owned the *Sir James Clark Ross* and the *C.A. Larsen*).

Konsei-pira. 71°23' S, 35°29' E. A cliff, composed of migmatite, and rising to 300 m, at the W edge of Mount Fukushima, just N of Yamato Glacier, in the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979 (name means "mixture cliff").

Nunataki Konstantina Simonova. 83°23' S, 55°30' W. A group of nunataks, NW of Mount Moffat, in the Pensacola Mountains. Named by the Russians.

Gora Kontaktnaja *see* **Madsensåta**

Konter, Richard Wesley "Dick." b. Jan. 8, 1882, Brooklyn, son of Eibertus A. Konter and his wife Marie Kuck. His mother died when he was 15, and he joined the U.S. Navy in 1897, fought in the Spanish-American War, and finally became chief petty officer (radio). He was once

wrecked on the *Charleston*, and stranded on a desert island for 12 days. During World War I he was on the *Minneapolis*. He was with Byrd in the Arctic, retired from the Navy in 1927, and was then a seaman on the *City of New York* during ByrdAE 1928-30. He played and composed songs, and would entertain the men. They called him "Ukulele Dick." He left for NZ on the *City of New York* on Feb. 22, 1929, but was back for the 2nd half of the expedition. He married Johanna Pool. From 1930 to 1970 he led a band and group of traveling entertainers to children's homes, homes for the aged, and the chronically ill. He died in Brooklyn on Aug. 25, 1979.

Konter Cliffs. 75°06' S, 137°48' W. A line of cliffs, rising to 360 m, which surmounts the E side of the terminus of Frostman Glacier, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys and from tricamera aerial photos taken by USN between 1959 and 1965. Named by US-ACAN in 1975, for Dick Konter.

Gora Konus. 73°39' S, 68°38' E. A nunatak, almost due E of Dalton Corner, in the S extremity of the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

Sopka Konus. 68°36' S, 77°31' E. A hill, due W of Keuken Rock, in the Vestfold Hills. Named by the Russians.

Konush Hill. 63°29' S, 58°12' W. An ice-covered hill rising to 550 m in the N foothills of the Louis Philippe Plateau, 2.03 km N of Mount d'Urville, 5.64 km ENE of Ogled Peak, and 5.51 km W by S of Cerro Argentino (what the Chileans call Cerro Guerrero), it surmounts Sestrimo Glacier to the E and Lafond Bay to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlements of Konush, in southern Bulgaria.

Mount Koob. 84°53' S, 169°02' W. Rising to 1600 m, it is the highest peak in Mayer Crags, 6 km NW of Mount Ferguson, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Derry D. Koob (b. 1933), USARP biologist at McMurdo in 1964-65 and 1965-66.

Mount Koons. 72°43' S, 160°22' E. A small mountain, 1.6 km E of Miller Butte, in the Outback Nunataks, in the Usarp Mountains of Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Robert W. Koons, USARP logistics coordinator who wintered-over at McMurdo in 1968.

The *Koonya*. A 225-foot, 1093-ton steel-hulled tramp steamer, built as the *Yukon*, in 1898 at Grangemouth, in England, for the Yukon Steamship Co., of Swansea, and bought in 1899 by the Union Steam Ship Co., of NZ, who changed her name to the *Koonya*. Captained by F.P. Evans, she was chartered by BAE 1907-09 to tow the *Nimrod* to Antarctica, in order to save fuel for Shackleton's expedition ship. This service was paid for by the Union Steamship Company and the NZ government. She towed the *Nimrod* out of Lyttelton Harbor on Jan. 1, 1908, and 1500 miles later, on Jan. 15, 1908, after becoming the first steel vessel to cross the Antarctic Circle, she cast off the tow and returned home. The *Koonya* foundered on Sandy Cape, on the Tasmanian coast on June 3, 1919.

Kupol Kooperacija *see* **Kooperatsiya Ice Piedmont**

Zaliv Kooperacija. 69°57' S, 160°59' E. The W portion of Rennick Bay. Named by the Russians. *See also* **Kooperatsiya Ice Piedmont**.

The *Kooperatsiya*. Expedition ship used by SovAE 1956-58 (Captain Anatoliy Savel'yevich Yantselevich); 1957-59 (same captain); SovAE 1959-61 (Captain V.V. Beloshistyy); SovAE 1961-63 (Captain Beloshistyy again).

Zaliv Kooperatsiya *see* **Kooperatsiya Ice Piedmont**

Kooperatsiya Ice Piedmont. 70°15' S, 160°25' E. At the SW side of Yermak Point, on the W shore of Rennick Bay. The area was photographed aerially by SovAE 1958, and they named the W portion of Rennick Bay as Zaliv Kooperacija, for their ship, the *Kooperatsiya*. NZGSAE 1963-64 quite rightly saw no reason to divide the bay with different names, and so, keeping Rennick Bay for the entire embayment, suggested that this nearby ice piedmont be named Kooperatsiya Ice Piedmont, to honor the Russian naming. NZ-APC accepted this, as did US-ACAN in 1964. Today, the Russians seem to agree, and call it Kupol Kooperacija.

Koopman Peak. 85°29' S, 125°35' W. Rising to over 2200 m, 3 km N of Moran Buttress, on the N side of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Kenneth E. Koopman, Navy yeoman in Antarctica during OpDF 65 (i.e., 1964-65), OpDF 66 (i.e., 1965-66), and OpDF 67 (i.e., 1966-67).

Gora Koordinirovannaja. 74°19' S, 66°38' E. A nunatak, due W of Wilson Bluff, at the S end of the Lambert Glacier. Named by the Russians.

Kooyman Peak. 82°43' S, 162°49' E. Rising to 1630 m, on the ridge just S of Dorrer Glacier, in the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Gerald L. Kooyman, USARP biologist at McMurdo in 1961-62, 1963-64, and 1964-65, studying physiological characteristics related to diving in the Weddell seal.

Isla Kopaitic *see* **Kopaitic Island**

Islote Kopaitic *see* **Murray Island**

Kopaitic Island. 63°19' S, 57°55' W. An island, with steep, almost completely snow-covered coasts, 0.5 km W of Cape Legoupil, in the Duroch Islands, off Trinity Peninsula. Named by ChilAE 1946-47, for 1st Lt. Boris Kopaitic O'Neill, leader of the first wintering-over party at Soberanía Station (later re-named Capitán Arturo Prat Station) in 1947. In 1958, as a capitán de navío, he was director of the Academy of Naval Warfare. It appears on a 1948 Chilean chart as Isla Teniente Kopaitic. In order to avoid the use of compound names, the feature appears as Isla Kopaitic on a Chilean chart of 1951, and that was the name accepted by the Chilean gazetteer of 1974. It appears as Kopaitic Island on a U.S. chart of 1963, and US-ACAN accepted that name in 1964. UK-APC accepted the name on Dec. 15, 1982, and it appears in the British gazetteer of 1986.

Kopelmann, Wilhelm. German-Argentine who was at Órcadas Station for the winter of 1914, and who led the party there for the winter of 1920, when he had to removed Augusto Tapia's fingers (*see* **Amputations**). From 1922 to 1931 he was the head of Cipoletti Meterological Station, in Río Negro, Argentina. The Argentines called him Guillermo Kopelmann.

Mount Kopere. 82°17' S, 158°51' E. A prominent mountain peak, 2.5 km (the Australians say 4 km) NNW of Lyttelton Peak, in the central sector of the Cobham Range. Discovered by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65, and named descriptively by them. From pretty much any angle, the triangular cross-section of this mountain suggests an arrowhead ("kopere," in Maori, means "arrow"). NZ-APC accepted the name, and ANCA followed suit on Aug. 10, 1966, with US-ACAN doing the same later that year.

The *Kopernik*. Polish ship that took part in PolAE 1979-80, skippered by Franciszek Wrobel.

Mys Koposova *see* **Kolosov Point**

Koppe Canyon. 71°39' S, 17°30' W. A submarine feature off the Princess Martha Coast, running between 71°30' S and 71°48' S, and between 16°00' W and 19°00' W. The name was proposed by Heinrich Hinze in Jan. 1997, and accepted by international agreement in June 1997. Carl Koppe (1844-1910) was a German cartographer and geodesist who developed an empirical formula for the accuracy of topographic maps.

Köppengletscher. 80°18' S, 28°00' W. A glacier on the W side of the La Grange Nunataks, in the NW part of the Shackleton Range. Named by the Germans.

The *Koral*. Polish ship that took part in PolAE 1985-86 and PolAE 1986-87. Skipper both seasons was Jan Boruta.

Korea *see* **North Korea**, **South Korea**

Koren, Johan Paulsen. b. Oct. 4, 1879, Fredrikstad, Ostfold, Norway, son of Poul Frederik Koren and his wife Karoline Lovise Ramm. Sailor and assistant zoologist on the *Belgica* during BelgAE 1897-99. He died on March 4, 1919, in the Red Cross Hospital in Vladivostok.

Korff Ice Rise. 79°00' S, 69°30' W. An ice rise, about 30 km wide, extending in a NE-SW direction for about 130 km (the British say about 170 km), and and rising to an elevation of about 300 m, about 80 km ENE of Skytrain Ice Rise, in the SW part of the Ronne Ice Shelf, E of Fletcher Promontory. Discovered and roughly mapped by the US-IGY Ellsworth Traverse Party of 1957-58, and named by them as Korff Island, for Russian-born Prof. Serge Alexander Korff (1906-1989), vice chairman of the cosmic ray technical panel of the U.S. National Committee for IGY. In Jan. 1975, BAS flew over here from

Siple Station on a radio echo-sounding flight, and showed it to be an ice rise, rather than an island. UK-APC accepted the name on May 30, 1975, and US-ACAN followed suit that year. It appears as such in the 1977 British gazetteer. From at least 1978, the Argentines have been calling it Isla Portillo, for Rear Admiral Gregorio Portillo, of the Argentine navy (*see* **Airplanes**, 1947).

Korff Island *see* **Korff Ice Rise**

Kormesiy Peak. 62°33' S, 59°37' W. A rocky peak rising to 260 m, 700 m SW of St. Kiprian Peak, 750 m SE of Drangov Peak, and 600 m E of Ziezi Peak, on the SE coast of Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006, for Khan Kormesiy of Bulgaria, 721-738.

Kornicker Glacier. 78°43' S, 84°35' W. Flows NE from the cirque bounded by Mount Liptak, Mount Southwick, and Mount Mullen, in the S part of the Sentinel Range, in the Ellsworth Mountains. It merges with the terminus of the SE-flowing Thomas Glacier as both glaciers emerge from the range. Named by US-ACAN in 2006, for Louis S. Kornicker, research zoologist with the Smithsonian, 1964-2006, who was on the board of associated editors for the *Antarctic Research* series, of the American Geophysical Union, 1978-90.

Gora Korolëva *see* **Hovdenuten**

Kupol Korolëva. 70°25' S, 4°20' E. A dome on the ice fringing Queen Maud Land. Named by the Russians.

Morena Korotkaja. 72°02' S, 68°45' E. A moraine on the N side of the Clemence Massif, on the E side of the Lambert Glacier. Named by the Russians.

Plato Korotkevicha. 73°30' S, 89°30' E. A plateau of the Antarctic ice cover, about 500 km S of Mirnyy Station, between IGY Valley and the traverse route from Mirnyy to Vostok Station. Named by the Russians on April 6, 1998, for geographer Yevgeny Sergeyevich Korotkevich, assistant director of the Arctic and Antarctic Institute, and who led SovAE 1959-61.

Lednik Korotkij *see* **Korotkiy Glacier**

Korotkiy Glacier. 72°51' S, 68°09' E. A small glacier, 3 km N of Rofe Glacier, it flows westward into the Lambert Glacier, on the Mawson Escarpment, in Mac. Robertson Land. It appears as Lednik Korotkij on a 1977 Russian map. US-ACAN accepted the name Korotkiy Glacier on Oct. 20, 2009.

Ostrov Korsar *see* **Korsar Island**

Korsar Island. 66°14' S, 100°54°E. In the Bunger Hills. Charted by SovAE 1958, and named by the Russians as Ostrov Korsar. ANCA translated the name on Jan. 19, 1989.

Mount Korsch. 82°52' S, 160°56' E. A pyramidal peak, rising to about 4000 m, on the NW margin of the Markham Plateau, 5 km W of Mount Markham, in the Queen Elizabeth Range. Named by US-ACAN in 1988, for geologist Russell J. Korsch who, with Ed Stump and D.G. Edgerton, climbed and geologically mapped this peak on Dec. 3, 1985, as member of a USARP field party. Korsch was a member of an earlier USARP field party, in 1968-69, and was an NZARP in 1982-83 and 1984-85.

Korten Ridge. 63°56' S, 59°53' W. A ridge, 9 km wide, extending in a N-S direction for 18 km, and rising to 1673 m (in Mount Bris), bounded by Podvis Col, which links it with the Detroit Plateau to the SE, with Temple Glacier to the SW, with Lanchester Bay to the W, with Wennersgaard Point and Jordanoff Bay to the N, and with Sabine Glacier to the E, on the Davis Coast, on the W coast of Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Korten, in southeastern Bulgaria.

The *Kos*. A series of whale catchers built at Framnaes Mek, in Norway, for Anders Jahre's Kosmos Company. For example, *Kos 31* and *Kos 32* were built in 1947, and were each 511 tons. There were also: *Kos I*, *Kos II*, *Kos III*, *Kos VI*, *Kos 21*, *Kos 22*, *Kos 23*, *Kos 26*, *Kos 34*, *Kos 45*.

Kosar Point. 71°08' S, 73°07' W. A snow-covered point forming the W end of Eroica Peninsula, on Beethoven Peninsula, in the SW part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48. Re-mapped by USGS from USN air photos taken in 1967-68, and from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for Cdr. William S. Kosar, USN, assigned to the NSF's Division of Polar Programs, as aviation projects officer, 1975-77. He was instrumental in modifying LC-130 aircraft to provide longer range in support of extensive radio echo-sounding missions. UK-APC accepted the name on May 13, 1991.

Mount Koscielec. 64°13' S, 56°37' W. Rising to about 170 m above sea level on Seymour Island. Named by the Poles on Sept. 1, 1999, for a peak in the Tatra Mountains of Poland.

Mount Kosciusko. 75°43' S, 132°13' W. A prominent mountain, rising to 2910 m, it comprises the central part of the Ames Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Capt. Henry Marzy "Hank" Kosciusko (b. Oct. 29, 1917, Millbury, Mass.), who joined the U.S. Navy in Oct. 1970, and who was commander of the Antarctic Support Activities group, 1965-67. He retired from the Navy in June 1972.

Kosco, George Francis. b. April 1, 1908, Knox, Pa., son of Viennese immigrant boarding house keepers John Kosco and his wife Teresa. He graduated in 1930 from the Naval Academy at Annapolis, where he became a friend of "Bull" Halsey. In 1937 he became interested in aerology, and in 1940 got his master's degree in the subject. Chief aerologist and chief scientist on OpHJ 1946-47. He retired as a captain, and died in June 1985, in Harrisburg, Pa.

Kosco Glacier. 84°27' S, 178°00' W. About 30 km long, it flows in a generally northerly direction from the base of Anderson Heights, in the Bush Mountains, and enters the Ross Ice Shelf between Wilson Portal and Mount Speed. Discovered on Flight C of Feb. 29-March 1, 1940, during USAS 1939-41. Named by US-ACAN in 1962, for Capt. George F. Kosco. NZ-APC accepted the name.

Kosco Peak. 79°47' S, 83°46' W. A prominent peak, rising to about 1650 m, between Drake Icefall and Hyde Glacier, in the N part of the Edson Hills, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken betwen 1961 and 1966. Named by US-ACAN for William J. Kosco, USGS topographic engineer, 1952-83. From 1975 to 1983 he was chief of the Polar Programs Office, with responsibility for Antarctic mapping.

Koshava Island. 62°25' S, 60°08' W. The easternmost island in the Zed Islands, it measures 340 m by 220 m, 140 m NE of Lesidren Island, and 1.9 km N of Williams Point, off the N coast of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Koshava, in northwestern Bulgaria.

Kosiba Wall. 67°31' S, 66°55' W. A cliff face rising to 1180 m, at the NE end of Blaiklock Island, off the Loubet Coast, on the W coast of Graham Land. BAS personnel from Rothera Station did geological work in the area in 1980-81. Named by UK-APC on April 3, 1984, for Alexander Kosiba (1901-1981), Polish climatologist and glaciologist, professor of meteorology and climatology at the University of Wroclaw, 1945-71; leader of the first Polish expedition to Greenland, in 1937, and of Polish glaciological expeditions to Svalbard between 1957 and 1960. US-ACAN accepted the name. It appears in the 1986 British gazetteer.

Cape Kosistyy. 67°42' S, 45°44' E. On the E side of Freeth Bay, it separates Vozrozhdenya Bay from Sibiryachka Bay, SE of Alasheyev Bight, in Enderby Land, about 5.5 km W of Molodezhnaya Station. Photographed aerially by ANARE in 1956, and by SovAE 1957, and named by the Russians as Mys Kosistyj. This name was translated by ANCA as Kosistyy Point, and later (July 31, 1972) to Cape Kosistyy.

Kosistyy Point *see* **Cape Kosistyy**

Koski Glacier. 85°17' S, 167°15' E. A glacier, 11 km long, it flows E from the east-central part of the Dominion Range ice-cap, close N of Vandament Glacier (whose flow it parallels), terminating at Mill Glacier just SE of Browns Butte. Named by US-ACAN in 1966, for Raymond J. Koski, USARP engineer on several traverses originating at Pole Station, in 1962-63, 1963-64, and 1964-65.

Mount Kosko. 79°09' S, 159°33' E. Rising to 1793 m, about 10 km N of Mount Keltie, in the Conway Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Arno Kosko, ionosphere physicist at Byrd Station in 1963. ANCA accepted the name on Aug. 27, 1975.

Kosky Peak. 70°57' S, 63°28' W. A peak, rising to about 2200 m, 2.5 km S of Mount Nordhill, in the Welch Mountains, in central Palmer

Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Capt. Harry G. Kosky, U.S. Coast Guard, captain of the *Westwind* during OpDF 71 (i.e., 1970-71). UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Koslov Nunataks *see* **Kozlov Nunataks**

Kosmann, Charles-Henri. b. Sept. 10, 1808, Burac, Westphalia, Germany. Coxswain on the *Astrolabe* during FrAE 1837-40, he also studied azimuths.

Kosminskaya Fracture Zone. 61°32' S, 30°20' W. An undersea feature toward the N extremity of the Weddell Sea. Discovered by the *Akademik Boris Petrov*, in Feb. 1995. The name was proposed by Dr. Galina Agapova and Dr. Gleb Udintsev, of the Geological Institute of the Russian Academy of Sciences, for Prof. Irina Petrovna Kosminskaya (1918-1996), a Russian scientist specializing in marine geophysics and seismology. The name was accepted by international agreement in June 1997.

Gory Kosmonavtov. 70°46' S, 66°22' E. A group of low peaks, about 11 km ESE of Mount Hollingshead, in the Aramis Range, in the Prince Charles Mountains. The most notable one is Mount Bunt, at the SW end. Others in the range are Gora Gagarina, Gora Komarova, Gora Bastion, Gora Bogatyr', and Mount Trott. Named by the Russians.

Lednik Kosmonavtov. 72°00' S, 10°20' E. A glacier, NW of Glopeflya Plain, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

More Kosmonavtov. 67°00' S, 42°00' E. A sea off the coast of Queen Maud Land. Named by the Russians.

The *Kosmos*. Norwegian whaling factory ship, 17,801 tons, owned by Anders Jahre's Kosmos Whaling Company, out of Sandefjord. She was built by Workman, Clark, Ltd., of Belfast, in 1929, at a cost of £275,000, the first factory ship specifically built as such with a stern slip (i.e., not a regular ship converted into a whaler), and the largest factory ship of her day, the first of the giant whalers. On Aug. 10, 1929, under the command of Captain Hans Andresen, and with 310 men on board, she led her fleet of 7 new whale catchers (built at Smith's Dock, Middlesbrough, at a cost of £20,000 each) out of Sandefjord, and on Sept. 10, 1929 passed through the Panama Canal, heading for Antarctic waters, where she would conduct pelagic whaling in the Ross Sea and at the Balleny Islands. The *C.A. Larsen* was another ship in the fleet. The *Kosmos* carried airplanes, and Finn Lützow-Holm and Leif Lier were the pilots. On Christmas Day 1929 Lier and Dr. Ingvald Schreiner went out on a reconnaissance flight over the pack-ice in their light, 2-seater Gypsy Moth, which had a 100-hp Cyrrus engine, and which was fitted with pontoons. They were never seen again. That season's expedition cost £450,000, but she took in 1872 whales (including 1000 blues), and produced 119,400 barrels of oil. The ship was back again for the 1930-31 season, again under Capt. Andresen. The ship supplied coal to the BANZARE ship *Discovery* on Dec. 29, 1930. Also aboard was the whale fishing inspector, Captain Dingsør. That second season she caught 2431 whales (including 1552 blues), and produced 119,190 barrels of oil. She was back in Antarctic waters in 1932-33, under the same skipper, and again in 1933-34, 1934-35, 1935-36, 1936-37, 1938-39, and 1939-40. On Sept. 26, 1940, during World War II, she was captured and sunk by the German raider *Thor*.

The *Kosmos II*. A 16,966-ton Norwegian factory whaling ship, built in Belfast, by Harland & Wolff, in 1931, specifically with a stern slip and two side-by-side funnels, for Anders Jahre's ad hoc Kosmos II Company. Her first season in Antarctic waters was 1932-33, under the management of Lars Andersen. That season she took 1979 whales, and produced 222,244 barrels of oil, an all-time Norwegian Antarctic record. She was back again in 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, 1938-39, 1939-40, and 1940-41. She was torpedoed on Oct. 28, 1942 in the Atlantic, having left New York 10 days before.

The *Kosmos III*. An 18,047-ton Norwegian whaling factory ship, owned by Anders Jahre. She was in Antarctic waters in 1947-48 and 1948-49, under Capt. Lea. Kjeld Tholefsen was 1st mate; Johan Fristedt was 2nd mate; Waldemar Bjørnes was 3rd mate; and Håkon J. Johansen was 4th mate. Hjalmar Larsen was bosun, and chief engineer was Rolf Olsen. John Gran was secretary, and the radio operator was Odd M. Omsland. The inspector on board was Finn Roy Istad. She was joined later in the season by the *Kosmos IV*. The *Kosmos III* had 10 attendant whale catchers — the *Kosmos 15*, *26*, *27*, *29*, *32*, *33*, *36*, *39*, *41*, and the *H.J. Bull*. She was back in Antarctic waters every season from 1949-50 until 1951-52, each time with the *Kosmos IV*. She missed the 1952-53 season, but from 1953-54 she and the *Kosmos IV* went to Antarctica together every season until 1960-61. In 1961, the *Kosmos III* was sold to the Japanese, and became the *Nisshin Maru 3*.

The *Kosmos IV*. A 13,474-ton whaling factory ship, ex-*Walther Rau* (q.v.). In Dec. 1946 she was in Norway, and was bought by Norwegian whaling magnate Anders Jahre, and her name was changed to the *Kosmos IV*. She was in Antarctic waters in 1946-47 and 1947-48, that latter season being one month late leaving from Liverpool, due to repairs, and that year's whaling season was extended for her. She went to Norway first to pick up her crew. She was back in Antarctic waters in 1948-49, in company with the *Kosmos III*. Each of the two factories had 10 whale catchers attendant on them; the *Kosmos IV* had *Kosmos* 24, 28, 30, 31, 34, 35, 37, 38, 40, and 42. She was back in 1949-50 and 1950-51, again in company with the *Kosmos III*. She was lengthened in 1951, and then she and the Kosmos III were back in Antarctic waters in 1951-52, and the *Kosmos IV* went alone in 1952-53. From 1953-54 until 1960-61 the two ships went to Antarctica together every season, and from 1961-62 the *Kosmos IV* went alone every season until her last, 1967-68. In 1971 she was sold to the Japanese, becoming the *Kyokusei Maru*.

Kostenets Saddle. 62°57' S, 62°27' W. A saddle, at an elevation of about 1520 m, bounded by Mount Pisgah to the N, and the E ridge of Drinov Peak to the S, it overlooks the head of Vetrino Glacier to the W, in the Imeon Range of Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the town of Kostenets in southwestern Bulgaria.

Mount Kostka. 70°42' S, 164°49' E. Rising to 1210 m, on the W side of Zykov Glacier, 5 km SE of Saddle Peak, and 20 km NE of Mount Burch, in the Anare Mountains. Photographed aerially by OpHJ 1946-47. Surveyed by SovAE 1958, and named by the Russians in 1961, as Gora Kostki, for Dr. Oldrich Kostka (b. Dec. 21, 1924, Prague), Czech meteorologist working at Mirnyy Station in the winter of 1960, and who was killed in the fire of Aug. 3 of that year (*see* **Deaths**, 1960). US-ACAN accepted the translated name in 1964, and NZ-APC followed suit.

Gora Kostki *see* **Mount Kostka**

Kostur Point. 64°10' S, 62°04' W. A point projecting southward for 1.4 km into Hill Bay, 2.7 km NNE of Petroff Point, and 4.2 km SW of Spallanzani Point, on the E coast of Brabant Island, in the Palmer Archipelago. Named by the Bulgarians on June 3, 2010, for the settlement of Kostur, in southeastern Bulgaria.

Ostrov Kot *see* **Kot Island**

Kot Island. 66°02' S, 101°06' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Kot. ANCA translated the name on Jan. 19, 1989.

Vpadina Kotël. 73°26' S, 62°20' E. A trench, inland from the American Highland. Named by the Russians.

Kotel Gap. 62°41' S, 60°15' W. A saddle, at an elevation of over 600 m, extending for 1.5 km between Serdica Peak and Silistra Knoll, in Levski Ridge, it separates the glacial catchments of Macy Glacier to the N and Boyana Glacier to the S, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the town of Kotel, in Sliven Province, in central Bulgaria.

Sedlovina Kotelska *see* **Kotel Gap**

Kotheberg. 72°52' S, 166°27' E. A peak, one of the Lawrence Peaks of Victoria Land. Named by the Germans, for Jürgen Kothe, from Hanover, who was logistics manager for GANOVEX III (1982-83).

The *Kotick*. French yacht, skippered by Oleg Bely and Sophie Labruhe, which visited the Antarctic Peninsula and the South Shetlands in 1984-85 and 1985-86. Monsieur Bely was sole skipper in 1986-87, to the South Shetlands and the Antarctic Peninsula, and he and Miss Labruhe skippered the vessel to the same places in 1987-88. The *Kotick* was back in the same basic places, in 1988-89, this time skippered by Alain Caradec. She was back for 2 trips, same places, in 1989-90, this time skippered by Alain Caradec and Claudine Brouazin, and one trip to the Antarctic Peninsula in 1990-91. She was back,

skippered by Monsieur Caradec alone, in 1991-92, 1992-93, 1993-94, 1994-95, 1995-96, 1996-97, 1997-98, 1999-2000, 2000-01, and 2001-02, in the 95-96 and 96-97 seasons carrying tourists. She was back in Antarctic waters in 2002-03, same skipper. She had a crew of 2, and could take two to three passengers.

Cabo Kotick *see* **Kotick Point**

Punta Kotick *see* **Kotick Point**

Kotick Point. 64°00' S, 58°19' W. The S entrance point to Holluschickie Bay, on the W coast of James Ross Island. Probably discovered in 1903, during SwedAE 1901-04. Surveyed by Fids from Base D in Dec. 1945. Named by UK-APC on Sept. 4, 1957, for Kipling's character in *Jungle Book*. US-ACAN accepted the name in 1963. There was a 1978 Argentine reference to it as Punta Kotick, but it appears on one of their 1978 maps as Cabo Kotick. Punta Kotick seems to to be the name they use today.

The *Kotick II*. French yacht, registered in Brazil, skippered by Oleg Bely, which visited the South Shetlands and the Antarctic Peninsula in 1990-91, 1991-92, 1992-93, 1994-95, 1995-96, 1996-97, 1997-98, 1998-99, 1999-2000, and 2000-01.

Kotis Point. 62°30' S, 60°12' W. A point, with a conspicuous rock near its tip, on the NW coast of Varna Peninsula, 6.4 km SW of Williams Point, and 12.8 km ENE of Siddons Point, at the NE extremity of Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the old Thracian king, Kotis I (384-359 BC).

Kotrag Nunatak. 62°30' S, 59°54' W. A conspicuous rocky peak, rising to about 290 m, projecting from Murgash Glacier, 600 m SW of Lloyd Hill, 940 m W of Altsek Nunatak, and 1.5 km E of Telerig Nunatak, on Greenwich Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for Khan Kotrag, founder of the kingdom of Volga Bulgaria in the 7th century.

Kottas, Alfred. b. 1884, Germany. He went to sea at 17, plying up and down the west coast of both Americas as an able seaman. He was captain of the *Schwabenland* from 1936, and during GerAE 1938-39.

Kottas Berge *see* **Milorgfjella**

Kottas Mountains *see* **Milorgfjella**

Kottasberge *see* **Milorgfjella**

Kotter Island *see* **Coffer Island**

Kotterer Peaks. 70°11' S, 64°26' E. A group of small peaks about 6 km NW of Mount Starlight, between that mountain and Wignall Nunataks, in the Athos Range of the Prince Charles Mountains. It was recorded on terrestrial photos taken by Rob Lacey, surveyor at Mawson Station in 1955, and also on air photos taken by ANARE in 1959 and 1965, and plotted by Australian cartographers from these efforts. Named by ANCA for Christiaan J.A. "Chris" Kotterer, weather observer-in-charge at Davis Station in 1964. US-ACAN accepted the name in 1970.

Kottmeier Mesa. 77°39' S, 162°08' E. A prominent mesa, rising to 2120 m, about 5 km NW of Mount J.J. Thompson, in the Asgard Range of Victoria Land. Almost entirely ice-covered, the mesa is 2.5 km long, averages 0.8 km wide, and rises above the converging heads of David Valley, Bartley Glacier, Matterhorn Glacier, and the N flank of Rhone Glacier, all of these receiving ice that drains from the mesa. Named by US-ACAN in 1997, for Steven T. Kottmeier, USAP researcher, 1981-87, who investigated sea-ice microbial communities in the fast-ice of McMurdo Sound, as well as krill associated with ice-edge zones in the Bellingshausen Sea, the Scotia Sea, and the Weddell Sea. He was ITT manager of the laboratory facilities at McMurdo, 1988-90; manager, laboratory science, 1990-96; and ASA chief scientist from 1997. NZ-APC accepted the name.

Le Kouglof *see* under **L**

Kouperov, Leonid *see* **Kuperov, Leonid**

Kouperov Peak. 75°06' S, 133°48' W. Rising to 890 m, at the S end of the Demas Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Leonid Kuperov (sic and q.v.).

Kovacs Glacier. 83°11' S, 49°15' W. On the SE side of the Lexington Table, it flows ENE (the British say ESE) into Support Force Glacier, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Austin Kovacs, leader of the 1973-74 USARP-CRREL survey party (with George Erlanger and Gunars Abele) in this area. They also worked in the area of McMurdo Sound. UK-APC accepted the name on May 21, 1979.

Lednik Kovarvyj. 66°48' S, 89°58' E. A glacier flowing NE into Cape Torson, on the coast of Wilhelm II Land. Named by the Russians.

Mount Kowalczyk. 77°56' S, 163°47' E. Rising to 1690 m, 1.5 km S of Goat Mountain, at the head of Hobbs Glacier, in Victoria Land. Charted by BAE 1910-13, and named by US-ACAN in 1964, for Chester Kowalczyk, chief of the U.S. Navy Oceanographic Office's photogrammetry branch. For many years, he had responsibility for the photogrammetric compilation of Antarctic charts. NZ-APC accepted the name.

Kowalski Cliff. 62°02' S, 58°27' W. A sheer cliff, rising to about 250 m above sea level, in the N part of Three Musketeers Hill, within Domeyko Glacier, at Mackellar Inlet, Admiralty Bay, King George Island, inthe South Shetlands. Named by the Poles in 1980, for Wieslaw Kowalski, a member of PolAE 1977-78.

Koynare Rocks. 62°30' S, 60°20' W. A group of rocks in Hero Bay, off the N coast of Livingston Island, 1.4 km S of the Miladinovi Islets, 5.3 km NW of Bezmer Point, and 7.5 km NE of Siddons Peak, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the town of Koynare, in northwestern Bulgaria.

Cape Koyubi. 69°14' S, 39°38' E. A rocky point marking the W extremity of a U-shaped peninsula which extends seaward in finger-like fashion from the W side of the Langhovde Hills, on the coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on June 22, 1972, as Koyubi-misaki (i.e., "little finger point") US-ACAN accepted the name Cape Koyubi in 1975. *See also* **Cape Nakayubi**.

Koyubi-misaki *see* **Cape Koyubi**

Koyubi-one. 71°54' S, 24°13' E. The westernmost of 5 ridges stretching northward in the Brattnipane Peaks (q.v. for more details), in the NW part of the Sør Rondane Mountains. Mapped by Japanese cartographers from JARE air photos taken in 1981-82 and 1986, and JARE ground surveys conducted between 1984 and 1991, and named by them ("little finger ridge") on Oct. 18, 1988. The Norwegians call it Nipehorga.

Kozloduy Cove. 62°23' S, 59°22' W. A cove, 1.4 km wide, indenting the E coast of Robert Island for 1.25 km, between Kitchen Point and Perelik Point, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the town in NW Bulgaria.

Kozlov Nunataks. 66°37' S, 51°07' E. A group of nunataks, 13 km N of Mount Parviainen, in the Tula Mountains of Enderby Land. Named by visiting Soviet geologists in 1961-62 as Gory Kozlova, for M.I. Kozlov, Soviet polar pilot. US-ACAN accepted the name Kozlov Nunataks, and ANCA followed suit on Oct. 22, 1968.

Gory Kozlova *see* **Kozlov Nunataks**

Kozma Cove. 62°27' S, 60°20' W. A cove, 1.8 km wide, indenting the N coast of Desolation Island for 1.2 km between the 2 arms of that V-shaped island, in the entrance to Hero Bay, on the N side of Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for the 10th-century Bulgarian scholar, Presbyter Kozma.

Kozo-iwa *see* **Kozo Rock**

Kozo Rock. 68°23' S, 41°54' E. An exposed rock on the coast of Queen Maud Land, between Narabi Rocks and Gobamme Rock, about 43 km E of Cape Omega, on the Prince Olav Coast. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on Oct. 1, 1962, as Kozo-iwa (i.e., "young elephant rock"). US-ACAN accepted the name Kozo Rock in 1968. The Norwegians call it Filungen.

Ostrov Krab *see* **[2]Peterson Island**

Krabba *see* **Kani Rock**

Holmy Krajnie. 66°36' S, 99°40' E. A hill, in the W part of the Obruchev Hills, between Denman Glacier and Scott Glacier, in Queen Mary Land. Named by the Russians.

Poluostrov Krajnij *see* **Krajnij Peninsula**

Krajnij Peninsula. 66°14' S, 100°34' E. A

roughly oval-shaped peninsula, measuring about 1.3 km by 0.8 km, and rising to a peak near its W edge, 2.5 km NW of Edgeworth David Station, and about 3 km NE of Cape Hordern, in the Bunger Hills, on the coast of Queen Mary Land. Mapped by SovAE 1956, and named by the Russians as Poluostrov Krajnij. The name was translated into English by ANCA.

Gora Krajnjaja. 70°38' S, 68°04' E. A nunatak in the SE part of the Loewe Massif, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Krak Glacier. 62°06' S, 58°19' W. An glacier flowing NW from Kraków Dome, at the head of Lussich Cove, in Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the legendary Polish prince Krak, founder of the great city of Kraków, and killer of the dragon (*see* **Dragon Glacier**). UK-APC accepted the name on on July 8, 2003, and US-ACAN followed suit that year. Last plotted by the UK, in late 2008.

Krakken *see* **Krakken Hill**, **Krakken Mountain**

Krakken Hill. 71°57' S, 26°14' E. A rocky nunatak-type hill, standing in Byrdbreen, 8 km E of Bautåen Peak, in the Sør Rondane Mountains. Photographed aerially by OpHJ 1946-47, and mapped from these photos in 1957, in 71°59' S, 26°26' E, by Norwegian cartographers, who named it Krakken (i.e., "the stool"). US-ACAN accepted the name Krakken Hill in 1966, and the feature has since been re-plotted.

Krakken Mountain. 71°32' S, 12°09' E. A mountain, 1.5 km N of Sandseten Mountain, in the N part of the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered by Ritscher's GerAE 1938-39, and initially mapped from these photos. It was re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Krakken (i.e., "the stool"). US-ACAN accepted the name Krakken Mountain in 1970.

Kraków Dome. 62°08' S, 58°16' W. The icefield covering Kraków Peninsula between Martel Inlet and King George Bay, on King George Island, in the South Shetlands. *See* **Kraków Peninsula**, for the history of the naming of this feature. Last plotted by the UK, in late 2008.

Kraków Icefield *see* **Kraków Dome**, **Kraków Peninsula**

Kraków Peninsula. 62°08' S, 58°15' W. The peninsula between Admiralty Bay and King George Bay, on King George Island, in the South Shetlands. The name Kupola Krakowa (translated as Kraków Dome, or Kraków Icefield, and named after the town in Poland), was given by PolAE in 1980 to the ice that covers the central part of this peninsula from Martel Inlet to King George Bay, but on April 3, 1984 UK-APC named the whole peninsula as Kraków Peninsula, and the term Kraków Icefield therefore became redundant (but not in Poland). US-ACAN followed suit with the new naming. However, on July 8, 2003 UK-APC decided that the two features were far from identical, and reverted to the original Polish definition (*see* **Kraków Dome**), retaining the name Kraków Peninsula for the peninsula, but calling the icefield Kraków Icefield. The Americans followed the British lead in 2004, except they called it Kraków Dome (q.v.). Last plotted by the UK, in late 2008.

Kupola Krakowa *see* **Kraków Ice Dome**, **Kraków Peninsula**

Krakowiak Crag. 62°09' S, 58°08' W. On Chopin Ridge, on King George Island, in the South Shetlands. Named by UK-APC on Feb. 15, 1998, in association with Krakowiak Glacier.

Krakowiak Glacier. 62°08' S, 58°07' W. A small hanging glacier on Chopin Ridge, coming out of Kraków Dome, and "flowing" into Bransfield Strait, between Lions Rump and Low Head, on King George Island, in the South Shetlands. Named by the Poles in 1980 for a Polish folk dance.

Krakra Bluff. 62°38' S, 60°33' W. A rocky bluff, rising to 140 m, and surmounting Memorable Beach, 2 km E of Ustra Peak, and 5.2 km W of Ereby Point, on the NW coast of South Bay, Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for one of their heroes, the great 11th-century feudal lord, Krakra Voivoda of Pernik.

Krall Crags. 77°27' S, 166°48' E. Two rock summits, rising to over 1400 m, on the NW slope of Mount Erebus, 2 km WNW of Abbott Peak, on Ross Island. Phil Kyle suggested the name, and US-ACAN accepted it in 2000, with NZ-APC following suit on Feb. 20, 2001, and ANCA on June 19, 2000. Sarah Krall was cook and camp manager at the Lower Erebus Hut.

Rocas Kramer *see* **Kramer Rocks**

Kramer Island. 77°14' S, 147°10' W. An ice-covered island, 3 km long, in the Marshall Archipelago, between Nolan Island and Court Ridge, in the Sulzberger Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Michael S. Kramer, meteorologist at Byrd Station in 1968.

Kramer Rocks. 65°26' S, 64°02' W. Two rocks in the N part of Beascochea Bay, 5 km SE of Cape Pérez, on the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted that same season by Fids from Base J. Named by UK-APC on July 7, 1959, for Johann Georg Heinrich Kramer (1684-1744), Austrian Army physician who, in 1737, discovered a cure for scurvy. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call them Rocas Kramer.

Kramolin Cove. 62°31' S, 59°53' W. A cove, 1.92 km wide, indenting the SW coast of Greenwich Island for 700 m between Yovkov Point and Kaspichan Point, in the South Shetlands. Its shape has been enhanced as a result of the retreat of the Murgash Glacier in the years around 2000. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the settlement of Kramolin, in northern Bulgaria.

Kranevo Point. 63°34' S, 59°53' W. A rocky point on the NW coast of Tower Island, forming the S side of the entrance to Mindya Cove, 2.4 km SW of Cape Leguillou, 3.5 km N of Ustina Point, and 5.8 km NNW of Peña Point (the S extremity of the island), in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Kranevo, in northeastern Bulgaria.

Krank Glacier. 83°08' S, 162°05' E. A glacier, 8 km long, flowing into Helm Glacier, just S of Mount Macbain, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for Joseph P. Krank, Weather Central (q.v.) meteorologist who wintered-over at Little America in 1957.

Kranz Peak. 86°31' S, 155°24' W. Rising to 2680 m, 10 km NW of Mount Przywitowski, between the heads of Holdsworth Glacier and Bartlett Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Cdr. Arthur C. Kranz (b. Ohio), staff meteorological officer, U.S. Naval Support Force, Antarctica, during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67). Cdr. Kranz was lost at sea (not in Antarctica).

Krapets Glacier. 64°27' S, 61°21' W. A glacier, 3.5 km long and 1.4 km wide, on Península Péfaur, E of Agalina Glacier, and W of Zimzelen Glacier, it flows E into the N arm of Salvesen Cove, on the Danco Coast, on the W coast of Graham Land. Mapped by the British in 1978. Named by the Bulgarians on Sept. 14, 2010, for the settlements of Krapets, in northeastern and northwestern Bulgaria.

Kråsen *see* **Kråsen Crevasse Field**

Kråsen Crevasse Field. 71°48' S, 0°58' W. About 24 km long, in the lower part of Jutulstraumen Glacier, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Kråsen (i.e., "the crop"). US-ACAN accepted the name Kråsen Crevasse Field in 1966.

Krasheninnikov Peak. 71°41' S, 12°40' E. Rising to 2525 m, it is the southernmost height on Svarthausane Crags, which is the northernmost part of the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, it was plotted from these photos. re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken durign the same long expedition. Re-surveyed by SovAE 1960-61, and named by the USSR in 1966 as Gora Krasheninnikova, for explorer and geographer Stepan Petrovich Krasheninnikov (1711-1755), who opened up Kamchatka. US-ACAN accepted the name Krasheninnikov Peak in 1970. The Norwegians call it Krasheninnikovhøgda.

Gora Krasheninnikova *see* **Krasheninnikov Peak**

Krasheninnikovhøgda *see* **Krasheninnikov Peak**

The *Krasin*. Name also spelled *Krassin*. Russian icebreaker, built in Finland in 1976, and operated by the Far Eastern Shipping Company, out of Vladivostok. 442 feet long, she could break ice up to 6 feet thick. Due to a shortage of icebreakers, the Americans hired her in 2004-05 to help with the re-supply of McMurdo Station. She left Vladivostok on Dec. 21, 2004 and arrived at the edge of the Ross Sea ice on Jan. 21, 2005. She was back at McMurdo doing the same thing in 2005-06 and 2006-07.

Nunataki Krasin *see* **Krasin Nunataks**

Krasin Nunataks. 68°18' S, 50°05' E. A small group of nunataks, between 16 and 20 km SE of Alderdice Peak, in the Nye Mountains of Enderby Land. Plotted by SovAE 1961-62, and named by them as Nunataki Krasin, for the icebreaker *Krasin*. ANCA accepted the name Krasin Nunataks on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Cape Krasinskiy. 69°50' S, 8°30' E. A projecting angle of the ice shelf fringing the coast of Queen Maud Land, it separates Dublitskiy Bay from Kamenev Bight. Mapped by Norwegian cartographers from 1958-58 air photos taken during the long NorAE 1956-60. Remapped by SovAE 1960-61, and named by them as Mys Krasinskogo, for G.D. Krasinskiy, organizer of polar air expeditions. US-ACAN accepted the translated name Cape Krasinskiy in 1970.

Mys Krasinskogo *see* **Cape Krasinskiy**

Massif Krasivyj. 72°45' S, 68°12' E. A massif, due S of Barkell Platform, at the N end of the Mawson Escarpment, Named by the Russians.

Gora Krasnaja *see* **Krasnaya Mountain**

Krasnaya Nunatak. 68°18' S, 49°42' E. A nunatak, about 6.5 km S of Alderdice Peak, in the Nye Mountains of Enderby Land. Named by SovAE 1961-62 as Gora Krasnaja (i.e., "red mountain"). ANCA accepted the name Krasnaya Nunatak on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Krasnov Rocks. 71°48' S, 10°20' E. A linear group of rocks, 3 km SSE of the summit of Mount Dallmann, and on the S side of the mountain, in the easternmost part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Mapped (but apparently not named) by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and also from 1958-59 air photos taken during the same long expedition. Remapped by SovAE 1960-61, and named by the Russians in 1966, as Skala Krasnova, for geographer A.N. Krasnov. In 1970, US-ACAN accepted the translated name Krasnov Rocks, which, interestingly, is plural. The Russian word "skala" is singular ("skaly" signifies plural), and morever, the Norwegians, who call it (in the singular) Krasnovhamaren (i.e., "the Krasnov hammer"), describe the feature as a small mountain. It looks as if the Russians and the Norwegians named only the largest of these rocks, whereas the Americans named the whole group.

Skala Krasnova *see* **Krasnov Rocks**

Krasnovhamaren *see* **Krasnov Rocks**

Hrebet Krasovskogo *see* **Mittlere Petermann Range**

The *Krassin* *see* **The *Krasin***

Krat Rocks. 68°34' S, 77°54' E. An area of submerged rocks off the Vestfold Hills, at the W side of Davis Anchorage, 1.4 km due S of Bluff Island, on the Ingrid Christensen Coast. They extend over an area of about 90 m by 55 m, with a depth of at least one meter. Named by ANCA on July 4, 1961, for I. Krat, chief engineer on the *Thala Dan*, which, in 1961, carried an ANARE party to the area (Tom Gale did the actual survey on that trip). US-ACAN accepted the name in 1965.

Kraterhafen *see* **Yankee Harbor**

Kraul, Otto. b. 1893, Germany. In Dec. 1908, when he was only 15, his brother Walter, a sailor, got him a job as a deck boy on the *Frieda* out of Hamburg, a tour that took him to the west coast of America. For the next several years he and Walter plied the west coast of both Americas in the *Frieda*, under Capt. Max Mark. After years of whaling in South American waters, and at South Georgia, Otto was involved in Russian whaling from 1931 to 1935, and was the most experienced whaling captain in Germany when he led the first German Antarctic whaling fleet in 1936, on the *Jan Wellem* (he was skipper in 1936-37 and 1937-38). He was ice pilot on the *Schwabenland* during GerAE 1938-39. On his return to Germany he published an account of the expedition. He commanded the *Sachsen* during the abortive battle for Jan Mayen in 1941, in the Arctic, and died in 1948.

Kraul Mountains. 73°30' S, 14°10' W. A chain of mountains and nunataks trending northeastward for about 110 km from Veststraumen Glacier, in New Schwabenland, in the W part of Maudheimvidda, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Kraulberge, for Otto Kraul. US-ACAN accepted the name Kraul Mountains in 1966. The Norwegians call them Vestfjella (i.e., "the west mountains"). The N part of this group was named by the Norwegians (and only by them) as Kraulberga. This feature (i.e., Kraulberga) extends from Basen, in the NE, to Isryggen, in the SW.

Kraulberga *see* **Kraul Mountains**

Kraulberge *see* **Kraul Mountains**

Krausberg. 72°42' S, 166°50' E. A somewhat isolated mountain, SW of Mount Hancox, in the Victory Mountains of Victoria Land. Named by the Germans.

Krause Point. 66°34' S, 91°04' E. A low, ice-covered point fronting on the Davis Sea, about 46 km WSW of Cape Filchner, about midway between that cape and Cape Torson, on the coast of Wilhelm II Land. Mapped from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for Glenn R. Krause (b. 1909), photogrammetrist with the U.S. Navy Hydrographic Office, surveyor with OpW 1947-48. ANCA accepted the name on Oct. 22, 1968.

Kraut Rocks. 76°04' S, 136°11' W. A group of rock outcrops on the snow-covered lower SW slopes of the Mount Berlin massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for William F. Kraut, USN, radioman 1st class on the Byrd Station Land Traverse of 1956-57 (the Army-Navy Trail Party).

Glaciar Krebs *see* **Krebs Glacier**

Mount Krebs. 84°50' S, 170°20' W. A prominent rock peak, rising to 1630 m (the New Zealanders say about 1920 m), and surmounting the central part of the main ridge of the Lillie Range, about 5 km WNN of Mount Daniel, it is the highest and easternmost peak of a group of bare rock ridges in the foothills of the Prince Olav Mountains. Discovered by the U.S. Ross Ice Shelf Traverse Party of 1957-58, under Albert P. Crary, and named by him for Cdr. Manson Krebs. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Krebs, Manson "Buddy." b. Oct. 3, 1922, Grosse Ile, Mich., son of banker Melvin G. Krebs. VX-6 helicopter pilot and a commander, USN, who developed air support operations during OpDF between 1960 and 1962. He died on April 10, 1963.

Krebs Glacier. 64°38' S, 61°31' W. Flows W into the head of Charlotte Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. In 1956 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for French engineer Arthur Constantin Krebs (1850-1935), who flew the first dirigible, in 1884. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Krebs.

Krebs Ridge. 70°33' S, 62°25' W. A ridge trending E-W, and, rising to about 900 m, forming the N wall of Gurling Glacier, terminating at the SW head of Smith Inlet, on the Wilkins Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from 1972-73 ground surveys conducted by BAS personnel from Base E. Named by US-ACAN in 1976, for William N. Krebs, USARP biologist at Palmer Station in 1972. UK-APC accepted the name on July 21, 1976.

Krebsgletscher. 70°59' S, 163°03' E. A glacier on the SW side of Mount Ashworth, in the Bowers Mountains. Named by the Germans.

Krebsnunatak. 80°38' S, 24°02' W. A nunatak on the NE side of Arkell Cirque, on the S side of the Read Mountains, in the Shackleton Range. Named by the Germans.

Krech, Adalbert. b. 1852. German whaling captain. In 1874 he rescued at sea the crew of the American steamer *Mary E. Emsten*, and was highly decorated as a result. He was with the Rumanian-Turkish Service, then in 1882 joined the Hamburg-Amerika Steamship Line. He was skipper of the *Valdivia* during the German Navy Oceanographic Expedition, 1898-99, and died on May 6, 1906.

Krefeldebene. 73°36' S, 162°48' E. A plain, SE of Exposure Hill, in the Mesa Range of Vic-

toria Land. Named by the Germans ("Krefeld plain").

Kreiling Mesa. 83°12' S, 158°00' E. A distinctive, partially ice-covered mesa, or flat-topped mountain (as the Australians describe it) on the SE side of the mouth of Argosy Glacier, and W of Marsh Glacier, in the Miller Range. Mapped by USGS from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Lee William Kreiling (b. Nov. 24, 1937, Appleton, Wisc.), USARP civilian traverse engineer/mechanic who wintered-over at McMurdo in 1961. He was a member of the Antarctic Peninsula Traverse of 1961-62 (q.v.), and was on Roosevelt Island in 1962-63. That latter season he also went back to Eights Station to rescue the Tucker Sno-cats that had been buried by snow since the last season he was there, while on the traverse (when it was known as Camp Sky-Hi). In 1972 he started his own heating and air conditioning business, which he still has. ANCA accepted the name.

Kreitzer, William Rutherford. b. Oct. 25, 1918, Savannah, Ga., son of William Clausen Kreitzer and his wife Elizabeth Rutherford. In 1936, after graduating from high school in Savannah, he joined the U.S. Navy as a seaman apprentice, served aboard the *Tennessee* for two years, then went to the Naval Academy's prep school in Norfolk, Va. He spent a year at the Academy, two years at Georgia Tech, then reenlisted in the Navy. He went through flight training and was commissioned as an ensign on May 15, 1942. On Oct. 23, 1943, he married Madeleine Moon. He saw a lot of action as a flyer in the Pacific, and in 1946 took part in the Atom Bomb test at Bikini. He was an aircraft commander during OpHJ 1946-47, operating off the *Currituck*, over East Antarctica, with Dave Bunger and William J. Rogers, Jr. He retired as a commander in 1968, and then went back to school in earnest, becoming a school psychologist in Maryland. Then he retired again, and he and his wife joined the Peace Corps, working for 2 years in Belize, 1986-88. He died on March 25, 2007.

Kreitzer Bay *see* **Vincennes Bay**

Kreitzer Glacier. 70°22' S, 72°36' E. A glacier descending from the Grove Mountains, and flowing NW between Jennings Promontory and the Reinbolt Hills, to enter the E part of the Amery Ice Shelf. Delineated in 1952 by U.S. cartographer John H. Roscoe, working from air photos taken during OpHJ 1946-47, and named by him for Lt. William R. Kreitzer. He plotted it in 70°25' S, 72°30' E. US-ACAN accepted the name in 1956. It has since been replotted. The Russians call it Lednik Mokryj. This glacier is not to be confused with Kreitzerisen.

Kreitzerisen. 72°13' S, 22°10' E. A glacier, 13 km long (the Norwegians say 35 km), flowing N between the Tertene Nunataks and Bamse Mountain, in the W part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them for Lt. William R. Kreitzer. US-ACAN accepted the name, without modification, in 1966. Not to be confused with Kreitzer Glacier.

Krekla. 71°42' S, 25°12' E. A mountain, just NW of Tvetaggen Peaks, on the W side of Kamp Glacier, in the central part of the Sør Rondane Mountains. Named by the Norwegians (name means "the crooked tree"; actually the word is more often seen as "krøkle, in Norwegian).

Kremena Ice Piedmont. 63°04' S, 62°38' W. An ice piedmont, 2.4 km long and 2.7 km wide, draining the SW slopes of the Imeon Range S of Organa Peak, and flowing southeastward into Bransfield Strait, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Kremena in northeastern Bulgaria, and also for the settlements of Upper and Lower Kremena, in northwestern Bulgaria.

Gora Krenkelja *see* **Mount McGregor**

Kresna Gully. 62°38' S, 60°18' W. The heavily crevassed longitudinal depression in Perunika Glacier, extending 2.7 km westward from Rezen Knoll, in the E part of Livingston Island. It terminates in the indentation forming the E corner of Emona Anchorage, 930 m SE by S of Aleko Rock, and 3 km NE of Hespérides Point. Named by the Bulgarians on Oct. 29, 1996, for Kresna, a town and gorge (the gorge being formed by the Struma River) in southwestern Bulgaria. UK-APC accepted the name on April 29, 1997, and US-ACAN followed suit that year. Last plotted by the UK, in late 2008.

Padina Kresnenska *see* **Kresna Gully**

Kressman, Richard Ian "Dick." b. April 28, 1946. BAS ionospheric project engineer who wintered-over at Base F in 1968 and 1969, and in South Georgia in 1971. In 1981 he was at Halley Bay Station installing the Advanced Ionospheric Sounder, a radar which he had helped design and build.

Kreutz Snowfield. 77°17' S, 161°15' E. An intermontane snowfield, 5 km square, in the Cruzen Range of Victoria Land. It is bounded to the S by Forsyth Peak, to the W by the Victoria Upper Névé, to the N by Mount Leland, and to the E by Mount Isaac. Named by US-ACAN in 2005, for Karl J. Kreutz, of the department of geological sciences, at the University of Maine, at Orono, who investigated the late Holocene climate variability from Siple Dome ice cores in 3 field seasons, 1994-97; and from Taylor Glacier and Clark Glacier ice cores, 2003-04 and 2004-05. NZ-APC accepted the name on Sept. 12, 2005.

Kreuzkamm. 73°26' S, 166°56' E. A crest on the S side of Armbrustspitze, in the Mountaineer Range of Victoria Land. Named by the Germans.

Banka Krevetka. 67°39' S, 46°10' E. A bank, between Vechernyy Hill and the cape the Russians call Mys Vyvodnoj, at the E end of the Thala Hills of Enderby Land. Named by the Russians.

Kribul Hill. 63°38' S, 57°55' W. A rocky hill rising to 520 m on the SE side of the Cugnot Ice Piedmont, 2.71 km WSW of Gornik Knoll, 5.27 km N of Church Point, and 7.88 km S by W of Marten Crag, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Kribul, in southwestern Bulgaria.

Krichak Bay. 68°34' S, 151°27' E. An indentation into the W part of the Cook Ice Shelf, George V Land. Discovered by SovAE 1957-58, on the *Ob'*, and named by them as Bukhta Krichaka, after Oscar Grigoryevich Krichak (1910-1960), chief of the aerological and meteorological section during SovAE 1955-57 and SovAE 1959-61, at Mirnyy Station for the winter of 1960, and who died in the fire of Aug. 3 of that year (*see* **Deaths**, 1960). They plotted it in 68°28' S, 151°16' E. ANCA accepted the name Krichak Bay on June 19, 1964, and plotted it originally in 68°28' S, 151°12' E. It has since been replotted.

Krichak Glacier *see* **Lednik Krichaka**

Bukhta Krichaka *see* **Krichak Bay**

Lednik Krichaka *see* **Turk Glacier**

Krichim Peak. 62°32' S, 60°09' W. Rising to 500 m in the Vidin Heights, 1.1 km NE of Miziya Peak, and 1.7 WNW of Madara Peak, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra Survey of 2004-05, and named by them on April 11, 2005, for the town of Krichim, in southern Bulgaria.

Krieger Peak. 71°46' S, 70°35' W. Between Duffy Peak and The Obeslik, in the Staccato Peaks, in the S part of Alexander Island. Photographed aerially by Ellsworth in 1935. Named by US-ACAN for Lt. Cdr. Charles J. Krieger, USN, LC-130 aircraft commander with VX-6 during OpDF 69 (i.e., 1968-69), and OpDF 70 (i.e., 1969-70, when VX-6 was becoming VXE-6). UK-APC accepted the name on June 11, 1980.

Krigsvold Nunataks. 75°38' S, 137°55' W. A small cluster of isolated nunataks directly at the head of Strauss Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Sgt. Alvin Ingvold Krigsvold (b. April 24, 1913, Eau Claire, Wisc. d. Oct. 22, 1994, at the Veterans Medical Center, Hampton, Va.; son of Norwegian immigrant cabinet maker Ingvold Krigsvold), who, after a spell as a laborer in a box factory in Eau Claire, joined the U.S. Army. He was a member of the Byrd Station Land Traverse of 1956-57.

Krill. The most important organism in the higher food chain in Antarctica, krill is a small, shrimp-like (between one and two inches long when mature) marine animal which is cannibalistic and can live to more than 2 years. It has antennae, a tail-fin, gills, thoracic legs, swimmerets, and a carapace. It congregates in vast, dense schools, and thus has great value as food for the large whales and seals who eat tons of it. A blue whale can eat 360 tons a year (one ton a day). Krill concentrate in the top few meters of water when ice is present, but disperse to depths of over 300 feet when the sea is ice-free. In 1981 the U.S. research ship *Melville* discovered a school of 10 million tons of krill near Elephant Island, in the South Shetlands, the largest swarm of sea animals ever seen. 82 species of krill have been

described, the largest and best known being *Euphausia superba* (which has 11 pairs of legs). Krill can be marketed, and is, to some extent, but the going is tough. Krill are fished by the USSR (since 1961) and Japan, and may one day be part of the human diet, although they're not exciting to eat, unless heavily sauced, spiced, or seasoned.

Mount Kring. 74°59' S, 157°54' E. A sharply defined nunatak, rising to 2100 m above sea level on the N margin of the upper reaches of David Glacier, 21.5 km SW of Mount Wood, and about 85 km NNW of the Ricker Hills, in Victoria Land. Mapped by USGS from USN air photos. Named by NZ cartographer D.B. McC. Rainey, for U.S. Marine Staff Sgt. Arthur Lyall Kring (b. Dec. 17, 1926. d. Nov. 6, 1972, Jackson, Miss.), who, after serving in Korea, was VX-6 navigator in Antarctica in 1962-63 and 1963-64, and helped NZ field parties out in this area. He later served in Vietnam. US-ACAN accepted the name in 1966, and ANCA followed suit on May 18, 1971. For an interesting sidelight on Sgt. Kring's background, *see* [1]**Mount Wood**.

Kring Island *see* **Kring Islands**

Kring Islands. 67°10' S, 58°30' E. Two islands and a number of rocks at the E side of Bell Bay, in the W part of Lang Sound, between Broka Island and Law Promontory, on the coast of Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers as one island, which they named Kringla (i.e., "the ring"). ANARE photos of 1959 showed the feature to be more than one island. ANCA accepted the name Kring Islands, and US-ACAN followed suit in 1964.

Kringholmane *see* **Hobbs Islands**

Kringla *see* **Kring Islands**

Krissek Peak. 80°13' S, 155°57' E. A sharp peak rising to about 2500 m on the ridge running SW from Mount Henderson, in the Britannia Range. Named by US-ACAN in 2001, for geologist Lawrence A. Krissec, of the Byrd Polar Research Center and also of the department of geology and mineralogy, both at Ohio State University, who worked many austral summers in the central Transantarctic Mountains beginning in 1985-86.

[1]**Mount Kristensen** *see* **Mount Christensen**

[2]**Mount Kristensen**. 86°20' S, 159°40' W. Rising to 3460 m, on the W side of the Nilsen Plateau, 3 km SE of Lindstrøm Peak, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Halvardus Kristensen. Somewhere in this area was Mount H. Kristensen (q.v.), named by Amundsen as he was on his way to the Pole. This may or may not be the same mountain.

Kristensen, Halvardus. b. May 16, 1878, Heddal, Telemark, Norway, son of Kristen Hansen and his wife Aaste Anundsdatter. He was taken on the *Fram* during NorAE 1910-12, as a deck hand, but on the voyage down, became 3rd engineer as well. He was with the group who arrived back in London on June 29, 1912, on the *Highland Scot*, from La Plata. He died in 1919.

Kristensen, Leonard. The name is more properly Christensen. b. Sept. 18, 1857, Nøtterøy, Norway, son of carpenter Lars Christensen. He went to sea, worked his way up through the mate ranks, and married Hanna Christiana in Nøtterøy. In 1884 they moved to Tønsberg, and had a large family. He was skipper of the *Antarctic* during Henryk Bull's 1894-95 expedition. He found the first vegetation south of the Antarctic Circle, and was leader of the boat that made the first substantiated landing on the continent, on Jan. 24, 1895, at Cape Adare.

Kristensen, Monika. b. June 30, 1950, Torsby, Sweden, but grew up in Kongsvinger, Norway. A glaciologist, she studied tabular icebergs aboard the *Endurance* in the 1981-82 season. In 1984 she started planning an unusual glaciological expedition, to set out in Sept. 1985. It would be the first Antarctic expedition led by a woman, and would follow Amundsen's footsteps to the South Pole, using the same methods he used. It would also be the first trek to the Pole without mechanized transport since the days of BCTAE 1955-58. Neil McIntyre (of the Mullard Space Science Lab, at the University of London), Nick Cox (a former BAS man), and Bjorn Wold (glaciology head of the Norwegian Water Research Board), would be her 3 companions. She called the expedition 90 Degrees South. The cost was projected at £254,000 (private funds, to be raised in Britain and Norway), and had the backing of the Royal Society and the European Space Agency. Finally, later than anticipated, in Oct. 1986 she and her crew left Oslo on an old whaler she had bought, the *Aurora*. As it turned out, her companions were McIntyre, Jesper Andersen, and Jacob Larsen, two Danes with considerable Arctic experience who would look after and drive the 22 sledge dogs. However, they were late starting out from the Bay of Whales (Dec. 17, 1986), reached their southernmost depot on Jan. 21, 1987, and 440 km from the Pole, in 85°59' S, on Jan. 30, 1987, they had to turn back in order to meet their ship by Feb. 28. They were on their own. The Americans had made it clear that they would not effect rescue if needed. In 1991-92 she led another expedition, aboard the *Aurora*, to find Amundsen's tent at the South Pole. They established Blåenga camp, near General Belgrano II Station, visited the Filchner Ice Shelf, and then set out for the Pole with Adventure Network International. This expedition extended over into 1992-93 and 1993-94. In Dec. 1993, Jostein Helgestad was killed in a fall into a crevasse, and Miss Kristensen was blamed for failing to observe safety rules. They failed to find the tent. She became Mrs Solås, and wrote *Mot 90 Grader Syd* in 1987.

Kristensen, Olav *see* **Kristiansen, Olav A.**

Kristensen Rocks. 71°55' S, 171°11' E. Twin rocks 1.5 km S of Possession Island, in the Possession Islands, in the Ross Sea. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1969, for Leonard Kristensen.

Kristiania Island *see* **Christiania Island, Intercurrence Island**

Kristiansen, Olav A. b. Jan. 20, 1867, Norway. His aliases were Olav Kristensen and Arnov Arnouse. A whaler in the South Shetlands for the 1916-17 season, who died of cancer on Feb. 2, 1917, and was buried in the Whalers Bay Cemetery on Deception Island.

Kristin Peak. 77°26' S, 168°19' E. Rising to over 1300 m, at the N end of Giggenbach Ridge, 7 km S of Cape Tennyson, on Ross Island. Named by US-ACAN on Nov. 25, 2000, for Kristin Larson, several times in Antarctica. She spent 2 winters at McMurdo, in 1988 as supervisor of the Eklund Biological Center, and in 1992 as supervisor of the Thiel Labs. From 1992 to 1995 she was supervisor of the Crary Science and Engineering Center. From 1996, she was editor of the Antarctican Society's newsletter, and was later on the staff of the NSF's Office of Polar Programs. She later became a lawyer. NZ-APC accepted the name on Feb. 20, 2001.

Morena Krivaja. 73°26' S, 66°15' E. A moraine, on the N side of Mellor Glacier, in the Prince Charles Mountains. Named by the Russians.

Krivina Bay. 63°49' S, 60°48' W. A bay, 5 km wide, indenting the E coast of Trinity Island for 3 km N of Romero Point, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Krivina, in western Bulgaria.

Krivodol Glacier. 62°59' S, 62°29' W. Flows SE for 3.8 km from the SE slopes of the Imeon Range, E and SE of Antim Peak, and S of Slationa Peak, on Smith Island, in the South Shetlands, and terminates in the Bransfield Strait. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of Krivodol, in NW Bulgaria.

Proliv Krivoy *see* **Robertson Channel**

Ostrov Krjuchok *see* **Kryuchok Island**

Isla Krogh *see* **Krogh Island**

Krogh Island. 66°17' S, 67°00' W. An island, 8 km long, and close W of the S part of Lavoisier Island, between that island and Dubois Island, in the Biscoe Islands. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for August Krogh (1874-1949), Danish physiologist specializing in the cold. He won the Nobel Prize for physiology in 1920. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Isla Krogh. It appears, misspelled as Kroch Island, in the 1974 British gazetteer.

Krogh-Hansen, Hans. b. 1863, Norway. He was at Deception Island in 1911-12, as the first manager of the whaling station owned by the Hektor Company. He later became a director (with Finn Bugge) of the company, and also became a consul. He married Magdalena Margrethe Ambjørnsen, and they lived in Tønsberg. He died in 1946.

Krogh-Johanssenberga. 74°25' S, 10°02' W. Crags in the ice, in the SW part of Sivorgfjella, in the N part of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Arne Krogh-Johanssen (b. 1888), Norwegian Resistance

leader in World War II, who died in a German concentration camp.

Krogmann-Insel *see* **Hovgaard Island**

Krogmann Island *see* **Hovgaard Island**

Krogmann Point. 65°08' S, 64°08' W. The W extremity of Hovgaard Island, in the Wilhelm Archipelago. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, in order to preserve the original name of the island (*see* **Hovgaard Island**). Hermann Krogmann (1826-1894) was a member of the Hamburg Geographical Society, and helped finance Dallmann's expedition of 1873-74. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Krogsbaek, A.C.F. Danish doctor at Deception Island from 1921 to 1925. His sick room was on the whaler *Ronald*.

Krok Fjord. 68°40' S, 78°00' E. Also called Krok Inlet. A narrow, sinuous fjord, 17.5 km (the Australians say 22 km) long, between Mule Peninsula and Sørsdal Glacier Tongue, at the S end of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it descriptively as Krokfjorden (i.e., "the crooked fjord"). US-ACAN accepted the name Krok Fjord in 1965. ANCA accepted the name Crooked Fjord.

Krok Inlet *see* **Krok Fjord**

Krok Island. 67°02' S, 57°46' E. An irregular-shaped island, nearly 2 km long, it is the largest of the group lying 1.5 km S of Abrupt Island, and 10 km W of Hoseason Glacier. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Krokøy (i.e., "the crooked island"). ANCA translated this as Crooked Island on Feb. 18, 1958. US-ACAN accepted the name Krok Island in 1965.

Krok Lake. 68°37' S, 78°24' E. An irregular-shaped lake, 6 km long, in the SE part of the Vestfold Hills. Photographed aerially by LCE 1936-37, and partially mapped from these photos in 1946 by Norwegian cartographers. They actually mapped it as 2 lakes, which they aptly called Krokvatnet (i.e., "the crooked lake") and Nyrevatnet (i.e., "kidney lake"). US-ACAN accepted the name Krok Lake for this one in 1965. The Australians, who call it Crooked Lake, established a field camp here. Presumably Nyrevatnet was a mistake.

Krokberget. 71°30' S, 15°30' E. A small mountain, SSW of Vorposten Peak, in the easternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the hook crag").

Krokevassfjellet. 70°44' S, 11°27' E. A mountain area in the W part of the Schirmacher Hills. Named by the Norwegians in association with the nearby lake they call Krokevatnet (*see* **Ozero Zigzag**, under **Z**).

Krokevatnet *see* **Ozero Zigzag** (under **Z**)

Krokfjorden *see* **Krok Fjord**

Krokiew. 62°09' S, 58°29' W. A hill, rising to 168 m, SE of Arctowski Station, between Geographers Creek and Petrified Forest Creek, on King George Island, in the South Shetlands. Named by the Poles in 1980, after the popular ski jump at Zakopane, Poland, which it resembles.

Krokøy *see* **Crooked Island**

Krokryggen. 72°07' S, 25°00' E. A curved mountain ridge, 12 km long, in Mefjell Mountain, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("the hook ridge").

Krokvatnet *see* **Krok Lake**

Krokveggen. 72°04' S, 24°48' E. The steep W side of Mefjell Mountain, it forms a wall about 8 km long at the E side of Gjel Glacier, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("the hook wall").

Lago Kroner *see* **Kroner Lake**

Kroner Lake. 62°59' S, 60°35' W. A circular lake, 315 m in diameter, immediately to the W of Whalers Bay, and N of Penfold Point, on Deception Island, in the South Shetlands. Its name was Tokroningen (i.e., "the two-kroner piece") between 1905 and 1931, a name given by Norwegian whalers. ChilAE 1946-47 named it Laguna Galvarino, after the 16th-century Araucanian chief Galvarino, and it appears as such on their 1947 chart. It was charted by an RN Hydrographic Survey unit in 1948-49, and appears on their 1949 chart as Lake Pennilea, after Loch Pennilea, in Scotland, to mark the services of a Scotsman on that survey. It was re-named on Nov. 15, 1951, by UK-APC, as Kroner Lake, preserving the original theme of Norwegian money. US-ACAN accepted that name in 1952. It appears as such on a British chart of 1953, and in the 1955 British gazetteer. It appears on a 1953 Chilean chart as Laguna Pennilea, and that was the name accepted by the 1974 Chilean gazetteer. On a 1953 Argentine chart it appears with the descriptive name Laguna Verde, on one of their 1954 charts as Lago Pennilea, but the name accepted by the 1970 Argentine gazetteer was Laguna Verde. There is a 1958 Argentine reference to it as Lago Sulfuroso (indicating its chemical content), and a 1964 reference to it as Lago Kroner. It used to be landlocked, but after the volcanic activity of Feb. 1969, its SE side was breached and it formed a lagoon, open to the sea. Last plotted by the UK, in late 2008.

Kronprins Olav Fjell *see* **Prince Olav Mountains**

Kronprins Olav Kyst *see* **Prince Olav Coast**

Kronprinsesse Martha Kyst *see* **Princess Martha Coast**

Lednik Kronshtadskij *see* **Kronshtadskiy Glacier**

Kronshtadskiy Glacier. 71°43' S, 71°35' E. A tributary glacier flowing WNE to enter the lower E part of the Lambert Glacier about 8 km S of Pickering Nunatak. The name Lednik Kronshtadskij appears in the Soviet Antarctic Journal of 1987. US-ACAN accepted the translated name on Oct. 20, 2009.

Mount Kropotkin. 71°54' S, 6°35' E. A peak on the W side of Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, but, apparently, not named by them. Re-mapped by SovAE 1961, and named by them as Gora Kropotkina, for the geographer prince-turned anarchist Pyotr Alekseevich Kropotkin (1842-1921). US-ACAN accepted the name Mount Kropotkin in 1970.

Gora Kropotkina *see* **Mount Kropotkin**

Kros, Martin. b. Sept. 2, 1950. Surveyor who wintered-over at Casey Station in 1975. In the 1990s he was surveying in Western Australia.

Kros Moraine. 66°22' S, 110°39' E. A crescent-shaped moraine about 2 km E of Robinson Ridge, in the Windmill Islands. Named by ANCA on Dec. 7, 1976, for Martin Kros.

Kupol Kroshka *see* **Kroshka Island**

Kroshka Island. 70°40' S, 2°05' E. The smaller of 2 ice-covered islands lying close together in the Fimbul Ice Shelf, along the coast of Queen Maud Land. First mapped by SovAE 1961, and named by them as Kupol Kroshka (i.e., "crumb dome"). US-ACAN accepted the name Kroshka Island in 1970.

Nunataki Kroshki. 67°56' S, 63°25' E. A group of nunataks, S by SE of McNair Nunatak, in the central part of the Masson Range, in Mac. Robertson Land. Named by the Russians.

Krout Glacier. 84°53' S, 172°12' W. A tributary glacier, 6 km long, flowing from the N slopes of the Prince Olav Mountains, between Mount Sellery and Mount Smithson, to enter Gough Glacier just E of Mount Dodge. Named by US-ACAN in 1966, for Walter L. Krout, USN, equipment operator 1st class, in Antarctica for OpDF 64 (i.e., 1963-64).

Kruber Rock. 71°45' S, 11°05' E. A lone rock in the E part of the glacier the Norwegians call Somoveken (and which the Russians call Lednik Gornogo Instituta), 5.5 km WNW of the summit of Mount Flånuten, on the W side of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-photographed aerially again by SovAE 1960-61, and named in 1966 by the USSR, as Skala Krubera, for Aleksandr Aleksandrovich Kruber (1871-1941), head of the department of geography at Moscow University. US-ACAN accepted the name Kruber Rock in 1970. The Norwegians call it Krubersteinen.

Skala Krubera *see* **Kruber Rock**

Krubersteinen *see* **Kruber Rock**

Krüder, Ernst-Felix. b. Dec. 6, 1897, Hamburg. He joined the German navy in 1915, trained on the sailing ship *Freya*, and was an able seaman on the *König* at the Battle of Jutland. He became an officer, and was on the *Breslau* in 1917, and then on to the *Goeben*, on which he was promoted to sub lieutenant on Dec. 13, 1917. The

Goeben struck a mine and went down. In 1920 he joined the Reichsmarine, and after a year at Wilhelmshaven, he joined a minesweeper, as a lieutenant, a specialist in mining. From 1924 to 1926 he was attached to the Baltic naval staff, and married a Hamburg girl about this time. In 1927 he went back on a minesweeper, and then to the *Karlsruhe*, going around the world on the first post-World War I cruise by a German warship. In 1933 he transferred to the *Königsberg*, and in 1934 was placed in command of the minesweeper flotilla at Pillau. When World War II started, he was a commander, working at the office of naval construction. On Nov. 11, 1939, he became captain of the *Pinguin*, and was leader of the notorious raid on 3 Norwegian whalers in Antarctic waters in 1940–41. He went down with his ship when it was sunk by the *Cornwall* in 1942.

Punta Krug. 64°49' S, 62°51' W. A point between Punta Sanhueza and Vidaurrazaga Glacier, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1950–51, for Alfredo Krug Peñafiel, of the Chilean Air Force, responsible for radio communications.

Mount Krüger. 72°36' S, 0°57' E. A mostly snow-covered mountain, rising to 2665 m, 13 km SW of Kvithø Peak, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed by GermAE 1938–39, plotted by them from these photos, and named by Ritscher as Krüger Berg, for Walter Krüger. Surveyed by NBSAE 1949–52. US-ACAN accepted the translated name Mount Krüger in 1966. The Norwegians call it Kvitskarvet.

Krüger, Walter. Meteorological assistant on GerAE 1938–39.

Krüger Berg *see* **Mount Krüger**

Krügerberg *see* **Mount Krüger**

Krügerfjellet *see* **Mount Krüger**

Gora Kruglaja. 70°42' S, 67°06' E. A nunatak on the W side of Murray Dome, in the Amery Peaks, in the Prince Charles Mountains.

Ozero Krugloe. 70°31' S, 68°10' E. A lake, NE of Lake Terrasovoe, in the NE sector of the Loewe Massif, in the Prince Charles Mountains. Named by the Russians.

Kupol Kruglyj *see* **Blåskimen Island**

Krum Rock *see* **Velchev Rock**

Kamak Krumov *see* **Krum Rock**

Krusha Peak. 78°42' S, 85°09' W. Rising to 2800 m, 2.88 km WSW of Mount Allen, 3.87 km S of Mount Strybing, 4.83 km NW of Mount Liptak, and 6.94 km E of Chaplin Peak, it surmounts Bolgrad Glacier to the SE and Brook Glacier to the NW, in the S part of the Sentinel Range, in the Ellsworth Mountains. Mapped by the Americans in 1988. Named by the Bulgarians on Sept. 14, 2008, for the Bulgarian educator Zahari Krusha (1808–1891).

Gora Krutaja. 73°04' S, 60°36' E. The western of 3 nunataks on what the Russians call Massif Zagadochnyj, in the Goodspeed Nunataks, in the S part of the Prince Charles Mountains, in Mac. Robertson Land. Named by the Russians.

Lednik Krutoj *see* **Helmore Glacier**

Mys Krutoj. 66°37' S, 90°57' E. A cape, SW of Krause Point, on the coast of Wilhelm II Land. Named by the Russians.

Gora Kruzenshterna *see* **Sandeggtind Peak**

Poluostrov Krylatyj *see* **Krylatyj Peninsula**

Ustup Krylatyj. 69°06' S, 63°28' E. A ridge, SE of the Anniversary Nunataks, in Mac. Robertson Land. Named by the Russians.

Krylatyj Peninsula. 66°13' S, 100°44' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Poluostrov Krylatij. ANCA translated the name on Jan. 19, 1989.

Krylen *see* **Krylen Hill**

Krylen Hill. 71°33' S, 2°10' W. A hill, 8 km SW of Valken Hill, in the N part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Krylen (i.e., "the hump"). US-ACAN accepted the name Krylen Hill in 1966.

Krylov Mountain *see* **Ristelen Spur**

Krylov Peninsula. 69°05' S, 156°20' E. An ice-covered peninsula, W of Lauritzen Bay, between the Usarp Mountains and the Cook Ice Shelf, in Oates Land. Photographed aerially by OpHJ 1946–47, and again by SovAE 1957–58, the latter naming it Poluostrov Krylova, for mathematician and academic naval architect Alexiy Krylov (1863–1945). ANARE re-photographed it aerially in 1959. ANCA accepted the translated name Krylov Peninsula, and US-ACAN followed suit in 1967.

Gora Krylova *see* **Ristelen Spur**

Poluostrov Krylova *see* **Krylov Peninsula**

Krylvika *see* **Krylvika Bight**

Krylvika Bight. 71°20' S, 2°00' W. A southern lobe of the Fimbul Ice Shelf, indenting the Princess Martha Coast of Queen Maud Land for about 50 km between Båkeneset Headland and Trollkjelneset Headland, N of Ahlmann Ridge. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Krylvika (i.e., "the hump bay"), in association with nearby Krylen Hill. US-ACAN accepted the name Krylvika Bight in 1966.

Kryuchok Island. 68°48' S, 77°45' E. About 1.5 km off the NW end of Filla Island, in the Rauer Islands, off the Ingrid Christensen Coast. Photographed aerially by LCE 1936–37, and mapped as part of Filla Island by Norwegian cartographers working from these photos in 1946. Re-photographed aerially by OpHJ 1946–47, by SovAE 1956, and by ANARE in 1957 and 1958. The Russians determined that this island was separate from Filla Ialand, and named it Ostrov Krjuchok (i.e., "hook island"). ANCA accepted the name Kryuchok Island.

Krzemien. 62°11' S, 58°27' W. A hill, NW of Sphinx Hill, near the margin of Sphinx Glacier, on the W shore of Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles after Krzemien Hill, in the Bieszczady Mountains of Poland.

Krzeminski, Wojciech. b. 1926, Poland. He was a boy scout when World War II broke out. He took part in the Warsaw Uprising, but was wounded and thrown into a German prison camp. After the war he served with the Polish army in Italy and England, and returned to Poland in 1947. From 1947 to 1952 he studied geodesy and cartography at the Warsaw University of Technology, from 1951 working in magnetic surveys. He led PolAE 1958–59 and PolAE 1978–79. He died on April 9, 1981, after a short illness.

Krzeminski Hills. 66°16' S, 100°44' E. Near Dobrowolski Station, 76 m above sea level, in the Bunger Hills. Named by the Poles in 1985, for Prof. Wojciech Krzeminski.

Krzesanica. 62°09' S, 58°29' W. A sheer cliff, about 120 m high, at Point Thomas, Admiralty Bay, King George Island, in the South Shetlands. So named by the Poles in 1980, because it reminded them of the precipitous Mount Krzesanica, in the Tatra Mountains of Poland.

Krzyminski Point. 62°30' S, 58°33' W. A moraine promontory W of Monsimet Cove, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Capt. Zenon Krzyminski, skipper of the *Dalmor* during PolAE 1976–77.

The *Ksar*. French yacht, skippered by Jean-Paul Bassaget, which visited the South Shetlands and the Antarctic Peninsula in 1984–85.

Kubbestolen *see* **Kubbestolen Peak**

Kubbestolen Peak. 71°47' S, 8°54' E. A small bare rock peak, rising to 2070 m, at the NW end of Vinten-Johansen Ridge, in the Kurze Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Kubbestolen (i.e., "the log chair"). US-ACAN accepted the name Kubbestolen Peak in 1967.

Kuben *see* **Hachinosu Peak**

Kuber Peak. 62°39' S, 59°58' W. Rising to 770 m in Delchev Ridge, 860 m S of Ruse Peak, 3.1 km E of Helmet Peak, and 1.8 km E of Plovdiv Peak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on April 11, 2005, for Khan Kuber, whose Panonian Bulgarians settled in Macedonia in the 7th century.

Kuberry Rocks. 75°17' S, 138°31' W. A small area of exposed rock at the N end of Coulter Heights, 10 km NW of Matikonis Peak, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Richard W. Kuberry, geomagnetist and seismologist at Byrd Station in 1969–70.

Kubitza Glacier. 70°24' S, 63°11' W. A tributary glacier flowing S into Clifford Glacier, just E of Mount Samsel, on the Wilkins Coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS person-

nel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Johnny T. Kubitza (b. March 6, 1942, Havre, Montana. d. Aug. 30, 2009, North Dighton, Mass.), master chief petty officer, chief builder in the construction detachment at Palmer Station in 1969-70. He had earlier (1963) wintered-over at McMurdo. He served 21 years with the Seabees, including 3 tours in Vietnam. After retiring from the Seabees in 1980, he got a degree from Roger Williams University, and went to work for the Framingham (Mass.) School System, as director of buildings and grounds, retiring in 2008. UK-APC accepted the name on July 21, 1976, and the feature appears on the 1979 USGS sketch map of the N part of Palmer Land.

Kubrat Knoll. 62°32' S, 60°01' W. A rocky peak, rising to 140 m, 640 m WSW of the base of Inott Point, 2 km E of Arbanasi Nunatak, and 1.8 km N of Edinburgh Hill, in the E part of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra Survey of 2004-05, and named by them on April 11, 2005, for Khan Kubrat, 632-668, who, in 632, founded the kingdom of Greater Bulgaria on the territory bounded by the Caucasus, the Volga, and the Carpathians.

Kubus *see* **Kubus Mountain**

Kubus Mountain. 71°59' S, 7°21' E. A distinctive, blocky mountain, rising to 2985, and shaped like a cube, 5 km SE of Trollslottet Mountain, in the NW part of the Filchner Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, first plotted from these photos, and named by the Germans as Kubus (i.e., "the cube"). It was translated into English as The Cube. The Norwegians also call it Kubus. Remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. US-ACAN accepted the name Kubus Mountain in 1966.

Kubusdaelda. 71°59' S, 7°21' E. A steep, ice-filled ravine (the Norwegians define it as a corrie) between Kubus Mountain and Klevekampen Mountain, in the Filchner Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from air photos taken during the same long expedition, and named by them ("the cube dell") in association with Kubus Mountain. US-ACAN accepted the name without modification in 1967.

Kubusdalen. 71°58' S, 7°14' E. An ice-filled valley (the Norwegians define it as a corrie, but the name "dal" does signify a valley) between Trollslottet Mountain and Kubus Mountain, in the Filchner Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them ("the cube valley") in association with Kubus Mountain. US-ACAN accepted the name without modification in 1967.

Lednik Kuchina *see* **Williamson Glacier**

Pik Kuchina *see* **Kutschin Peak, Steinskaregga Ridge**

Kuechle Island. 77°52' S, 165°13' E. An island, 1.5 km NW of Uberuaga Island (the northernmost feature in the Dailey Islands), in McMurdo Sound. Named by US-ACAN in 1999, for Valerian B. "Larry" Kuechle, USARP biologist from the University of Minnesota, studying population dynamics and behavior of Weddell Seals at Erebus Bay and McMurdo Sound, between 1968-69 and 1971-72. NZ-APC accepted the name on Nov. 4, 1999.

Kuhn Nunatak. 84°06' S, 66°34' W. Rising to 730 m, it is the southernmost of the Rambo Nunataks, 5 km SW of Oliver Nunatak, on the W side of Foundation Ice Stream, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their 1965-66 Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Michael H. Kuhn, meteorologist who wintered-over at Plateau Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Kuiper Scarp. 71°26' S, 68°27' W. An E-W escarpment rising to 810 m along the S side of Uranus Glacier, on the E side of Alexander Island. Seen aerially, and photographed, by Ellsworth, on Nov. 23, 1935, and roughly mapped from these photos in 1936, by U.S. cartographer W.L.G. Joerg. Surveyed by BAS between 1961 and 1973. In association with Uranus Glacier, it was named by UK-APC on Dec. 20, 1974, for Gerard Peter Kuiper (1905-1973), U.S. astronomer who discovered the Uranian moon Miranda, in 1948. US-ACAN accepted the name in 1975. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mount Kuipers. 77°54' S, 161°24' E. An ice-free mountain rising to 1940 m, between Knobhead and Mount Benninghoff, in the Quartermain Mountains of Victoria Land. Named by US-ACAN in 1992, for Ronald L. Kuipers, formerly of the CIA, who, from 1968 to 1980 was associated with government committees that formulated U.S. Antarctic policy. He also initiated and collaborated in the authorship of the *Atlas of Polar Regions*, 1978.

Kuivinen Ridge. 77°14' S, 161°45' E. A transverse ridge, 8 km long, and rising to 1750 m (in Lanyon Peak), it extends SW-NE across the Saint Johns Range between an unnamed glacier and Ringer Glacier, in Victoria Land. The name was proposed by Robert Rutford, head of the Ross Ice Shelf Project, for Karl C. Kuivinen, of the University of Nebraska at Lincoln, field operations manager for the Ross Ice Shelf Project. He was in Antarctica 15 times from 1974 onwards, and from 1979 to 1989 was director of PICO (Polar Ice Coring Office). US-ACAN accepted the name in 2005, and NZ-APC followed suit on Sept. 12, 2005.

Kujira-misaki *see* **Kujira Point**

Kujira Point. 69°36' S, 38°16' E. Also spelled Kuzira Point. A small point forming the NW extremity of Padda Island, in Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and roughly mapped from these photos in 1946 by Norwegian cartographers, who did not name it. Accurately remapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on Oct. 1, 1962, as Kuzira-misaki, or Kujira-misaki (i.e., "whale point"), because a mummified whale was found here. US-ACAN accepted the name Kujira Point in 1968. The Norwegians call it Kvalodden (which means the same thing).

Kukeri Nunataks. 62°38' S, 60°05' W. A pair of rocky peaks, rising to 320 m, 150 m away from each other, in the central part of the Huron Glacier, 700 m N of Nestinari Nunataks, 2.7 km SE of Atanasoff Nunatak, 2 km W of Godech Nunatak, and 3.7 km E of Kuzman Knoll, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra Survey of 2004-05, and named by them on April 11, 2005, for the Bulgarian folklore masked ritual of Kukeri, which was designed to frighten away evil spirits.

Kuklen Point. 62°34' S, 60°35' W. A point, 2.13 km SE of Avitohol Point, and 5.6 km W of Lukovit Point, on the coast of Hero Bay, Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the town of Kuklen, in southern Bulgaria.

Kukri Hills. 77°44' S, 162°42' E. Also seen (erroneously) as the Kurki Hills. A prominent range, trending WSW-ENE for about 42 km, it is really a peninsula of gray granite surmounted by peaks rising from between 600 m and 1800 m above sea level, and it forms the divide between Taylor Valley on the N and Ferrar Glacier on the S, just behind New Harbor, on McMurdo Sound, in southern Victoria Land. Discovered by BNAE 1901-04, and named for their resemblance to a Gurkha's knife. US-ACAN accepted the name, and NZ-APC followed suit.

Kukuryak Bluff. 63°36' S, 58°10' W. A partly ice-free bluff rising to over 700 m at the end of a ridge descending eastward from the Louis Philippe Plateau, 3.65 km S of Windy Gap, 13.54 WNW of Kribul Hill, 8.41 km NNW of Levassor Nunatak, and 6.83 km ENE of Hochstetter Peak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6 2010, for the settlement of Kukuryak, in southern Bulgaria.

Kukuzel Cove. 62°37' S, 61°03' W. A cove, 830 m wide, indenting the N coast of Byers Peninsula for 550 m between Lair Point and Villard Point, on Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for St. Yoan Kukuzel (1280-1370), the Bulgarian church music composer and singer.

Kulen *see* **Kulen Mountain**

Kulen Mountain. 72°39' S, 3°18' W. A projecting-type mountain, it forms the snow-covered NW side of Jøkulskarvet Ridge, in the Borg Massif of Maudheimvidda, in Queen Maud

Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and named by them as Kulen (i.e., "the swelling"). US-ACAN accepted the name Kulen Mountain in 1966.

Nunatak Kulibina. 80°35' S, 33°18' W. An incredibly lonely nunatak, behind the Filchner Ice Shelf. Named by the Russians.

Kulikowski Skerry. 66°55' S, 57°22' E. The easternmost of the Rigel Skerries, off the coast of Kemp Land. Named by ANCA on Dec. 7, 1976, for William "Willie" Kulikowski, who wintered-over as carpenter at Mawson Station in 1975, and was a member of the dog-sledge party that camped on the Rigel Skerries in Sept.–Oct. 1975. He had also wintered-over at Macquarie Island in 1973.

Nunataki Kulisnye. 73°05' S, 60°30' E. A group of nunataks, just to the W of Mitchell Ridge, in the Goodspeed Nunataks, in the southern Prince Charles Mountains. Named by the Russians.

Kullen *see* **Kullen Knoll**

Kullen Knoll. 72°04' S, 2°44' W. A knoll, 3 km N of Gösta Peaks, and S of Grunehogna Peaks, in the S part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Kullen (i.e., "the rounded mountain top"). US-ACAN accepted the name Kullen Knoll in 1966.

Kulten. 66°27' S, 52°56' E. A nunatak, rising to about 1390 m above sea level, about 18.5 km SSE of Mount Codrington, in Enderby Land. Mapped in 1946 by Norwegian cartographers working from aerial photos taken by LCE 1936–37, and named by them (name means "the block"). ANCA accepted the name without modification.

Kumata Hill. 63°34' S, 57°49' W. A partly ice-free hill, rising to 614 m, E of Stepup Col, 6.9 km NNW of McCalman Peak, 3.08 km E of Marten Crag, 7.88 km SSW of Kanitz Nunatak, and 3.37 km WSW of Cain Nunatak, it surmounts Broad Valley to the N and Cugnot Ice Piedmont to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the locality of Kumata, in Vitosha Mountain, in western Bulgaria.

Kumihimo-iwa. 69°38' S, 37°00' E. A small rock exposure at the NW entrance to Fletta Bay, on the SW shore of Lützow-Holm Bay, on the Prince Harald Coast. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1969 and 1984, and named by them ("braid rock") on March 26, 1985, in association with Fletta Bay ("fletta" meaning "the braid").

Kuml. 71°59' S, 16°39' E. A small nunatak between Vorposten Peak and Sarkofagen Mountain, in the easternmost part of Fimbulheimen, in Queen Maud Land. Named descriptively by the Norwegians (name means "grave mound").

Kumo-no-taira. 71°35' S, 35°45' E. An icefield between Mount Eyskens, Mount Derom, and the JARE IV Nunataks, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1969, and named by the Japanese (name means "plain of clouds").

Kumoch Cliff. 62°03' S, 58°27' W. A sheer cliff, rising to about 300 m above sea level, in the central part of Three Musketeers Hill, within Domeyko Glacier, at Mackellar Inlet, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for meteorologist Lechoslaw A. Kumoch, with PolAE 1977–78 and PolAE 1978–79.

Vershina Kunina. 71°30' S, 67°45' E. A summit on the E side of the Fisher Massif, in the Prince Charles Mountains. Named by the Russians.

Kunlun Qundao. 80°25' S, 77°07' E. Kunlun Station. Chinese summer station opened at Dome A in 2009. This was the third Chinese station in Antarctica.

Kuno Cirque. 80°41' S, 24°55' W. A cirque forming the head of a glacier flowing SW into Glen Glacier, between that glacier and Murchison Cirque, on the S side of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Prof. Hisashi Kuno (1910–1969), Japanese petrologist who worked on basaltic magmas. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Kuno Point. 66°24' S, 67°10' W. The SW end of Watkins Island, in the Biscoe Islands. Mapped by FIDS cartographers in 1959–60, from aerial photos taken by FIDASE in 1956–57, and from ground surveys conducted by Fids from Base W in 1956–59. Named by UK-APC on Sept. 23, 1960, for Japanese physiologist Yasau Kuno (1882–1977), whose specialty was human perspiration. US-ACAN accepted the name in 1965.

Künze, Adolf. Seaman on the *Deutschland* during GermAE 1910–11, and again on the *Schwabenland* during GermAE 1938–39.

Kuperov, Leonid. Name also spelled Kouperov. On March 19, 1961, Soviet ionosphere physicist and exchange scientist Leonid Kuperov, at Byrd Station, developed an acute abdominal condition (nausea, vomiting, and intense pain), and reported to Lt. Donald R. Walk, the officer-in-charge and medical officer, who could not locate the cause. By March 22 the patient was in better shape, and on the morning of March 23 his temperature was down to 101.8°. By 10 o'clock that morning he had recovered completely, much to Dr. Walk's amazement. Kuperov claimed to have remembered a cure that an old Russian doctor had come up with, tying a neck scarf tightly around his waist. He refused to discuss his condition any further, and was taken off the sick list. However, on March 27 it flared up again, but he was not a very cooperative patient. The trouble went on for several days, and on March 31, 1961 the patient talked by radio to the doctor at Mirnyy Station. That day Lt. Jack W. Potter, medical officer on the staff of Admiral Tyree, commander, U.S. Naval Support Force, Antarctica, suggested (or at least, agreed to) an evacuation of Comrade Kuperov from Byrd Station, just in case something awful happened at this moment of world tension between the Soviet Union and the United States of America. No winter air pick-up or landing had ever been made in Antarctica before. Admiral Tyree ordered two planes to be made ready at Quonset Point, RI, manned, and then flown to Christchurch, NZ. The first, piloted by Loyd Newcomer, left at 6.51 P.M., on April 1, 1961, and the second, flown by Lt. Ronald F. Carlson, USN, left at 7 P.M., same evening. By April 3 Kuperov was recovering, even though he had lost 14 pounds in weight. On March 31 the American ship *Staten Island* had left NZ, arriving on April 5 at her picket station in 60°S, 170°E, to give met reports, and provide communication and back-up for the operation. A temporary runway had to be built at McMurdo, as Williams Field was not in a position to take a C-130. The first plane arrived at Christchurch at 9.21 P.M., on April 3, 1961, and the 2nd arrived three hours later, just after midnight, on April 4. April 5 all was ready at McMurdo and Byrd, but weather conditions would not permit a flight. On April 8, 50 minutes after noon, the C-130BL aircraft piloted by Cdr. Newcomer left NZ bound for McMurdo. This was the first nocturnal flight and landing in Antarctic history. On April 9, at 5.22 P.M., after refueling, Newcomer took off for Byrd. The rest of the crew were: Capt. William H. Munson, USN, co-pilot, commanding officer of VX-6; Lt. Donald Angier, USN, and Capt. Richard M. Johnson, USMC, co-pilots; master Sgt. Henry S. Brown and Sgt. Fred W. Streitenberger, both USMC, navigators; Howard H. Murray, USN, crew chief; John E. Beiszer and Howard Hoffman, both USN, flight engineers; Robert L. Parry, USN, mechanic; Charles L. Burton and George N. Kovach, both USN, electricians; Adrion D. Behrens and Franklin J. Daughtery, both USN, metalsmiths; and Kenneth R. Starr and Joe D. McKinnis, both USN, radiomen. At 10.47 P.M., the plane landed at Byrd, stayed 45 minutes, and at 21.30 was airborne again, with Kuperov aboard. At 4 A.M., on April 10, 1961, it landed at McMurdo, still with Kuperov aboard, and, at 4.55 A.M., after refueling, taking mail aboard, and a few abortive attempts to get the Herc off the snow, Newcomer was finally underway back to NZ, where he arrived at 12.51 P.M., on April 10, 1961, mission accomplished. At Christchurch, Admiral Tyree met the patient, who was rushed, amid much publicity, to Princess Margaret Hospital. Tests revealed no ulcer, and further tests were very inconclusive. Kuperov was then released to the Russians. The morning of April 10 the *Staten Island* had stood down, and returned to NZ. Lt. Carlson, no longer needed, left NZ that day bound for the USA. Newcomer, after 2 days rest in NZ, did the same. Kuperov disappeared after his stay in NZ. There seems to be no record of any medical care he received there. Was he really

sick? Was he an asylum seeker? Was this a diversion while the big powers did something else? Were the Russians testing American rescue capabilities? Was Kuperov recalled to Moscow for some secret mission? Was he shot?

Kuperov Peak *see* **Kouperov Peak**

Gora Kupol. 72°38' S, 68°32' E. A nunatak, SE of Styles Glacier, at the N end of the Mawson Escarpment, in Queen Maud Land. Named descriptively by the Russians (means "dome hill").

Lednik Kuprijanova. 66°36' S, 93°20' E. A glacier between Ob' Passage and Wright Bay, on the coast of Queen Mary Land. Named by the Russians, for Ivan Kupriyanov.

Hrebet Kuprina *see* **Birgerhøgda**

Kupriyanov, Ivan. Midshipman on the *Mirnyy*, during von Bellingshausen's expedition of 1819-21.

Kurakake-yama. 72°00' S, 35°13' E. A nunatak, rising to 2218 m above sea level, in the group of nunataks the Japanese call Minami-Yamato-nunatak-gun, about 40 km SW of the Queen Fabiola Mountains. Surveyed by JARE 1973, and named by the Japanese (name means "saddle nunatak").

Kurasawa Pond. 77°31' S, 160°44' E. In the NW part of Labyrinth, at the W end of Wright Valley, S of Dean Cirque, and 0.8 km E of the terminus of the Wright Upper Glacier, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Hajime Kurasawa, of the Japan Geological Survey, a member of the McMurdo Dry Valleys Drilling Project in the 1973-74 and 1974-75 seasons. NZ accepted the name on Nov. 8, 2006.

Mount Kurchatov. 71°39' S, 11°14' E. A peak rising to 2220 m from the base of Sponskaftet Spur, in the Humboldt Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1961-62. Named by the USSR in 1963, as Gora Kurchatova, for nuclear physicist Igor Vasiliyevich Kurchatov (1903-1960), a protégé of Abram Ioffe (*see* **The *Akademik Ioffe***), and "Father of the Soviet Bomb." US-ACAN accepted the name Mount Kurchatov in 1970.

Gora Kurchatova *see* **Mount Kurchatov**

Pik Kurchatova. 73°26' S, 61°31' E. A peak just SW of Gora Stoletova, and NW of Pardoe Peak, in the Prince Charles Mountains. Named by the Russians.

Kurilo Point. 62°45' S, 61°15' W. A sharp ice-free point on the SE coast of Snow Island, projecting 200 m into the Bransfield Strait, 3.1 km SW of President Head, and 2.3 km N of Hall Peninsula, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Kurilo, in western Bulgaria.

Kurki Hills *see* **Kukri Hills**

Mount Kurlak. 84°05' S, 168°00' E. An ice-covered mountain, 5 km SE of Mount Bell, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Lt. Cdr. (later Cdr.) William B. "Bill" Kurlak (b. April 6, 1916, NYC. d. July 28, 2006, Calif.), USN, who joined the Navy in 1934, fought in World War II and Korea, and was aircraft commander in Antarctica during OpDF 64 (i.e., 1963-64). He is notable for having flown the wing plane during the historic non-stop flight from Cape Town to McMurdo on Oct. 2, 1963 (*see* **Aircraft**, 1963). He retired in 1970, to Gulf Breeze, Fla.

Kurmann Refugio *see* **Sub-teniente P. Kurmann Refugio**

Treshchiny Kurochkina. 81°10' S, 35°00' W. A fissure in the ground, W of the Shackleton Range. Named by the Russians.

Kuroiwa-yama. 72°09' S, 27°41' E. A mountain, rising to 1793 m above sea level, in the SE part of Berrheia, on Balchen Mountain, in the Sør Rondane Mountains. Mapped by Japanese cartographers from JARE air photos taken in 1981-82 and 1987, and from JARE ground surveys conducted in 1983, and named by them on Oct. 23, 1989 (name means "black rock mountain"). The Norwegians call it Kuroiwaberget (which means the same thing).

Kuroiwaberget *see* **Kuroiwa-yama**

Kurtse Mountains *see* **Kurze Mountains**

Kurumi Island. 69°01' S, 39°28' E. A small islet, just SE of Ongulkalven Island, between that island and Ongul Island, in the Flatvaer Islands, in Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and roughly mapped (but not named) from these photos in 1946 by Norwegian cartographers. Accurately mapped by Japanese cartographers from JARE ground surveys and air photos from 1957-62, and named descriptively by them on May 1, 1953 as or Kurumi-zima, or Kurumi-shima (i.e., "walnut island"). US-ACAN accepted the name Kurumi Island in 1968. The Norwegians call it Kalvholmen (i.e., "calf island").

Kurumi-shima *see* **Kurumi Island**

Kurumi-zima *see* **Kurumi Island**

Kurze Gebirge *see* **Kurze Mountains**

Kurze Mountains. 71°53' S, 8°55' E. A range of mainly bare rock peaks, ridges, and mountains, about 30 km long and 10 km wide, in the Orvin Mountains, between the Drygalski Mountains on the W, and the Gagarin Mountains and Conrad Mountains on the E, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, plotted by them, and named by Ritscher as Kurze Gebirge (or Kurzegebirge), for the director of the Naval Division of the German Admiralty. Presumably the man's name was Kurze. The name has also been seen misspelled as Kurtse Mountains. The range was re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from air photos taken during the same long expedition, and renamed by them as Holtedahlfjella. However, the original name is recommended to everyone except the Norwegians. US-ACAN accepted the name Kurze Mountains in 1970. The Norwegians do have a name Kurzefjella, but they apply that to what the Americans call the Gagarin Mountains.

Kurzefjella *see* **Gagarin Mountains**

Kurzegebirge *see* **Kurze Mountains**

Kurzmann Refugio *see* **Suboficial Principal Kurzmann Refugio**

Kurzynski Bay. 61°58' S, 58°14' W. A bay in front of Eldred Glacier, it is actually part of Corsair Bight, facing the Drake Passage, on the N coast of King George Island, in the South Shetlands. Named by the Poles in 1984, for Wojciech Kurzynski, helicopter pilot on PolAE 1978-79 and PolAE 1980-81.

Kusinoha-dai. 69°03' S, 39°36' E. A small terrace with indented margins, in the E extremity of Higasi-Teøya (the easternmost of the Te Islands), in the Flatvaer Islands. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named descriptively by them on March 22, 1994 (name means "comb heights").

Punta Kusunoki *see* **Kusunoki Point**

Kusunoki Point. 65°33' S, 65°59' W. On the NW coast of Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS cartographers in 1958-59. Named by UK-APC on July 7, 1959, for Kou Kusunoki (b. 1921), sea ice specialist at the University of Hokkaido, and from 1966 with the National Institute of Polar Research, in Tokyo. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The Argentines call it Punta Kusunoki.

Kusuriyubi-one. 71°54' S, 24°18' E. The second west of the 5 ridges stretching northward in the Brattnipane Peaks, in the Sør Rondane Mountains. JARE photographed it aerially in 1981-82 and again in 1986, and surveyed it from the ground between 1984 and 1991. Named by the Japanese on Oct. 18, 1988 ("ring-finger ridge").

Kutchin, Aleksandr. Name also spelled Alexander Kutschin. b. Russia. Through the influence of his teacher, Bjørn Helland-Hansen, Kutchin became oceanographer on the *Fram*, during NorAE 1910-12, led by Amundsen. He left the *Fram* at Buenos Aires, in Sept. 1911, along with Nødtvedt, to return to Norway. In 1912 he was skipper of the *Herkules*, for Rusanov's expedition to the Arctic. The ship was lost at sea, with all hands, in early Sept. 1912. *See also* **Mount Rusanov**.

Kutschin Peak. 86°25' S, 159°42' W. A prominent peak, rising to 2360 m, on the W slopes of the Nilsen Plateau, 10 km S of Mount Kristensen, at the E side of Amundsen Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Aleksandr Kutchin (sic and q.v.). The Russians call it Pik Kuchina, and plot it in 86°27' S, 159°00' W (coordinates not to be trusted).

Kutyba Point. 62°08' S, 58°07' W. The SW tip of Lions Rump, King George Bay, King George Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for Jacek Kutyba, a member of PolAE 1990-91.

Kuven *see* **Kuven Hill**

Kuven Hill. 73°52' S, 5°15' W. A prominent hill between Gommen Valley and Kuvsletta Flat,

in Uhligberga, in the N part of the Urfjell Cliffs, near the SW end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Kuven (i.e., "the hump"). US-ACAN accepted the name Kuven Hill in 1966.

Kuvklaken. 70°06' S, 10°50' E. An ice rise on the ice shelf the Norwegians call Nivlisen, N of the Schirmacher Hills, on the Princess Astrid Coast. Named by the Norwegians ("the hump-shaped lump of ice").

Kuvsletta *see* **Kuvsletta Flat**

Kuvsletta Flat. 73°50' S, 5°14' W. A small, flattish ice plain between Kuven Hill and Kuvungen Hill, or (to put it another way) between Utrinden Point and Framranten Point, in Uhligberga, in the N part of the Urfjell Cliffs, near the SW end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Kuvsletta (i.e., "the hump plain"). US-ACAN accepted the name Kuvsletta Flat in 1966.

Kuvungen *see* **Kuvungen Hill**

Kuvungen Hill. 73°50' S, 5°09' W. Just SE of Framranten Point, in Uhligberga, in the N part of the Urfjell Cliffs, near the SW end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Kuvungen (i.e., "the hunchback child"). US-ACAN accepted the name Kuvungen Hill in 1966.

Kuwagata-yama. 72°04' S, 35°14' E. A nunatak rising to 2282 m above sea level, in the group of nunataks the Japanese call Minami-Yamato-nunatak-gun, about 40 km SW of the Queen Fabiola Mountains. Surveyed by JARE in 1973, and named by the Japanese on Nov. 22, 1975. The word "kuwagata," apparently, signifies an ornament on an ancient Japanese helmet. The word "yama," of course, means mountain.

Kuzira-misaki *see* **Kujira Point**

Kuzira Point *see* **Kujira Point**

Kuzman Knoll *see* **Tukhchiev Knoll**

Mogila Kuzmanova *see* **Tukhchiev Knoll**

Nunataki Kuznëcova. 73°00' S, 75°18' E. A group of nunataks on the SW side of the Gale Escarpment, in the Grove Mountains of Princess Elizabeth Land. Named by the Russians. Pronounced "Kuznyetzova."

Kuznetsov Canyon. 64°00' S, 135°00' E. A submarine feature off Adélie Land. Named by international agreement.

Gora Kvadrat. 71°18' S, 66°55' E. A nunatak close SW of Gora Treugolka, and SE of Mount Lanyon, in the Prince Charles Mountains. Named by the Russians.

Massif Kvadratnyj. 72°58' S, 68°17' E. This is a suspicious naming, in that the coordinates are very similar to those of the Mawson Escarpment. Indeed, if it is a massif, as the Russians say, then it lies on the Mawson Escarpment, and it is hard to imagine a massif not having been named by the Americans or the Australians. One's best guess is that it is the Russian name for the Mawson Escarpment.

Kvaevefjellet *see* **Kvaevefjellet Mountain**

Kvaevefjellet Mountain. 71°52' S, 14°27' E. An elongated mountain about 10 km long, which has been eroded by the ice into a series of spurs that enclose small cirques. It is surmounted by Mount Fucik, at the N end of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and first plotted from those photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Kvaevefjellet (i.e., "the cirque mountain"). US-ACAN accepted the name Kvaevefjellet Mountain in 1970.

Kvaevenutane *see* **Kvaevenutane Peaks**

Kvaevenutane Peaks. 71°57' S, 14°18' E. Two small peaks, Mount Kibal'chich and Mount Brounov, 3 km SW of Kvaevefjellet Mountain, at the N end of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, these peaks were first plotted from those photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Kvaevenutane (i.e., "the cirque peaks"), in association with Kvaevefjellet. US-ACAN accepted the name Kvaevenutane Peaks in 1970.

Kvaeveskolten. 71°52' S, 14°34' E. A small mountain E of Kvaevefjellet Mountain, in the N part of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the cirque knoll").

Kvaevhøgda. 72°08' S, 27°38' E. A height in the E part of Berrheia, in Balchen Mountain, in the Sør Rondane Mountains. Named by the Norwegians ("the cirque height").

Kvalfinnen *see* **Kvalfinnen Ridge**

Kvalfinnen Ridge. 72°08' S, 26°24' E. A mountain ridge rising to 2670 m, on the W side of Byrdbreen, and 0.8 km NE of Isachsen Mountain, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946–47, and named descriptively by them as Kvalfinnen (i.e., "the whale fin"). US-ACAN accepted the name Kvalfinnen Ridge in 1966.

Kvalodden *see* **Kujira Point**

Kvalvika. 68°47' S, 90°36' W. A bay at the N side of the glacier the Norwegians call Simonovbreen, on the ice rise they call Mirnyjkuppelen, in the northernmost part of Peter I Island. Named by the Norwegians ("the whale bay").

Kvamsbrotet. 71°45' S, 11°44' E. A long and curved mountain ridge in the central part of the Humboldt Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians. The word "brot" signifies "broken." For "kvam" *see* **Kvamsgavlen Cliff**.

Kvamsgavlen *see* **Kvamsgavlen Cliff**

Kvamsgavlen Cliff. 71°46' S, 11°50' E. A gable-like cliff facing E, at the SE corner of Storkvammen Cirque, it forms the easternmost part of the ridge the Norwegians call Kvamsbrotet, on the E side of the Humboldt Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Kvamsgavlen. US-ACAN accepted the name Kvamsgavlen Cliff in 1970. The word "kvam" in Norwegian signifies a hemmed-in valley, and "gavl" means "gable." "Gavlen" means "the gable."

Kvamskvervet. 71°43' S, 11°35' E. A glacier near Kvervenuten and Kvamsbrotet, in the Humboldt Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the valley whirl").

Kvars Bay *see* **Kvarsnes Bay**

Kvars Promontory *see* **Kvarsnes Foreland**

Kvarsnes *see* **Kvarsnes Foreland**

Kvarsnes Bay. 67°03' S, 56°49' E. A small bay just to the SW side of Kvarsnes Foreland, on the S part of Edward VIII Bay. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers who named it Kvarsnesvika. ANCA translated this name as Kvars Bay, on Aug. 20, 1957. US-ACAN accepted the name Kvarsnes Bay in 1965.

Kvarsnes Foreland. 67°02' S, 57°00' E. A prominent, rocky foreland projecting into the S shore of Edward VIII Bay, close W of the Øygarden Group. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Kvarsnes. US-ACAN accepted the name Kvarsnes Foreland in 1947. It was first visited by an ANARE sledging party, led by Bob Dovers, in 1954. ANCA translated the name as Kvars Promontory (for themselves only), on Aug. 20, 1957. The word "kvar" in Norwegian signfies "quiet"; "nes" is a headland, or ness.

Kvarsnesvika *see* **Kvarsnes Bay**

Kvassknatten *see* **Kvassknatten Nunatak**

Kvassknatten Nunatak. 72°27' S, 0°20' E. A small mountain crag, one of the Knattebrauta Nunataks, in the central part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938–39. Mapped by the Norwegians from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Kvassknatten (i.e., "the sharp crag"). US-ACAN accepted the name Kvassknatten Nunatak in 1966.

Kvassodden. 70°00' S, 11°58' E. A point projecting from Nivlisen, on the Princess Astrid

Coast. Named descriptively by the Norwegians ("the sharp point").

Kvasstind *see* **Kvasstind Peak**

Kvasstind Peak. 72°31' S, 3°23' W. In the NE part of Borg Mountain, on the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Kvasstind (i.e., "sharp peak"). US-ACAN accepted the name Kvasstind Peak in 1966.

Kvea *see* **Kvea Valley**

Kvea Valley. 71°55' S, 4°30' E. A rectangular and ice-filled valley, between Grinda Ridge and Skigarden Ridge, northward of Mount Grytøyr, in the westernmost part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Kvea (i.e., "the sheepcote"). US-ACAN accepted the name Kvea Valley in 1967.

Kvelven. 69°45' S, 37°29' E. A corrie between Vesthovde Headland and the main part of Botnneset Peninsula, on the S side of Lützow-Holm Bay, on the Prince Harald Coast. Named by the Norwegians ("the vault").

Kvervelbreen. 72°17' S, 24°30' E. A glacier, 8 km long, between the Rogers Peaks and the mountains the Norwegians call Tvihøgda and Trerindane, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("the whirl glacier"), for the characteristic surface of the glacier.

Kvervelnatten *see* **Kvervelnatten Peak**

Kvervelnatten Peak. 73°31' S, 3°53' W. A small mountain, 3 km SW of Svartbandufsa Bluff, in the Heksegryta Peaks, in the N part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Kvervelnatten (i.e., "the whirl peak"). US-ACAN accepted the name Kvervelnatten Peak in 1966.

Kvervenuten. 71°42' S, 11°35' E. One of the Humboldt Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the whirl peak").

Kvinge Peninsula. 71°10' S, 61°10' W. A snow-covered peninsula at the N side of Palmer Inlet, it terminates in Cape Bryant, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Thor Kvinge (b. 1929), Norwegian oceanographer from the University of Bergen, a member of the International Weddell Sea Oceanographic Expeditions of 1968, 1969, and 1970. UK-APC accepted the name on July 21, 1976.

Kvitebotnen. 74°58' S, 11°59' W. A valley, 6 km long, W of Sumnerkammen, in the NE part of the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the white cirque").

Kvithamaren *see* **Kvithamaren Cirque**

Kvithamaren Cliff. 71°59' S, 5°02' E. A mountainous cliff just E of Slokstallen Mountain, and SW of Vestreskorve Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Kvithamaren (i.e., "the white hammer"). US-ACAN accepted the name Kvithamaren Cliff in 1966.

Kvithø *see* **Kvithø Peak**

Kvithø Peak. 72°29' S, 1°13' E. An isolated, mostly ice-covered craggy peak, rising above the ice 11 km SE of Kvitkjølen Ridge, and S of Isingen Mountain, in the central part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. First photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Kvithø (i.e., "the white hill"). US-ACAN accepted the name Kvithø Peak in 1966.

Kvitholten *see* **Kvitholten Hill**

Kvitholten Hill. 71°49' S, 5°51' E. A snow-clad hill at the E side of Austreskorve Glacier, and just S of Sagbladet Ridge, in the north-central part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Kvitholten (i.e., "the white grove"). US-ACAN accepted the name Kvitholten Hill in 1967.

Kvithovden *see* **Kvithovden Peak**

Kvithovden Peak. 72°22' S, 0°45' E. A craggy peak at the N end of Kvitkjølen Ridge, in the central part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Kvithovden (i.e., "the white peak"). US-ACAN accepted the name Kvithovden Peak in 1966.

Kvitkjølen *see* **Kvitkjølen Ridge**

Kvitkjølen Ridge. 72°24' S, 0°49' E. A rock mountain ridge, mostly snow- and ice-covered, between the ice-filled Kvitsvodene Valley and Ising Glacier, in the central part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Kvitkjølen (i.e., "the white keel"). US-ACAN accepted the name Kvitkjølen Ridge in 1966.

Kvitkleven *see* **Kvitkleven Cirque**

Kvitkleven Cirque. 72°00' S, 7°43' E. An ice-filled cirque at the S side of Klevekampen Mountain, between that mountain and Klevekåpa Mountain, in the N part of the Filchner Mountains, in Fimbulheimen, in Queen Maud Land. First plotted from air photos taken during GermAE 1938-39. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Kvitkleven (i.e., "the white closet"). US-ACAN accepted the name Kvitkleven Cirque in 1967.

Kvitkuven *see* **Kvitkuven Ice Rise**

Kvitkuven Bank. 72°30' S, 16°30' W. A submarine feature, with a least depth of 150 m, just N of the Riiser-Larsen Ice Shelf, on the Princess Martha Coast of Queen Maud Land. Named by Heinrich Hinze in Jan. 1997, in association with Kvitkuven Ice Rise. The name was accepted by international agreement in June 1997.

Kvitkuven Ice Rise. 72°38' S, 16°18' W. An ice rise, or ice dome, 25 km long, on the Riiser-Larsen Ice Shelf, on the Princess Martha Coast of Queen Maud Land. Named by the Norwegians as Kvitkuven (i.e., "the white hump"). The name in English is, at the time of writing (June 2010), unofficial.

Kvitkvaeven. 74°46' S, 11°40' W. An ice corrie in the SW side of Skjønsbergskarvet, in Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the white cirque").

Kvitøya *see* **White Island**

Kvitskarvet *see* **Mount Krüger**

Kvitskarvhalsen *see* **Kvitskarvhalsen Saddle**

Kvitskarvhalsen Saddle. 72°30' S, 0°51' E. An ice-saddle (actually an ice-covered ridge) between Mount Krüger and Robin Heights, in the central part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Kvitskarvhalsen (i.e., "the white mountain neck"). US-ACAN accepted the name Kvitskarvhalsen Saddle in 1966.

Kvitsvodene *see* **Kvitsvodene Valley**

Kvitsvodene Valley. 72°26' S, 0°45' E. An ice-filled valley, 8 km long, between Kvitkjølen Ridge and Robin Heights, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Kvitsvodene (i.e., "the white slopes"). US-ACAN accepted the name Kvitsvodene Valley in 1966.

Kwarecki Point. 62°07' S, 58°53' W. A cape to the SW of Bell Island, on Joannes Paulus II Coast, on the N coast of King George Island, in

the South Shetlands. Named by the Poles in 1980, for Prof. Krzysztof Kwarecki (b. 1938. d. Sept. 10, 2002), chief of the Polish medical teams in Antarctica since 1977. He was twice at Arctowski Station.

Mount Kyffin. 83°48' S, 171°38' E. Also spelled (erroneously) as Mount Kiffin, and even Mount Kyftin. A distinctive, reddish-brown mountain, rising to 1670 m (the New Zealanders say 1778 m), with a sloping spur extending 6 km to the N, at the extreme N end of the Commonwealth Range, projecting into the E side of the Beardmore Glacier and rising precipitously above it about 33 km up the glacier from Mount Kathleen at the head of the Ross Ice Shelf. Discovered during BAE 1907-09, and named by them for Evan Kyffin-Thomas (1866-1935), a South Australian friend of Shackleton's, and co-owner of the *Register*, the Adelaide newspaper. He had traveled out with Shackleton from England. US-ACAN accepted the name in 1949, and NZ-APC followed suit.

Mount Kyftin *see* **Mount Kyffin**

Mount Kyle. 71°57' S, 168°35' E. Rising to 2900 m, midway along the ridge bordering the N side of Denning Glacier, in the Admiralty Mountains of Victoria Land. Mapped by US-ACAN from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Ricky L. Kyle, USN, utilitiesman at McMurdo in 1967.

Kyle, James T. b. 1892. He moved to Auckland, NZ, and was a fireman on the *Discovery,* during the 1st half of BANZARE 1929-31. After his part in the expedition, he caught the *Bendigo* from Melbourne, arriving in London on June 25, 1930.

Kyle, Philip Raymond "Phil." b. 1947, Wellington, NZ. He graduated from VUW in 1971, in geology. He did 6 seasons with NZARP, 1969-76, including one with VUWAE in 1971-72, and another (1972-73) as site geologist and principal investigator with the Dry Valley Drilling Project. In 1974-75 he was geologist and project co-ordinator with a French-NZ-U.S. expedition to Mount Erebus. In 1976 his doctoral dissertation was entitled *Geology, Mineralogy, and Geochemistry of the Late Cenozoic McMurdo Volcanic Group, McMurdo, Antarctica*. From 1976 to 1981 he was in research at the Institute of Polar Studies, at Ohio State University, and also taught at the university, going down to Antarctica in the 1978-79 season. From Ohio he went to the New Mexico Institute of Mining and Technology, where he was professor of geochemistry, and he remained there. Altogether, as of 2002-03, he spent 32 summer field seasons in Antarctica, 31 of them being at Mount Erebus, and in 2000 was in charge of the volcano observatory there.

Kyle Cone. 77°31' S, 169°16' E. An exposed volcanic cone near Cape Crozier, 2 km WNW of the summit of The Knoll, in the eastern part of Ross Island. Named by NZ-APC for Phil Kyle (*see* **Kyle Peak**), NZ geologist who examined it in 1969-70. US-ACAN accepted the name in 1972.

Kyle Hills. 77°30' S, 169°02' E. A prominent group of volcanic cones, hills, ridges, and peaks, occupying the E part of Ross Island, and running E-W for 13 km between Cape Crozier (where they rise from sea level) to Mount McIntosh (2700 m), near Mount Terror. Named by US-ACAN in 1970, for Phil Kyle. NZ-APC accepted the name on Feb. 20, 2001.

Kyle Nunataks. 66°47' S, 51°20' E. A group of 3 nunataks, about 5 km E of Mount Hampson, in the N part of the Tula Mountains of Enderby Land. Plotted from aerial photographs taken by ANARE in 1956. Named by ANCA for J.T. Kyle. The name was accepted by US-ACAN in 1965.

Kyle Peak. 72°34' S, 166°17' E. Rising to 2850 m, in the Barker Range, 3 km NE of Mount McCarthy, in the Victory Mountains of Victoria Land. Named by NZ-APC in 1972, for Philip Kyle (q.v.), who worked here with VUWAE 1971-72. He was back with the International Northern Victoria Land Project, 1981-82.

The *Kyo Maru 27*. Japanese whale chasing vessel, in Antarctic waters in 1979-80, as part of the International Whaling Commission Expedition (q.v.). Her skipper that season was Shoji Nagata. She was back for the 1980-81 expedition, under skipper Kazuhiko Yamashita. That season (in 1981) she was in waters near the Balleny Islands. She also took part in the IWC expeditions of 1983-84 (Capt. Fumio Yokota; chief officer was Toshinori Tsurui), 1984-85 (Capt. Yukota; Tsurui was still chief officer), 1985-86 (Capt. Sanji Nakanishi), and 1986-87 (Capt. Masatoshi Kira).

The *Kyokusei Maru 3*. The former *Kosmos IV*. Sold to the Japanese in 1971, she became the whaler *Kyokusei Maru*, and was in Antarctic waters only in the 1973-74 season, Minke whaling.

The *Kyokuyo Maru*. A 17,548-ton Japanese whaler built in 1938, along the lines of the *Svend Foyn*. She was in Antarctic waters in 1938-39, 1939-40, and 1940-41. During World War II she became an oil tanker, and was sunk by the Allies. There was another Japanese whaler with the same name after the war, the 11,448-ton former freighter *Tsuruoka Maru*, but she worked only in the Arctic (until 1967).

The *Kyokuyo Maru 2*. This was the old Greek-German Arisotle Onassis whaling factory ship *Olympic Challenger* sold to the Japanese in 1956, and refitted as the 16,433-ton whaler *Kyokuyo Maru 2*. She was in Antarctic waters in 1956-57, 1957-58, 1958-59, 1959-60, and 1961-62. Then she was laid up, but was back in 1963-64 and 1964-65, but was then laid up again. She came back for a final season in 1968-69. In 1970 she was in the North Pacific, and was then converted into an oil tanker.

The *Kyokuyo Maru 3*. Japanese whaler, the former British whaler *Balaena*, sold to the Japanese in 1960, and refitted as the 23,059-ton whaler *Kyokuyo Maru 3*. She was in Antarctic waters in 1960-61, and then back every season until her last, 1975-76. She was scrapped in 1978.

Kyrkjebakken *see* **Kyrkjebakken Slope**

Kyrkjebakken Slope. 71°54' S, 6°32' E. An ice-slope on the W side of Jøkulkyrkja Mountain, in E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Kyrkjebakken (i.e., "the church hill"). US-ACAN accepted the name Kyrkjebakken Slope in 1967.

Kyrkjedalen *see* **Kyrkjedalen Valley**

Kyrkjedalen Valley. 71°50' S, 6°53' E. The ice-filled valley between Jøkulkyrkja Mountain and Habermehl Peak, in the E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Kyrkjedalen (i.e., "the church valley"), in association with Jøkulkyrkja. US-ACAN accepted the name Kyrkjedalen Valley in 1967.

Kyrkjedalshalsen *see* **Kyrkjedalshalsen Saddle**

Kyrkjedalshalsen Saddle. 71°47' S, 6°53' E. An ice-saddle between Gessner Peak and Habermehl Peak, in the E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Kyrkjedalshalsen (i.e., "the church valley neck"). US-ACAN accepted the name Kyrkjedalshalsen Saddle in 1967.

Kyrkjeskipet *see* **Kyrkjeskipet Peak**

Kyrkjeskipet Peak. 71°52' S, 6°48' E. Rising to 3085 m, just N of Kapellet Canyon, it dominates the NE part of Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 aerial photographs taken during the same long expedition, and named by them as Kyrkjeskipet (i.e., "the church nave"). US-ACAN accepted the name Kyrkjeskipet Peak in 1967.

Kyrkjetorget. 71°54' S, 6°57' E. A flatish, ice-filled amphitheatre on the E side of Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them (name means "the church marketplace"). US-ACAN accepted the name without mofication in 1967.

Kyte, Graham Frederick Charles. b. 1937, Hendon, son of Harold Charles Kyte and his wife Una Julia Jupp. He joined FIDS in 1960, as a meteorologist, and wintered-over at Base B in 1961 and 1962.

L.A.S. *see* **Little America**

Mount L. Hansen *see* **Hansen Spur**

The *L.P. Simmons* *see* **The *Lizzie P. Simmons***

L.V.T. *see* **Amphibious Vehicles**

Paso La Angostura *see* **The Narrows**

The *La Argentina*. Argentine ship which took part in ArgAE 1964-65 (Captain Fernando Milia).

Punta de la Atrevida. 63°01' S, 60°47' W. A point named by the Argentines for one of the two ships in the 1789-91 expedition led by Alessandro Malaspina (1754-1810) to Alaska in search of the Northwest Passage.

La Balance. 66°41' S, 139°59' E. A low islet formed from 2 rocky plates, in the SW portion of the Géologie Archipelago, and to the SE of Gouverneur Island, in Baie Pierre Lejay. Named by the French initially and improperly as Les Jumeaux (i.e., Gemini), it was renamed by them in 1977, for the zodiacal sign of Libra.

La Baleine. 66°39' S, 140°01' E. A group of rocky islands, very close together, just off Dumont d'Urville Station. Seen from the station, the silhouette of this feature reminds one of a whale, hence the name given by the French in 1977. In addition, jets of water coming from off the waves also remind one of a whale.

La Base. 66°40' S, 140°01' E. A rocky plateau in the N part of Pétrel Island, in the Géologie Archipelago. Most of the winter installations of Dumont d'Urville Station are found here. Named by the French in 1977.

La Bifur. 67°03' S, 141°33' E. A depot set precariously on the glacial continental platform of the Géologie Archipelago, marked by three signals. When the French left from here, to go out on the trail, they were able to take different directions other than the heavily crevassed Zélée Glacier Tongue.

La Borne. 66°40' S, 140°00' E. An isolated rock to the SW of Carrel Island and to the S of Île des Hydrographes, in the Géologie Archipelago. Named by the French in the 1950s as La Bouée (i.e., "the bouy"), but in 1977 they changed the name to La Borne (i.e., "the pin").

La Bouée *see* **La Borne** (above)

Mancha La Calavera. 64°18' S, 62°56' W. A small area of land on Eta Island, in the Melchior Islands. Named by the Argentines.

La Cave. 66°40' S, 140°01' E. The highest part of the center of Pétrel Island, in the Géologie Archipelago. Named by the French in 1977, for a seismological recording station dug into the rock here.

Punta La Caverna. 62°27' S, 60°47' W. A point, immediately S of Playa Bahamonde, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, for the large cave that exists here.

La Conchée. 66°47' S, 141°29' E. A rocky island, 0.4 km long, between Pascal Island and Monge Island, 1.1. km E of Cape Mousse. Charted in 1950 by FrAE, and named by them for one of the forts guarding the Golfe de Saint-Malo, in France.

La Count Mountain. 78°00' S, 161°42' E. A mostly ice-free mountain, rising to 1875 m, forming the N portion of Battleship Massif, between Rotunda Glacier, Blankenship Glacier, and Ferrar Glacier, in Victoria Land. Studied by USGS geologist Warren Hamilton in 1958-59. Named by US-ACAN in 1992, for Ronald R. La Count (b. Oct. 28, 1929. d. Nov. 5, 2008, Silver Spring, Md.), manager, Polar Operations section, Division of Polar Programs, National Science Foundation, 1984-90, who was in Antarctica in 1988-89.

La Croix du Sud. 66°40' S, 140°01' E. A rocky islet, S of Carrel Island, and W of Bon Docteur Nunatak, in the Géologie Archipelago. Named by the French in 1977, for its contours, which resemble the shape of the Southern Cross constellation, and also because of its southern location.

Meseta la Cruz *see* **Cross Mesa**

La Dent. 66°39' S, 140°03' E. A rocky island in Baie Pierre Lejay, at the extreme NE of the Géologie Archipelago. Named by the French in 1958. From Dumont d'Urville Station it looks like a tooth ("une dent").

La Dorsale. 66°49' S, 141°24' E. An extended, narrow rocky spur, its extremity forming the culminating point of the S part of the peninsula where Port-Martin Station was situated. Named for its shape by the French in 1950.

Mount La Gorce *see* **La Gorce Peak**

La Gorce Mountain *see* **La Gorce Peak**

La Gorce Mountains. 86°45' S, 146°00' W. A group of mountains, 30 km in extent, between Robison Glacier and Klein Glacier, at the E side of the upper reaches of Scott Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35. Named by Byrd for John Oliver La Gorce (b. Sept. 22, 1879, Scranton, Pa., as de la Gorce. He later dropped the "de" and capitalized the "l" in "la." He died on Dec. 23, 1959, in Washington, DC), editor of *National Geographic*, and postmaster of Little America in 1933-35 (even though he never went to Antarctica). US-ACAN accepted the name in 1947.

La Gorce Peak. 77°37' S, 153°22' W. A prominent summit, rising to 822 m, 13 km SW of Mount Josephine, it is at the S end of the Alexandra Mountains, in King Edward VII Land, in Marie Byrd Land, and marks the highest point in those mountains. Discovered in Feb. 1929 during ByrdAE 1928-30, and named by Byrd for John La Gorce (*see* **La Gorce Mountains**). US-ACAN accepted the name in 1947.

La Grande Dorsale. 66°40' S, 140°01' E. The name given by the French in 1977 to the extended relief forming the culminating part of Carrel Island, in the Géologie Archipelago.

La Grande Souille. 66°40' S, 140°01' E. An important Adélie penguin rookery, in the center of Rostand Island, in the Géologie Archipelago. So named by C. Volck, because of the nature of the ground. France accepted the name officially in 1976. The word "souille" poses a linguistic puzzle. The verb "souiller" means "to foul," which would certainly apply to this feature, but as a feminine (or any other kind of) noun, this word does not ordinarily exist in French, so must be a nonce word.

La Grange, Johannes Jacobus (Hannes). Also known as "J.J." In normal writing the "la" has a small "l." b. Oct. 13, 1927, Ladysmith. Arguably South Africa's most famous Antarctic explorer, Hannes la Grange had been a met man with the South African Weather Bureau since 1949 when, in 1951-52, as visiting meteorologist, he produced a map of Marion Island (not in Antarctica). He was invited by Fuchs to go on BCTAE, arrived in Antarctica on Jan. 28, 1956, and was a member of the Advance Party for the transantarctic crossing. He then joined Fuchs for the main trek across the continent, being the first South African to reach the South Pole. He was back in 1959-61 as leader/meteorologist of SANAE I, and leader of the 1960 wintering party at Norway Station. He died on April 21, 1999, in South Africa.

La Grange Nunataks. 80°18' S, 27°50' W. A scattered group of nunataks, rising to an elevation of about 1100 m, and extending W for 35 km from the mouth of Gordon Glacier, on the NW side of the Shackleton Range. The group includes (from W to E): Mount Skidmore, The Dragons Back, Mount Etchells, Mount Beney, Morris Hills, Wiggans Hills, True Hills, and Lewis Chain. First roughly surveyed and mapped in Oct. 1957 by BCTAE 1955-57, and the NE sector of this group was named on Aug. 31, 1962, by UK-APC, as Beney Nunataks, for Ivor Beney (q.v.). US-ACAN followed suit with the naming. The name Mount Lagrange (sic) was also given at this time to what later became Mount Skidmore. Photographed aerially by USN in 1967. Following these photos, and new ground surveys conducted by BAS personnel from Halley Bay Station, 1968-71, the entire group was renamed by UK-APC as Lagrange Nunataks (sic), for J.J. la Grange. The spelling was later corrected, and appears in the 1980 British gazetteer. US-ACAN accepted the new name.

La Molaire. 66°40' S, 140°01' E. A rocky hill, rising to 24 m, on the W side of Rostand Island, in the Géologie Archipelago. Charted by FrAE in 1951, and named by them for its shape (like a molar).

Islotes La Opinión *see* **Psi Islands**

La Plata Channel *see* **Plata Passage**

La Plata Point. 64°14' S, 56°40' W. Immediately NE of Marambio Station, on Seymour Island. Named by the Poles on Sept. 1, 1999, for the scientists from the department of vertebrate paleontology, at the La Plata Museum, in Argentina, who camped here for several seasons.

Punta La Plaza *see* **Plaza Point**

La Plaza Point *see* **Plaza Point**

La Selle. 66°39' S, 139°58' E. A rocky island in the shape of a saddle, in Baie Pierre Lejay, in the NW part of Géologie Archipelago. Named by the French in 1958, as Îlot de la Selle (i.e., "islet of the saddle"). The name was later shortened.

Pico La Torre *see* **The Tower**

La Tour *see* **The Tower**

Cerro La Tour *see* **The Tower**

La Vierge. 66°40' S, 139°59' E. A little island, E of Gouverneur Island, in Baie Pierre Lejay, in the Géologie Archipelago. Named by the French in 1977, as Îlot de la Vierge, for the zodiac sign, Virgo. The name was later shortened.

Caleta La Vuelta *see* **Caleta Carrasco**

Laager Point. 62°38' S, 61°09' W. A conspicuous headland extending out from President Beaches, on the shore of new Plymouth Harbor, between Point Smellie and Ocoa Point, on the W coast of Byers Peninsula, Livingston Island, South Shetlands. In 1971 this point was referred to as Punta Campamento (i.e., "camp point"), by Chilean paleobotanists P.J. Hernández P., and Valeria Azcárate M., and that is what the Chileans have called it since. For a while it was also seen as Campamento Point. Following geological work here by BAS, 1975-76, UK-APC named it, on Feb. 7, 1978, as Laager Point ("laager" meaning "camp"), and US-ACAN followed suit with the naming. It appears as such in the 1980 British gazetteer.

Islote Labbé *see* **Labbé Rock**

Islotes Labbe *see* **Stray Islands**

Punta Labbé *see* **Kitchen Point**, **Labbé Point**

Labbé Island *see* **Labbé Rock**

Labbé Point. 62°30' S, 59°44' W. On the S coast of Basso Island, in Discovery Bay, off Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47, as Punta Labbé, for Custodio Labbé Lippi (*see* **Labbé Rock**), and it appears as such on a Chilean chart of 1951, but, on a 1947 Chilean chart, it appears as Punta Cacique. However, ChilAE 1946-47 seems to have named another point as Punta Labbé (*see* **Kitchen Point**). UK-APC accepted the name Labbé Point, on May 11, 2005. US-ACAN has stayed right out of this argument. Plotted by the UK, in late 2008.

Labbé Rock. 63°17' S, 57°56' W. About 1.2 km NW of Largo Island, between that island and Link Island, and E of Bulnes Island, in the Duroch Islands, NW of Cape Legoupil, in Covadonga Harbor, on the W coast of Trinity Peninsula. Named by ChilAE 1947-48 as Islote Labbé, for 1st Lt. (later captain) Custodio Labbé Lippi, navigation officer on the *Angamos*, and former head of military activities at the Naval School. It appears on a Chilean chart of 1951, and that is the name accepted by the 1974 Chilean gazetteer. It appears as Labbé Rock on a 1963 American chart, and that was the name accepted by US-ACAN in 1964, even though it appears on a 1964 map as Labbé Island. UK-APC followed suit with Labbé Rock, on Dec. 15, 1982, and it appears as such in the 1986 British gazetteer. *See also* **Stray Islands**.

Labben. 72°17' S, 21°49' E. A nunatak at the W side of Bamse Mountain, and in the E part of Kreitzerisen, in the W part of the Sør Rondane Mountains. Named by the Norwegians (name means "the paw").

Label Station *see* **General Belgrano II Station**

LaBelle Valley. 77°20' S, 161°16' E. A valley, 1.5 km long, between Peterson Terrace and Price Terrace, it opens S to Barwick Valley, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for James W. "Jim" LaBelle, of the department of physics and astronomy, at Dartmouth College, NH, USAP principal investigator for the study of low, middle, and high frequency auroral radio noise observed at Pole Station and at other observatories, between 1991 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Laboremus Company. Norwegian whaling company, set up in 1910, in Sandefjord, by Torald Dannevig (b. 1878) and Lars Thorsen, with T. Dannevig & Co. running it. The company had three whaling factory ships in the South Shetlands and Graham Land between 1910 and 1927, all named *Roald Amundsen*. In 1919 Dannevig became sole owner, and in 1922 bought his first tanker, and his second in 1927. He was involved in whaling until 1937, and ran his tankers until World War II, when they were torpedoed. In the late 1980s Laboremus merged with I.M. Skaugen.

Morro Labra. 63°09' S, 55°35' W. A hill rising above King Point (the extreme NW entrance to Ambush Bay), on the NE coast of Joinville Island, off the extreme NE of Trinity Peninsula. Named by the Chileans for Lt. Col. Roberto Labra Muñoz, of the Chilean Army, Armed Forces delegate on the *Maipo* during ChilAE 1954-55. Don Roberto had also been the 1950 wintering-over leader at General Bernardo O'Higgins Station in 1950. *See also* **Muñoz Point**. The Argentines call it Morro Carrizo, for Segundo Carrizo, able seaman on the *Uruguay*, in 1903.

Labusta, Cesáreo *see* **Órcadas Station**, 1945

Labyrinth. 77°33' S, 160°50' E. An extensive flat upland area which has been deeply eroded, at the W end of Wright Valley, in Victoria Land. Named by VUWAE 1958-59 for the appearance of a labyrinth created by the eroded dolerite of which it is formed. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Cabo Lacaze-Duthiers *see* **Duthiers Point**

Cape Lacaze-Duthiers *see* **Duthiers Point**

Mount Lacey. 70°11' S, 64°43' E. A high, pyramidal, steep-sided brown rock mountain with 2 prominent sharp peaks, rising to 2059 m above sea level, 1.5 km W of Mount Béchervaise, in the Athos Range of the Prince Charles Mountains. There is little snow or ice cover above the general level of the plateau ice. Sighted on Nov. 27, 1955, by an ANARE party led by John Béchervaise, and named by ANCA for Robert Harding "Rob" Lacey (b. Feb. 7, 1924, Manly, NSW), surveyor at Mawson Station in the winter of 1955, who plotted it. US-ACAN accepted the name in 1962.

Lachal Bluffs. 67°30' S, 61°09' E. A group of rock promontories backed by rock ridges, extending from the continental ice-edge just S of Ufs Island, on the coast of Mac. Robertson Land. Photographed by LCE 1936-37, and mapped (but not named) from these photos in 1946 by Norwegians cartographers. First visited by ANARE personnel Dave Trail and Robert Paul Lachal, on Jan. 9, 1965. Named by ANCA for Bob Lachal, who, fresh from taking part in the 1964 Olympics, as a member of the men's eight rowing team, wintered-over at Mawson Station in 1965, as assistant cook and geological field assistant. In 1986 he would lead the ANARE team which wintered-over on Macquarie Island (not in Antarctica). US-ACAN accepted the name in 1970.

Cabo Lachman *see* **Cape Lachman**

Cape Lachman. 63°47' S, 57°47' W. A low, level tongue of rock marking the extreme NE tip of James Ross Island, and the NW entrance point of Herbert Sound, to the SE of Trinity Peninsula. Discovered and surveyed in 1903, by SwedAE 1901-04, and named by Nordenskjöld as Kap Lachmann (sic), for J. Lachman, a patron. However, on his expedition maps, he spells it Lachman. It appears as Cape Lachman on British charts of 1921 and 1949, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. Fids from Base D resurveyed it in 1945 and 1952. It appears as Cabo Lachmann on a 1953 Argentine chart, but as Cabo Lachman in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Lachman Automatic Weather Station. 63°53' S, 57°48' W. Established by the Argentines in 1992, on James Ross Island, at a height of 80 m. There are two other Lachmans, very close by — Lachman Costa (at 8 m) and Lachman Hornfels (at 45 m).

Lachman Crags. 63°52' S, 57°50' W. An escarpment, rising to a high point of 645 m (originally thought to be only 620 m), and running in a NNE-SSW direction for 8 km, 5 km SSW of Cape Lachman, on James Ross Island. Surveyed and charted by Fids from Base D in Nov. 1945, and again by Fids from the same base in the period 1952-54. FIDS named it in association with the cape. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955. It appears on a 1970 American map as Lachmans Crags.

Kap Lachmann *see* **Cape Lachman**

Lachmans Crags *see* **Lachman Crags**

Lackey Ridge. 84°49' S, 116°15' W. A ridge, 6 km long, running E-W, it forms the W end of the Buckeye Table, in the Ohio Range of the Horlick Mountains. Named by US-ACAN in 1962, for Larry Lee Lackey (b. 1936, Texas), geologist with the Ohio State University expedition here in 1960-61.

Laclavère Plateau. 63°27' S, 57°47' W. An ice plateau (or cap), running E-W for 16 km, with a width of between 1.6 and 5 km, and rising to 1035 m above sea level, between Misty Pass and Theodolite Hill, just S of Schmidt Peninsula and General Bernardo O'Higgins Station, in the central part of Trinity Peninsula. It appears on a 1948 Chilean sketch map as Meseta General Barrios (*see* **Barrios Rocks**), but that name was never used. Following aerial photos taken by FI-

DASE in 1956-57 and ground surveys by Fids from Base D in 1960-61, it was named by UK-APC on Feb. 12, 1964, for Georges R. Laclavère (1906-1994), French cartographer and president of SCAR, 1958-63. US-ACAN accepted the name in 1965. It appears on a British map of 1974.

Massif Lacroix *see* [1]**Mount Lacroix**

Mont Lacroix *see* [1]**Mount Lacroix**

Monte Lacroix *see* [1]**Mount Lacroix**

[1]**Mount Lacroix**. 65°03' S, 63°58' W. A prominent mountain, rising to 635 m at Cléry Peak, it has a rounded summit and red vertical cliffs, and surmounts (and, in reality, forms a peninusula that marks) the extreme NE end of Booth Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted by FrAE 1903-05, and named by Charcot as Mont Lacroix, for Alfred Lacroix (*see* **Lacroix Glacier**), a member of the scientific commission of both of Charcot's Antarctic expeditions. However, it also appears on Gourdon's 1908 map as Mont Rouillé (i.e., "rusty mountain"), a descriptive name given it by sailors on the *Français* during FrAE 1903-05. On a 1911 map it is seen as Massif Lacroix. It has been seen spelled erroneously as Lecroix on various charts: on a 1930 British chart, as Mount Lecroix; on a 1943 U.S. Hydrographic Office chart, as Mount Lecroix Peninsula; and on a 1949 Argentine chart, as Monte Lecroix. US-ACAN accepted the name Mount Lacroix in 1952, and UK-APC followed suit on Sept. 20, 1955. It was photographed aerially by FIDASE in 1956-57, and appears on a 1958 British chart. It appears on a 1960 Argentine chart as Monte Lacroix, and that was the name accepted by the 1970 Argentine gazetteer. The Chileans also call it Monte Lacroix.

[2]**Mount Lacroix** *see* **Lacroix Nunatak**

Nunatak Lacroix *see* **Lacroix Nunatak**

Lacroix Glacier. 77°40' S, 162°33' E. A small glacier flowing SE into Taylor Valley (it is on the N side of that valley), between Suess Glacier and Matterhorn Glacier, in Victoria Land. Charted by BAE 1910-13, and named by them for François-Antoine-Alfred Lacroix (known as Alfred) (1863-1948), French geologist who, from 1893 to 1936, was professor of mineralogy at the National Museum of National History in Paris. US-ACAN accepted the name in 1964.

Lacroix Nunatak. 66°51' S, 141°20' E. A ridge of terminal moraine, about 1.5 km long and 75 m high, immediately S of a small zone of low, rocky ridges which protrude above the ice-covered point 3 km SW of Cape Margerie, in the area of Port-Martin, on the coast of Adélie Land. Discovered by BANZARE from the *Discovery* in 1931, from a distance, and believed to be a rock peak 300 m high. Mawson named it Mount Lacroix, for Alfred Lacroix (*see* **Lacroix Glacier**). Following aerial photos by OpHJ 1946-47, and ground surveys by the French in 1949-51 (who established an astronomical control station near its center), it was re-defined. US-ACAN accepted the name Lacroix Nunatak in 1955. The French call it Nunatak Lacroix.

Lacuna Island. 65°31' S, 65°18' W. A small island, 13 km E of Tula Point (the N end of Renaud Island), in the Pitt Islands, in the Biscoe Islands. Surveyed from the ground by Fids from Base J in 1957. So named by UK-APC on July 7, 1959, because this island lies in a lacuna (or gap) in the FIDASE vertical air photo coverage of 1956-57. US-ACAN accepted the name later in 1959. It appears on a British chart of 1960.

Ladfjella. 74°06' S, 7°45' W. The southernmost mountain in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians.

Ladies Buttresses. 62°08' S, 58°33' W. West of Urbanek Crag, on the N side of Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the women members of PolAE 1977-78 and 1978-79.

Ladies Icefall. 62°09' S, 58°22' W. Between Urbanek Crag and Ladies Buttresses, on the N side of Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, in association with the buttresses.

Punta Ladislao *see* **O'Neill Point**

The *Lady Emma*. Biscoe's ship of 1838-39 (*see* **Biscoe, John** for details).

The *Lady Francis*. Note the spelling. A 63-ton Cowes cutter, under 60 feet in length, built in 1808, and owned by John Milner, a London mast maker (who also owned the *John*), John Tremlow (a London drug broker), and 3 master mariners. She was in the South Shetlands during the 1820-21 season. Skipper was Capt. Worth. On April 20, 1821, she arrived at Valparaíso. She was sold in 1827 to the Chileans.

The *Lady Franklin*. Ice-strengthened 103.42 meter-long vessel built by Kogerwerft, in Rendsberg, for the United Baltic Corporation of London, she was originally known as the *Baltic Valiant*, and ran a cargo route every 2 weeks between London and Helsinki. In July 1981 C.A. Crosbie Shipping, of Newfoundland, took out a long lease on her, changed her name to *Lady Franklin*, (for Lady Jane Franklin, wife of Arctic explorer Sir John Franklin, who was also governor of Tasmania for 6 years) and she became a Canadian Arctic vessel, working in the far north during the summer, mainly for oil explorers, and running containers farther south during the winter. With a crew of 21, she could also take 52 passengers. In 1982-83 ANARE and the French both leased her from Crosbie, as the temporary replacement vessel for the *Thala Dan*, and to take the French down to Antarctica. Her skipper for the Australian part was Gordon L. Williams, and for the French part, Capt. Sowden. She repeated the experiment in 1983-84 (Capt. Williams again, this time for both expeditions). The next season, she was dropped from the ANARE program, and for the French part was replaced by the *Polarbjørn*. She was back in ANARE service in 1988-89, again under the command of Capt. Williams. *See* **ANARE** for voyage schedules.

Lady Newnes Bay. 73°40' S, 167°30' E. A bay, 100 km long, part of the western Ross Sea, it extends along the coast of Victoria Land from Cape Sibbald to Coulman Island. Discovered in 1899 by BAE 1898-1900, and named by Borchgrevink for Priscilla Jenney Hillyard (1848-1925), the wife of Sir George Newnes, principal backer of the expedition. US-ACAN accepted the name in 1966.

Lady Newnes Glacier *see* **Aviator Glacier**

Lady Newnes Ice Shelf *see* **Lady Newnes Bay**

The *Lady Troubridge*. Name also seen (erroneously) as *Lady Trowbridge*. Liverpool sealing brig, owned by Wyburg & Co., and named for Admiral Cochrane's daughter, Anna-Maria, wife of the 2nd Baronet Troubridge. The vessel returned to Liverpool on June 24, 1820 (under the command of John Richards), and then, under the command of Capt. Richard Sherratt, she headed to Antarctica, where she was wrecked off Cape Melville, King George Island, South Shetlands, on Dec. 25, 1820. She was found later in the season, beached.

Laënnec Glacier. 64°12' S, 62°13' W. Flows NE for 5 km into Hill Bay, on the NE side of Brabant Island, in the Palmer Archipelago. Mapped by FIDS in 1959, from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for René-Théophile-Hyacinthe Laënnec (1781-1826), French inventor in 1819 of the stethoscope, and pioneer invesigator of chest diseases. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961.

Isla Lafarge *see* **Lafarge Rocks**

Roca(s) Lafarge *see* **Lafarge Rocks**

Roche(r) Lafarge *see* **Lafarge Rocks**

Lafarge Øy *see* **Lafarge Rocks**

Lafarge Rock *see* **Lafarge Rocks**

Lafarge Rocks. 63°13' S, 57°33' W. One large rock and several smaller, lower ones separated from the main one by 500 m, 3 km NNW of Casy Island, and 11 km W of Prime Head (the N tip of the Antarctic Peninsula). Discovered and mapped on Feb. 27, 1838, by FrAE 1837-40, and named by Dumont d'Urville as Roche Lafarge, for Tony Pavin de la Farge (*see under* **P**). It appears on a Spanish chart of 1861 as Roca Lafarge, and on a British chart of 1901 as Lafarge Rock. On a Chilean map of 1908 it appears as Isla Lafarge, on a French map of 1912 as Rocher Lafarge, and the Norwegians charted it in 1928 as Lafarge Øy. On a 1938 British chart, Lafarge Rock is shown in 63°08' S, 57°08' W. In Oct. 1946 Fids from Base D re-charted this feature as two rocks, and UK-APC named them on Nov. 21, 1949, as Lafarge Rocks, with US-ACAN following suit in 1952. As such the feature appears on a British chart of that year, as well as in the British gazetteer of 1955. Photographed aerially by FIDASE in 1956-57. The Argentines were calling this feature Rocas Lafarge certainly by 1956, and it appears as such in their gazetteer of 1970, as well as in the Chilean gazetteer of 1974.

Bahía Lafond *see* **Lafond Bay**

Lafond, Pierre-Antoine. b. March 8, 1814, Villié, France. Naval officer on the *Astrolabe* during FrAE 1837-40. He joined as an élève, and

was promoted to ensign on Aug. 20, 1839, but was put ashore, sick, at Semarang on Nov. 25, 1839.

Lafond Bay. 63°27' S, 58°10' W. A square bay, 5 km by 5 km, just S of Cockerell Peninsula and Cape Ducorps, on Trinity Peninsula. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Pierre-Antoine Lafond. US-ACAN accepted the name later in 1964. The Argentines call it Bahía Lafond.

LaForrest Rock. 85°06' S, 164°32' W. A rock outcrop 2.5 km W of the mouth of Strom Glacier, along the low, ice-covered N slopes of the Duncan Mountains. This area was first explored and mapped by ByrdAE 1928-30. Named by US-ACAN in 1967, for B.A. LaForrest, storekeeper on OpDF 66.

Mount Lagado. 66°00' S, 63°15' W. Rising to about 1200 m, on the S side of Leppard Glacier, W of Target Hill, on the Oscar II Coast of Graham Land. In keeping with the naming of certain other features in this area after places or people in Jonathan Swift's *Gulliver's Travels*, UK-APC named this one on Feb. 15, 1988, after Lagado, the capital of Laputa. US-ACAN accepted the name.

Mount Lagally. 67°09' S, 67°06' W. A mountain rising to about 2000 m above sea level, 5 km S of Vanni Peak, it is the southernmost peak in the Dorsey Mountains, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Roughly charted in Jan. 1909 by FrAE 1908-10, and included on their maps under the collective name Pics Gravier or Massif Gravier. Photographed aerially by FIDASE in 1956-57. Individually named for the first time by UK-APC on Sept. 23, 1960, for Prof. Max Otto Lagally (1881-1945), German mathematician and glaciologist who made studies of the mass and heat balance of glaciers. It appears in the British gazetteer of 1961. US-ACAN accepted the name in 1965.

Puerto Lagarrigue *see* **Lagarrigue Cove**

Punta Lagarrigue *see* **Lagarrigue Cove**

Lagarrigue Cove. 64°39' S, 62°34' W. A small cove, just SW of Orne Harbor, and S of Spigot Peak, at Errera Channel, on the Danco Coast, on the W coast of Graham Land. By 1911 whalers were using it as an anchorage, and calling it Selvick (or Selvik) Cove, for the lost *Selvik*. It appears on a 1911 chart. Roughly charted by ArgAE 1953-54, and provisionally named by them as Puerto Lote (i.e., "lottery harbor"). It appears as such on their chart of 1954. That expedition established the refugio known as Rada Lote (q.v.). In 1956 the Argentines renamed it Puerto Marinero Lagarrigue, for Adriano Lagarrigue, the navy cook with ArgAE 1947-48 (*see* **Deaths**, 1947-1948). It appears as such on a 1957 Argentine chart, and that was the name (long as it was) that was accepted by the 1970 Argentine gazetteer (the Argentines later shortend it to Puerto Lagarrigue; it has also been seen as Punta Lagarrigue). In 1956-57 the cove was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. UK-APC accepted the name Selvick Cove, on Sept. 23, 1960. US-ACAN accepted the name Lagarrigue Cove in 1965.

Isla Lagartija *see* **Lizard Island**

Bukhta Lagernaja *see* **O'Brien Bay**

Ozero Lagernoe *see* **Lake Lagernoye**

Lake Lagernoye. 67°40' S, 45°41' E. A small lake, just S of Molodezhnaya Station, and close W of Lake Glubokoye, in the Thala Hills of Enderby Land. Mapped by SovAE 1961-62, and named by them as Ozero Lagernoye (i.e., "camp lake"). ANCA translated the name as Lake Lagernoye, and US-ACAN accepted that name in 1971.

Lagerstedt, Henrik. b. March 10, 1870, Sweden. Whaler in Antarctic waters in the summer season of 1910-11, he drowned off the *Svend Foyn*, in Dorian Bay, Wiencke Island, on March 8, 1911, and was buried at the Whalers Bay Cemetery on Deception Island.

Laggard Island. 64°49' S, 64°02' W. A rocky island on the N side of the Bismarck Strait, about 3 km SE of Bonaparte Point, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in 1955, and named by UK-APC on Sept. 4, 1957, as Laggard Islet, for its position on the SE fringe of the islands of Arthur Harbor. It appears as such on a British chart of 1958. However, it was redefined by UK-APC on July 7, 1959, as Laggard Island, and appears as such on a British chart of 1960. US-ACAN accepted this new name in 1963.

Laggard Islet *see* **Laggard Island**

Låghamaren Cliff. 72°30' S, 0°30' E. A rock cliff forming the NW end of Hamrane Heights, in the central part of the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially during GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Låghamaren (i.e., "the low hammer"). US-ACAN accepted the name Låghamaren Cliff in 1966.

Lågkollane *see* **Lågkollane Hills**

Lågkollane Hills. 72°08' S, 22°28' E. A group of hills, 11 km N of Bamse Mountain, between Kreitzerisen and Hansenbreen, in the W part of the Sør Rondane Mountains. Photographed aerially by OpHJ 1946-47, and mapped from these photos in 1957 by Norwegian cartographers, who named them Lågkollane (i.e., "the low hills"). US-ACAN accepted the name Lågkollane Hills in 1966.

Lagoon Island. 67°36' S, 68°14' W. An island, 1.1 km NW of Anchorage Island, in the entrance to Ryder Bay, it is the northernmost of the Léonie Islands, on the SE side of Adelaide Island. Discovered (but, apparently, not named) by FrAE 1908-10. Charted in Feb. 1936 by BGLE 1934-37, and so named by them because, with (what much later became known as) Kirsty Island on its W side, it forms a lagoon. Surveyed by Fids from Base E in Oct. 1948, and redefined by them as Lagoon Islet. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such on a 1954 British chart, and also in the 1955 British gazetteer. However, on Sept. 20, 1955, UK-APC defined it back to the original Lagoon Island, and that is how it appears in the British gazetteer of 1961, and on a British chart of that year. US-ACAN accepted the name Lagoon Island in 1963. It appears as such on a 1980 British chart. It appears on a 1957 Argentine chart translated as Islote Laguna. It was further surveyed by an RN Hydrographic Survey unit on the *Endurance*, in 1976-77.

Lagoon Islet *see* **Lagoon Island**

LaGorce *see* **La Gorce**

Lagord, Louis. b. July 1, 1814, Ars, France. Able seaman on the *Zélée* during FrAE 1837-40.

Bahía Lagos *see* **Larvik Harbor**

Nunatak Lagos. 66°12' S, 61°31' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Île Lagotellerie *see* **Lagotellerie Island**

Isla Lagotellerie *see* **Lagotellerie Island**

Lagotellerie Island. 67°53' S, 67°24' W. A small island, ice-free in summer, about 1.5 km long, and rising to an elevation of 288 m above sea level, at the entrance to Bourgeois Fjord, 3 km W off the SW end of Horseshoe Island, between Pourquoi Pas Island and Camp Point, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. It stands out because of the dark color of those rocks that are visible. Discovered and charted in Jan. 1909, by FrAE 1908-10, and named by Charcot as Île Lagotellerie, for the Baron de Lagotellerie, banker of Paris, and a supporter of the expedition. It appears as Lagotellerie Island on a 1914 British chart, and again on the expedition maps of BGLE 1934-37, who further charted it in Feb. 1937. Surveyed by Fids from Base E in Sept. 1948. US-ACAN accepted that name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Isla Lagotellerie, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. In 1986, it became SPA #19, being the home of the only 2 flowering plants in Antarctica (*see* **Flora**). There is an Adélie penguin colony here, and a blue-eyed cormorant colony as well.

Lagrange *See also* **La Grange**

Cabo Lagrange *see* **Lagrange Peak, Strath Point**

Cap(e) Lagrange *see* **Lagrange Peak**

Île Lagrange *see* **Lagrange Island**

Mount Lagrange *see* **Mount Skidmore**

Lagrange Island. 66°46' S, 141°28' E. A small, rocky island, about 0.7 km NE of Newton Island, and 2.5 km N of Cape Mousse, between Port-Martin and Cape Découverte, off the coast of Adélie Land. Charted in 1951 by the French, and named by them as Île Lagrange, for Joseph-Louis Lagrange (1736-1813), French geometrist and perhaps the greatest mathematician of the 18th century. US-ACAN accepted the translated name in 1962.

Lagrange Nunataks *see* **La Grange Nunataks**

Lagrange Peak. 64°28' S, 62°25' W. A conspicuous peak rising to 455 m, SW of Avicenna Bay, and almost 9 km NE of Strath Point, on the SE coast of Brabant Island, in the Palmer Archipelago. On Jan. 31, 1898, BelgAE 1897-99 roughly charted a point 1 km to the S of this peak, and named it Cap Lagrange for Charles-Henri Lagrange (1851-1932), director of the Royal Observatory of Belgium, and his brother Eugène, a professor at the Royal Military School. Charles was appointed to the *Belgica* commission in Dec. 1899. On one of the photos taken by the expedition, the name Cape Lagrange was applied to the S tip of Brabant Island. The cape appears as such on the expedition charts, and on Dr. Frederick Cook's 1900 English language version of the maps, it appears as Cape Lagrange. The Argentines were calling it Cabo Lagrange from 1908. It appears as Cape Lagrange on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by US-ACAN, and by UK-APC on Sept. 20, 1955. It appears as such in the 1956 U.S. gazetteer. Surveyed by Fids on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. On Sept. 23, 1960, UK-APC re-applied the name Lagrange to the peak surmounting the point, and it appears as such on a British chart of 1961. US-ACAN accepted that in 1963.

Cabo Lagrelius *see* **Lagrelius Point**

Cape Lagrelius *see* **Lagrelius Point**

Kap Lagrelius *see* **Lagrelius Point**

Lagrelius Point. 63°55' S, 58°18' W. A low, ice-free point, N of Holluschickie Bay, on the NW side of James Ross Island, 2.5 km S of Carlson Island. Discovered, surveyed, and roughly mapped in Oct. 1903, by SwedAE 1901-04, and named by Nordenskjöld as Kap Lagrelius, for industrialist Axel Lagrelius (1863-1944) of Stockholm, treasurer of the Swedish Geographical and Anthropological Society, and a contributor to the expedition. It appears as Cape Lagrelius on a British chart of 1921. Re-surveyed by FIDS from Base D in Dec. 1945 and again in Aug. 1952, and redefined by them as a point. US-ACAN accepted the name Lagrelius Point in 1956, and it appears on a U.S. Hydrographic Office chart of that year. UK-APC accepted the name on Sept. 4, 1957. It appears on a Chilean map of 1966, as Cabo Lagrelius, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Lågtangen *see* **Low Tongue**

Islote Laguna *see* **Anchorage Island, Lagoon Island**

Mont(e) de la Laguna *see* **Laguna Hill**

Laguna Hill. 62°56' S, 60°42' W. An ice-free hill rising to 160 m above the lagoon on the SW side of Telefon Bay, in Deception Island. Surveyed by Fids from Base B in Jan. 1954, and named by them as Cross Hill, for the large wooden cross at its summit, a cross probably erected by whalers. UK-APC accepted the name on Sept. 4, 1957. It appears on an Argentine chart of 1956, named descriptively as Monte de la Laguna (i.e., "mountain of the lagoon"), in association with nearby Crater Lake. In 1965, US-ACAN accepted the name Laguna Hill. *See also* **Collado de las Obsidianas** (under **D**).

Monts Lahaye *see* **Mount Lahaye**

Mount Lahaye. 72°36' S, 31°10' E. Rising to 2475 m, on the N side of Giaever Glacier, in the Belgica Mountains. Discovered by BelgAE 1957-58, under Gaston de Gerlache, who named it Monts Lahaye (i.e., in the plural) for Prof. Edmond Lahaye of the University of Brussels, director of the Royal Belgian Meteorological Institute (1951-62) and president of the Belgian National Committee for IGY. US-ACAN accepted the singular name Mount Lahaye in 1966.

Cap Lahille *see* **Lahille Island**

Île Lahille *see* **Lahille Island**

Isla Lahille *see* **Lahille Island**

Islote Lahille *see* **Lahille Island**

Pointe Lahille *see* **Lahille Island**

Punta Lahille *see* **Takaki Promontory**

Lahille Island. 65°33' S, 64°23' W. An island, 5 km long, 3 km W of Nuñez Point, in the entrance to Leroux Bay, off the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1903-05, and charted by them as a point on the coast, which Charcot named Cap Lahille (it appears that way on his 1906 map), or Pointe Lahille (it appears that way on his 1908 map), for Fernando Lahille (1861-1940), the French ichthyologist who worked in Argentina. On his next expedition, FrAE 1908-10, Charcot redefined this feature, and renamed it Île Lahille. It appears that way on the expedition's charts. There was a tendency around the 1914 time to call it Lafrille Island, but that was based on a missprint on one of Charcot's charts. It appears on a 1914 British chart as Lahille Island. Further charted in 1935, by BGLE 1934-37. US-ACAN accepted the name Lahille Island in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Islote Lahille, and there have been various spelling mistakes along the way, but both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Isla Lahille. It was photographed aerially by FIDASE in 1956-57, and was surveyed from the ground by a FIDS-RN team in 1958.

Lahngletscher. 73°51' S, 162°50' E. A glacier on the SW side of Mount Gibbs, in the Deep Freeze of Victoria Land. Named by the Germans.

Laighton, William N. *see* **USEE 1838-42**

Roca Laine *see* **Lone Rock**

Lainé, Toussaint-Michel. b. Jan. 20, 1812, Pleurtuit, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40.

Laine Hills. 70°46' S, 64°28' W. A cluster of 4 mainly snow-covered hills rising above the Dyer Plateau to an elevation of about 2000 m above sea level, about 26 km WNW of the Welch Mountains, in Palmer Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Daren Lester Laine (b. Feb. 15, 1951, Alameda, Calif.), of the department of geology at the University of California at Davis, who wintered-over as USARP biologist and scuba diver at Palmer Station in 1975, and again, at the same station, in 1977, but this time as a Holmes & Narver power plant mechanic. UK-APC accepted the name on July 21, 1976. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land.

Cabo Lainez *see* **Lainez Point**

Cap Lainez *see* **Bongrain Point**

Cape Lainez *see* **Lainez Point**

Lainez Point. 67°41' S, 67°48' W. Also called Cape Laínez. Forms the N side of the entrance to Dalgliesh Bay, on the W side of Pourquoi Pas Island, at Marguerite Bay, off the W coast of Graham Land. Discovered and charted in Jan. 1909, by FrAE 1908-10, and named by Charcot for Manuel Láinez (sic; the pronunciation is very close to the English word "lioness") (1852-1924), senator, founder (in 1881) of the Argentine newspaper *El Diario*, and who was of assistance to Charcot at Buenos Aires in Oct. 1908. It appears as Cabo Lainez on a Chilean chart of 1947, and that name was accepted by the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. Surveyed by Fids from Base E in Sept. 1948. UK-APC accepted the name on Sept. 20, 1955, and US-ACAN followed suit in 1963. For a history of the naming confusion between this point and Bongrain Point, *see* **Bongrain Point**. There is a 1961 FIDS reference to it as Stinker Spit, for the stinkers, or giant petrels, found on the point by Fids from Base Y on Nov. 24, 1957.

Laing, Charles. b. 1798, Connecticut. Bosun on the *Huron*, in the South Shetlands, 1820-22. He was only 5' 3."

Laing, James. He took over from Capt. Johnson as skipper of the *Mellona*, during the 1821-22 sealing season in the South Shetlands, and brought that vessel back to London in 1822.

Cerro Lair. 62°37' S, 61°02' W. A hill, rising to 96 m above sea level, which overlooks Lair Point, on the N side of Byers Peninsula, Livingston Island, in the South Shetlands. Named by the Spanish, in association with Lair Point.

Punta Lair *see* **Lair Point**

Lair Point. 62°37' S, 61°02' W. Off Robbery Beaches, 8 km SE of Essex Point, on the N side of Byers Peninsula, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on Aug. 31, 1962, for the sealers' lair here, a large cave found by FIDS in 1957-58, almost 140 years after it was last used. US-ACAN accepted the name in 1965. A 1971 Argentine map shows it as Punta Trineos (i.e., "sledge point"), but today the Argentines use the name Punta Lair.

Cape Laird. 81°41' S, 162°27' E. A prominent rocky cape, on the coastline 13 km NW of Cape May, on the W side of the Ross Ice Shelf. Named by NZGSAE 1960-61, for Malcolm Laird, NZGS geologist in Antarctica that season (*see also* **Laird Plateau**), who took a special interest in the peneplain surface above the 300-meter

granite cliffs. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1965.

Laird Glacier. 84°55' S, 169°55' E. A tributary glacier, 5 km long, it flows NE from the Supporters Range to enter Keltie Glacier 6 km SE of Ranfurly Point. Named by US-ACAN in 1966, for Robert J. Laird, USARP biologist at McMurdo in 1963.

Laird Plateau. 82°00' S, 157°00' E. A small, high plateau, rising to over 2400 m, 1.5 km NW of Mount Hayter, on the N side of the head of Lucy Glacier, 22 km NE of the N end of the Cobham Range. Discovered by NZGSAE 1964-65, and named by NZ-APC for the leader of the expedition, Malcolm Gordon Laird (b. April 23, 1935, Christchurch, NZ). Mr. Laird had been in Antarctica in 1960-61 (*see* **Cape Laird**), and was back as a leader of a geological party during VUWAE 1971-72, to northern Victoria Land. In 1974-75 he was back with a NZ team in the Bowers Mountains, and again, same place, in 1981-82. US-ACAN accepted the name in 1966, and ANCA followed suit. *See also* **Cape Laird**.

Laizure Glacier. 69°15' S, 158°07' E. A broad glacier that flows into the sea immediately W of Drakes Head, on the Oates Coast of Victoria Land. Roughly plotted by Australian cartographers from air photos taken during OpHJ 1946-47, and from ANARE air photos taken between 1959 and 1963. Mapped more accurately by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. (jg) David Hunter Laizure (b. Nov. 28, 1942, Los Angeles), USN, navigator on Hercules aircraft during OpDF 68. ANCA accepted the name.

Islas Lajarte *see* **Lajarte Islands**

Lajarte Islands. 64°14' S, 63°24' W. A group of islands fringing the N coast of Anvers Island, and extending N and W close off Cape Grönland, in the Palmer Archipelago. Discovered and roughly charted by Dallmann in 1873-74. Charted by FrAE 1903-05, and named by Charcot as Îles Dufaure de Lajarte, for Captain Henri-Louis Dufaure de Lajarte (1852-1911) of the French Navy. The feature appears that way on Charcot's 1906 map. On a British chart of 1909 it appears as Dufaure de Lajarte Islands. ChilAE 1946-47 surveyed the feature, and named it Grupo Avión V. Sikorski, for the Vought Sikorski helicopter they had on the expedition. It apepars as such on their 1947 chart. On a 1949 Argentine chart it appears as Islas Dufaure de Lajarte. US-ACAN accepted the name Lajarte Islands in 1951, and it appears as such on a British chart of 1952. However, on Jan. 28, 1953, UK-APC accepted the name Lajarte Islets, and that was how it appeared on a 1954 British chart, in the 1955 British gazetteer, and on a 1957 British chart. Photographed aerially by FIDASE in 1956. It appears on a 1953 Argentine chart as Islas Lajarte, but, on an Argentine chart of 1957, the feature appears as Islas Dufaure, and that it how it was accepted by the 1970 Argentine gazetteer. On July 7, 1959, UK-APC accepted the name Lajarte Islands, and it appears as such on a 1961 British chart. The 1974 Chilean gazetteer accepted the name Islas Lajarte, after having rejected Grupo Avión V. Sikorski 308, Grupo Avión V. Sikorsky 308, and Grupo Avión V. Sikorsky.

Lajarte Islets *see* **Lajarte Islands**

Ostrov Lajka *see* **Lajka Island**

Lajka Island. 66°02' S, 101°09' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Lajka, after the famous 3-year old space bitch, Laika (name means "the barking dog"), formerly known as Kudryavka, found as a stray wandering the streets of Moscow, the first animal to orbit the Earth (Nov. 3, 1957, in *Sputnik 2*). The Australians translated the name to Lajka Island.

Lajkonik Rocks. 62°07' S, 58°09' W. Basaltic stacks at King George Bay, S of Growler Rock, and N of the Sukiennice Hills, King George Island, in the South Shetlands. Named by the Poles in 1980, for the Lajkonik, a festival held every year in Krakow for the last 700 years on the first Thursday after Corpus Christi, with a man called The Lajkonik, dressed as a Tartar, walking amid much celebration into the city square with a wooden horse around his waist. This is to remind the Poles of the Tartar invasions of the 13th century.

Lajous, Francisco A. b. ca. 1887, Argentina. Son of Francisco Lajous and his wife Ana Courtade. After studying at the Escuela Naval, he entered the Argentine Navy, and as a teniente de navío was skipper of the *Uruguay* from Feb. 1, 1922 to Oct. 1, 1922, the last skipper to relieve Órcadas Station in the *Uruguay*. He later became a vice admiral and director of the very Escuela Naval at which he had studied. He retired in 1943.

Lakatnik Point. 63°00' S, 62°37' W. A point, formed as an offshoot of Neofit Peak, it is located on the NW coast of Smith Island, 10.5 km NNE of Cape James, and 20.5 km SW of Cape Smith, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the town of Lakatnik, in western Bulgaria.

Lake Island. 68°33' S, 77°59' E. A small island, about 1 km long, between Plog Island to the N and Flutter Island just to the S, in Prydz Bay, just W of Breidnes Peninsula, in the Vestfold Hills, about 4 km N of Davis Station. Photographed aerially by LCE 1936-37, and mapped (but apparently not named) by Norwegian cartographers working from these photos in 1946. Re-mapped by ANARE in 1957-58, and so named by ANCA on Aug. 11, 1958, because a lake occupies the N part of the island. US-ACAN accepted the name in 1965.

Lakes. There are several unfrozen lakes in Antarctica. Many of them are deep, the deepest being Radok Lake. They are warmer at the bottom than at the top. There are also several highly saline lakes (*see* **Lake Vanda**, for example), the salt being present probably because of chemical weathering of bedrock and soil. Since 1977 George Simmons has pioneered investigative methods of these lakes. *See* the lakes containing these words: Ablation, Abraxas, Ace, Alga, Algae, Algal, Alph, Amos, Amphitheatre, Anderson, Balham, Barkell, Basalt, Basin, Beaver, Bisernoye, Blue, Blundell, Boeckella, Bonney, Bothy, Boulder, Braunsteffer, Brownworth, Bruehwiler, Buddha, Bull, Bullseye, Burch, Burevestnik, Burgess, Burton, Calendar, Cameron, Camp, Campbell, Canopus, Canyon, Cat, Cauldron, Cemetery, Chad, Chancellor, Changing, Chapman, Chelnok, Chester, Clear, Club, Coast, Cole, Colleen, Collerson, Cowan, Crater, Crescent, Crooked, Dalekoje, Deep, Depot, Dingle, Discovery, Discussion, Dlinnoye, Druzhby, Eggers, Ekho, Emerald, Enigma, Ephyra, Farrell, Ferris, Flatiron, Fletcher, Fold, Franzmann, Frozen, Fryxell, Gadarene, Garwood, Gillieson, Ginger, Glider, Glubokoye, Gneiss, Grace, Graticule, Green, Hand, Hanging, Heart, Henderson, Heywood, Hidden, Hideaway, High, Highway, Hoare, Home, Hope, Hourglass, House, Howchin, Island, Izumrudnoje, Jabs, Jack, Jade Crater, Jaques, Jaya, Jennings, Jill, Johnstone, Joyce, Kamakshi, Kamala, Kamome, Karentz, Keyhole, Kitezh, Knob, Krok, Kroner, Lagernoye, Lakshmi, Larelar, Lassitude, Laternula, Lebed', Lee, Lichen, Light, Long, Lookout, Lorna, Low, McCallum, McNeill, Malachite, Marginal, Matangi, Medusa, Midge, Midori, Myers, Minami, Monolith, Morning, Moss, Mossel, Moutonnée, Mud, Murkwater, Nanda, Nicholson, North Angle, North Doodle, Nostoc, Ober-See, Oblong, O-ike, Organic, Orwell, Oscar, Oval, Oval'noye, Painted, Parwati, Patterned, Pauk, Pelite, Pendant, Penny, Petrel, Phormidium, Pineapple, Podprudnoye, Pol'anskogo, Pony, Porkchop, Priestley, Prilednikovoye, Priyadarshini, Profound, Progress, Pt'ich'je, Pumphouse, Péw, Radok, Reid, Relict, Reynolds, Richardson, Ripple, Rookery, Round, Rumdoodle, Saraswati, Sbrosovoye, Scale, Scandrett, Secret, Shchel', Sheshnag, Shield, Sibthorpe, Simmons, Skua, Slalom, Smith, Snake, Soglasija, Sombre, Sonic, South Angel, Spate, Spirogyra, Split, Starr, Stepped, Stinear, Sunanda, Sunk, Tarachine, Tassie, Teardrop, Terrace, Terrasovoe, Thalatine, Thomas, Three Lakes, Tikhoje, Tillite, Tioga, Tranquil, Trident, Triple, Trough, Twisted, Unter-See, Vanda, Varuna, Vashka, Vereteno, Verkhneye, Victoria Upper, Vida, Vijaya, Vostok, Walcott, Ward, Waterfall, Watts, Webb, Weddell, Williams, Wilson, Zapadnoye, Zerkal'noje, Zub, Zvezda. *See also* **Subglacial lakes**.

Lakeside Hotel. The summer home for the replacement teams and for the rotating crew teams of the Japanese relief ships, at Showa Station.

Lake Lakshmi. 70°46' S, 11°42' E. In the Schirmacher Hills, in Queen Maud Land. Named by the Indians.

Isla Laktionov *see* **Laktionov Island**

Laktionov Island. 65°46' S, 65°46' W. An island, 3 km long, 6 km NE of Jurva Point, between that point and Zubov Bay, on the E coast of Renaud Island, in the Biscoe Islands. ChilAE 1946-47 named it Isla Hyatt, possibly for a

member of the expedition. It appears as such on a Chilean chart of 1962, and was the name accepted by the Chilean gazetteer of 1974. Charted by ArgAE 1956-57, it appears (unnamed) on their 1957 chart. That same season, 1956-57, it was photographed aerially by FIDASE. Named by UK-APC on July 7, 1959, for Aleksandr Fedorovich Laktionov (1899-1865), Soviet sea ice specialist, head of the department of oceanography, ice forecasting, and river mouths, at the Arctic and Antarctic Institute, at Leningrad, 1927-65. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Isla Laktionov.

Lednik Laktionova. 72°00' S, 9°35' E. A glacier, SW of Henry Moraine, on the NW side of Mount Bjerke, in the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians for A.F. Laktionov (*see* **Laktionov Island**).

Bahía Lallemand *see* **Lallemand Fjord**
Fiord Lallemand *see* **Lallemand Fjord**
Seno Lallemand *see* **Lallemand Fjord**
Lallemand Bay *see* **Lallemand Fjord**
Lallemand Fiord *see* **Lallemand Fjord**

Lallemand Fjord. 67°05' S, 66°45' W. It is, in fact, a bay, 15 km wide, 50 km long in a N-S direction, between Holdfast Point and Roux Island, or between Arrowsmith Peninsula and the Loubet Coast, on the W coast of Graham Land. Discovered and charted near its entrance in Jan. 1909, by FrAE 1908-10, and named by Charcot as Fiord Lallemand, for Charles Lallemand (1857-1938), French topographer, a member of the Bureau des Longitudes, and of the scientific commission for Charcot's expedition. On a British chart of 1914 it appears as "Lallemand Fd." It was surveyed by BGLE 1934-37, and appears as Lallemand Bay on Rymill's 1938 map of that expedition. On a British chart of 1940 it appears as Lallemand Fiord. On a USAAF chart of 1942 it appears as Lallemand Fjord, and that name was accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1961. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base W. It appears on a Chilean chart of 1947 as Bahía Lallemand, but on one of their 1962 charts as Seno Lallemand, and that latter was the name accepted by the Chilean gazetteer of 1974. The Argentine gazetteer of 1970 accepted the name Bahía Lallemand.

Le Lama *see under* **Le**

Mount Lama. 78°04' S, 163°42' E. A bare rock peak rising to over 800 m, topping the ridge N of Miers Glacier, and forming the S rampart of Shangri-la. Named by VUWAE 1960-61, in association with that valley. NZ-APC accepted the name, and US-ACAN followed suit in 1974.

Islotes Lamadrid *see* **Psi Islands**
Île Lamarck *see* **Lamarck Island**

Lamarck Canyon. 64°45' S, 137°45' E. An undersea feature, N of the Balleny Islands. Named by international agreement.

Lamarck Island. 66°40' S, 140°02' E. A rocky island, about 165 m long, and about 165 m NE of Rostand Island, in the Géologie Archipelago. Charted in 1951 by the French, and named by them as Île Lamarck, for Jean-Baptiste-Pierre-Antoine de Monet, chevalier de la Marck (1744-1829), the French naturalist known to history as Lamarck. US-ACAN accepted the name Lamarck Island in 1962.

Cabo Lamas *see* **Cape Lamas**

Cape Lamas. 64°19' S, 56°54' W. The SW point of Seymour Island, off Trinity Peninsula. Named by Pablo F. Beláustegui, the skipper of the *Chiriguano* during ArgAE 1953-54, as Cabo Lamas, after Guardiamarina (midshipman) José Daniel Lamas of the Argentine Navy, who died on the *Fournier* in 1949 (although that disaster did not take place in Antarctic waters; *see* **The *Fournier***). UK-APC accepted the name Cape Lamas on May 13, 1991, and US-ACAN followed suit. We are told by the SCAR gazetteer that the Chileans call it Cabo Bello, for 1st sergeant Jorge Bello Villagra of the Chilean Air Force, on the *Covadonga* during ChilAE 1947-48. The trouble is, the Chilean gazetteer defines Cabo Bello as the NE extremity of Snow Hill Island, and say that it is separated toward the E from James Ross Island by Admiralty Sound. Admiralty Sound does, indeed, separate Snow Hill Island and Seymour Island from James Ross Island. At first, one is tempted to think SCAR has it wrong, and that Cabo Bello does not equal Cape Lamas, but then the Argentines have Cabo Lamas being in 64°20' S, 56°56' W, precisely the same coordinates as those for Cabo Bello. At one time, it was thought that Snow Hill Island was a hill, a part of Seymour Island, but that was a long, long time ago. Someone is 100 years out of date, and it looks as if it might be the Chileans.

Cabo Lamb *see* **Cape Lamb**

Cape Lamb. 63°54' S, 57°37' W. Forms the SW tip of Vega Island, on Herbert Sound, in the James Ross Island group. Discovered and roughly mapped in 1903 by SwedAE 1901-04. Re-discovered and re-surveyed in Nov. 1945, by Fids from Base D, who named it for Ivan Mackenzie Lamb. It appears on a British chart of 1949, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Cabo Lamb, and that is what the Argentines call it to this day.

Punta Lamb *see* **Lamb Point**

Lamb, Danny. Oiler and fireman on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Lamb, Hubert Horace "Hugh." b. Sept. 22, 1913, Bedford, son of Prof. E.H. Lamb, and grandson of the great mathematician Sir Horace Lamb. Meteorologist with the Air Ministry at Harrow, who went to Antarctica on the British whaler *Balaena*, in 1946-47. Using FIDS weather reports he prepared daily forecasts for the whaling fleet. He made several Antarctican predictions, not just meteorological but also topographical, which came true. On his return he married Beatrice Moira Milligan. In 1971 he retired from the Met Office to found and become director of the climate research unit, and an honorary professor, at the School of Environmental Sciences, at the University of East Anglia. He wrote *Climate, History and the Modern World*. He died in June 1997, in North Walsham, Norfolk.

Lamb, Ivan Mackenzie "Mac." b. Sept. 10, 1911, Clapham, London, son of Scotsman Alfred Smith Lamb and his wife Evelyn Elspeth Mackenzie, and grandson of a missionary. He grew up in Scotland, and in 1935, after two years study in Germany, became assistant keeper, Botany Department, Museum of Natural History, London, and moved into lichenology and mosses. In 1936 he married Maila Elvira Laabejo (Lamb called her "Butterfly"), of Tampere, Finland. He was the FIDS botanist on Operation Tabarin at Port Lockroy Station for the winter of 1944, and for the winter of 1945 was at Base D, at Hope Bay. Following the war he and his wife and son moved to Argentina, he as professor of cryptogamic botany at Tucuman University, but in 1951 they moved to Ottawa, where he had a post at the Canadian National Museum. In 1953 he became director of the Farlow Reference Library and Herbarium at Harvard, from which he retired in 1973. He was a visitor to Antarctica on OpDF in 1960, and again in 1964-65, to the Melchior Islands, to study marine algae and lichens (Operation Gooseflesh, as he called it). In 1971 he had a sex change operation and became Elke Mackenzie, and died of Lou Gehrig's Disease on Jan. 27, 1990, at Massachusetts Respiratory Hospital, in Braintree.

Lamb Peak. 79°34' S, 84°57' W. A conspicuous bare rock peak, 3 km SSE of Maagoe Peak, in the Gifford Peaks of the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lt. Cdr. Arthur Daniel Lamb, Jr. (b. Oct. 3, 1924, Chicago) who joined the U.S. Navy in June 1943, and who was operations and communications officer on OpDF 64, OpDF 65, and OpDF 66. He retired from the Navy in Jan. 1968.

Lamb Point. 73°41' S, 60°42' W. Low and ice-covered, it forms the S side of the entrance to Howkins Inlet, on the Lassister Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, by USAS 1939-41. In Dec. 1947, it was photographed aerially by RARE 1947-48, and, that same month, surveyed from the ground by Fids from Base E, who named it for Hugh Lamb. They plotted it in 73°41' S, 60°48' W. UK-APC accepted the name (and those coordinates) on Jan. 28, 1953, and US-ACAN followed suit that year. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. Re-mapped by USGS from USN air photos taken between 1965 and 1967, it appears, with new coordinates, on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and with the new coordinates appears in the 1977 British gazetteer. It appears erroneously on a 1954 Argentine map as Cabo Wheeler (*see* **Cape Wheeler**), but on a 1957

Argentine chart as Punta Lamb, which is the name the Argentines use to this day.

Isla Lambda *see* **Lambda Island**

Lambda Island. 64°18' S, 63°00' W. An island, 2.5 km long, immediately NW of Delta Island, in the Melchior Islands (it is the largest feature in the NW part of this group), in the Palmer Archipelago. First roughly charted by FrAE 1903-05, and named by Charcot as Île Sourrieu, for Capt. (later Adm.) Bertrand-Sixte-Marie Sourrieu (1853-1921), of the French Navy. It appears as such on Charcot's 1906 map. Roughly surveyed by the Discovery Investigations in 1927, and renamed by them for the Greek letter. It appears as Lambda Island on their chart of 1929. Surveyed and re-charted from the *Primero de Mayo*, during ArgAE 1942, and again by ArgAE 1943. It appears on an Argentine chart of 1946 as Isla Lambda. Re-surveyed by ArgAE 1947-48, and renamed by them as Isla Primero de Mayo, after the ship. It appears as such on their 1948 chart, and that was the name accepted by the Argentine gazetteer of 1970. UK-APC accepted the name Lambda Island on Sept. 8, 1953, and US-ACAN followed suit in 1956. It appears as such on a British chart of 1960. The Chilean gazetteer of 1974 accepted the name Isla Lambda.

Lambert Deep. 68°30' S, 70°31' E. A narrow bathymetric deep, with a depth of over 1000 m, about 88 km S of Fram Bank, it apparently extends from under the W part of the Amery Ice Shelf for at least 25 km to the ENE. Named by ANCA in association with the Lambert Glacier, which is to the south.

Lambert Glacier. 71°00' S, 70°00' E. The longest glacier in the world, it is up to 400 km long, including its upper section which is known as Mellor Glacier, and it is up to 60 km wide. With the Fisher Glacier limb it forms a continuous ice passage of about 480 km, which feeds N to the Amery Ice Shelf from a large area to the E and S of the Prince Charles Mountains. Photographed aerially during OpHJ 1946-47, by personnel in the aircraft known as *Baker 3*. In 1952 U.S. cartographer John H. Roscoe, using these photos, delineated what he called Baker Three Glacier. It appears as such in the 1956 U.S. gazetteer, but did not appear on any published maps. In 1956 Australian cartographers remapped the area, and ANCA renamed the glacier in 1957 for Bruce Philip Lambert (b. 1912, Gosnells, Western Australia), director of National Mapping, in the Australian Department of National Development. US-ACAN accepted that name in 1961.

Lambert Nunatak. 75°25' S, 137°54' W. A rock nunatak protruding through the snow mantle of the SE part of Coulter Heights, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Paul A. Lambert, USN, senior quartermaster on the *Glacier*, 1961-62.

Lamberts Peak. 72°44' S, 74°51' E. A small peak, 5 km NNE of the Mason Peaks, and about 16 km NNW of Mount Harding, in the Grove Mountains, in Princess Elizabeth Land. Mapped by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA on July 29, 1965, for G. Lamberts, topographic draftsman with the (Australian) Division of National Mapping, one of the major Australian Antarctic cartographers. US-ACAN accepted the name in 1967.

Lamboley Peak. 75°04' S, 64°19' W. A prominent peak, rising to about 1000 m, on the NW side of Prehn Peninsula, on the Orville Coast, near the base of the Antarctic Peninsula. Mapped by USGS in 1967, from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Paul Eugene Lamboley (b. 1938), USARP radioman who wintered-over at Pole Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Lambrecht, John James. Baptized on June 9, 1756, in Holborn, London, son of John Lambrecht and his wife Prudence Lenten. Able seaman and one of the several midshipmen on the *Adventure* during Cook's 2nd voyage. He actually died early on, on Aug. 27, 1772, of a fever, and thus never saw Antarctic waters.

Lambson, Francis Eugene. b. Aug. 27, 1913, Seattle, as Francis Lee Lambson, son of motion picture projectionist Bertram Hale "Bert" Lambson and his wife Wilma Head (they were divorced when Francis was a child). He was a seaman on the *North Star* during USAS 1939-41, and, while horsing around on the hoist, fell 20 feet to considerable injury, on Jan. 23, 1940. Doc Geyer did the best he could, almost lost him early in the morning of Jan. 29, 1940, but Lambson pulled through. He continued on a sailor on merchant ships into the 1950s, living in Petersburg, Alaska, and then back in Seattle, which is where he died on July 30, 1980.

Lambuh Knoll. 63°36' S, 58°36' W. An ice-covered hill rising to over 900 m between the Louis Philippe Plateau and Srednogorie Heights, at the N entrance to Trajan Gate, 3.21 km ENE of Mount Ignatiev, 4.6 km S by W of Crown Peak, 6.9 km SW of Lardifo Peak, and 13.78 km NNE of Sirius Knoll, it surmounts Malorad Glacier to the NW, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Lambuh, in southern Bulgaria.

Lamina Peak. 70°32' S, 68°45' W. A prominent pyramid-shaped peak, rising to 1280 m, and surmounting a stratified ridge ENE of Mount Edred, the ridge curving down from that mountain northeastward toward George VI Sound, 7 km inland from the E coast of Alexander Island, at the S limit of the Douglas Range. First photographed aerially on Nov. 23, 1935, by Ellsworth, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Roughly surveyed in 1936 by BGLE 1934-37, and photographed by them from the air in Oct. 1936. It was surveyed again in 1948-49 by Fids from Base E, who named it for the marked horizontal stratification of the rocks exposed in this peak. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

Lammas, Bertie Charles. Known as Charles. b. June 30, 1882, Limehouse, son of shipwright William Lammas and his wife Priscilla Skilton (known as Alice). He went to sea, as a fireman, moved to NZ, and, in England in 1910, joined the *Terra Nova* as a fireman, for BAE 1910-13. He continued on at sea, moved to Kaiapo, NZ, and died at Christchurch Hospital on March 24, 1941.

Glaciar Lammers *see* **Lammers Glacier**

Lammers Glacier. 68°37' S, 66°10' W. A large glacier flowing E along the N side of Godfrey Upland into the Traffic Circle and Mercator Ice Piedmont, on the Bowman Coast, on the E coast of the Antarctic Peninsula. It appears indistinctly on an aerial photo taken by Wilkins on Dec. 20, 1928, but shows up more clearly in aerial photos taken by Ellsworth on Nov. 23, 1935, and in 1940 by USAS 1939-41. Visited on the ground in Jan. 1941, by members of USAS. Resighted in late 1947 by RARE 1947-48, and named by Finn Ronne that season (i.e., 1947-48) for Lester Lammers (1903-1982), of Walla Walla, Wash., contributor of 9 grown huskies and 4 puppies to RARE. Actually the name Lammers Glacier was first applied by Ronne to what would become Robillard Glacier, and it appears as such on his 1949 map. UK-APC accepted that situation on Jan. 28, 1953, and US-ACAN followed suit that year. However, by the time of the 1956 American gazetteer, the name had been re-applied, and UK-APC followed suit with that on Aug 31, 1962. On a 1949 Argentine chart it appears, by error, as Glaciar Whirlwind, and this error was perpetuated on a 1957 Argentine chart, where it appears fully translated as Glaciar Vórtice. However, today, the Argentines call it Glaciar Lammers.

Lamotte, Harold de Gallye. b. Dec. 2, 1882, Wimbledon, Surrey, son of solicitor William de Gallye Lamotte and his wife Margaret Maria Campbell. He became a naval cadet on May 15, 1898, and in Dec. 1899, still a cadet, he was transferred to the *Canopus*. He became acting sub lieutenant, made sub lieutenant on July 9, 1904, and was transferred to the *Halcyon*. In 1905 he was promoted to lieutenant and transferred to the *Thames*, and later that year to the *Edgar*. In 1907 he went to the *Mars*, in 1908 to the *Victorious*, and in 1909 to the *Formidable*. In 1910 he went to the *Gibraltar* and then the *Proserpine*, and in 1913, at Cheltenham, Glos, he married Eva Freeth. In Dec. 1914, now a lieutenant commander, he took over the minesweeper *Seagull*, and commanded her for the duration of World War I. He was captain of the *William Scoresby*, 1927-29. After this trip, he retired as a commander, to Wimbledon, where he died in 1960.

Punta Lamperein *see* **Caution Point**

Mount Lampert. 74°33' S, 62°39' W. A mountain, rising to about 1100 m, about 10 km W of Kelsey Cliff, in the SE part of the Guettard Range, on the Lassister Coast, on the E coast of Palmer Land. Mapped by USGS from ground

surveys conducted in 1961-62, during the Antarctic Peninsula Traverse, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Irwin Ronald "Ron" Lampert (b. Oct. 20, 1942, Chicago), who joined the U.S. Navy in June 1961, and who was storekeeper at Pole Station for the winter of 1964. He retired from the Navy in Dec. 1966. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Lamping Peak. 84°14' S, 164°49' E. A rock peak, between Prebble Glacier and Wyckoff Glacier, on the W slopes of the Queen Alexandra Range. Named by US-ACAN in 1966, for John T. Lamping, USARP geomagnetist at Pole Station, 1961.

Lampitt Nunatak. 66°57' S, 65°47' W. Rising to about 1800 m near the head of Murphy Glacier, on the Loubet Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base W. From these efforts, it was mapped by FIDS cartographers. Named by UK-APC on July 7, 1959, for Leslie Herbert Lampitt (1887-1957), British chemist and expert on polar rations. He was director and chief chemist of J. Lyons & Co., 1919-57. US-ACAN accepted the name in 1964.

Bahía Lamplugh *see* **Lamplugh Inlet**

Ensenada Lamplugh *see* **Lamplugh Inlet**

Lamplugh, Elmer Louis. b. March 10, 1907, in a mountain home near Rocky Bar, Idaho, as Elmer Louis Johnson, son of teamster and general hauler Henry Bonaparte "Charles" Johnson and his wife Maud Ethel Lewis. He was raised in several different places in the West, including Salt Lake City, and then his father died. Mrs. Johnson married again to Walter Lamplugh, who adopted Elmer and his brother Roscoe. The two brothers went to San Diego in the 1920s, and opened up a radio store. Elmer was communications man at East Base during USAS 1939-41. He married Ann Edna Housman, and they lived in Pasadena. During World War II he was a lieutenant, USN. At 1.30 P.M. on Sept. 23, 1949, while serving in Korea, he was coming out of the commissary at Kimpo Airport and was hit by a jeep. He died as the result of a brain hemorrhage. He is buried in Arlington National Cemetery. In April 2010, his medals went up for auction on e-bay.

Lamplugh Bay *see* **Lamplugh Inlet**

Lamplugh Inlet. 71°23' S, 61°10' W. An inlet, 11 km long, between Cape Healy and Cape Howard, along the Black Coast, on the E coast of Palmer Land. Discovered aerially by members of East Base in Dec. 1940, during USAS 1939-41, and surveyed by them from the ground at about the same time. Named by them as Howard Bay, for August Howard (*see* **Cape Howard**), it appears as such on a 1942 USAAF chart. However, by 1943 it had been renamed Lamplugh Bay, for Elmer Lamplugh. It appears as such on a 1943 U.S. Hydrographic Office chart, and on Finn Ronne's map of 1948. On a 1946 Argentine chart, though, it appears as Bahía Howard. In Nov. 1947, it was re-surveyed by a joint sledging team of Fids from Base E and personnel from RARE 1947-48. On an Argentine chart of 1949 it appears as Bahía Lamplugh. US-ACAN accepted the name Lamplugh Inlet in 1952, and UK-APC followed suit on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. On an Argentine chart of 1958 it appears as Ensenada Lamplugh, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Lamplugh Island. 75°38' S, 162°45' E. An ice-capped island, 3 km wide, 16 km long, and rising to an elevation of 243 m, it runs in a S by W direction, 6 km N of Whitmer Peninsula, and is separated from the mainland of Victoria Land by the Davis Glacier and the Clarke Glacier. Discovered during BNAE 1901-04, and first charted as an island by Edgeworth David's South Magnetic Pole Party, during BAE 1907-09. Named by Shackleton for amateur Yorkshire geologist George William "G.W" Lamplugh (1859-1926), president of the British Association, and a patron of Shackleton's expedition. US-ACAN accepted the name, and NZ-APC followed suit.

Lamykin Dome. 67°27' S, 46°40' E. An ice dome rising to 526 m above sea level, it forms the ice-covered summit of Tange Promontory, on the coast of Enderby Land. Photographed aerially by ANARE in 1956, and plotted by them in 67°30' S, 46°45' E. Photographed aerially again by SovAE 1957. Named by the USSR as Kupol Lamykina, for hydrographer Captain S.M. Lamykin. ANCA accepted the translated name Lamykin Dome on May 18, 1971, and US-ACAN followed suit in 1973, but with different coordinates.

Kupol Lamykina *see* **Lamykin Dome**

Lana Point *see* **Café Point**

Cabo Lancaster *see* **Cape Lancaster**

Cap Lancaster *see* **Cape Lancaster**

Cape Lancaster. 64°51' S, 63°44' W. Forms the S extremity of Anvers Island, as well as the SW entrance point of Neumayer Channel, in the Palmer Archipelago. Discovered by Dallmann in 1873-74. Re-discovered and charted on Feb. 9, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Albert Lancaster, or Cap Lancaster, for Albert-Benoît-Marie Lancaster (1849-1908), scientific director of the Meteorological Service of the Royal Observatory of Belgium, and a supporter of the expedition. It appears both ways on the expedition's maps, and, on Dr. Frederick Cook's 1900 English language version of those maps it appears as Cape Lancaster. On Charcot's 1906 map it appears as Cap A. Lancaster, which was translated on a 1916 British chart as Cape A. Lancaster. The name Cape Albert Lancaster was also seen. It was re-surveyed by the Discovery Investigations in 1927, and appears on their 1929 chart as Cape Lancaster. It was surveyed by Operation Tabarin personnel from Port Lockroy Station in 1944. On a Chilean chart of 1947 it appears as Cabo Lancaster (the Argentines had always called it that), and as such it was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Cape Lancaster in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1958. In 1956-57 it was charted by an RN Hydrographic Survey unit in cooperation with FIDS.

Lancaster Hill. 65°21' S, 64°00' W. Rising to about 600 m, at the head of Collins Bay, at the S side of the mouth of Trooz Glacier, on the Danco Coast, on the W coast of Graham Land. First charted by FrAE 1908-10, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Sir James Lancaster (ca. 1555-1618), English navigator and privateer who, in 1601, was the first captain to use fruit juice regularly as a cure for scurvy. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

The *Lance*. A 458-ton, 60.8-meter fishing and sealing ship, built in 1978. She was acquired in 1981 by the Norwegian Hydrographic Service, and turned into a research vessel, mostly working in the Arctic. She had 12 crew, and could take 25 passengers. After another re-building, she took down the Nordic Antarctic Research Program Expedition in 1992-93 (Jan Olsen was her skipper that season). She carried a small helicopter. In 1994 she was acquired by the Norsk Polarinstitutt. She was back, researching off the coast of Queen Maud Land in 2000-01.

Lance Rocks. 82°52' S, 48°19' W. Two rocks rising to 935 m, and lying together at the NE end of Crouse Spur, on the E side of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Capt. (later Colonel) Samuel J. "Sam" Lance (b. Feb. 13, 1920, Lost Springs, Kans. d. Sept. 14, 2004, Phoenix, Ariz.), USAF, navigator on the U.S. Air Force Electronics Test Unit, 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Bahía Lanchester *see* **Lanchester Bay**

Lanchester Bay. 63°55' S, 60°06' W. A bay, 11 km wide, E of Havilland Point, between that point and Wennersgaard Point, along the Davis Coast, on the W coast of Graham Land. It seems to have been known to whalers about the 1920 period, and seems to be the Ice Bay charted by Lester in 1922 (during the British Imperial Antarctic Expedition). Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. Named by UK-APC on Sept. 23, 1960, for Frederick William Lanchester (1868-1946), aeronautics and automobile pioneer. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. The Argentines call it Bahía Lanchester.

The *Lancing*. Built by C. Connel & Co., of Glasgow, in 1898, as the *Flackwell*, and converted to a Norwegian whaler in 1923, when her name was changed to the *Lancing*. 7866 tons, 470 feet long, and 57 feet 2½ inches wide, with 737 nhp,

she was owned by Globus, in Larvik, and was 5 times bigger than the *Admiralen* of the 1905-06 Antarctic fleet. That year (1923) Capt. Henrik Govenius Melsom installed the first hauling-up stern slipway on this ship (Petter Sørlle had invented it), which initiated pelagic whaling in Antarctic waters. On June 5, 1925, she left Sandefjord, with Petter Sørlle and H.G. Melsom aboard. She spent the summer of 1925 fishing in waters off the Congo, then on to Tristan da Cunha, and then down to West Antarctica for the 1925-26 whaling season, under the command of Capt. Hans P. Hansen, and with manager Henrik Melsom still aboard. On Nov. 11, 1925 she began fishing at the ice-edge off the South Orkneys, and was also in the waters of the South Shetlands and the Palmer Archipelago, and, from Feb. 10 to March 8, 1926 she was in the waters of South Georgia (54°S). She got a chain and wire wrapped around her propeller shaft, and, on March 3, 1926, had to be towed into Jason Harbor, in South Georgia, by her four catchers, the *Norrøna I*, and the *Globe I*, *Globe II*, and *Globe III*. It was one of those tricky moments. The *Lancing* was operating in Antarctic waters without the license required by the British government, yet she got repaired and out of harbor in the nick of time before the Falkland Islands authorities swooped down on them. The vessel took 9 right whales that first season, and then went whaling off the Patagonian coast. In 1926 she fished off Argentina, catching 12 right whales and 413 sei whales, and was then back in the South Orkneys, 1926-27, skippered by Capt. Hansen again. Manager S. Sjeldche, whaling inspector José Schwarz (an Argentine naval ensign), and Alberto Carcelles, the naturalist, were all aboard as well. By the end of Nov. 1926 she was at the South Orkneys, again without a British license. Again she had to pull in to South Georgia, with a sick crewman, and once again, managed to get away without arrest, and back to Argentina. She whaled pelagically in the Ross Sea in the 1927-28, 1928-29, 1929-30 and 1930-31 seasons. She was back in Antarctic waters in 1934-35, 1935-36, 1936-37, 1937-38, 1938-39, and 1940-41 (*see* **The *Queen of Bermuda***), and was torpedoed off Cape Hatteras, on April 17, 1942.

Land Bay. 75°25' S, 141°45' W. An ice-filled bay, about 60 km wide, it indents the Hobbs Coast of Marie Byrd Land just eastward of Groves Island. Discovered by USAS 1939-41, and named by them as Emory Land Bay, in association with Emory Land Glacier (*see* **Land Glacier**), which feeds this bay. US-ACAN accepted the shortened name in 1966,

Land-bridges. Bridges of land connecting one land mass to another.

Land Glacier. 75°40' S, 141°45' W. A broad, heavily crevassed glacier, about 56 km long, it flows into Land Bay, on the Hobbs Coast of Marie Byrd Land. Discovered by USAS 1939-41, and named Emory Land Glacier, for Rear Admiral Emory Scott Land (1879-1971), chairman of the U.S. Maritime Commission. The name was later shortened, and, as such, accepted by US-ACAN in 1966.

Land ice. Ice formed on land, even when it is found floating in the sea.

Landau Glacier. 63°53' S, 59°19' W. A glacier, 3 km NE of McNeile Glacier, it flows NW into Lindblad Cove (it is the most northerly of the glaciers flowing into that cove), at Charcot Bay, on the Davis Coast, on the W coast of Graham Land. Named by US-ACAN on May 4, 2009, for Denise Landau, for her role in the development of environmentally responsible policies for the growing Antarctic tourism industry. She was IAATO (International Association of Antarctic Tour Operators) spokesperson to the Antarctic Treaty from 1997 onwards, and executive director of IAATO from 1999 onwards.

Punta Landauer *see* **Landauer Point**

Landauer Point. 67°04' S, 67°48' W. On the E coast of Adelaide Island, it marks the W side of the N entrance to Tickle Channel, in Hanusse Bay, on the Loubet Coast of Graham Land. Mapped by FIDS cartographers in 1959, from air photos taken by RARE 1947-48 and by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Joseph Kronthal Landauer (1927-1982), U.S. physicist specializing in ice and glacial flow. He was also an arms control expert, and from 1975 to 1976 was special assistant to Donald Rumsfeld, then secretary of defense. He, his wife, and daughter, were all killed in a car crash. It appears as Landover Point in the 1961 British gazetteer (this was later corrected). US-ACAN accepted the name in 1965. The Argentines call it Punta Landauer. Although the British gazetteer says that this is the same as Cabo Éxodo, it can't be (*see* **Cabo Éxodo** for why).

Mount Landen *see* **Landen Ridge**

Landen Ridge. 66°50' S, 63°54' W. A narrow rock ridge, rising to about 900 m, at the E end of Cole Peninsula, on the Foyn Coast, on the E coast of Graham Land. Surveyed and charted by Fids from Base D in Dec. 1947, and about that time photographed aerially by RARE 1947-48. Named that season by Finn Ronne, as Mount Landen, for David Landen (1908-1988), of USGS (in Washington, DC), who helped Ronne with his photographic program. It appears that way on Ronne's map of 1949, and US-ACAN accepted that name in 1953. However, it was later re-identified as a ridge, and it appears as Landen Ridge on a U.S. Hydrographic Office chart of 1955. UK-APC accepted the name on July 21, 1976.

Cabo Landeros. 64°39' S, 62°11' W. A cape forming the N extremity of Pelseneer Island, in Wilhelmina Bay, off the W coast of the Antarctic Peninsula. Named by the Chileans for Cabo 2nd class José Miguel Landeros Aravena, of the Chilean Army's corps of engineers, who helped build General Bernardo O'Higgins Station during ChilAE 1947-48.

Landers Peak *see* **Landers Peaks**

Landers Peaks. 69°26' S, 71°12' W. A group of peaks, 6 km E of Mount Braun, rising to about 1000 m between Palestrina Glacier and Nichols Snowfield, in the N part of Alexander Island. At first thought to be one peak, Landers Peak, in 69°26' S, 71°16' W, it was surveyed by BAS between 1973 and 1977, and found to be in the plural. Named by US-ACAN for Cdr. Robert J. Landers, USN, Hercules pilot with VXE-6 during OpDF 65 (i.e., 1964-65) and OpDF 66 (i.e., 1965-66). UK-APC accepted the name on June 11, 1980.

Landfall Peak. 72°00' S, 102°01' W. A prominent peak near the extreme W end of Thurston Island, about 13 km ENE of Cape Flying Fish. Discovered during flights from the *Bear* in Feb. 1940, during USAS 1939-41, and photographed at that time by Earl Perce. So named because the rock exposures of the peak serve as a landmark for ships approaching Thurston Island from the W. Plotted from air photos taken during OpHJ 1946-47, and observed during the USN Bellingshausen Sea Expedition of Feb. 1960. US-ACAN accepted the name in 1960. Originally plotted in 72°01°S, 102°08' W, it has since been replotted.

The Landing. 78°22' S, 161°25' E. A large, flat snowfield in the upper part of Skelton Glacier, between Upper Staircase and Lower Staircase, hence the name given in Feb. 1957 by the NZ party of BCTAE, who surveyed it. US-ACAN accepted the name in 1964.

Landing Bluff. 69°45' S, 73°43' E. A rock mass with a steep slope on the E side, with several small outcrops just to the SW, in the SW part of Sandefjord Bay, about 26 km W of Mount Caroline Mikkelsen. Mapped by Norwegian cartographers in 1946 from air photos taken during LCE 1936-37, and named by them as Strandknatten (i.e., "the beach crag"). A survey cairn was built on the highest point by ANARE in 1968. So named by ANCA on Oct. 22, 1968, because of its proximity to the landing place for stores and equipment for the ANARE Amery Ice Shelf party in Jan.-March 1968.

Landing Cove. 60°44' S, 45°41' W. A cove N of Conroy Point, on the NW side of Moe Island, off Signy Island, in the South Orkneys. BAS did biological work here up to 1973. So named by UK-APC on Dec. 20, 1974, because it is the only place on the island where small boats can land. US-ACAN accepted the name in 1975.

Landings. **Oct. 14, 1819**: Probably the first landing south of 60°S was by William Smith in the *Williams*, when he landed on King George Island, in the South Shetlands. **Jan. 23, 1820**: The crew of the *Hersilia* landed in Hersilia Cove, also in the South Shetlands, but they found there an Argentine ship which had undoubtedly already landed men. This ship was either the *San Juan Nepomuceno* or the *Espíritu Santo*, and perhaps both these ships had landed crews. **Feb. 4, 1820**: Bransfield, in the *Williams*, landed on Clarence Island, in the South Shetlands. **Feb. 7, 1821**: A Wednesday, between 10 and 10.30 A.M., John Davis is reputed to have made the first landing on the Antarctic Peninsula, at Cape Sterneck, Hughes Bay, although Davis himself did not go ashore. It was a whaleboat, probably off the tender *Cecilia*, that made the landing, and the most likely candidates for first ashore are Samuel Goddard (1st mate of the *Huron*), Charles Phillips (2nd mate of the *Huron*), and

Smith (2nd mate of the *Huntress*). It is also possible that this landing was preceded by one that may have been made by Capt. Robert Macfarlane (q.v.). **Dec. 12, 1821**: Michael McLeod landed in the South Orkneys. **Feb. 21, 1832**: John Biscoe landed on Anvers Island, considerably farther south. **Jan. 20, 1840**: Du Bouzet led a party onto an islet off the coast of Adélie Land during FrAE 1837-40. **Jan. 27, 1841**: A party from RossAE 1839-41 landed on Franklin Island. **Jan. 24, 1895**: The first undisputed landing on the continental mass of Antarctica. Leonard Kristensen led a boat party ashore from the *Antarctic*, at Cape Adare. First to jump from the boat was Kristensen, or was it Borchgrevink, or was it von Tunzelman? **Feb. 2, 1929**: Peter I Island was finally landed upon, when a crew from the *Norvegia* did so. **Feb. 20, 1935**: The first woman to set foot on the continent was Caroline Mikkelsen. *See also* **Gibbs, George**.

Landmark Peak. 79°10' S, 85°40' W. A very prominent peak rising to 1840 m, 8 km S of Minnesota Glacier, on the E side of Gowan Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party here in 1963-64, for its prominence as a landmark to flyers in the area. US-ACAN accepted the name in 1966.

Landmark Point. 67°31' S, 63°56' E. A rocky point, 0.8 km (the Australians say 1.5 km) ESE of Safety Island, on the Mawson Coast of Mac. Robertson Land. Mapped by Australian cartographers from ground surveys conducted by ANARE between 1955 and 1966, and from 1956 air photos. So named by ANCA on Aug. 10, 1966, because it is almost due S from Auster Rookery and provides an excellent landmark when approaching the rookery along the coast from Mawson Station. US-ACAN accepted the name in 1970.

Mount Landolt. 78°46' S, 84°30' W. Rising to 2280 m, at the head of Hudman Glacier, in the S part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for astronomer Prof. Arlo Udell Landolt (b. Sept. 29, 1935, Highland, Ill.), aurora physicist at Pole Station in 1957 (*see* **South Pole Station**). He was later with the department of physics and astronomy at Louisiana State University.

Landon Promontory. 69°13' S, 69°20' E. A broad, domed, ice-covered promontory on the W side of the Amery Ice Shelf, about 8 km S of Foley Promontory. Plotted by Australian cartographers from 1956 ANARE air photos. The region was first visited by an ANARE party led by Dave Carstens, in Nov. 1962. Named by ANCA for Ian Hamilton Landon-Smith (b. Nov. 17, 1937), glaciologist at Mawson Station in 1962, and a member of Carstens' party. He led the first journey to the Amery Ice Shelf, with 3 men and 14 dogs. US-ACAN accepted the name in 1967.

Landover Point *see* **Landauer Point**

Landreth Glacier. 63°01' S, 62°31' W. A steep glacier, 2.3 km long and about 600 m wide, draining southeastward from Mount Foster between the side ridges separating it from Rupite Glacier to the N and Dragoman Glacier to the S, and flowing into Ivan Asen Cove, on Bransfield Strait, on the SE side of the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Sept. 14, 2010, for New Zealander Greg Landreth, whose team made the first ascent of Mount Foster on Jan. 29, 1996.

Landrum Island. 69°14' S, 68°20' W. The most southerly of the 3 Bugge Islands, in the S part of Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. ChilAE 1946-47 surveyed it, and named it Isla Latorre, possibly for a member of that expedition. It appears as such on their 1947 chart. Named by US-ACAN for Betty J. Landrum, biologist at the Smithsonian Oceanographic Sorting Center, 1965-89; director, 1973-78. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Landry Bluff. 85°16' S, 175°37' W. A rock bluff in the Cumulus Hills, just N of the mouth of Logie Glacier, where that glacier joins Shackleton Glacier. Named by US-ACAN in 1968, for Edward J. Landry, USARP meteorologist with the U.S. Weather Bureau, who wintered-over at Byrd Station in 1963, and at Pole Station in 1965.

Landry Peak *see* **Billey Bluff**

Lands. If there were no ice in Antarctica, the lands (i.e., Wilkes Land, Ellsworth Land, etc.) would be beneath the sea. The terms "land" and "coast" have been somewhat interchangeable over the years, but the essential difference is that the Americans generally prefer the word "coast," and the Australians prefer "land." The major lands are: Adélie, Coats, Ellsworth, Enderby, George V, Graham, Kemp, Mac. Robertson, Marie Byrd, Oates, Palmer, Princess Elizabeth, Queen Maud, Queen Mary, Victoria, Wilhelm II, Wilkes.

[1]**Land's End**. 67°01' S, 142°39' E. The westernmost point of land on the rocky cape on which the base was built at Cape Denison, during AAE 1911-14. Named by Mawson, it appears on the expedition's maps.

[2]**Land's End**. 77°39' S, 166°24' E. A name used by Cherry-Garrard, during BAE 1910-13, for the tip of South Bay, 0.8 km SE of Cape Evans, on Ross Island. It appears in the 1958 NZ provisional gazetteer.

Lands End Nunataks. 83°43' S, 172°37' E. Two rock nunataks, 3 km NNW of Airdrop Peak, at the N end of Ebony Ridge, at the E side of the terminus of the Beardmore Glacier, they mark the N end of the Commonwealth Range at the Ross Ice Shelf. Named descriptively by John Gunner of the Ohio State University Institute of Polar Studies. He and Henry H. Brecher measured a geological section here on Jan. 16, 1970. US-ACAN accepted the name in 1970.

Landy Ice Rises. 72°15' S, 70°35' W. A group of 6 ice rises in the Bach Ice Shelf, near the head of Stravinsky Inlet, on the S coast of Alexander Island. Named by UK-APC on June 11, 1980, for Michael Paul Landy (b. 1954), BAS glaciologist, 1975-81, who worked in this area from Base T in 1975-76, and from Rothera Station in 1976-77. He did not winter-over. US-ACAN accepted the name in 2006.

Lane Plateau. 84°23' S, 175°26' E. A flat, ice-covered plateau, 4 km wide, trending N-S for 14 km, and rising to about 3000 m, between Mount Waterman, Mount Cartwright, and Mount Bronk, in the central part of the Hughes Range, in the Queen Maud Mountains. Mount Wexler is also on this plateau. Discovered and photographed on Byrd's baselaying flight of Nov. 18, 1929, during ByrdAE 1928-30. Surveyed by Bert Crary in 1957-58. Mapped by USGS from ground surveys conducted in 1962-63, and from USN air photos taken between 1958 and 1963. Named by US-ACAN on May 18, 2000, for Neal Lane, NSF director, 1993-98. NZ-APC had already accepted the name on Nov. 21, 1999. Dr. Lane visited Antarctica on 3 occasions.

Lang Island. 66°59' S, 57°41' E. An island, 1.5 km (the Australians say just over 2 km) long, 0.7 km wide, and rising to an elevation of 110 m above sea level, about 3 km E of the Øygarden Group, about midway between that group and Abrupt Island. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Langøy (i.e., "long island"). ANCA came up with the ill-advised translation Lang Island on Feb. 15, 1958, and US-ACAN followed suit in 1961.

Lang Nunatak. 74°10' S, 66°29' W. An isolated nunatak, rising to about 2300 m, in the interior of southern Palmer Land, about 50 km W of the head of Irvine Glacier, behind the Lassiter Coast. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for James F. Lang, USARP assistant representative at Byrd Station, 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Lang Sound. 67°09' S, 58°40' E. A sound, 2.5 km wide at its narrowest, and 14 km (the Australians say 20 km) long in an E-W direction, between Law Promontory and the group of islands which include Broka Island and Havstein Island, off the Kemp Coast of Enderby Land. Photographed aerially in Jan.-Feb. 1937 by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographer who named it Langsundet (i.e., "the long sound"). US-ACAN accepted the name Lang Sound in 1953. First visited by an ANARE sledging party led by Bob Dovers in 1954. ANCA accepted the name on Nov. 28, 1955, but translated all the way, as Long Sound, which is much better than the American translation, conveying fully, as it does, the original Norwegian intent.

Langbogbreen. 72°11' S, 25°39' E. A tributary glacier, 30 km long, flowing from the W into Mjell Glacier, in the SE part of the Sør Rondane Mountains. Named by the Norwegians ("long curvature glacier").

Langbogfjellet. 72°13' S, 25°41' E. A mountain at the S side of Langbogbreen, in the SE part of the Sør Rondane Mountains. Named by the Norwegians in association with the glacier.

Lange, Alexander "Alex." b. June 29, 1860, Sandefjord, Norway, son of curate Christinus Castberg Lange and his wife Petra Christine Margrete Castberg. In the 1880s he married Hanna Marie and they lived in Sandar, and had several children. He worked on whalers in the 1880s, and from 1894 to 1902 was manager of the Neptun Whaling Company. In 1903 he went to work for Chris Christensen's newly-formed Ørnen Company, managing the *Telegraf* in the Arctic in 1903, and the *Admiralen*, in the South Shetlands, 1905-06, 1906-07, and 1907-08. He was a pioneer of modern steam whaling. Then he went over to Salvesen, and was their whaling manager at Olna, in the Shetlands (in Scotland) for 1909-10. In 1911 he began trying (unsuccessfully) to obtain licenses from the Falkland Islands government, to do whaling on his own account in the South Shetlands. In 1912-13 he was back in Antarctic waters as manager of the *Neko*. In 1914 he joined Sandefjords Hvalfangerselskab, filling the position of his recently deceased cousin Peder Bogen. He died in 1922.

Lange, Heinz. b. 1908, Germany. Meteorologist with the Reich Ministry for Science and Education, he went as meteorological observer on GermAE 1938-39. He died in 1943.

Lange Glacier. 62°07' S, 58°31' W. Flows E into the W side of Admiralty Bay, close S of Admiralen Peak, King George Island, in the South Shetlands. Charted by FrAE 1908-10. Surveyed from the ground by FIDS between 1948 and 1960, and photographed aerially by FIDASE in 1956. Named by UK-APC on Sept. 23, 1960, for Alex Lange. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. Last plotted by the UK, in late 2008.

Lange Peak. 71°34' S, 167°42' E. Rising to 2435 m, in the W central part of the Lyttelton Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Otto L. Lange, USARP biologist at Hallett Station, 1966-67.

Lange Platform. 71°57' S, 0°35' E. Immediately E of the Holane Nunataks, about 30 km W of the extremity of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Named, apparently, by the Russians.

Langekletten. 72°24' S, 20°55' E. A nunatak in the northernmost part of the Blåklettane Hills, in the W part of the Sør Rondane Mountains. Named by the Norwegians (i.e., "the long hill").

Langen *see* **Dlinnoye Lake**

Langevad Glacier. 73°08' S, 168°50' E. About 3 km S of Bargh Glacier, and just W of Narrow Neck, it flows SW from Daniell Peninsula into the lower part of Borchgrevink Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Michael William Langevad, electronics technician with the NZ Post and Telegraphs Department, who wintered-over at Hallett Station in 1957.

Langevatnet *see* **Ellis Fjord**

Langflog Glacier. 72°06' S, 4°14' E. Flows N between Mount Hochlin and Langfloget Cliff, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Langflogbreen (i.e., "the long rock wall glacier"). US-ACAN accepted the name Langflog Glacier in 1966.

Langflogbreen *see* **Langflog Glacier**

Langflogdokka. 72°11' S, 4°38' E. An ice corrie (cirque) between Skålebrehalsen Terrace and Snønutryggen, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians in association with Langfloget Cliff. The Norwegian word "dokk" signifies a depression.

Langfloget *see* **Langfloget Cliff**

Langfloget Cliff. 72°06' S, 4°24' E. A rock cliff (the Norwegians call it a mountain ridge), 10 km long and mostly ice-covered, at the W side of Flogeken Glacier, between that glacier and Langflog Glacier, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Langfloget (i.e., "the long rock wall"), in association with Langflog Glacier. US-ACAN accepted the name Langfloget Cliff in 1966. The SCAR gazetteer has Langfloget Glacier being the same as Kayekamm (q.v.), which cannot be.

Langford Peak. 85°33' S, 135°23' E. An isolated peak, 3 km W of the lower part of Reedy Glacier, and 8 km NW of Abbey Nunatak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lawrence G. Langford, Jr., builder who wintered-over at Byrd Station in 1958.

Langhofer Island. 72°32' S, 93°02' W. A small ice-covered island with a rock outcrop near its S end, at the N edge of the Abbot Ice Shelf, 0.8 km E of McNamara Island. Named by US-ACAN in 1968, for Joel Henry Langhofer (b. May 24, 1915, Dorrance, Kans. d. May 26, 2000, Lakewood, Colo.), USGS topographic engineer on the *Glacier* which lay just off this island on Feb. 11, 1961, making botanical and geological collections at the outcrop. Mr. Langhofer positioned geographical features in the area.

Langhovde *see* **Langhovde Hills**

Langhovde Glacier. 69°13' S, 39°48' E. At the E side of the Langhovde Hills, it flows N to Hovde Bay, on the E shore of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and roughly mapped from these photos in 1946 by Norwegian cartographers. Mapped in more detail by Japanese cartographers working from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Langhovde-hyoga, in association with the nearby hills. US-ACAN accepted the translated name Langhovde Glacier in 1968. The Norwegians call it Langovdebreen.

Langhovde Hills. 69°14' S, 39°44' E. An extensive area of bare rock hills, on the E shore of Lützow-Holm Bay, just S of Hovde Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Langhovde (i.e., "the long knoll"). US-ACAN accepted the name Langhovde Hills in 1964.

Langhovde-hyoga *see* **Langhovde Glacier**

Langhovde-kita-misaki *see* **Langhovde-kita Point**

Langhovde-kita Point. 69°10' S, 39°37' E. Marks the NW end of the Langhovde Hills, on the E shore of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos in 1946, by Norwegian cartographers. Surveyed by JARE in 1957. Named Langhovde-kita-misaki (i.e., "Langhovde north point") by the Japanese on Oct. 1, 1962, for its location in the Langhovde Hills. US-ACAN accepted the name Langhovde-kita Point in 1968. The Norwegians call it Hovdeneset (i.e., "the Hovde point").

Langhovdebreen *see* **Langhovde Glacier**

Langknattbreen *see* **Higashi-naga-iwa Glacier**

Langknatten *see* **Naga-iwa Rock**

Langley Peak. 64°03' S, 60°37' W. A peak, 5 km E of Curtiss Bay, rising to about 920 m above the W end of Wright Ice Piedmont, on the Davis Coast, on the W coast of Graham Land. Mapped by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Samuel Pierpont Langley (1834-1906), U.S. astronomer, physicist, and aeronautics pioneer. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961.

Caleta Langmuir *see* **Langmuir Cove**

Langmuir Cove. 66°58' S, 67°10' W. Between Thorne Point and Shmidt Point, at the N end of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base W between 1956 and 1959. Named by UK-APC on Sept. 23, 1960, for Irving Langmuir (1881-1957), U.S. chemist specializing in the formation of snow. He won the Nobel Prize in 1932. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Caleta Langmuir.

Langnabbane *see* **Wilkinson Peaks**

Langnes Channel *see* **Langnes Fjord**

Langnes Fjord. 68°30' S, 78°15' E. Also called Langnes Channel and Langnes Inlet. A narrow fjord, 16 km long, between Langnes Peninsula and Breidnes Peninsula, in the N section of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it in

association with the peninsula. In 1952 U.S. cartographer, John H. Roscoe, working from photos taken by OpHJ 1946–47, found that the fjord extended farther E than was previously thought, and that it included what the Norwegians had mapped separately as an isolated lake, which they had called Breidvatnet. First visited by an ANARE party led by Phil Law in Jan. 1955. On Sept. 4, 1956, ANCA accepted the translated name Long Fjord. US-ACAN accepted the name Langnes Fjord in 1965.

Langnes Inlet *see* **Langnes Fjord**

Langnes Peninsula. 68°28' S, 78°15' E. A narrow, sinuous, rocky peninsula, 14 km (the Australians say about 19 km) long, and of irregular shape, it is the most northerly of the three main peninsulae which comprise the Vestfold Hills. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers who named it Langneset (i.e., "the long point"). US-ACAN accepted the name Langnes Peninsula in 1956. ANCA accepted the name Long Peninsula on Sept. 4, 1956.

Langneset *see* **Langnes Peninsula**

Langnestrynet *see* **Tryne Island**

Langnuten *see* **Mount Breckinridge**

Langolt, Albert. b. 1888, Norway. Whaler who died in the South Shetlands on Jan. 7, 1928, and was buried at the Whalers Bay Cemetery on Deception Island. Again, like practically all of those buried at Whalers Bay, this man is not of record anywhere else, and his very existence must be regarded with suspicion. Besides, Langolt is not even a name in Norway, and neither is Langholt, as his name is sometimes seen.

Langøy *see* **Lang Island**

Langpollen *see* **Langpollen Cove**

Langpollen Cove. 69°26' S, 39°35' E. A long, narrow cove in the NW part of Skarvsnes Foreland, on the E side of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Langpollen (i.e., "the long bay"). US-ACAN accepted the name Langpollen Cove in 1968.

Langskallane *see* **Mount Choto**

Langskavlen *see* **Langskavlen Glacier**

Langskavlen Glacier. 72°01' S, 14°29' E. A short, steep glacier flowing from the N side of Skavlhø Mountain, in the Payer Mountains, in the easternmost part of the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Langskavlen (i.e., "the long snowdrift"). US-ACAN accepted the name Langskavlen Glacier in 1966.

Längstans Udde *see* **Cape Longing**

Langsundet *see* **Lang Sound**

Mount Langway. 75°29' S, 139°47' W. Also called Langway Mountain. A coastal mountain rising to 760 m, 4 km SW of Mount LeMasurier, in the Ickes Mountains, on the coast of Marie Byrd Land. First photographed aerially during USAS 1939–41. Named by US-ACAN in 1970, for Chester Charles Langway, Jr. (b. Aug. 15, 1929, Worcester, Mass.), CRREL glaciologist at Byrd Station, 1968–69.

Langway Mountain *see* **Mount Langway**

Langya Zui. 69°24' S, 76°19' E. A spur in the Larsemann Hills. Named by the Chinese.

Cape Lankester. 79°16' S, 160°29' E. A high (the New Zealanders describe it as low), rounded, snow-covered headland, forming the S side of the entrance to Mulock Inlet, along the W edge of the Ross Ice Shelf. Discovered during BNAE 1901–04, and named by them probably for Sir Edwin Ray Lankester (known as Ray) (1847–1929), director of the Natural History Department of the British Museum from 1898 to 1907, and founder of the Marine Biological Association in 1884. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Lann Glacier. 71°15' S, 167°54' E. A steep tributary glacier, 5 km long, in the N end of the Admiralty Mountains, 6 km E of Rowles Glacier, it flows NW into Dennistoun Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Roy R. Lann, USN, cook at Hallett Station in 1964.

Mount Lanning. 77°47' S, 85°45' W. Rising to 1820 m, at the S side of Newcomer Glacier, 8 km SE of Mount Warren, in the N part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for 1st Lt. Delmar L. Lanning, USAF, part of the air support force who helped build Pole Station in the summer of 1956–57.

Lansing snowplane. A very unusual-looking prop plane used by FIDS in 1960, at Adelaide Island, to scout out the site for Base T. One of them was left buried in the ice, and was dug out by lads from Halley Bay in 1967, and used for sport. In 1968 they actually got it working for its original purpose (more or less). It was buried again in 1970, but dug up later that year. Buried again, it was dug up in 1971–72 by Mike Taylor. It became a sort of running joke at Halley Bay.

Lanterman Range. 71°40' S, 163°10' E. A mountain range about 56 km long and 20 km wide, it forms the SW part of the Bowers Mountains, and is bounded by Rennick Glacier (to the W), Sledgers Glacier (to the N), Black Glacier (to the E), and Canham Glacier (to the S). Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Cdr. William Lanterman, aerological officer for OpDF 60, OpDF 61, and OpDF 62. NZ-APC accepted the name.

Lantern fish. *Electrona antarctica* (which has not yet been given a popular name) is about the only myctophid found in Antarctic waters. Adults are found in waters off Peter I Island, and in the South Shetlands and South Orkneys.

Cerro Lanudo *see* **Beehive Hill**

Bahía Lanusse *see* **Lanusse Bay**

Cabo Lanusse. 68°13' S, 66°57' W. A small cape indenting the W coast of Roman Four Promontory, on the Fallières Coast, on the W coast of Graham Land. Named by the Argentines, for Lt. Alejandro Lanusse (*see* **Lanusse Bay**).

Lanusse Bay. 64°14' S, 62°30' W. A bay, about 4.5 km wide, 1.5 km SE of Driencourt Point, between that point and Minot Point, in the central part of the W coast of Brabant Island, in the Palmer Archipelago. Photographed aerially by FIDASE in 1956–57. ArgAE 1978–79 named it Bahía Lanusse, for Teniente de navío Alejandro Lanusse, of the Argentine Navy, the first Argentine aircraft pilot to fly in Antarctica. He was killed in a flying accident at Buenos Aires, in 1943. The Chileans call it Bahía Gauche, for Luis Gauche Délano, skipper of the *Leucotón* during ChilAE 1951–52. Surveyed by the British Joint Services Expedition to Brabant Island. UK-APC accepted the translated name on Nov. 13, 1985, and US-ACAN followed suit.

Mount Lanyon. 71°15' S, 67°10' E. A large mountain, about 14 km long and divided in the S by a small plateau-fed glacier, it stands about 17.5 km (the Australians say 22 km) S of Taylor Platform, in the Prince Charles Mountains. An area of moraine extends eastward from the N part of the mountain for 12.8 km. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for John "Jack" Lanyon, officer-in-charge at Wilkes Station in 1965. US-ACAN accepted the name in 1967.

Lanyon, William. Baptized April 2, 1745, at Trenony with Cuby, Cornwall, son of John Lanyon and Mary Trembath. He joined the Navy at 18, and was serving on the *Terrible* when he transferred to the *Adventure* for Cook's 2nd voyage, 1772–75. From Sept. 1772 he was a midshipman, and from Dec. 19, 1773 a master's mate. He became a lieutenant in Aug. 1774, but sailed as a master's mater with Cook on the *Resolution* during Cook's 3rd voyage. In Aug. 1779, when 2nd Lt. Clerke died on the *Discovery*, Lanyon was promoted in his place. He kept a diary. He subsequently commanded several ships, and by 1814 had retired sick to St Austell, Cornwall, became paralyzed, and was buried on March 26, 1818. His wife Jane had died the year before.

Lanyon A. 66°17' S, 110°48' E. An Australian automatic weather station, due E of Casey Station, at an elevation of 390 m, installed on Nov. 1, 1998, to replace the soon-to-be-removed Lanyon (see below). It was still operating in 2009.

Lanyon Automatic Weather Station. 66°17' S, 110°48' E. An Australian AWS, due E of Casey Station, at an elevation of 390 m, installed on Feb. 22, 1991, and closed on Nov. 24, 1998. It was replaced by Lanyon A (see above).

Lanyon Junction Automatic Weather Station. 66°17' S, 110°48' E. Australian AWS, due E of Casey Station, at an elevation of 470 m, that operated between Jan. 1, 1983 and Dec. 31, 1987.

Lanyon Peak. 77°15' S, 161°41' E. A sharp

rock peak, 4 km E of Victoria Upper Glacier, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 1976, for Margaret C. Lanyon, USARP secretary in Christchurch, NZ, for many years in the 1960s and 1970s.

Lanz, Walter G. John. b. Feb. 15, 1907, East Rockaway, NY, son of Swiss immigrant parents, book keeper Ernest Gottleib Lanz (sic) and his wife Louise. A mechanical engineer who had studied at Cornell (1924-28), he went up the Orinoco with Dickey in 1931, and was the radio operator on Ellsworth's first three Antarctic expeditions in the 1930s. In 1977 he patented a miles per gallon computer system. He died on Feb. 21, 2000, in Leicester, Vt.

Lanz Peak. 77°17' S, 86°17' W. Rising to 1570 m, near the extreme N end of the Sentinel Range, in the Ellsworth Mountains, 16 km NNW of Mount Weems, it is the middle of a group of 3 peaks lying in a NE-SW direction. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for Walter Lanz.

Mount Lanzerotti. 74°50' S, 71°33' W. Rising to about 1550 m, it is the most northerly of the Sky-Hi Nunataks, where Ellsworth Land meets southern Palmer Land. Named by US-ACAN in 1988, for physicist Louis J. Lanzerotti, of Bell Laboratories, in Murray Hill, NJ, a principal investigator for upper atmosphere research at Siple Station and Pole Station for many years from 1970. UK-APC accepted the name on Feb. 15, 1988.

Laoying Zui. 69°24' S, 76°17' E. A spur in the Larsemann Hills. Named by the Chinese.

Gora Lapa. 73°12' S, 68°38' E. A nunatak in the east-central part of the Mawson Escarpment. Named by the Russians.

Islote Lapa *see* **Limpet Island**

The *Lapataia*. A 6000-ton, 99-meter cargo and passenger merchant ship built for the Argentine government by Cantieri Reuniti dell'Adriatico, in Monfalcone, Italy, and launched on June 25, 1949, sister ship of the *Les Éclaireurs* and the *Le Maire*. She could do 15 knots, and could take 71 crew and 100 passengers. In 1955, briefly, during the revolution, she was used as a prison ship. She was the first ship to take an American tourist group to Antarctica (*see* **Lindblad Travel**, and **Tourism**), in Jan. and Feb. 1966. Captain Zenón Saúl Bolino. She was accompanied by the *Irigoyen* (q.v.). Mr. Lindblad led the trip himself. She was back in 1966-67, on two trips out of Ushuaia to the South Shetlands. On June 27, 1969 she was retired from active service, and on Aug. 20, 1973 was sent to the bottom to serve as target practice for the Argentine Navy.

Bahía Lapeyrère *see* **Lapeyrère Bay**

Lapeyrère Bay. 64°23' S, 63°15' W. A bay, 3 km wide, indenting the NE coast of Anvers Island for 11 km on the NW side of Gourdon Peninsula, in the Palmer Archipelago. Roughly charted by Dallmann in 1873-74, and again in Jan. 1905, by FrAE 1903-05. Charcot named it Baie Boué de Lapeyrère, or Baie de Lapeyrère, for Rear Admiral (later Vice Adm.) Augustin Boué de Lapeyrère (1852-1924) of the French Navy, who, in 1905, commanded the French Atlantic fleet, and was the first to welcome Charcot's expedition on its return to Buenos Aires. It appears both ways on Charcot's 1906 maps. It appears on British charts of 1909 and 1929 as Lapeyrère Bay. On a USAAF chart of 1942 it appears misspelled as Lapeyere Bay. On a Chilean chart of 1947 it appears as Bahía Lapeyrère, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Lapeyrère Bay in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1959 British chart. Surveyed by Fids from Base N in 1955, and photographed aerially by FIDASE in 1956-57.

Lapidary Point. 62°12' S, 58°56' W. The SW entrance point to Rocky Cove, at Maxwell Bay, on King George Island, in the South Shetlands. Following surveys conducted here by SovAE at Bellingshausen Station, it was named Mys Kamennyj (i.e., "rocky cape") by Garrik Grikurov and M.M. Polyakov, in 1968. It appears as such on their 1968 map, and, on a 1971 translated map, as Cape Kamennyy. On Feb. 7, 1978, UK-APC translated the name as Lapidary Point, and US-ACAN accepted that name. It appears as such in the 1980 British gazetteer. On the 1984 Brazilian map of Fildes Peninsula, it appears as Pontal das Piedras (i.e., "rocky point").

Île Laplace *see* **Laplace Island**

Laplace Island. 66°47' S, 141°28' E. A small, rocky island, 0.4 km WNW of La Conchée, and 1.2 km N of Cape Mousse, between the Port-Martin peninsula and Cape Découverte, in the Géologie Archipelago. Charted by the French in 1951 and named by them as Île Laplace, for Pierre de Laplace (1749-1827), French astronomer and mathematician. US-ACAN accepted the name Laplace Island in 1962.

LaPrade Valley. 85°11' S, 174°36' W. In the Cumulus Hills, it has steep rock walls and an ice-covered floor, and is 5 km long, extending N to McGregor Glacier, just W of Rougier Hill. Named by the Texas Tech Shackleton Glacier expedition of 1964-65, for Kerby E. LaPrade, a member of the college and of the expedition. US-ACAN accepted the name in 1966.

Monte Laprida *see* **Mount Banck**

Península Laprida *see* **Península Tirado**

Laputa Nunataks. 66°08' S, 62°58' W. A range of nunataks and snow-covered hills with minor rock outcrops, rising from about 500 m to over 1000 m, 10 km NW of (i.e., at the head of) Adie Inlet, on the Oscar II Coast, on the E coast of Graham Land. First charted by FIDS in 1947, and that year also photographed aerially by RARE 1947-48. Re-surveyed by BAS personnel from Base E in 1964-65. Named by UK-APC on July 21, 1976, for the flying island in Jonathan Swift's book *Gulliver's Travels*, and in association with the nearby Gulliver Nunatak. US-ACAN accepted the name later in 1976. It appears in the 1977 British gazetteer.

Lapworth Cirque. 80°44' S, 23°08' W. To the W of Goldschmidt Cirque, in the E portion of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Charles Lapworth (1842-1920), professor of geology and physiography at Birmingham University, 1881-1913. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Lardigo Peak. 63°34' S, 58°29' W. An ice-covered peak rising to 1158 m, in Snegotin Ridge, 10.06 km NE of Mount Ignatiev, 4.2 km E of Crown Peak, 9.63 km SE of Marescot Point, 13.17 km SW of Tintyava Peak, and 10.62 km NW of Hochstetter Peak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for Lardigo Point, on the Black Sea coast of Bulgaria.

Larelar Lake. 68°31' S, 78°05' E. A circular freshwater lake, S of Powell Point, in the Vestfold Hills. Named descriptively by ANCA. "Larelar" is a Aboriginal word meaning "circular."

Isla Larga *see* **Atriceps Island, Long Island**

Playa Larga. 62°28' S, 60°46' W. A beach, extending immediately S of Punta Del Medio toward Punta Yussef, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1965-66, for the length of this sandy beach.

Punta Larga *see* **Aguda Point**

Quebrada Larga *see* **Larga Valley**

Roca Larga *see* **Long Rock**

Larga Valley. 64°17' S, 56°49' W. A valley, 3 km long, trending NE-SW (the British say WNW-ESE), W of Bodman Point, in the W part of Seymour Island. In Argentine geological maps and reports from 1978, this feature was descriptively named Quebrada Larga (i.e., "long ravine"). It also appears on 1988 Argentine maps. UK-APC translated it as Larga Valley on May 13, 1991, and US-ACAN followed suit. The British gazetteer tells us that the word "larga" in English is a bullfighting term, and that is absolutely true.

Rocas Largas *see* **Long Rock**

Baie du Large *see under* **Du**

Large Razorback Island *see* **Big Razorback Island**

Islote Largo. 62°19' S, 59°29' W. A small island at the extreme SE end of the Mellona Islands, N of Robert Island, in the South Shetlands. This descriptive name ("long islet") first appears on a Chilean chart of 1947, and has been in use since.

Paso Largo. 62°28' S, 60°47' W. A marine passage, or channel, off the coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans ("long channel"). Although there is no entry for it in the SCAR gazetteer, there definitely seems to be such a feature, as it is named quite distinctly in the entry for Cerro Chonos (*see under* Chonos). And, also, in those very same coordinates, there are 2 other "pasos" named by the Chileans (and both have been given SCAR gazetteer entries)—Paso

Ancho (i.e., "broad passage") and Paso Estrecho ("narrow passage"). So, it seems logical to assume that the Paso Largo referred to is genuine.

Valle Largo. 62°28' S, 60°47' W. Between Cerro Chonos to the N and Cerro Selknam to the S, on the W coast of Cape Shirreff, Livingston island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91 because this valley is the most extensive on Cape Shirreff (it means "long valley"), and also in association with the nearby marine channel the Chileans call Paso Largo.

Largo Island. 63°18' S, 57°53' W. An elongated island, 1.5 km long, it is the largest of the Duroch Islands, and lies 1.5 km W of Halpern Point, Trinity Peninsula. ChilAE 1947-48 surveyed it, and charted it as 3 separate islets, naming them for 3 sub lieutenants on the *Rancagua* during that expedition — Isla Sub-teniente Rozas, Isla Sub-teniente Horn (for Federico Horn Wheeler, artillery officer), and Isla Sub-teniente Swett (for Francisco Swett Madge, maneuvers officer). On a 1951 Chilean chart they were still 3 separate islands, but their names had been shortened — the cumbersome "Sub-teniente" part had been dropped from all three. In 1960-61 the University of Wisconsin sent a geological field party here, and its leader, Martin Halpern, mapped the three islands as one. He claimed that the Chileans at nearby O'Higgins Station knew it was one island, and constantly referred to it as Largo Island, but that it just seems to be three separate islands. This is, in fact, the situation, and US-ACAN accepted the name Largo Island in 1964. However, on a 1967 Chilean chart appear Islote Rozas and Islote Horn (i.e., islotes, not islas; and no Islote or Isla Swett), but that was simply out of date. By 1974, when the Chileans made up their gazetteer, they decided it was 3 islands after all (which it isn't), and (with the 3 islands minus the rank of the honorees) located the 3 islands in Covadonga Harbor — Islote Horn in 63°18' S, 57°55' W, off the W coast of Swett Island; Isla Rozas in 63°17' S, 57°54' W; and Isla Swett in 63°18' S, 57°54' W, between Isla Horn and Isla Rozas (note that the Chileans had not yet decided on whether Horn was an islote or an isla). It appears as one island on a U.S. map of 1984, and a British map of 1986. In fact, UK-APC accepted the name Largo Island on Dec. 15, 1982, but located it in 63°18' S, 57°54' W.

Larkman, Alfred Herbert "Alf." b. 1890, Norwich, son of Alfred Ebenezer Larkman and his wife Regina Charlotte Wasser. His father, a schoolteacher, left Norwich to run an academy for ships' officers, in Southampton. Trained in mechanical engineering, Alf was a ship's engineer with the Radcliffe Line, when he was picked to be 2nd engineer on the *Aurora*, as part of the Ross Sea Party of BITE 1914-17. He left England on the *Ionic*, and in Cape Town, on the way to Australia, was arrested for taking photos. They thought he was a German spy (there was a war going on, after all). In Australia, on Dec. 3, 1914, Don Mason, the chief engineer, quit, and Larkman took his place. In Antarctica he developed gangrene in two of his toes, but amputation was averted. He was one of those on the *Aurora* as the vessel drifted away from her moorings. He left a log. On June 30, 1916, in Andersons Bay, near Otago, NZ, he married Janet Rennie M. Maxwell. He served in the RNVR during World War I. He died on July 15, 1962, in Wanganui, NZ.

Larkman Nunatak. 85°46' S, 179°23' E. A large, isolated rock nunatak, rising to 2660 m, and isolated, at the SE end of the Grosvenor Mountains, 20 km E of Mauger Nunatak. Named by NZGSAE 1961-62, for Alf Larkman. NZ-APC accepted the name, and US-ACAN followed suit in 1966. *See also* **Aurora Nunataks**.

Larmour, George. b. March 10, 1929, Bangor, Northern Ireland. An accountant by profession, he joined FIDS in 1955, as a meteorologist, and sailed from Southampton in Oct. 1955, on the *John Biscoe*, bound for Port Stanley. He wintered-over at Base D in 1956, and at Base Y in 1957. He and Pete Wylie made their way to Callao, in Chile, and from there caught the *Reina del Mar* back to Liverpool, arriving there on July 28, 1958, and with George making his way back to Bangor. He died in 2003, in Belfast.

Larouy Island *see* **Larrouy Island**

Estrecho Larrea *see* **Boyd Strait**

Île Larrouy *see* **Larrouy Island**

Isla Larrouy *see* **Larrouy Island**

Larrouy Island. 65°52' S, 65°15' W. An island, 8 km long and 3 km wide, it rises to a height of 745 m above sea level, at the SW end of Grandidier Channel, 6 km N of Ferin Head, W of Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1903-05, and named by Charcot as Île Larrouy, for French linguist and consul Paul Larrouy (1847-1906), minister plenipotentiary in Argentina, who rendered assistance to Charcot's expedition. It appears as such on Charcot's 1906 map. On a 1908 British chart it appears as Larrouy Island. It was further charted in 1936, by BGLE 1934-37. It appears misspelled on a 1946 U.S. Hydrographic Office chart as Larouy Island, and, as a consequence, on a 1947 Chilean chart as Isla Larouy. However, it appears on another 1947 Chilean chart as Isla Pendleton. It appears as Larrouy Island on a British chart of 1948, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 20, 1955. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J between 1956 and 1958. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Isla Larrouy.

Larry Gould Bay *see* **Gould Bay**

Lars Andersen Island *see* **Andersen Island**

Monte Lars Christensen *see* **Lars Christensen Peak**

Lars Christensen Coast. 69°00' S, 69°00' E. That portion of the coast of Mac. Robertson Land between Murray Monolith (66°54' E) and the head of the Amery Ice Shelf (71°E). In Jan. 1931, the seaward portions of this area (along the Amery Ice Front to Murray Monolith) were discovered and sailed along by Norwegian whalers in the employ of Lars Christensen, and they named it Lars Christensen Kyst. The name Lars Christensen Land was also seen, but the name Lars Christensen Coast was accepted by US-ACAN in 1947, and ANCA followed suit. Exploration and mapping of the SW (i.e., the interior) side of the Amery Ice Shelf was accomplished by ANARE during the 1950s.

Lars Christensen Expedition 1936-37. Seen in this book as LCE 1936-37. The 9th of Lars Christensen's Antarctic expeditions, its mission was to map or re-map 3000 miles of coastline between 100°E and 10°W. They fulfilled their mission, but, in many ways, it was more like a tourist cruise. The *Thorshavn* left Sandefjord on Nov. 10, 1936. The expeditioners were: Lars Christensen (leader), his wife Ingrid, and their youngest daughter, Fie; a guest, Lill Rachlew; Viggo Widerøe (pilot) and his wife Solveig; Erik Simensen (photographic expert), Nils Romnaes (radio operator and aerial photographer), and Hans Strandrud and Tom Fidjeland (mechanics). The all-Norwegian crew were: Klarius Mikkelsen (skipper), Nils Larsen (1st officer), Reidar Andersen (2nd officer), Bjarne Hansen (3rd officer; aged 27), Carl Krogh (radioman; aged 31), Gunnar Kristensen (bosun; aged 34), Herman Skifeld (aged 33), Juel Tollefsen (aged 34), Ansgar A. Eikeland (aged 26), Kristian Fredriksen (aged 21), Arne Andersen (aged 20), and Gustav Johannesen (aged 21) (able seamen), Hans Hansen (youngman; aged 19), Håkon Larsen (deckhand; aged 25), Hans Carlsen (messboy; aged 16), Trygve Hansen (cook; aged 37), Harry Evensen (2nd cook; aged 24), Lars Davidsen (chief engineer; aged 39; he had been on the ship the year before), Hans Mathisen (2nd engineer; aged 43; he had been on the ship the year before), Charles Dahl (3rd engineer; aged 26), Erling Pedersen (assistant engineer; aged 31; he had been on the ship the year before), Michael Larsen (electrician; aged 29), Trygve Pedersen (pump man; aged 28), Arne Waskås (aged 27), Erik Strandlie (aged 28), and Anders Davidsen (aged 30) (motormen), Håkon Olsen (aged 26), Ragnar Wilhelmsen (aged 27), and Magne Karm (aged 18) (firemen), Knut Halle (saloon boy; aged 18), Thorbjørn Pedersen (engine boy; aged 16), Otto Nordnes (aged 52) and Bjarne Hansen (aged 42; he had been on the ship the year before) (pantrymen). The plane used was a 1936 Stinson SR.8EM LN-BAR, with a 350 hp engine, and, after extra fuel tanks were fitted, a flying radius of 1200 km. **Dec. 28, 1936**: The expedition sailed from Cape Town on the *Thorshavn*, bound for the West Ice Shelf of Antarctica. **Jan. 25, 1937**: The first of several flights over the next 3 days by Widerøe and Romnaes, photographing the Ingrid Christensen Coast and the Lars Christensen Coast, westward to 66°E. **Jan. 27, 1937**: Ingrid Christensen flew as a passenger over the Ingrid Christensen Coast, and dropped a flag. **Jan. 30, 1937**: Christensen (along with his wife) made his first landing, at Scullin Monolith, and then the *Thorshavn* continued westward. **Jan. 31, 1937**: Aerial photos

taken of the Mawson Coast and the Kemp Coast. **Feb. 4, 1937**: The *Thorshavn* had passed 45°E, considered the E boundary of the Norwegian sector of Antarctic interest, and lay off the Prince Olav Coast. Widerøe, in a 2½-hour flight to the west, discovered a new coastline running NE-SW, which he photographed and named the Prince Harald Coast. **Feb. 5, 1937**: Two more photographic flights were made over the Princess Ragnhild Coast. **Feb. 6, 1937**: In 69°15' S, 26°00' E, the plane took off for a flight inland, discovering the Sør Rondane Mountains. **Feb. 1937**: They arrived back in Cape Town. All the expeditioners except Strandrud left the ship, and so did Nordnes, the ship's pantryman, who had taken another berth. **Feb. 18, 1937**: The *Thorshavn* left Cape Town, bound for New York. **March 1937**: The *Thorshavn* arrived in New York.

Lars Christensen Kyst *see* **Lars Christensen Coast**

Lars Christensen Land *see* **Lars Christensen Coast**

Lars Christensen Peak. 68°46' S, 90°31' W. Also called Christensen Peak. A lofty, rounded dome, an extinct volcano, rising to 1755 m (the Chileans say 1220 m), in the NE part of Peter I Island, it is the highest point on the island. Named by Eyvind Tofte in Jan. 1927, as Lars Christensentoppen, for his boss, Lars Christensen. US-ACAN accepted the translated name in 1947. The Chileans call it Monte Lars Christensen.

Lars Christensentopp *see* **Lars Christensen Peak**

Lars Christensentoppen *see* **Lars Christensen Peak**

Lars Nunatak. 71°52' S, 4°13' E. An isolated nunatak, about 8 km W of Skigarden Ridge, and NW of Mount Grytøyr, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Larsgaddane, for Lars Hochlin (*see* **Mount Hochlin**). What the name implies, and what the Norwegian gazetteer descriptor says, is that this feature is pluralized, as a group of small nunataks. US-ACAN accepted the singular name Lars Nunatak in 1967.

Larsemann Hills. 69°24' S, 76°13' E. Also called Larsen Mountains. A group of low, bare, rounded coastal hills, rising to between 80 and 180 m, along the SE shore of Prydz Bay, they extend for about 14 km W from Dålk Glacier, on the Ingrid Christensen Coast of Princess Elizabeth Land. Discovered in Feb. 1935 by Klarius Mikkelsen on the *Thorshavn*, and named by him (apparently) as Larsemann Fjellene (i.e., the Larsemann Mountains), although no one seems to know why the name was given. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers (actually, they may have named the feature, rather than Mikkelsen). First visited, and position fixed, in 1957, by Morris Fisher, ANARE surveyor at Mawson Station that year. US-ACAN accepted the name in 1947, and ANCA followed suit.

Bahía Larsen *see* **Larsen Inlet**

Barrera de Hielos Larsen *see* **Larsen Ice Shelf**

Caleta Larsen *see* **Larsen Channel**

Canal Larsen *see* **Larsen Channel**

Cape Larsen. Toward the N of Seymour Island. if this feature ever was there, it isn't any more.

Estrecho Larsen *see* **Larsen Channel**

Île Larsen *see* **Arctowski Nunatak**

Islas Larsen *see* **Larsen Islands**

Mount Larsen. 74°51' S, 162°12' E. A mountain, rising to 1560 m (the New Zealanders say 1524 m), and presenting sheer granite cliffs on its N side, 5 km SW of Hansen Nunatak, it forms the southernmost portal (i.e., it is at the mouth) of Reeves Glacier, in Victoria Land. Discovered during BNAE 1901-04, and named by Scott for Carl Anton Larsen. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Plataforma de Hielo Larsen *see* **Larsen Ice Shelf**

Larsen, Bjarne. b. 1915, Norway. Cabin boy on the *Wyatt Earp* during the Ellsworth Antarctic Expedition, 1933-34. He was back, as a sailor for the Ellsworth Antarctic Expeditions of 1934-35, 1935-36, and 1938-39. He died in 2005.

Larsen, Captain. Skipper of the *Pisagua* in 1912-13.

Larsen, Carl Anton. b. Aug. 7, 1860, Østre Halsen, near Larvik, Norway, son of laborer Lars Polsen and his wife Maren Christine Knudsdatter. He went to sea in 1875, was a captain at 20, and had his first Arctic whaling command in 1885, out of Sandefjord, just after he married Andrine. He sailed on the *Jason* with Nansen in the Arctic in 1888. In 1892-93 he was captain of the *Jason*, in Antarctica (an expedition sent out by the Oceana Company, for which *see* **Oceana Nunatak**), explored Erebus and Terror Gulf, and discovered 50 mysterious clay beads on Seymour Island (*see* **Mysteries**), as well as some of the first fossils (q.v.) in Antarctica. He was back again, in the same vessel, in 1893-94, and discovered the Foyn Coast, the Oscar II Coast, Mount Jason, and Robertson Island, as well as the Larsen Ice Shelf. In 1901-04 he was back in the Antarctic, as skipper of the *Antarctic*, during SwedAE. When the expedition returned to Buenos Aires in 1904, Larsen found himself something of a hero, and using his reputation, he approached the Norwegians for backing for a whaling station in South Georgia (54°S). They turned him down, but the Argentines backed him to the tune of £40,000, and he started the Compañía de Pesca Argentina. He went to Norway for ships, crew, supplies, and left Sandefjord in July 1904, bound for Buenos Aires. He arrived at South Georgia on Nov. 16, 1904, and by Jan. 1905 the essence of the new Grytviken factory had been built. This was the first whaling station on South Georgia (indeed, in the southern seas), and Southern whaling was now on. That first season, 1904-05, about 183 whales were caught, including 3 right whales. Whalebone from the right whale was then fetching up to £1500 a ton in Europe. The first exports (whale oil and baleen) reached Buenos Aires in Feb. 1905. Larsen managed the station until 1914. In Dec. 1910, at Stanley, he became a British subject. He was in the South Orkneys in 1911-12, as skipper of the *Undine*, when that vessel relieved Órcadas Station. In 1923 he established the first factory whaling system when he took the *Sir James Clark Ross* down to Antarctica for the 1923-24 season. As he was taking that ship down again on a 1924-25 cruise he died in his cabin, at the edge of the pack-ice, on Dec. 8, 1924, and was replaced by Oscar Nilsen. C.A. Larsen was embalmed in Norway.

Larsen, Lars. b. Denmark. Veteran polar explorer who was David Lewis's 2nd-in-command during the *Solo* expedition of 1977-78. He married Elise, and made a 4-year trip around the Pacific with their 2 children.

Larsen, Lars A. Able seaman on the *Southern Cross* during BAE 1898-1900.

Larsen, Nils. Norwegian captain of the *Norvegia*, 1928-29, and 1929-31. He was at Peter I Island in 1939, and was captain of the *Bråtegg* during NorAE 1947-48. This is almost certainly not the Nils Larsen who was 1st officer of the *Thorshavn* in the mid-1930s, and who later went on to be skipper of that ship every season between 1955-56 and 1960-61.

Larsen, Olaf. Able seaman on the *Southern Cross* during BAE 1898-1900.

Larsen, Thorvald. Skipper of the *Ørn II*, in 1918.

Larsen A Ice Shelf *see* **Larsen Ice Shelf**

Larsen B Ice Shelf *see* **Larsen Ice Shelf**

Larsen Bank. 66°16' S, 110°32' E. A shoal, 45 m wide, 90 m long in a N-S direction, and with a least depth of 16 m, in the N part of Newcomb Bay, 0.8 km N of Kilby Island, and about 3 km from the summit of Shirley Island, in the Windmill Islands, off the Budd Coast. Discovered and charted in Feb. 1957 by a party from the *Glacier*. Named by ANCA in 1962, for Ludvig Larsen, 2nd mate on the *Thala Dan*, the ship used by ANARE in a 1962 survey of Newcomb Bay and its approaches, led by Phil Law. Tom Gale did the actual survey that year. US-ACAN accepted the name in 1963.

Larsen Basin. 68°00' S, 60°00' W. An undersea feature off the Larsen Ice Front (after which it was named by Heinrich Hinze in Jan. 1997). The name was accepted by international agreement in June 1997.

Larsen Bay *see* **Larsen Inlet**

Larsen C Ice Shelf *see* **Larsen Ice Shelf**

Larsen Channel. 63°10' S, 56°12' W. A strait running NE-SW, between 1.5 and 5 km wide, it separates d'Urville Island from Joinville Island, to the N of the tip of the Antarctic Peninsula. Discovered, but not navigated, in Dec. 1902 by SwedAE 1901-04, and named by them in error as Active Sound. However, it does appear that way on the 1905 American Geographical Society's map. On British charts of 1921 and 1930, it

appears as Larsen Channel, named for for Carl Anton Larsen. On a 1928 Norwegian whaling chart it appears as Larsen Kanal, on another from 1929 as Larsen-Kanalen, and on Aagaard's 1930 map as Larsensundet (i.e., "the Larsen sound"). On a 1946 Argentine chart it appears as Canal Larsen, on one of their 1953 charts as Caleta Larsen, and on another, from 1954, as Estrecho Larsen. Larsen Channel was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It was surveyed by Fids from Base D in 1953-54, and photographed aerially by FIDASE in 1956. The name Canal Larsen was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Larsen Cliffs. 71°56' S, 6°53' E. Steep rock and ice cliffs which form a part of the SE face of Jøkulkyrkja Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Larsenskarvet, for Per K. Larsen (b. 1910), who wintered-over as cook and steward at Norway Station in 1957, during NorAE 1956-60. US-ACAN accepted the name Larsen Cliffs in 1967. *See also* **Per Nunatak**.

Larsen Cove *see* **Oviedo Cove**

Larsen D Ice Shelf *see* **Larsen Ice Shelf**

Larsen Glacier. 75°06' S, 162°28' E. A glacier about 40 km long and 5 km wide, flowing SE from Reeves Névé, through the Prince Albert Mountains, along the S slopes of Mount Larsen, Mount Gerlache, and Mount Crummer, and entering the Ross Sea at the Nansen Ice Sheet, just S of Mount Crummer, on the E coast of Victoria Land. Discovered by Edgeworth David on his way to the South Magnetic Pole in 1908, as part of BAE 1907-09. He followed the course of this glacier on his way to the plateau beyond. So named because it flowed SE past the foot of Mount Larsen, which was always in view as they climbed the glacier. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Larsen Ice Automatic Weather Station *see* **Larsen Ice Shelf Automatic Weather Station**

Larsen Ice Barrier *see* **Larsen Ice Shelf**

Larsen Ice Front. 68°00' S, 60°00' W. The seaward face of the Larsen Ice Shelf. It was named by UK-APC on Sept. 20, 1955, but, at that stage, the name referred only to the ice front of the shelf between the Seal Nunataks (on the Nordenskjöld Coast) and Cape Mackintosh (on the Black Coast). The British gazetteer of 1961 shows it as the Larsen Ice-edge. It was not until 1977 that UK-APC accepted the name Larsen Ice Front for the entire front of the shelf. US-ACAN does not recognize the term "ice front." More recent mapping of the ice front is based on USN air photos taken in 1969 (for the Nordenskjöld Coast) and on U.S. Landsat images taken between 1977 and 1979 (for elsewhere along the ice shelf).

Larsen Ice Shelf. 67°30' S, 62°30' W. An extensive linear ice shelf, one of the great ice shelves, it used to extend (before its notorious break-up) as one continuous feature along the E coast of the Antarctic Peninsula from Cape Longing in the N to Cape Mackintosh in the south. Named for Carl Anton Larsen who, in Dec. 1893, discovered it, and sailed along it in the *Jason* from the vicinity of Robertson Island to as far south as about 68°10' S. On a 1929 Norwegian whaling chart, it appears as Larsens Isbarriere. On Aagaard's 1930 map the terms Larsens Barriere and Christensens Barriere are used, the former referring to the ice shelf on the Nordenskjöld Coast, and the latter to the ice shelf S of the Nordenskjöld Coast, the Christensen in question being Chris Christensen. Rymill's 1938 map, reflecting BGLE 1934-37, refers to it as the Larsen Barrier. It appears on a British chart of 1940 as the Larsen Ice Barrier, and on a 1940 U.S. Hydrographic Office chart as the Larsen Barrier Edge. On a 1946 Argentine chart it appears as Barrera de Hielos Larsen, and on a 1947 Chilean chart as Barrera de Hielo Larsen. There are also references to Barrera de Larsen. A greater understanding of the feature, its nature and its limits, was acquired in 1947-48, from air photos taken by RARE 1947-48, ground surveys conducted by Fids from Base D, and a ground survey conducted by a joint sledging party of RARE personnel and Fids from Base E. UK-APC accepted the name Larsen Ice Shelf on Jan. 22, 1951, and US-ACAN followed suit in 1953. Scientific convention has split the Larsen Ice Shelf into 4 sections, running N to S: Larsen A (adjacent to the Nordenskjöld Coast, between Larsen Inlet and the Seal Nunataks; this is the smallest of the segments), Larsen B (from the Seal Nunataks to Jason Peninsula), Larsen C (from Jason Peninsula to Cape Agassiz; this is the largest of the segments), and Larsen D (between Cape Agassiz and Cape Mackintosh). Larsen C and Larsen D were, in due course, merged by scientific convention, as Larsen C. In Jan. 1995, large sections of Larsen A disintegrated. Between Jan. 31, and March 7, 2002, Larsen B shattered and collapsed, losing over a quarter of its total mass. Larsen C appears to be stable. So, now, in 2009, the N limit of the Larsen Ice Shelf is a fragmentary part around the Seal Nunataks and Robertson Island, on the Nordenskjöld Coast, while the actual shelf runs more or less continuously from Cape Disappointment in the N to Cape Mackintosh (on the Black Coast) in the south. Over the years there have been several automatic weather stations installed on the ice shelf.

Larsen Ice Shelf Party, 1963-64. Two BAS sledging teams on the Larsen Ice Shelf. Ian McMorrin, Mike Fleet, and Peter Kennett formed one, and Ron Tindall, Ben Hodges, and Tony Marsh formed the other, although they interchanged at times.

Larsen Inlet. 64°26' S, 59°26' W. An ice-filled inlet, 11 km wide, indenting the E coast of Graham Land for about 20 km long in a N-S direction between Cape Longing and Sobral Peninsula. In Nov.-Dec. 1893, Carl Anton Larsen mapped a large bay between James Ross Island and Robertson island, which was named in 1902, by Edwin Swift Balch, American writer on Antarctica, as Larsen Bay, for C.A. Larsen. It was re-charted in 1902, by SwedAE. By 1908 the Argentines were calling it Ensenada Larsen. On a British chart of 1921, the name Larsen Bay was restricted to the present feature (i.e., the one we know today as Larsen Inlet), but it was still poorly charted and shown only as a minor indentation in the coast between Sobral Peninsula and Cape Longing. It also appears that way on a 1940 British chart. It appears as Bahía Larsen on a 1946 Argentine chart. The bay was re-identified by Fids from Base D in Nov. 1947, charted by them, and redefined as Larsen Inlet. UK-APC accepted that name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. On a 1954 Argentine chart it appears as Caleta Larsen, and that was the name accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1974 accepted the name Ensenada Larsen.

Larsen Island *see* **Larsen Islands**, **Monroe Island**

Larsen Islands. 60°36' S, 46°04' W. A small group of 3 islands (the biggest being Monroe Island) and offlying rocks (including Nicholas Rocks), 1.5 km NW of Moreton Point (the W extremity of Coronation Island) and Sandefjord Bay, in the South Orkneys. Discovered and roughly charted in Dec. 1821 by Palmer and Powell. On Feb. 10, 1874, Dallmann made a landing, probably on these islands (probably on what would become Monroe Island), and named it Return Island. Jimmy Marr used that name in 1935. Further charted by Petter Sørlle in 1912, and named by him as C.A. Larsen (that's it, C.A. Larsen; it appears as such on his 1912 chart) for Carl Anton Larsen. However, on his 1930 chart, it appears as C.A. Larsen Øyane. On a 1917 British chart it appears as Larsen Island (i.e., in the singular). On a British chart of 1925 it appears as Larsen Islands. On an Argentine chart of 1930, it appears as Islas Larsen, and that was the name accepted by the 1970 Argentine gazetteer. Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart as Larsen Islands. US-ACAN accepted the name Larsen Islands in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer.

Larsen Kanal *see* **Larsen Channel**

Larsen Mountains *see* **Larsemann Hills**

Larsen Nunatak. 64°58' S, 60°04' W. A nunatak, rising to 140 m above the Larsen Ice Shelf, 3 km N of Murdoch Nunatak, in the Seal Nunataks, just off the Nordenskjöld Coast, on the E coast of the Antarctic Peninsula. The Seal Nunataks were discovered by Larsen in Dec. 1893, and this one was plotted by Larsen on Dec. 11, 1893, in 64°45' S, 60°08' W. He incorrectly described it (along with Christensen Nunatak) as an active volcano, and named it Sarsee Vulcan, or Sarsee Volcano (i.e., "sea-bream volcano"). It appears as such on his 1894 map. In 1895 it ap-

peared on Friederichsen's German map as Larsen-Insel (i.e., "Larsen island"), and on the 1900 map produced by BelgAE 1897-99 it appears as Île Larsen. It is shown as Larsen Island on a British chart of 1901. On Oct. 8, 1902, SwedAE 1901-04 re-surveyed the Seal Nunataks as what they really are, i.e., nunataks rather than islands, and they renamed several of them. However, it looks as if this was not one of the ones renamed. Following a re-survey by Fids from Base D in 1947 by FIDS, the name Larsen Nunatak was given to the one nearest the position reported by Larsen for his Sarsee Volcano. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 20, 1955. In 1959 the Argentines established San Antonio Refugio here. Larsen Nunatak appears on a 1963 U.S. Hydrographic Office chart as Larson Nunatak.

Larsenbrekka. 70°46' S, 11°00' E. An ice-slope, about 12 km long, NW of the nunatak the Norwegians call Lingetoppane, in the S part of the Schirmacher Hills, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("Larsen slope") for naval lieutenant Leif Larsen (1906-1990), a Resistance leader during World War II, and the most highly decorated allied naval officer of that conflict. Known as Shetlands-Larsen (the title of his 1947 autobiography), he operated the "Shetlands Bus" escape route.

Larseninsel *see* **Larsen Nunatak**

Larsenskarvet *see* **Larsen Cliffs**

Larsensundet *see* **Larsen Channel**

Larsgaddane *see* **Lars Nunatak**

Larson Crag. 76°44' S, 161°08' E. A prominent rocky summit rising to over 1600 m, at the N end of Staten Island Heights, in the Convoy Range. Named by US-ACAN in 1965, for Cdr. Wesley L. Larson (b. Nov. 8, 1922, Goldfield), commander of the *Staten Island*, 1959-60. He retired from the Navy in July 1968. NZ-APC accepted the name.

Larson Glacier. 77°28' S, 154°00' W. A tributary glacier flowing NW from La Gorce Peak, in the Alexandra Mountains, to enter the S side of Butler Glacier, on Edward VII Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. Cdr. Conrad S. Larson (b. July 1, 1924, Winchester, Mass.), who joined the U.S. Navy in June 1942, and who was officer-in-charge of the helicopter detachment aboard the *Eastwind* during OpDF I (1955-56). He retired from the Navy as a commander, in Aug. 1963.

Larson Nunataks. 82°45' S, 48°00' W. A small cluster of nunataks rising to about 640 m, 2.5 km SE of Mount Malville, along the E side of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Larry R. Larson, aviation electronics technician at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Larson Valley. 79°32' S, 83°51' W. A relatively smooth, ice-filled valley, between the S end of Inferno Ridge and Mhire Spur, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for D.L. Larson, USN, snow removal operator at Williams Field during OpDF 65 (i.e., 1964-65) and OpDF 66 (i.e., 1965-66).

Lartigaux, Pierre. b. March 22, 1807, Lanne, France. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Larvik Harbor. 64°29' S, 62°27' W. A small bay SW of Lagrange Peak, in the SE part of Brabant Island, in the Palmer Archipelago. Roughly charted by Lester and Bagshawe during their British Imperial Antarctic Expedition of 1920-22. The Norwegian whalers had been calling it Larvik for some time (it appears as such on Capt. Johannessen's 1919-20 chart), after the Norwegian town, and Lester recorded it as such on his chart. ArgAE 1949-50 surveyed it from the *Chiriguano*, and named it Bahía Denise, after the Brazilian fiancée of one of the ship's officers. It appears as such on their chart, and that was the name accepted by the 1970 Argentine gazetteer. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Larvik Harbour, on Nov. 13, 1985. US-ACAN followed suit (without the "u" in "harbour," of course). The Chileans call it Bahía Lagos, after Capitán de navío (later Rear Admiral) Miguel Lagos Grant (b. Nov. 29, 1900, Los Ángeles, Chile), skipper of the *Presidente Pinto* during the Presidential Antarctic Expedition of 1948. Don Miguel was director of the Naval Academy, Feb. 19, 1949-March 13, 1950.

Glaciar Las Heras. 70°10' S, 61°25' W. An ice tongue in Keller Inlet, on the Lassiter Coast, on the E coast of the Antarctic Peninsula. Named by the Argentines for Gen. Juan Gregorio de Las Heras (1780-1866). It appears in a 1978 reference.

Península Las Heras *see* **Península Gabriel**

The *Las Palmas*. Spanish Navy oceanographic research vessel and station support ship, built in Santander in 1978, and based out of Cartagena. Her first season in Antarctica was 1988-89, when she was used for the first time to re-supply the Spanish Antarctic base of Juan Carlos I. That season, in 1989, she helped the stricken *Bahía Paraíso*, near Palmer Station. She was back at Juan Carlos in 1989-90 and 1990-91 (Fernando Quiros was skipper), and then replaced by the bigger *Hespérides* for the 1991-92 season. However, she came back, re-fitted and modernized, for the 1999-2000 season (Juan Carlos Gómez Vidal was skipper), and the 2000-01 season, operating with the *Hespérides* every summer since then (except 2003-04, when she came down alone, without the *Hespérides*). By 2000 there was another Spanish station to relieve — Gabriel de Castilla, and the Spanish ships have also, since that time, been relieving the Bulgarians, at St. Kliment Ohridski. In late Nov. 2006, the *Las Palmas* rescued the stricken tourist ship *Orlova*.

Caleta Las Palmas *see* **Las Palmas Cove**

Glaciar Las Palmas *see* **Las Palmas Glacier**

Lóbulo Las Palmas *see* **Las Palmas Glacier**

Las Palmas Cove. 62°41' S, 60°25' W. On the E side of South Bay, between Henry Bluff and Salisbury Bluff, on Livingston Island, in the South Shetlands. Named by the Spanish about 1991, as Caleta Las Palmas, for their relief ship, the *Las Palmas*. UK-APC accepted the translated name Las Palmas Cove, on Dec. 16, 2003. Plotted by the UK in late 2008.

Las Palmas Glacier. 62°41' S, 60°24' W. Flows WNW from Hurd Dome into Las Palmas Cove, South Bay, between Henry Bluff and Salisbury Bluff, on Livingston Island, in the South Shetlands. The Spanish named it about 1995, as Lóbulo Las Palmas, for the *Las Palmas*. UK-APC translated it on July 8, 2003, and US-ACAN accepted the name later that year. Last plotted by the UK, in late 2008.

Punta Las Torres. 62°28' S, 60°48' W. A point forming the N extremity of the beach the Chileans call Playa del Lobero, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91 because the two columns forming this feature resemble two towers.

Cabo Lasala *see* **Cabo Pucher**

Lasala Refugio. 62°56' S, 60°36' W. More correctly, Teniente Cándido de Lasala Refugio (named for the old Argentine hero). Argentine refuge hut built at Whalers Bay, Deception Island, in the South Shetlands, on Jan. 14, 1953, by personnel from the *Chiriguano*. It was inaugurated on Jan. 17, 1953. Two Argentine Navy men were left there to man the refugio, but on Feb. 15, 1953 (i.e., a month later), a party of 32 Royal Marines (British) invaded from the *Snipe*, armed with sten guns, rifles, and tear gas, destroyed the hut and tent the following day, and removed the sargento and the cabo to South Georgia (*see* **Wars**). In Dec. 1953, the Argentines built a new refugio, called Teniente Lasala, at Pendulum Cove.

Låsen. 71°54' S, 22°43' E. The highest peak in the Perlebandet Nunataks, in the W part of the Sør Rondane Mountains. Named by the Norwegians (name means "the snap").

Laseron, Charles Francis. b. Carl Francis Laseron, on Dec. 6, 1887, at Manitowoc, Wisconsin, youngest child of a British Episcopalian minister, David Laseron, by his wife Frances Bradley. When Carl was one, his family moved to London, and when he was 4, to Sydney. He worked in museums, and was well-known as a geologist, paleontologist, and conchologist, and was taxidermist and biological collector on AAE 1911-14. He was a sergeant in the AIF at Gallipoli, where he was wounded on the second day, being discharged in 1916. He married bank clerk Mary Theodora Mason on March 22, 1919, at Albury, and after more museum work he became an antique dealer and authority on stamps. He was a map-reader during World War II, and then worked for years for the Colonial Sugar Refining Company, in Sydney. He wrote *South with*

Mawson (*see* the Bibliography). He died on June 27, 1959, in Concord, Sydney, Australia.

Laseron Islands. 66°59' S, 142°48' E. A chain of small ice-capped and rocky islands, about 5 km ENE of Cape Denison, in Commonwealth Bay, on the coast of George V Land. Discovered in Jan. 1912, by the Main Base Party of AAE 1911-14, and named by Mawson for Charles Laseron. US-ACAN accepted the name in 1952, and ANCA followed suit on May 18, 1971.

Lasher Spur. 69°06' S, 66°40' W. A prominent mountain spur trending NW from Kelvin Crests, and rising to about 750 m at the N end of the Forster Ice Piedmont, about 6 km ENE of Triune Peaks, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially by RARE 1947-48, surveyed from the ground by Fids from Base E in 1958, and re-photographed aerially by USN in 1966. Named by US-ACAN in 1977, for Lt. William J. Lasher, USN, LC-130 aircraft commander during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70). UK-APC accepted the name on May 21, 1979.

Lashley Mountains *see* **Lashly Mountains**

Lashly, William "Stoker." b. Dec. 25, 1867, Hambledon, Hants, son of thatcher John Lashly and his wife Ann Tucker. He entered the RN in 1889, and in 1896 married a Hambledon girl, Alice Cox. He was on the *Duke of Wellington* when he transferred to the *Discovery* for BNAE 1901-04. After ballooning training at Aldershot, he went south with Scott. Skelton said of him, "Taking him all round, [he] is the best man far and away on the ship." A versatile, expert sledger, he also went on BAE 1910-13. On returning to England in 1913, he retired from the RN, and joined the reserves, fighting in World War I on the *Irresistible* and *Amethyst*. After the war he was a customs officer in Cardiff, and in 1932 retired to Hambledon, built a brick-built detached house that he called Minna Bluff, and died there on June 12, 1940. In 1969 his diaries were edited and published, *Under Scott's Command—Lashly's Antarctic Diaries*.

Lashly Glacier. 77°57' S, 159°50' E. A short, broad glacier between the Lashly Mountains on the W, and Tabular Mountain and Mount Feather on the E, it flows S from a poorly defined ice divide in the area of the upper Taylor Glacier into The Portal, at the upper Skelton Glacier, in Victoria Land. Named by the NZ party of BCTAE in 1957, in association with the nearby mountains. NZ-APC accepted the name, and US-ACAN followed suit in 1961.

Lashly Mountains. 77°54' S, 159°33' E. South of the head of Taylor Glacier, and W of Lashly Glacier, near the edge of the Polar Plateau, in Victoria Land. Mount Crean (2550 m) is the highest in this small group. Discovered during BNAE 1901-04, and named by them for Stoker Lashly. US-ACAN accepted the name, and NZ-APC followed suit.

Lashmar, Charles Edward Jack. b. 1915, Uckfield, Sussex, son of Charles E. Lashmar and his wife Elizabeth L. Adams. Ordinary seaman on the *Discovery II*, 1931-34, and an able seaman on the same vessel, 1934-37. He married and moved to Klerksdorp, South Africa.

Mount Lassell. 71°43' S, 68°48' W. A snow-covered peak rising to 1000 m (the British say about 1300 m), overlooking the head of Neptune Glacier, in the SE part of Alexander Island. Apparently discovered aerially by Ellsworth on Nov. 23, 1935, it seems to have been roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Mapped by Searle of the FIDS in 1959-60 from air photos taken by RARE 1947-48. Named by UK-APC on March 2, 1961, for William Lassell (1799-1880), English astronomer who discovered Ariel and Umbriel, satellites of the planet Uranus, and also Triton, the satellite of Neptune. US-ACAN accepted the name later in 1961. In those days it was plotted in 71°45' S, 68°50' W, but it was replotted from U.S. Landsat images taken in Jan. 1973. With these new coordinates, it appears in the 1977 British gazetteer.

Bahía Lasserre *see* **Admiralty Bay**

Costa Lassiter *see* **Lassiter Coast**

Lassiter, James Walter "Jim." b. May 31, 1920, Fla. On April 26, 1941, after 3 years of college, he enlisted, in Jackson, Miss., as an aviation cadet in the Army Air Corps, serving as a bomber pilot in World War II, and flying missions over "The Hump" into China with Chuck Adams. He was a captain, USAAF, and operating a commercial venture out of New Orleans called Flying Fish, when he became chief pilot on RARE, 1947-48. After this he was promoted to major, and became personal pilot to the Maharajah of Darbhanga. In 1957-58 he was back in Antarctica, as head of the U.S. Air Force Electronics Test Unit (q.v.). He died on Dec. 16, 1992, in Ocala, Fla.

Lassiter Coast. 73°45' S, 62°00' W. That portion of the E coast of Palmer Land between Cape Mackintosh and Cape Adams. The N portion of this coast was discovered and photographed aerially by USAS in 1940. The entire extent of the coast was photographed aerially in 1947, by RARE 1947-48, and, during that same season, was surveyed from the ground and charted by a combined sledging team of RARE personnel and Fids from Base E. Named in 1947 by Ronne as the James Lassiter Barrier, for Jimmy Lassiter [the name Lassiter had previously been applied to the N part of the Ronne Ice Shelf (q.v.)]. It appears on Dougie Mason's FIDS map of 1950. The S part of this coast appears on a *National Geographic* map of 1948 as the Isaiah Bowman Coast (*see* **Bowman Coast**), and on Bill Latady's 1949 map as the Weddell Coast. The name Lassiter Coast was accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer, on a 1955 U.S. Hydrographic Office chart, and in the 1956 U.S. gazetteer. It appears on a 1957 Argentine chart as Costa Lassiter. On a Chilean chart of 1962 it appears as Costa de Lassiter, but the 1974 Chilean gazetteer accepted the name Costa Lassiter, a name also used by the Argentines. The feature was photographed aerially by USN between 1965 and 1967, and appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land.

Lassister Ice Barrier *see* **Ronne Ice Shelf**

Lassitude Lake. 67°46' S, 62°48' E. A small, permanently frozen lake, about 2.2 hectares in area, and with a pressure dome in the center, at the foot of a steep ice slope near Rumdoodle Lake, in the Framnes Mountains, in Mac. Robertson Land. Named by ANCA. Lassitude was a condition suffered by the doctor in W.E. Bowman's famous novel *The Ascent of Rumdoodle*, always a very popular book at Mawson Station.

Lassus Mountains. 69°30' S, 71°37' W. A group of mountains, 24 km long and 5 km wide, they rise to 2100 m and extend S from Palestrina Glacier in the NW part of Alexander Island. They include, from N to S: Vittoria Buttress, Mount Wilbye, Beagle Peak, and Mount Morley. Discovered by von Bellingshausen in 1821. Photographed aerially from the E on Feb. 1, 1937, during BGLE 1934-37, and subsequently mapped as part of the Havre Mountains (which had been identified from the N on an earlier flight during that expedition). It appears as such on Stephenson's 1940 map of the expedition. This was later corrected by Searle of the FIDS who, in 1959-60, mapped this feature from air photos taken by RARE 1947-48. The new group was named by UK-APC on March 2, 1961, for the Franco-Flemish composer Orlande de Lassus (ca. 1530-1594). US-ACAN accepted the name later in 1961. It appears on a British chart of 1961.

Last Cache Nunatak. 85°33' S, 174°08' W. The last and most southerly of the nunataks on the ridge forming the E wall of Zaneveld Glacier. Though not a particularly big nunatak, it is an important landmark on the Polar Plateau, for explorers in the area of the head of Shackleton Glacier. Surveyed by the Southern Party of NZGSAE 1961-62, and so named by them because it was near here that they made their last depot of fuel and food. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Last Hill. 63°28' S, 57°05' W. A small hill, rising to 350 m, it has a rock ridge at its crest and a cliff at its N side, 6 km SSW of Hope Bay, and 3 km E of the N shore of Duse Bay, between that bay and Trepassey Bay, on Tabarin Peninsula, on Trinity Peninsula. Probably discovered by SwedAE 1901-04. First surveyed and charted by Fids from Base D in 1946, and so named by them because it marks the last climb on the sledging route between Hope Bay and Duse Bay. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. There is a 1956 Argentine reference to it as Ultima Colina (which means the same thing).

The *L'Astrolabe*. Modern day French research and supply ship, 65 meters long, built in 1986, and based out of Hobart. She took part in CEAMARK. She was in at Dumont d'Urville Station as relief ship for the following French Polar expeditions: 1988-89 (captains Yves Guedez and Gérard Daudon); 1989-90 (captains Guedez and Daudon); 1990-91 (captains Guedez and Daudon); 1991-92 (Captain Charles Protat);

1992-93 (Capt. Protat); 1993-94 (Capt. Guedez); 1994-95 (captains Daudon and Guedez); 1995-96 (captains Daudon and Guedez); 1996-97 (captains Daudon and Guedez) 1997-98 (Capt. Daudon); 1998-99 (Capt. Daudon); 1999-2000 (Capt. Daudon); and every season since then.

Monte Latady *see* **Latady Mountains**

Montes Latady *see* **Latady Mountains**

Latady, William Robertson "Bill." b. Feb. 14, 1918, Birmingham, Alabama. As a child, he moved with his widowed mother to Hingham, Mass., and went to MIT (1943-44). He was a precision instrument mechanic, and was part of a radar research team that went to the UK for 18 months during World War II. After the war, he studied geology for a year at Harvard. He was also a mountain climber, and was one of the first group ever to climb Mt. St. Elias, in Alaska, in July 1946. He became aerial photographer and deckhand on RARE 1947-48. In 1948 he was back in Alaska, he married in 1949, and died Oct. 13, 1979, in Hingham.

Latady Island. 70°55' S, 75°10' W. A low, ice-covered island, about 56 km long and over 16 km wide, 72 km S of Charcot Island, and W of Alexander Island, in the NE corner of the Bellingshausen Sea, its NE end forms part of the SW boundary of the Wilkins Ice Shelf. An ice-covered feature was discovered aerially by Sir Hubert Wilkins, on Dec. 29, 1929, and described by him, but not recognized or separately mapped for what it was. It appears on his map of 1930. Mapped by Searle of the FIDS in 1959-60, from air photos taken on Dec. 23, 1947, by RARE 1947-48 (who also did not recognize it for what it was). Searle plotted in 70°45' S, 74°35' W. Named by UK-APC on March 2, 1961, for Bill Latady. US-ACAN accepted the name later in 1961, and it appears on a 1962 U.S. Hydrographic Office chart. The coordinates were corrected from U.S. Landsat images taken in 1979.

Latady Mountains. 74°45' S, 74°35' W. A group of mountains rising to about 1700 m, W of Gardner Inlet, between Wetmore Glacier and Ketchum Glacier, on the Orville Coast, in the SE part of Palmer Land. They include, from N to S, Mount Aaron, McLaughlin Peak, Mount Robertson, Crain Ridge, Mount Wood, Mount Hyatt, Mount Terrazas, and Schmitt Mesa. Discovered and photographed aerially on Nov. 21, 1947, by RARE 1947-48, and partially surveyed from the ground in Dec. 1947, by a joint sledging team of RARE personnel and Fids from Base E. They were named by Finn Ronne for Bill Latady, and RARE plotted them in 75°30' S, 65°50' W. As such, they appear on Finn Ronne's 1949 map, and on a U.S. Hydrographic Office chart of 1955. They were re-photographed aerially by USN between 1965 and 1967, and appear, with the new coordinates, on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted these new coordinates on Dec. 20, 1974. They appear on an Argentine chart of 1952 as Montes Latady, which was the name accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (although, misspelled as Monte Latady). However, since 1978, (we are told) there has been an Argentine move to name this feature Cordón Namuncura. However, this is not true (*see* **Cordón Sikorski**).

Latarnia Rock. 62°09' S, 58°27' W. A basaltic stack at Shag Point, near Arctowski Station, King George Island, in the South Shetlands. It has a lighthouse ("latarnia" in Polish, hence the name given by the Poles in 1980).

Laternula Inlet. 68°39' S, 77°55' E. An inlet into Mule Peninsula, just W of Laternula Lake, in the Vestfold Hills. Visited by an ANARE geological and biological party in Jan.-Feb. 1972. Named by ANCA, in association with the lake.

Laternula Lake. 68°38' S, 77°58' E. About 1 km SSW of Clear Lake, on Mule Peninsula, in the Vestfold Hills. Visited by an ANARE geological and biological party in Jan. 1972, and they found it to have around it unique layered deposits of the shells of the clam *Laternula elliptica*. Named by ANCA.

Latham Peak. 66°21' S, 51°48' E. A peak projecting through the ice cap 24 km SE of Cape Ann and Mount Biscoe, and 13 km NW of Mount Marr, on the coast of Enderby Land. Discovered by BANZARE in Jan. 1930, and named by Mawson for Sir John Greig Latham (1877-1964), the leader of the (out of office, and soon to be disbanded) Nationalist Party. Latham held various high offices in Australia, including chief justice, 1935-52. US-ACAN accepted the name, and ANCA followed suit.

Latino Peak. 72°09' S, 167°33' E. Rising to 2290 m, 6 km SSW of Mount Hazlett, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Terry L. Latino, USN, construction man at McMurdo in 1967.

Isla Latorre *see* **Landrum Island**

Île Lattanzi. 66°39' S, 139°58' E. An island in the Géologie Archipelago. Originally called Îlot des Damiers (i.e., "checkerboard islet"), it was renamed Îlot Lattanzi by the French on March 31, 1999, after Dario Lattanzi, engineer and mechanic on the *L'Astrolabe*, who died in 1999 (*see* **Deaths**, 1999). It is now called Île Lattanzi.

Îlot Lattanzi *see* **Île Lattanzi**

Lattemand Bai *see* **Lallemand Fjord**

Latty, John *see* **USEE 1838-42**

Fiord(o) Laubeuf *see* **Laubeuf Fjord**

Seno Laubeuf *see* **Laubeuf Fjord**

Laubeuf Fjord. 67°20' S, 67°50' W. A sound, with an average width of 16 km, it extends N for 40 km in a N-S direction to Barlas Channel and Hinks Channel, between Rothera Point (on the east-central part of Adelaide Island) and Cape Sáenz and the S part of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Discovered and roughly charted in Jan. 1909, by FrAE 1908-10, and named by Charcot as Fiord Laubeuf, for Maxime Laubeuf (1864-1939), French marine engineer who supervised the building of the *Pourquoi Pas?*'s engine. It appears on Charcot's maps of 1910 and 1912. On a 1914 British chart it appears as "Laubeuf Fd." Surveyed in July 1936, by BGLE 1934-37, it appears on Rymill's 1938 map of that expedition as Laubeuf Fjord. It appears on a British chart of 1940 as Laubeuf Fiord. On an Argentine chart of 1946 it appears as Estrecho Laubeuf, and on a 1947 Chilean chart (misspelled) as Fiordo Laubeauf. Re-surveyed by Fids from Base E in 1948. The name Laubeuf Fjord was the one accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. On an Argentine chart of 1957 it appears as Fiordo Laubeuf, and that was the name accepted by the 1970 Argentine gazetteer. On a Chilean chart of 1962 it appears as Seno Laubeuf, and that was the name selected by the 1974 Chilean gazetteer. Needless to say, over the years, the name has occasionally been mangled.
